three different ways. First, a Foucauldian approach stresses the historicity of the present since power has constituted the subjects of knowledge. Second, a systems-theoretical intervention stresses the “contingency of reality” by claiming a radical constructivist theory of knowledge production. While both theories are not only aware about but reduplicate the historically given, I will argue for a third version of critical thought that stresses the processual understanding of the present since both, past and present, are “genetically linked” (Bourdieu). It is neither sufficient to critically emphasize the historical contingency of the forms of knowledge (Foucault) nor that reality could be interpreted differently (Luhmann). Reality can be made differently under the impact of actors and conditions that produce and stimulate the former.

## Cosmopolitanism and Global Crises: Ulrich Beck’s Theory of Cosmopolitanization Reconsidered

David Inglis, University of Exeter | [dinglis99@gmail.com](mailto:dinglis99@gmail.com)

One of the most prominent critical social theories of global affairs of recent years is Ulrich Beck’s account of ‘cosmopolitanization’, which analyses contemporary trends towards the forging of ‘cosmopolitan’ forces, practices, attitudes, and institutions. For Beck, trends towards the emergence of cosmopolitan conditions, especially in Europe, are primarily the unintended consequences of social forces such as mass trans-national migration, rather than being due to the intentional actions of institutional actors such as the EU. This paper reflects on the utility, or otherwise, of Beck’s

ideas at the present time. First, it considers the charge that Beck’s account is merely a disguised form of Kantian Providentialism and Hegelian cunning-of-Reason, in that it allegedly rests in a faith in the ultimately beneficial ramifications of the unintended consequences of macro-level social forces. Second, as the theory of cosmopolitanization was primarily written before the onset of the current global financial crises, the paper considers how well the theory stands up in light of current economic and political developments involved in these crises. Third,

the paper reflects on Beck's post-crisis writings, to ascertain both the degree to which these are empirically and normatively compelling, and also whether the analyses offered therein substantially modify the pre-crisis account of cosmopolitanization. In this

way, a substantial critique is offered of the central concept of cosmopolitanization itself, considered both sociologically and in terms of what guidance it may give as to how to respond to current global dilemmas.

## 29JS36 - European Integration Revisited: from Teleological to Critical Approach

Chair(s): Marju Lauristin (Social and Educational Sciences/Institute of Journalism and Communication University of Tartu, Estonia)

### Calling for "More Europe": Ideology and Motivation

Stefan Immerfall, University of Education, Schwäbisch Gmünd | [Stefan.Immerfall@ph-gmuend.de](mailto:Stefan.Immerfall@ph-gmuend.de)

A confluence of political and social crisis, sovereign debt crisis, banking crisis and economic disequilibrium among them, has hit hard the European Union and its member states. It has exposed deficits in policy adjustments and inadequacies in the institutional regime of the Euro. As a consequence, "More Europe" is being regularly advocated as the proper way out of the crisis. While it may be doubtful, whether "More Europe" is more of a solution or a problem, the diverseness of the advocates of the battle-cry for "More Europe" is even more remarkable. They comprise politicians and intellectuals from the left as well as conservatives and assorted members of the financial industry. All are pushing for more centralized European power to determine the economic and tax policies of the member states albeit in slightly different shapes and colors. Another

commonality of this group is their disposition to brand all those as anti-European who are skeptical about more power going to Brussels and who are pointing to the unwillingness of the peoples of Europe for a fast-track towards a genuine political union. The presentations will sort out the different ideas for a genuine Union and put them into the perspective of a social analysis. It will elucidate the continuing attractiveness of the European idea despite the apparent shortcomings of the European Union and it will illustrate the EU elites' efforts to confuse the former with the latter. It is also important to analyze how different sections of the elite explains and takes into account the apparent popular objections to many of Europeanizing ideas. The growing disjuncture between the European elite and the people at large may serious derail the European project as whole.

### European Societal Integration: Contested Institutional Sets of Conflict

Johannes M Kiess, University of Leipzig | [johannes.kiess@uni-leipzig.de](mailto:johannes.kiess@uni-leipzig.de)

European societal integration is best described as a conflictual process within which new

institutional sets are being configured. This shapes the terms and conditions of social

conflicts i.e. an emerging European society itself. I further suggest that social conflicts on the meso-level (classically between trade unions and corporations) are not only about resource allocation itself. Institutional sets in which conflicts are to be negotiated are also part of the strategies of social actors and, furthermore, institutional sets become contested. Exploring the institutional sets of conflicts and the emerging of these sets promises a deeper understanding of European society, based on and opening a gradualistic understanding of society in general. Last but not least, the question arises how the emergence of European institutional sets of conflict affects the already existing national sets of conflict. This aims at the main question

for a sociology of Europe: is there a European society, and, if so, what does European society mean? The suggested conflict theoretical perspective is relevant to this question, both politically and for academia, because conflicts emerging from modernization and transformation processes most likely produce winners and losers which directly (re-)configures questions of identity, social integration, and legitimacy. The sociological and particularly the conflict theoretical perspective, pointing at the meso-level of social actors – in contrast and amendment to intergovernmental meta-level or horizontal, attitude oriented analysis – adds significantly to efforts of explaining European integration processes and dynamics.

## **Anomie: Social Reality or an Abstract Concept Depicting all the Possible Negative Phenomena?**

Ekaterina Lytkina, Higher School of Economics, Moscow | [ekaterina.lytkina@gmail.com](mailto:ekaterina.lytkina@gmail.com)

The proposed paper addresses the classical theory of anomie which underwent a rebirth in the 90-ieth of the 20th century and has been used as a means of describing transformation societies such as Eastern Germany (Heinz 1994), Hungary (Vingender 2001), Ukraine (Golovaha and Panina 2008), Russia (Krivosheev 2008). Nevertheless anomie theory has been widely implemented in relation to the Western Europe (Faßbauer and Schirmer 2007, Atteslander 2006, Legge 2010) and the USA (Merton 1964, 2006, Messner and Rosenfeld 1997) and also in a cross-cultural context (Messner and Rosenfeld 1997, Atteslander 2006). The original meaning of Durkheim was re-analyzed after the Merton's theory followed by "strain theory" (Cohen (1955), Cloward and Ohlin (1960), Dubin (1959), Agnew (1992)) and institutional anomie theory (Messner and Rosenfeld (1994)) with the emphasis on the

tension within the societal structures. Another set of theories was on the border of social psychology (McIver (1950), Olsen (1965), Legge at al. (2008)) with the key differentiation between the objective state of social structure (anomie) and subjective individual attitudes of anomie (anomia). Besides, the concept of anomie has been used together or as a part of other concepts such as alienation (Seeman 1959, Dean 1961, Olsen 1965), anomia (Srole 1965, Olsen 1965, Merton 1964), deviance, aspirations and success (Merton 1938), social disorganization, abnormality, etc. Thus clarifications are to be made and the central question is to be answered: can anomie be seen as a relevant concept for description of contemporary societies or is it an abstract concept depicting all the possible negative societal phenomena.

## The Modernist Thrust of the European Union and its Limits. A Critical Assessment of EU Integration from a World-Polity Perspective

Sebastian M. Büttner, Friedrich-Alexander University, Erlangen-Nuremberg | [sebastian.buettner@soziol.phil.uni-erlangen.de](mailto:sebastian.buettner@soziol.phil.uni-erlangen.de)

The current Euro crisis has uncovered, once again, the highly fragile nature and ambivalent perceptions of European integration. Anti-European attitudes and anti-EU parties are on the rise in many countries all around Europe. Some government leaders of EU member states have openly expressed EU skepticism and coqueted with withdrawal of EU membership. Thus, there are clear signs of exhaustion with regard to ongoing EU integration, and there is a growing sense of alienation between the existing European Union and the EU citizens who are still majorly embedded locally and in national frameworks of policy-making. Against this backdrop, however, it appears as an ironic paradox of EU integration that despite all growing skepticism EU integration is further proceeding and even deepening in light of the Euro crisis. This must be acknowledged in theories of EU integration,

and it constitutes a major challenge to contemporary social theories to account for this "double movement" of EU integration. This paper aims to contribute to this debate by offering a world-polity perspective on EU integration. From this perspective EU integration is conceived as a highly specific expert-driven project of "social mobilization" (Deutsch) enforcing a whole array of highly modernist ('world-cultural') norms and standards of policy-making and social organization. Many of these norms and standards, such as 'non-discrimination', 'tolerance', or 'freedom of employment', are perceived skeptically by huge segments of EU citizens, since they challenge existing local traditions and popular in-group/out-group distinctions. Until today this has not prohibited EU integration from continuing; this relation will be further explored in this contribution.

## Waking up from the European Dream - Declining Faith in the Common European Future

Piotr Cichocki, Adam Mickiewicz University, Poznań | [cichocki@me.com](mailto:cichocki@me.com)

European integration has always been stronger on the systemic than the social level. The weak sense of common European identity as well as the effective fragmentation of the European public sphere have long been recognized as great challenges for the integration project in the long-run. Almost a decade has now passed since the last time there was hope that this weakness could be overcome, and the optimism of Habermas' belief in the European constitutional patriotism or Rifkin's endorsement of the European over the American dream seem now to belong to a very distant past. The mood of the present appears

more promptly captured by Laqueur's "The Last Days of Europe" and its recent sequel "After the Fall: The End of the European Dream and the Decline of a Continent". While from the point of view of the present, no hope for the common European future seems warranted, the question remains whether the optimism of a decade ago has still anything to teach us today. There might be no direct way back to the heyday of hope in constitutional patriotism binding European citizens together, these position might perhaps still have something to offer for the future.

## RN30 - Youth and Generation

### a01RN30 - Leaving Home and Becoming Independent

Chair(s): David Cairns

#### Leaving the Parental Home during the Economic Crisis - Germany as an Example in the European Context

Anne Berngruber, German Youth Institute (DJI) | [berngruber@dji.de](mailto:berngruber@dji.de)

Leaving the parental home is assumed to be one of the central transition markers in the status passage from youth to adulthood. European comparisons show strong distinctions in the timing of leaving home. But transition markers are increasingly comparable to a yo-yo. Moving out is often no concluding event, but a reversible process. Young adults often return home one or more times before they leave home permanently. The trend to a rising number of these so called "boomerang kids" has developed differently in particular national backgrounds. An insecure labour market situation – like during the recent financial and economic crisis – can lead to a prolongation of living in the parental home and to a higher returning rate. The possibility of staying with the parents or returning home can be understood as a familiar security net. It

can be assumed that in those countries which are especially affected by the crisis young people live longer with their parents. I will show the development of the proportions of young people living with their parents before and during the crisis using data of EUROSTAT. In this context some determinants why young people stay with their parents or return home using Germany as an example will be presented. The results will be discussed in the context of recent comparative research. The analyses are based on the survey data "Growing Up in Germany: AID:A" of the German Youth Institute (DJI), which was conducted in 2009. The sample size is about 7,000 observations of young people aged 18 to 32 years. The survey contains diverse information on the living situation of young people and their detachment from the parental home.

#### 'But they've invested so much me': New graduates' Experiences of Family Relationships and New Patterns of (In)dependency

Kirsty Finn, Teesside University | [k.finn@tees.ac.uk](mailto:k.finn@tees.ac.uk)

April 2012 witnessed a very public outcry for renewed sociological engagement with both the causes and effect of the global financial crisis (Chakraborty, 2012). Writing in The Guardian, Chakraborty lamented the 'dearth' of sociological research in this area and derided the discipline's preoccupation with 'niche' experiences at the expense of rigorous

investigation into the everyday challenges faced by ordinary people in the face of recession and austerity. The following paper engages with this debate and aims to fill an important gap in sociological research by examining the impact of recent social and economic trends upon youth transitions, focusing specifically upon the experience of

young graduates. Through the discussion of relatively rare, qualitative longitudinal data generated through interviews with young women students and later graduates over a period of 6 years, the discussion will provide an original contribution to knowledge in this area. The paper addresses the impact of two key policy and socio-economic shifts which continue to frame the experiences and pathways of young people: the 'massification' of higher education in the UK and the global financial crisis. This paper will demonstrate

how these two separate but related issues are impacting upon new graduates' family relationships and networks of support, creating new patterns of (in)dependency and feelings of obligation between kin. The findings of this small-scale study highlight the need for further and broader research into the experiences of new graduates, because of the way the current context is shaping their orientations towards their future employment, housing and family careers.

### **The Role of Global Recession in Increasing Inequalities in Young Adults' Ability to Maintain Residential Independence.**

**Ann M Berrington**, University of Southampton | [a.berrington@soton.ac.uk](mailto:a.berrington@soton.ac.uk)

**Peter Tammes**, Southampton University | [p.j.tammes@soton.ac.uk](mailto:p.j.tammes@soton.ac.uk)

**Steven Roberts**, University of Kent | [S.D.Roberts-26@kent.ac.uk](mailto:S.D.Roberts-26@kent.ac.uk)

Leaving the parental home is for many UK young adults becoming more problematic. For some the transition to residential independence is being reversed - the media portray a new generation of young adults "boomeranging" to the parental home. Difficulties in the transition to residential independent have been exacerbated by the Global Recession associated with the collapse of the banking system. The negative impact of youth unemployment and increased economic insecurity on young adults' ability to maintain residential independence is being compounded by rising house prices and lack of mortgage credit which have put owner occupation out of the reach of most young adults. Many young single adults, not being eligible for social

housing, are forced to look to the (unregulated) private sector where rents have subsequently increased. At the same time, welfare retrenchment (itself a function of the Global Recession) means that housing benefits to (especially single) young adults have been reduced. This paper will show the impact of these forces on inequalities in the ability of young adults to leave the parental home according to social class, gender, age, educational level, ethnicity, and type of employment. To do this we will undertake secondary data analyses of the housing circumstances of young adults (aged 16-34) surveyed within the 2009/10 United Kingdom Household Longitudinal Survey (UKHLS).

## b01RN30 - Youth Transitions in Times of Crisis

Chair(s): Valentina Cuzzocrea

### Youth Labour Market and Transition. Global Crisis and Recession and its Impact on Young People.

Mei-Ling Lin, National Open University, Taiwan | [paulina@kcg.gov.tw](mailto:paulina@kcg.gov.tw)

Young people are one of the most vulnerable groups in society, especially in the current economic and financial crisis. In our ageing society, young people are a precious resource. The government has stressed the need to promote youth labour market integration in the larger context of employment policies. The regional structural sectors biased towards low-skilled/low compensation sectors are those more inclusive of young inexperienced and low-skilled workers. Since young workers may be viewed as a sectorally mobile workforce segment, a variety of employment opportunities may contribute to enhancing their job opportunities. Instead, more specialized regions may be characterized by higher concentrations of knowledge and abilities specific to the leading industries. The author examines trends in the youth labour market, and highlights the main difficulties of

integrating young people into decent work. The author also considers the extensive empirical literature on the determinants of labour market performances and dynamics by focusing on: (i) youth labour markets, (ii) regional labour markets, and (iii) the quality of youth employment in terms of wages, weight of the informal sector and underemployment. There is a considerable debate about the pros and cons of various definitions of youth and their consequences in the study of labour market performance and dynamics. The author presents some key data concerning the process of institutional, economic and structural change, and combines analysis of structural dynamics with domestic and the world-wide level variables. The paper concludes with some remarks on the relevance of the local community level as a platform for social struggle for the youth.

### Considering the History-Biography Dynamic in Studies of Young People's Life Course Transitions

Ann Nilsen, University of Bergen | [ann.nilsen@sos.uib.no](mailto:ann.nilsen@sos.uib.no)

Julia Brannen, Institute of Education University of London | [j.brannen@ioe.ac.uk](mailto:j.brannen@ioe.ac.uk)

This paper takes the history-biography dynamic as a point of departure and discusses how different approaches to studies of young people's lives can help clarify effects of context and history. Empirically we will draw on our earlier studies of young people's life course transitions; the phases of leaving the parental home in the 1990s and becoming a parent in the mid-2000s. While these studies focused on how the wider historical circumstances relating to country and workplace played a part

in people's lives during transition phases, the current paper focuses on how intergenerational relationships are part of the historical context particular to different cohorts. The theoretical argument we wish to put forward here is that some methodological and conceptual perspectives lack specificity, for example, perspectives that see context in terms of epochs rather than specific historical periods and likewise studies that treat the life course as a collection of individual trajectories.

Such approaches tend to draw conclusions on the basis of particular moments in history, for example, references to the current so-called 'lost generation' of young people takes for granted that economic austerity and the public policies that contribute to it constitute a force

of nature and are outside social and democratic control. It is important to keep the dynamic relationship between history and biography to the forefront in order to avoid individualising and deterministic explanations.

## A Lost Generation? Young Adults under Economic Crisis in Spain.

Eriikka M Oinonen, University of Tampere | [eriikka.oinonen@uta.fi](mailto:eriikka.oinonen@uta.fi)

Young people are expected to answer for Europe's socio-economic, demographic, and cultural challenges. They are expected to have a good education without staying in education too long. They should become flexible workers for flexible labor markets, to be willing and able to move around the EU as job opportunities arise while establishing a family with children, to juggle demands of the family with work and stay economically active as long as possible. Yet, it is increasingly difficult for European youth to meet these expectations. The contemporary generation of young educated people is the first cohort in the post-1945 period who can expect to have lower income than their parents regardless of their investments in education. The current European economic crisis makes matters even worse. The research investigates how

economic crisis and its social consequences affect individual educated young adults' personal lives in Finland and Spain. What kind of life choices they make? Would they choose differently should the circumstances be different? What are the social frames, institutions and structures they use for and find important to their social integration? In this paper focuses on Spanish young adults. In contemporary Europe, Spain can be seen as the 'crucial' case. Spain has suffered from the economic crisis since its very beginning in 2008 and it has hit Spanish youth particularly hard. The proposed paper studies how Spanish young adults perceive their current situation and future by analyzing young Spaniards' own written testimonies in El País on-line newspaper and the web-site mileuristas.com.

## Youth, Economic Crisis and the Convergence to the Southern Welfare Regime Model

Mick Carpenter, University of Warwick | [m.j.carpenter@warwick.ac.uk](mailto:m.j.carpenter@warwick.ac.uk)

Marti Taru, Tallinn University | [marti@iiss.ee](mailto:marti@iiss.ee)

In this paper, drawing on, among other sources, the 14 country MYPLACE FP7 research study covering northern, southern, and central and Eastern Europe countries, we consider the emerging impacts of the economic crisis and austerity measures on youth policy as a key feature of 'welfare regimes' in crisis, and whether new processes of convergence are occurring. Of course complex variations exist both within and

between societies, but the contested and variable shift generally towards neoliberal 'recommodification' of labour and services is dramatically accelerating and threatening the viability of the European Social Model (ESM). We argue that 'youth' is a neglected in regime analysis which now needs to feature more prominently in such analyses, and its intersection to class, gender, 'race' and other inequalities. We first define the position of

youth in the Esping-Andersen (1990) 'tradition', as in a 'pre-commodified' position prior to labour market entry. We identify pressures on education and training towards 'anticipatory commodification' through emphasis on 'employability'. Additionally, restructuring and retrenchment measures are eliminating or restricting access to previously 'decommodified' welfare, impacting differentially on young peoples' emerging

employment and biographical trajectories. Overall we identify a convergent trend across Europe towards the 'southern European' model of familialist welfare (Ferrera, 1996). While in more developed societies these features are emergent, in southern European countries themselves they are rapidly reasserting themselves, in ways that will universally reinforce precarity and widening inequalities.

## **d01RN30 - Generations and Inequalities**

Chair(s): Steven Roberts

### **Intergenerational Disadvantage: Explaining Worklessness across the Generations**

Tracy Shildrick, Teesside University | [t.a.shildrick@tees.ac.uk](mailto:t.a.shildrick@tees.ac.uk)

In common with much of Europe, since the recession of 2008 unemployment in the UK has been running at historically high levels. Concerns have been expressed, in particular, about the situation facing young people and their difficulties in accessing the labour market, with over one million 16 to 24 year olds currently not in education, employment or training. One impetus underpinning current UK government welfare policy agendas has been a focus on workless households and the potential passing on of anti-employment attitudes particularly from workless parents to younger generations. Our study, funded by the Joseph Rowntree Foundation, investigated this idea via in-depth qualitative research with different generations in workless families in Teesside and Glasgow. The study concluded that families where two generations are

workless are very rare in the UK and that ideas that workless families inhabit cultures of worklessness bear little, if any, relationship to the attitudes, values and experiences of workless families. Despite these conclusions the study provided a rare opportunity to explore the intergenerational dynamics of poverty, unemployment and disadvantage across generations in workless families. Case study material will be presented with a particular focus on the experiences of young people growing up in multiply and deeply deprived and disadvantaged families. The paper has a particular emphasis on how aspects of disadvantage impact on young people's opportunities, choices and life trajectories with a particular emphasis in how we might best understand questions of intergenerational disadvantage.

## Intergenerational Equity in Labour Markets: is now the Time?

**Barbara Barabaschi**, Catholic University of Sacred Heart, Milan | [barbara.barabaschi@unicatt.it](mailto:barbara.barabaschi@unicatt.it)

Paper presents results of a comparative research, aiming to analyze the evolution of welfare policies (in particular that of labour, education and training, retirement) concerning aged and young workers. The main goal is to verify if and how, national government have tried to create labour markets more inclusive from a generational point of view, especially in those contexts with strong imbalances among social groups due to age and worsened in the context of crisis. More precisely, research aims to control if welfare systems have been reformed through an integrated approach, inspired by intergenerational equity. Analysis are concentrated in some of European countries in which disequilibrium and disparity of chances in labour market between youngers and olders, are more evident (Italy, France, Spain, United Kingdom). For each country various reform domains and consequent

concrete measures are studied (new pensions schemes, solidarity contracts, contrats de génération, youth contract...). Research methodology is both qualitative and quantitative. Results, critically analyzed on the basis of a sociological (but also philosophical, economic, political) literature on welfare, have allowed: to reclassify principles guiding policies, with special attention to intergenerational equity; to reinterpret historical classification of welfare systems, introducing generational criteria; to verify coherence between aims declared in reform processes and measures conceived to translate them in practice, also in order to understand if it is possible to induce virtuous relations among generations in labour markets. Final reflections concern the role of the State in each welfare regime analyzed.

## Subjective Economic Well-being among Youth: An Intergenerational Analysis on Finnish Young People and Their Parents

**Atte Oksanen**, Finnish Youth Research Network | [atte.oksanen@utu.fi](mailto:atte.oksanen@utu.fi)

**Tommi Hoikkala**, Finnish Youth Research Network | [tommi.hoikkala@youthresearch.fi](mailto:tommi.hoikkala@youthresearch.fi)

**Sami Myllyniemi**, Finnish Youth Research Network | [sami.myllyniemi@youthresearch.fi](mailto:sami.myllyniemi@youthresearch.fi)

**Petri Paju**, Finnish Youth Research Network | [petri66paju@gmail.com](mailto:petri66paju@gmail.com)

Economic crisis in Europe has raised discussion about intergenerational conflict between generations. Yet, intergenerational social ties are often strong and parents are capable of helping their children in economically difficult times. In Finland, the generation born in the 1990s (the so called generation of individual choice) had lived most of their childhood and youth during the time of economic growth before the financial crisis of 2007–2008. In this presentation, we will focus

on the subjective economic wellbeing of Finnish youth from an intergenerational perspective. Finnish Youth Barometer was collected in January–February 2012 from young people aged 15–29 (n=1902) and their parents (n=597). We will especially focus on the question concerning how content the young people are in their current economic situation. Young respondents who still lived with their parents were more content with their economic situation than other respondents.

Not surprisingly, young people who lacked education and the job were least satisfied with their economic situation. Social resources and social belonging was associated positively with subjective economic wellbeing. Parents' occupational status was associated with answers given by their children. Furthermore,

social activities during childhood had positive impact on subjective economic wellbeing. Parents have an important role in promoting the subjective economic wellbeing of young people, especially if they are able to provide social and cultural resources for their children during the childhood.

## The Youth in Russia: Inequalities and Living Choices

Elena Kuzmina, Moscow State Institute of International Relations | [helen.i.kuzmina@gmail.com](mailto:helen.i.kuzmina@gmail.com)

Due to the influence of the global social transformations of 21st century there appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige that are being changed in the direction of increasing uncertainties. These multiple structural factors not only determine but shape the choices of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions. Neither the state, nor the social politics, nor the mass media is ready to control the vulnerabilities connected with the various forms of inequality in a rational way and give the youth responsible chances for a better

future and favorable living choices. Under these conditions the young people are forced to accept the disembedding form individualization. Is the Russian youth ready for these new and "old" inequalities? That was the main question of the research that is based on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. Using the factor analysis and CHAID-analysis, we have defined six factors which play the significant role in the formation of the social inequality of a new type that we term as a non-linear inequality of the "liquid modernity" (Z. Bauman). I'll present the results of my research showing the influence of the becoming of non-linear inequality on the living choices of youth in Russia.

## e01RN30 - Socio-economic Exclusion

Chair(s): Kirsty Finn

## Battling against Social Exclusion - Young People's Stories on Surviving

Hanna-Mari Heinonen, Kela, Research Department (Social Insurance Institution of Finland) | [hanna-mari.heinonen@kela.fi](mailto:hanna-mari.heinonen@kela.fi)

The study looks into young people's experiences of poverty, social exclusion and surviving with and of them. The basis of the study is a notion of human beings as coping, social and goal-oriented creatures. The

theoretical basis of the study lies in the capability approach framework (see Sen 1993; Sen 1999). Social exclusion and its rejection are seen as time-related processes, circles or spirals towards deprivation or surviving. Social

exclusion is defined as unintentional exclusion from society's basic functionings: education and working life. This exclusion itself is seen as a result of a person lacking the necessary capabilities to participate in education or work. The data is derived from biographical stories about experiences of poverty and exclusion by young people and it was collected in two phases (first in 2006 and from the same persons in 2011). The stories were originally collected with a published request to write about everyday experiences of being poor and coping with it. The data consists of 17 follow-up essays where young people (between 21 and 34

years) describe their lives and individual coping strategies over the course of six years. Because the data contains individual narratives from two time points it enables interesting opportunities for analyzing the process of exclusion and coping with it. Analysis draws attention on e.g. events, actors and transitions crucial for surviving social exclusion. The study questions are: 1) What kinds of positive transitions take place in young people's lives? 2) What kinds of changes in the resources and/or the environment of the excluded youth reinforce their capabilities and enable them to participate in education or working life?

## Youth and opportunity: The changing economic position of young adults in affluent societies

Benjamín Tejerina, University of the Basque Country | [b.tejerina@ehu.es](mailto:b.tejerina@ehu.es)

Ignacia Perugorría, Rutgers University, New Jersey | [ignacia.perugorria@fulbrightmail.org](mailto:ignacia.perugorria@fulbrightmail.org)

Michael Shalev, Hebrew University, Jerusalem | [michael.shalev@gmail.com](mailto:michael.shalev@gmail.com)

Young adults were the major protagonists in the wave of protests that swept many affluent societies in Europe and elsewhere in 2011. One of the leading components of the Spanish "Indignados" movement was "youth without a future", a diagnosis that many have linked with the exacerbation of chronic youth unemployment by both the ongoing economic crisis and austerity policies. We argue that the problem is deeper than this – it began before the crisis, affects adults and families in their late twenties and thirties as well as "youth", and is manifest in a decline in their relative economic standing in society. These hypotheses are inspired by the unusual case of Israel, where the withdrawal of the state from responsibility for citizens' economic welfare sparked a massive protest, but in the absence of an economic crisis, austerity measures, and

even worrying levels of youth unemployment. Like in crisis-stricken Europe, however, Israel witnessed massive mobilizations led by youthful, often middle-class activists who felt aggrieved by dwindling economic opportunities and increasing economic inequality. We thus claim that protests in Israel and Europe respond not just to the crisis, but also to the longer-term erosion of established mechanisms of reproduction of the middle class in affluent societies. To test this hypothesis we will conduct a comparative statistical analysis of EU-SILC data for the 2004-2010 period. We will focus on countries that were, and were not part of the wave of anti-inequality protests: Spain, Portugal, Italy and Greece, on the one hand, and France, the United Kingdom, Belgium and the Netherlands on the other.

## The Impact of the Great Recession on Youths' NEET and Temporary Employment Risks in Europe

Michael Gebel, University of Mannheim | [mgebel@mail.uni-mannheim.de](mailto:mgebel@mail.uni-mannheim.de)

Stefanie Heyne, University of Mannheim | [sheyne@mzes.uni-mannheim.de](mailto:sheyne@mzes.uni-mannheim.de)

First studies show that youths are disproportionately affected by the crisis. However, a strong diversity in the impact of the crisis on youth labour markets can be observed across Europe. The aim of this paper is to understand which factors explain the variation. First, we expect that the variation in the strength of the crisis might be responsible for different reactions of youth labour markets. Second, the impact of the crisis on youth labour market might be shaped by the nation-specific institutional setting (e.g. the education/training system, employment protection, minimum wages and active labour market policy) that existed at the onset of the crisis. Third, countries differed in their policy responses to the crisis and reforms. To evaluate the influence of the three factors,

micro-data are used for 27 European countries from the European Labour Force Survey for the period from the pre-crisis years to the latest available wave of 2011. This database provides unique large-scaled, standardised, nationally representative micro-data. We apply multilevel models to explain the cross-country variation in youth labour market responses to the crisis. We use two different dependent variables to detect potential trade-offs between youths' employment chances and the quality of employment: (1) the broad conception of young NEET (not in employment, education, training) as a measure of labour market exclusion and as an alternative to the problematic youth unemployment indicator and (2) youths' risks of being in temporary, insecure employment as a measure of precarious jobs.

## An Intersectional Analysis of Crisis

Enzo Colombo, University of Milan | [enzo.colombo@unimi.it](mailto:enzo.colombo@unimi.it)

Luisa Leonini, University of Milan | [luisa.leonini@unimi.it](mailto:luisa.leonini@unimi.it)

Paola Rebughini, University of Milan | [paola.rebughini@unimi.it](mailto:paola.rebughini@unimi.it)

The authors use an intersectional framework to explore how, in this period of economic and social crisis, young people face labour and social precariousness and reduction of economic resources which lessen their abilities and capacities to image their future. Conceiving the current crisis as a complex phenomenon, affecting in different ways young people, the paper investigates how gender, social position, cultural capital and ethnicity have effect on individual agency, either opening to tactical and strategic behaviour, or representing hurdles that hinder opportunities

which are cause for discrimination and exclusion. The paper aims to contribute to the current debate about the substance of changes in everyday life, personal biographies and action in public sphere six years into the 2007/8 crisis, stressing the necessity to move from an economic perspective toward a more articulated one which enables to shed light on the complexity of current crises. The data presented are based on narrative interviews and focus with young adults (aged 24-30) living in the urban area of Milan, Italy.

## 02RN30 - Young People's Responses to the Global Crisis

Chair(s): Gary Pollock

### Social and Interpersonal Trust of Young People in Eastern Europe, in the Context of the Global Crisis

**Olga Kitaitseva**, Russian State University for the Humanities | [olga\\_kitaitseva@mail.ru](mailto:olga_kitaitseva@mail.ru)

**Anna Kuchenkova**, Russian State University for the Humanities | [a.kuchenkova@rggu.ru](mailto:a.kuchenkova@rggu.ru)

The formed modern trends of the Eastern European countries during the global crisis has turned into the devaluation of many previous values and needs and the rapid rise of new ones. Above all, this problem has affected the younger generation. Value orientations, attitudes and the level of interpersonal trust in the immediate environment (family, friends), and in strangers serve as important indicators of the adaptation of young people to the new realities. The purpose of our study was to compare the level of trust and the dominant value orientations of young people from Eastern European countries, to identify values that support or hinder a culture of trust in the global crisis. Comparative analysis of the level of social and interpersonal trust, as well as the

dominant value orientations of young people, led to a number of conclusions about the relationship between value orientations and the level of trust in the studied group of countries. The young people in Poland and Lithuania demonstrate a high level of interpersonal trust and the highest level of social trust. Russia and Ukraine show an intermediate, middle position in the level of social trust, while the level of interpersonal trust in these countries is the lowest. The Czech Republic differs from the two pairs in the fact that while there is a relatively low level of general trust, the country demonstrates the highest level of interpersonal trust among all the countries that participated in the study.

### Support for a Welfare State or Neo-Liberalism? Does a Global Studies Course affect Students' Perspectives about the Global Economic Crisis?

**Carol D. Miller**, University of Wisconsin-La Crosse | [cmiller@uwlax.edu](mailto:cmiller@uwlax.edu)

Does a globalized curriculum enhance students' understanding of the global economic crisis? Specifically, do students who have completed a global studies course gain a better understanding of how people in other countries, especially in Europe, have been affected by the crisis? Is that understanding associated with a higher likelihood of supporting a welfare state and government regulation? A survey was distributed to a probability sample of 3000 undergraduate students at a public comprehensive university in Midwestern United States. Additional

students were targeted as respondents because they were enrolled or had completed a specific general education course focused on contemporary global issues. Survey questions were adapted from the World Values Survey (WVS), and the International Social Survey Program (ISSP): Role of Government survey to assess knowledge of and beliefs about global issues and the role of governments. Results from questions from the WVS and ISSP were compared to results from samples of respondents within a similar age range from selected European countries.

## Reconfiguring the Past and the Present in Time of Crisis – the Case of Post-Socialist Hungary

Domonkos Sik, Eötvös Loránd University, Budapest | [sikdom@gmail.com](mailto:sikdom@gmail.com)

Since the starting of the financial crises of 2008 it is more and more certain that a new era has started, which reconfigures young people's relation to the past and present. They have been grown up with the experience of continuous expansion of the EU, the unquestioned functioning of the welfare state and the emergence of new forms of network communication. Such promising "space of experience" (Koselleck 2004), resulted in case of the majority the declining of classical forms of political participation, while in case of the minority the experimenting with new forms of activism (Forbrig 2005, Spannring et al 2008). As the horizon of hopeful expectations has been collapsed after 2008, this constellation has been drastically changed. Many formerly depolitized young people were looking for ways of articulating their voice and the experimental

participative forms got more attention. The sudden collapse of the promising expectations may equally result in the emergence of new forms of democratic participation or new fundamentalisms. In this constellation the questions of the past become inseparable from the questions of the present, as the (re)interpretation of the past frames the potential political solutions of the present challenges. These questions are analyzed in the context of the post-socialist Hungary, based on focus groups (n=49) and a survey (n=1200) made with young people in MYPLACE project (FP7-266831). Democratic, passive, fundamentalist patterns of memory and consequent political cultures are identified; also the structural and phenomenological explanatory factors of these idealtypes are introduced.

## Changes of Value Orientations and Resources of "the Social Capital" of Students in the Conditions of Crisis

Nailya Malikova, Russian state university for the humanities | [nrmalikova@mail.ru](mailto:nrmalikova@mail.ru)

Elena Irsetskaya, Russian state university for the humanities | [e.irs@rggu.ru](mailto:e.irs@rggu.ru)

Representatives of different branches of social and humanities sciences make modern cross-cultural studies of social trust relatively autonomously. This subject matter has become recently particularly urgent, and it is often included in the context of studying of transformation of social identities, formation of new layered socio-cultural identities, spread of such phenomena as perception of productive communication, socio-economic, political, international cooperation. Let us turn to the results of a sociological survey of students of the five countries (Russia, Czech Republic, Lithuania, Poland, Ukraine) given by our Polish colleagues from the University of Szczecin. Using provided data we come to the

following conclusions. Polish students dominate as to measure of level of positive social contacts. As to institutional level, trust in the main political, public institutions falls in all analyzed countries, but Poles express a little more tolerance, while Ukrainians are the most critical. Confidence indicators of Russian and Ukrainian students are very similar in all parameters. As to worldview, about one third of the Russian and Ukrainians have formed general attitude to trust people in principle (35%). The most significant differences are found in the world perception exactly of Russians. In general, Russians demonstrate a greater degree of "horizontal" trust (family, friendship, local social network

communication). To a much less extent they tend to a "vertical" trust (government, police, court, all branches of government). The leading factor is the level of interpersonal trust.

Exactly with it young people associate sense of well-being, growth, well-being, life satisfaction.

## 04RN30 - Social Mobility

Chair(s): Aurelie Mary

### Exploring the Epistemological Fallacy: Subjectivity and 'Class' in the Lives of Young People Living in Disadvantaged Neighbourhoods

Alan France, University of Auckland | [a.france@auckland.ac.nz](mailto:a.france@auckland.ac.nz)

The relevance and continuation of class in late modern society has been at the heart of contemporary debates in sociology. Beck and others argue that major social changes are impacting on individuals relationships with status-based classes. Individuals have been 'disembedded' from traditional communal contexts and re-embedded into new modes in which the ability to create life paths and new identities is achieved through individual reflexivity. How these changes and developments are impacting on the class relationships and trajectories of young people are an important area of debate. It has been suggested that while the young see individual

solutions and choices as central to their lives, outcomes are still strongly connected to social class. This contradiction has been seen as an 'epistemological fallacy' where a disjuncture between objective and subjective dimensions obscures underlying class relationships. This paper draws on data collected from an ESRC research programme on Pathways into and out of crime and the work of Pierre Bourdieu to explore understandings, meanings and relevance of class in young people's lives. The paper depicts how class is subjectively impacting on young people's educational and occupational choices and how it is embedded in their everyday reflexivity.

### Three-Generational Mobility in Germany and the USA

Florian R Hertel, University of Bremen | [fhertel@bigsss-bremen.de](mailto:fhertel@bigsss-bremen.de)

Olaf Groh-Samberg, University of Bremen | [ogs@bigsss-bremen.de](mailto:ogs@bigsss-bremen.de)

Our presentation aims at the comparative analyses of intergenerational class mobility across three generations in Germany and the USA. Both countries have been analyzed in comparative social mobility studies before, but most cross-country research restricted themselves to European countries due to data comparability (Erikson/Goldthorpe 1992; Breen 2004). We constructed two datasets comprising information on the occupational (EGP) class of

grandparents, parents and children using the Panel Study of Income Dynamics (PSID) and the Socio-Economic Panel (SOEP). We find that in both countries grandfathers' class is directly associated with their grandchildren's social position. We propose three possible mechanisms which could explain the observed multi-generational mobility patterns. First, we consider the role of class-specific resources for mobility strategies. Second, we suggest a

more general explanation by integrating grandparents' class into the reference frame for mobility decision. Third, we argue that multi-generational class associations could be the result of categorical inequality based on race or ethnicity. We find that absolute mobility rates across three generations are class specific. Immobility is most frequent in the lowest and highest classes. Log-linear

analyses show that in both countries significant grandfather effects foster immobility in the working classes and limit mobility from working to non-manual classes. These effects partly lose significance if we only study white US-Americans and native Germans. Combining the two national mobility tables, we find that the pattern of three-generational mobility is similar in both countries.

## Early Career Patterns and Wages in Italy: a Longitudinal cross Cohort Comparison

Emanuela Struffolino, University Milan-Bicocca | [e.struffolino@campus.unimib.it](mailto:e.struffolino@campus.unimib.it)

Michele Raitano, Sapienza University of Rome | [michele.raitano@uniroma1.it](mailto:michele.raitano@uniroma1.it)

Since the '80s, labour market deregulation has been promoted as the most suitable way to cope with labour market rigidity and high unemployment rates all over Europe. The introduction of new contracts and the revision of job security regulation have represented the main channel of adjustment to macro-economic shocks in Europe, primarily globalization and economic recessions. However, the flexibilization through deregulation has led to new inequalities and higher level of uncertainty for workers and job seekers. In order to detect vulnerable profiles of younger workers, it would be more conducive to consider not just single transitions but rather the trajectories conceived as a series of episodes of different labour market states. The paper focuses on the first eight years of labour market participation. By using the sequence analysis, we build a

typology of trajectories, providing a deeper understanding of how different types of careers are distributed across the cohorts and how individual characteristics affect the likelihood of experiencing disrupted or stable careers. Finally, we consider the association between trajectories, family background and wage penalties. By using the AD-SILC panel data, a comparison between four Italian workers' cohorts is carried out. AD-SILC matches information from Social Security registers (INPS) and the Italian section of the EU-SILC survey. The analysis shows that i) the access to specific trajectories is strictly associated to individual socioeconomic characteristics, ii) a cumulative disadvantage applies to intermittent careers both in a short and mid-term perspective, iii) in Italy the family background is associated to a significant wage penalty, even after completing education.

## Social Mobility in Post-Industrial Times?

Florian R Hertel, University of Bremen | [fhertel@bigsss-bremen.de](mailto:fhertel@bigsss-bremen.de)

In the last 40 years, western industrialized societies underwent dramatic social change with regard to working opportunities. Skill biased technological change leads to an increase of professional and service occupations, while old fashioned Fordist jobs

started to vanish. I analyze how social mobility chances have been affected by occupational change in a set of two least different countries: the USA and Germany. Standard social mobility literature indicates that absolute mobility chances across western industrialized nations

became more similar, whereas relative mobility chances remained rather stable. I argue that this may be a methodological artifact. The EGP class schema usually employed in the analysis of social mobility collapses manual and low grade service occupations. Thus, it hardly accounts for the changing occupational distribution and is categorically unable to detect the impact of structural change on mobility chances. For my presentation, I analyze the development of mobility chances in both countries over the last 40 years based on the class schema proposed

by Esping-Andersen (1993). It differentiates between the managerial/manual and the professional/service hierarchy therefore allows to analyze how mobility chances within each occupational sector but also between occupational sectors changed in both countries. The analyses are based on panel data from the SOEP and the PSID. Log-linear analysis will be applied in order to model the existing mobility barriers and channels. Further analyses incorporate the role of education for mobility within each hierarchy and across the Fordist/post-Fordist cleavage.

## **a06RN30 - Young People's Future Aspirations**

Chair(s): Lorenza Antonucci

### **A Self-Orientated Generation - Professional Careers as Subjectivized and Structured Self-Projects**

Alexandra König, University of Wuppertal | [akoenig@uni-wuppertal.de](mailto:akoenig@uni-wuppertal.de)

Doris Bühler-Niederberger, University of Wuppertal | [buehler@uni-wuppertal.de](mailto:buehler@uni-wuppertal.de)

A self-orientated generation - Professional careers as subjectivized and structured self-projects Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will show that professional careers are subjectivized, structured self-projects. The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The study is designed to allow a comparison of adolescents in different fields of education in Germany. We want to discuss the following points: 1) The talk of a new "lost generation" is an inadequate label for the young generation (in Germany). Instead, we identified a "self-orientated generation". By

self-orientation we mean that decisions and evaluations of decisions and situations are orientated predominantly towards the self. 2) The longitudinal study shows that a high self-orientation can be a capital or an obstacle in different fields of education. 3) A more in-depth analysis taking into account the structured opportunities and ambitions of adolescents shows that chances to design and realize a subjectivized self-project differ, depending on one's social position and the field of work. The self-project is not orientated towards a "youth identity" but towards an occupational identity as an artist, painter, hairdresser or teacher. In our paper we will not discuss a youth culture but the "culture" of specific fields and the relevance for the adolescents.

## **An Ethnographic Study of Career Aspirations amongst Students Studying Level 3 Sports Courses at a Further Education College in England**

**Daniel J Connolly**, University of Lincoln | [danconnolly1991@gmail.com](mailto:danconnolly1991@gmail.com)

**Adam B. Evans**, University of Lincoln | [adevans@lincoln.ac.uk](mailto:adevans@lincoln.ac.uk)

**Jacquelyn Allen-Collinson**, University of Lincoln | [jallencollinson@lincoln.ac.uk](mailto:jallencollinson@lincoln.ac.uk)

There is currently a dearth of research into how sports students' career aspirations are formed during their post-compulsory education. This paper is based on an ethnographic study of sport students' habitus and career aspirations. Two first-year cohorts on two different courses at a Further Education College in England were selected to participate in the in-depth study. The paper provides an analysis of the contrasting subcultures emergent within these groups, and how specific cultural practices affect students' career aspirations vis-à-vis the current global recession and economic crisis. Utilising a Bourdieusian framework, the study is based upon formal and informal (auto)ethnographic observations and semi-structured group interviews, and aims to unearth the internalised, often latent cultural practices that impact upon these students' diverse career

aspirations in the field of further education in sport. The paper reveals how the two cohorts are situated within a complex field of relations; where struggles for legitimisation, kudos, academic accomplishment and numerous forms of lucrative capital are habituated. Despite the two courses being of equivalent academic level, the scholastic and career aspirations of the two groups appear to differ considerably. One cohort is eager to demonstrate aspirations of progression into Higher Education, whereas the other cohort appears content with achieving the lowest grades "required" to pursue full-time employment. The study will offer academics and practitioners valuable insights into both the career aspirations of these students, and also their attitudes towards their educational field and their contrasting work ethics.

## **Young People and the Negotiation of Future Aspirations and Social Change in Family Context**

**Sanna Aaltonen**, Finnish Youth Research Society | [sanna.aaltonen@nuorisotutkimus.fi](mailto:sanna.aaltonen@nuorisotutkimus.fi)

Young people make choices related to their education and career but, paraphrasing Karl Marx, not in circumstances of their own choosing. While the current social era characterized by economic crises provides common circumstances to all the impacts of social change are differentiated between different groups of young people. This paper aims to elaborate how the big picture, social circumstances and social change are understood on the micro level and in relation to personal choices. The starting point of the paper is that both parents and older siblings work as sources of information, material

support and habitual examples of adulthood for the young people. Thus, the focus of the paper is to what extent young people and their family members convey their awareness of societal change in relation to young people's future aspirations. The perceived involvement of family members is examined from a generational perspective by paralleling how the guidance and inspiration of the previous generation, parents, differs from the one of young people's own generation, their older siblings. In particular, the paper sheds light to the aspirations of working class young people in the margins of education as well as to the

hopes and suggestions of their older siblings and parents. It draws both from interviews of Helsinki-based young people who were participating in targeted services offering

support to complete comprehensive school and to prevent marginalization, and additionally from interviews conducted with their parents.

## Looking into the Future. Young People's Capacity to Aspire

**Simona Isabella**, University of Cagliari | [isabella@unica.it](mailto:isabella@unica.it)

**Valentina Cuzzocrea**, University of Cagliari | [cuzzocrea@unica.it](mailto:cuzzocrea@unica.it)

**Giuliana Mandich**, University of Cagliari | [mandich@unica.it](mailto:mandich@unica.it)

**Ester Cois**, University of Cagliari | [ester.cois@unica.it](mailto:ester.cois@unica.it)

**Myriam Ferrari**, University of Cagliari | [myferrari@unica.it](mailto:myferrari@unica.it)

Young people's ways of projecting themselves into the future are the grounds on which their social identity is built. Existing literature explores young people's temporalities and the way they plan their future in a context of increasing uncertainty (Leccardi, 2009; Melucci, 1996). Yet, the intersection between the ability itself to plan and ideas or notions of the future deserves further exploration. The relation between the two is often configured as a critical one with many declinations, one of which being the process of presentification, whereby the ability to build a future project is substituted by a constant adaption to the present in order to promptly turn chances into opportunities. Drawing on Appadurai's 'capacity to aspire' (2004) and Bourdieu's distinction between practical and reflexive anticipation (1997), we expand on this by conceptualizing young people's efforts to

imagine their future as able to show the capacity to 'realistically' project their present opportunities and as an ability to employ socially relevant narratives. Due to the severe difficulties of the current economic situation in Italy, where our data is collected, we aim to discuss whether (re)-configurations of presentification are given and what other strategies seem to emerge. Methodologically, the theme of the future is explored through the analysis of ca. 200 essays on the future, a method used elsewhere on similar topics (amongst others, see Lyon & Crow 2012). In this presentation, we present the research project where these issues are framed and discuss the first findings in an effort to highlight what sort of capacity to aspire emerges from the narratives of the young people who wrote the essays in 2012.

## b06RN30 - National Values and Social Identities

Chair(s): Dirk Schubotz

### National Identity and Social Representations of Related Concepts - the Case of Hungary

Istvan Muranyi, University of Debrecen | [muranyi@chello.hu](mailto:muranyi@chello.hu)

The Hungarian survey fieldwork of the MYPLACE project (FP7-266831) was conducted at two different locations: in the historic town of western-Hungary (Sopron) and in the former industrial town of eastern Hungary (Ózd) the latter being a much less favorable economic and social environment for the socialization of young people living there. As questions related to national identity were also incorporated into the research questionnaire it gave us the opportunity to investigate the national identity of groups having a different socio-cultural background. In addition, with the purpose of exploring the social representation of further notions additional concepts were also incorporated into the Hungarian questionnaire: about politics, Hungarian, democracy, radicalism, Gypsy, history, freedom and justice.

Only a few attempts could be mentioned with the objective of specifying the nature of the assumed link between group, social representation and national identity formation. Most of these researches however were narrowly geared towards describing the content of social representations rather than trying to explain why do they take form they way they do, how do they originate, what is their distribution and use both within and between groups. The objective of the statistical and text analysis was to try to obtain answer to the basic question of the research: what is the relationship between the social representations of key categories and the characteristics of national identity formed in different socio-cultural environments.

### Building Youth Culture and Identity through Food Sharing among Peers: Horizontal Socialization and Sociability

Giada Danesi, EHESS, Paris | [danesi.giada@gmail.com](mailto:danesi.giada@gmail.com)

Commensality is an essential act in order to build social ties. A common food produces the same effects of a common origin (Durkheim, 1912; Fischler, 2011). In this paper, our aim is to present and discuss how food sharing between peers in this age group allows the building of youth culture and identity. These aspects are addressed thanks to an ethnographic research of commensal forms and meanings of food sharing among French, German and Spanish young adults. Data were collected through in-depth interviews, participant observation and video recordings of eating practices in Barcelona, Berlin, Lyon,

Madrid and Paris. Physiological, food and social needs evolve during life course. In each society, there are usages determining how these needs are satisfied. These aspects change the social relations of the individuals with the others members of the group and also the expected activities at different steps the life cycle (Richards, 1932). Youth is a liminal phase (Van Gennep, 1908) characterized by ruptures, transgressions and innovations. It is a crucial and critical step in the process of the identity production and self-construction. Horizontal socialization and sociability play an important role in the process of young people

emancipation, the acquisition of food and social autonomy and the building of new social belongings. Thanks to “thick description” (Geertz, 1973) of eating practices and commensal relations of young people, we approach in this communication the place of

food in youth social practices, the specificities of lifestyles and living conditions of young adults impacting eating patterns and the crucial role of peers group in this specific step of life course.

## **Same as it ever Was? The Impact of the Belfast Flag Protests on Young People’s Attitudes to Community Relations and their National and Religious Identities**

Dirk Schubotz, Queen's University, Belfast | [d.schubotz@qub.ac.uk](mailto:d.schubotz@qub.ac.uk)

Young Life and Times (YLT) is an annual study of 16-year olds in Northern Ireland undertaken since 2003. Over this period, the YLT survey has monitored attitudes to community relations. The fieldwork for the 10th YLT survey was undertaken in November and December 2012 and coincided with the Belfast City Council decision to cease flying the British flag (The Union Jack) all year round and to only fly it on designated days instead. This decision has sparked prolonged and partially violent protests from parts of the Unionist/Protestant community who see this decision as a further concession to Irish Nationalists and Republicans and as a watering down of Northern Ireland’s constitutional Britishness. Many young people were involved in the street protests and marches as well clashes with the

police. But how are these events reflected in the attitudes of the general population of young people? The 2012 YLT survey provides an opportunity to investigate how current events and affairs, such as these flag protests, impact on young people’s attitudes to community relations. In this proposed presentation I will take a look at the times series data on community relations collected over ten years in the YLT survey. Over time we observed an improvement in cross-community attitudes and increase in contact and friendships between Catholics and Protestants as well as a rise in a ‘Northern Irish’ national identity. But did the flag protests result in a worsening of the relationships and a stronger identification with the traditional Irish and British identities respectively?

## **Teenagers on Social Networking Sites and Their Construction of Social Class**

Natalia Waechter, University of Eastern Finland | [waechter@ihs.ac.at](mailto:waechter@ihs.ac.at)

Recent research on social networking sites (SNSs) was able to show that young people use SNSs for their identity development. While some studies focused on gender identity, other social categories such as migration background or social class have been neglected. Our study with teenagers aged 12 to 19 investigated how the use of social networking sites differs by migration background (with/without) and by different educational levels. Using quantitative and qualitative methods (online questionnaire, focus groups and individual qualitative

interviews) we were able to show that the social background does make a difference. Thereby the presentation connects to the subculturalist/subpostculturalist debate, if and how youth cultural activities are influenced by social class. The quantitative results showed, above all, that the young people with higher educational background employ a more diverse use of social networking sites; they reported having several profiles each on different SNS platforms while those young people with lower education are more concentrated on a particular SNS platform. The qualitative

results shed a more detailed light on the different uses: Teenagers with lower education and/or migration background seemed to apply a quite risky behavior, adding as many people as possible onto their friends' list and trying to get in touch with them offline. Their main goal was to evaluate others by their pictures and to

start romantic affairs. In contrast, teenagers with higher education/no migration background use social networking sites only for a short period in the same way while they mainly connect more intense with fewer friends they know from offline contexts.

## c06RN30 - Engaging into Risky Behavioural Practices

Chair(s): Tracy Shildrick

### Boundaries between adult and youth drinking. Comparing drinking geographies from Italy and Finland

**Sara Rolando**, Eclectica, Institute for Training and Research and University of Helsinki | [rolando@eclectica.it](mailto:rolando@eclectica.it)

**Jukka Torronen**, Centre for Social Research on Alcohol and Drugs, Stockholm University | [jut@sorad.su.se](mailto:jut@sorad.su.se)

**Franca Beccaria**, Eclectica, Institute for Training and Research and University of Helsinki | [beccaria@eclectica.it](mailto:beccaria@eclectica.it)

The study applies the concept of 'boundary work' to analyze how young people express their drinking identities and informal norms of drinking by their discussion on proper and improper drinking situations among young people and adults. The analysis is based on 8 focus group interviews with 17 to 24 years of old young (N= 51) conducted in Torino and Helsinki. Results show that in Italy young people do not draw clear boundaries between their own and adults' drinking habits, except for drunkenness, which is seen as normal for young people but not at all for adults. Compared to Italy, in Finland young people express more distance to adults' drinking and separate their drinking habits more noticeable from those of the adults. Moreover, in Italy many boundaries emerged that separate proper and improper drinking by outlining a

shared system of informal norms. In Finland young people did not specify these kinds of informal norms for drinking. In overall, in Finland young people's drinking habits seem to develop more separately from adults as compared to Italy where the youth drinking seems to be more consistently regulated by shared system of informal norms between adults and young people. The study provides insights to better understand the youth drinking cultures in different countries and shed light on the controversial issue of supposed convergence of youth drinking in Europe. It also shows how different cultural traditions and structures contribute to shape different "drinking geographies". Lastly, the study furthers the discussion concerning the comparison in qualitative research.

## Facing the Death. Youth, Rituals and Bodies in Contemporary Society

Alessandro Porrovecchio, University of the Littoral Opal Coast | [alessandro.porrovecchio@gmail.com](mailto:alessandro.porrovecchio@gmail.com)

The aim of my paper is to describe the ritual aspect of adolescents' identity construction. This work moves from a doctoral research held at the University of Turin. The research path was based on the convergence of: quantitative and qualitative methodological approach; online and offline research field; syntagmatic and paradigmatic axis model. In particular, I gathered 20 in-depth interviews, I conducted some focus groups and a web ethnography. Through this approach I had the opportunity to make teenagers capture their speech, trying to bypass the adults' point of view, and to define the teenagers' path on the construction of identity. It seems clear that Western contemporary societies no longer recognize change in status leading to adulthood through some collectively established rites of passage.

In fact, they leave to individuals the honour and responsibility to build and shape the path of their existence through the creation of intimate rites of passage. Those are relatively new kinds of rituals performed in a relatively solitary way, tending to conflict with the established social ethics ("risky" behaviours). One of the most important evidences emerging from my analysis is adolescents' new conception of risk: it seems clear that they are switching from safety objectives, where the tension to reach secure conditions represented the ultimate goal of the process of acquisition of adult roles, to more flexible conditions. It seems now that being able to risk – to face the death – is an essential condition to get ahead in life and to be somebody.

## Young People's Discourses about the Benefits, Opportunities, Dangers and Threats of Digital Technologies

Heidi Annikki Mikkonen, Aalto University School of Business | [heidi.mikkonen@aalto.fi](mailto:heidi.mikkonen@aalto.fi)

This interpretative research examines young people's discourses about benefits, opportunities, dangers and threats concerning digital technologies. The research is based on consumer culture theory tradition and it also takes part to the discussion of transformative consumer research. The theoretical framework consists in identity construction and transhumanism. At this paper the benefits and opportunities as well as the dangers and threats of digital technologies consist of discourses which arise from the data collected from Finnish high school pupils by essays (292) and interviews (20). Four different discourses concerning the topic is presented, and there is a focus on the discourses which support or reject the transhumanistic idea of the

enhancement of intellectual, physical, and psychological capacities. This paper is relevant for many reasons. First, technology plays a significant role in defining the cultural experiences of contemporary childhood and adolescence. Secondly, digital technology has been the most consequential factor in changing young people's lifestyles and consumption patterns and according to this research it plays a crucial part of young people's everyday lives. Thirdly, there is a debate about benefits, opportunities, dangers and threats of ICT to young people in societies, where digital technology is an integral part of adolescence. This paper gives young peoples' – often missing – voice to the current topic.

## Young People, Drugs, Responses and Crises in the Portuguese Context

Mara F. Silva, University of Minho | [mara83@iol.pt](mailto:mara83@iol.pt)

Alice D.A. Matos, University of Minho | [adelerue@ics.uminho.pt](mailto:adelerue@ics.uminho.pt)

Young people today have at their disposal a wide range of psychoactive substances, legal and illegal, which usually use for purposes of socialization, recreation and identity construction. They can acquire them easily in their family environment, school, among their peers, buying from a dealer, on the web or in a Smartshop. The consumptions are now more diversified as well as more complex along with its surrounding social structures. Consumption may have a different spectrum of problematic or addition, as consequence of a dynamic process between a relational triad that includes the subject, the context and the substance/object, however young people usually try to make a risk management when consuming. Through bibliographical review, we

intend to look on the consumption of psychoactive substances used among young Portuguese, in what contexts, and how they are done. Our aim is to identify some risk and protective behaviors, manifested by juveniles when using drugs, based on observation data of young people in recreational environments. The intention is also to understand how the current socio-economic conditions influence these models of consumption and what type of public or private services are available, which functions they assume and provide. Overall, this study aims to understand how the current economic and financial crisis is reflected in the provision of such services and how it modified the trends on the consumption followed by youngsters.

## a07RN30 - Political Attitudes in Situation of Crisis

Chair(s): Steven Roberts

### Political Radicalism in East Germany? Assessing Attitudes and Civic Engagement of Young People in Jena and Rostock

Marius Guderjan, Manchester Metropolitan University | [m.guderjan@mmu.ac.uk](mailto:m.guderjan@mmu.ac.uk)

Robert Grimm, Manchester Metropolitan University | [r.grimm@mmu.ac.uk](mailto:r.grimm@mmu.ac.uk)

The cities of Rostock and Jena have drawn unwanted attention in association with Germany's far right. In 1992, a group of 100 people set on fire an asylum for Vietnamese guest workers in Rostock-Lichtenhagen. The Progrome of Lichtenhagen came to symbolise and stigmatise East Germany as the post-unification playground of the far right. In 2011, East Germany was yet again in the spotlight because of politically motivated crime right. Jena was discovered to be the hometown of members of the National Socialist

Underground (NSU) that is responsible for murders of nine migrants and one police officer between 2000 and 2007. This paper offers firstly a comparative overview of the propensity towards extremist ideologies across Germany. We will assess the validity of the argument that East Germany is the playground of the German far right. Based on the MYPLACE research project, the paper draws on qualitative and quantitative empirical data to examine in how far certain political ideologies continue to inform the attitudes and

the civic engagement of young people in Jena and Rostock. The paper will further investigate how the youth perceives the current economic

climate and the appeal of political radicalism to young people as a result of economic uncertainty and a Europe-wide recession.

## **Young Greeks' politicization and political participation: The long road to disavowal and rejection of the political system**

**Alexandra Koronaiou**, Panteion University of Athens | [alexkoron@gmail.com](mailto:alexkoron@gmail.com)

**Evangelos Lagos**, Panteion University of Athens | [evangelos.lagos@gmail.com](mailto:evangelos.lagos@gmail.com)

**Irini Chiotaki-Poulou**, Panteion University of Athens | [i.chiotaki@gmail.com](mailto:i.chiotaki@gmail.com)

**Alexandros Sakellariou**, Panteion University of Athens | [sociology.panteion@gmail.com](mailto:sociology.panteion@gmail.com)

During the last 35 years, a relatively clear trend towards the sharpening of dissatisfaction with and rejection of the political system and the functioning of democracy seems to characterize Greek youth's politicization and political participation, following similar trends of the general population. Such a trend can be also established taking into consideration the increasing unrest that characterized young Greeks during the same period. This means that the de-legitimization of the political system in general, the increasing disengagement from formal political processes and young Greeks' growing readiness to adopt forms of radical activism need to be integrated to the wider framework of the evolution of the Greek society's now explosive socio-political crisis; one that encompasses and interrelates the gradual exhaustion of all developmental processes with the growing crisis of political

representation and the sharpening of social problems and pathologies related to the deconstruction of social policy. In this context, rising unemployment, the explosion of illegal immigration and the social pathologies related to them are of great importance for the explanation and understanding of Greek youth's political radicalism. Having all these in mind this paper will present some preliminary findings regarding young people's political participation and their attitudes towards mainstream politics and politicians. Furthermore, our goal is to highlight alternative forms of young people's political participation within the current socio-political and economic crisis. These findings are derived from a European Research Program (MYPLACE, Memory, Youth, Political Legacy and Civic Engagement 2011-2015) and based on quantitati

## **The Modes of Political Participation among European Urban Youth The Impact of Precariousness**

**Matteo Bassoli**, Bocconi University | [matteo.bassoli@unibocconi.it](mailto:matteo.bassoli@unibocconi.it)

**Lara Monticelli**, University of Brescia | [monticelli.lara@gmail.com](mailto:monticelli.lara@gmail.com)

Classical studies considered political participation as a mono-dimensional variable. During the seventies scholars showed that political participation is multidimensional (the so-called modes of participation) and specific political cleavages may boost political

participation of specific groups. The informing idea of the present work is that the modes of participation are temporary, geographic and socially bounded. Departing from the new typology developed by Teorell and colleagues, the article stresses the importance of agents,

assessing the modes deployed by European Urban youth. To do so it uses a four-nation comparative dataset (Italy, France, Switzerland and Germany) based on a wide random sample on the youth of four European cities divided into three major groups: long-term unemployed, temporary workers (precarious) and permanently employed youth. Adopting the conventional oblimin-factor analysis political behaviours are clusterized into coherent modes that work according different logics for the overall population. Moreover, using latent class analysis techniques, socio economic status and background variables are

introduced in order to derive some idealtypical profiles. The article highlights the importance of contextual factors in order to understand the logic of diffusion of different modes of political participation. Thereafter it decomposed the sample population according to the three categories assessing the importance of precarious occupational status and its implication in the modes of political participation. The article thus concludes with a typology based on the openness of labour market and the level of political debate about precarious to describe the modes of political participation.

## Precarious Youth and Political Engagement in Portugal

**Nuno Almeida Alves**, Lisbon University Institute | [nalmeidaalves@iscte.pt](mailto:nalmeidaalves@iscte.pt)

**David Cairns**, Av. das Forças Armadas, Lisbon | [david.cairns@iscte.pt](mailto:david.cairns@iscte.pt)

**Ana Alexandre**, CIES-IUL, Lisbon | [ana.alexandre@sapo.pt](mailto:ana.alexandre@sapo.pt)

**Tiago Carvalho**, Av. das Forças Armadas, Lisbon | [tiagomcarvalho@gmail.com](mailto:tiagomcarvalho@gmail.com)

This paper explores political engagement in Portugal, focusing on the youth response to labour market precariousness. In contextualising this theme, we look at the growing marginalisation of youth in the Portuguese labour market, particularly during the on-going economic crisis, highlighting the rise in youth unemployment and issues such as the deregulation of employment law and downgrading of social welfare. To illustrate the youth response to this situation, we utilise results drawn from an ethnographic case study and interviews with members of the *Precários Inflexíveis* activist group, conducted in 2012 and 2013 as part of the European Commission funded MYPLACE (Memory, Youth, Political Legacy and Civic Engagement) project. We look

at the group's actions within the broader context of the Portuguese political sphere in terms of formal and informal political action, including relationships with traditional political organisations (Political Parties) and social movements (including Trade Unions and NGOs). At a subjective level, we also illustrate how group members become involved and participate in political action. In conclusion, despite prior evidence to the contrary, we are able demonstrate that certain young people in Portugal are making a concerted effort to engage with the issue of labour market precariousness in a context of growing marginality for youth in respect to employment.

## b07RN30 - Debates on Determinants of Political Participation 1

Chair(s): Carsten Yndigegn

### Trust, Political Activeness and Participation in Voluntary Associations of 8th Graders in 23 Countries

Martti Siisiäinen, University of Jyväskylä | [martti.siisiainen@jyu.fi](mailto:martti.siisiainen@jyu.fi)

Tomi Kankainen, University of Jyväskylä | [tomi.k.kankainen@jyu.fi](mailto:tomi.k.kankainen@jyu.fi)

The purpose of this article is to compare trust, political activeness and associational participation of lower-secondary students in 23 countries all over the world representing different polity and welfare regimes. The comparison between countries shows that the level of trust and political activeness/level of association participation correlate negatively with each other. The differences between 8th graders and adults in this respect are discussed in the paper. The level of political and associational activeness was highest in Dominican Republic, Thailand and Paraguay, the lowest in Finland, Sweden, and Denmark. Moreover, young people in these Nordic countries are less interested in political and societal issues even though the level of their civic knowledge is on the top of all countries. Differences in the level and type of welfare

state (especially children's level of welfare and their educational rights) are most probably the most important social factors in the explanation of national differences. Bourdieu's theoretical repertoire (especially the concept of the causality of the probable [1974]) was adopted in the interpretation of the differences in trusting and political cum associational activeness between countries included in the analysis. The analyses are based on the ICCS 2009 survey gathered from 140000 students in 38 countries (23 included in the analysis). The response rate was exceptionally high (see ICCS 2009). These data provide information on the willingness of 8th graders to actively participate in the civil society and on their attitudes towards citizenship and the civil society.

### Civil Knowledge and Political Participation of Youth in two Regions Slovakia

Ladislav Machacek, University of Cyril and Metohdus in Trnava | [ladislav.machacek@ucm.sk](mailto:ladislav.machacek@ucm.sk)

The sociological survey of the youth in Slovakia since 2004 transferred its attention from the issue of civil associations of children and youth also to school self-governments of pupils and students as an important place of civil education of European citizens. We built upon the assumption that civil knowledge has a material importance for the purpose of effective civil participation. Thus, in the long term, we have been verifying the ICCS 2009 research hypothesis according to which "higher level of civil knowledge guarantee higher level of participation of young people in

various forms of civil and political life at school and in the society. "New data from MyPlace project in Slovakia help identify the breadth of forms of socio-political activism among young people in two specific region (Trnava and Rimavská Sobota 1200 surveying young people), mainly measure respondents' knowledge, attitudes towards and experiences of right extreme politics. The MyPlace project survey of young people commenced in late 2012 and continued into early 2013, surveying 18,000 young people across 30 field sites in 15 regions (14 countries).

## Political Participation of Young people in Finland

Vesa Puuronen, University of Eastern Finland | [vesa.puuronen@uef.fi](mailto:vesa.puuronen@uef.fi)

The paper presents empirical results of a survey research, which has been conducted during end of 2012 and beginning of 2013 in two research sites in Finland. The sites were middle size city of Kuopio and predominantly rural area (Pielisen Karjala) in Eastern Finland. The age range of the respondents was from 16 to 25 years. The aim of the study was to analyse the relationship between certain background variables (age, social class, educational level and gender) and political participation of youth in order to measure the level and types of political participation. Political participation of youth has been studied

several times since 1960s in Finland. One purpose of this study was to reveal the trends in youth political participation. The results show that political participation vary according to the social background, age, educational level and gender of the respondents. Younger ones were less involved in political activities. One of the interesting features of political preferences of young people was that populist right wing True Finns party has high popularity among young people. Generally young people are quite indifferent regarding formal political participation. The study is part of EU FP7 project MYPLACE.

## Youth, Political Socialisation and Everyday Life

Carsten Yndigegn, University of Southern Denmark | [cy@sam.sdu.dk](mailto:cy@sam.sdu.dk)

Klaus Levinsen, University of Southern Denmark | [khl@sam.sdu.dk](mailto:khl@sam.sdu.dk)

This paper aims to explore and understand the social processes that shape political socialisation of European youth. The theoretical point of departure is the classical literature of political socialization, arguing that family and peer groups are among the most important agents (or agencies) of personal political experiences. Current research on childhood and youth political socialisation is reconsidering the role of the parents and family environment. One of the key questions is to what extent parents pass on political values and habits to their offspring, and how the upcoming generations differ politically from their predecessors. However, there seems to be a lack of knowledge concerning social dynamics and interaction in young people's every day experience of political life. While we recognize the importance of parental socialisation, we challenge the typical

assumption of a "one-directional" intergenerational transmission of political values from parent to child. Besides outlining relative contributions by different agents of political socialisation, we aim to explore the contexts of political socialisation by asking how political issues are raised in everyday environments, and what kind of political issues are discussed? The paper triangulates data from a questionnaire survey (n=1200), and 60 qualitative in-depth interviews of young Danes; data that has been gathered for the MYPLACE project. It is thereby possible to make a coherent analysis at different levels, which both maps the networks of political socialisation, such as family, friendship groups and social media, but also explore how young people gain and develop information and knowledge about social and political issues.

## c07RN30 - Debates on Determinants of Political Participation 2

Chair(s): David Cairns

### Making Sense of the 'Difficult' Past: Transmission of Political Heritage and Memory-Work among Young People across Europe

Anton Popov, University of Warwick | [a.popov@warwick.ac.uk](mailto:a.popov@warwick.ac.uk)

Dusan Deak, University of SS Cyril and Methodius, Skopje | [gzeleznica@gmail.com](mailto:gzeleznica@gmail.com)

The paper draws upon the transnational comparison of the production and transmission of the 'second hand' memories about the problematic periods in the national history among young people across Europe. The focus here is on the selective and intersubjective process participating in which young people become socialised in particular mnemonic communities. Arguably, youth's internalisation of political values and ideas is historically and culturally conditioned and is a result of their (dis-) engagement with the 'difficult' pasts of

their countries. Our meta-ethnographic analysis of regional case studies questions the correlations between the 'totalitarian' national pasts and popularity of radical political ideas among young people there. It also maps common and different features in transmission of political heritage across European regions which share 'traumatic' or 'problematic' historical periods evaluating various mediums of mnemonic socialization (e.g. museums, archives, family memorial practices, school curriculums, etc.).

### Institution Trustworthiness, Political Efficacy and Justification of Violence as Determinants of Youth Civic Participation

Renata Franc, Ivo Pilar Institute of Social Sciences, Zagreb | [renata.franc@pilar.hr](mailto:renata.franc@pilar.hr)

Vanja Medugorac, Ivo Pilar Institute of Social Sciences, Zagreb | [vanja.medugorac@pilar.hr](mailto:vanja.medugorac@pilar.hr)

Marko Mustapic, Ivo Pilar Institute of Social Sciences, Zagreb | [marko.mustapic@pilar.hr](mailto:marko.mustapic@pilar.hr)

Primary goal of the paper is to explore the validity of various existing differentiations of youth civic participation in terms of establishing similarities and differences in their possible determinants. Specifically, the paper will explore usefulness of differentiating between normative and non-normative youth participation or institutionalized and electoral forms of political participation versus non-institutionalized forms of participation. Additionally, the differentiation between violent collective participation and nonviolent collective participation will be explored. Paper will be based on Croatian survey data collected within MyPlace project. Data were collected by face to face interviews in two socioeconomic

contrasting areas of city of Zagreb, from a random sample of young people aged between 16 and 25 (N=600 for both locations, total N=1200). Political participation measure encompassed 23 specific activities ranging from signing a petition to participating in a violent political event, during the last 12 months. In addition to sociodemographic variables and variables of political interest, paper will explore institution trustworthiness, political efficacy and justification of violence as main possible determinants of different forms of participation, taking into account multidimensionality of these construct. Specifically, the paper will explore the structure of trust towards 13 different

institutions or organizations and perceived efficacy of 11 different political activities and their impact on different forms of youth civic participation. With regard to exploring the

difference between violent and nonviolent collective participation the paper will explore the justification of violence as antecedent too.

## Democracy and Tolerance in Georgia: Perceptions, Practice and Civic Engagement of Young People

Tinatin Zurabishvili, CRRC Georgia | [tina@crrccenters.org](mailto:tina@crrccenters.org)

Tamar Khoshtaria, Caucasus Research Research Centers (CRRC), Georgia | [tamuna@crrccenters.org](mailto:tamuna@crrccenters.org)

During the past 20 years Georgia has been struggling to form democratic institutions and strengthen civil society. Parliamentary elections on October 1, 2012 were the first elections in Georgian history, when the change of the government was the result of peaceful elections, rather than a revolution. This could mean Georgia's first significant step towards democracy. In this context, it is particularly important to understand the attitudes and perceptions of young people, whose political values are in the process of formation. Memory, Youth, Political Legacy and Civic Engagement (MYPLACE) project (<http://www.fp7-myplace.eu/>) collected data on values and practices of youth immediately after the elections and provide unique data. The survey was conducted in two Georgian cities by The Caucasus Research Resource Centers (CRRC - <http://www.crrc.ge>), where a total of

1200 young people aged 16 to 25 were interviewed. In addition, in-depth interviews were conducted with 60 survey participants. At the conference, we will present regression analysis showing whether democratic attitudes, perceptions and values, including level of tolerance of young people, have an impact on their civic engagement. Using the data of qualitative interviews conducted with the same respondents, we will additionally provide respondents' own explanations of how they understand democracy, which democratic values they appreciate the most and how their attitudes are reflected in their civic engagement. Overall, comparison of quantitative and qualitative findings will help us to get the most accurate understanding of what democracy actually means to youth in Georgia.

## d07RN30 - Right-Wing Movements, Extremism, Populism

Chair(s): Gary Pollock

### Populism, Ideology and Contradiction: Mapping Young People's Political Views

Gary Pollock, Manchester Metropolitan University | [g.pollock@mmu.ac.uk](mailto:g.pollock@mmu.ac.uk)

Mark Ellison, Manchester Metropolitan University | [m.ellison@mmu.ac.uk](mailto:m.ellison@mmu.ac.uk)

Populism is often used pejoratively to denote a poorly grounded political ideology it needs, however, to be taken seriously as it is important in its own right. Forms of populism have long been a component of political discourse because they often subvert the ideologies of the main parties. The subversion of traditional politics by protests and new social movements is closely associated with young people and this makes them central to shaping new forms of participation. We use

survey evidence from fourteen European countries to explore the ways in which young people's political views and activities as well as those of their friends and family contain an apparently contradictory mixture of positions. While they appear incoherent in terms of traditional party ideology, these views often contain a logic which is underpinned by notions of populism but remains, as yet, poorly understood.

### Georgian Youth: Rise of Xenophobia

Tamar Zurabishvili, Tbilisi State University | [tamar.zurabishvili@gmail.com](mailto:tamar.zurabishvili@gmail.com)

After the dissolution of the Soviet Union, like many other former USSR republics, Georgia found itself rapidly impoverished. Economy of the country collapsed, two inter-ethnic conflicts in Abkhazia and South Ossetia in the early 1990s lead to the increase in the out-migration, with Georgian citizens starting emigration en masse not only to Russia, but to the Western European countries, the US and Israel. It was not until recently, that immigrants from various countries started coming to Georgia - to live, to study, to work and to invest. However, attitudes of the Georgian population to the newly arrived immigrants has not been studied yet. This paper tries to fill this gap by examining the opinions of Georgians towards newly arrived immigrants on the example of the Georgian

youth (16-25 years old), since it is the young generation, that in many societies, is more open and have more liberal attitudes than the older generations. The paper, however, argues that young Georgians are predominantly intolerant towards newly arrived immigrants, express xenophobic attitudes and are functioning in the realm of nationalistic discourse, which requests ban on ownership of Georgian land to foreigners, and changes in the immigration policy, which by now is rather liberal. The papers will analyze both qualitative and quantitative data of MYPLACE study, conducted in Georgia in Fall, 2012. Quantitative component consisted of 1200 structured interviews, and qualitative - of 60 in-depth interviews.

## Youth Right-Wing and Extremist Activism in Estonia

Marti Taru, Tallinn University | [marti@iiss.ee](mailto:marti@iiss.ee)

Recent decades have witnessed rise in right-wing political activism in Europe. Europe is a fairly heterogeneous region culturally and historically and there are considerable variations also across degrees and forms of (youth) support to right-wing movements and ideologies. In some countries populist political forces are elected into legislative bodies of the country, in other countries researchers have to focus on reasons of virtually non-existence of such movements. Estonia belongs to the latter group of countries with weak extremist movements. Nevertheless, since Estonia is a member of European Union, young people in the country are facing similar challenges and have similar opportunities as their peers in other regions of Europe. This paper focuses on

identifying patterns and types of political activism of 16-25 year old Estonians. Special attention is paid to exploring three groups: a) highly active youth b) protesting youth and c) violent youth. The main analytical tools for empirical analysis are cluster analysis and cross-tables. Empirical analysis will be conducted using data from a large-scale project MYPLACE - a random sample of 1 200 young people aged 16-25 years collected in late 2012 and early 2013. Importantly interviewees come from two contrasting locations in the country, making it thus possible to weigh significance of cultural and socio-economic factors as explanations of youth (right-wing, extremist) activism.

## Support for Populist and Far Right Parties and Ideology among Youth in Europe

Inta Mierina, University of Warsaw | [inta.mierina@uw.edu.pl](mailto:inta.mierina@uw.edu.pl)

Ilze Koroleva, University of Latvia | [Ilzek@petijums.lv](mailto:Ilzek@petijums.lv)

The last decade has seen a notable increase in right wing extremism and support for populist radical right parties across Europe. Young people are often at the forefront of right wing extremist movements and have been shown to be especially receptive to radical ideology. Drawing on a new comparative dataset of 14 European countries, gathered as part of the MYPLACE project\*, this article explores young people's support for and involvement in nationalist, radical right parties and their activities. Considering that not all countries in Europe have successful right wing parties, this study also looks at the appeal of extreme right

ideology (Mudde 2000) to youth in Europe. Thus, we distinguish clusters of active supporters, "latent" supporters, and non-supporters of populist and far right parties, and use multi-level regression analysis (15 000 individuals clustered in 28 localities) to investigate which individual or macro-level factors are associated with a higher propensity of young people getting involved in far right and populist movements. \* MYPLACE (Memory, Youth, Political Legacy And Civic Engagement) project is funded by the 7th Framework Programme of the European Union. Grant agreement no: FP7-266831.

## e07RN30 - Political Participation - Old and New Forms

Chair(s): Kirsty Finn

### Young People, the 'Non Politics' and New Cleavages

Andrea F Pirni, University of Genoa | [Andrea.pirni@unige.it](mailto:Andrea.pirni@unige.it)

The relation between youth condition and political culture has been greatly investigated in empirical research. The studies on the processes and paths of political culture reproduction and of political socialization have benefited from the relevant works by Percheron, Muxel, Fournier, Galland and Mauger in France; with regard to Spanish sociology, must be considered the researches by Benedicto and Moran, on the new relation between young people and citizenship, and by Tezanos, on the topic of young population social exclusion; in Germany the works by Hoffmann-Lange have made possible to approach the topic of young people political culture from an innovative point of view; In England, the theory of "structured individualization" developed by Furlong and others provides an interpretative tool in which are bound together very promisingly the issues

of the reflexive transformation of culture and political institution - according the general hypothesis theorized by Beck and Giddens - and those of the transformation of the youth identity. The Italian contribution to the sociological analysis on these issues is still partial: the dimension of political culture is mainly studied in the context of general descriptive reports on the youth condition in Italy. In this theoretical framework, this paper using empirical data aims to show two dynamics, deeply connected, leading to the 'non-politics' among new generations: the political individualization and the privatization of public sphere. Then these dynamics are linked with the present Italian context to focalize new cleavages between young people and politics, society and main culture. Finally some scenarios will be draw up n a comparative perspective.

### Young People's Representations of Violence in Contemporary Italy

Ilenya Camozzi, University Milan-Bicocca | [ilenya.camozzi@unimib.it](mailto:ilenya.camozzi@unimib.it)

Sveva Magaraggia, University Milan-Bicocca | [sveva.magaraggia@unimib.it](mailto:sveva.magaraggia@unimib.it)

The present financial crisis in Europe is affecting both the socio-political constellations and the cultural universes of contemporary societies. Its effects seem to intensify the difficulties for social actors - and in particular for young people - in defining long-standing life-projects as well as in maintaining inter-generational trust. The paper aims to point out the relationship between this contemporary panorama and the representations of violence within the relational world of young people and, consequently, to analyse the possible new thresholds for the attribution of legitimacy to

violent behaviour. The paper intends to understand whether, and how, the features of uncertainty, de-standardization and redefinition of youth also influence the meanings attributed to violence and its representations among young people. The reflections we present are based on a qualitative research (participant observation, narrative interviews and focus groups) conducted in Milan in 2011 with two different age cohorts: a) 16-18 years old - in the final years of upper-secondary school; b) 22-24 years old - in the period in which experience of

the social world is acquired with increasing autonomy. We will present the preliminary results of our research focusing on two dimensions: intergenerational relations (above all with teachers and parents) and gender (among peers). As far as the first dimension is concerned, it emerges a new and specific

relationship between generations: strongly conflictual but nevertheless latent and unexpressed. With regards to the second dimension, it emerges a persistence of gender stereotypes affecting both the representations of violence and its dynamics between young women and young men.

## **The Idea of the Youth Council: Towards a genealogy of children and young people's participation in liberal democracies**

**Ana Beaumont**, Macquarie University | [ana.beaumont@mq.edu.au](mailto:ana.beaumont@mq.edu.au)

Youth councils now represent the most common type of children's formal participation in local government structures. However, there is little account of their historical beginnings: where does the idea of the youth council come from? Drawing on historical records and original research, this paper explores the development and evolution of the youth council in England using a diachronic approach and the historical, analytical perspectives of Michel Foucault. The aim of this approach is to trace the genesis of the youth council over time in order to provide a more nuanced understanding of changing participation practices. Similarly, the research engages with

often taken-for-granted narratives of children and young people's participation. Sometimes unexpected, the insights afforded by this approach lead us to question the novelty of a concern with youth councils, children and young people and their participation. Relevant to this approach are adult motivations, and the 'political' imperatives and influences of the day. The inquiry is also timely, as there is some controversy surrounding the origins and the birth of the youth council in modern liberal democracies. Background: This paper draws on PhD research conducted at Macquarie University under the supervision of Professor Mitchell Dean.

## **Two Worlds of Participation**

**Britta Busse**, University of Bremen | [bbusse@iaw.uni-bremen.de](mailto:bbusse@iaw.uni-bremen.de)

**Jochen Tholen**, University of Bremen | [jtholen@uni-bremen.de](mailto:jtholen@uni-bremen.de)

**Alexandra Hashem-Wangler**, University of Bremen | [awangler@iaw.uni-bremen.de](mailto:awangler@iaw.uni-bremen.de)

Germany's political system is, in large part, based on John Stuart Mill's (1958) idea of a representative democracy – which, in its optimal shape, aims at involving people in policy-forming processes and promoting civic competencies for a successful democracy. However, the constitution of a parliamentary democracy as we have it in Germany fosters tendencies towards a professionalization of participation, which leads to a strong cleavage between elites and the rest of the citizens. For a functioning parliamentary governmental

system relatively well organized parties, qualified political representatives and disciplined party factions within the parliament are necessary, but not sufficient. Within the large scale EU project MYPLACE, we analyze different forms of youths' political and social participation in two socioeconomically different regions. Coming from our empirical quantitative and qualitative data including ethnographic studies we seek to show that this political culture fosters the existence of parallel worlds – where, on the one side, there

are the statutory regulated and established forms of engagement, with its qualified members, and, on the other side, there are young people who rather engage in projects and institutions that display a form of self-organization that is distant from conventional political engagement patterns. Moreover, this split between association-lobbyism and

“unprofessional activism” is characterized by only little interexchange and thus could endanger the essence of democracy. We will develop a typology of different forms of political engagement among German young people to better explain the above mentioned parallel worlds and its consequences.

## f07RN30 - Youth Activism

Chair(s): Tracy Shildrick

### Risks and Pleasures on Scenes of Youth Activism in Russia

**Elena L. Omelchenko**, National Research University Higher School of Economics | [omelchenkoe@mail.ru](mailto:omelchenkoe@mail.ru)

In this presentation I am going to explore specific young people's experience of being part of different kind of youth cultural scenes in St. Petersburg. Particularly I will focus on three activities: nationalistic youth organization “Russian run”, community of anarchist, governmental youth organization “Vse doma”, which have been subject of three case studies (60 in depth interviews) within project “Memory, youth, political legacy and civic engagement” (FP7 project, 2011-2015). These three activities represent very different segments of current youth social involvement. We are applying solidarity approach to explore these forms of youth groups. The key elements of this approach are the corporeal and emotional attachment and co-experience

within youth scenes. I'm going to argue that risk and pleasures are both important futures of youth activities which make the involvement attractive. They are characteristic for all three cases but there are also some specifics of the risk-joy profile and experience in these three cases. There is diversity of risk practices like conspiracy, illegal activities, participation in street protest actions, fight with subcultural enemies, police etc. There is also pleasure of being part of collective body, getting new individual physical, cultural and social experience. We can observe how on the map of changing landscape of youth activism in Russia are emerging and rooting the forms of youth solidarities which are open for risk practices and remain joyful.

### ‘Why do they participate? Youth Activism in Estonia: Meanings, Motives and Practice’

**Reelika Pirk**, Tallinn University | [reelika.pirk@gmail.com](mailto:reelika.pirk@gmail.com)

Some researchers claim that nowadays young people are disengaged and alienated from politics others indicate that young people are interested in politics, but they use ‘alternative’

ways to participate. Nevertheless, recent studies have shown youth to be socio-politically one of the most inactive groups in Estonia (as well as in many other democratic

countries) therefore raising many questions about youth participation. The focus of this paper will be directed at analysing youth political participation, but in the wider sense of the term. The paper includes two different forms of involvement that could be considered as (a) traditional and (b) as 'alternative' ways of participation, respectively youth council and animal rights movement. The paper will underline discrepancies and similarities in

order to understand contemporary Estonian youth political participation strategies and motives. The aim is to explore youths' participation activities and practices as well as to the meanings and motives members attach to their participation. The research is based on participant observations conducted between April 2012 and June 2013, recorded semi-structured interviews and document analyses.

## New Forms of Youth Political Activism

Airi-Alina Allaste, Tallinn University | [alina@iiss.ee](mailto:alina@iiss.ee)

Recent studies have shown the youth to be among the least socio-politically active groups as much as voting and participation in organisations is concerned – this holds true in most European countries. Such a phenomenon has been explained through losing faith in politics and preferring direct action or participation. However, this needs not be regarded as proof of the younger generation's passive attitude. Youth organisations, councils and parliaments are not the only options – subcultures, new social movements, Internet activism and other informal forms of participation play an important role, serving as an environment crucial from the viewpoint of worldview development and self-expression. The goal of this paper is twofold: a) to describe

new forms of activism that could be interpreted as political; and b) to present some initial findings on the motivations behind this participation. The empirical part of the paper considers the findings of secondary analyses of activism conducted in 14 European countries in the framework of the large-scale EC project MYPLACE for general description of activism. An in-depth micro level analysis is based on interviews with young people in Estonia conducted in the framework of same project. Initial findings indicate that activism can be related with seemingly apolitical actions such as music or (street) art in subcultures, chatting with friends in social networks or consumption preferences according to worldview.

## PinInterest in Extra-Institutional Politics. Mesuring Emerging Forms of Political Involvement and its Impact on Youth Political Participation in Europe

Roger Soler i Martí, Pompeu Fabra University, Barcelona | [roger.soler@upf.edu](mailto:roger.soler@upf.edu)

The relationship that young people have with politics can seem contradictory. On one hand, several longitudinal studies that have identified a decline in voter turnout and in other forms of formal political participation attribute part or this entire decline to the youngest generations. On the other hand, recent decades have also witnessed the emergence of other forms of participation of a less institutional nature, such as protests and political consumption, in which

the youngest generations have played a prominent role. Political attitudes, such as interest in politics or political efficacy, are one of the best predictors of political participation, since they reflect the individual motivation for political mobilization. Thus, given the trends in participation patterns, we might expect that there would also be a change in young people's subjective forms of political involvement. However, survey studies have not had the same

success identifying the transformations in political attitudes. The thesis of this paper is that this is because survey indicators of political attitudes reflect essentially orientations towards institutional politics and not to an extra-institutional engagement. The European research project MYPLACE, on youth civic engagement, have carry out a survey in 14 countries that makes possible identify and

measure new forms of subjective political involvement. The paper analyses if interest in politics of young people is oriented towards different political objects and, particularly, if there is an interest in extra-institutional politics that contributes to better explain the tendency of young people to participate in emerging forms of participation as protest or political consumerism.

## a08RN30 - Education Exclusion and Inequality 1

Chair(s): Aurelie Mary

### “You are not meant for it”. On the Performing Power of Teachers Classifications

Marco Romito, University of Milan | [marco.romito@unimi.it](mailto:marco.romito@unimi.it)

In Italy, the transition from lower to upper secondary school is crucial in reproducing educational inequalities. Research shows that working-class and immigrants pupils display an higher propensity to enroll into vocational tracks then other groups, even when previous school performance is the same. Through a one year ethnographic observations in two lower secondary schools in the area of Milano, my research is aimed at opening up the 'black box' of orienting practices at the passage to upper secondary school. Classrooms and orienting practices have been analysed during the months preceding high school enrollment and the overall decision-making process has been investigated through observations and interviews with parents, students, teachers and orienting experts. Research evidences suggest that teachers' orienting advices are conditioned by issues related students

ascribed memberships (in particular social class and ethnicity). However, in Italy, teachers' indications are not binding and families are formally free to choose the type of school track they prefer. Thus, which is the relevance of orienting practices on school transitions? My aim is to show how issues of social closure through the school system may be addressed looking at the symbolic domain. Drawing on Bourdieu's concepts of field, habitus and cultural capital, I wish to show how teachers' views on students' educational potential may have a performing power. In particular, observing familial decision-making through time, allow to outline how orienting practices may depress educational expectations of working class and immigrants families pushing them to opt for less ambitious school trajectories.

## Making Sense of Personal Traumas and Educational Exclusion

Hannah King, Durham University | [hannah.king@durham.ac.uk](mailto:hannah.king@durham.ac.uk)

Reducing the number of young people who become NEET (not in education, employment or training) at the age of 16 continues to dominate the youth policy agenda in the UK. However, the reasons behind young people's exclusion pre-16 remain elusive. This paper draws on the findings of a qualitative longitudinal research project, which employed biographical methods to explore the experiences of educationally excluded young people. Diachronic and synchronic analysis of young people's case histories, and developing personal life-grids for each, enabled an exploration of personal traumas and the

relationship between different domains in their lives both across and through time. Drawing on extensive case histories, the paper aims to uncover and understand the interconnectedness of some of the key personal traumas experienced by young people. It will also demonstrate, through the words of the young people themselves, the connection between these traumas and the events that seemed to precipitate their educational exclusion; and how they make sense of their biographies in times of social change.

## Immigrant and Italian Children's Transition to upper Secondary School: the Role of Teacher's Views and Practices in the Reproduction of Social Inequalities

Marco Romito, University of Milan | [marco.romito@unimi.it](mailto:marco.romito@unimi.it)

Paola Bonizzoni, University of Milan | [paola.bonizzoni@unimi.it](mailto:paola.bonizzoni@unimi.it)

The transition to upper secondary school within the Italian school system is a critical stage to address larger issues of educational opportunities and social inequalities. Children of immigrants, compared to Italian pupils, show a higher probability to segregate in vocational tracks. Although vocational schools may allow a rapid entrance within the labor market (and may be therefore preferred by less economically privileged families), issues of equality and social mobility opportunities arise. Our aim is to address this topic through an investigation of teacher's views and orienteering practices, an aspect which is largely ignored in current research. Combining quantitative and qualitative data, we'll try to understand how a range of factors (ethnicity, social class, gender and school performance) influence teacher's views in respect to the

school path they judge as more suitable to students. The research has been carried out in Milan. Quantitative data were collected through a survey. 2.000 questionnaires were administered to families of children enrolled at the last year of lower secondary school. Information on children's school performance, family's education and income, and the orienteering advice received from schools have been gathered. Qualitative data have been collected through a one year participant observation and interviews in a school with a strong influx of children of immigrants' origin. Results show that, beside average marks, teachers indications are conditioned by their views and preconception on students familial background that allow children of foreign origin to be more often than Italian to be channeled toward vocational paths.

### **Welfare Sources and the Inequality of the Experience of University of Young People. A Comparative Study of Italy, England and Sweden.**

Lorenza Antonucci, University of Bristol | [l.antonucci@bristol.ac.uk](mailto:l.antonucci@bristol.ac.uk)

One of the greatest changes affecting young people's lives in contemporary European societies is the mass access into higher education: more than 50% of young people between 18 and 29 enter into university (EQUNET, 2010). Young people in transition to adulthood use different welfare sources, which act as 'structures' determining their experience of university. By combining sociology of youth and social policy the paper aims to explore the role of the different welfare sources in the experience of university of young people. The paper presents the first results of a cross-national study involving Sweden, Italy and England. This 'most-different' comparative design permits to explore the role of each source of welfare in Europe: comparatively, the welfare mixes in the three countries show a different relative

significance of family, state and labour market sources. The paper presents a first analysis of the 'q-methodology questionnaire' filled by 90 young people in university and of 33 follow-up in-depth qualitative interviews conducted across the three countries. The analysis of the empirical material emphasises the role of the welfare sources and of the different instruments (loans and grants) in determining different experiences of university (e.g. financial position, accommodation, quality of the experience, well-being). Moreover, the paper will discuss the experiences of students from different socio-economic backgrounds and explore how socio-economic backgrounds (occupational position and educational attainment of parents) interact with the welfare structures available to young people in the three countries.

### **Gender and Migration related Inequalities in the Austrian Educational System**

Isabella Skrivanek, Danube University, Krems | [isabella.skrivanek@donau-uni.ac.at](mailto:isabella.skrivanek@donau-uni.ac.at)

Gudrun Biffl, Danube University, Krems | [gudrun.biffl@donau-uni.ac.at](mailto:gudrun.biffl@donau-uni.ac.at)

In a European perspective Austria has a favourable labour market performance with low levels of unemployment, also among young people: In 2011 the general unemployment rate was 4.2% (EU27 9.6%) and in the age group 15-24 8.3% (EU27 21.4%). One reason for this comparably favourable position is seen in the educational system and its option for dual training. However, there is a significant number of young people with difficulties not only on the labour market but also in the educational system (early school leavers, drop outs, inactive young people). This paper

examines gender and/or migration related inequalities in the Austrian educational system and discusses potential intervention points. Not only in the light of the current crisis it seems crucial to avoid and reduce disadvantages in the educational system, i.e. early prevention instead of compensating measures later. The paper is based on an analysis of the Austrian Education Statistics and a literature review from the perspective of gender and migration issues that we carried out for the Ministry for Education (BMUKK). The analysis shows gender gaps for immigrant

and native students alike, though they are in part more pronounced among immigrant students (educational pathways, levels of educational performance, educational attainment). Immigrant students are a heterogeneous group; thus being an "immigrant" does not constitute a disadvantage by itself. However, immigrant

students in Austria are at higher risk to leave the school system without acquiring important basic skills. Policy areas for reform are, among others, teachers' training, learning environments, language support programs, guidance on school choice and professional pathways.

## **Social Inequalities, School Conditions and National Attainment Tests results: the Portuguese Public School Students (Lisbon Metropolitan Area)**

**Teresa Seabra**, ISCTE-IUL, Lisbon | [teresa.seabra@iscte.pt](mailto:teresa.seabra@iscte.pt)

**Patrícia Ávila**, CIES/ISCTE-IUL, Lisbon | [patricia.avila@iscte.pt](mailto:patricia.avila@iscte.pt)

**Inês Baptista**, CIES/ISCTE-IUL, Lisbon | [inesdbaptista@gmail.com](mailto:inesdbaptista@gmail.com)

**Leonor Castro**, CIES/ISCTE-IUL, Lisbon | [leonorduartecastro@gmail.com](mailto:leonorduartecastro@gmail.com)

We intend to present the preliminary results of the project "Schools that do better: the school achievement of the children of immigrant in public school." The data refer to 6th grade students that have done National Attainment Tests in Lisbon Metropolitan Area (LMA), as this is the region of the country with the larger contingent of immigrant students. The databases that support this analysis were provided by the Portuguese Ministry of Science and Education and contain the results in 6th grade National Attainment Tests in 162 schools for three consecutive years (2008/09, 2009/10 and 2010/11), sex, age, place of birth and nationality of the student and social characterization of their families (occupation,

employment status, educational level, place of birth and nationality of both parents). We aim to highlight the inequalities between the students' academic performance, taking their social background into account, as we also try to unveil differences between schools concerning the results obtained in mathematics and Portuguese National Attainment Tests, while controlling social conditions and national origins of students. We will also try to relate these schools results with the profile of the school population in order to detect if there are differences in the schools' ability to produce results. Thus, we expect to understand if the schools reinforce or mitigate the pre-existent social inequalities.

## **Migrant Penalties in Educational Achievement: a Comparative Perspective on Western Europe**

**Camilla Borgna**, University of Milan | [camilla.borgna@unimi.it](mailto:camilla.borgna@unimi.it)

**Dalit Contini**, University of Torino | [dalit.contini@unito.it](mailto:dalit.contini@unito.it)

Due to the great diversity of immigrant populations across host societies, comparative research on educational inequalities by migratory status is challenging and the literature scarce. In this paper, we explore the

issue of migrant educational underachievement in Western Europe by using the 2009 wave of PISA survey on mathematics literacy of 15-year-old students. We propose a new measure for migrant educational penalty:

z-scores standardized with respect to the national distribution of natives with the same socio-economic background. Such measure accounts for the variability existing in a given receiving society, and it is therefore more consistent with the concept of integration. We find that countries that are able to limit the negative effect of migratory status as such on educational performances generally are the least egalitarian on the socio-economic resources dimension, and viceversa. This finding cannot be merely attributed to composition effects, as we show with additional

analyses on Turkish migrants on selected countries of destination. We discuss these findings and their implications for the explicatory role of educational systems. Our results suggest that some dimensions of educational systems – such early start of compulsory schooling and high participation rates of migrants and natives to preschool – are more relevant for second generation immigrants than other dimensions which have been traditionally found useful to explain class-driven achievement inequalities, such as horizontal differentiation.

Chair(s): David Cairns

### **Qualifications, Experience, Extra-Curricular Activities and Employability in Times of Crisis**

**Manuel Souto**, University of Bath | [mso21@bath.ac.uk](mailto:mso21@bath.ac.uk)

Sociological research has for decades studied the links between formal educational achievement and labour market outcomes (e.g. Bourdieu, Goldthorpe and others). Much less is known about the importance of non-formal learning and informal learning for employability -in spite of the political rhetoric regarding the importance of these kinds of learning. Based on a survey of over 1,000 young people in Europe, the paper looks at the extent to which non-formal education in youth

organization helps to develop the kind of 'soft' skills that are associated with employability, as well as employers' acceptance of such skills -in a time of crisis. The findings suggest that non-formal education in youth organizations significantly increases the soft skills of young people, but that their value in recruitment processes is very varied. The findings are interpreted in light of positional competition theory.

### **Education Frustration: Has the Crisis Led to Higher Pessimism Amongst Students? Evidence from PISA.**

**Janna Teltemann**, University of Bremen | [janna@uni-bremen.de](mailto:janna@uni-bremen.de)

One bitter experience of the financial crisis and the following recession was the realization that "good education" is no longer a safeguard against unemployment or precarious employment. For the first time in about 250

years, younger generations cannot expect to experience intergenerational upward mobility. Particularly, the middle classes threaten loss of status and react with marked educational ambitions for their offspring. Consequently,

children and young adults experience increasing pressure from their families which they might find hard to conform to as they themselves realize the repercussions of the crisis. If resigned teachers tell students that they might not find training positions or occupation, students start feeling powerless and overwhelmed. The paper presents evidence from the OECD PISA studies 2003 and 2009. In both studies, students were asked if they think that school has taught them useful things for future jobs and that school prepared them for adult life. It is hypothesized that there is an increase in agreement that school is not

able to prepare students for adult life, as a consequence of the crisis. The paper examines changes of the agreement rates between 2003 and 2006 and looks at individual and school determinants of these indicators of "school frustration". If high achieving students feel discouraged by their future prospects than they might feel frustrated despite their performance. In further steps, the paper focuses on differences between countries in the degree of school frustration and explores possible relationships with macro indicators of the crisis such as productivity and unemployment rates.

## **Education and Social Integration of Immigrant Students in Italy: Family Choices and Expectations at the End of Secondary School**

Arianna Santero, University of Torino | [arianna.santero@unito.it](mailto:arianna.santero@unito.it)

The research analyses educational trajectories and post-school aspirations in the field of education and labour market of immigrant families with children attending the last year of upper secondary school in Italy and particularly in Turin, in 2011. The theoretical framework I adopt intends to avoid both conceptions of immigrants' careers as completely delimited by ethnic discriminations and ad hoc explanations. I have therefore focused my attention on agency, family and contextual determinants of educational choices and social mobility expectations. The institutional context has been defined using quantitative and qualitative secondary data. Then I have realised 91 semi-structured qualitative interviews addressed to teachers, educators, migrant students and to some of their parents coming from different geographical areas, sampled from six secondary schools, characterised by

dissimilar curricula and percentage of immigrant students. Immigrants tend to prefer vocational tracks at the end of lower secondary school not only because of children's school performances and economic resources. Other reasons are: family's migration project, effects of norm on immigration, status imbalance (downward homologation of parents' previous qualifications). The lack of knowledge of Italian educational system gives a greater importance to teachers' orientations or immigrants social networks. Higher education is seen by migrant families as one possible route to reach middle class status in transnational social stratification. Nevertheless, expected timing of transitions to adulthood (earlier than natives) and deterioration in household finances during the economic crisis reduce the propensity to attend university.

Chair(s): Aurelie Mary

### Global Dreams and Local Realities: Vocational Students' Future Visions in the Internationalising Labour Markets

Sirpa Lappalainen, University of Helsinki | [sirpa.lappalainen@helsinki.fi](mailto:sirpa.lappalainen@helsinki.fi)

In the current economic order the basic duty of citizens is to find placements in the internationalizing labour market, and internationalism has been a common educational objective throughout Europe. Internationalism, previously associated as a feature of middle-class subjectivities and academic education, is implemented in the agenda of vocational education as well. In this paper I analyse how vocational students in the Finnish educational context of social and health care see their future in presumed internationalizing labour market. The analysis is based on three years ethnographic field work in one vocational institute. Data consists of field notes, interviews, and material

produced by the institute, for example student guides, leaflets, web pages and curriculum documents. The analysis is influenced by material and post structural feminist theories. This analysis suggests that transnational mobility presented as an educational aim in vocational curriculum is partly a fantasy of policy makers. Imagined futures of vocational students are mainly bond with national labour market. When imagining their futures young people reflect on social, cultural and material resources they have an access. Transnational experiences of life might sometimes work as a resource when generating a sense of oneself with value.

### Tailored Support in Complicated Educational Transitions – Seeking for New Self-Definitions for Young People?

Mirja T Määttä, University of Eastern Finland | [mirja.maatta@uef.fi](mailto:mirja.maatta@uef.fi)

Youth transition studies have shown that paths to adult working life have become increasingly complicated and demanding for many young people. The paper introduces an interview study in a Finnish project offering intensive support for 15-24-year-old young people without secondary education. They have difficulties in their educational transitions such as learning difficulties, unfinished vocational studies, and different psychological and social problems. The project offers easily accessible career counseling services and guidance to other services, when needed. It also offers study modules of vocational studies in a flexible and tailored manner, and familiarization to different vocational career

possibilities. During the studies wide-ranging and individual support is offered. The aim of the paper is to investigate the definitions young people address to themselves and other young people in the service, and whether these definitions differ from those of the professionals. Qualitative interviews were carried out in the beginning of 2013, 19 young people and 5 professionals were interviewed. Professionals have project-based and official but also personal descriptions and categorizations of the young people and their needs. Young people's earlier, often negative, experiences in education system affect their self-definitions. They may also see other young people in the same service more problematic

than themselves. What kinds of differentiations are made among the young? Or are there some kind of peer support and communality

evolving? Does the service enable experiences of support and competence that could ease the transition to secondary education?

## **Career Aspirations of Adolescents with Different Socio-Economic Background in their Final Year of High School**

**Agnes David-Kacso**, Babes-Bolyai University, Cluj | [kacso\\_agnes@yahoo.com](mailto:kacso_agnes@yahoo.com)

**Paul T Haragus**, Babes-Bolyai University, Cluj | [tpharagus@yahoo.com](mailto:tpharagus@yahoo.com)

**Maria Roth**, Babes-Bolyai University, Cluj | [roth.mari@ymail.com](mailto:roth.mari@ymail.com)

**Sergiu L Raiu**, Babes-Bolyai University, Cluj | [raiu.sergiu@yahoo.com](mailto:raiu.sergiu@yahoo.com)

Socio-economic status is strongly related to successful transitions from adolescence to adulthood, being the main source of short-term intercohort variation with respect to, among others, education and enter to labor market (Shanahan, 2000). Social capital as a supportive network of family members, friends and neighbors mediates the relations between SES and goals and aspirations of the adolescents (Mortimer et al., 2005, Shildrick and MacDonald, 2008). In educational systems where the connection between school and labor market is weak – and the Romanian is this type – it is important the student's own capacity to set realistic goals and aspirations (Mortimer and Krueger, 2000) The objective of our study is to verify how the plans of adolescents with different socio-economic background regarding their educational and

work-related future in their final year of high school are influenced by their social capital (family, peers from neighborhood, friends). The Romanian sample of 4000 nationally representative high school students in their final school year (12th grade), was surveyed in the first wave of "Outcomes of Adolescence. A longitudinal perspective on the effect of social context on successful life transitions". In this study we consider the plans of the students regarding: the continuation of the studies, the entry on the labor market, their long-term work-related aspirations as well as their representations regarding career possibilities. The study follows the way social capital mediates relations between SES and the students' career aspirations and their capacity to plan their career and to prepare for educational and work opportunities.

## **a09RN30 - Entering the Labour Market**

Chair(s): David Cairns

## **Climbers or Prisoners? A Study on Occupational Trajectories of Italian Young Graduates using Sequence Analysis**

**Lara Monticelli**, University of Brescia | [monticelli.lara@gmail.com](mailto:monticelli.lara@gmail.com)

Youth difficulties in entering the Italian labor market and "insiders-outsiders" dualism, have always been topics of foremost interest in

sociology of work and education, but, since twenty years, when new labor market laws and reforms occurred in Italy, the debate found

new boost. The extensive use, both by public and private sector firms, of new forms of flexible contracts, generated employability vicious circles for youngsters: flexible contracts become, most of times, traps of precariousness rather than "stepping stones" towards more rewarding and stable careers. This paper's aim is to focus on a sample of Italian young graduates' occupational trajectories using data collected through a longitudinal survey carried one, three and five years after their graduation (in the paper I will focus on the cohort of graduates obtaining a bachelor or master in year 2006). The dataset belongs to the large Almalaurea archive (a consortium gathering together data from 64 Italian universities) with a yearly sample of

about 20.000 graduates coming from different geographical areas. One of the most effective and innovative statistical techniques used to describe occupational trajectories is Sequence Analysis (SA): through SA it is possible to derive meaningful graphical maps and, finally, to reduce large amounts of informations applying cluster analysis to occupational sequences, obtaining some idealtypical "trajectory" clusters. I analyze a sub-sample of the longitudinal dataset, using both sequence and cluster analysis in order to explore, in a descriptive way, the quality of occupational trajectories and how they differ across geographical areas, universities and disciplines.

## **Nordic Welfare States and the Inclusion of Ethnic Minority Youth: A Role for Recognition and Regulation?**

**Rune Halvorsen**, NOVA Norwegian Social Research, Oslo | [rune.halvorsen@nova.no](mailto:rune.halvorsen@nova.no)

**Mi Ah Schoyen**, NOVA Norwegian Social Research, Oslo | [miah.schoyen@nova.no](mailto:miah.schoyen@nova.no)

**Bjorn Hvinden**, NOVA Norwegian Social Research, Oslo | [bjorn.hvinden@nova.no](mailto:bjorn.hvinden@nova.no)

Focusing on the Nordic countries (DEN, FIN, NOR, SWE) the paper asks how the legitimacy (recognition or misrecognition) of 'ethnicity' influences public policies to promote labour market inclusion of ethnic minority youth (age 16-29). We assess the case for seeing misrecognition and lack of accommodation as significant factors behind troubled transitions from school to work and the case for regarding social regulation (or self-regulation) as a way of preventing and correcting exclusion. Despite their strong commitment to labour market inclusion, the Nordic countries have not succeeded in developing instruments which ensure employment of minority youth. Arguably we are witnessing a shift from redistributive towards regulatory measures to promote the employment of ethnic minority youth. Since the 1990s the countries have to various extents enhanced individual incentives to seek and retain paid work. In addition, they

have introduced legal provisions, financial incentives and voluntary agreements to prevent discrimination, positive action duties and/or failure to provide reasonable accommodation on the part of employers. The paper identifies similarities and differences in the design of social regulatory and redistributive provisions. Relying on recent interviews, we analyse how Nordic governments balance the needs of minority youth against the interests of employers and how assumed burdens for employers' prerogative in hiring and retaining employees influence the adoption of regulatory policy measures. The paper also clarifies assumptions about what employer responsibilities and efforts are reasonable to expect. We close with a discussion of how the legitimacy of cultural diversity impacts on policies to support inclusion.

## Young People Employment Situation once they Have Finished their Education, the Spanish case, 1987-2012

Pau Miret-Gamundi, Autonomous University of Barcelona | [pmiret@ced.uab.cat](mailto:pmiret@ced.uab.cat)

This paper analyses the employment situation of people aged 16-30 who have finished their education. Our source is the Spanish Labour Force Survey from 1987 to 2012, a quarterly panel in which individuals are followed during a maximum of six waves. A total of 939,800 people aged 16-30 (49% women) are observed in 2,556,838 occasions along the 16-30 age-range (46% started by women). Our dependent variable is whether an individual is employed. We use hierarchical logistic regression as a technique. We control for wave, sex and age in order to model the effect of educational attainment on the probability of being working. Employment rates were expanding from 1987 but experienced a deep depression from 1992 to 1998, followed by a quick recovery that led to a welfare period that last from 2001 till 2007; from 2008 onwards the employment rates have been sharply falling. Women have always

registered lower employment rates than men, but differences have been progressively shortening. The age pattern are different by sex, as whilst men increase their working proportions by age, women show this pattern until certain age but the proportions level off and even decrease from that age onwards (probably due to the interference of family formation). We will focus on three milestones: 1994 (as the deepest point of depression), 2007 (the end of economic expansion) and 2012 (last data available), and on people with at least 23 years (minimum age for holding a university degree). We conclude that the effect of education depends on gender and economical context: for instance, during the economic expansion whilst the ones who profit the most were men with professional training, women with minimum education were the least employed.

## Activating Labor Market Measures - its "Sticks" and "Carrots" - Experienced by the Young Unemployed

Jaana Lähteenmaa, University of Helsinki | [jaana.lahteenmaa@helsinki.fi](mailto:jaana.lahteenmaa@helsinki.fi)

As the current economic crisis continues in Europe, more and more European countries are implying strict ALPs directed at especially the young unemployed people. For example U.K., Germany and Denmark have had strict ALPs - strengthened with sanctions - especially for the young for a while. Also Finland has joined this company with its "Youth Guarantee" (though it was preceded by "Society Guarantee for the Young" that already included some sanctions). European Council has just recently (in January 2013) recommended rather same kind of "Guarantee" directed at the young to all EU-countries. How do the young unemployed themselves experience these activation measures? What about especially those, that already have high-school

or upper education? They are not so easy to be "activated" to study more (which at least in the Finnish system is the most used activation-way). Already for that reason their "cases" are complex and sociologically interesting from both agency-vs. - structure - point of view as well as habitus- point of view. In which ways the situation, in which one is forced with sanctions, is felt by those who have internalized the more or less middle-class-habitus? What about gender-differences in this group; from this point of view; are there any? Empirically I base my paper on my ongoing research, which is going on in Finland. In this paper I use and the 440 open-ended answers of young unemployed people gathered in an internet-survey, from the year 2009 and

88 mini-size questionnaires gathered among youth workers as ethnographic survey. Yet, I discuss the situation of ALPs in Europe and the

above mentioned idea of European Council also from wider perspective.

## **b09RN30 - Seeking Employability**

Chair(s): Steven Roberts

### **Working and Living in the Backyard? Young People and Mobility Challenges in Italy in Hard Times**

**Roberta Ricucci**, University of Torino | [roberta.ricucci@unito.it](mailto:roberta.ricucci@unito.it)

**Marianna Filandri**, University of Milano-Bicocca | [marianna.filandri1@unimib.it](mailto:marianna.filandri1@unimib.it)

**Tania Parisi**, University of Torino | [tania.parisi@unito.it](mailto:tania.parisi@unito.it)

The current economic situation draws attention to young people's real chances of social and professional growth. In a context of increasing uncertainty and hardship, the resources which youth may draw upon – human, social and economic capital – become even more important than usual. In Italy, there is great concern about the unemployment issue. Preliminary surveys have shown a tendency towards increased mobility among young people for work reasons. This paper aims at investigating whether or not this tendency towards mobility is similar among two groups of young people: Italians and their foreign peers, *jeunes issus l'immigration*. Should this latter group be more disposed towards moving, having already been uprooted from their home culture, than their Italian peers? Or, due to the migratory experience, are they uninterested in

another "migration"? Otherwise, both groups may see an opportunity for themselves in being mobile in this specific historical and economic context. In order to answer our research question, we shall use a mixed-method approach. The quantitative approach will outline the Italian socio-employment framework within which young people live, bearing in mind the characteristics associated with a tendency towards territorial mobility: to this end, we'll use the survey "Famiglie e soggetti sociali, 2009" focussing on this specific issues. Indeed, the qualitative approach (40 in-depth interviews) will help us in investigating characteristics laying down the tendency towards mobility: family-of-origin characteristics, transnational links, education, work experiences.

### **Recognising Young People's Work in and outside Employment**

**Valentina Cuzzocrea**, University of Cagliari | [cuzzocrea@unica.it](mailto:cuzzocrea@unica.it)

This paper assesses the concept of employability in youth literature. I argue that, albeit seemingly paradoxically, an 'out-of-employment' dimension of employability is taking an increasingly important role in young

people's work. By this I mean work which is not commissioned for, nor paid for, but promises to give access to jobs which would not otherwise be granted. So far, these have received attention only in the form of voluntary

work; yet, other side-employment activities have left totally understudied in the impact they can have on one's early career. Especially since the expansion of the internet has taken place, and with it the increased possibility to have one's work publicly available, 'side-employment' activities have grown a lot. My argument is that these activities might gain the status of possible turning points and consequently, they should gain a more prominent recognition in researching youth's work, as they come to affect the way in which young people look at work as a constituent part of their identity-in-the-making. In parallel, a claim for more visible and public legitimacy of

the same activities is made as a matter of recognition for the efforts of a generation which is not only partially excluded from the labour market, but also underestimated in their potential to be incisive in their own context of reference, and to create value for society in general. To illustrate my argument I will discuss some examples from several qualitative research projects I took part in, which studied different portions of labour market actors, ranging from young entrepreneurs in deprived areas to early career professionals in Italy to young Europeans who participated to a EU funded think-tank.

## **The Voice of Non-Employed Student Job-Seekers: Understanding Students' Pursuit of 'Earning while Learning'**

**Steven Roberts**, University of Kent | [S.D.Roberts-26@kent.ac.uk](mailto:S.D.Roberts-26@kent.ac.uk)

We know much about student employment, but actually very little about non-employed student job-seekers. This is a group of a significant size; in fact, while youth unemployment in the UK reached just over 1 million for the first time since comparable records began, this headline figure marginalises a rather startling statistic—of this 1 million 16–24 year olds searching for a job, more than 285,000 are full-time students looking for part-time work. This group represents something of an unknown and under-researched quantity, yet their very existence raises a number of interesting and important questions for social inquiry. The incidence of university students in the UK working part time while studying has increased dramatically since the mid-1990s, coinciding with huge increases in tuition fees and concurrent reductions in maintenance grants

to meet students' living expenses (NUS, 2011). Thus, it has been suggested that in an era of increased labour market competition and greater differentiation in rewards for graduate jobs, students may show an increased propensity to take on part-time employment in order to enhance their employability. Quantitative studies of the phenomenon have revealed some broadly consistent patterns but also suggest that the situation is more complex that needs qualitative research to fully examine individuals' perception and experiences (e.g. Richardson et al, 2009). This paper contributes to this understanding, but does so through the unusual approach of addressing those students who are seeking part-time employment but have failed to find it, complementing research which has considered the voices of students who have.

## Structural Factors and Personal Agency in the Education to Work Transition Context in Oman

Tess Goodliffe, Oman Academic Accreditation Authority | [tessgoodliffe@gmail.com](mailto:tessgoodliffe@gmail.com)

Oman, like many countries in the Middle East region, is facing a 'demographic bulge' which is resulting in a growth in youth unemployment. A significant increase in the number of graduates entering the labour market also means a more competitive environment for job seekers. While graduates have traditionally sought employment in the public sector, the government is promoting 'Omanisation'; a range of localisation policies to increase the number of Omanis being employed in the private sector. Despite the government's efforts, statistics indicate that graduates entering the job market have not been engaging with efforts to promote localisation. This paper presents the findings from a recent mixed methods research study on how graduating students' perceive structural factors influencing their transition from

education to work context and the extent to which there are indicators of agency in their transition behaviour. While structural factors and agency have been explored in European transition contexts, this is the first time that these concepts have been explored in relation to the transition context in Oman. Findings from the study suggest that while students perceive structural factors such as government, labour market, the education system, gender and socio-cultural factors to be influencing and shaping their transition context, there is an indication that their own abilities and efforts have a role to play, reflecting agency in their transition behaviour. Concepts such as "bounded agency" provide a useful basis to explore the stirrings of active individualisation within the social structures of the Omani education to work transition context.

## High School Drop out and Later Work Commitment

Torild W Hammer, NOVA Norwegian Social Research, Oslo | [Torild.hammer@nova.no](mailto:Torild.hammer@nova.no)

Christer Hyggen, NOVA Norwegian Social Research, Oslo | [christer.hyggen@nova.no](mailto:christer.hyggen@nova.no)

There is an increased awareness of and a greater focus on the large numbers of young people who drop out of high-school, and the association between this and an increased risk of exclusion from the labour market. This development has led to questions regarding the work commitment of young people. It is conceivable that the schools do not teach the pupils good work routines, which can result in a poor work ethic. In this paper we will firstly research the drop-out selection in high-school. We will then examine the extent to which there is a connection between the lack of completion of high-school and the individual's work commitment. We also research to what extent developments and changes in an individual's

work commitment are influenced by experiences of the labour market and family establishment. In order to investigate these issues we are using data from a survey (ALH) of 2000 young people in Norway, followed through the period from their youth in 1985 to adulthood in 2010. The survey was carried out in 1985, with follow-ups in 1987, 1989, 1993, 2003 and finally in 2010. The response percent has been very high throughout the whole period, from 85 percent in 1985, 70 percent in 2003 to 53 percent in 2010. We found that social background and mental health problems increased risk of high school drop out, and those who dropped out did not report lower work commitment than those who completed

school. However, longer periods of unemployment reduced work commitment

## c09RN30 - School-to-work Transitions and Getting more than Work

Chair(s): Tracy Shildrick

### Between the Degree and the Labour Market: the Young European' Transition to Adulthood

Filipa C. Cachapa, University of Évora | [fccachapa@ics.ul.pt](mailto:fccachapa@ics.ul.pt)

Maria F.F. Mendes, University of Évora | [mmendes@uevora.pt](mailto:mmendes@uevora.pt)

Maria Conceição Rego, University of Évora | [mcpr@uevora.pt](mailto:mcpr@uevora.pt)

Nowadays, the gap between the point at which full-time education is completed and young people starting their first job is increasing. Gradually, we assist to the prolongation of youth, given that individuals spend more time in education system and because of that they become financially independents later, postponing their adults life. The delay of adulthood is a consequence of the new social and economic context, where more and more importance is given to higher qualifications. The aim of this paper is to provide an understanding of how social, economic and demographic factors in European countries and attendance of higher education contribute towards the emergence of new patterns of behaviour among young people in transition to adulthood as regards employability. By conducting a multidisciplinary analysis and adopting a quantitative approach (descriptive

analysis and generalized linear models), we study 18,211 individuals aged 17 to 31 years old, residents in the following countries: Germany, Spain, France, Hungary, Norway, Portugal, the United Kingdom, the Czech Republic and Sweden. European Social Survey Data (round 5, 2010) is used. With this study we identified indicators that describe the relationship between social and economic background, attendance of higher education and the transition to adulthood in Europe. We find that there is no homogeneity of behaviours, opinions or attitudes between countries. The analysis highlights three main issues: the demands of the labour market, the difficult perceived by young people in the moment of getting a job and the importance of employment stability. Finally, we built the profile of the young European with a job.

### Self-Realisation and Passion over Salary? Finnish and French Highly Educated Young Women Evaluating the Value of Work

Aurélie A Mary, University of Tampere | [aurelie.mary@uta.fi](mailto:aurelie.mary@uta.fi)

Finnish and French female university students want to work with particular purpose and meaning, not just for the simple fact of having to earn an income. A growing number of young people indeed view work as both a means of

subsistence and personal development, and consider work and private life as equally important. Work must thus bring financial stability but also generate personal satisfaction, self-fulfillment, and give meaning

to one's life. It has become a domain where individuals can develop their personal interests and express their passions. The traditionally separate spheres of public and private life (corresponding to work and personal or family life) are hence increasingly connected. They even seem to merge and complement each other, with work used as a tool to improve personal life and promote personal ethics and

values. This presentation is based on a comparative study that investigated the pathways to adulthood among Finnish and French female university students about to experience transition from university to working life. Young women's situation and perspectives have been investigated by carrying out 22 qualitative in-depth interviews (11 interviews in each country) in 2008.

## **School to Work Transitions - Findings from Quantitative and Qualitative Approaches in Youth Transition Research**

**Nora Gaupp**, German Youth Institute | [gaupp@dji.de](mailto:gaupp@dji.de)

The paper illustrates the development of a model of transitions to employment on the basis of a combination of quantitative and qualitative methods in the context of a study of school-to-work transitions among lower educated young adults in Germany. Due to its interest in the intersection of structural and institutional determinants on one side and individual action on the other, transition research has a long tradition of combining quantitative and qualitative approaches. Against this background the paper reflects the steps of producing findings from a mixed method study. The argument follows a single case through this process: it was first observed in the context of a longitudinal survey and subsequently selected for a qualitative interview. The first part of the paper introduces the outcome of the quantitative analysis in terms of a logistic regression model based on

a six year panel study; it discusses the relevance of individual, social and structural variables for vocational pathways and access to the labor market. This is followed by the development of the 'quantitative profile' of a single case on the basis of longitudinal survey information. The third part presents the comprehensive qualitative perspective established on the case on the basis of a qualitative interview. The comparative analysis of all qualitative interviews suggests the consideration of the four main dimensions of agency, motivation, critical life events and social interactions in a integrated model of school-to-work transitions. It is presented in the fourth part. The concluding discussion addresses critical issues, possibilities and limitations of combining both approaches as well as options of integrating them in youth transition research.

## **The Role of Soft Skills for Young People's Earnings Shortly after Labor Market Entry**

**Irene S. Kriesi**, Swiss Federal Institute for Vocational Education and Training (SFIVET) | [irene.kriesi@sfivet-switzerland.ch](mailto:irene.kriesi@sfivet-switzerland.ch)

A key topic in sociological research is the analysis of income inequality. Numerous studies have documented the role of formal skills (i.e., education and experience), gender and firm characteristics for workers' earnings.

The influence of "soft skills", such as personality traits, motivation, or social competencies has been studied surprisingly little – despite Jencks (1997) early work providing convincing evidence of their

significance for labor market outcomes. Against this background, we analyze whether personality traits, social and productive competencies matter for the earnings of 21-year-old workers shortly after their transition into the labor force. Theoretical considerations as well as job advertisements imply that for certain types of jobs there is a high demand for workers with soft skills like agreeableness, teamwork skills or autonomy, which are rewarded by employers. We use data from the Swiss longitudinal study COCON, which includes a representative sample of 21-year-olds residing in the German- and French-speaking part of Switzerland. The data were

collected in 2006 and include detailed information on the respondents' life course, family context, cognitive, social, and productive competences, values, as well as personality characteristics. The analyses are based on respondents who had completed (upper) secondary education and made the transition into the labor force by the age of 21. Results based on linear regression analyses show that already at the beginning of young people's careers personality characteristics (openness, agreeableness) as well as social and productive competencies (ability to reach consensus, autonomy, willingness for achievement) play a role for their earnings.

## d09RN30 - Precarity

Chair(s): Steven Roberts

### Young NEETs and Employment Transition. A Sub-Territorial Comparison in the Pre-crisis Italian Scenario.

Tiziano Gerosa, University Milan-Bicocca | [t.gerosa1@campus.unimib.it](mailto:t.gerosa1@campus.unimib.it)

Fabio Gaspani, University Milan-Bicocca | [f.gaspani@campus.unimib.it](mailto:f.gaspani@campus.unimib.it)

The acronym "NEET" (Not in Education, Employment or Training) refers to young people excluded both from the educational and employment systems, a widespread phenomenon in Italian society. However, it also represents a heterogeneous statistical category with low explanatory power, defined – in most cases – in a short-period perspective (four weeks) which is not capable of grasping the real level of social and economic vulnerability of young people living this experience. In order to solve this issue, this paper provides an alternative operational definition of "NEET", taking also into account the extension of the reference period (six months). This choice allows us to provide a distinction between "transient" NEETs and NEETs "trapped" in this condition. The research represents the first phase of a

broader study that investigates diachronic changes occurred in the NEET population before and during the global economic crisis and recession. Based on Eu-Silc 2004-2007 survey\*, it focuses on Italian data disaggregated by North, Central and South macro-areas. First of all, the study investigates – through the adoption of predictive models – the social, economic and cultural factors that affect the probability of being NEET for six months after the end of the last educational or work experience. Afterwards – through clustering techniques – homogeneous groups of young NEETs are created, in order to identify what kinds of individuals are more exposed to socio-economic vulnerability risks (low income, economic deprivation and job instability). \* To date, 2008-2011 Eu-Silc data are only partially available.

## **The more you are educated, the shorter your contract is... A comparative study on young highly skilled precarious workers between Italy and Spain**

**Annalisa Murgia**, University of Trento | [annalisa.murgia@unitn.it](mailto:annalisa.murgia@unitn.it)

**Barbara Poggio**, University of Trento | [barbara.poggio@unitn.it](mailto:barbara.poggio@unitn.it)

Over the past decades, a number of EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious and insecure jobs, independently from their education and skills. Starting from this observation, the project "Trapped or Flexible? Risk Transitions and Missing Policies for Young High-Skilled Workers in Europe", financed as a pilot project by the European Commission and completed in the course of 2011, has conducted a detailed examination of the different ways in which young highly skilled workers are affected by job insecurity. In each country a statistical analysis of existing national micro-data was carried out, to understand the incidence of precarious employment and its evolution during these years of crisis. The quantitative

analysis was followed by a qualitative investigation, based on in depth face to face biographical interviews with young workers (both men and women, aged between 25 and 35) with tertiary-level educational qualifications who, at the time of the interview, were employed on temporary contracts in jobs either consistent with their training or markedly distant from it. This contribution aims to present a synthesis of the main research results of the qualitative analysis carried out in the Italian and Spanish case studies. The results highlight the need for policies to protect young people against work instability, and guarantee them jobs consistent with their skills and secure enough to plan a long-term future, both professionally and in their private lives.

## **"One-euro-job" Workfare Scheme for Young Adults: Do Effects Differ Due to Family Background and Why?"**

**Juliane Achatz**, Institute for Employment Research of the Federal Employment Agency | [juliane.achatz@iab.de](mailto:juliane.achatz@iab.de)

**Brigitte Schels**, Institute for Employment Research of the Federal Employment Agency | [brigitte.schels@iab.de](mailto:brigitte.schels@iab.de)

Labor market programs are often targeted at unemployed youths to enhance their chances to find employment or start vocational training. In Germany, a major reform in 2005 emphasised the activation of welfare recipients and introduced a new workfare scheme for needy jobseekers. The central aim of so called "one-euro job" measures is to improve the employment prospects of disadvantaged and very hard to place welfare recipients. "One-euro jobs" are temporary, mainly part-time placements mostly in the public or non-profit sector. Participants earn an extra income of

one or two Euros per hour in addition to their welfare benefit. Evidence on the impact of this workfare scheme is still scarce, in particular for young unemployed who live with a partner or children and therefore have to arrange care requirements with programme participation as well as employment entry. We investigate employment outcomes of program participation of young adults with different family backgrounds by applying methods of propensity score matching. The sample comprises young people aged from 18 up to 30 years, who entered welfare reciprocity and

unemployment during the period October 2005 to January 2006. In short-term perspective, negative lock-in effects can be observed. However, the results also show that program participation rather improves middle-term employment chances than vocational training prospects. Participation in “one-euro jobs”

moderately raises the rate of regular employment for young mothers, while for young fathers adverse or non-significant effects are dominating. Though, the employment effects are lower when considering jobs that facilitate households' exits from welfare reciprocity.

## a10RN30 - Drinking

Chair(s): Geoffrey Hunt

### Youth Binge Drinking in Finland and Italy – Risk-taking, Identity Construction, or Normative Behaviour?

Anu Katainen, University of Helsinki | [anu.h.katainen@helsinki.fi](mailto:anu.h.katainen@helsinki.fi)

Youth binge drinking has raised concerns in many European countries. Qualitative research on youth drinking cultures has aimed at making the phenomenon intelligible from the young people's point of view, interpreting youth binge drinking typically in the frame of social bonding, deliberate risk-taking and identity construction, or more recently as a counter-reaction to neo-liberalism with its expectations of responsibility and self-regulation. The paper argues that the previous research leans on too simplistic understanding of the meaning of binge drinking, and has not sufficiently considered cultural variations. The study compares young people's views on binge drinking in Finland and Italy, which have conventionally been considered to represent sharply contrasting drinking traditions. The

data consist of 28 focus group interviews conducted at schools among 15-year old pupils (N=145) in Helsinki, Finland and Turin, Italy. The analysis focuses on the rules of binge drinking, i.e. evaluations of what kind of intoxication oriented drinking behaviour is considered appropriate. In both countries, binge drinking was seen as risky, but it was associated with many rules that defined the limit of successful or failed drinking experience. Cultural variations were found especially in the ways the individual was seen as responsible of controlling one's behaviour. However, in both data the competence of the drinker was emphasized, thus contradicting the interpretation of binge drinking as deliberate risk-taking, or a time-out from a neo-liberal social order.

## Images of Alcohol among Italian Adolescents, Understanding their Point of View

Enrico Petrilli, University of Torino | [petrilli@eclectica.it](mailto:petrilli@eclectica.it)

Sara Rolando, Eclectica, Institute for Training and Research and University of Helsinki | [rolando@eclectica.it](mailto:rolando@eclectica.it)

Franca Beccaria, Eclectica, Institute for Training and Research and University of Helsinki | [beccaria@eclectica.it](mailto:beccaria@eclectica.it)

Franco Prina, University of Torino | [franco.prina@unito.it](mailto:franco.prina@unito.it)

Researches about use and misuse of alcoholic beverages among young people are usually interested only to gather quantitative data as the average consumption in the last year/month, the types of drink, the number of drunkenness or the negative consequences experienced. The study aim is to plug the gap about how young people understand their direct and indirect alcohol experiences investigating the imaginative world regarding alcohol among 15-year-olds adolescents. The research wants also to clarify the position of young Italians towards the traditional drinking culture of our country. To achieve the purpose 22 focus group were organized in 2 Italian city, a metropolis in the north (Turin) and a

medium-sized city in the south (Cosenza). The FG were set according to the Research Analytical Group Interview (RAGI) method, wherein respondents are invited to discuss after having seen video-clips used as a stimulus. The material collected has been analyzed through an approach that takes into consideration both the participants' interpretative processes and their socio-cultural environment. Results show the importance given to conviviality of drinking and the blame of alcoholic intoxication – in accordance with the traditional Italian drinking culture – along with the fall of the nutritional value and the rise of so-called pharmaceutical drinking – new elements to be considered

## Researching Youth in Denmark: The Growing Importance of Studying Immigrant Youth and Drug and Alcohol Consumption

Geoffrey Hunt, University of Aarhus | [huntgisa@ix.netcom.com](mailto:huntgisa@ix.netcom.com)

Torsten Kolind, University of Aarhus | [tk@crf.au.dk](mailto:tk@crf.au.dk)

Karina Holm, University of Aarhus | [kh@crf.au.dk](mailto:kh@crf.au.dk)

Until recently, youth research in Denmark has not played a major role in either sociology or anthropology. What little research that exists developed from a number of different perspectives, including arts, culture, media and sociology. Against this background, sociological research in Denmark on youth and drug and alcohol consumption came rather late in comparison to the USA and other European countries. However, recently, research on young people's involvement in drugs and alcohol has begun to develop and much of it has been influenced by youth studies

in the UK. This influence has led, among other things, to less "socially conspicuous young adults" being overlooked, and especially immigrant youth. Such an oversight is surprising given the recent upsurge of non-European immigrants into Northern European countries and the recent political concern with immigration, national identity and economic crisis in Denmark. These concerns have focused on problematic aspects of immigrant youth, "immigrant gangs" and crime. Such developments are seen to reflect the general social and political marginality of ethnic

minority immigrant youth. With this in mind, the aim of this paper is first to provide an overview of the existing research on immigrant youth in Denmark from different empirical perspectives and second to examine the recent concerns about immigrant youth and drug and

alcohol issues. The second part of the paper is based on the available existing literature coupled with data collected from a series of key informant interviews with stakeholders involved in immigrant youth issues.

## **b10RN30 - Leisure and Consumption**

Chair(s): Valentina Cuzzocrea

### **Consumer-Oriented Character of the Leisure Economy and New Life Styles of Multi-Consumer Places**

Elife Kart, Akdeniz University, Antalya | [elifekart@hotmail.com](mailto:elifekart@hotmail.com)

Today's economic rationality changes the way the individuals spend their free time through socio-cultural consumer codes. The leisure economy is reproduced via multi-consumer places which are privatized, differentiated on the basis of new communications and information technologies. The places in question which are changed and reproduced in the context of "differentiation, individualization, and alienation" determines the character of the leisure economy based on the developments experienced in every aspects of social and cultural levels. But "the economic character of the leisure economy" puts an end to the time notion and practice characterized by individual "autonomy". Mentioned quality of leisure time is determinative in individuals' liking, choices,

decisions, behavior codes, necessities of entertainment and recreation by means of new communication and information technologies, cultural and social capital. This situation leads to the construction of new lifestyles, new forms of being and socialites. In this study, it is explored how young people spend their free time and participate in multi-consumer places in their daily lives; and furthermore the potential to construct new lifestyles by free time experiences is analyzed. Thus; data gathered from a study with university students in different faculties of Antalya- a touristy city is used with taking the potential for a new social construction by today's youth into consideration.

### **Young Parents of Multi-Child Families and their Perception of Luxurious Goods (Case of Poland)**

Piotr Binder, Polish Academy of Sciences, Warsaw | [pbinder@ifispan.waw.pl](mailto:pbinder@ifispan.waw.pl)

Since the current global recession is still affecting the Polish economy in a rather moderate way, Polish sociologists are not only concerned with the most striking aspects of poverty, but they also stress the importance of the relational symbolic and subjective

dimensions of poverty as a complex phenomenon. The proposed paper will present the results of a research study that was thematically and methodologically rooted in the ideas of P. Beresford, D. Green, R. Lister and K. Woodward Poverty First Hand: Poor

People Speak for Themselves (1999). As it was pointed out by Z. Bauman (2006) one of the outcomes of the “big change” is that people nowadays are able to constantly compare their situation not only to that of the people next door, but also to that of people all over the world. Humiliation suffered by those in poverty has become one of the most important factors characterizing their position today. Therefore it is essential to understand also what people experiencing poverty think and feel when confronted with the idea of luxurious goods,

one of the key elements of the culture of consumption. The empirical basis of the paper comprises the analysis of over 20 in-depth interviews conducted in 2012 as a part of the research project “Luxurious Poverty: Socio-Moral Contexts of Consumption” financed by the Ministry of Science and Higher Education (grant agreement: No. 2229/B/H03/2010/39). The results of the survey “Poles on the Scale of Poverty” [BS/51/2012] conducted by Public Opinion Research Center (CBOS, N=1015, 2012) will serve as a reference point.

## Media Consumption and Perception of Inter-Generational Differences among Age Groups in Estonia: A Cultural Approach to Media Generations

Veronika Kalmus, University of Tartu | [veronika.kalmus@ut.ee](mailto:veronika.kalmus@ut.ee)

Anu Masso, University of Tartu | [anu.massos@ut.ee](mailto:anu.massos@ut.ee)

Marju Lauristin, University of Tartu | [marju.lauristin@ut.ee](mailto:marju.lauristin@ut.ee)

This paper adopts a cultural approach in order to provide an empirical grounding to the multidimensional concept of media generations. Data from the representative survey ‘Me. The World. The Media’, conducted in autumn 2011 among members of the Estonian population aged 15-74 (N=1,510), are used to map similarities and distinctions among four age groups with regard to the use of media technologies and channels, format and topic preferences, spatial orientations of media consumption, and attitudes towards the internet. The findings demonstrate significant and multifaceted differences between the age cohorts regarding their use of media technologies, thus referring to the existence of different ‘media generations’. The two youngest cohorts have actively responded to the opportunities and affordances provided by their ‘generational location’ on the unfolding

developmental track of information and communication technologies, thus acquiring features of ‘generation as an actuality’. The analysis of the thematic and format preferences reveal a clear divide between the groups younger and older than 45, suggesting that in addition to the ascent of new media technologies, broader social and cultural changes need to be considered in interpreting generational groups’ relations with the media. Similarly, the cross-generational trends in changing spatial orientations of media use – following the trajectory from Russian media across local media towards global media – reflect broader societal and cultural changes. On the individual level, our study partially confirms the hypothesis that media experiences shared with members of another media generation are related to a weaker perception of inter-generational gaps.

## a11RN30 - Integration and Belonging

Chair(s): Aurelie Mary

### Immigration and Social Engagement – The Different Aspects of Integration of the First-Generation Immigrant Youth in Finland

Laura K. Kyntölä, University of Helsinki | [laura.kyntola@helsinki.fi](mailto:laura.kyntola@helsinki.fi)

The Finnish integration policies have traditionally been closely linked to providing employment for newly arrived immigrants. However, this strong focus only on employment policies has left the immigrant youth in a challenging position. At the same time the young immigrants are faced with increasing expectations to integrate and to do well in their new home countries. In my presentation I will be discussing social engagement as a new and alternative way to study immigrant youth. The presentation is based on my empirical study among the first generation immigrant youth in Finland. Social engagement, as I define it, is not a synonym for integration, but it encompasses various actors and actions that influence individual's process of engaging with the different groups and structures of his or her social environment. How are these relationships formed and what

other forms of social engagement are there to be found? Current integration policies also often neglect to acknowledge all the various networks that immigrants have at their disposal. Therefore, in addition to the level of engagement with the Finnish society, I am especially interested in how the teenage youth in my research group form multicultural social relationships and networks with groups outside the majority culture. Some connections may pull the individual closer to the majority culture, while some forms of engagement may push the youth towards other groupings and networks. How can the youth benefit from these relationships and what role does the family play in this process? In my presentation I will explain what kind of support there is to be found within the various social networks and how all these different forms of engagement can be enforced.

### Youth Religiousness in the Social Network Era: New Opportunities for Muslims Living in a Catholic Country?

Roberta Ricucci, University of Torino | [roberta.ricucci@unito.it](mailto:roberta.ricucci@unito.it)

Muslims in Italy include not only members of the first generation but also a growing number of second generations. Given this, it becomes increasingly apparent that any research on Muslims needs to consider how both Muslim immigrants and their Italian-born – or second-generation – offspring adapt to life in Italy. In addition to this, the growing importance of social networks among young people invites us to focus on how these tools (e.g. Facebook, Twitter) influence religious expression in those contexts, like Italy, where the Muslims'

presence and visibility is questioned. This study will examine how young Muslim Italians express their religiousness and how they use social networks for religious purposes, placing the findings within the larger context of literature about second generations, acculturation and religiosity. The issue of the ethno-religious adaptation of second-generation Muslim Italians is a critical area of study given that the negative attitude of the media after 9/11 and in a context where one political party, the Northern League, uses

religious difference to fight against immigration, stressing the distance between Muslim young generations and their peers. Data used in the paper have been collected

through semi-structured qualitative interviews with 40 second-generation Muslim Italians (mainly Morocans and Egyptians) of varying levels of religious identification and practice.

## The Dimensions of Belonging and Emigration Plans of Latvian Youth

**Ilze Koroleva**, University of Latvia | [ilzek@petijums.lv](mailto:ilzek@petijums.lv)

**Aleksandrs Aleksandrovs**, University of Latvia | [aleksandrsa@gmail.com](mailto:aleksandrsa@gmail.com)

**Ritma Rungule**, Riga Stradins University | [ritma.rungule@rsu.lv](mailto:ritma.rungule@rsu.lv)

In this paper, we define identity as a sense of belonging to a particular locality, social group, civic community, or nation. Identity is understood in terms of similarity with and distinction from other individuals, groups, and communities. Our aim was to compare the formation of different sense of social and territorial belonging in various youth cohorts, and to identify the socio-demographic and economic factors that influence it. The analysis is based upon two quantitative surveys of high-school graduates (2005, n=3046; 2011, n=3248). Employed methods: factor analysis for grouping characteristics of the sense of belonging and determining its structure; and logistic regression for identification of the most powerful factors that affect the belonging dimensions. The results reveal that the diverse youth identities are grounded in certain

structures of the sense of belonging, which are rather stable and hardly change with time. At the same time, economic processes and social change do contribute to the shifts in young people's sense of national and territorial belonging. Overall, belonging of youngsters concentrates along two axes: national / ethnic Latvian vs. ethnic Russian / national minority identity, and traditional/local vs. cosmopolitan dimension. The data supports the hypothesis that sense of belonging is among the statistically significant factors that either support or delay decisions regarding staying or leaving the country. Among the cosmopolitan oriented youth, the share of those who already decided to leave Latvia immediately after school graduation is higher, while the national/Latvian dimension sho

## b11RN30 - Ethnic Identity and Community Networking 1

Chair(s): David Cairns

### Citizenship as “Tool” and Challenge for Social Inclusion. The Case of Italian Second Generation’ Migrants

Liana M. Daher, University of Catania | [daher@unict.it](mailto:daher@unict.it)

M. Teresa Consoli, University of Catania | [consoli@unict.it](mailto:consoli@unict.it)

Laura Siligato, University of Catania | [laurasiligato@libero.it](mailto:laurasiligato@libero.it)

Recent statistical projections (ANCI-Cittalia 2012) have observed that in 2029 the foreign minors in Italy could be around two million, one million and 770 of which born in our country. But, if the present law on citizenship will remain in force, only 7% of them will become Italian citizens. Italy is, in fact, one of the last European countries with more restrictive regulations on the subject. According to law 91/1992, the Italian State grants citizenship by giving prominence to jus sanguinis. If, instead, this principle were to be replaced by that of jus soli in 2029 86% of minors may become Italian citizens. The above data highlight the need for careful considerations on the subject. The effects of globalization and the new forms of migrant stable settlements in the country have changed the idea of citizenship. Citizenship becomes

one of the main areas of civic exchange, transmitting also demands for changing rules and managing public space and politics. The new migration highlights incongruities among typical dimensions of the classical idea of citizenship. The principle to ensure inclusion and participation in civic life of those who live within the territory of the State, by excluding who is defined as “foreign” openly clashes, in fact, with the need of non-discrimination and social inclusion of foreign young people (coming to or born in Italy). From this perspective, the citizenship of second-generation youth represents a legal, institutional and cultural challenge which we aim at discussing in the paper through theoretical considerations and some empirical references.

### Relations, Norms and Contradictions - Lifeworlds of Kyrgyz Youth

Jessica Schwittek, University of Wuppertal | [j.schwittek@uni-wuppertal.de](mailto:j.schwittek@uni-wuppertal.de)

This paper looks at the issue of Youth and Generation in the transition society of Kyrgyzstan. The presented study takes an interactionist stance, conceptualizing individuals as actors whose communication is meaningful and decisive for the (re)production and negotiation of social rules. Twenty in-depth interviews were conducted with young Kyrgyz

adults including topics such as childhood and family life, interests as a child and adolescent, relations with family members and friends, educational and professional decisions, as well as private and professional future perspectives and goals. Data analysis has shown that significant and generalized others are holding a variety of different normative orientations,

confronting the interviewees with contradictory and conflictive expectations. As Kyrgyz society is structured by a strong ageism, demands and norms of elder people have an important position and are prominently taken into account by young actors. This paper looks at

the specific figurations of relations, dependencies and norms within which young Kyrgyz adults make important biographical decisions, at 'typical' conflicts and at the strategies actors develop to solve them.

## **c11RN30 - Ethnic identity and community networking 2**

Chair(s): Kirsty Finn

### **The Formation of European Identity: Ethnic Minority Groups in Central and Eastern Europe in Generational Perspective**

Natalia Waechter, University of Eastern Finland | [waechter@ihs.ac.at](mailto:waechter@ihs.ac.at)

Research on European identity has above all focused on majority populations in Western European countries, neglecting the new member states in Central and Eastern Europe as well as ethnic minority groups. This paper contributes to filling this gap by exploring and investigating processes of European identity formation of five ethnic minority groups in four CEE countries. A generational perspective was applied by conducting qualitative in-depth interviews with three generations of members of ethnic minority groups. The results show

that across all researched minority groups, the young generation, due to more positive personal expectations and experiences with the EU, has rather developed positive images and perceptions of Europe and more of a sense of European identity than the older generations. Furthermore, there are ethnic-group-specific processes of identity formation: some are glad of finally being part of EU-Europe, whereas others take belonging to Europe for granted but feel disadvantaged compared to the richer Western Europe.

### **Net-Generation and their Way of Solving Problems – Case Study based on Net-Generation Elite**

Agnieszka Jeran, University of Economy in Bydgoszcz | [a.jeran@wp.pl](mailto:a.jeran@wp.pl)

Individual social capital is the collection of resources that one can reach from her or his personal social network. In moments of personal or global difficulty one can use this capital to find solution or social support. For young people the sources of it and the ways of testing this capital are connected with school, peer groups and community of interests. Nowadays building social capital and sustaining it in good condition is often based on computer-mediated communication and "net-

generation" is probably the better connected generation in history – of course if you count only number of ties. But is it also the generation with the best social support? In research done in Bydgoszcz (Poland) and other towns in region we conducted 300 questionnaire interviews and 40 in-depth interviews with young people who were well-educated, living in the city and using internet. They were asked about their social capital and the ways they use to resolve small and big

problems of everyday life. We chose them as an elite of the net-generation and their resources and strategies reflect the actions of the best suited people in that generation. In my presentation I will show different resources

and strategies they use to solve their problems and also some of their skills and opinions about values and control over their own lives. These are factors important to recognize their ways of dealing with difficulties and crisis.

## **My Story or Your Story? Reconstructing Problematic Pasts in Young Lives.**

Raili Nugin, Tallinn University | [nugin@tlu.ee](mailto:nugin@tlu.ee)

Young people are socialized in the society by constructing collective identity of a particular nation/ ethnic group. This identity consists of various complex parts, one of them being the narrative of the shared past. In a multicultural post-socialist society like Estonia, multiple stories and narratives sometimes complement, but often also compete and contradict with each other. On the one hand, this past can be a source of tensions, but on the other, by constructing narratives about the mutual pasts and communicating them successfully to different ethnic groups, some confrontations of the previous generations can be overcome. This paper looks at how young people are socialized into the 'difficult' pasts and what role different collective pasts play in their lives. Based on a case study (2 exhibitions in Estonian Museum of Art KUMU and fieldwork,

which included ethnographic observations, in-depth and focus group interviews with experts and young people from different ethnic backgrounds), it will be asked how the so-called 'problematic periods' in the past are presented and interpreted. It will be argued that in young people's socialization, intergenerational memory plays a crucial role. The dialogue between different narratives can only be productive if the versions of 'problematic pasts' have some mutual ground. Thus, the narratives of the past aiming for more heterogeneous interpretations are needed. Even if the competing versions of the past may not evoke conflicts, it can result in disinterest and ignorance of the past and the multiple versions of it. The research is part of the EC FP7 project MYPLACE.

## **The Role of Friendship and Social Networks Mediating Young People's Experiences of Regeneration and Relocation in Two Deprived Neighbourhoods in Glasgow, UK**

Joanne Neary, MRC | CSO Social and Public Health Sciences Unit, Glasgow | [jneary@sphsu.mrc.ac.uk](mailto:jneary@sphsu.mrc.ac.uk)

Current regeneration strategies in Glasgow (UK) focus on improving the built environment in order to improve physical and mental health outcomes (Kearns et al, 2012). One such strategy is to relocate families from socially rented sub-standard housing, primarily high-rise flats (HRF), to better quality houses or low-rise flats either within or outside of their current neighbourhood. While few studies focus on young people's experiences of

relocation, some evidence from US studies suggest that relocation may lead to fragmentation of social support networks (Clampet-Lundquist, 2007). Using longitudinal qualitative methods, my PhD interviewed 15 young people (11-18 years) from two deprived Glasgow neighbourhoods about their experiences of relocation: questions related to their own move as well as the relocation of friends and neighbours. The current paper will

discuss young people's maintenance of social networks within the context of the relocation programme. Unlike US programmes, the Glasgow relocation programme often relocated residents to nearby neighbourhoods of a similar deprivation level. Therefore young people found that their original social networks were easily maintained post-relocation. They discussed that their maintenance of

friendships was helpful in settling into their new home. Young people also described the importance of secondary school and the internet as key resources to keep in touch with friends who moved further away. While policy in Glasgow helped young people maintain their social networks, this paper will suggest that this was at the expense of moving to a more affluent area with improved services.

## a12RN30 - Emigration and Immigration

Chair(s): Raili Nugin

### Home and Place in the Identity of young Faroe Islands

**Firouz Gaini**, Norwegian University of Science and Technology, Trondheim | [firouz.gaini@svt.ntnu.no](mailto:firouz.gaini@svt.ntnu.no)

The Earth is revolving around the islands... Home and Place in the Identity of young Faroe Islands This paper aims to shed light on contemporary Faroese youth identities with focus on cultural constructions of home and place. The Faroe Islands, an archipelago with a population of 49.000 inhabitants, are characterized by relatively high levels of emigration and immigration (mostly 'return migration'), especially among the youth and young adults, which has major influence on the cultural identities of Faroe Islanders. My main questions are hence: Do small-scale islands communities have a peculiar sense of home and place? How do current processes of globalization affect the identities of young islanders? Through my extensive qualitative research – since 2003 – the remote island community in the North Atlantic appears as a

place connecting tradition and modernity, local and global, in a rather unique way. Using French anthropologist Marc Augé's book on so-called 'non-places' (1995) I attempt to analyze the meaning of home and place in relation to the floating 'outside' world from a Faroese perspective. This leads us to the issue of generation: To which degree do young people, growing up with new electronic media and international social networks, reinterpret the parents' construction of place and identity? The case of the Faroe Islands represents the situation in many sparsely populated European peripheries, and, curiously, the contrasts between tradition and (late) modernity as dynamics behind general social change, are more visible, or more pronounced, here than in central urban societies.

## Should I Stay or Should I Go? Analysis of Biographic Strategies of University Students in Spain

Benno Herzog, University of Valencia | [benno.herzog@uv.es](mailto:benno.herzog@uv.es)

Sandra Obiol Francés, University of Valencia | [sandra.obiol@uv.es](mailto:sandra.obiol@uv.es)

Alícia Villar Aguilés, University of Valencia | [Alicia.Villar@uv.es](mailto:Alicia.Villar@uv.es)

Joan Carles Bernad Garcia, University of Valencia | [Joan.C.Bernad@uv.es](mailto:Joan.C.Bernad@uv.es)

Francesc Jesus Hernàndez i Dobon, University of Valencia | [Francesc.J.Hernandez@uv.es](mailto:Francesc.J.Hernandez@uv.es)

The economic and social crisis in Spain, as well as the institutional response to it are affecting the younger generations and turning its labour and life conditions even more precarious. In the case of university graduates it turns evident that the investment in education realized by them and their families does not lead to the expected results. This circumstance fosters the sensation of uncertainty which is characteristic for modern, western society. Regarding to this circumstance, young people could develop different types of education, labour, lifetime and migration strategies. The main objective of our contribution is to show the importance and variety of these strategies. The results stem from analysis of secondary data as well as from qualitative analysis of focus

groups with university students in Valencia (Spain). We will show which factors are decisive to young graduates for their decision to emigrate or not towards other countries. The results suggest that migration strategies are composed by traditional factors – economic and labour situation, family situation – as well as by emerging factors resulting from reflexive modernity. The overall results of the research provide a better knowledge of biographic strategies of young, well-trained students at the transition between university and labor market. This knowledge could be useful not only for academic purpose but also in order to stimulate social debates and to promote appropriate social policies for improving the quality of life of young Spaniards.

## Media - Marginaliser or Booster of Youth Transitions?

Raili Nugin, Tallinn University | [nugin@tlu.ee](mailto:nugin@tlu.ee)

Out-migration of young people from rural areas in Europe is one of the main focuses of rural youth research as the problem is acute even in areas where counter-urbanisation is strong (Britain). Often the first step in moving out of home rural area involves going to study. The age of deciding for a school outside home area varies. In Estonia, however, over 50% of young people in rural boroughs go to gymnasium (age 16-19) in towns and as much as 38% of rural youth choose a gymnasium in urban areas even if there is a gymnasium in their own borough. This can result in closing down the existing gymnasiums and marginalizing the regions furthermore.

However, it also indicates that there are other reasons for choosing a school besides the closeness of the school and that municipalities' strive to create an infrastructure with sufficient institutions may not be enough in avoiding out-migration. This paper looks at discourses surrounding young rural lives on the threshold of their adult lives when making crucial decisions about their life course. Specifically, it focuses on media discourses prevalent around youth. The aim of the paper is twofold: to analyze the discourses of (a) rural areas, and (b) youth transitions and contemporary youth's position in society. The paper is based on the articles of the biggest Estonian daily

“Postimees” during 2010-2011. It will be argued that coupled with individualisation and self-realisation discourses, the marginalization narratives may have a strong impact on young

people’s out-migration decisions. Yet, the construction of rural idyll and strong rural communities may enable to construct a positive self-image for those intending to stay.

## **a13RN30 - Health and Well-being 1**

### **Health Promotion for Young Prisoners in Romania - Development of a Toolkit**

Anamaria Szabo, University of Bucharest | [ana.szabo@gmail.com](mailto:ana.szabo@gmail.com)

The paper presents the country results (Romania) of a EC funded project called “Health Promotion for Young Prisoners”, which started in 2010 and involved the partnership of institutions from seven European Member States - Bulgaria, Czech Republic, England, Estonia, Germany, Latvia and Romania (<http://www.hpyp.eu>). The project aimed at developing and improving health promotion for young vulnerable people in the prison setting, aged between 14 and 24 years. It specifically aims at the subsequent implementation of a

health promotion toolkit for young prisoners widely across European Member States. The toolkit addresses health related factors regarding infectious diseases, sexual health, mental health as well as the prevention and treatment of drug use. The toolkit is the result of research oriented process that includes a needs assessment among young prisoners and prison staff, as well as a piloting stage. The author of the paper coordinated the project in Romania via the Association of Schools of Social Work in Romania.

### **The Association between Media Use, Alcohol Consumption and Dental Hygiene with Loneliness among Finnish Adolescents**

Matti Näsi, University of Turku | [matti.nasi@utu.fi](mailto:matti.nasi@utu.fi)

Niina Junttila, University of Turku | [niina.junttila@utu.fi](mailto:niina.junttila@utu.fi)

Leena Koivusilta, University of Tampere | [leena.koivusilta@uta.fi](mailto:leena.koivusilta@uta.fi)

Most people experience feelings of loneliness in some point in their life. It has been found to peak during adolescence, with nearly 25 per cent of children perceiving the feelings of loneliness on a daily basis (Larson 1999), therefore having significant implications in their everyday life. Loneliness is described as deviation between the state of one’s actual and desired relationships (Weiss 1973). It has been found to result in several negative implications, such as poor academic performance,

depression, social anxiety and in more severe cases suicide attempts or suicides (e.g. Rotenberg 1999; Heinrich & Gullone 2006). In this article we examine the relationship between electronic media use, alcohol consumption and dental hygiene with loneliness. We are particularly interested in how the participants’ Internet and media use, alcohol consumption and dental hygiene associates with the development of perceived loneliness between the 7th, 8th and 9th Grade.

We have longitudinal design collected from 390 Finnish adolescents during while they were grades 7 to 9 in six different measuring points in two separate age cohorts. For the measure

of loneliness we apply the UCLA loneliness scale, the Internet and media use, alcohol consumption and dental hygiene are measured using respondents' self-reported activity.

## Reducing Student Burnout by Stress Management? – Experiences of Williams Life Skills Training among University Students

Mariann Kovacs, University of Szeged | [kovacsmariann@jgypk.u-szeged.hu](mailto:kovacsmariann@jgypk.u-szeged.hu)

Eszter Kovacs, Semmelweis University, Budapest | [kovacs.eszter@emk.sote.hu](mailto:kovacs.eszter@emk.sote.hu)

Noemi Keresztes, University of Szeged | [tari@jgypk.u-szeged.hu](mailto:tari@jgypk.u-szeged.hu)

Investigating mental health of youth is a highly prioritized field of research. University students face a huge amount of stress load during studies that might influence their psychosocial well-being. Previous studies have emphasized the evidence that WLS training is an efficient tool resulting in improved health indicators. The objective of the present study was to examine psychosocial well-being of university students participating in WLS training, and to measure student burnout and study engagement. Two groups of students were analyzed in WLS training in 2012 (M=22.4 years of age). Pre- and post questionnaire survey was conducted with a follow-up study in 2013. Burnout was measured by Maslach Burnout Inventory; study engagement was investigated by Utrecht Work Engagement Scale. The findings of the pre-survey showed that Exhaustion could be detected in middle

level (M=11.4 SD=5.2), Cynicism stayed in low level (M=5.5 SD=6.4), and the level of Personal efficacy was remarkable (M=26.0 SD=6.2). Of the engagement scales, students achieved high scores in Dedication (M=11.5 SD=3.7), Absorption (M=9.6 SD=4.5), followed by Vigor scale showing the lowest level (M=9.1 SD=4.1). Strong correlation of each scale of engagement with Personal efficacy was found ( $r=.558-.687$   $p<.05$ ). Significant differences in post-survey could not be detected, however, this finding strengthens the fact that burnout involves chronic stress that might be modified by WLS. As a conclusion we underline that influencing student burnout and reducing symptoms covers longer period. With the follow-up study it would be clarified whether changes could be confirmed after WLS training or there is a need to elaborate specific program for reducing student burnout

## b13RN30 - Health and Well-being 2

Chair(s): Carsten Yndigegn

**The interaction of demographic factors, psychological well-being indicators and maturity awareness in the life course planning by two cohorts of Romanian youngsters: high-school and University students**

**Maria Roth**, Babes-Bolyai University, Cluj | [roth.mari@gmail.com](mailto:roth.mari@gmail.com)

**Agnes David-Kacso**, Babes-Bolyai University, Cluj | [kacso\\_agnes@yahoo.com](mailto:kacso_agnes@yahoo.com)

**Paul T Haragus**, Babes-Bolyai University, Cluj | [tpharagus@yahoo.com](mailto:tpharagus@yahoo.com)

**Sergiu L Raiu**, Babes-Bolyai University, Cluj | [raiu.sergiu@yahoo.com](mailto:raiu.sergiu@yahoo.com)

**Anna Bernath**, Babes-Bolyai University, Cluj | [ariel5918@yahoo.com](mailto:ariel5918@yahoo.com)

Beginning with the '90s, research confirmed the value of university studies in enhancing cognitive capabilities, civic responsibility and academic orientation (Whitt et al., 1999; Battistoni, 1995; Terenzini et al., 1995; Wilder et al., 1996; Ehrlich, 2000) and showed the changes in the identity status (Côté și Levine, 2002), but there are few studies to look at the differences of the maturity indicators and psychological well-being according to differences in social status and the demographic factors. The goal of our research is to catch differential aspects of identity formation in young adults to be linked to different social status of youth. Therefore we examine the differences in the way demographic factors, psychological well-being and maturity indicators statistically interact in a sample of 780 high school students from

Romanian cities, compared to a sample of 520 University students from the same cities. We used Arnett's questionnaire (Arnett, 2002), as well as scales that measure self esteem, optimism, future orientation, career planning, and demographic variables. The results showed different types of statistical interactions in the two samples and also significant changes in the main categories identified by Arnett (autonomy, independence, future orientation and career planning, but less for risk behavior). As shown by previously by Côté and Levine (2002), changes can be considered the results of the life experiences due to the new social status (since age differences are less than 12 months) that encourages individuals to confront their perceptions with their opportunities and responsibilities as students.

## Diversification of Well-Being and Academic Achievement between Finnish Schools from 2002 to 2011

**Sakari Karvonen**, THL - National Institute for Health and Welfare, Helsinki | [sakari.karvonen@thl.fi](mailto:sakari.karvonen@thl.fi)

**Arja Rimpelä**, University of Tampere | [arja.rimpela@uta.fi](mailto:arja.rimpela@uta.fi)

**Kari Tokola**, University of Tampere | [kari.tokola@uta.fi](mailto:kari.tokola@uta.fi)

**Matti Rimpela**, University of Tampere | [matti.rimpela@uta.fi](mailto:matti.rimpela@uta.fi)

Rapid spatial diversification by immigration rate, education and income has taken place in the Helsinki Metropolitan Area (HMA). A free choice between comprehensive schools – following however a basically similar curriculum – has given parents an opportunity to select a school for their child. Internationally increasing school selection appears to result in inequalities in educational outcomes. Whether segregation also imposes other diversities between schools, e.g. health-related lifestyles or well-being is unclear. We analyze the extent of school differentiation, its regional variation (4 regions with different phase of urbanization) and its association with diversification in well-being by means of the Finnish School Health Promotion Survey covering 78% of 8th and 9th

graders in 2002-2011 (age 14 to 16, N=450 000). We hypothesized that the largest differences between schools in academic achievement and in well-being (measured with a modified Beck Depression Scale and a health complaint sum score) are observed in the HMA where there are most options for school selection and that school diversification would be widening over time. Distinct school clusters around academic achievement and well-being were found but the patterns between the areas and differences between the clusters showed no significant change over time. We will also analyze how academic achievement and well-being are related at the school level and whether there are area and secular patterns in this association.

## Transcending the Gender Dichotomy in Educational Gender Gap Research: The Impact of Gender Identity on Study Processes.

**Wendelien Van Tieghem**, Ghent university | [wendelien.vantieghem@ugent.be](mailto:wendelien.vantieghem@ugent.be)

**Hans Vermeersch**, Ghent University | [hans.vermeersch@ugent.be](mailto:hans.vermeersch@ugent.be)

**Mieke Van Houtte**, Ghent University | [Mieke.VanHoutte@ugent.be](mailto:Mieke.VanHoutte@ugent.be)

Research into the educational gender gap, tends to contrast girls' achievement with boys 'underachievement'. However, this approach tends to ignore the variety within each sex category, such as well-achieving boys and underachieving girls. To be able to consider both sides of the gender order in a continuous fashion, we employ the use of the concept of 'gender identity', which refers to the extent to which people feel 'masculine' or 'feminine'. This study examines the impact of gender identity on study processes (such as academic

self-efficacy, study motivation and self-regulated learning). Over 6000 7th grade students, clustered in 59 Flemish schools, completed a questionnaire. Using multilevel analysis, we expect a more 'feminine' gender identity to be associated with more conducive study processes, such as an internal locus of study motivation, more self-regulated learning and a higher academic self-efficacy. Similarly, we expect a more masculine gender identity to be related to less beneficial study processes, such as a more external locus of study

motivation, lower academic self-efficacy and less self-regulated learning. Furthermore, we consider the impact of pressure for gender conformity on the connection between gender identity and study processes. We anticipate that gender atypical children who experience strong pressure for gender conformity might try to adapt their behaviour to gender

expectations, thus exhibiting a less distinct study process than expected based on their gender identity. Similarly, we expect gender typical children who nevertheless experience strong pressure for gender conformity to display more extreme 'gender typical' study processes.

## 14\_04JS28JS30 - Facets of Participation in Childhood and Youth: Exploring Sport Participation (1)

### Non-Disabled Secondary School Children's Lived Experiences of a Wheelchair Basketball Programme Delivered in the East of England.

Adam B. Evans, University of Lincoln | [adevans@lincoln.ac.uk](mailto:adevans@lincoln.ac.uk)

Lindsay J. Brown, University of Lincoln | [Lbrown@lincoln.ac.uk](mailto:Lbrown@lincoln.ac.uk)

Jonathan Bright, University of Lincoln | [jonobright86@googlemail.com](mailto:jonobright86@googlemail.com)

Frequently an unquestioned belief is held in UK schools in the value of 'normalised' ability in physical education. Consequently inclusion of disabled students can be problematical. Negative perceptions of disability are rarely challenged. This study investigated the embodied experiences of 50 non-disabled secondary school pupils during a programme designed to introduce disability sport to non-disabled schoolchildren entitled 'The Wheelchair Sports Project.' Wheelchair Basketball sessions were delivered by coaches during physical education for a 12 week period. 50 pupils aged between 10 and 12 years took part. Non-participant observations were completed during the intervention and guided group interviews were completed with 40 participants pre and post project. Bourdieu's theoretical framework was utilized during data analysis. The impact of the project on pupils'

perceptions of physical disability was investigated. Prior to the project, pupils emphasized the 'otherness' of disabled bodies and described disability sport as inferior and not 'real.' Observations highlighted how pupils' experienced physical challenges adapting to wheelchair basketball. Pupils struggled to control wheelchairs and frequently diverged from acceptable behaviour by using their lower limbs to 'cheat.' Post-programme interviews demonstrated pupils' perceptions of physical disability altered due to their embodied experiences. Pupils described high physical demands of wheelchair basketball and began to focus upon similarities between themselves and physically disabled individuals. However, no reference was made to mental or psychological disability, emphasizing the specificity of the effects of pupils' embodied experiences on their habitus'.

## Selected factors Related to Participation in Sport and Physical Activities among Secondary School Students in the Island of Tobago

Anand Rampersad, University of the West Indies | [pastiche6@yahoo.com](mailto:pastiche6@yahoo.com)

This exploratory paper examines the relationship between selected social variables and participation in sport and physical activities among secondary school students on the island of Tobago, in the Caribbean. Participation in sport and physical activities involve engagement at school, organized clubs and recreational settings. The research explores the relationship between participation in sport and physical activities as it relates to Social and Economic Status (SES), engagement in extra-curricular activities, school encouragement and parental education. The study draws on an analysis of quantitative data of 116 secondary school students from four (4) schools in Tobago between the ages of 11-15 years. Using a number of statistical tests such as Spearman's rank correlation, the data

shows that there are no positive relationships between school encouragement, SES, parental education and participation in sport and physical activities. Additionally, there is no statistically inverse relationship between engagement in extra-curricular activities and participation in sport and physical activities. The findings of the study calls for a deeper understanding of the meaning and prioritising of sport and physical activities in a small developing society. In so doing, recommendations are offered for future research as well as policy planning in order to make meaningful interventions in the lives of adolescents in terms of their health and socio-cultural well being. Keywords: Participation; Sport; Small Developing Society

## Conforming or Countering Femininities? Secondary School Sport

Majella McSharry, Dublin City University | [majella.mcsharry@dcu.ie](mailto:majella.mcsharry@dcu.ie)

This paper is based on research conducted in a range of Irish second level schools selected because of their reputations for success in rugby and Gaelic games. Sport is frequently seen as a source of hope and cohesion, strengthening community belonging among participants and supporters. However this research examines how school sport can be alienating and infuriating when it serves to reinforce gender inequalities, while giving the illusion of 'natural' gender practices. In Ireland, whatever the team sport, it is predominantly men's leagues and competitions that attract most media support and public interest, so physical team sports are largely gender specific and male orientated. This dominance is often nurtured and perpetuated in secondary schools whose reputations

depend on the success of boys' teams. This research investigates the experience of girls attending these schools. It is framed against the backdrop of varying studies that document high levels of sport 'drop out' amongst teenage girls (Kelleher et al, 2003) or lack of participation in diverse activities (McPhail, Collier and O'Sullivan, 2009). This paper explores the range of co-curricular sporting activities available to girls and suggests that equality of choice can serve to highlight rather than reduce gender dissonance. This paper examines how ultimately the girls' quests for equality and recognition within school sport can leave them balancing a fine line between conforming and countering discourses of gender performativity.

Chair(s): Aurelie Mary (University of Tampere), Tom Cockburn (University of Bradford), Leena Haanpää (University of Turku)

### The Phenomenon of Drop Outs Sports among Teenagers. A Case Study in Italy

Barbara Mazza, University of Sapienza, Rome | [barbara.mazza@uniroma1.it](mailto:barbara.mazza@uniroma1.it)

Between 14 and 18 years there has been, in Italy, the highest rate of abandonment of sport and amounted to over 20% (Istat 2010). What are the factors that have the greatest impact on this choice? To investigate the reasons, ORSA (Regional Observatory sports Abruzzo) on behalf of CONI Abruzzo has conducted in 2012, a research involving nearly 10,000 high school students (equivalent to 20% of the student population of the region), distributed by type of school attended, gender, age, province of residence, to ensure the representativeness of the sample. The survey examined by administering a semi-structured questionnaire and the construction of four focus groups (one in each province of the region), motivation, socio-cultural, lifestyle and eating habits, relationship with individual

sports, relationship dynamics and patterns of cultural consumption. The reflection emerged is part of the debate, for some time, has suffered as a national and international level. The aims to understand the reasons that lead to inactivity and neglect, but also to identify possible actions to intervene in order to help contain the phenomenon of drop outs. The results have been demonstrated fully in line with the national data and made it possible to provide a detailed and multifaceted condition and habits of young people of Abruzzo, in addition to interesting ideas that come from the way they conceive of the sport and their requests to the sporting world, aimed at dialogue and make it more challenging approach to physical and motor activities.

### The Sport and Physical Activity Drop Out Phenomenon – Concepts, Methodological Issues and Airections for Future Research

Matti Hakamäki, LIKES Research Center, Jyväskylä | [matti.hakamaki@likes.fi](mailto:matti.hakamaki@likes.fi)

There is a consensus regarding dropout from organized sport in general; however, the phenomenon is seldom investigated in detail. Beginning, changing and withdrawing from a specific sport can be measured using the license data of sports federations in countries where such information is available in a suitable format. The basic feature is that although children will drop out of sports at any age, starting a new one becomes more difficult as they get older. The declining amount of physical activity is a parallel but slightly different issue; the decline starts earlier.

According to currently available data, the level of objectively measured physical activity starts to decline after children reach the age of seven. Organized sport is only a small fraction of the total volume of physical activity. From the health behaviour perspective, the organization mode of physical activity is important because it affects the probability of an active lifestyle in the future. Amounts of physical activity are traditionally measured using questionnaires; currently, the data is also objectively gathered with accelerometers. The research method affects the results; the

interpretation of associations between socioeconomic factors and physical activity is influenced by the chosen method of data collection. Sport-related behaviour can be understood as a consumption style ; to some extent, this behaviour is dependent on available resources. On the other hand, several

aspects of consumption are more immaterial, and some features can be adapted to circumstances where only scarce funding is available. The consumption styles may be independent of participating self in sport in the form of physical activity .

## **Sports Participation, Family Habitus and Gender : a Case Study of Sporty Girls and Non Sporty Boys**

Christine Mennesson, University of Toulouse | [christine.mennesson@univ-tlse3.fr](mailto:christine.mennesson@univ-tlse3.fr)

Numerous works highlight the role of the socioeconomic status of families in children's participation in sports (White and Pledge, 2007; White and McTeer, 2012). Other authors studied the modes of family socialization which favor this process. The family culture so appears as a central element in the construction of the childrens' sports tastes (Wheeler, 2012 ; Dagkas and Quarmby, 2012). In particular, the place occupied by sport in the family style of life plays an important role (Macdonald and al. , 2004). More generally, it is possible to identify a family habitus (Tomanovic, 2004; Weininger and Lareau, 2009), who organizes children's engagement in leisure and physical activity. However, the

sports participation of childrens also varies according to their sex. If sports participation seems more valued for the boys, and allows them to occupy a favored place in their group of peers (Eder and Kinney, 1995), the atypical sports investments are less negatively judged for the girls (Messner, 2005; Mennesson, 2007). This communication discusses the interest of an analysis in term of family habitus to analyze the atypical gender uses of sport of certain children. It bases on a qualitative survey led with about twenty children's families, and presents in great detail the cases of two girls practising sport in a intensive way, and of two boys who doesn't like sport.

## 16\_04JS28JS30 - Facets of Participation in Childhood and Youth: Exploring Sport Participation (3)

Chair(s): Tom Cockburn (University of Bradford), Leena Haanpää (University of Turku), Aurelie Mary (University of Tampere)

### Urban Youngsters and Organised Sports. Relations between Socio-Demographic Characteristics and Drop Out.

Tineke Van de Walle, Ghent University | [Tineke.VandeWalle@UGent.be](mailto:Tineke.VandeWalle@UGent.be)

Lieve Bradt, Ghent University | [lieve.bradt@ugent.be](mailto:lieve.bradt@ugent.be)

eva de coninck, Ghent University | [e.deconinck@ugent.be](mailto:e.deconinck@ugent.be)

Participation in organized leisure activities is believed to bring substantial developmental benefits for young people. Participation in organized sports in particular has not only been associated with general developmental benefits, but also with better health in young people. As a consequence, there is a growing interest in the non-participation and drop out of young people in organized sports. While research data are available on the socio-demographic characteristics of 'non-participants' and on young people's main reasons for dropping out, few studies have focused on relations between youth drop out and socio-demographic characteristics. In our presentation we will present findings based on multilevel data from a school survey conducted by the Youth Research Platform, a Flemish Policy Research Centre, in secondary schools

in the two biggest cities of the Flemish region of Belgium. The sample includes 3.867 young people, aged between 12 and 18 years old and from diverse socio-demographic backgrounds (half of the respondents come from ethnic minority families and over 10% of the respondents reported financial strain in their family). All respondents had to report on their former and current participation in organized sports and other leisure time activities. Multilevel logistic regressions uncover compound relations between drop out, age, gender, ethnicity and socio-economic status. Our findings suggest that different explanations for youth drop out in sports are to be found in different sections of the population, notwithstanding possible invariance in self-reported reasons.

### Children and the Federal Definitions of Sports Activities in France

Pascale Garnier, University Paris 13 | [pascale.garnierx@free.fr](mailto:pascale.garnierx@free.fr)

Sports practices must be understood as the relationship between two phenomena: on the one hand a "demand" of practices; on the other hand an "offer" of practices (Bourdieu, 1980). In particular, the participation of children and young people in sports organizations can be

explained by various factors such as time allocation, but also by the social definitions of sports practices according to age groups. These aspects, in the French context, constitute the object of my proposal, insisting on a tension between recreational and

competitive definitions of sports. The objective is to show an increasing emphasis on the selective and competitive dimensions of organized sport compared to the dimensions of leisure and play. In order to analyze this general process and its variations according to different sports, I study the development of five sports activities within the framework of national federations: basketball, gymnastics, horse-riding, tennis, swimming (Garnier, 2005, 2006). The aim of my communication is to contribute to denaturalize the classifications of age, which are particularly powerful in this

domain of physical activities. References

## **Ethnic Minority Youth and the Access to Participation in Organised Sports: Danish Case: The Intervention Playground**

Annette K. Michelsen la Cour, University of Southern Denmark | [amlacour@sam.sdu.dk](mailto:amlacour@sam.sdu.dk)

From 2010-2012 an intervention named Playground offered sporting activities during vacation periods in 6 disadvantaged areas in Denmark. The Ministry of Culture was behind the funding and the intervention was organised by the Danish sporting umbrella organisation DGI and carried out by local sports clubs. The political aim was to reduce crime and political radicalisation through meaningful organised activities, though the aim of the local sportsclubs was to attract new members among the children and young people between the age of 5 to 16. The political expectation was, that a variety of sporting activities offered ranging from football across cricket to capoeira, belly dancing and fencing would present an important alternative to doing nothing or engaging in criminal activities during vacation periods. The intervention was evaluated and the findings showed that the aim

of reducing "trouble" was met through the activities and it was believed that the activities could prevent gang-like constellations from recruiting new members. The activities were well attended by children up to the age of 14 years and approved by both children and parents after a period of introduction, but the participants did to a very little extend enrol as members. The sports clubs though did not gain a lot of new members, but became known in the areas. The findings also showed that participation in organised sports is limited for both financial, social and cultural reasons and that the knowledge of the civil society based sports clubs in Denmark is at hand but not at use. There's a substantial underrepresentation of ethnic members and the findings showed that means of transportation and parental resources are scarce among the families in the areas.

## Learning to Associate: The Facilitators and Obstacles to BME Children and Young People's 'Participation' in Sports Associations.

Tom Cockburn, University of Bradford | [t.d.cockburn@bradford.ac.uk](mailto:t.d.cockburn@bradford.ac.uk)

This research explores the work of Black and Minority Ethnic (BME) children's and young people's association through the lens of sports associations. The research: a) Illuminates how BME young people's social identities are produced and negotiated in families and in private and in public spaces/places; ii) Understands how such learnt patterns of association in the informal sphere develop into

more formal associations; iii) Sports participation is a key element in supporting BME children to negotiate the interface between 'informal' and 'public' association. We adopt an intensive case study approach utilising semi-structured interviews, PLA techniques of network mapping (Chambers, 2009).

## RN30 - Poster Session

### Social Goals and Values of Students in Post-Socialist Countries: Why Regional Differences are more Significant than Cross-Cultural

Nikolay P. Narbut, Peoples' Friendship University of Russia, Moscow | [npnarbut@rambler.ru](mailto:npnarbut@rambler.ru)

Over the past several decades the issue of structure and components of students' value orientations in the transforming society has been the focus of sociologists' attention. Firstly, it is the value orientations system rather than the values that is scrutinized, since the former term is broader in meaning and implies the structural bond between the subject and the values he adheres. Secondly, it is the students rather than the youth as a whole as a particularly sensitive segment of the youth with a high level of social mobility which is extremely involved into the process of social value system transformation. Thirdly, the analysis of value orientations of students provides some opportunities to predict diverse social processes and helps to break down mass conscience stereotypes attached to the present-day younger generations. The comparative analysis of regional and

metropolitan students in Russia and China based on the same parameters proved that the structure and components of youth value orientations throughout Chinese society are too similar to involve any substantial differences that could be significant in terms of interpretation, whereas the rather ambivalent nature of the value-normative sphere of the present-day students in Russia becomes especially evident as far as regional institutions of higher education are concerned. On the one hand, students in Russian regions adhere to the same value dominants as their peers in Moscow; on the other hand, some value priorities are essentially different due to the influence of more traditional sociocultural environment and to the lack of institutional opportunities for self-fulfillment in the educational, professional, socio-political and other spheres of social life.

## Student Youth in a Multi-Polar World: a Sociological Study of the Images of the Neighboring Countries

Irina V. Trotsuk, Peoples' Friendship University of Russia, Moscow | [irina.trotsuk@yandex.ru](mailto:irina.trotsuk@yandex.ru)

In the past five years the Sociology Chair of the PFUR together with our Chinese, Czech, Serbian and Kazakh colleagues have been developing and implementing a joint research project to study the content and dominant features of the worldview of the students. In all countries a number of surveys based on representative samples of students was conducted with the same questionnaire, where the thematic blocks could be slightly changed, if such modifications seemed essential to better reflect the world of young people. In 2010, we added a new thematic unit to the questionnaire, the purpose of this was to show how the images of neighboring countries (China and Kazakhstan) are composed in the Russian students' minds. In 2012, we conducted an empirical study to characterize the basic social stereotypes of young Russians about the Serbs and Serbia – a country with

which Russia has had a historically long and friendly relationship. In recent decades Serbia has constantly been mentioned in the Russian mass media, mainly in several key discourses (the Orthodox faith as a common ground of culture of our countries, unresolved ethnic and territorial conflicts, the confrontation between pro-and anti-Western views in the political sphere) that suggest the formation of quite clear social representations of Serbia among Russian students. We recognize the conventionality and schematic mode of our tools and results, but, however, believe that the proposed model of 'measurement' can be used as a basis for the development and implementation of more ambitious projects in terms of volume and stratification structure of the sample aimed to study social representations and compare the images of countries in broad socio-cultural contexts.

## Civic Engagement of Adolescents – Findings from the Youth Survey 2010-2011 in Ostrobothnia, Finland

Pia E. W. Nyman-Kurkiala, Åbo Akademi University | [pnyma@abo.fi](mailto:pnyma@abo.fi)

The aim of this poster is to investigate the patterns of civic participation among youth as well as its determinants, by using unique survey data from the Ostrobothnian Youth survey in Finland. In 2010-2011 a total of 1674 ninth graders (15-16 years old) participated in an electronic survey. The results show a higher

level of engagement in relation to non-political activities whereas conventional and non-conventional political activities attract far less attention among youth. The foremost explanations to civic engagement were to be found in gender and social and political capital.

## RN31 - Ethnic Relations, Racism and Antisemitism

### 02RN31 - Cosmopolitanism, Critical Theory and Antisemitism: Thinking with Adorno and Arendt

Chair(s): Ben Gidley (Oxford)

#### Cosmopolitanism and Antisemitism: Troubled Relations

Robert D Fine, University of Warwick | [robert.fine@warwick.ac.uk](mailto:robert.fine@warwick.ac.uk)

This paper explores the difficulties cosmopolitanism has in dealing with by the history of antisemitism. I suggest it has to do with the fact that universalism has shown two faces to Jews: a kindly inclusive face that looks at Jews as fellow human beings and reveals itself in magnificent discourses on Jewish emancipation; and a cruel judgmental face that abstracts 'the Jews' as the enemy of humankind and manifests itself in discriminatory discourses on the 'Jewish question'. The Janus-face of universalism is a problem not just for Jews but for all categories of people to whom the labels of the inhuman, not-yet human or anti-human have been attached. The usual cosmopolitan response is

not to abandon the idea of universalism but to treat it as a unrealised regulative idea. Exclusion appears as the marker of an incomplete universalism whose incompleteness must be rectified. However, I argue that antisemitism poses a particular difficulty because it revolves around the abstraction of 'the Jews' as the enemy of the universal. Every emancipatory act of inclusion has made available new exclusions in the form of the 'Jewish question'. I maintain that this difficulty has historical roots but continues into the present. The question I pose concerns what a self-critical engagement with antisemitism in the here and now demands of cosmopolitan thought.

#### Rethinking Antisemitism after the Holocaust – Connecting some threads in Dialectic of Enlightenment and the Origins of Totalitarianism”.

Philip Spencer, Kingston University | [p.spencer@kingston.ac.uk](mailto:p.spencer@kingston.ac.uk)

This paper seeks to connect shifts in Adorno and Horkheimer's and Arendt's rethinking of antisemitism after the Holocaust, as each placed it at the heart of injustice, without losing sight of its distinctive characteristics as both a form of and something more than racism. As news began to come out about the Holocaust, Horkheimer described antisemitism as "the focal point of injustice ...where the world shows its most horrible face", arguing that "just as it is true that one can only understand

antisemitism by examining society ...it is becoming equally true that society itself can now only be understood through antisemitism". Arendt too was forced into a significant rethink by the Nazi radicalisation of antisemitism. She too understood that something quite new had occurred, which opened up an inter-connected danger both for the Jews and for humanity itself, the threat of modern genocide, before which "no people on earth - least of all, of course, the Jewish

people, in Israel or elsewhere – can feel reasonably sure of its continued existence”. There are of course significant differences between them. If Horkheimer and Adorno came to look further back in time, going back perhaps to the roots of “civilisation”, Arendt was keener to emphasise the distinctiveness of

modern antisemitism. This paper however argues that these differences can be exaggerated and that many of their insights can be combined to help us avoid either treating antisemitism as quite separate from other forms of injustice or as indistinguishable from them.

## **The Relevance of Hannah Arendt's Theory of the Nation for her Analysis of Antisemitism**

**Ilka Schroeder**, Technical University of Berlin | [i.schroeder@jpberlin.de](mailto:i.schroeder@jpberlin.de)

In antisemitism theory, Hannah Arendt's respective analysis is not undisputed, but nevertheless recognised as an important contribution. One part of her explanation for antisemitism in the “Origins of Totalitarianism” is the idea that (republican) nationalism is an effective means against antisemitism. It presupposes a couple of statements that I would like to discuss: is Arendt right in making a fundamental distinction between republican loyalty to the nation and fascist reference to it? Is her argument apposite that the National Socialists wanted to overcome the nation? Contrary to the idea of post-nationalism, I will criticise Arendt on the basis of commonalities of nationalisms at her time and today. I would like to challenge Arendt's differentiation of the

two approaches to the nation as a confusion of differences in appearance and substance by arguing that the very basis of both is an affirmation of the unity of a group of people. First of all, aiming for world-power, as National Socialists used to (and, similarly, some branches of Islamists do today) is not a negation of or even challenge to the heart of national unity. Secondly, whether this unity is defined by (asserted biological) community or by social, i.e. cultural or political factors, is indeed a difference, but not one in substance. In conclusion, I would like to show how Arendt's analysis fell short: underestimating the modern appeal of antisemitism exactly by interpreting antisemitism as incompatible with the modern (republican notion of the) nation.

## **03RN31 - In the Shadow of Totalitarianism: Post-Holocaust and Post-Socialist Antisemitism and the Politics of Memory**

Chair(s): Philip Spencer (Kingston University)

### **How is Democracy Inimical to Anti-Semitism?**

**Ireneusz Krzeminski**, University of Warsaw | [krzemire@is.uw.edu.pl](mailto:krzemire@is.uw.edu.pl)

The answer to this question comes from the authors extensive empirical studies on anti-Semitism in Poland. The presentation is based on the third wave of the original research project realized in Poland in 2012. The first

iteration of this project was completed in 1992 year, soon after the creation the democratic order in the country after the fall of communism. The second one was done 10 years later, in 2002.. Author's other works,

including empirical studies of the citizens two small town, showed substantial progress democratic consolidation in Poland. But, on the other hand, a strong opposition party emerged that promotes the traditional nationalistic-catholic ideology, with strong illiberal overtones. Anti-Semitism is a part of its ideology, at least for some of its leaders and supporters. The question the study tries to answer is: do democratic practices and democratic - liberal values influence on the attitudes toward Jews, or not? How have attitudes toward Jews and the anti-Semitic

prejudices among Poles changed since the fall of communism? And how extensive is now the scope of the anti-Semitic attitudes in the society? Answers to these questions constitute the main part of the paper and presentation. The author plans to take into account not only the results of his own studies, but also works of other authors (for example, Antoni Sulek) and international data. One of the assumptions of the project is that the values and democratic institutions in the long run promote the open-minded attitudes, working against anti-Semitic and xenophobic views.

## Anti-Semitic Rhetoric in the Austrian Parliament after 1945

Nicolas Bechter, University of Vienna | [nicolas.bechter@univie.ac.at](mailto:nicolas.bechter@univie.ac.at)

Austria, as a Nazi-perpetrator-state, developed its own understanding of its involvement in the Holocaust after 1945. Following a rather particular interpretation of the Moscow-Declaration, Austria understood itself as the first victim of Nazi-aggression: Germany and a handful Austrian individuals were the true perpetrators, but Austria as a nation and most of its citizens were forced to take part. The phenomenon of a transformed anti-semitism in the perpetrator-nations is referred to as Secondary anti-semitism. Anti-semitism not in spite of Auschwitz, but rather because of it. Guilt is oppressed and projected on the Jews. Secondary anti-semitism typically emerges along the lines of reparation-payments to Jews or the State of Israel or in the demand to draw a Schlusstrich (final stroke) behind the Nazi-past. The paper shows how antisemitic rhetoric is used in parliamentary debates in Austria

after 1945. Whereas anti-semitic MPs used to organise themselves in the anti-semitic caucus, the forms and rhetorics of anti-semitism changed dramatically after 1945. It is not articulated openly but changed shapes and appears in codes that sound only too innocent, such as wahre Österreicher (true Austrians), but can be deciphered by the audience. Methodological questions: How to recognise the codes and were they understood as anti-semitic; the role of parliamentary speech in a democracy. To exemplify this, the paper analyses a parliamentary debate of 1946 on the Nichtigkeitsgesetz, a law to void all legal transactions of the period 1938-1945 as it is a good example to address the methodological questions raised above and to show how anti-semitic patterns transformed themselves and how they were used in a post-nazistic context.

## How Anti-Jewish Indeed are Antisemitic Stereotypes? Evidence from Ukraine

Oleksii Shestakovskiy, Institute for Economics and Forecasting, National Academy of Sciences, Kyiv | [o.shest@gmail.com](mailto:o.shest@gmail.com)

The paper demonstrates ambiguity of treating beliefs towards Jews as antisemitic in particular societal context. It became even more acute in Ukraine after right-wing "Svoboda" party passed to the parliament in 2012 that raised question about antisemitism among general population. Our empirical base is a 2008 representative nationwide survey. Its obsolescence can be excused by the fact that it was last profound study of the subject and by no substantial changes in attitudes to Jews since then according to indirect measures. The survey revealed 3 distinct patterns of Jews-concerning beliefs: generalized meanness of Jews (mostly maintained by 15% of respondents), their competitiveness and in-group favoritism (43%), and excessive influence (29%). Only the first pattern consistently correlated with such measures of anti-Jewish prejudice as social distance and

inclinations to institutional discrimination, contact avoidance and hostility. Two latter patterns related much weaker. Moreover, their association disappeared after removal of a cluster of "judophobic" respondents. We conclude that antisemitic stereotypes were considerably disseminated anyway. However, ideas of Jewish strong competitiveness and redundant power did not often witness prejudice against Jews. Thus identification of antisemitism and estimation of its prevalence in Ukraine are controversial. It may stimulate investigations in two realms. The first one is disentangling dimensions of today antisemitism in Ukraine and in ex-USSR states in general. But the more crucial is how far traditionally considered as antisemitic beliefs remains today actually unfavorable and inimical to Jews.

## The Past and the Present: Revisiting Memory in Austria 75 years after the Anschluss

Karen E Frostig, Lesley University | [karen.frostig@gmail.com](mailto:karen.frostig@gmail.com)

The urge for fresh dialogue regarding the historic legacies of the Holocaust shaped a personal impetus to develop a new memorial project in Vienna, 75 years after the Anschluss. As an art activist and granddaughter of Austrian Holocaust victims now bearing Austrian citizenship, I was interested in how art can invigorate public dialogue and stimulate new thresholds of memory in a city with a mixed record of remembering the past. I set out to develop a new memorial project entitled 'Orte der Erinnerung/The Vienna Project,' that examines ideas about memory alongside culturally sanctioned acts of amnesia, as interactive streams of consciousness and anti-consciousness inhabiting today's public

spaces. 'Orte der Erinnerung/The Vienna Project' will be the first public memorial in Europe to name multiple groups of victims and dissidents of National Socialism, on record within a given country, murdered between 1938-1945. Developed as a decentralized, hybrid and participatory model of memory, the memorial contains three focal points: 1) Opening ceremonies developed as bridge and water projections, 2) sidewalk installation program that features 38 addresses where crimes against citizens took place, and 3) closing ceremony featuring the names of 90,000+ Austrian victims and dissidents projected onto the surface of the Flaktower in the Augarten to coincide with V-Day marking

the end of the war and the defeat of the Nazi regime. The paper discusses new methodologies of memorialization, how the

past interacts with the present, as well as examining how the past impacts today's minority groups living in Vienna.

## 04RN31 - Understanding Prejudice and Othering: Transforming and Intersecting Intolerances

Chair(s): Robert Fine Warwick

### Islamophobia and Antisemitism: some Reflections on New Forms of Racialization

Dario Padovan, University of Torino | [dario.padovan@unito.it](mailto:dario.padovan@unito.it)

Alfredo Alietti, University of Ferrara | [alfredo.alietti@unife.it](mailto:alfredo.alietti@unife.it)

Despite what is claimed by fans of neoliberal globalization, societies have not moved to a state of deep and widespread prosperity, free from conflict, hostility, exclusion and discrimination. Racism and racial prejudice, considered a relic of obsolete and outdated social systems, is emerging in the depths of ultra-modern Western societies with different characteristics from the past but with a surprising and worrying virulence. Anti-Islamism seems to challenge, by diffusion, transversality and essentiality, the worst historical anti-Semitic exhibitions. These waves of prejudice and racism that follow one after the other at the dawn of the twenty-first century testify to the many fears that fill the horizons of advanced societies, undermining not only their internal reliability, but also just their democratic settings. This paper presents

a critical review of Islamophobia as racial prejudice, shows that scholars embrace two main definitions of it: Islamophobia as xenoracism or as a prejudice linked to the notion of the clash of civilizations. The cogency and structure of anti-Islamic public discourse and connected mass attitudes, revealed by our investigations, confirm the emergency of these two relevant dimensions of Islamophobia, which claim for a more accurate definition of Islamophobia. Moreover, social attitudes illustrate an interesting overlapping of Anti-Semitism and Islamophobia which claims that racism is multi-targeted and that there is not so much options between Anti-semitism and Islamophobia. Finally we use three main variables - anomie, ethnocentrism and authoritarianism - as predictors of Islamophobia and Judeophobia.

### Old and New Hatreds: The Dynamics of Xenophobia in a Globalizing World

Cathrine M Thorleifsson, Fafo Institute for Applied International Studies, Oslo | [cat@fafomail.no](mailto:cat@fafomail.no)

This paper proposes an analytics of the political economy and everyday workings of apparently 'banal xenophobia', drawing on the author's studies of nationalism amongst Mizrahim in an Israeli border town. Starting in the late 1980s, neo-liberal privatization of

state-owned enterprises and mass immigration of Jews and non-Jews from the former Soviet Union increased labour completion and socio-economic cleavages. Since then, the most notable response to existential uncertainties has been the rise of

the political right and regional forms of ethno-nationalism. Mizrahim used historically constructed images, myths and ascribed stereotypes of differentiated others to negotiate Israeliness. Anti-sentiments were invoked, naturalized and embedded in the language of culture, nation and religion. Opposing the supposition that xenophobia is only ideologically produced, the paper will

examine how anti-sentiments can be applied as a cognitive framework and unselfconscious disposition that is invoked and reproduced in everyday life. These insights will be used to propose research methodologies in the study of three distinct projects of exclusion such as Islamophobia, antisemitism and anti-ziganism in contemporary Europe.

## **Racist Violence against Migrants in Greece**

Lena Karamanidou, City University, London | [lena.karamanidou.1@city.ac.uk](mailto:lena.karamanidou.1@city.ac.uk)

Incidents of violence against migrants in Greece have dramatically increased in recent years, following the rise of the extreme right Chrysi Avgi (Golden Dawn) party and in the context of the current economic crisis. They appear to be perpetrated by groups and individuals affiliated to Chrysi Avgi, but allegedly with the tolerance of Greek police. Such incidents are increasingly reported in media, and seem to be predominantly racist in nature. However, they tend to obscure a longer history of violence towards migrants in Greece, exercised by state security bodies. This paper

aims, first, at exploring patterns of violence against migrants in Greece over the last decade. Secondly, it looks at historical, social and institutional contexts in Greece, as well as the recent economic and social crisis, in order to throw light onto both the persistence of violence and recent changes particularly in relation to the actors involved in racist attacks. Thirdly, the paper aims to reflect on racist violence as an element of the relationship between states and migrants, and locate the Greek case in the broader European context.

## **05RN31 - Constructing the Figure of the Migrant: Regimes of Expertise and the Politics of Measuring Violence, Integration and Racism**

Chair(s): Ben Gidley (Oxford)

### **Using Official Statistics to Measure Ethnic/Racial Inequalities and Discrimination in the European Union**

Irene Rossetto Giaccherino, University of São Paulo | [irene.rossetto@usp.br](mailto:irene.rossetto@usp.br)

Benno Warken Alves, University of São Paulo | [benno@usp.br](mailto:benno@usp.br)

This paper aims at mapping the existing official statistics that collect ethnic or racial variables in the countries of the European Union. This research includes both statistical surveys conducted at the national level, by National Statistics Institutes or Ministries, as well as

surveys implemented by European Union Bodies. It analyses the classification categories used in the surveys, trying to organize the multiplicity of categorizations adopted in these countries, and to explore their potential to study social inequalities and discrimination.

Beyond the importance of the task of systematization by itself, this article seeks to explore the sociological and political meaning of the existence of those bases of information. The fact is that, despite the ever-increasing diffusion of statistical surveys containing data on the ethnic and racial composition of the population all over the world, in the European Union there is still strong resistance to collect this type of information. The paper will try to explore the epistemological and methodological dimensions of the debate on

the introduction of ethnic/racial variables in official statistics: why or why not to introduce ethnic/racial variables; what type of categorization; for which purpose; etc. At the same time, it will examine the potential use and the limits of the official statistics, currently available, to study ethnic/racial inequalities and to make cross-national comparisons of European realities of discrimination and social marginalisation of minorities and ethnic groups.

## **Imagining the Nation: Regimes of Expertise in Immigrant Integration Measurement in Germany and the Netherlands**

**Sanne Boersma**, Erasmus University, Rotterdam | [boersma@fsw.eur.nl](mailto:boersma@fsw.eur.nl)

**Willem Schinkel**, Erasmus University, Rotterdam | [schinkel@fsw.eur.nl](mailto:schinkel@fsw.eur.nl)

Much has been written about the shape of racism in postcolonial Western Europe, particularly concerning the position and the discursive framing of its immigrants. On the one hand, racism is said to have vanished and a by and large postracial Europe is said to have emerged. On the other hand, the structural transformations but continued relevance of racist discourse and practices is highlighted in what is experienced as a 'crisis of multiculturalism'. In this paper, we critically analyze the regimes of expertise that contribute to prevailing discursive constructions of migranhood in policy discourses. We do so by comparing the Dutch and German measurements of immigrant integration in semi-governmental statistical organizations. Such regimes of expertise, we

argue, are crucial in shaping images of immigrants and their descendants that feed into policy. As such, they help to stabilize contested images of the nation. Such images are therefore partly assembled with the help of classifications of immigrants, and of juxtapositions between immigrants' and 'dominant societal' beliefs and practices as measured in regimes of expertise. This means racist constructions lie at the heart of the social imagination of the nation as performed by authoritative expert institutions. The paper thus highlights one of the ways in which racism is relevant today, and it illustrates the intricate connections between contemporary racist classifications, social scientific knowledge production and immigrant integration policies.

## **Fighting Racism? Anti-Racist Legislation in Practice – an Analysis of Anti-Muslim Hate-Crimes in Sweden in 2006-2010**

**Kolankiewicz Lundberg Marta**, Lund University | [marta.kolankiewicz@soc.lu.se](mailto:marta.kolankiewicz@soc.lu.se)

In Sweden, different forms of racist practices are banned under the law, with provisions protecting against discrimination, forbidding hate speech and providing for penalty

enhancement when a crime is motivated by racism. However, the number of convictions where this kind of legislation is used is small, as is the percentage of hate crimes that are

taken to court. How does this happen? In what do the definitions of racism used by victims, police, courts and the Council of the Crime Prevention (Brå) – a national institution responsible for hate crime statistics – differ? What is the rationale behind the application or the lack of application of hate crime provisions? In order to answer these questions, this paper scrutinizes the cases classified as Islamophobic hate crimes by Brå in Sweden in the period between 2006 and 2010. The paper

constitutes a part of my dissertation the overall aim of which is to analyze the anti-Muslim racism in Sweden. In this paper I intend to understand how tools designed to protect individuals from racism work in practice – how they are interpreted and applied. This analysis makes it possible to observe how State and society, through the judiciary system, react to this form of racism and what kind of discourses are mobilized in the process.

## **06RN31 - Crisis and Critique: Social Movements, Antisemitism and anti-Americanism**

Chair(s): Lena Karamanidou (City University)

### **'Who's controlling Wall Street?' – Perspectives on Antisemitism in US Social Movements**

Sina Arnold, Technical University of Berlin | [sina.arnold@hu-berlin.de](mailto:sina.arnold@hu-berlin.de)

The economic crisis of 2008 has been met by various popular responses in the US, including the emergence of “Occupy Wall Street” as a left social movement. But crisis are also often times when antisemitic ideologies resurface, on the right as well as the left. This paper therefore analyzes contemporary left social movements in the United States – the „Occupy Wall Street” movement, Palestine solidarity activism, anti-war groups and others – and their specific perspectives on antisemitism. It bases its findings on qualitative interviews with political activists in New York and the San Francisco Bay Area, participant observation at protest sites and analysis of current movement literature. Drawing from antisemitism theory and social movement studies the paper takes

the specific conditions of the US context into account to analyse the central frames of left discourse. It points to the implications of specific ideological traditions as well as identity concepts that render antisemitism as a relevant political issue invisible. It particularly looks at the difficult relationship between antisemitism and antiracism, and at notions of Jewish whiteness in relation to imperialism and Israeli politics. While arguing that the re-emergence of a specific left antisemitism in the financial crisis is unlikely it dissects the theoretical and practical sites of fracture where antisemitism might grow. Through this analysis the paper tries to lay the groundwork for an internationally comparative analysis of antisemitism in times of crisis.

## On the Relationship between Anti-Semitism and Anti-Americanism: Theoretical Reflections and Empirical Data

Heiko Beyer, Georg-August University, Göttingen | [hbeyer@uni-goettingen.de](mailto:hbeyer@uni-goettingen.de)

Ulf Liebe, Georg-August University, Göttingen | [uliebe@uni-goettingen.de](mailto:uliebe@uni-goettingen.de)

One of the most controversial hypotheses of anti-Americanism research is the correlation of anti-Semitic and anti-American resentments. So far neither a satisfying theoretical explication of this relationship nor valid empirical data which might prove such a linkage can be found in the literature. This presentation tries to fill these gaps: In a first step we argue that anti-Semitic and anti-American attitudes can be considered psychological functional equivalents because both show similar mechanisms, i.e. a

rationalization of social change and a projection of denied traits. In a second step our theoretical assumptions are confronted with empirical evidence from a German population survey carried out in 2011 (n=1201). The data show that there is not only a strong correlation between anti-Semitism and anti-Americanism but that, compared with other determinants, anti-Semitism is even the strongest predictor of devaluations of persons, institutions or properties which are perceived as "American".

## A Different World is Possible – without Antisemitism? Antisemitism and the Critique of Globalization within the German Anti-Globalization Network "Attac"

Holger Knothe, Ludwig-Maximilians University, Munich | [holger.knothe@soziologie.uni-muenchen.de](mailto:holger.knothe@soziologie.uni-muenchen.de)

The starting point of this paper is the argument of a convergence of social critiques from the historic left with critiques from the historic right in times of crises such as the increasing erosion of the once self-evident equation of terms and attitudes like "left" and "progressive" on the one side and "non-antisemitic" on the other side. One prominent example for this process can be seen in charging the German section of the anti-globalization network Attac for fostering structurally antisemitic narratives within their agenda. Thus the paper explores the relationship between progressive and anti-

globalization arguments on the one hand and antisemitic narratives on the other hand inside Attac and the handling of this argument within Attac. Overshadowing this debate is the memory of the Holocaust and thus the potential of secondary antisemitic reactions in Post-Holocaust-Germany. If Attac's handling with the critique of antisemitic linkages within their own argumentation might indicate a new amalgamation of rather incompatible elements and thus herald a new configuration of antisemitism can only be answered in an ambivalent fashion.

## 07RN31 - Researching Xenophobia, Prejudice and Racism within Europe

Chair(s): Dario Padovan (University of Torino)

### Explaining Racism and Xenophobia before and during Crisis, the Case of Spain within the UE Context

M<sup>a</sup> Ángeles Cea D'Ancona, Complutense University of Madrid | [macda@cps.ucm.es](mailto:macda@cps.ucm.es)

Miguel S. Valles, Complutense University of Madrid | [mvalles@cps.ucm.es](mailto:mvalles@cps.ucm.es)

How attitudes, forms or discourses of racism and xenophobia have varied with the lasting crisis initiated in 2008? Is the present crisis necessarily increasing racism and xenophobia in European societies? These are only two of various issues related to the ones formulated by the coordinator of the RN31. Our paper focuses on the evolution of survey and qualitative data gathered mainly in Spain, regarding those research questions among others. There is some evidence supporting the two hypothetical starting points: 1) in times of crisis, the autochthonous population expresses more xenophobia related to economic rationales than fear of losing national or cultural identity; 2) a context of a wider and deeper crisis triggers the verbal expression of latent forms of racism even in direct indicators. Nevertheless, the empirical data analyzed shows that other less anticipated

effects might have taken place: a) the configuration of some forms of favorable attitudes and discourses (defined under the counter-concept of xenophilia), related or not to social memory and mobility experience prevailing in each generation; b) the role of different variables behind attitudes and discourses denoting either xenophobia or xenophilia. National survey data belong to public archive housed by CIS (promoted also by Spanish Observatory of Racism and Xenophobia from 2007 to 2012). Eurobarometers (53, 59.2 and 380) are also used. Qualitative data pertains to two consecutive projects focused on measuring xenophobia: MEXEES I (2006-2007) and MEXEES II (2010-2011). Both were supported by grants from the Education and Science Department in Spain (SEJ2005-00568 and CSO2009-07295, respectively).

### Still “strangers to ourselves”? Unpacking Prejudice Discourses in Post-socialist Context in Poland

Aneta Piekut, University of Sheffield | [a.piekut@sheffield.ac.uk](mailto:a.piekut@sheffield.ac.uk)

The paper draws on research from a large European comparative project “Living with Difference” (funded by ERC, FP7) which explores attitudes towards difference and prejudice in the UK, as a postcolonial state, and Poland, as a post-socialist state. The research reported in this paper draws on postcolonial theory to explore narratives and discourses in the post-socialist East (Owczarzak 2009), and in turn, to reimagine diversity in Europe (Stenning 2005). This paper

reports on fieldwork undertaken in Warsaw, Poland. It focuses on questions of redefining national identity within the context of increasing diversity in the post-socialist period, in opposition to defining who ‘the other’ is. The ‘othering’ processes reflect, on the one hand, difficulty accepting the Slavic identity, still associated with former ‘colonial hegemon’, Russia (Janion 2006), and on the other hand, a struggle to establish new relations with the ‘surrogate hegemon’ – the West (Thomson

2010). In this paper I discuss how 'othering' processes are informed by everyday (corporeal and virtual) encounters and collective national memories. The 'other' has been more visible in both the public sphere and popular discourse since 1989. Minorities, such as sexual minorities or domestic others ('dres' subcultural groups) are increasingly 'visible' in public spaces. Discourse around invisible

minorities has also increased, whose presence is reproduced through imagined contact and media coverage, e.g. 'platonic Islamophobia', or through family memories, e.g. the 'symbolic Jew' or 'Ruski'. Both types of stereotyping mirror a struggle to renegotiate national identity in relation to past and present hegemony.

## Understanding Xenophobia and Conviviality at Local Level

Ben P Gidley, University of Oxford | [ben.gidley@compas.ox.ac.uk](mailto:ben.gidley@compas.ox.ac.uk)

This paper draws on the findings of two European research projects – AMICALL: Attitudes to Migrants, Communication and Local Leadership and CONCORDIA DISCORS: Inter-Group Relations and Integration Policies in Selected Neighbourhoods of Five European Cities – to explore the relationship between xenophobic attitudes and convivial behaviour in the context of everyday urban life in the European city. Contextualised by a presentation of what we know about local and trans-local patterns in attitudes to the figure of

the migrant (and their intersection with other intolerances), the paper presents some of the findings of the research projects, focusing on the paradoxical relationship between negative representations of and positive interactions with the other. The paper concludes with some thoughts on what this means for social scientific scholarship on xenophobia and practical strategies for creating xenophobia-resilient or -resistant cities and neighbourhoods.

## 09RN31 - Understanding Prejudice and Discrimination: Discourse, Practices, Narrative, Semantics, Stereotypes

Chair(s): Sina Arnold (Technische Universität Berlin)

### Perceived Ethnic Discrimination of Immigrants in Portugal: Individual and Contextual Factors

**Pedro Candeias**, Centro de Investigação e Estudos de Sociologia, Lisbon | [pedromecandeias@gmail.com](mailto:pedromecandeias@gmail.com)

**Manuela Mendes**, CIES-IUL, Lisbon | [mamendesster@gmail.com](mailto:mamendesster@gmail.com)

In southern Europe, particularly in Portugal, experienced since 2007 a situation of crisis and continuing economic and financial restraint, aggravated since 2011 with the formal request of the Portuguese state bailout. Despite this situation, Portugal remains a country of emigration and immigration, and in the last two years, the flow of immigrants decreased. In this unfavorable context, immigrants face daily situations of racism and ethnic discrimination. As we know the scientific literature in this area has a wider scientific heritage of research where it was tested explanatory factors for perceived discrimination at an individual level (Brüß 2008; Goto, Gee and Takeuch 2002; Neto 2006; Paradies and Cunningham 2009). On the other hand, from the perspective of autochthonous population there are various studies that tested contextual factors to explain attitudes towards

immigrants and ethnic minorities (e.g., Quillian 1995; Ramos, Vala and Pereira 2008; Ramos 2011). However there is a gap in what concerns studies of perceived discrimination in which they tested predictors of individual and contextual level. From the perspective of the victims perceived discrimination can be defined as “a group member’s subjective perception of unfair treatment of ethnic groups or members of such groups, based on racial prejudice and ethnocentrism” (Neto 2006). This communication is centered in the immigrant perception of discrimination and we want to test an explanatory model that combines both levels of analysis. It will be tested individual level factors known in the literature (sociodemographic and acculturation) and also contextual indicators, at the level of the municipality of residence (perceived threat and intergroup cont

### “They’re stupid and racist” Nigerian, Rumanian and Italian Women Interpret the Weekly Representations of Foreign Women through Photo-elicitation Interviews

**Luigi Gariglio**, University of Torino | [luigi.gariglio@unito.it](mailto:luigi.gariglio@unito.it)

Populism, ethnocentrism and racism are more or less relevant in different social and political settings and media production and consumption throughout European and non-European countries. Race, ethnicity gender,

sexuality have long been addressed, in very different ways, as a contested battleground by media and feminist scholars. This paper focuses, on the one hand, on the journalistic representations of migration phenomenon in

Italy and, on the other, it shed some lights on the perception that different groups of women have of the social phenomenon of migration and interethnic relations . It describes the results of a research carried out using two methods integrated with each other: first, a content analysis of three weekly news magazines from the crises period (2008-2012) about the representation of migrant women in which emerged also that “black women” were almost only represented as sex workers. Second, a sample of these representations of migrant women have been used as stimuli in thirty-three interviews with photo-elicitation. The sample, considering the results of c.a. was

composed by: prostitutes, feminists and Catholic nuns coming from: Italy, Romania, and Nigeria. Robust empirical results comprehend both interpretation of the media coverage and opinion on the race relation in Italy. The most robust result shows (both through content analysis and photo elicitation) that in Italy there is a clear color line that separates white community from “black” community. “Black” women defined racist – in a way or another – both the ways in which Italian media frame them and the everyday interaction with Italians. On the contrary, most of the white women gave very little or no importance to racial discrimination.

## On the shores of Turkish citizenship: Displacement of Kurds in Turkey

Mesut Yegen, Istanbul Sehir University | [mesutyegen@sehir.edu.tr](mailto:mesutyegen@sehir.edu.tr)

The Turkish state launched a campaign of severe repression to suppress the armed and political resistance of Kurds of Turkey in the early 1990's. One of the most privileged instruments of this campaign was internal displacement. It is estimated that more than three thousand villages were evacuated and more than a million Kurds were displaced in the 1990's. Relying on a field research conducted in 2010, I aim, in this presentation, to examine the displacement in question in terms of the citizenship status of Kurds in Turkey. The findings of the field research point to three important facts. First, the displacement was achieved at the expense of the violation of Kurds' such basic citizenship rights as the right to property, the right to free travelling, and the right to house immunity. Second, the violation of such rights took place

in a massive manner and lasted for a considerable period of time. Third, while many basic citizenship rights of the displaced people were violated, the displaced Kurds had nevertheless almost always have an access to such basic rights as free education and free medical care. On the basis of the fact that the violation of Kurds' citizenship rights took place in a massive manner and lasted for a long time and yet that Kurds' access to citizenship rights was not totally denied, I argue that Kurds' citizenship in Turkey is a precarious and a part-time citizenship. Thinking the findings of this research together with the history of the resettlement of Kurds in modern Turkey, I suggest that Kurds in Turkey have almost constantly been on the shores of Turkish citizenship.

## Stereotyping and the Syndrome Character of Prejudice

Björn Milbradt, University of Kassel | [bjoernmilbradt@uni-kassel.de](mailto:bjoernmilbradt@uni-kassel.de)

It was one of the basic findings of the 'Studies in Prejudice' that 'a man who is hostile toward one minority group is very likely to be hostile against a wide variety of others'. Adorno and

colleagues argued that it is stereotyping in the sense of applying rigid notions to everything and everyone that connects the varying facets and elements of the authoritarian personality

as well as the different types and syndromes. In my presentation I will argue that the critical theorists developed a notion of stereotyping that builds on a philosophy of language as well as on a critical social theory. It delineates stereotyping as a process that happens in language, and language as the medium where the individual and the social meet and mediate. Whilst Adorno et al. nonetheless based their research on a psychoanalytic notion of personality that suspects the cause of authoritarianism, racism and antisemitism in deep-rooted unconscious traits, I will show –

drawing on some thoughts of Ludwig Wittgenstein and Gilbert Ryle – that reading critical theory as a philosophy of language avoids most of the shortcomings that are usually connected to this approach. Concerning the changing forms of prejudice that will be discussed at ESA 2013 conference, this implies that beneath those changing phenomena there is a shared core which connects different facets of authoritarianism like conventionalism, racism and antisemitism over time and with regard to contents.

## **16JS31JS35 - On Disadvantaged Populations within Health Care Systems in Contemporary Europe: The Case of Migrants and Ethnic Minorities**

Chair(s): Kàtia Lurbe i Puerto (ENS Lyon), Anders Petersen (Aalborg University Denmark)

### **Health Inequalities in Accessing Health Care for Ethnic Minority Women: Regulative Contexts and Services in Comparative Perspective**

Genova Angela, University of Urbino | [angela.genova@uniurb.it](mailto:angela.genova@uniurb.it)

Ethnic minority women present higher risk of health inequalities. The aim of this study is to investigate the impact of the crises on the regulative contexts and the related services to tackle health inequalities for ethnic minority women in accessing health services in four EU countries. The study presents the results of EC co-funded project: Better Health for Better Integration, focusing on the regions of South West England in UK, Marche region in Italy, the county of Orebro in Sweden and the state of Romania. Analyses show that in Marche region there is a fragmented and incomplete regional regulation and few targeted services implemented, despite the high level of guarantee in accessing health services for migrant population claimed by the national law. In Orebro county, equal access and

treatment of all residents are emphasized and some prevention targeted services were recently introduced. In South West England, the universalistic health system guarantees high level of access to health services however the recent reform process has introduced copayment for some basic health services. In Romania, the occupational health care system limits access to health care for not insured and no reform has introduced to improve the contexts. The current economic recession has different impact on the regulative contexts and related services in the four geographical areas analyzed: in Orebro has increased the attention for efficacy and efficiency, while in Marche and Romania the institutional inertia risks to amplify the inequalities as well as the payment system in South West England.

## Living with Chronic Disease – Minority Experience

Kadi Lubi, University of Tartu | [kadi.lubi@ut.ee](mailto:kadi.lubi@ut.ee)

Triin Vihalemm, University of Tartu | [triin.vihalemm@ut.ee](mailto:triin.vihalemm@ut.ee)

This paper contributes to the research of the area that is especially vulnerable to the cuts in welfare provision and tense situation in the labor market due to the economic crisis in Europe – the possibilities of social rehabilitation of chronically ill people who are (partially) capable and willing to continue working and participating in the society life. We ask what are the prospects of ethnic minority members in realizing this vital desire under the double pressure: the need to cope with disease and with the tensions arising from overall economic and social depression from the other side? The analysis bases on the survey and in-depth interviews with younger Parkinson disease patients in Estonia. Informants were ethnic Russians with various levels of knowledge of Estonian language, educational and occupational backgrounds. We approach our data from the practice theory perspective

(Schatzki 1996, Reckwitz 2002, Shove et al 2012) that is novel in the health sociological research. We outline the practices of becoming re-tooled and re-skilled to maintain their social position despite of diminishing physical capabilities. In broad terms our analysis showed that on the everyday practical level people have re-tooled and re-skilled and position themselves as competent practitioners, less so when managing with the public discourse of the sick (minority) people that discourages their social rehabilitation. Finally we discuss the possibilities to mitigate the drawbacks rising from the strained relations between social groups in time of socio-economic depression as well as the methodological challenges of using practice theoretical approach in the research of health and ethnicity.

## Labor Migrants to Russia from CIS: Medical Social Control versus Health Care.

Violetta M Khabibulina, St. Petersburg State Medical University | [vioksu@gmail.com](mailto:vioksu@gmail.com)

Medicalization of labor migration leads to intervention of hegemonic discourse of power into medical issues. This paper attempts to analyze President Putin's Migration Policy's concept (13'June 2012), recent relevant legislation (2002-Jan'2013), and practical implications in Kazan and St.Petersburg with main focus on medical exams for foreigners to receive work permit and on consequent deportation if dangerous diseases are revealed. Although there is a declarative sentence about non-discriminatory ideology of new Migration Policy, the adequate access to the health care settings is not clarified. We consider that the main feature of Russian political decisions towards labor migrants is to establish strict medical social control over process of a work permit issue and/or to

create additional source for state budget or latent corruption. And this tendency is not related to public health control and preventive preparedness. Arguments based on discourse analysis, observations, and on health&migration statistics data allow to reveal the discriminative nature of legislation and to present new model of 'doctor-patient interaction' where the doctor is a medical policeman rather than a healer. If medical exams are set up in order to prevent the infected or narcotized body from crossing the Russian border, so there are several discrepancies: i) not all labor migrants from CIS are subject to medical testing, it's not true for family members and illegal workers; ii) the screening itself can be postponed for a several months; iii) biomedical justification is not

enough in a case of friendly regulations towards bodies from certain countries and

social strata. So the main public sociology conclusion is to cancel the medical testing.

## **Beyond the Usual Suspects: Increasing the Representation of Disadvantaged Minorities in Health Participatory Spaces in Times of Crisis**

Cláudia De Freitas, ISCTE-IUL, Lisbon | [claudia\\_defreitas@yahoo.com](mailto:claudia_defreitas@yahoo.com)

Cuts on healthcare budgets and the increasing disinvestment in diversity sensitive care observed since the start of the economic crisis in Europe are likely to generate civil disobedience and impel service users to seek a voice in healthcare governance. Many EU countries have created health participatory spaces where citizens can join government representatives to discuss healthcare policy and delivery. This development is grounded on the idea that listening to users can help develop more responsive health policies and services. However, the citizens involved in these spaces are usually white middle-class people who are not necessarily sensitive to the needs of less vocal, disadvantaged groups. This may cause health participatory governance to become a mechanism by which health inequities are produced or exacerbated (instead of reduced) as services become

progressively adapted to the needs of better-off majorities. Increasing the representativeness of health participatory spaces beyond the “usual suspects” is crucial at a time when reforms associated with the economic crisis are threatening the loss of many healthcare rights. This paper looks at strategies that can promote the participation of disadvantaged groups. It draws on a qualitative study of user involvement in mental healthcare in the Netherlands employing participant observation and semi-structured interviews with Cape Verdean migrants affected by psychosocial problems (n=20) and stakeholders in the field of user involvement (n=30). We conclude that both governments and civil society organisations need to adopt a proactive approach to user participation in order to make health participatory spaces more inclusive and promote equitable change.

## RN31 - Poster Session

### Approval of a Marriage Between Representatives of Different Nationalities in Non-Linear Sociology

Polina Basimova, Russian State Social University | [polina-chelovek32@yandex.ru](mailto:polina-chelovek32@yandex.ru)

Mikhail Basimov, Kurgan State University | [basimov@mail.ru](mailto:basimov@mail.ru)

"Non-linearity" – fundamental conceptual unit of a new (synergetic) paradigm, including, and in sociological research. For the analysis of the data is used the author's approach to concept of statistical relation (I.B.Britvina's data, research "A Young family in Kurgan area"). In the report are considered two dependences. Dependence of parameter "Frequency of financial aid to parents" (Y) from parameter "Approval of a marriage between representatives of different nationalities" (X) as comparative weightiness of parameter Y for triads on scale X: X-1(Y= +1016); X-2(Y= +23); X-3(Y= -130). Dependence of parameter "Size of the monthly income on 1 person in family" (Y) from parameter "Approval of a marriage between representatives of different nationalities" (X) as comparative weightiness of parameter Y for triads on scale X: X-1(Y= +1005); X-2(Y= -115); X-3(Y= +47). A Frequency

of financial aid to parents, and also a size of the monthly income on 1 person in family are highest (comparative weightinesses +1016 and +1005) at disapproval respondents of a marriage between representatives of different nationalities (the first triad on this scale). Thus these dependences are far from linear (coefficients of correlation are equal -0.24 and -0.07) and the extremely asymmetrical, i.e. the opposites in relation to submitted to dependence when parameter "Approval of a marriage between representatives of different nationalities" is considered as a dependent variable, have factors of the connection strength insignificant on size (0.19 and 0.12). Above mentioned results also allow to speak about an opportunity for new synergetic paradigms in the sociological science directed on studying of non-linear effects of social systems.

## RN32 - Political Sociology

### 01RN32 - Economic Crisis, Political Polarization, and electoral consequences

Chair(s): Hans-Jörg Trezz (University of Copenhagen), Discussant: Mark Swygedouw (University of Leuven)

#### How do the Unemployed Vote: A Micro-Level Analysis of the Electoral Consequences of Unemployment in Spain

Miguel Caínzos, University of Santiago de Compostela | [miguel.cainzos@usc.es](mailto:miguel.cainzos@usc.es)

Carmen Voces, Escola Galega de Administración Pública, Xunta de Galicia | [carmen.voces.lopez@xunta.es](mailto:carmen.voces.lopez@xunta.es)

One of the most outstanding symptoms of the current economic crisis in Spain has been the rising of unemployment to its highest ever levels. This brings back into the research agenda an old question: how does the experience of unemployment affect voting? Do unemployed people really display a distinctive voting pattern? If they do, what are the direction and the magnitude of the electoral effects of unemployment? Focusing on probability of voting for the incumbent party,

we will evaluate four alternative models of the relationship between unemployment and voting: a) a general model of reward/punishment; b) a restricted model of punishment based on ideological affinity; c) a model of left-wing politicization of personal experience; and d) a model of issue ownership. We will try to adjudicate among these models running a longitudinal comparative analysis of survey data about elections taking place within the last three decades.

#### Generation Effects and Voter Turnout in Post-Communist Democracies

Filip Kostelka, Sciences Po, Paris | [filip.kostelka@sciences-po.org](mailto:filip.kostelka@sciences-po.org)

While generation effects have been considered the main source of voter turnout decline in established democracies (e.g. Wass 2007, Franklin 2004, Blais et al. 2004, Miller and Shanks 1996 etc.), they have been little studied in the context of newly democratized polities. The present article focuses on post-communist democracies, which have experienced a spectacular decline of electoral participation since democratization in the early 1990s. The paper's objective is two-fold. First, it aims to explore the generational patterns in post-

communist electoral participation. Among other things, this implies testing hypotheses about the impact of socialization under different types of communist regimes on voter turnout after the transition. Second, the article tries to measure the impact of generational replacement on the post-communist voter turnout dynamics. The empirical section employs a cohort analysis of a large original dataset that draws on several dozens of post-electoral surveys.

## Crisis-driven renationalization of discourse on the European integration – the Polish case

Katarzyna Zielińska, Jagiellonian University | [katarzyna.zielinska@uj.edu.pl](mailto:katarzyna.zielinska@uj.edu.pl)

Magdalena Gora, Jagiellonian University | [mm.gora@uj.edu.pl](mailto:mm.gora@uj.edu.pl)

The European accession was perceived among the new member states' right-wing circles as a threat to newly re-established national sovereignties and a challenge to the national identities. This found also expression in the growing strength of the conservative and right-wing parties in those countries in the years following the accession and the significant representation of the right-wing politicians in the national parliament across the regions well as in the European Parliament. The current economic crisis seems to further fuel the popularity of this political orientation and significantly transforms the discourse on European integration and on national identities in those countries. We seem to witness the process of the renationalization of the debate on Europe and backlash against the

supranational integration both on elite as well as on the popular level. The focus of the proposed paper will be to identify how the issues related to the European integration are framed in the Polish parliament in the context of ongoing economic crisis and how they are interconnected with the identity politics. We will be particularly interested in identifying the cultural and religious elements contributing to the process of renationalization of the debate and backlash against the supranational integration. The analysis will cover the recent parliamentary debates (of the current term in office) focusing mostly on issues perceived as value based (abortion, gay marriage, in-vitro etc.) and value-free (foreign policy, European integration etc.).

## Constitutional Alternatives to the Crisis: A Political Sociological Approach to European 'Anti-Politics'

Paul Blokker, University of Trento | [paulus.blokker@unitn.it](mailto:paulus.blokker@unitn.it)

The democratic nature of the European integration project is contested, and contestation and dissent seem to be on the increase, or at least becoming more visible, with the current economic crisis. A European project confined to transnational market-making is found wanting in terms of social competence as well as civic-democratic enablement. It seems undeniable that the attempts by the European Union (EU) to enhance its democratic standing have so far had limited success, as for instance has become clear in the failed constitutional project. The constitution-making project of the EU has raised counter-claims by civic actors, invokign among others a 'Europe of the Commons' or a 'Citizens' Assembly'. For a

political sociology of European democracy, an increasing gap between a European society and the formal-political world of the EU raises a host of significant and interesting questions. In the first part, the paper will outline a political-sociological approach on the basis of some of the recent sociological studies that focus on European democracy, civil society, and social movements. In the second part, it will apply this approach in a discursive study of constitutional claims as made by transnational pro-democracy movements. In this, the paper will contribute to the political-sociological analysis of the crisis of European democracy, and of top-down, institutional answers to this crisis in particular.

## Politics, Education, and Social Class. Political Interests, Opinions and Attitudes among Young Swedish citizens in rural and urban geographic places

Ylva Bergström, Uppsala University | [ylva.bergstrom@edu.uu.se](mailto:ylva.bergstrom@edu.uu.se)

The aim of this paper is twofold: on the one hand to understand the relationship between political interests, opinions and attitudes and, on the other hand, to examine the correspondence between the space of interests, opinions and attitudes and educational position – schools, educational program – and social origin. Citizens' decline in political participation in Western societies has caught a growing academic interest the past few decades. Contemporary research recognizes, alongside this decline, the rise of new forms of political participation, having their origins in wider social and technological changes. Political activism, including consumer politics, demonstration, public protest and "sit-in", canvassing, along with the social forums global justice campaigns changed the landscape of possible acts, offer new arenas and alternatives to traditional

forms of political activities such as joining a political party. These political movements are far from homogenous. They consist of rather diverse interests ranging from social justice, environmental protection, and human rights issues to former more traditional issues of economic redistribution and labour politics and seem to resemble a diverse group of activists with a heterogeneous social background. Of central concern is, thus, how it is possible to grasp the complexity of contemporary political agenda and a changing social structure. The data set stems from a survey carried out in 2008 and 2009 in two different municipalities – the university town of Uppsala (n=1097) and the mining districts (n=402) – in Sweden. The space of political opinions and interests is examined through correspondence analysis and Euclidean classification.

## 02RN32 - EU Civil Society and the Changing EU Equality Regime

Chair(s): Alison Woodward (Free University of Brussels), Discussant: Michèle Lamont (Harvard University)

### Changing EU Equality Regimes for Feminist NGO: Contracting Opportunities and Strategic Responses

Pauline Cullen, National University of Ireland, Maynooth | [pauline.cullen@nuim.ie](mailto:pauline.cullen@nuim.ie)

Alison E. Woodward, Vrije Universiteit, Bruxelles | [alison.woodward@vub.ac.be](mailto:alison.woodward@vub.ac.be)

Concurrent with the socio-economic crisis, the architecture for addressing gender discrimination in the EU has been radically transformed, providing significant challenges for NGO's addressing gender centered issues. EU feminist and gender-focused non-governmental organizations (NGO) have witnessed a growing reluctance by EU officials

and member states to support their demands. This is a function in part of developments in how the EU frames equality and more broadly the hostile political opportunity context of neo-liberal, conservative and recession based dynamics. This paper assesses the implications of these shifts in EU political opportunity structure for the strategies and

patterns of mobilization employed by the EU feminist NGO the European Women's Lobby (EWL) and associations of Migrant women. Strategic forms of collaboration with women's rights and non-feminist groups within the EU and outside in other intergovernmental fora play a key role as these organizations attempt to navigate a context of diminished resources.

Analysis of these organizations and their bureaucratic counterparts affords an opportunity to reassess the participation costs and inflexibility that can accompany institutionalized feminist engagement and the opportunities and threats inherent in mobilization in close proximity to institutional sponsors.

## **Wrong about Rights? Tracing the effects of EU legislation against racial and ethnic discrimination.**

Virginie F. Guiraudon, CNRS and Sciences Po, Paris | [virginie.guiraudon@sciences-po.fr](mailto:virginie.guiraudon@sciences-po.fr)

The great expectations that followed the adoption of two EU laws and an action programme in to fight discrimination in 2000 often fetishized rights. Of course, their adoption had an immediate performative effect, if we consider them as part of symbolic politics, to use Murray Edelman's phrase. In brief, the inclusion of article 13 in the 1997 treaty of Amsterdam, and the two 2000 directives by their very legal existence acknowledge discrimination, the role of states in fighting it. They thereby legitimate claims made in societal and political debates beyond the sphere of law. Whether scholars conceive EU antidiscrimination legislation as "hard law," a symbolic moment or a new language (more than a frame and less than a paradigm shift), their very idea about its effects will vary.

Theoretically, activists will use the new tools in different ways and at different costs (e.g. generating case law, raising awareness, or reframing previous claims). We are also interested in other actors, policy-makers at different levels of governments, private, those targeted by EU legislation on racial and ethnic discrimination (public and private employers, and those provided access to goods and services, including housing, education and training), and actors such as trade unions, academics, non-governmental organizations that were not involved in the original mobilizations and thus still needed to position themselves. This paper studies the effects of the adoption and implementation of the directives focusing on what Stuart Scheingold called "politics of rights".

## **Article 13 and the NGO-ization of ILGA-Europe**

David Paternotte, Université libre de Bruxelles/Fonds de la Recherche Scientifique | [david.paternotte@ulb.ac.be](mailto:david.paternotte@ulb.ac.be)

European antidiscrimination NGOs are unusual sociological objects. They are often overlooked by social movement scholars, while students of EU politics usually consider them as another example of EU lobbies. This is true that these groups have often become highly professionalised and that they use more often lobbying or litigation strategies than street protest. However, they still pursue social movement goals, and staff members are often

appointed by a board representing social movement organisations. This paper will explore the mixed nature of European discrimination NGOs, bridging these two sets of literature. It will more precisely focus on ILGA-Europe, the European umbrella of LGBT organisations, and study the impact of Article 13 of the Treaty of Amsterdam, which turned this organisation into an official partner of the EU. This impact will be mostly investigated

using the notion of NGO-ization. This paper, which is part of an international research project and should be placed under the theme “Crisis in EU Equality Regimes: The role of civil society”, will develop in three parts. It will first review ILGA’s history to show that this organisation, which chose really early for reformist LGBT politics, always strived towards

NGOisation. This trend was therefore present long before the adoption of Article 13. Second, it will study ILGA’s long-term interest in European politics, and detail the context in which ILGA-Europe was established in 1996. The third part will focus study the adoption of Article in 1997 and its consequences on the organisation.

## **Opportunities for Progress toward Equality and Non-Discrimination: The Equality Architecture and Enhanced Learning Mechanisms within the European Union**

Ronald L. Holz hacker, University of Groningen | [r.l.holz hacker@rug.nl](mailto:r.l.holz hacker@rug.nl)

Proposed Panel: Crisis in EU Equality Regimes: The role of civil society The purpose of this article is two-fold. The first is to map the institutional architecture for the promotion of equality and non-discrimination within the European Union and the member states – what we call the ‘the equality architecture’ of the EU. While there are a series of formal EU institutions involved in non-discrimination, such as the European Parliament and the European Court of Justice, here we particularly focus on the activities of the European Commission because of their central coordinating role in the process of learning across the political system. Within the institutional architecture for equality, there are also important bodies at the national level, including relevant ministries and Equality bodies created pursuant to the EU Racial

Equality Directive. The second goal of this paper is an analysis which indicates that a new mode of governance is emerging in this policy area, with new relationships between the center and the member states that demonstrates the continual evolution of governance forms in the EU. New methods of governance seem to be emerging in this area of social policy, where the member states are expected to take the lead. While a lot of attention by policymakers and academics a few years ago was placed on the Open Method of Coordination (OMC), looser forms of coordination have also emerged. In particular, in the area of equality and anti-discrimination, a new form of governance between the EU and the member states has been evolving, which we call ‘enhanced learning mechanisms.’

## **Anti-Discrimination Mobilization at the Eu Level: Recent Successes and Difficulties of Article 13 Public Interest Groups**

Carlo Ruzza, University of Trento | [carlo.ruzza@unitn.it](mailto:carlo.ruzza@unitn.it)

This paper assesses recent changes in political and cultural opportunities for advocacy groups focusing on the anti-discrimination issues regulated by article 13 of the Amsterdam Treaty (now article 19 of the Treaty on the functioning of the European Union). On the one hand it seeks to explain why European Institutions and in particular the European

Commission support a range of anti-discrimination public interest groups and the political opportunities connected to this institutional support. On the other hand it points to recent macro-economic and political factors that hinder the impact of these groups. It argues that supported groups are notably those that provide political legitimacy to the

European project, those that provide an alternative channel of representation for politically vulnerable groups thereby offering them a needed and alternative channel of representation, and those that contribute to a mythology of the European Union by emphasising the concept of human rights and thus providing the EU with a distinctive and needed political identity. Among these groups are Article 13 organizations. The paper points to their key role in combating discrimination.

However, it argues that this role has recently become more difficult as a less tolerant political climate is emerging spurred by increased ethnic rivalry related to advances of the xenophobic right and a backlash against multiculturalism. The impact of increased competition for resources of the welfare state and reactions against a perceived negative economic impact of a range of anti-discrimination programmes are also discussed.

### 03RN32 - The Aftermath of the 2008 Financial Crisis and International Civil Society

Chair(s): Carlo Ruzza (University of Leicester), Discussant: Juan Diez Medrano (University of Carlos III)

#### De-politicization, Financialization, and the European Political Drift Starting from the Analysis of the Italian Case.

Fabio de Nardis, University of Salento | [fabio.denardis@unisalento.it](mailto:fabio.denardis@unisalento.it)

Angelo Salento, University of Salento | [angelo.salento@unisalento.it](mailto:angelo.salento@unisalento.it)

The aim of the paper is to understand the economic and political dynamics that follow the great crisis of 2008 with a focus on the Italian case. The attention will be paid to the historical pre-conditions of the crisis. Since the Seventies, in Italy, a tendency towards the de-politicization of the economy got a foothold. The reaction to the downhill of profits occurred in the late Sixties was based on a wide delegation to the market, then to a rapid growth of the debt and the financial accumulation as well as to the progressive decline of the managerial capitalism and the labor. The succession of rights and left governments has never stopped this trend. After the crack of 2008 the need of a process of re-politization of economy has become clear. But the weak constraints on the financial accumulation are far from counteract its expansive force. In Italy, Monti's government

paradigmatically expressed the claim of the international financial actors to keep the supremacy of the finance over the real economy unchanged, by reinforcing the pretence of the economic actors to extract value from labor and common goods. Under the debt blackmail, the Italian people are subject to a further phase of deregulation and work commodification as well as to new inequalities. De-politicization of economy is accompanied by a transformation of the political class that is in a permanent crisis of legitimacy. Civil society reacts, on the one hand, through the organization of new protest movements, on the other, by developing an anti-political sentiment that is fostered by new populist leaders. The Authors try to analyze these processes following a diachronic-comparative perspective.

## New Doors and Closed Doors: EU Channels for Post-crisis Transnational Civil Society

Alison E. Woodward, Vrije Universiteit, Bruxelles | [alison.woodward@vub.ac.be](mailto:alison.woodward@vub.ac.be)

European transnational civil society organisations and meta-organisations have been heavily affected by the crisis but not always in expected ways. This paper builds on interviews with 20 representatives of EU transnational civil society organisations, officials in the Economic and Social Committee and several case studies on the impact of the socio-economic crisis and austerity measures on their membership and on their access to decision-makers in the European Union. Organisations report varying strategies for maintaining voice, as well as a changing opportunity structure within European policy making requiring new partners and new

discourses as well as different approaches to forming coalitions. Far from being side-lined, the results show new organisational tactics and creative use of technological networking tools to retrench and maintain voice under conditions of resource scarcity. The institutions of the EU have also shown a multi-lateral response that has not always meant closing doors. However, the experiences vary dramatically in the different regions of Europe and upcoming budgetary measures are expected to have extensive ramifications. The paper discusses the results in the context of the challenges to democratic voice in building European civil society.

## The Crisis of Europe. Contributions from Political Sociology

Hans-Joerg Trenz, University of Copenhagen | [trenz@hum.ku.dk](mailto:trenz@hum.ku.dk)

In the development of modern sociology, the notion of crisis has always been intrinsically linked to accelerated social change and mobilization, which, in the case of Europe stretches beyond the nation state. This paper sketches the outlines of a political sociology of crisis in Europe. It looks at how the current crisis affects patterns of social exclusion and conflict but also various ways how it activates

social networks and new forms of solidarity and social cohesion – locally and transnationally. It is argued that political sociology can help to reconstruct the complex interrelation of mobility, voice and loyalty that is currently reconfigured in the European space, directly as an effect of crisis, but also more endemically as a long term effect of European integration.

## Civil Society, Participation and Democracy: New Conditions and Challenges

Thomas P. Boje, Roskilde University | [boje@ruc.dk](mailto:boje@ruc.dk)

Citizens' social and political involvement has become a key issue on the current political agenda. The main reason for this is the legitimacy crisis of the participatory democracy in Europe. Additional factor to be considered are difficulties of realizing processes involving citizens in strategic decision-making at community as well as national level and

difficulties in the identification and organization of welfare services, with special relevance for the vulnerable groups of citizens. These problems have been ascribed to the limitations of representative forms of democracy in capturing the heterogeneity, complex interests, and identities in our diverse societies. Active citizenship and civic involvement can be

considered as part of the solution on these problems. From the perspective of deliberative democracy, the role of civil society is to bring disaffected citizens back in touch with politics. The issues at stake to be dealt with in the paper could be phrased as following: 1. How to involve civil society institutions in a dialogue with welfare state institutions in a viable way to enhance public participation considering the declining trust in social and political

institutions? 2. How is the active participation of different social groups structurally, socially, and politically conditioned and how does it effect who is included and excluded from the different types of participation and associations? 3. Who are the new social actors operating in-between the more traditional civic institutions and how do they differ from the traditional social groups of the civil society in type of activities and forms of organisation?

## Active Citizenship and Participation in the Framework of EU's Integration Policies

Luca Sebastiani, University of Granada | [lucaseba78@ugr.es](mailto:lucaseba78@ugr.es)

Although the EU no direct competencies over immigrants' integration policies, in the recent years a growing number of actors -both institutional and of the "european civil society"- has been involved in the development of soft policy tools in order to achieve a common understanding of "integration". This process resulted in the publication of the "Second Common Agenda" (2011), which is the context of my study. I consider the analysis of integration policies and discourses a useful perspective in order to detect wider processes of inclusion/exclusion, construction of difference as well as classification of populations. Starting from this point, I focused on the different problematizations and re-significances which are linked to this concept, paying special attention to the articulation between "integration" and other relevant

notions like "participation" and "active citizenship". Also I have taken into account the diversity existing in the emerging "political field" (Bourdieu, Guiraudon, Kauppi, Mérand) of integration in the EU, which is characterized by many situated actors, with different standpoints and strategies -for instance: the EC, nation states, regional and local administrations, the EESC, several NGOs and "experts". The qualitative datas used in this research are the result of the fieldwork done in Brussels between 2011 and 2012 -financed by the University of Granada "Plan Propio". It mainly consists of interviews to the main actors involved in the EU's political field of integration as well as observations of different meetings over the same issue -like for example some sessions of the "European Integration Forum".

## 04RN32 - Citizens' Resilience in Times of Crisis

### Activating European Citizenship in Times of Crisis: From Elite Project to New Redistributive Struggles?

Hans-Joerg Trenz, University of Copenhagen | [trenz@hum.ku.dk](mailto:trenz@hum.ku.dk)

The multiple crises of Europe have exposed the thinness of European citizenship and the seemingly insurmountable differences that divide the peoples of Europe. European citizenship, which was meant as a stabilizer of the European social and political space and a marker of a European identity, now seems to symbolize the cleavages and tensions among the peoples of Europe. At the same time, a crisis increases the readiness of affected groups to become mobile and mobilized. In the current situation, we observe how EU citizenship becomes activated in diverse ways: indirectly through the new boost of social mobility (e.g. young people moving to the

North), and directly through the emergence of new movements of social and political protest, indicating a new politics of European civil society that asks for the extension of rights, participation and democratic control of economic governance. Can the most vulnerable groups of society affected by crisis make use of EU citizenship as an instrument of resilience? The paper discusses the extent that EU citizenship has become politicized during the Eurocrisis and how such politicization might link to the way different types of mobility are presented and debated in the public sphere.

### The European Citizens' Initiative in the "European Year of Citizens": what's the future of European citizenship?

Maria Cristina Marchetti, Sapienza University, Rome | [mc.marchetti@uniroma1.it](mailto:mc.marchetti@uniroma1.it)

With the decision 1093/2012/EU of the European Parliament and of the Council the year 2013 has been designated as the "European Year of Citizens". 2013 is also the first year we can monitor the European Citizens' Initiative (ECI). The European Citizens' Initiative was introduced by the art. 11 of the Treaty of Lisbon and it allows one million EU citizens to participate in the development of EU policies, by calling on the European Commission to make a legislative proposal. The rules and procedures governing the citizens' initiative are set out in an EU Regulation adopted by the European Parliament and the Council of the European

Union in February 2011. On April 1st 2012 the Regulation entered into force and the first initiatives have been registered. Fourteen initiatives are currently open and running, covering issues such as the environment, health, media, water, etc. In the nine months since the ECI started, not one of the 14 campaigns was able to gather signatures online because the so called "free" Online Collecting System (OCS) developed and offered by the EU didn't work and the administrative costs of fixing it were too high for the organizers. The ECI is an important tool of democracy but it shows some crucial problems. The paper will focus on the following

topics: - Can the ECI be considered a new form of transnational participatory democracy and can it boost the develop of a transnational civil society? - Can the ECI open the way to the

involvement of civil society in the European Union decision making processes with the aim to ask for more participation and democratic control of economic governance?

## Transnational Solidarity in the EU: Do Citizens Support Fiscal Help for EU-member States Facing Financial Troubles?

Holger Lengfeld, University of Hamburg | [holger.lengfeld@wiso.uni-hamburg.de](mailto:holger.lengfeld@wiso.uni-hamburg.de)

Sara Schmidt, University of Hamburg | [sara.schmidt@wiso.uni-hamburg.de](mailto:sara.schmidt@wiso.uni-hamburg.de)

Before global financial crisis reached Europe in 2008, the EU's concept of transnational solidarity has been predominantly focused on territorial cohesion measures. Since 2009, the EU and its member states have stepwise established solidarity mechanisms supporting member states facing fiscal troubles. Nonetheless, it is questionable if these immense redistributive efforts are supported by EU citizens. Therefore, we aim to answer three questions: 1. Do European citizens' support this new dimension of European redistribution order? 2. To what degree support for fiscal solidarity is caused by utilitarian or moral motives of equality? 3. Do we find evidence for socio-economic or cultural cleavages on both individual and country-specific level which should hinder further political processes of institutionalization transnational solidarity?

Empirically, we analyze data from "Special Eurobarometer" 2010 containing attitudes towards financial help in the EU (N = 18.865). Descriptive results show that about half of the respondents are in favour of transnational fiscal solidarity, observing higher approval rates in EU-15 and lower rates in EU-10 countries, Romania and Bulgaria. In addition, the majority of supporters give moral reasons for fiscal solidarity. In order to identify formations of possible socio-economic and cultural cleavages, we carry out multi-level regressions, accounting for individual and for contextual effects located on country level. Overall, findings show only slight effects of socio-economic and cultural predictors on attitudes towards fiscal solidarity. In sum, results may be taken as a hint that in times of crisis, Europe's social integration seems to be stronger than often expected in public.

## The New Citizens of the EU towards the New European Citizenship

Tatjana Sekulic, University Milan-Bicocca | [tanja.sekulic@unimib.it](mailto:tanja.sekulic@unimib.it)

The enlargement lays in a very heart of the European Union integration process as it constantly pushes its main actors to a reflexive, possibly creative effort of sociological imagination. As it is not only the process of a widening but, more important, of a deepening of the EU, it puts in question every time its institutional and structural disposals and mechanisms, but also its fundamental principles. The enlargement fatigue of the EU broke out in an unprecedented way during the

actual crisis expressed primarily in financial and economic terms. Once again the juxtaposition and overlapping of the political EUropean elite and the politicians of the (core) member states governing the situation revealed a limitation of the EU political leadership potentials. The difficulty to support the economies of the most vulnerable member states and to create, generally, stronger capability to control and resist global crisis dynamics, protecting in a better way it's model

of a welfare state, continues to produce negative effects both to the further enlargement process and to the citizens' commitment to the European integration. My intention here is to open some questions related to the dynamics of the process of EU

integration, democratization and creation of common and national institutions, from the particular angle of the enlargement practices; to explore its actual but also possible future patterns and consequences, that sometimes appears unexpected and controversial.

## Resilience through Group Activism in Spain

Mariona Ferrer-Fons, Pompeu Fabra University, Barcelona | [mariona.ferrer@upf.edu](mailto:mariona.ferrer@upf.edu)

Spain is one of the countries in Europe more affected by the global crisis sadly known by the top levels of unemployment. At the same time, it is one of the European countries more heavily affected by austerity measures. In parallel, at the political sphere, the model of representative democracy and political institutions, established in the 70s after the Franco's dictatorship, is suffering a high level of discredit and disaffection among the population. Young people are one of the social groups more affected by the crisis with unemployment rates around 50% and long transitions towards full emancipated adulthood. In this paper I want to explore the development of resilience of young citizens affected by the crisis through activism in groups or movements that are mobilised against the situation. My hypothesis of work is that these activists, most of them young

unemployed, precarious workers or students develop resilience against the crisis and their personal life difficulties through their group activism, their near social communities. Hence, group resources appear as an important way of empowerment and resilience to adversity. The empirical work will be based in the analysis of around 80 in-depth interviews done between November 2012 and April 2013 in BCN city or surrounding to activists in three types of groups/movements: the student movement against austerity measures, the indignant feminists and the extreme-left secessionist Catalan movement (ARRAN/CUP). The data has been collected in the framework of the FP7 European project MYPLACE (Memory, Youth, Political Legacy and Civic Engagement). The data also will offer examples of new ways of activism and protest in time of crisis.

## 06RN32 - Crisis and Change in Northern Europe: From Nordic Welfare Systems to Welfare Chauvinism?

Chair(s): Dietmar Loch, Discussant: Cristian Norocel

### Guarding the Doors to the People's Home: Migration and Welfare in the Nordic Countries

Anne S. Grødem, Fafo Institute of Labour and Social Research, Oslo | [asg@fafo.no](mailto:asg@fafo.no)

The Nordic countries are among the most advanced welfare states in Europe, but questions have been asked regarding how well-equipped these countries are to deal with international migration. The current challenge of migration to the Nordic countries is two-fold: intra-EU/EEA migration raises questions of access to social security and benefit export, while immigration from outside the EU – which is mainly humanitarian – creates concerns for social exclusion and poverty. This paper will discuss how these challenges may be more profound in the Nordic countries (mainly Norway, Sweden and Denmark) than

elsewhere in the EU, and look at how the various countries have dealt with the challenges. Two questions are raised: first, have recent policy changes in the three countries been motivated by concerns related to immigration – and if so, what aspects of migration, or the behavior of migrants, are highlighted as problematic? Second, is there a popular demand, as evidenced in surveys, for more exclusionary policies? The paper will build on an up-to-date review of integration policies in the three countries in question, and present a literature review on relevant findings from surveys.

### Post-democracy, Welfare State and Neoliberalism in Finnish Political Rhetoric on Immigration

Suvi Keskinen, University of Turku | [suvkes@utu.fi](mailto:suvkes@utu.fi)

Building on theoretical discussions about 'post-democracy' and the 'post-political' condition and recent analyses on the European wide 'crisis of multiculturalism' discourse with its depoliticising effects, the paper analyses political rhetoric on immigration in Finland. Since the severe economic recession of the 1990s, the neoliberal discourse of 'economic competitiveness' has enjoyed a hegemonic position in the Finnish political rhetoric. The political parties from right to left have been united in arguing for the need to develop economic competitiveness in order to safeguard the future of the nation and the

Nordic welfare state model. In recent years, such rhetoric has increasingly characterised also debates about immigration, asylum and refugees. This paper analyses how different political actors, ranging from radical right-wing populists to mainstream parties and Ministers in the government, use the rhetoric of economic necessity and the crisis of the welfare state to argue for actions that in effect reduce immigration from non-western countries (in Africa, Middle-East and Asia). The paper argues that this racialising politics is promoted by depoliticising the issue – by referring to the 'undeniable' economic facts

and the 'welfare state in crisis'. Moreover, hierarchies are built between different migrant groups based on class, religion, ethnicity,

'race' and gender. The empirical data of the paper consists of (print and social) media texts and programmes of the political parties.

## Transformation of the Socio-economic Cleavage? A Typology of Welfare State Opinions in Flanders

Koen Abts, University of Leuven | [koen.abts@soc.kuleuven.be](mailto:koen.abts@soc.kuleuven.be)

Marc Swyngedouw, University of Leuven | [marc.swyngedouw@soc.kuleuven.be](mailto:marc.swyngedouw@soc.kuleuven.be)

Bart Meuleman, University of Leuven | [bart.meuleman@soc.kuleuven.be](mailto:bart.meuleman@soc.kuleuven.be)

As a result of globalization and denationalization, Western European cleavage structures are fundamentally transformed. Research shows how cultural conflict is re-articulated and re-organized in terms of a new 'integration-demarcation' cleavage (Kriesi et al., 2006). Yet the meaning, conceptualization and effects of the transformed socio-economic left-right divide remain underexposed. We study –theoretically and empirically– how economic conflict is partially re-articulated in times of European integration, growing cultural heterogeneity and welfare retrenchment. The left-right divide still refers to the state vs. market conflict in terms of the contribution and state interventionism question. Yet concurrently, it transforms into various inclusion-exclusion conflicts referring to questions of reciprocity and conditionality: which groups should get what, why and under

which conditions. This transformation blurs boundaries between distributional and cultural conflict. Welfare populism combines egalitarianism, welfare chauvinism and anti-welfarism in order to reconcile its nativist and anti-establishment discourse with the socio-economic preferences of the lower classes. We investigate empirically how the transformation of the socio-economic cleavage manifests itself in welfare opinions among the Flemish electorate. The Belgian Election Survey 2010 contains validated scales for attitudes towards state intervention, income redistribution, welfare critique and welfare chauvinism. Using Latent Class Analysis we construct a typology of welfare opinions. The central research question is whether there is a subgroup of 'welfare populists' and how it may be characterized in terms of structural positions and voting behavior.

## What is Finnish about The Finns Party? Political Culture and Populism

Tuukka Ylä-Anttila, University of Helsinki | [tuukka.yla-anttila@helsinki.fi](mailto:tuukka.yla-anttila@helsinki.fi)

The populist Finns Party's (Perussuomalaiset, PS) upsurge in the 2011 parliamentary elections shocked the Finnish political scene, marking the most significant post-war shift in Finnish parliamentary politics. The party more than quadrupled its share of votes and instantly became a mainstream player, the third largest party. While other studies have theoretically and empirically provided some explanations for this development both elsewhere and in Finland, I study the Finns

Party's argumentation by method of Luc Boltanski & Laurent Thévenot's justification theory to shed light on the cultural specificity the nationalist populist phenomenon takes on in the Finnish case. It is argued here that this specificity includes combining left-wing Nordic welfarist redistributionary policy with conservative nationalist values, facilitating the party's appeal to voters of left-wing parties. This specificity is born out of the legacy of Finnish rural populism, including the legacy of

the Finnish Rural Party (Suomen maaseudun puolue, SMP, 1959–1995), the predecessor of the PS. Moreover, a historically formed consensual political culture explains the party's comparatively moderate and negotiative politics, compared to its more extreme European counterparts. Additionally, I will propose an interpretation of populism,

through Laurent Thévenot's sociology of engagements, as an attempt at doing politics on a level of familiar engagements, based on intimacy and shared emotion, which goes against the requirement of distancing oneself from one's political claims and presenting claims on a high level of generality, typically required in institutionalized politics.

## Reinventing the Popular Meaning of Democracy in the Times of Crisis in European Periphery

Janez Stebe, University of Ljubljana | [janez.stebe@fdv.uni-lj.si](mailto:janez.stebe@fdv.uni-lj.si)

The study extends on classical Lipset's definition of the perceived legitimacy of the democratic political system, that is built on feeling of justice that certain procedures and institutions provides and is congruent with the prevailing values of freedom. We compared this with the equally important and widespread support base which understands democracy in terms of egalitarian values. Using available recent data from a comparative surveys (European social survey and World Values Survey carried out in 2012), we confirmed that support for democracy per se is largely dependent on the "liberal" or procedural understanding, while the support it derives

from those with egalitarian priorities is more ambivalent. There is incongruence in understanding the meaning of democracy on merely liberal procedural grounds compared to social justice understanding that may explain the ambivalent effect on support for democracy of the later. This picture is exaggerated in the times of crisis in the ideologically deeply divided societies of European South-Eastern periphery, such as Portugal, Spain, Italy, Greece, Slovenia and Hungary. The consequences are discussed for the prospects of resolving the social unrest surrounding current cuts in social benefits provision.

## 07RN32 - Social Media and Public Opinion: Conceptual and Empirical Challenges

Chair(s): Hans-Jörg Trezz (University of Copenhagen), Discussant: Mauro Barisione (University of Milano)

### Italian Democracy in the Age of Digital Social Media. Did Twitter changed political communication in the first post-absolute videocracy Italian vote ?

Renato L Roda, University of Torino | [renato.roda@unito.it](mailto:renato.roda@unito.it)

The astonishing exponential growth in the access to digital social platforms, and their rising importance as communication network, unquestionably stands as one of the most interesting phenomena in the contemporary mass media scene. Among of the most direct consequences of such change trend, there's the determinant role achieved by well-planned micro-blogging and digital interaction strategies in political communication agendas, especially during pivotal electoral campaigns. The massive, easily accessible data sets produced by digital social interactions opened to social and political scientists a whole new scenario of research perspectives and opportunities. In this contribute, I will explore the Twitter networks of the main 4 premiership candidates during the last days before Italy's

2013 General Elections, the first ones after the absolute dominion of Television in political communication has been challenged by the rise of diffused digital networking. Using traditional Social Network Analysis methodologies applied to the grids of digital conversational exchanges, I will compare the Twitter Networks of candidates characterized by very different communication histories, profiles and styles. From a more quantitative point of view, I will focus on the structure and dimensions of the Twitter networks developed around each candidate; from a more qualitative viewpoint, I will try to identify the prevailing topics, and the dominant sentiments, in the tweets exchanges between the politicians and their followers.

### The Social Conditions of Digital Activism: the Case of Anonymous

Juan Pecourt, University of València | [juan.pecourt@uv.es](mailto:juan.pecourt@uv.es)

The development of information and communication technologies has promoted the appearance of innovative social movements and cultural practices, eroding the established frameworks which characterised the twentieth century. In the case of the public sphere, centralised mass media (newspapers, cinema, television) are losing ground against social media networks based on decentralization and horizontality. The aim of this work is to place

the Anonymous movement in the context of the public sphere's present transformation. Anonymous shares the main characteristics of the new social movements originated in the network society. It presents itself as a decentralised and multiform project, highly malleable and adaptable to accelerated social change. As an inheritor of the hacker culture developed from the sixties onwards, it defends the autonomy of the digital world against

traditional social powers such as state bureaucracies, global corporations or the mass media. Anonymous defends the values and principles spread in the specialised communities of the digital world: decentralization, resistance against hierarchy and leadership, aspirations of freedom and rejection of censorship, collaborative work, open and playful experimentation. At the same time, it provides new strategies and techniques

for political activism which aim at defending these principles within the digital and global public sphere. Among others, Anonymous fosters media spectacle, anonymity, absence of leadership, multiple and ultra-coordinated actions, and electronic sabotage. These forms of digital activism are opening new political horizons and redefining the relationship between social actors, and they suggest an increasing importance of conflicts and tensions

## **Social media and Web Analytic Technologies in the 2012 French Presidential Campaign: towards a Real-Time Monitoring of Public Opinion?**

**Françoise Papa**, University of Grenoble Alpes | [francoise.papa@u-grenoble3.fr](mailto:francoise.papa@u-grenoble3.fr)

**Jean-Marc Francony**, University of Grenoble Alpes | [jeanmarc.francony@umrpacte.fr](mailto:jeanmarc.francony@umrpacte.fr)

The last Presidential Election in France highlighted the emergence of Web 2.0 in the campaign. As part of a broader research dedicated to social media, this study is based on the analysis of: - a corpus of 2 million tweets resulting from a continuous and systematic archiving of Twitter from January to May 2012, - the media coverage of the campaign and of web communication of candidates. Our paper addresses the impacts of web analytic on communication during the campaign, as well as on evolutions that usages the web and social media have accompanied in this context. We will examine here some issues related to the spreading of web marketing tools and approaches on information and on public opinion making. Our study points that, alongside candidates, mass media and opinion polls professionals that usually contribute to

deliver information for the making of public opinion, new agents coming from webmarketing sphere have challenged this established configuration, while adapting their approaches and analysis tools to political issues. Does the process of hybridization of a mass communication pattern with a logic of real-time production and processing of opinion data that we've observed, imply a change in our design of information? in the role of journalists in public space? in our conception of public opinion? Does this foresee some reconfigurations in the field of public opinion measurement? Given the logic of real time in use in web 2.0 and eventization process that operates in mass media, when webmarketing tools enable to produce real-time indicators, this results in a real-time monitoring of public opinion.

## **“Big data” Analysis: Online Expression and New Theoretical Challenges for the Research**

**Marie Neihouser**, University of Montpellier I - laboratoire CEPEL-CNRS (UMR 5112) | [neihouser.marie@gmail.com](mailto:neihouser.marie@gmail.com)

As new “big data” research techniques, such as blog sentiment analysis, are developing, there are few researches on the question of data nature. Parallel to a PhD work on a political blogs panel, this communication aims, as Bourdieu did it about traditional opinion polls, to question the conceptualization of these new forms of expression that appeared online. New “big data” analysis set us three major problems : first, there would be only “formed opinions” online –, social media, especially blogs and microblogs would entail self-selection, i.e. individuals actively willing to express their opinion. But what is a “formed opinion”? The aggregation of data stemming from individuals with their own differences and own trajectories raises a fundamental question. Who is speaking? To who? What is the impact of online and offline individual influence on the message? Tacking account of

enunciation context and being cautious about bringing into general results from collected data is necessary. Furthermore, in an individual, these methods may lead to make no distinction between the popularity and the authority of an opinion. The question which must be asked is the status and the hierarchical organization of his opinions by the individual himself. Data collect can lead the researcher to level subjects not having the same importance from the point of view of the individual. A temporality problem is pointed up: how shall we know the difference between “reactive opinions” and “long-lasting opinion”? Finally, it is interesting to discuss the non-imposition of problematic allowed by these techniques and the “freedom” for the individual to talk about what he wants: is this assertion tenable?

## **a08RN32 - Changing Meanings of Civil Society Involvement**

Chair(s): Julien Talpin, Discussant: David Paternotte

### **Mission or Management? Civil Society Organizations as Service Providers in Finnish Substance Abuse and Mental Health Treatment**

**Riikka Perälä**, University of Helsinki | [riikka.perala@helsinki.fi](mailto:riikka.perala@helsinki.fi)

**Pekka Sulkunen**, University of Helsinki | [pekka.sulkunen@helsinki.fi](mailto:pekka.sulkunen@helsinki.fi)

The paper investigates the position of civil society organizations (CSO's) in Finnish substance abuse and mental health treatment services. Study's focus is on the autonomy of CSO's as service providers and on the changes in justification of their work, which are scrutinized with the help of theory of

justification developed by Luc Boltanski and Laurent Thévenot (2006). The paper is based on 20 in-depth interviews with the substance abuse and mental health treatment professionals working in the CSO's, who were asked about their daily work, their relationship with public stakeholders and their possibilities

to represent the interest of their clients in service provision. The main results show that the representatives of the Finnish CSO's feel that despite of the increasing talk about CSO's autonomy in service provision the position of the organizations is still very fragile and secondary in relation to public stakeholders. The main problem seems to go back to the differences in justification that guide CSO's and public stakeholders' activities in the current service system. This discrepancy inhibits the CSO's to have a clear effect on the

services and is in danger to turn to these organizations to – as one of the interviewees put it – mere “service factories”. The paper argues that the prevailing talk about partnership and co-operation between different stakeholders of the society often disguises social relationships as voluntary agreements, while in reality they may be products of various power relations. Therefore the concept of power should be raised to the fore in the discussions about state-civil society relationships in the future.

## From 'Voluntas' to Voluntary Work? Questions of a Voluntary Action in the Time of Crisis

Marek Nowak, Adam Mickiewicz University, Poznań | [marek.nowak@amu.edu.pl](mailto:marek.nowak@amu.edu.pl)

One of the aspects of the dynamics of contemporary society concerns the specific subject of voluntary action. It tends to provoke discussion at least in two directions. The first one could be expressed by the analysis of voluntary behavior, motivations, and the “systemic” tensions which inspired to actions. The second could discuss the evolution of the institutional environment (the NGO's or political parties) which exploit the concepts of the constructivist vision of social movements (Stompka) or just the complexity of the western welfare state. The problem of the modalities of the tradition and organization of voluntary activity will be pictured in the context of differences between the Polish and the English-Irish experiences (Salmon, Anheier;

Acheson, Harvey, Williamson). The presentation will discuss aspects of the less visible problem of voluntary work as a deeply rooted motivation driven by (or into) the “cultural profile” of the society or by metaphor: a specificity of “the systems sticking plaster” which is kind of “growth-oriented adjustment” helping improves the shortage of the market regulated social services or strategy of lowering the cost of the realization of business actions particularly in the time of crisis. The base of the empiric sociological narration will be provided by literature in Polish and English, and the results of a qualitative and quantitative research realized among young volunteers in Poznań, Wrocław, and Gdańsk (Poland) in the years 2006, and 2011.

## Public Servant or Service Provider? The Dilemma between Customer Orientation and Authority in Face-to-face Interactions at Public Administration Offices

Oliver Schmidtke, University of Siegen | [schmidtke@soziologie.uni-siegen.de](mailto:schmidtke@soziologie.uni-siegen.de)

Kathrin Englert, University of Siegen | [englert@soziologie.uni-siegen.de](mailto:englert@soziologie.uni-siegen.de)

Ariadne Sondermann, University of Siegen | [sondermann@soziologie.uni-siegen.de](mailto:sondermann@soziologie.uni-siegen.de)

Wolfgang Ludwig-Mayerhofer, University of Siegen | [sekretariat.wlm@uni-siegen.de](mailto:sekretariat.wlm@uni-siegen.de)

During the last two decades, German public administration has undergone internal organizational reforms. One important underpinning of the reforms was the concept of customer, or service, orientation. By taking into consideration wishes and needs of a heterogeneous citizenship the state aimed at overcoming authoritarian forms of interaction. Citizens should not be viewed as subordinate to the administration and its staff, but rather be met on an equal footing and be treated in a friendly and respectful way. Obviously, these transformations have consequences for the way public servants and citizens come into contact with each other. Customer/service orientation may be in conflict with the representation of authority which is part and parcel of bureaucratic-administrative action. This becomes evident when public servants in

offices have to insist on compliance with rules for documents which citizens are obliged to supply. Drawing on qualitative interviews with public employees from German local authorities (registry and tax offices) in four different localities and on recorded encounters between frontline officials and citizens, we want to deal with the question of how public servants fulfill their task of representing state authority while respecting citizens' rights and integrity. We would like to present conclusions from the qualitative analysis of these data, which show the principle distinction of two problem-levels public servants and citizens have to face during encounters: the administrative decision due to legal rules itself and the way these decisions are communicated and negotiated.

## b08RN32 - Urban Governance and Local Politics

Chair(s): Carlo Ruzza, Discussant: Julien O'Miel (TBC)

### In Search of the Municipal Self: A Model of the Actorness of Politicians and Bureaucrats in the Local Government

Juha Klemelä, University of Turku | [jklemela@utu.fi](mailto:jklemela@utu.fi)

The topic of my presentation is a model of the action premises of the municipal representatives and officials (municipal politicians and bureaucrats). The model is an outtake from a forthcoming doctoral thesis where I study the co-operation of these actor

groups. The model consists of the elements of task, means (roles, resources), opportunities, motives (self-esteem, rewards), and results. At the core of the model is a symbolic interactionist role-identity conception of the municipal self. An actor in the role of either

representative or official has three sub-role-identities: the administrator, the bureaucrat, and the politician. Both the representatives and the officials exemplify all of these sub-role-identities, albeit to differing degrees. The actors opt for verification of identities in role behavior and exchanging of resources (e.g. knowledge, skills, time) for profit. They are motivated by the sustaining of their self-esteem and by the getting of rewards (e.g. salary, meeting fees, employment). The actor-conception in the model gives due weight to both the social and the rational motives of conduct. Therefore, seen from the viewpoint of

the science of politics, the work at hand has a flavor of the new institutionalist thinking. In an anecdotal fashion it may be mentioned that the structure of the model is somewhat reminiscent of the way that the investigation of crimes is treated in popular culture: "task accomplishment" (crime taken place), is a function of ability (weapon), opportunity, and motive. In an offbeat way this observation adds credibility to the chosen line of studying action, since it reveals that the model probably includes a rather coherent and comprehensive set of action-explaining factors.

## Local Governance Models and Crisis

**Barbara Barabaschi**, Catholic University of Sacred Heart, Milan | [barbara.barabaschi@unicatt.it](mailto:barbara.barabaschi@unicatt.it)

Paper analyses the evolution of local governance systems in three European countries: Italy, France and Germany. Research interest is concentrated on the role of public actor, in order to verify which specific role it has in territorial governance processes (coordination, subsidiary, control?). Analysis deeps internal organization evolution of local public administrations in the three countries selected, but also the ways by which local public administrations interact with local community and civil society in defining policies and services. Research aims to verify if there is or not coherence between changes adopted in internal organizational structures and those in local participatory models by firms, no profit agencies, citizens (for example, open government, outsourcing, crowdsourcing, especially with the use of technologies and

social networks-media). Three case studies are presented, one for each country, in order to exemplify local governance model affirmed in every country, focusing, in particular, on policies and projects that aim to improve services quality and public expenditure efficiency. After an historical reconstruction on changes in local development policies in Europe, paper focuses on those realized in the last years, during the recent economic crisis and verifying hypothetical connections. The three countries have been selected for the common historical basis on which public sector is founded, but also, at the same time, for the different local governance models developed during the time (centralized in France, partially centralized or inspired by subsidiarity in Italy, decentralized in Germany).

## The Demise of Municipal Democracy: The Study of Moscow Region's Local Political Regimes

Edward Ozhiganov, Russian Presidential Academy of National Economy and Public Administration | [Edward.Ozhiganov@gmail.com](mailto:Edward.Ozhiganov@gmail.com)

Current Russian Federation's municipal reforms offer a unique field for sociological research and simulations because they exhibit correlations between effects of dominant political regimes and dispositions of local social communities. Examining political patterns in twelve Moscow Region's municipalities, we find that dominant regimes target narrow coalitions and powerful interests at the expense of the local social communities. To substantiate these propositions, the paper first presents a theoretical explanation of the relationship between regime dominance and benefit distribution. Then it provides sociological, statistical and expert evidence that under certain economic and social conditions the dominant regimes are characterized by insularity of local elites and authoritarian leadership style at all stages of the policy process – to gain, maintain and

exercise control over offices. It involves both formal and informal agreements with one or more private interest groups that support the elected persons in positions of power. The local communities included in this study witnessed, for the first, a low level of political participation in the activities of the political parties and institutions, and, for the second, – the dispositions of citizens to the policy of regional and local authorities described as a alienation with a high degree of opportunism. The key complex variable is a lack of sufficient security against economic instability, administrative arbitrariness and criminality. We suggest a research agenda that highlights the inherent dynamics in local politics, and conclude with simulation modeling as a method of examining and evaluation the level of sustainability of the dominant political regimes.

## 09RN32 - The Populist Radical Right in Europe in the Aftermath of the Crisis, country studies

Chair(s): Cristian Norocel, Discussant: Dietmar Loch

### Explanatory Right-Wing Semantics

Claudia Globisch, University of Innsbruck | [claudia.globisch@uibk.ac.at](mailto:claudia.globisch@uibk.ac.at)

Quantitative data in Europe shows a rise of right-wing ideology in Europe during the recent Crisis. The data of the last ten years shows that feelings of political and economic powerlessness had a direct influence on a rise in right-wing ideology. Recent data shows that prospects of a dismal economic future are the main influence to growths in right-wing

ideology. Apart from those economic context factors and its subjective perception, this paper suggests a close analysis of semantics to learn more about cultural and political opportunity structures. Right-wing semantics always acts upon an assumption of crisis. Characteristic for the fascist semantics of crisis is the »decadence-apocalypse-heroism-syndrom«

(Lenk) that acts upon the idea of cultural »rebirth«: here, there is always a diagnosis of apocalypse/crisis with specific scapegoats and the construction of »cultural rebirth« through heroic saviors. This did not change with the present economic crisis. What one can observe is a strategic use of the concept of »ethnopluralism« within the European right that allows alliances and functions, but only until there are conflicts concerning migration

or conflicting territory claims. My argument is that this strategic use, together with the selection of specific scapegoats, provides links to the cultural and political opportunity structures of a society separate from the influence of economic crisis and the subjective perception of it, i.e. those factors that are mainly used as explanations in modernization theory.

## The Electoral Success and Failure of Extreme Right in Flanders-Belgium: the Case of Vlaams Belang

Marc Swyngedouw, University of Leuven | [marc.swyngedouw@soc.kuleuven.be](mailto:marc.swyngedouw@soc.kuleuven.be)

Koen Abts, University of Leuven | [koen.abts@soc.kuleuven.be](mailto:koen.abts@soc.kuleuven.be)

Electurally, Vlaams Blok/Belang (VB) was gaining from 1985 until 2004 steadily at every election. The party gathers its electoral peak of 24.2% of the votes in 2004. Since 2007, the party faces big electoral losses. In this paper we want to develop a political sociology of extreme right beyond the current demand and supply explanations, since these are using a rather static approach by describing an electoral market where demand and supply meet each other. Our argument is that the analysis and explanation of the rise, success and decline of the radical right, should investigate the changes in the contemporary society and social structure, in the political opportunity structure, in the organization and mobilization structure of extreme right and in their cultural - read populist - framing which determines the transformation of social space

as well as contributes to credibility of the (new) party increasing the electoral appeal of the party to their potential party electorate. By examining all those seven dimensions (social structure, POS, organization structure, framing, cultural hegemony, credibility and electoral succes/failure) we argue that the analysis of (new) parties must take into account the life cycle of the Vlaams Belang, namely the phases of establishment (1979-1985), breakthrough (1987-1991), success and consolidation (1995-2004) and erosion and decline (2006-2010). Although a detailed empirical analysis was not possible yet, we illustrate the logic of the approach for the case of Vlaams Blok/Belang - a prototypical successful party in a phase of steady electoral decline.

## Populism and the Welfare Society's Economic and Social Crisis - the Swedish Case

Björn Fryklund, Malmö University | [bjorn.fryklund@mah.se](mailto:bjorn.fryklund@mah.se)

This study shows that the welfare society Sweden can up to now be regarded as something of an exception or better say an anomaly in Europe when it comes to successful right-wing populism. In Sweden has the party

the Sweden Democrats made use of right-wing populism to mobilise electoral support in 2006 and 2010 parliamentary elections. But the Sweden Democrats are still struggling with their "dark" past - a past that is strongly

associated with racist movements that were active in the 1980s – which hinders or prevents them from attracting the same amount of electoral support as other right-wing populist parties in Europe. But the party has taken a lot of political and organisational initiatives to change the "image" of the party, there the goal is to become a more respectful and civilized normal mainstream party in the Swedish public opinion. It could be relevant to compare the Swedish case with the on-going change in other right-wing populist parties in Europe, in both Eastern and Western European countries. But, irrespective of whether or not the Sweden Democrats gain more ground in the next

parliamentary elections (next election is 2014), we cannot overlook the fact that Sweden is dependant by the European economic and political development – a Europe where right-wing populist parties have gained major electoral success in recent decades and have become much more apparent and influential on the European political scene as for example National Front's recent success in the president election in France shows. The presence of the economic and social crisis in Europe could lead to a much more prominent role for the populist parties in Europe where the democratic system in Europe is seriously challenged.

## Consensus, Corruption and Populist Upsurge of the Finns Party

Halil Gurhanli, University of Helsinki | [halil.gurhanli@helsinki.fi](mailto:halil.gurhanli@helsinki.fi)

Emilia Palonen, University of Helsinki | [emilia.palonen@helsinki.fi](mailto:emilia.palonen@helsinki.fi)

After decades of power-sharing by three dominant parties, a populist force entered the Finnish political party spectrum. The Finns Party emerged as the winner of April 2011 parliamentary elections with its radical contestation of the elite and status quo. In the October 2012 municipal elections the party fell short of repeating the landslide, yet it established itself as the forth force rather than a sporadic phenomenon. Analyzing the post-election surveys, party program and ideology, this article locates the unprecedented electoral support for the FP in the context of a momentum for anti-elitism and populism in Finland that responds to the dominance of "state-keeping" by the ossified consensus between a closed-group of elite that has cultivated a peculiar "political" terrain where the politics itself has been missing. Contrary to

the predominant assessments situating it as a party of the radical right, yet acknowledging the presence of an extreme right-wing within the party, this article argues that, under current leadership of Timo Soini, the FP stands as a traditional populist party, procuring its support largely from a massive dissatisfaction with the Finnish consensus politics revolving around three parties - especially after the uncovering of widespread electoral corruption during the previous parliamentary elections. Combined with the Eurozone crisis that is considered as the last nail in the coffin of the country's Nokia-led economic boom, all these factors have led a significant part of the Finnish electorate to find the FP's relentless anti-elitism and euroscepticism as the only viable option in an otherwise hopeless political atmosphere.

## 10RN32 - The Populist Radical Right in Europe in the Aftermath of the Crisis, a comparative perspective

Chair(s): Björn Fryklund

### The New Radical Right Populisms in the European Socioeconomic Crisis. Ideological Profiles and Threat to Democracy

José J. Sanmartín, University of Alicante | [jose.sanmartin@ua.es](mailto:jose.sanmartin@ua.es)

Bernabé Aldeguer Cerdá, University of Alicante | [bernabealdeguer@gmail.com](mailto:bernabealdeguer@gmail.com)

The economic crisis, by the social cohesion weakening and the default of democratic legitimacy, is causing an important process of strengthening related to the rightist political parties and their diffused social and economic movements. Taking into account the researches that have been linking development and democratic political culture, the paper addresses how the ideological discourse of new-rightists populist parties is winning ideological, cultural and electoral positions in the European countries hardest hit by the crisis. The imputation of responsibilities to immigrants, the virtual assumption of classical left ideological postulations, the subliminal review to the suitability and legitimacy of representative democracy as a way of dialectical and peaceful management of socioeconomic and political conflicts, are all them some of the main classical

characteristics of populist and chauvinist new-rightists populist parties. The paper addresses how these ideological components could success and achieve more receptivity among the European societies ravaged by growing levels of poverty, social exclusion, and restrictive public budgeting policies. The search for transversal ideological views is a growing trend between new European Radical Right in order to invade and "colonize" new political and social spaces. We will study also the influence of ideologists as Norberto Ceresole and Alain de Benoist to attain something new and different from the old and the same. For this reason, the main focus here is to make an examination of Radical Right theories according to their implementation to social reality. Both perspectives –theoretical and empirical-, and the link between them, are equally relevant in this matter.

### Populist Radical Right Parties, Social Change and "Crisis": European Similarities and National Differences

Dietmar Loch, University of Grenoble | [dietmar.loch@upmf-grenoble.fr](mailto:dietmar.loch@upmf-grenoble.fr)

This proposal wants to contribute to the comparative dimension of the panel topic. How can we analyse, first, the relations between the social and cultural change in European societies (long-term change, recent economic crisis, its aftermath, etc.) and the common success of populist radical right parties for three decades, in order to find their similarities? We use cleavage theory to link the

electoral success to these structural changes of European societies, which are embedded in the process of globalization. Thus, cleavage-related protectionist positions of the radical right parties towards globalization allow examining their economic ("modernization losers") and cultural (ethnic competition, cultural differences) similarities. Furthermore, they can show that - even when during the

economic and financial crisis the radical right is criticizing global capitalism - its dominant characteristics are cultural (national identity) and also political (national sovereignty, populist democracy). Second, these similarities, which we can observe all over Europe, are accompanied by regional and national differences existing in the electoral success and its explanations between the radical right parties in Western and Eastern Europe and in single countries. Beyond the

different degrees of globalization, of structural change and of the immediate impact of the economic crisis, these differences can be explained mainly by the persistence of national political cultures and by political opportunity structures. The comparison of selected cases (France, Austria, Germany, Hungary, et al.) will demonstrate these similarities and differences. The aim of this contribution is to bring empirical evidence in this comparative framing.

## The Appeal of Neo-Fascism in Times of Crisis: the Case of CasaPound Italia

Pietro Castelli Gattinara, European University Institute, Florence | [pietro.castelli@eui.eu](mailto:pietro.castelli@eui.eu)

Matteo Albanese, University of Lisbon | [matteo.albanese@eui.eu](mailto:matteo.albanese@eui.eu)

Caterina Froio, European University Institute, Florence | [caterina.froio@eui.eu](mailto:caterina.froio@eui.eu)

The financial crisis in Europe led to a major reshaping of the political systems in crisis-ridden countries, and Italy, "the World's most dangerous economy", represents no exception in this respect. Despite previous research established the connection between economic crises and the emergence of fascist ideologies in Western Europe, the study of contemporary far right organizations at times of crisis remains underdeveloped. Very little attention has in fact been dedicated to how (after the experience of the Nouvelle Droite) these organizations are responding to the social demands that are generated by the crisis. Moreover, very little research studied the groups that remain outside the spectrum of institutional politics, and the dynamics by which the critic to neo-liberalism and market economy increasingly connotes the cultural and nationalistic dimensions of their political

ideology. The present paper shall try to fill this gap, suggesting an interdisciplinary approach accounting for both the historical roots and the social implications of the relationship between "crisis settings" and the far right. We focus on the case of the Italian neo-Fascist movement CasaPound, and we investigate its forms of organization and the reformulation of cultural and economic issues in its ideology and repertoire of actions. Based on a set of in-depth interviews, qualitative text analyses and ethnographic participant observation conducted between January and December 2012, our aim is that of tracing the political legacies of the movement and of its militants, while focusing on the central question of how the ideology and the practices of the group are reformulated in the times of the financial crisis.

## New Cleavages and Populist Radical Right Parties in Europe

Dietmar Loch, University of Grenoble | [dietmar.loch@upmf-grenoble.fr](mailto:dietmar.loch@upmf-grenoble.fr)

This contribution tries to link systematically the research on populism and radical right parties in Europe with that of Europeanization and globalization by using cleavage theory.

Since their rise in the 1980s, populist radical right parties stand for welfare chauvinism under conditions of urban segregation, for nationalistic and racist reactions to

immigration, and for populist criticism of political representation in their national societies which are faced to Europeanization and globalization. It is argued that - particularly in Western Europe - they constitute, in a sociological perspective and on a new economic and cultural cleavage, the "closed", protectionist and ethnocentric pole which is opposed to the pole of "open", market oriented and global positions, and that they defend, in a political perspective, Eurosceptic national communities against European and

cosmopolitan forms of democracy. Going beyond classical comparative politics, this contribution underlines with the example of populism, that these transnationalized conflicts express, one the one hand, denationalized European similarities (impact of global modernization, socio-cultural differentiation and political fragmentation) and, on the other hand, persistent differences (types of welfare state, political culture, intermediary bodies of representation, etc.) of societies and democracies framed by the nation state.

## 11RN32 - Migrants in the Aftermath of the Crisis

Chair(s): Dietmar Loch

### Mobilizing Minorities. Clientelism, co-option and Civic Engagement During the French Presidential Campaign in a Working-class City

Julien Talpin, University Lille 2 | [julien.talpin@univ-lille2.fr](mailto:julien.talpin@univ-lille2.fr)

Electoral disaffiliation, especially of the youth and descendant of immigrants, is seen as a cause to be fought at the national level, but particularly in this city often presented as the French "capital of abstention". The 2012 Presidential campaign appeared therefore as a unique mobilizing moment for a wide array of groups, from political parties and public agencies to civic groups, who deployed very heterogeneous means to engage the youth and minorities, who appear as the least "participationist" population. Based on an ethnographic study and immersion in the city, the paper firstly compares the repertoires of action used by these different groups to mobilize the youth and minorities. While in general research focus on one form of collective action (voting behavior, protest, participatory democracy), this paper, based on a territorial and inductive approach, tackles

these different forms of civic practices in a shared urban environment. From canvassing, door-to-door, "citizenship cafés", rallies and public events to participatory democracy institutions and a mobilization of the "mums of the city" (mostly of Arabic origins), our study underlines the difficulties to engage the targeted population. These difficulties stem from two main sources. 1. In the framework of an electoral campaign, these initiatives often appeared too instrumental to appear genuine. The population therefore reacted with cynicism, by either ignoring or actively rejecting them. 2. While in the whispers and the backstage interactions ethnic identities could be invoked to appeal to descendants of migrants, no mobilization on such grounds was possible due to the French universalistic civic culture, therefore making mobilizing efforts largely inefficient.

## Of Denatured Women, Spiteful Minorities, and Parasitical Migrants: Antifeminist, and Xenophobia across Europe in the Aftermath of the 2008 Economic Crisis

Ov Cristian Norocel, University of Helsinki/Stockholm University | [cristian.norocel@helsinki.fi](mailto:cristian.norocel@helsinki.fi)

The 2008 economic crisis has sent shockwaves across European societies, bringing forth a redefinition of the means citizens and states interact. Exploring these avenues of interaction, the present investigation lies at the intersection of the gender equality efforts, and the rising backlash against it; the accommodation policies towards ethno-national diversity, and exclusivist nativist and nationalist projects that such policies have given rise to in the aftermath of a deep economic meltdown. The analysis focuses on the interaction between the conceptual

dichotomies of the gender binary – on the one hand –, and the majority/minority dyad (understood in terms of ethnic/'racial', religious difference) – on the other. The said interactions are investigated in the ideology, and discourses of radical parties across Europe: from the Nordic specificity related to the dominance of gender equality norms, to Central and Eastern European fluidity of political boundaries, to Southern European extreme political manifestations as an effect of the most severe impact of the economic crisis).

## How Stable are Social Values in Times of Economic Crisis? The Euro Crisis and the Attitudes towards Immigrants and European Union

Dafina Kurti, GESIS - Leibniz Institute for the Social Sciences | [dafina.kurti@gesis.org](mailto:dafina.kurti@gesis.org)

Karoline Harzenetter, GESIS - Leibniz Institute for the Social Sciences | [karoline.harzenetter@gesis.org](mailto:karoline.harzenetter@gesis.org)

This article analyses the relationship between the recent economic crisis in Europe and the development of negative attitudes toward immigrants and the European Union (EU). In times of economic crisis the increased orientation toward national values tend to result in individual alienation from other cultures/nations, including EU, because these are considered economic and political threat. Drawing on the group threat theory (Blumer 1958) and the idea of EU as threat for national integrity (McLaren 2002), the paper examines the contextual effect of economic crisis on individual attitudes towards immigration and EU. The focus here is on explaining the mediator role of value system, i.e. materialist and post materialist values (Inglehart 1977) on both, developing anti-immigrant attitudes and the support for European Integration. However,

we claim three possible explanations for the correlation between the economic crisis and scepticism towards EU: a rational behaviour, internalized values, and/or perceived economic threat. To test the assumptions we aim to compare contextual effects cross-nationally before and during the crisis. The multi-level regression analysis includes the European Social Survey data from 2006 and 2010. The expected finding is that the crisis does affect the attitudes towards immigration. The individual value system is stable over time, that is, it does not mediate the relationship between crisis and anti-immigrant attitudes. Further, in countries most affected by crisis the effect is stronger than in more economically stable countries. Support for the EU is more likely to be explained by threat perception and less by rational benefit or social values.

## Segregated from Political Participation? How Urban Segregation Matters for Immigrant Political Participation

Nihad El-Kayed, Humboldt University, Berlin | [nihad.el-kayed@hu-berlin.de](mailto:nihad.el-kayed@hu-berlin.de)

Political participation rates differ between localities (see e.g.: <http://www.wahlen-berlin.de/wahlen/BE2011/ergebnis/karten/zweitstimmen/ErgebnisUeberblick.asp?sel1=1052&sel2=0651>). This raises the question if we deal with the spatial concentration of people who tend to participate more / less in politics (e.g. due to socio-economic factors or missing political rights) or if the residential context affects political participation. In the presentation I will examine the question if and how urban segregation of immigrants matters for their political inclusion. First, I will first present a theoretical model which combines models of immigrant political participation, contextual models of political participation as well as neighborhood effects models. Immigrants are usually seen as 'politically quiescent' e.g. due to limited knowledge of the political system,

language proficiency or limited attachment to the context of residence (Hammar 1990). However, research suggests that local social networks and local organizations are able to overcome these obstacles. Despite this awareness, little is known about how the spatial distribution of these networks and organizations affects who is politically included. The proposed model closes this gap by including the spatial dimension of social networks and civic organizations into the picture. Second, I will present first results of a survey which is currently conducted in several neighborhoods in Berlin based on the presented theoretical approach. The results will specify the role urban segregation plays in the process of political incorporation of immigrants and identify the relevant mechanisms. Reference: Hammar, T. (1990): Democracy and the Nation State. Avebury

## RN32 - Poster Session

### How they Learned to Stop Worrying and Love Privatization. Economic-Political Field and Italian Steel Demise

Luca Pareschi, University of Bologna | [luca.pareschi@unibo.it](mailto:luca.pareschi@unibo.it)

Edoardo Mollona, University of Bologna | [emollona@cs.unibo.it](mailto:emollona@cs.unibo.it)

In this paper we build on neo-institutional perspective (DiMaggio and Powell, 1983) and on Bourdieu's theory of the field (1996) to describe privatization in Italian economic-political field. We focus on the demise of state steel in Italy. We develop a quali-quantitative method: i) first we analyzed newspapers' articles during the steel privatization process in Italy (1984-1995): we found 574 articles, for 1918 actors' statements ii) we then coded the statements through a iterative process in order

to reconstruct the framings/frames (Benford & Snow, 2000) of the privatization process; iii) through a Multiple Correspondence Analysis we described the field and related actors, frames and positions. iv) Finally, we conducted a content analysis of the frames, that allowed us depicting the rhetoric used by several actors in pursuing their interests. Privatization was a delicate bargaining process in which rhetorical devices to represent the role of the state, to diagnose the malaises of Italian economy and

to define the nature of privatization have been used in the public discourse to mold the process in specific directions. MCA results show two principal axis, which accounts for almost 75% of the structure of the field: model of state intervention and power asymmetry. As we will explain, they are respectively related to actors' symbolic and social capital. Content analysis will illustrate this issue. Also, we

unpack the heterogeneity of interests laying behind the struggles over the meaning assigned to the privatization of the steel industry and show that global political pressures to privatize state-owned firms have been locally manipulated and molded by national interest groups in a sort of oligopolistic corporatism

## **What is the Value of Citizenship? Multi-dimensional Visions of Migrants and Local Factory Workers in Italy**

Djordje Sredanovic, University of Bologna | [djordje.sredanovic2@unibo.it](mailto:djordje.sredanovic2@unibo.it)

One of the possible ways to conceive citizenship is as a formal status vis-à-vis a State, with a specific value attached. My research, based on 60 in-depth interviews with migrants of different origins and professions and local factory workers, conducted in Ferrara (northern Italy), shows the complexity of this value. I will show that the values that the interviewees attach to citizenship are multi-dimensional, going beyond both a purely economicistic conception of citizenship and the often stigmatizing concept of "instrumental citizenship". These dimensions include the rights linked to citizenship (particularly welfare rights), protection (particularly from deportation), living opportunities, recognition (of legitimate social and/or cultural membership), emotional attachment, and mobility opportunities (a more or less "strong"

passport). Asking the interviewees who should or should not be able to obtain Italian citizenship, I have been able to elicit the value they saw in the citizenship and the worth they expected from the candidates to naturalization. Given the effects of the present crisis (welfare cuts and shrinking job opportunities) some of the locals thought that no one would benefit from obtaining Italian citizenship, and a few of the migrants were indeed uninterested in naturalization. However even in these cases the answers of both migrants and locals are better understood as being linked to the social recognition the interviewers thought to have from society. More generally, a tension can be found between a pragmatic vision of citizenship and two normative visions, one cultural and the other based on the principle of equal rights.

## RN33 - Women's and Gender Studies

### 01\_23JS28JS33 - Sports, Gender and Sexualities (1)

Chair(s): Oktay Aktan (University of Dortmund), Michael Meuser (University of Dortmund), Alessandro Porrovecchio (University of the Littoral Opal Coast )

#### Reconstruction of Gender in Sports Context

Oktay Aktan, University of Dortmund | [oktay.aktan@tu-dortmund.de](mailto:oktay.aktan@tu-dortmund.de)

Diana Lengersdorf , Technical University of Dortmund | [diana.lengersdorf@tu-dortmund.de](mailto:diana.lengersdorf@tu-dortmund.de)

The meaning of gender in sports studies is a major theme in social sciences. Next to the technical aspects of sports, the team formations and selection processes for the collective sports practice is a question of gender as well. The aim of the presentation is to introduce the theoretical frame of gender and sports studies with the aim of discussing the reflections of gender based interrelations in sports. The main question is whether gender in its combination with sports contribute to re-definition and/or (re)perception of "gender". Another point of interest is to examine to which extent the competition among the athletes can re-constitute the male and female identities in

sports context. The presentation includes an overview of some research approaches in studying not only gender but also other dimensions of social inequality i.e. ethnicity, milieu, social class or religion in sports. The primary focus is to reconstruct the categories and dimensions of social inequality in their interwoven form. The individual and the collective self-presentation forms, perception patterns and their relations with gender are some other phenomena in this area of research. The impact of these social constructions on everyday life relations and the staging attitudes will be investigated profoundly in the presentation as well.

#### Beautifully Violent: The Gender Dynamic of Karate

Chloe Maclean, University of Edinburgh | [s0822532@sms.ed.ac.uk](mailto:s0822532@sms.ed.ac.uk)

If sport is a domain used to construct and reproduce hegemonic masculinity (Connell,1990), and violence particularly is constructed as an inherent 'duty' of masculinity (Bourdieu,2001:53), then how do women place themselves within the mixed-sex training environment of karate? Through a combination of semi-structured interviews and observations, this study explores the gender relations in Scottish karate, and how they both reproduce, and challenge, established ideas of gender. Karate is a sport societally understood

to embody characteristics of conventional masculinity, but where men and women train and contend with one-another for sporting capital. Based on conceptions of the body, men are assumed a more 'natural' fit to karate and afforded higher status than women. Yet within the mixed-sex training environment, men and women learn a mutual respect for one another as training partners who can improve one another. In this environment, karate is a sport where women can, and often do, outperform men, and in doing so, reconstruct notions of

femininity, and the gender order. As such, karate does not simply reproduce hegemonic masculinity. Rather, the tension between karate athletes learnt understanding of women karate athletes as strong fighters, combined

with societal interpretations of women as weak, fragile, and aesthetically pleasing, constructs a gender arrangement where women are both subordinated and empowered simultaneously.

## Gender in Equitation: "Now Go on and Grab her Really Hard by the Back of her Neck"

Nicole Kirchhoff, Technical University, Dortmund | [nicole.kirchhoff@tu-dortmund.de](mailto:nicole.kirchhoff@tu-dortmund.de)

From a historical perspective, the relationship between man and horse has masculine connotations. This applies both to the domestication of the animal as well as to its use for economic and military purposes and for the staging of male domination. Dressage as a discipline of equestrian sport has its roots in the training of soldiers and horses and up to today employs a language in which domination and annexation of the animal body through the body of the rider are expressed in a sexualized form. This however appears in stark contrast to the current competitive practice, in which there is no separation between the sexes and to the observation that it is dressage of all sports which seems to be a typically female discipline. Starting from body and gender theory based on social constructivism, this

presentation would like to point out, using a single case study on a dressage rider, how the bodies of horse and rider are gendered in sport practice. On the one hand the empirical results refer to the tension between institutional gender equality in competition and to inequalities in the form of traditional language usage at the same time. On the other hand, the experience of one's own body and that of the horse as a "partner in sports" will be examined, focussing on the question how femininity is constructed and performed. Thus, the assumption is taken into account that the social construction of gender always implies a physical dimension, which must quite necessarily be included in sociological analyses.

## Women in Ice

Piroska Béki, Semmelweis University, Budapest | [beki@tf.hu](mailto:beki@tf.hu)

In the past decades women have begun to take up types of physical activity which traditionally used to be considered masculine. They appeared in previously one-gender team sports such as football or water polo, and nowadays they are also involved in ice hockey, canoeing, and are active in numerous combat sports as well. On the other hand, men have also entered sport fields previously only available for women, such as rhythmic gymnastics. By this, sport can be regarded not only as a scene of gender stereotyping, but also that of redefining the concepts of masculinity-femininity in the negotiating of

gender relations. In his theory (1965) Metheny defined the social acceptance or refusal of women in sports on the basis of features like aesthetics, the frequency of physical contact and the level of physical stress, or the weight of equipment used. But have stereotypes related to women in different sports changed by the beginning of the twenty-first century, and if they have, what particular changes can be traced? The presentation aims at introducing current results of a PhD research which examines gender stereotypes related to different sports. Data were collected from female representatives of Olympic sports via

semi-structured interviews. Earlier pairs of sports, one of which was considered feminine and the other masculine were compared (boxing vs RG as examples of individual sports, handball vs volleyball as team sports). This time female ice hockey players' (N=21) and

female figure-skaters' (N=12) opinions on their own sport and the other sport were investigated. We deal with differences in the childhood sport socialization processes and motivation of sport selection, etc. of the representatives of the two sport

## 01RN33 - Bodies, Practices and Identity Models

Chair(s): Carmen Leccardi (Dipartimento di Sociologia e Ricerca Sociale (Università di Milano Bicocca)

### Sociological Study of Sexual Concealment in Everyday Life of Iranian Young Girls

Maryam Ziari, University of Isfahan | [maryamziari86@gmail.com](mailto:maryamziari86@gmail.com)

Due to social taboos and cultural norms surrounding the female and her problems in Iran, women have not been able to speak from their own special place. But they have always acted from this place and sexual interactions are one of those actions. In fact, because of their sexuality or in other words because of their female bodies, women have different experiences in everyday life, and these experiences are related to the female body and intertwined with it. Amidst all this, a lesser studied subject is the very concealment of these experiences, feelings, and thoughts and also the way of living with this sexuality and its linked experiences. Here, we try to deal with this problem: The problem of why people conceal and keep concealing issues related to

feminine sexuality domain. Our method was to interview 26 single girls who had experienced premarital sexual relationships, because we believe that they had different views toward their own bodies. Because of sensitivity of the issue - i.e the trickiness of talking about feminine body- deep semi-structured interview was chosen as research method and grounded theory was used for data analysis. This method is based on the fact that before a social researcher even begins her work, the social world has been interpreted by its builders. In this research, the researcher found out that there are three types of concealment among Iranian young girls: concealment of feminine body, concealment of sexual relationships, concealment of sexual desires.

### On Beauty and Women's Bodies. The Representation of the Female Self in Early Modernity

Consuelo Corradi, Lumsa University, Rome | [corradi@lumsa.it](mailto:corradi@lumsa.it)

In social theory, modernity is habitually identified with secularization. In my paper, I will focus on a different facet: the falling off of beauty from art, which started at the beginning of the Twentieth century in European art, and is still active in our contemporary world. Very

often art has searched for beauty in the representation of women's bodies; this is why I will look at portraits made by European painters of modernity between the late '800s and the early '900s. I will show the evolution of the representation of the female self, which

was in tune with the development of one of the most powerful elements of modernity: a new sense of self and her place in the cosmos. At the same time as the individual is represented as more confident in the powers of her own moral order, beauty is made redundant. Twentieth century art disassembles the female human body, mixing the human and the beast, beauty and ugliness. Cultural pluralism explained this evolution by arguing that we

have shifted away from a rigid notion, and we are now open to different forms of beauty. Even if this is not incorrect, I will argue that there is a radical difference between the representation of women's bodies in early and late modernity. Art has lost a normative notion, which allowed for enjoyment, an essential part of the human possibility of living the depth and fullness of life that was articulated in art before the disappearance of beauty.

## **The Bypassed Gender Revolution. The Dominant Religion Model and State-Endorsed Gender Discrimination in Romania**

Simona M Sav, Babes-Bolyai University, Cluj | [simonesav24@yahoo.com](mailto:simonesav24@yahoo.com)

This presentation aims at analysing the implications of the absence of a gender revolution (specifically second wave feminism) in contemporary Romania, with particular attention given to the dominant religion model with the purpose of identifying gender discriminatory policies endorsed by the Romanian state. Second wave feminism bypassed communist Romania, as the "reds" offered an equality in the public sphere that was seldom scrutinized in terms of its driving forces, thus leading to perfectly accepted paradoxes such as a high number of employed women but strict abortion prohibition and virtually no access to family planning (prospective estrangement from the means of production was considered far worse than state control of the female body!) The transition to democracy exposed deeply anchored patriarchal attitudes, "no ma-am's

territories" of socially, religiously and politically endorsed gender inequality. The research focuses on the way Romanian Law on Religious Denominations contributes to and sustains financial discrimination against women as the state provides salaries, pension funds and other financial privileges for religious institutions that unequivocally deny women the right to serve as de facto "religious public servants." A careful theoretical analysis and critique of this legislation on religious freedom will give way to empirical data concerning the seemingly gender-blind financing policies of religious denominations, even within the public sector of education. The findings of the research call for a normative re-assessment of the role that Romania, as an integrated European state, should play in promoting gender equality in the religious sphere in the future.

## Is Elderly Asexual? – the Image of Elderly Women and Men in Polish Media and its Social Consequences

Paulina Świątek, Jagiellonian University, Cracow | [paulina.swiatek@poczta.onet.eu](mailto:paulina.swiatek@poczta.onet.eu)

The aim of this paper is to analyze the image of elderly women and elderly men functioning in Polish popular culture texts (such as soap operas and TV commercials), which have a major impact not only on the development of the stereotypical image of seniors, but also the formation of social norms about how to live and displaying their sexuality in old age. Modern and developed (not only) European societies face the demographic challenge of an aging population. This process progresses most rapidly in developing countries, to which Poland is classified. In this context, it is important to understanding the problems of the elderly, very often seen through the prism of stereotypes associated with old age. Elderly people often are treated by social scientists as a homogeneous category in terms of gender. Seniors gender identity is not paying too much attention for gender studies, or social

gerontology. The biomedical model is dominant - the old men and women is referred to as sexual beings, if you are considering the diseases associated with the male or female reproductive system. Images of elderly men and women have been analyzed in the most popular Polish TV series (last 10 years emissions), and commercial advertisements. The analysis focused on issues such as the very presence of men and women (makeup, clothes, etc..), exhibited social activity, and the context in which seniors are portrayed. It turns out that the way of presenting old men essentially no different from the young characters of the same sex, while the old woman (other than young and middle-aged) are presented through the prism of the role of grandmother. The paper is an attempt to explain the reasons for this situation.

## a01RN33 - Femicide: An Increasing Phenomenon?

Chair(s): Consuelo Corradi (Dipartimento di Scienze Umane - Università LUMSA, Roma)

### Femicide Survivor Narratives among Ethiopian Migrants: a Rare Glimpse

Dr. Shlava Weil, Hebrew University, Jerusalem | [shalva.weil@mail.huji.ac.il](mailto:shalva.weil@mail.huji.ac.il)

This paper brings rare excerpts of narratives of survivors of femicide attacks among Ethiopian migrants in Israel. Although Ethiopian immigrants make up 1.4% of the Israeli population, femicide constitutes nearly one third of all cases perpetrated in Israel in the years in which research was carried out. All of the femicides enacted were intimate partner murders. Female survivors of a murder attempt spoke in depth as to how their husbands planned the murder and exactly

what happened on that fateful day. The research reveals that most women knew that their husbands were planning to murder them, and some even knew that he had prepared a knife to stab them when the time would come. Within a framework of the "sociology of survival", the paper analyses these narratives, showing a clear cultural pattern of femicide among Ethiopian migrants, who are sometimes stigmatized within Israeli society, and whose women are doubly stigmatized by men within

the Ethiopian community. It then moves to a different question of what the researcher can do with these narratives in a climate of secrecy and fear on the part of Ethiopian immigrants,

and in a climate of self-defence and ineptitude on the part of the Israeli government and Establishment.

## Intimate Partner Femicide in Slovenia

**Milika Antic Gaber**, University of Ljubljana | [milica.antic-gaber@guest.arnes.si](mailto:milica.antic-gaber@guest.arnes.si)

**Jasna Podreka**, University of Ljubljana | [jasnapodreka@gmail.com](mailto:jasnapodreka@gmail.com)

For Slovene public femicide is a relatively new phenomenon. This is due to the fact that even violence against women as a public issue or as a research field doesn't have a very long history. Silence on this issues lasted too long. Not until the end of 1980s this phenomenon have been discussed as a serious social issue when few feminist organizations started to deal with it and treat it as the result of the power and dominance one of the gender over the other. In the third decade of dealing with these issues there are more and more data and research on the cases of violence against women among other issues intimate partner violence had intimate-partner murders arouse, as the most severe violent act. The paper discusses the problem of intimate partner homicides and attempted homicides in

Slovenia between 1999 and 2011. With the qualitative analysis of 36 cases we present significant gender differences in the characteristics, motives and dynamics of intimate partner murders of women and men. We prove that intimate partners' homicides are basically a reflection of the extreme manifestation of male power and control over women. We argue that intimate partner femicides are not caused by the current rage by otherwise non-violent men, but they are distinctly marked and deliberate acts, characterized by many years of violence and abuse against murdered partners. In contrast, when women murder their mates, they often do so to protect themselves and people they love from violent men.

## Acceptable Femininity Being Judged: Femicide in the Juridical Records and Their Media Coverage in Turkey

**Nilay Çabuk Kaya**, Ankara University | [cabukkaya@gmail.com](mailto:cabukkaya@gmail.com)

**Haktan Ural**, Ankara University | [haktanural@gmail.com](mailto:haktanural@gmail.com)

Ever-increasing literature on violence against women in Turkey provides for rich data through from a wide variety of disciplines like law, medicine, sociology and psychology. In spite of various methodological orientations and contesting discussions, those studies might be possibly assessed in two terms. On the one hand, there is a considerable attempt to understand women's vulnerability to violence in terms of different social, economic and cultural positioning. Certain demographic factors being analyzed aside, intersectionality

of gender, ethnicity, class and migration are also considered in this vein. Besides, there is significant amount of study focusing on certain cultural norms in the name of "acceptable femininity". In this context, those studies approaches to women's practices in everyday life and how particular violations of appropriate femininities make women more prone to violence and even femicide. Regarding those studies fed by a rich data, we aim to explore an extreme form of violence, that is femicide, at an institutional level. For this purpose, we will

evaluate juridical records of femicide cases; and how they are being represented in mass media. By virtue of this, we aim to understand two substantial actors' –state and media- role in construction of "acceptable femininity". Moreover, in line with the fact that those cases and their media coverage constitute an

indispensable element for constructing a collective memory at a societal level, this study would give us an opportunity to understand women's potentials and limitations to challenge "acceptable femininity" in Turkish society.

## Responses to Men's Violence: Rethinking Male Peer Support Theory

Lucas Gottzen, Uppsala University | [lucas.gottzen@soc.uu.se](mailto:lucas.gottzen@soc.uu.se)

It has often been argued that gender norms affect men's use of violence against women. These cultural norms do however not exist on their own, but are produced and negotiated in everyday interaction. How family, friends and others in the social network respond to men's violence is therefore important for perpetrators' attitudes and actions. In a number of studies, DeKeseredy, Schwartz and colleagues have developed so-called Male Peer Support Theory (MPST), which argues that male friends may give abusers informal, emotional and material support. These different network responses may sustain men's violence against women. MPST does however not identify support that challenge violence. Drawing on interviews with of 44 men

in Sweden that have used physical violence against a female partner, this paper discusses the possibilities for violent men to face support that both sustains and opposes violence. It demonstrates that responses to violence are far more ambivalent than MPST proposes. Above all, interview data suggests that condemnation and acceptance of violence may be given simultaneously, and that responses changes over time. This paper discusses and modifies MPST, and demonstrates how informal, emotional and material support to violent men may both accept and oppose violence. This modified model also emphasizes how responses to violence against women are negotiated in time and space.

## **b01RN33 - Negotiating the Gender Order in the Household (1)**

Chair(s): Maria Carmela Agodi (Dipartimento di Scienze Politiche - Università di Napoli Federico II)

### **„Little children are not for daddies.“ Who Cares? Self-attribution and Partner's Attribution of Care Responsibilities within Dual Earner Couples in Germany**

Almut C. Peukert, University of Tuebingen | [almut.peukert@uni-tuebingen.de](mailto:almut.peukert@uni-tuebingen.de)

In everyday life, gender inequality is persistently practiced in intimate relationships and seems to be quite resistant to change. The transition to parenthood is seen as the crucial gateway for the re-entry of a gendered division of labour within modern heterosexual relationships. One common explanation is that the employment disruption of the mother after childbirth is predominantly 'de-termined' by socio-structural characteristics such as the (mostly) higher income of the father. I argue instead that the implicit or explicit processes of negotiation and interaction within the couple are crucial for deciding 'who cares' and 'who is taking parental leave'. Based on extensive face-to-face and group interviews with ten new parents in Germany, this paper provides previously untapped empirical material

explaining the diverging parental leave decisions beyond income inequality. Focussing on narrations by the couple (or one partner) to explain their chosen division of work opens up a systematic comparison of reasoning figures regarding the involvement in care work by one or both parent(s). The resulting four basic reasoning figures 'hegemonic mothering', "little children are not for daddies", 'maternal gatekeeping' and 'equally shared parenting' are an important explanatory factor for different parental leave decisions from dual earner couples. Based on my empirical work I propose the systematic consideration of the complex and ambivalent couple dynamics as level sui generis to gain one important source of explanation for the lasting gender inequality in Europe.

### **Sexual Division of Labour, Ressources and Domestic Power: Some Results of a Research in Portugal**

Manuel Carlos F Silva , University of Minho | [mcsilva2008@gmail.com](mailto:mcsilva2008@gmail.com)

Within the framework of the studies on the sexual division of labour within the family, particularly in Portugal, despite the notable advances, there is little analysed the distribution of power between men and women in heterosexual couples. This text, after a brief revisiting of some views about the gender differences and inequalities and over some studies on domestic power, particularly in the North of Portugal, is based on empirical data

collected from a survey of 800 people applied in mainland Portugal. The data collected confirm findings from other national and international studies: inequality between men and women regarding the distribution of household tasks and their hours spent and the discrepancy between representations and practices analysed by sex and professional group. However, the analysis focuses on the framework of conjugal dynamics, about what

aspects of life that have changed with the entry in conjugality, what type of relationships (more with fusional or more individualistic), management and application of money, who decides and how – the man, the woman or both-on certain issues more important (children, buying home or car, holidays).

Finally, it is concluded that, although there is generally patriarchal or matriarchal type relations, there is an unequal sexual division of household chores and caring for the children and a certain man's predominance in certain areas in particular where this is the sole or main economic provider.

## **Masculinities and Fatherhood from the Perspective of Polish and Swedish Fathers**

**Katarzyna Suwada**, Polish Academy of Sciences, Warsaw | [k.suwada@gmail.com](mailto:k.suwada@gmail.com)

Parenthood must be concerned as one of areas within which reproduction of gendered practices occurred. In my paper I will try to deal with the issue of hegemonic masculinity and how becoming a father affects men's view on it. The main question here is how fatherhood is defined and perceived in the context of hegemonic masculinity and also how everyday fathering practices are affected by it. My paper is based on in-depth interviews conducted with Polish and Swedish fathers in 2012 and at the beginning of 2013. Interviews concerned men's experience of parenting and are analysed in the institutional and social contexts of both societies. In my opinion these contexts are extremely important here. Stereotypical roles of fathers and mothers are strongly connected to cultural ideas of

masculinity and femininity. Beside that Polish and Swedish societies provide, through family policies, completely different conditions for having children and differently approach the problem of work-home balance. Unsurprisingly these have an impact on how men perceive and fulfil their parental roles. Among Polish fathers there is a tendency to look at it with more conservative and traditional approach, whereas Swedish fathers are more eager to question imposed by society patterns of behaviour. If we try to locate it in the context of hegemonic masculinity, it becomes obvious that Swedish and Polish men differently approach it and differently try to redefine it. This also has an impact on how they understand fatherhood and what kinds of responsibilities they associate it with.

## **Men in the Domestic Sphere: Ambivalences of Involved Fatherhood and Gender Conflicts**

**Michael Meuser**, Technical University of Dortmund | [michael.meuser@tu-dortmund.de](mailto:michael.meuser@tu-dortmund.de)

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although being a minority, looking at these fathers helps to understand the complex dynamics of changing gender relations in the private sphere. Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural

construction of masculinity is still job centered. Our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father's uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man's abstinence from career ambitions is a permanent source of conflict. Another potential

source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father's engagement, but, on the other side, tend to defend the household as

their domain. Often the father gets into a position of his wife's "junior partner". If men refuse to be the junior partner a new kind of gender conflict arises. Closing the gap between "culture and conduct of fatherhood" (LaRossa) proves to be complicated in different respects. It even can evoke new conflicts.

## Is there a "Genderized" Intergenerational Childcare Support?

**Marco Tosi**, University of Trento | [marco.tosi@unitn.it](mailto:marco.tosi@unitn.it)

**Adriano Cataldo**, University of Trento | [acataldo@live.it](mailto:acataldo@live.it)

According to literature, female employment chances and choices depend on the amount of care responsibilities, particularly when they have small children. For that reason, family involvement and particularly grandparent's help can be seen as a way to ease women's employment decisions. Our aim is to show how in contemporary societies gender dimension play an important role in the division of care responsibilities, not only in nuclear family relations but also in extended family ties. Using SHARE data 2004-2010, our research focuses on gender relations in grandchildren care responsibilities and how they vary across European countries. On the one hand, family policy approaches (decommodification and defamilialisation) regulate the amount of care activities and play a role in promote or not gender equality in the extended family. On the

other hand, family attitudes shape intergenerational support and gender (in)equality in care responsibilities between grandparents. To this aim, our analysis will take in account the dimensions of intensity (number of hours in looking after grandchildren) and likelihood (frequency of care) of intergenerational childcare assistance, with reference to the typology of welfare regimes. In Southern countries, where grandchildren care transfers are relatively less frequent but more intense and time consuming, we expect a higher gender inequality in care responsibilities between grandparents than in the Nordic countries, where the intensity of grandchild care is lower but more frequent. Continental countries can be considered as an in-between case.

Chair(s): Alessandro Porrovecchio (University of the Littoral Opal Coast), Michael Meuser (University of Dortmund), Oktay Aktan (University of Dortmund)

### Extreme Training and Self-Destruction in Mixed Martial Arts

Yann Ramirez, University Paul Valéry Montpellier III | [yann-ramirez@orange.fr](mailto:yann-ramirez@orange.fr)

Mixed Martial Arts (or MMA) is concerned by the sociology of bodily engagement. We can define combat sport like a deliberate destruction. A destruction of the "other", but also a self-destruction. Engagement in boxing and also in Mixed Martial Arts can strengthen social cohesion of young men with deviant behaviour and can break routinization of life and reaffirm masculinity. Body becomes extreme; a machine which moves away from the ideals of health. Competition degrades body. The cult of performance and the pressure of success increase risks. Doping is one of the consequences. The bodily engagement by the abuse of sport could be illustrated by a symbolical reunion between Eros and Thanatos: the fascination of the death danger. Construction and destruction are

mixed up, the risks are glorified and covered by a form of aesthetics. All percussion combat sports are violent, but MMA is not the more brutal one. Meanwhile the athletes fight inside a cage. Open-fingered gloves and strikes on the ground bring out a negative impression and barbarian image. Furthermore, scientific statistics show that MMA is less traumatic than American Football or Rugby. The problem is the visual impression with blood and spectacular minor injuries: cuts on the face, broken bones, dripping blood over bodies and fight shorts. Organization leaders are seriously taking care of competitors. Medical tests take place before the fight with blood test and the funduscopy. After the fight, a check up must define an appropriate medical suspension in case of noticed injury.

### Tunisian Sportswomen between Modernity and Tradition

Jamoussi Benkhalifa Raja, University of Sfax | [raja\\_isseps@yahoo.fr](mailto:raja_isseps@yahoo.fr)

We have devoted our efforts in this research to provide some answers and offer further insights on the elite sports and on the status of sportswomen. We focus on the evolution of the mindset held by our society towards women in sports. To answer all these questions, we conducted a qualitative survey (31 interviews) and quantitative (412 questionnaires) with athletes (216 women and 216 men) who have earned medals in international competitions in various sports. The comparison between athletes enabled us all along this work to shed some light on convergences and divergences in

sports, body and society. Our work shows that laws governing elite sports, sports facilities, sports education, and scientific supervision have enabled athletes some ascent to the top level. However, social class and the nature of practiced sport played a more important role in the progression towards elitism. Tunisian women increasingly invest in 'high level' sports that are identified to strengthen economic potential, improve living standards, fight against inequalities, and lower poverty. These women engage in non-traditional practices, but they are neither in family conflict nor in

rupture with the cultural circle. It seems easier and more acceptable for a girl to practice a «male» sport; nevertheless, there is a restriction on broadcasting the image of these sportswomen on television. Elite sportswomen

still face resistance and social constraints, but their attitude of wanting to change the stereotypical representations of masculinity and femininity cannot be disputed.

## **Homosexual Gendered Body - Perception Inside and Outside the Sport: The Case of Poland.**

Honorata Jakubowska, Adam Mickiewicz University, Poznań | [honorata@amu.edu.pl](mailto:honorata@amu.edu.pl)

In my presentation, I would like to discuss the differences in attitudes toward homosexual women and men in sports. I will focus on football – the national sport in Poland – perceived as the last bastion of masculinity. I'm going to take a look at attitudes of both players and coaches as well as sports fans. This subject is interesting because any professional athlete has not revealed his homosexuality in Poland, while some artists (actors or dancers)

as well as politicians have come out in recent years. It is hard to believe that there are no homosexual people in sports, rather this area of social life is perceived as homophobic environment. The fear of coming out, however, what I would like to show, has gender-dependent sources. Finally, I would like to point out some examples of positive changes taking place mainly in amateur sport.

## **02RN33 - Migration and Gender Relations in Europe**

### **Contextualizing Gendered Inequalities and Discrimination Experience: an Analysis of Narrative Interviews with Academic Couples of Mixed Migrant Background in Germany**

Lena Inowlocki, University of Applied Sciences | [inowlocki@soz.uni-frankfurt.de](mailto:inowlocki@soz.uni-frankfurt.de)

How should we proceed with regard to research strategies, by understanding gendered inequalities as a very general phenomenon and by considering their contextual character? On the one hand, a general focus on gender inequalities seems important so as not to further accentuate other inequalities, for example difference assigned to a migrant status. On the other hand, we cannot understand gender inequalities, also gender specific discrimination outside of context, as

intersectional approaches have shown. The narrative interviews my analysis is based on constitute a subsample of interviews that I collected as part of a comparative French-German study on the younger generation in migrant families from Turkey and North Africa, on partnership and social participation („Conjugalités mixtes“, directed by Beate Collet and Emmanuelle Santelli in 2004-2005). Sampling criteria for the study were that at least one of the (marriage) partners should

have grown up in Germany (respectively France) as a child of migrants. The subsample consists of couples and a divorced woman who were friends with one another and referred me to each other. They were academics, socially upwardly mobile, with school age children. The unequal treatment and discrimination they

experienced in different institutional settings were gender specific and partly related to a more general division of work and family care. In my discussion of the findings I would also point out how narrative analysis contributes to a contextualized understanding of gendered inequalities.

## **Negotiations on Migrant Masculinity in Transnational Migration Context: Marriage Migration to Germany by Moroccan and Turkish Men**

Anıl Al-Rebholz, Goethe University, Frankfurt | [Al-Rebholz@soz.uni-frankfurt.de](mailto:Al-Rebholz@soz.uni-frankfurt.de)

Focusing on Turkish and Moroccan male migrants in Germany, this paper aims at an overview of the issues related to marriage migration to Europe in general and to Germany in particular. The authors, who work on the issue of marriage migration, draw especially attention to the fact that marriage migration should be understood as a subtype of family-led migration (Kofman 2004), and in this sense it entails a gendered migration experience (Beck-Gernsheim 2007). Highlighting the problems and difficulties which “the imported husbands” might face in the migration processes, the scholars analyze marriage migration both as the cause and effect of change in gender relations both in sending and host country. The paper will raise the question whether the male marriage migration might be ending up in changing the constellation of familial power relations, and of gender

relations between married couples, hence denoting the reversal of gender order in migration context. Drawing on masculinity studies (Connell 1995; Connell 2005; Donaldson 1993; Meuser 2010) and transnational family networks and the concept of world-families (Beck-Gernsheim 2011), I want to focus on performative, interactive and relational character of gendered identity constructions in transnational social space and show how the notions of manhood and womanhood are going to be renegotiated between the couples in migratory processes. The paper will be based on the biographical-narrative interviews conducted with Turkish and Moroccan male migrants who could migrate to Germany through marriage with a female descendant of migrant families resident in Germany.

## **Foreign Women in Low-Status Jobs? Post-colonial Relations Shaping Migrant Care Workers' Positionality**

Bernhard Weicht, Utrecht University | [b.weicht@uu.nl](mailto:b.weicht@uu.nl)

The employment of migrant workers in the field of care as an answer to the intensifying demands caused by ageing societies has received much attention over the last years. A vast and rich body of literature has been dealing with this phenomenon from both macro (regime-analysis) and micro (individual experiences of migrant care workers)

perspectives. More recently various authors have used concepts of intersectionality to analyse migrant care workers' positionality and the effects of the intersection of gender, class, ethnicity and status. These perspectives, however, often treat social categories as abstract identity markers and thereby ignore the particular historical, political and cultural

circumstances which strongly shape the meaning and consequences of the specific intersections. This paper tries to situate an intersectional analysis of the positionality of migrant care workers within the particular national conditions with an explicit focus on the role of post-colonial and post-imperial relations between the 'sending' and 'receiving' countries. Drawing on narrative interviews with 70 migrant care workers in three different European welfare states (Austria, Netherlands, UK) representing different (post-)colonial

histories, the particular trajectories of both migration and work will be explored. It will be investigated in how far those historical contingences shape the construction of different understandings and practices of gender, class, status, nationality and ethnicity (and, importantly, their intersections). The paper will argue that the positionality of migrant care workers is strongly influenced by post-colonial, post-imperial and self-imperialist constructions, imaginations and practices.

## **“Women’s voice”: an Association’s Struggle against “forced marriage” in France**

Nisrin Abu Amara, INED, Paris | [nisrin.abu-amara@ined.fr](mailto:nisrin.abu-amara@ined.fr)

Based on a quantitative and qualitative study with a French association who campaigns against forced marriages in France, this paper will discuss the analysis of situations of women at risk of forced marriage, or who have been married against their will by their families, from different origins (a study conducted with Christelle Hamel at the national demographic Institute, France in 2012-2013). Based on a statistical analysis of 1000 cases and interviews with activists, this research illustrates the tension between these women’s aspirations and the family control they are subject to, added to the social and economic obstacles and discriminations they have to face. Despite its violent consequences to these women, this conflict indicates the existence of a process of social change, both in the minority

as in the countries of origin. This research shows how these women struggle against different types of violence (social, family and economic) with the help of the association “Voix de Femmes” (“women’s voice”), who, by definition, encourages them to express their own desires regardless of social and family pressures. Facing permanent economic difficulties, the association members resist against forced marriages through two main activities: on the one hand, they bring concrete assistance to the women (accommodation, legal assistance); and from the other hand, they organize public awareness activities (especially in schools) which aim to change social norms regarding conjugality and gender relations.

## a02RN33 - Gender in the Workplace

Chair(s): Michael Meuser (Institut für Soziologie der Technischen Universität, Dortmund, Germany)

### Heterosexualising Work and Gendering Orders at Work

Päivi Korvajärvi, University of Tampere | [paivi.korvajarvi@uta.fi](mailto:paivi.korvajarvi@uta.fi)

The practices of the formation of gender orders in work are in constant flux. This is shown through analyzing the ways, in which gender is done, practiced and performed in the realm of work. The research typically focuses on the inequalities between women and men, particularly in terms of unequal wages and hierarchical positions in organizations. Furthermore, the content of femininities and masculinities at work as well as its consequences on gender inequalities has been examined. However, the relationships and interconnections between sexuality, gender and formation of inequalities is less analyzed.

The aim of the paper is to examine, how do gender orders and the heterosexual presentations required in customer service entangle with each other. The empirical data consists of the interviews of the call centre agents and the employees in work-related coaching. My research questions are such as how is heterosexuality entangled with the social gender orders, and how is heterosexuality shaping gendered orders. The argument is that there is a need to recognize the complex connections between the unequal gender binaries and the requirements based on heterosexual presentations at work.

### The Patterns of the Practices of Lay Women and Lay Men in the Organizations of Administrative Power of the Roman Catholic Church in Poland.

Katarzyna Leszczyńska, AGH University of Science and Technology | [leszczynska.katarzyna@gmail.com](mailto:leszczynska.katarzyna@gmail.com)

In this paper will be presented the results of the research concerning the patterns of femininity and masculinity reproduced in important organizations of the Roman Catholic Church authorities in Poland. Theoretical perspective adopted in this project is rooted in the new sociological institutionalism which recognizes the existence of social institutions as constituting for a society (Scott 2008, Meyer, Rowan 2006, March, Olsen 1994). Gender in my research is understood as a social institution constituted by social practices of men and women and their interpretations, and the practices and interpretations that relate to the

formal and informal norms and rules (Lorber 1994, Martin 2003, 2004, 2006, Ridgeway 2009). During the project was conducted a quantitative analysis of the structures of personal formations in all dioceses of the Church in Poland in terms of finding a position of the lay men and women in the structures of the Church power. There were also completed 50 in-depth interviews with the lay men and women working and performing professional functions in the central, diocesan Church's authority organizations (ex. Departments of Curia, Bishops' Courts). The interviews related to their experiences, daily

activities, interactions and meanings attributed to these activities. The interviews were supported with the participative observation of the space of diocesan curies. The collected empirical material is very rich but in the paper I would like to focus on the presentation of the

main patterns of men's and women's activities within the curial organizations which were distinguished by the author mainly by referring to the category of intersectionality of gender, the agency of the subject and reflexivity.

## Uneven paths. Women in Italy and Spain

Constanza Tobío, Carlos III University of Madrid | [ctobio@polSOC.uc3m.es](mailto:ctobio@polSOC.uc3m.es)

In welfare regimes typologies, Italy and Spain are usually grouped together because of the central role played by the family in the welfare mix. Italian female employment was higher than in Spain during earlier decades, but since the 90s, the situation has reversed, due not only to a rapid increase in Spanish female employment, but to a stagnation in the labour market participation of Italian women. The article explores the multiplicity of factors that explain the observed "sorpasso" (overtaking). Looking at the Italian case from a Spanish perspective, the paper explores a variety of causes that can explain the slowdown of female employment growth in Italy. Firstly, the paper analyses the peculiarities of the Italian

labour market, with a higher propensity to inactivity than in other countries like Spain or France. Secondly, it examines the institutional aspects and the characteristics of the organization of social policies in Italy, focused on health and pensions, as well as other factors such as the political weakness of the feminist agenda, the role of the Catholic Church in shaping the Italian welfare system as well as the strength and limits of family networks. The various aspects studied relate to each other in a logic which explains the divergent paths of women in the two countries. The article is based in Labor Force Surveys and Multiscopo surveys, as well as on interviews with Italian social policy experts.

## Does "His" Education and Class still Matter? The Changing Effect of the Husband on Women's Paid Work in Italy and Britain

Cristina Solera, University of Torino | [cristina.solera@unito.it](mailto:cristina.solera@unito.it)

Everywhere a woman's allocation of time between paid and unpaid work is negotiated within the household, and, because of either cognitive or instrumental rationality, it is influenced by her partner's symbolic and material resources. Moreover, everywhere from the 1960s onwards women's behaviour appears to have become more individualised within their partnership: the partner's education and occupation have lost importance in determining the chances of the wife's permanence in the labour force in favour of the wife's own education and position. However, variations across countries in the degree and timing of such "independence" are still wide. In

some countries for example, where policies and culture are not generally supportive of gender equality and mothers' labour market involvement, such independence is confined to highly educated couples. By drawing from the ILFI and the BHPS, this paper compares two countries with two different welfare and gender regimes, Italy and Britain, and it analyses changes across four subsequent birth cohorts in the incidence and correlates of transitions between paid market work and unpaid family-care work from the time women marry to their forties. More precisely, it first reports bivariate descriptive figures on the incidence of continuous or discontinuous types

of work history according to “his” class and education. Then it undertakes multivariate event-history estimates on married women’s risk of moving from employment to housework, in order to see whether the partner’s effect

remains also after controlling for “her” education and class. It emerges that in both countries polarisation has become based much more on “her” than “his” profile.

## Potentials for Women in Leadership in the Social and Health Sector in Germany

**Esther Ochoa Fernández**, Hochschule Niederrhein - University of Applied Sciences | [esther.ochoa\\_fernandez@hs-niederrhein.de](mailto:esther.ochoa_fernandez@hs-niederrhein.de)

**Annette Müller**, Hochschule Niederrhein - University of Applied Sciences | [a.mueller@hs-niederrhein.de](mailto:a.mueller@hs-niederrhein.de)

In the social and health sector in Germany the majority of the employees are women. However, like in other sectors, women in leading positions are in a minority. The aim of the project is to recognize the patterns of explanation and the subjective reality of different kinds of groups. These groups are women without leading positions, female bosses and Human Resources Managers or their assistants. The theoretical framework of the research is based on a heuristic model which implies that sexism is developed in three dimensions – an epistemic, an institutional and a personal one. In the epistemic dimension, the social roles theory and role congruity theory are relevant. The leadership role is associated with the male gender role rather than the female gender role, while social and care professions are

associated with the female gender role. In the institutional dimension we refer to the organizational and human resources development. Will it be recognized in the institutions, that helping is a female and leading a male connoted job? Is there any disposition to deconstruct these roles? Key aspects of the personal dimension are preferences and attitudes of women concerning work preferences and also attitudes of women concerning the role of women in the family and in the labor market. In total, 30 Interviews will be conducted. In our paper we present the concept of the interviews and the first results of our project. Since the project is based on the previous one, the key results of the previous project will be also presented.

## b02RN33 - Negotiating the Gender Order in the Household (2)

Chair(s): Lena Inowlocki (Institute for Migration Studies and Intercultural Communication (IMiK) University of Applied Sciences , Frankfurt, Germany)

### Wealth Distribution within Couples and Financial Decision Making

Markus M. Grabka, DIW, Berlin | [mgrabka@diw.de](mailto:mgrabka@diw.de)

While most studies on wealth inequality focus on the inequality between households, this paper examines the distribution of wealth within couples. For this purpose, we make use of unique individual level micro data from the German Socio-Economic Panel (SOEP). In married and cohabiting couples, men have, on average, 33,000 Euro more net worth than women. We look at five different sets of factors (demographics, income, labor market, inheritances, financial decision making in the partnership) that might explain this wealth gap. We find that all factors contribute to the explanation of the wealth gap within

partnerships, with inheritances and income being particularly relevant. Furthermore, we find that specific characteristics (e.g. self-employment, no migration background, inheritances, high income) that decrease the wealth gap for women increase it for men. For men the respective coefficients are even stronger in absolute terms. When examining intra-partnership financial decision making, we find the gap to be significantly smaller when the female manages the money and larger if the male partner has the last word in financial decisions.

### Intrahousehold Decision Making in Europe

Katharina Mader, Vienna University of Economics and Business | [katharina.mader@wu.ac.at](mailto:katharina.mader@wu.ac.at)

Alyssa Schneebaum, Vienna University of Economics and Business | [alyssa.schneebaum@wu.ac.at](mailto:alyssa.schneebaum@wu.ac.at)

Until recently, economists treated households as if their members had congruent interests assuming a joint utility function. Over the past decade reservations about this unitary perspective have intensified because the assumption that a household consisting of several individuals behaves as if it were a single decision-maker seems overly restrictive. Moreover feminist economics have criticised the household as a “black box” when it comes to genders and decision-making processes. They find it crucial to focus the analysis in the private sphere on individuals, because it is where we see key economic

variables as expenditures, labor supply and human capital formation. Although recent work has begun to examine household decision-making processes, there is no large-scale, cross-national, study of how household financial decisions are made and what factors influence women’s decision-making power. We employ the 2010 EU-SILC data to test for differences in household decision-making on everyday purchasing, savings and debt, spending on children, etc. There are surely cross-national differences in gender relations, and as a consequence, we expect that decision making power will be different across

countries. Our main research question is: How does the household decision-making power of men and women compare, both within and across European countries? If decision-making power is inversely correlated with one's economic dependence, then we would expect women in countries with more opportunities

for independence to have more decision making-power in the household. With our data, it is possible to explore the relationship between macroeconomic structures (women's labor market success) and microeconomic outcomes (decision-making power).

## Contraceptive Practices as Gender Negotiation

Micol Pizzolati, University of Molise | [micol.pizzolati@unimol.it](mailto:micol.pizzolati@unimol.it)

The significance of the control of fertilization practices can be deeply understood by contextualizing it within the couple gender relationships. In recent decades, the increasing access to hormonal methods of contraception has transformed the experiences of sexuality and redefined the male role into the control of procreation. Although it has not necessarily had an impact on the representation of the social gender balances. Instead, the representation of a distinction and a complementarity of gender roles based on the ideology of female responsibility of pregnancy has been

reinforced. In the couple relationship, the choice and the use of a contraceptive method resulting from a negotiation that can fit into a continuum that goes from full agreement to conflict. Starting from these assumptions, the paper examines the results of a qualitative study that deals with the negotiation practices of pregnancy prevention through the analysis of the biographies of twenty-five Italian women who have used emergency contraception at least once. The research highlights the extent to which negotiation practices are influenced by the adaptation to those social norms that determine gender roles.

## Gender inequalities: a Paradoxical Common Denominator

Davide Girardi, University of Padova | [dgirardi12@gmail.com](mailto:dgirardi12@gmail.com)

The persistent gender inequalities are one of the clearest signal of the social and economic crisis actually involving Italy in the wider, critical global scenario. It seems to be true both for "italian" and foreign women, as this paper demonstrates. It aims to deepen the gender relations and representations in two quota samples of Moroccans and Romanians young adults. The interviewees are considered primarily as young adults rather than immigrants and the emerging results are compared with those presented by the most important surveys conducted on italian young adults. Looking at housework and family practices and symbolic representations, gender dynamics appear to be the result of interaction between persistences (on the level

of practices) and changes (on the level of representations). From this point of view, the foreign young adults' experience seems to be similar in respect to Italian young adults' experience; moreover the "gender" inequalities seems to be the paradoxical common denominator between italian and foreign women, so that "gender" variable prevails on nationality/culture variable. More generally, the outcomes suggest to avoid a "diversity trap", firstly analyzing the gender dynamics among foreign young adults not accounted as a "specific population", then building "analytical bridges" in order to compare the foreign and italian women's experience without an unaware construction of difference.

## 03RN33 - Studying and Working at University: Gendered Paths and Careers

Chair(s): Maria Carmela Agodi (Dipartimento di Scienze Politiche, Università di Napoli Federico II)

### Gender Segregation in Higher Education: Sample of Turkey

Nurşen Adak, Akdeniz University, Antalya | [nadak@akdeniz.edu.tr](mailto:nadak@akdeniz.edu.tr)

Gendering of disciplines is an important issue in sociology. The purpose of this paper is to examine gender segregation in higher education in Turkey and cultural factors that may underlie this problem. Data used in the study was obtained from ÖSYM (Republic of Turkey Student Selection and Placement Centre). The proportion of women among university students has reached 45% and positive changes have been recorded in all areas of education in Turkey. Nevertheless; highest female participation rates are in linguistics, literature and health sciences and lowest rates in technical sciences, engineering and agriculture. Communications, education, caring fields are feminine character while technical fields and agriculture are masculine

character. It may also assume that males are much more likely to enter fields of study with higher economic returns than are females. Finally data support that selecting fields of study for university has a gendering effect. The article consists of three parts. In the first part the relationship of gender and education will be investigated. In the second part the proportion of male and females will be evaluated based on data gathered from ÖSYM. The data also compare with the figures of other countries. In the last part of the article there will be a systematic analysis of the impact of gender roles on choosing fields of study at university. Finally the paper will end with the conclusion part.

### Early Career Researchers' Mobility in the Baltic Sea Region: 'Tied Lives' and Work-Family Challenges

Marion Pajumets, Tallinn University | [marion@iiss.ee](mailto:marion@iiss.ee)

This project addresses early career researchers' mobility from less knowledge-intensive countries of to highly knowledge-intensive regions of Europe. Universities increasingly link job and individual funding opportunities, no matter the family status of the applicants, to the experience of a period at a research institution abroad. Transnational mobility has become an institutionalised element of the career trajectory of early stage researchers in Europe (Leemann 2010). It is expected that 'transnational social capital' (contacts and cooperation), can be transformed into cultural capital (publications) and finally

symbolic capital (reputation in academia) (see also Bourdieu 1986/2004). Taken the benefits of transnationality, as well as institutional pressures, it has become urgent to explore how gender and gender-related factors like partnership, family responsibilities and dual-career constellations along with social origin affect post-doctoral researchers' experiences of mobility (Leemann 2010). While contemporary research often depicts the highly skilled as the economic agents, this project views them also as social agents, who might have 'linked lives'. A life course approach (Moen & Sweet 2008), and intersectional

approach (McCall 2005) will be combined to gain an understanding of the personal/familial, organisational and societal aspects forming the realities of the young foreign scholars in the Nordic countries both as professionals, and

as citizens. Long narrative interviews will be conducted. In Turin I would focus on the theoretical and methodological issues of the planned post-doctoral project.

## For Gender Equality in Scientific Careers: Evaluating Publishing

Giampietro Gobo, University of Milan | [giampietro.gobo@unimi.it](mailto:giampietro.gobo@unimi.it)

In order to achieve gender equality in scientific careers is necessary to adopt different criteria for the assessment of CVs, and in particular of scientific production. If men and women are different (and often unequal) in society, we cannot assume that the effects of this diversity (and inequality), are suspended when we pass to the scientific output. However currently there is no attention (at least in Italy) to a differentiated assessment of scientific production, so pretending that men and women in this area are (or should be) the same. This deceit hides the fact that not everyone can

perform in the same way with respect to the indicators and indices of scientific production: in other words (exemplifying two extreme cases) it is obvious that will be difficult that a single and a person who has cared for 3 children (with the same capacity intellectuals) could have the same standards of publication. If this is reasonable, we can assume remedies (weights, coefficients, adjustments, normalizations, etc.) which take into account the social dynamics and gender inequalities, in order to better assess the scientific production.

## Gender and Agency in Academia: The prospects of employment in changing universities

Kirsti M Lempiäinen, University of Jyväskylä | [kirsti.lempiainen@ulapland.fi](mailto:kirsti.lempiainen@ulapland.fi)

Gender and Agency in Academia: The prospects of employment in changing universities Kirsti Lempiäinen This paper discusses the prospects of employment in current academia. The analysis is part of the research project called "Job-seeking groups and the restructuring of opportunities in Finland since the 1990s" (2011-2015). The background of my analysis arises from the change that many universities are facing in Western Europe. The paper asks how academics negotiate their agency and how academics see their prospects of employment in the future. Theoretical basis lays on Beverley Skeggs's and Pierre Bourdieu's elaborations on gender, agency and cultural

capital. The research material consists of auto-ethnography and interviews (N=30) conducted in the University of Liverpool, the University of Milan-Bicocca and the University of Tampere. The study suggests that there are similar ways of foreseeing the academic future and one's own employment situation as rather gloomy and occasionally also bright depending on how the interviewees see their own position in regard to fellow academics. When it comes to gender and especially the bending or breaking gender divisions in academia there are differences between the interviewees' stories in Milan, Liverpool and Tampere in the ways in which gendered orders are seen, worked upon and denied in academia.

## a03RN33 - Violence against Women

Chair(s): Milica Antic Gaber (Department of Sociology - University of Ljubljana)

### Preventive socialization of violence against women and “mirage of upward mobility”

Ana Vidu, University of Barcelona | [ana.vidu@ub.edu](mailto:ana.vidu@ub.edu)

Lidia Puigvert, University of Barcelona | [lidia.puigvert@ub.edu](mailto:lidia.puigvert@ub.edu)

Jorge García Marín, University of Santiago de Compostela | [santasmarinhas@gmail.com](mailto:santasmarinhas@gmail.com)

Beatriz Muñoz, University of Extremadura | [bmunoz@unex.es](mailto:bmunoz@unex.es)

Violence against women is a social scourge that far from disappearing increases in younger ages. This fact implies the need for new strategies to address and overcome this problem. The research line preventive socialization of violence against women accumulates more than 15 years researching the processes of socialization in models of love and attractiveness, and also their linkages with gender-based violence. A key issue lies in the existing majority socialization that connects attraction to violence, presenting as more attractive the hegemonic models in which the exercise of power, despise and domination prevail. Within this research framework is

developed the RTD project Mirage of upward mobility. This research analyses the misperception that some girls and adolescents have at associating the fact of maintaining an affective-sexual relationship with a model of dominant masculinity (which means imposition and contempt), with an increase of her status and attractiveness; in fact the opposite happens. Having proven the existence of this “mirage of upward mobility”, the research project proposes how to address it in order to overcome this “mirage” and consequently, in order to eradicate violence among youth and adolescents.

### Violence by Children towards Mothers

Prashant Tripathi, C.S.J.M University, Kanpur | [drprashantdrster@gmail.com](mailto:drprashantdrster@gmail.com)

Sanjay Chandani, C.S.J.M University, Kanpur | [sanjay\\_chandani@yahoo.com](mailto:sanjay_chandani@yahoo.com)

Chitra Awasthi, Rit Foundation | [chitrasrt@gmail.com](mailto:chitrasrt@gmail.com)

Violence by children towards mother is a topic that is not widely studied in Sociology. In different stages of life, children are trying to bully their mothers to get their ways. Parental abuse as concept includes misbehavior of children against mother and father both. But in general and particularly in India because of rigid patriarchic set up of families it is mother who bears the worst burnt of this victimization. Indian women are not very vocal about their domestic problems as it is, when there is

involvement of their children, they become almost dumb. They perceive the inappropriate behaviour of their children as their own failure in child rising. In spite of several problems, it becomes very difficult for them to consider children as an entity separate from their selves. Another reason, behind their silence is their lack of financial and emotional independence. Women, who have spent their lives with support of parents, husbands and in laws, hope for the support from their children

in old age. It has been found that women, who are either subjected to any type of violence by their husbands or in laws or who have lost their husband (widows or divorcees), are more likely to be subjected by the violence by their children. This problem is often studied from

the perspective maladjustment of children or as an aspect of juvenile delinquency. But in this paper it will be discussed as an aspect women's victimization behind the doors of their own home.

### **“Hermes” interview the First Responders: investigation on representations and emotional dimension of the operators of the women's crisis centres.**

Anna Lisa Amodeo, University of Naples | [amodeo@unina.it](mailto:amodeo@unina.it)

Luna Carpinelli, University of Naples | [lunacarpinelli@hotmail.it](mailto:lunacarpinelli@hotmail.it)

Carmen Ricci, University of Naples | [car.ricci@libero.it](mailto:car.ricci@libero.it)

Introduction: Hermes - "Linking Sexual and Gender Network To Fight Stigma" is a European project born for combating and preventing violence against women and LGBTQI people, involving the Italy, Spain and Ireland, where the prevalence and incidence of violence against women is very high. Objectives: The aim of this study is to explore the representations of the operators of women's crisis centres about this phenomenon; reflecting on the networking between associations and the factors which affect negatively on preventing and combating violence against women. Materials and Method: Were interviewed operators of 8 women's crisis centres situated in Campania (Italy), with a semi-structured interview, that consisting of 4 sections: classification of the phenomenon at national and local level;

identification of services/projects; main characteristics and quality of intervention strategies; suggestions of good practice and directions of perspective. The answers provided by the operators were fully transcribed and analyzed through the use of the software T-LAB (Lancia, 2011). Results: The representations of emotional experiences of the operators is that the violence is seen as an emergency before which they feel powerless. One factor that emerging is the difficult to support women, especially when they decide to "forgive" the violent partner. Conclusions: The first step to make violence against women a political problem is to recognize the ways in which locally occurs: an analysis of reality and the "consciousness" of the pain - that accompanies them - is, probably, a starting point for its elimination.

## b03RN33 - Women in Rural Contexts

Chair(s): Rossana Trifiletti (Dipartimento di Scienze Politiche e Sociali - Università di Firenze)

### Women and Men Village Representatives: Gender and Power in Rural Communities in Poland

Ilona Matysiak, University of Warsaw | [ilona.matysiak@uw.edu.pl](mailto:ilona.matysiak@uw.edu.pl)

Historically speaking, the institution of village representative (sołtys) has a long and well established tradition in Poland. Its roots can be traced back to the processes of rural settlement under German and Dutch law, which occurred in the Medieval Age. Nowadays, elected village representatives can be shortly described as liaisons between the residents of rural communities and local authorities at the level of communes. Interestingly, the percentage of women among village representatives has increased significantly in the last decades. In 1967, female village representatives constituted only 2,8%, while in 2010 already 30,7% of all village representatives in Poland. Therefore, the function of a village representative is an interesting example of the increasing participation of women in an area so far dominated by men. I address the question

whether, and to what extent, gender influences the processes of getting to position of village representative and the actions undertaken afterwards. The emphasis is very much on gender as a factor affecting differences of women's and men's social capital. Why and in what circumstances women and men are elected for village representatives? I claim, that women and men village representatives' social capital differs in terms of its sources, structure and in its strengthening processes. Secondly, the growing number of women among village representatives is caused by low prestige and importance of this function. The paper is based on the qualitative data collected in 10 communes chosen due to "feminization" and "masculinization" of the local public sphere. 108 individual in-depth interviews were conducted with women and men village representatives and other local actors.

### Gender – Water Nexus in Rural Azerbaijan : Findings of a Field Research in Goychay and Agdash Rayons

Senem Elcin Korkut, Hacettepe University, Ankara | [senemelin@gmail.com](mailto:senemelin@gmail.com)

Anar Valiyev, Baku State University | [anarvaliyev@mail.ru](mailto:anarvaliyev@mail.ru)

Azerbaijan Human Development Report in 2007 emphasized that patriarchal dominance in Azerbaijan has widened the gap between men and women, chiefly by limiting women's public participation, restricting their personal freedom and rights, and emphasizing their procreative function. Gender development in

Azerbaijan exhibit the beginnings of transition from feminized perceptions on the equality of the sexes to the understanding of gender equality as part and parcel of human rights. The right to water and sanitation services and the right to participate in local decision – making are some of important areas to

empower women in the country. International organizations and projects draw attention to gender equality in water and sanitation services in line with national development plans. As one of these initiatives, ADB financed Water Supply and Sanitation Program aims at improving public health and environment by promoting the quality, reliability, and sustainability of water supply and sanitation services in the selected secondary towns. The

objective of the research is to determine female community members' needs and specify safeguard measures to provide equal utilization of natural resources between women and men in rural Azerbaijan. Within the scope of the research, socio - economic surveys conducted to a total of 507 community members in 2010 and semi - structured interviews were conducted to 202 women in Agdash and Goychay Rayons in 2011.

## **Generations, Peasantry and Differentiation in Gender Concepts: Examples from Two South-Eastern Anatolian Villages**

**Mehmet Nuri Gultekin**, University of Gaziantep | [mngultekin@gmail.com](mailto:mngultekin@gmail.com)

A rapid process of modernization that created radical change in rural life and peasantry took place in non-Western societies in the 20th century. Large peasant populations faced migration, creation of new nation-state concepts, modernization of education processes, introduction of capitalist market relations, and radical change thanks to the mechanization of agricultural production and industrialization. The demographic change in peasantry and rural social structure has taken place in parallel with a qualitative change in the population living in villages in Turkey. The

results of field research in two villages in south-eastern Turkey between 2008 and 2010 illustrate how gender perceptions differ from one generation to the other. Which gender issues are changing? Which subjects remain strong in the traditional social value system and which are in transition? These questions and their explanations will help conceptualize the social change and its directions. This paper also focuses on the changing and stable elements of the deep-rooted cultural codes of the traditional social context, such as "honour," marriage and other subjects.

## **Challenging Hydro-Electric Power Stations through the Memorial Knowledge of Elderly Women: The Case of Turkey**

**Meral Akbaş**, Middle East Technical University, Ankara | [meral\\_akbas@yahoo.com](mailto:meral_akbas@yahoo.com)

**Nihan Bozok**, Middle East Technical University, Ankara | [nihanmortas@hotmail.com](mailto:nihanmortas@hotmail.com)

During our field research feed from in-depth interviews with women who are approximately at the age of 90s and live in the rural regions of Turkey we see elderly women's challenging narratives on the hydro-electric power stations. Depending these narratives, this presentation will attempt to make visible the women's experiences of feeling themselves as a certain part of nature, rather than as the owners of nature by applying the oral and memorial knowledge of elderly women. The

case of hydro-electric power stations built by state in the middle of lives of rural people living in Turkey can be considered in parallel with Bruno Latour's explanations on the ozone hole. As Latour puts that the ozone hole is not truly natural, but it is also the result of meaning effects constructed in the battle of various interests, strategies and struggles. Similar to this, hydro-electric power stations in Turkey constructed not only upon the rivers but also on the multi-dimensional field of

strategies and relations including many components such as scientific discourses, perceptions of risk, power relations, engineering, interests, daily experiences, social protests and nature. Within all of these relational constructions, this presentation will focus on the daily experiences and the

memories of women living in Turkey, mostly neglected from the 'official' history, in order to follow the changing lives of women after new water policy of Turkish state including intervention and commodification of water/nature.

## a04RN33 - Motherhood

Chair(s): Marie Thérèse Letablier (Centre d'Economie de la Sorbonne, Université Paris 1)

### “Invisible Mothers”: The Case of Ankara Women's Prison

Deniz Zeytinoğlu, Research Institute for Software Technology, Ankara | [dzeytinoglu@gmail.com](mailto:dzeytinoglu@gmail.com)

The purpose of this research is to cover arrested / convicted mothers' perceptions and experiences about motherhood during and before imprisonment. In the course of the research in-depth interviews were conducted with 25 women of whom 5 are arrested and 20 are convicted in Ankara Women's Prison. In this study, detailed information about women's perceptions and thoughts regarding motherhood, their motherhood experiences inside the prison, their relations with their children and what has changed during imprisonment in this relation was tried to be obtained in the framework of Shamai and Kochal's (2008) study of "Motherhood Starts in Prison: The Experience of Motherhood Among Women in Prison". In this research, it's been found that mothers characterise and experience motherhood within the framework

of the existing mainstream ideologies. Women interviewed stated that being a mother gives women a new identity and it is a complementary part of womanhood. While defining motherhood; women mostly use concepts of sacrifice, responsibility, decency, giving, satisfy and being at one's side; and define motherhood via these concepts. While women talk about their experiences in the prison they primarily express their deep aspirations. It's been observed that one of the basic characteristics of women's relationship with her children is the reason of her imprisonment. Within the scope of the study, it's been shown that women's past life, type of crime they committed and their coping strategies are important regarding the possibility of continuity of their relationships with their children.

### Changing Face of Motherhood Ideology

Umut Belek Ersen, Hacettepe University, Ankara | [umutbelek@hotmail.com](mailto:umutbelek@hotmail.com)

Famous women of current show business who have children, appear in visual press with photos of themselves and their children. Once a photo of a model is placed in a newspaper, how many children she has, is certainly

emphasized. Although a child was a unspecified issue in 90s, it has become a highlighted focus nowadays. Can women build their careers and have children in the meanwhile? Or can't they complete their

existences and do they have hope for traditional roles? With influence of feminist movement, women came out of their own houses and built up their careers by working two times more than men. The matter of having a child that was pushed into the background has come to the fore in their mid-30s. Working women, as mothers at the same time, tried to fulfil their two times more responsibilities. Superpower mothers come into pieces among the descriptions of working woman, housewife and mothers, because equal relations cannot be structured in public domains and also existence of the roles based

on traditional gender patterns continues at home. These super women have not been supported by both government and their husbands in this process. Thus, women started to leave most ignorable area gradually and turned towards the home and their children. Motherhood ideology is now more powerful than the past. Mothers consider "Motherhood" as the meaning of life and realize themselves through motherhood. Today motherhood's becoming more common with more extended limits results from unlimited realm of existence provided by motherhood

## Breastfeeding: Certainties and Bias of Today's Motherhood

Vera Henriques, CIES-IUL, Lisbon | [vera.henriques@iscte.pt](mailto:vera.henriques@iscte.pt)

Rita Cachado, CIES-IUL, Lisbon | [ritacachado@gmail.com](mailto:ritacachado@gmail.com)

Tânia Cardoso, CIES-IUL, Lisbon | [tania.c.cardoso@mail.com](mailto:tania.c.cardoso@mail.com)

Inês Pereira, CIES-IUL; FCSH-UNL, Lisbon | [ines.pereira@iscte.pt](mailto:ines.pereira@iscte.pt)

In Western countries, where the number of children is growing down and born at a later stage of their parents' lives, motherhood is given an increased importance, which is not only focused on babies, but also on everything else that is related. Women who decide to become mothers undergo a set of social pressures to be successful in every stage of the motherhood process: pregnancy, preparation for birth, delivery and neonatal care, in which breastfeeding gains special relevance. This study aims to be a relevant contribution to the discussion on breastfeeding, which seems to be rarely approached in the context of Portuguese sociology. Regarding methodology, this will be based primarily on interviews with mothers who breastfeed, mothers who did not breastfeed and health professionals. This sociological disinterest is, moreover, surprising since breastfeeding, generally considered to be

organic, natural and a personal choice, is actually a social practice, which varies according to the historical period, social class and social and political context. From a microsociological point of view, breastfeeding as a social practice reflects the action of medical professionals, breastfeeding therapists, mothers and fathers and their social group. From a macrosociological point of view it results from government policies, prevailing medical paradigms and economic actors. It is common to believe that breastfeeding is a natural issue for mothers and that it is the best for babies. Based on this, women after childbirth are subjected to pressures not only from health professionals, but also from society in general, due to a set of bias. The purpose of this presentation is to discuss some of the beliefs about breastfeeding, taking into account the different roles of women.

## The Inmate Identity – Experienced by Incarcerated Mothers

Andrea Müller-Fabian, Babes-Bolyai University, Cluj | [andrea\\_fabian\\_ubb@yahoo.com](mailto:andrea_fabian_ubb@yahoo.com)

According to the International Centre for Prison Studies (ICPS), female prisoners made up 4.6% of the total prison population (ICPS) in Romania. Women are a small minority of the prison population, but this minority has special needs and rights. The aim of the study is to present the main characteristics of those incarcerated Romanian women who are mothers. We base our results on eight "Discussion Groups for Imprisoned Mothers" and several other group works, discussions and case studies taking place with incarcerated mothers. These methods allowed a longitudinal insight into inmates' childhood environment, into their adolescence and adulthood, as well as into their everyday life in prison in terms of daily routines and emotional experiences. Among others, we can conclude that the life histories of these women offenders

are characterized by extreme social and economic disadvantage. They were disproportionately poor, undereducated and unskilled, victims of sexual or physical abuse, poverty and substance use. Their emotional experiences are characterized by frustration, conflict, and guilt which are the result of being both separated from and unable to care for their children. Added to these, on the long term, there appears the social stigmatization: the label of a "bad mother", and the "self-imposed punishment". On this background it appears the inmate identity. For these mothers the answer on the question "Who am I?" is "I am an inmate". Based on these findings, our investigation shows also some possible ways about how incarcerated mothers can combat their social discrediting.

## b04RN33 - Women and Islam

Chair(s): Anil Al-Rebholz (University of Frankfurt, Germany)

### Toward a "New Islamic Women": women's role in society in the thought of Rachid Ghannouchi and Yusuf al-Qaradawi

Margherita Picchi, University of Napoli | [marghe.picchi@gmail.com](mailto:marghe.picchi@gmail.com)

By the end of 19th century, the Arabic world was suffering a serious crisis, which eventually led to colonisation and, more generally, to political and economic subjugation to the West. In that contest, intellectuals started debating on which road could have restored the Arab world's former glory; focusing mainly on which role religion should have played in this "renaissance". Broadly speaking, two main currents of thought stood out: "Secularism", from one side, and "Islamism" on the other. In this debate, one of the main topics discussed was the role of women in society. While

secularists invoked a westernization of customs and fostered women's civic, political, and social rights, Islamists promoted rehabilitation of the "pure" Islamic values according to which women's primary role was motherhood. After almost a century and many twists and turns, Islamist movements seem to have become majoritarian. Despite important changing in their methods and ideology, the prevailing culture within those movements still views women as best serving the cause through their traditional roles as mothers and wives, raising new generations of Islamists, but

not as political actors or equals in the movement. However, some of the contemporary prominent Islamists have been proposing a more active and committed model of Islamic woman. My paper will analyse this new Islamist discourse on women's social and

political role, focusing on the thesis of two prominent figures, namely Rachid Ghannouchi and Yusuf al-Qaradawi. In particular, it will focus on how this discourse, despite renewed, is still built in explicit opposition to secular, and especially feminist, models of womanhood.

## **'Islamic' Veiling, Work and Citizenship: Working Muslim Mothers in Finland**

**Anna-Mari Almila**, University of Aberdeen | [annamari.almila@abdn.ac.uk](mailto:annamari.almila@abdn.ac.uk)

In some European countries hijab-wearing Muslim women have been symbolically excluded from practicing their citizenship through the legislative banning of headscarves from public institutions. Although Finland has no such legislation, veiling Muslim women's position in the labour market is often marginal. Finnish women are, ideally, expected to perform their citizenship through both motherhood and participation in a strongly gendered labour market. Based on ethnographic fieldwork in Helsinki, this paper examines dress-related compromises that Muslim women in Finland make in order to participate in work-life and citizenship. While discrimination because of religious dress is forbidden in Finland, companies can impose restrictions for health and safety reasons. Many Muslim women work in areas that have specific dress restrictions, such as nursing or cookery. Similarly, the women working in

customer service are expected to follow company dress codes, while those working as teachers become aware of their representative role. Almost all Muslim women make compromises with regards to their dress, such as wearing a smaller scarf, giving up the face-veil while working, wearing trousers instead of a skirt or wearing 'western' styles instead of dresses perceived as ethnic. They describe such adaptations as necessary and unavoidable and they consider their participation in public life as having the potential to 'break stereotypes'. Hence, I argue that while the Muslim women value motherhood, they are equally mindful of the importance of cultural citizenship, whereby they seek to fulfil both their public and personal roles by negotiating a variety of dress strategies and thus combine religious requirements with work-life demands.

## **The Margins of Personal Freedom - Negotiating Support, Working through Control: Widowed and Divorced Israeli Palestinian within their Kin and Community Relations**

**Tal Meler**, Zefat Academic College | [talmeler12@gmail.com](mailto:talmeler12@gmail.com)

Recent years have seen a growing percentage of single-mothers in the Israeli-Palestinian community, a result of divorce and widowhood. This paper is based on a qualitative study I conducted with these families, based on a feminist worldview; I examined the experiences of Israeli-Palestinian single-mothers and their status in the community.

This new familial pattern is part of contradictory trends that exist in the Israeli-Palestinian society. Studies show the complexity of the lives of these; one of the reasons is the fact that their life is an assemblage of oppression and conservative practices on the one hand, and challenges and opposition on the other. The above research

corpus enables me to combine a discussion of the cultural influences of Islam and the potency of tradition in Arab societies, with an examination of the women's status from a contemporary political perspective. The increased ratio of these families occurred concurrently with changing trends in the orientation of the welfare state model and decreasing state involvement. In addition, their civil status increases their dependence on their family and sustains local patriarchal arrangements, which generally results in their

increased subordination and repression. Since this was a heterogeneous group of women it manifested the need to conduct intersectional analysis. The women's classification according to different variables created a typology of three groups. Analysis of the findings revealed data concerning the levels of supervision they were subject to, the sources of power and autonomy and their ability to negotiate. This study can contribute to ethnographic thinking on Muslim women experience living as a minority in western societies.

## a05RN33 - Care and Migration

Chair(s): Costanza Tobio (Dept. de Ciencias Politicas y Sociologia - Universidad Carlos III, Madrid)

### Gender and Mobility: Fragments to an Analysis of the North-South Divide in Europe

Lise Widding Isaksen, University of Bergen | [lise.isaksen@sos.uib.no](mailto:lise.isaksen@sos.uib.no)

This paper contributes to the current sociological discussions of how the structuration of care-and welfare regimes in Europe is related to different ideas and policies for gender equality. Drawing on interviews with Norwegians living in Italy and Italians living in Norway, the discussion sheds light on how the economic crisis is experienced and formulated among women living in an affluent oil economy like Norway and women living in the contemporary Italian economy and how they compare and evaluate the two societies. The theoretical approach is inspired by Georg

Simmel's works on how sociological theories can connect to social meanings of money to an "economy of life". The perspective opens up for a possibility to explore how the current crisis is becoming a "lived experience" in social institutions like the family, the market, the state and the civil society in safe and precarious contexts. The North-South divide in Europe is perceived and lived in different contexts and gender systems. Norwegian immigrants in Italy and Italian immigrants in Norway have developed a variety of forms of "crisis talk" to express how the crisis affects their lives.

## The Impact of the Crisis on Migrant Care-Workers in Italy: How to Reconstitute Stressed Families or Reframe the First Migration Project

Rossana Trifiletti, University of Florence | [rossana.trifiletti@unifi.it](mailto:rossana.trifiletti@unifi.it)

The paper is based on data from a national project (2012/2013) funded by the Italian Ministry for University and research (Miur) involving five university seats (Padua, Venice, Milan Bicocca, Rome three and Florence) and investigating the transformations of multi-layered Citizenship of migrants in recent times, and the transculturation of urban social spaces they begin to induce. The Florence team, in particular explored the Life Trajectories of Migrant Women coming for care-work jobs from Eastern countries (Ukraine and Rumania) or from Albania or from farther sending countries (Peru) and arriving in problem surroundings of three towns in Tuscany Region (Florence, Siena and Pistoia). The very important role of migrant family assistants in Southern Europe is considered in its most recent transformations, after the crisis it

emerges how such a role, always deeply different from the classic model of 'international chains of care' tends today to polarize migrant women between those who can count on some empowering factors (mostly cultural and social capital) and those who are simply rejected. The first group of women accepts a wisely programmed (provisional or final) social downgrading and compressed work- life balance in order to actively construct a better future in the receiving or sending country. Often they can bear the burden of exploitation, of uncertain work contracts and isolation in receiving countries, thanks to a sort of national virtual community of co-migrants, based on a collective memory of stories and experiences. These communities begin to transform in some cases the landscape of our cities.

## Czech Nannies in Vietnamese Immigrant Families: What are the Motivations to Become a Nanny?

Adéla Souralová, Comenius University/Masaryk University | [asouralo@fss.muni.cz](mailto:asouralo@fss.muni.cz)

Some Vietnamese families in the Czech Republic recruit Czech women to look after their children. Such care arrangements challenge the dominant image of the ethnic logic in employer-employee relationship, and provoke many questions, including the motivations that lead Czech women to work as nannies in Vietnamese families. Drawing upon qualitative research conducted with Czech nannies, Vietnamese mothers, and their children, the paper examines the incentives of women to become nannies. My analysis of these motivations builds on the assumption that economic incentives (which are very often seen as the main reason why women adopt the care giving jobs) play an important but not

exclusive role in women's decisions. I will develop an argument that these nannies need (Vietnamese) children more than they need the money they are paid for taking care of them. Simply put, (paid) child care holds a special meaning for the interviewed women; it assumes a prominent place in their lives both because it takes up the majority of their day as paid work, and because it requires emotions, for it is emotional work. Analyzing the motivations for becoming a nanny illuminates broader issues, such as the understanding of what care is, as well as the role of care in nannies' biographies (what the care/paid child care means). In my paper, I argue that the recruitment of nannies springs from the

tension between economic incentives (diversification of income), and the longing for

fulfilment, which is provided by the gendered activity of caring.

## **Work-family Conciliation Processes of Immigrant Working Mothers in Italy: Addressing New Forms of Inequality**

Paola Bonizzoni, University of Milan | [paola.bonizzoni@gmail.com](mailto:paola.bonizzoni@gmail.com)

Recent research has brought to light the strict interconnections of migration and care regimes, showing how international migration and reconciliation issues are increasingly interdependent in post-industrial economies. The increase of female employment, heavier care needs due to an elderly population and inadequate welfare provision in a context of still unequal gender relationships, have promoted the development of care markets across Europe, where migrant and ethnic minority women find employment. Such a global restructuring of care economies led scholars to theorize the formation of "global care chains" a new regime of inequality in care and social reproduction that extends globally. While scholars have explored in depth the internal dynamics and the impact of

transnational parenting and caregiving, the work-family balance carried out locally by migrant families has been instead largely ignored. This paper draws on 48 qualitative interviews with Latin American and Eastern European working mothers in Milan. It argues that migratory policies (stratifying migrants' access to social rights, pushing them into paid employment not to lose their residency status and allowing the reunification of their relatives just under strict economic requirements) and labour market segmentation (positing immigrant women in labour intensive, badly remunerated, highly informal and unprotected jobs) strongly impact on these families' reconciliation strategies, leading to new forms of social inequality.

## **b05RN33 - Masculinity Models**

Chair(s): Elisabetta Ruspini (Dipartimento di Sociologia e Ricerca Sociale - Università di Milano Bicocca)

## **Constructing Masculinities in the Eastern Black Sea Coast of Turkey**

Mehmet Bozok, Artvin Coruh University | [mehmetbozok@yahoo.co.uk](mailto:mehmetbozok@yahoo.co.uk)

This presentation critically investigates the contextual social construction of masculinities in the city of Trabzon, which is located in the Eastern Black Sea coast of Turkey with a [pro]feminist approach. Inhabiting Pontus Greek, Armenian, and Laz ethnicities before the establishment of Turkish Republic, this city came into prominence both in national and international levels in the last two decades

with a number of incidents such as massive violent nationalist uprisings, sex trade with Natashas and football fanaticism of Trabzonspor. Currently, Trabzon is a patriarchal, nationalist, Islamist and conservative city, which is known for its feverish, irrational and violent men and masculinities. This presentation discusses the social construction of masculinities,

broadening Raewyn Connell's debate on "masculinities" to local and regional levels of investigation. In order to make such an investigation, a number of trajectories in Trabzon that have largely affected the social construction of masculinities in the last two decades has been focused on. Those are the emotional and sexual lives of men, families and the domestic lives of men, rightist politics, and football fanaticism of Trabzonspor amongst the masculinities in Trabzon. In order to

investigate the social construction of masculinities in the city, a qualitative field research, based on a feminist methodology was conducted. The field research was conducted between August 2010 and October 2011 by making interviews with 43 men, in the Trabzon city centre. This study is going to present how the local and regional dynamics of Trabzon contribute the construction of violent, rightist and patriarchal masculinities.

## **The Appropriation of Hegemonic Masculinity within Selected Research on Men's Health**

**Christopher R Matthews**, Nottingham Trent University | [dr.christopher.r.matthews@gmail.com](mailto:dr.christopher.r.matthews@gmail.com)

Connell's (1987, 1995) Hegemonic Masculinity Thesis (HMT) has occupied a relatively dominant position within contemporary research exploring the lives of men. Messerschmidt (2012) has conducted a review of recent literature that purports to use HMT, he describes in detail some the ways Connell's thesis has been appropriated. Taking Messerschmidt's (2012) lead, this paper explores a small selection of men's health research that employs HMT as a central organising theme. Such a narrow focus and limited sample enables detailed critical analysis of the theoretical, conceptual and empirical contributions of engagements with Connell's work. It is hoped that this paper will provide colleagues with clear examples of ways in which theoretical problems and conceptual slippages, which have been

associated with HMT, are still being produced in contemporary explorations of men's lives. In calling for researchers to critically reflect upon their usage of Connell's (1987, 1995) thesis in more detail my aim is to increase the subtly and sophistication of such explorations of men's lives. By attempting to reduce the number of overtly problematic appropriations of HMT the academy might be in a stronger position to critically evaluate the theoretical and empirical insights that such a conception of the social world offers. A further hope is that by highlighting specific examples of the need to appraise the relevance and adequacy of HMT as a conceptual frame of lived experiences, we might encourage researchers to access the multitude of different theoretical positions that might speak to the lives of men.

## **Amat and Masculinity**

**Ayşen Utanır**, University of Gaziantep | [aysenutanir@gmail.com](mailto:aysenutanir@gmail.com)

My presentation is about Turkish novelist and philosopher İhsan Oktay Anar books. The sociology of literature enables us to study various social phenomenon. This study uses sociology in order to analyze a literary text. Similarly, theories of gender are considered to

investigate masculinities and identities. By focusing on issues of gender identity, the meanings of being masculine and the formation of masculine codes are investigated through İhsan Oktay Anar's novels. Indeed, the study of the representations of masculinity in

novels enables us to understand the phenomenon of masculinity. The book titled *Amat* is important for my presentation. Sociology of literature, masculinity and gender are my area of interest. In this respect, the novel's masculine characters will be analyzed.

All of characters are man in this novel and in this text is difficult to come across women. On the other hand male characters in the text formed the basis of class. My aim is explain correlation with class and masculinity.

## **Fatherhood Experiences of Lower-Middle Class Men: the Case of Eskisehir, Turkey**

**Zeynep Tecik**, The Scientific and Technological Research Council of Turkey |  
[zeynep.tecik@tubitak.gov.tr](mailto:zeynep.tecik@tubitak.gov.tr)

Like femininity, there is not one type of masculinity. Since there are different kinds of masculinities, there are also various types of fatherhood. Historical, cultural, economic, and social factors can affect fatherhood experiences in different ways. Fatherhood, which is the subject of this study, is a significant role for children, wives, families, and also for society. Although men are not socialized for being father, but they have responsibilities in raising children. In general, family structure in Turkey is patriarchal. After the 1950s, following the mechanization of agriculture, migration from rural to urban settlements began. Consequently, extended families were gradually replaced by nuclear families. However, strong kinship relationships continued to exist. Although family types have changed, traditional patriarchal norms and values are still very strong and effective.

Consequently, father figure is still important since fathers continue to play a key role in the transition of cultural values from one generation to the next. The aim of this study is to analyze the fatherhood experiences of lower-middle class men in Eskişehir which is a small city in middle Anatolia. The concept of hegemonic masculinity and the approach of critical men and masculinity were used when the results of the study were analyzed. The study was conducted with twenty lower-middle class men who have a least one son. Snowball sampling method was used to reach to men to be interviewed. Within this context of men's relations with their sons and their fathers is the focus of this study. Under the conceptualization of 'ideal father', all participants commented that economic power affects men's fatherhood experiences.

## **Memories of Combat Experience as a Resource for Constructing Masculinity**

**Irina Tartakovskaya**, Institute of Sociology Russian Academy of Sciences |  
[I\\_Tartakovskaya@mail.ru](mailto:I_Tartakovskaya@mail.ru)

The memory about certain events can be a very important resource for the construction of identity, including gender identity. Memories are built in such a way as to reinforce the desired gender identity. In my paper I explore how the veterans of the Soviet War in Afghanistan (1979-1989) in their life stories reconstruct the specific form of hegemonic masculinity of highly militaristic type. The task

of the supporting that kind of masculinity leads to the specific form of "memory management" which determines what part of memoirs would be actively representation and where would be zone of silence. The paper also shows how strongly the building of a narrative identity is affected by the dominant gender ideology in which this type of masculinity is defined through the relationship with the state. But

what is implied here is not the real Soviet (and all the more so contemporary Russian) State, but rather an idealistic construct of some "perfect empire," great enough to legitimize experienced hardship and loss of comrades. The degree of memory management depends on how much the biographical episode of participation in local war was crucial for the

formation of masculine identity of certain veteran. In such memories it is possible to identify two basic conceptual constructs: a. War as a trial that is successfully overcome thanks to individual manliness, resourcefulness, and solidarity; b. War as the best years of one's life; the peak of self-expression.

## a06RN33 - Women, Politics and Participatory Behaviour

Chair(s): Rossana Trifiletti (Dipartimento di Scienze Politiche e Sociali, Università di Firenze)

### Out of Place? Models of Gender Citizenship in an Italian Political Party

Elisa Bellè, University of Trento | [elisa.belle@unitn.it](mailto:elisa.belle@unitn.it)

Political parties have a crucial responsibility in the permanence of a severe gender gap in modern political system, which seems to be particularly deep in Italy. Despite of the social and scientific relevance of the problem, studies of Italian parties, which adopt gendered lenses, to this day are rare. I attempt to give a partial contribution to this underestimated topic, using a micro-sociological perspective to the study of an Italian political party (Northern League). Parties are not only political actors at a macro and systemic level, but also concrete and situated organizations, in which gender and masculinities are constantly re-produced through social relations, symbolic orders, cultures, power and organizational structures. These whole of everyday gender dynamics play an absolutely relevant, although often unrecognized role in the construction

processes of specific gender citizenship models (more or less inclusive) inside the party and, in general, in the permanence of a deeply rooted gender gap in the political system. My contribution is focused on the processes of gender and masculinity construction in two local party section of Northern League, respectively located in a small town of Veneto (a region of Northern East Italy) and in a large metropolitan area of Lombardia (a region of Northern West Italy). I realized a political ethnography of the selected party, through the use of participant observation (about 6 months in each local section) of different organizational activities (party boards and meetings, social dinners, informal encounters etc.) and in depth-interviews with party leaders and activists.

## In Bed with an Enemy? Women 's Movements and Neoliberalism in the Post-State Socialist Context

Elzbieta Korolczuk, Södertörns University | [bekorol@gmail.com](mailto:bekorol@gmail.com)

The development of neoliberalism strengthened by the economic crisis has posed new challenges to feminist organizing and theorizing. Many feminist scholars and activists claim that it is one of the biggest challenges that contemporary women's movements face. Gradual dismantling of welfare provisions, the precarization of working and living conditions, privatization of care and education have affected women's (and men's) lives in all parts of the world, albeit in different ways. In the present text I aim at exploring some of the crucial aspects of the relation between neoliberalism and feminist thought and activism in the post-state socialist context of Poland. Such an intervention seems to be needed as the voices from post-state socialist countries seem to be missing from feminist debates on origins, consequences and workings of neoliberal policies. Is this absence just another facet of the existing hierarchy

between Western "producers" of knowledge and Eastern "transmitters" of ideas, or "providers" of useful data? Maybe the scholars and activists in the region do not perceive neoliberalism as an enemy. Perhaps they follow some of their Western sisters in focusing on cultural aspects of injustice, and civil and political rights, while underplaying social and economic rights for strategic reasons. Or maybe the relation between feminism and neoliberalism in the CEE is different than in the West, and more complicated than the alternative between engaging in a "dangerous liaison" with or struggling against neoliberal policies and discourses. These are the questions I will address in the analysis of the women's movement in contemporary Poland, based on the research project conducted between 2009-2012.

## The Gender Gap in Political Knowledge: Is it all about Guessing?

Mónica Ferrín Pereira, Collegio Carlo Alberto, Moncalieri | [monica.ferrin@carloalberto.org](mailto:monica.ferrin@carloalberto.org)

Marta Fraile, CSIC, Institute of Public Goods and Policies (IPP) | [marta.fraile@csic.es](mailto:marta.fraile@csic.es)

Gema García Albacete, Autonomous University of Madrid | [gema.garciaa@uam.es](mailto:gema.garciaa@uam.es)

No doubt that an essential requisite in democracy is that citizens are politically informed. Disconcerting in most societies, however, is that women know less than men about politics. Not only does this make the gap in political knowledge evident between men and women, but it reveals to be an important source of political and social inequality. Most studies have tried to explain the gender gap in political knowledge. Still, these attempts remain partial, as differences between women and men cannot totally be explained on the basis of socioeconomic inequalities. Recent

research is more promising in this regard, questioning the way political knowledge has traditionally been measured. According to these new findings, differences between men and women are artificially created by the type of variables which is normally used to measure political knowledge. Mondak and Anderson (2004), for example, find that gender differences in political knowledge are a function of the different propensity of women and men to guess. Following this most recent line of research, this paper examines whether gender differences in political knowledge are

an outcome of the type of items used to measure political knowledge; in particular, whether the gender gap results from the different propensity of women and men to guess. For this purpose, we use a set of experiments conducted for a Spanish representative sample with a face to face

survey: 'don't-know' answers were encouraged for half of the sample; while these were not encouraged for the other half. This set of experiments includes different dimensions of knowledge: economic, social, and political knowledge.

## Women's paths of participation in volunteer work: a sociological exploration

**Stella Milani**, University of Florence | [stella.milani@unifi.it](mailto:stella.milani@unifi.it)

**Gavin Rae**, Kozminski University, Warsaw | [iro@kozminski.edu.pl](mailto:iro@kozminski.edu.pl)

Gender equality in key roles of social and political participation is generally supposed to be a good indicator of the quality of democracy and of social quality in a broader sense. However, quite surprisingly, the analysis of gender balance in the participative process is so far in a very preliminary stage, and this lack of knowledge makes the organization of a systematic analysis tricky. In this respect, the so called organized solidarity could be considered an especially suitable field of analysis in the broader theme of women's patterns of participation: the gift economy, and the reciprocity principle as well as the practice of gratuitous exchanges are, in fact, the main features of the voluntary work as well as the main traits of the so called ethics of care. Women more often than men, are inclined to adopt such behaviors also in their family contexts. That is why this field of research,

more than others, offers the opportunity to try to detect some crucial traits of women's participation in an ideal continuity with other realms of everyday life. This research, based on European and Italian literature, uses the main findings of a qualitative study conducted in Tuscany, and aims at proposing a specific interpretation of different pattern of participation, in order to consider these practices in the context of women's biographies. This approach is consonant with the sociological reflection which tries to overcome the classical dichotomy public/private sphere. Such research design seems to be, in fact, the more fruitful one in the attempt to explore this different form of active citizenship, very often an invisible one, but one which requires an intersectional approach to different spheres of life.

## 19\_28JS33 - Gender and Sexual Harassment at Work and in Leisure Time (Sport)

Chair(s): Kari Fasting (Norwegian School of Sport and Physical Education), Maria Carmela Agodi (University of Naples "Federico II")

### Competing Discourses in Estonian Nurses' Talk: Professionalism, Gender and Power

Katri Lamesoo, University of Tartu | [katri.lamesoo@ut.ee](mailto:katri.lamesoo@ut.ee)

Raili Marling, University of Tartu | [raili.marling@ut.ee](mailto:raili.marling@ut.ee)

Thus far there have been carried out number of studies on sexual harassment that operate in discursive framework. However, although there is an increasing number of studies analyzing how sexual harassment is discursively constructed, there are fewer studies that would consistently attend to the relevant social knowledge such as norms and values as well institutional or organizational structures of the given context. Therefore, insights primarily from feminist post-structuralist discourse analysis (FPDA) were employed for analyzing 21 interviews with Estonian hospital nurses on the topic of sexual harassment. The approach is suitable for the present study because of its attention to the micro-analysis of discourse and the multiple positioning of speakers and their complex negotiation between different subject positions. As Baxter (2003: 49) puts it, 'Speakers are able

to take up, accommodate or resist relatively powerful or powerless subject positions made available within competing discourses at work within any given moment'. Although feminist scholarship has importantly demonstrated the extent to which women have been disempowered, this should not be taken as universal assumption, but be tested in each social context. Power is always gendered but in a dynamic and multi-faceted fashion. Today's women negotiate their gender and professional identities in complex modes. In the following analysis we seek to overcome the trope of female victimization that tends to prevail in studies of sexual harassment and, rather, focus on women's agency and the often ambivalent ways in which they reiterate or subvert scripts of gender. This analysis allows us to focus on differences between women and their experiences of gender and power

### Quality of Life Threats in Recreational and Competitive Sport

Jan Toftegaard-Støckel, University of Southern Denmark | [jtoftegaard@health.sdu.dk](mailto:jtoftegaard@health.sdu.dk)

Previous research has shown that personal issues (nutrition, injury, goals and expectations), coach-athlete issues (coach, coaching style, selection) and environmental issues (team atmosphere, support structures) are key determinants for stress, depression and illness in elite sports. In a large scale survey among 4,000 Danish athletes from recreational thru to elite sport a regression analysis show an increase in risk of self-

reported stress, depression or illness (SDI) by odds ratio 6,5 in elite sport compared to recreational sport. One in eight athletes reported SDI and highest associations are related to coach behavior. The key question for this abstract is to examine whether men and women are equally vulnerable to SDI at various sport levels and secondly what types of behaviors may pose the biggest threats to athlete welfare.

## Towards a Prevention Policy against Sexual Harassment and Abuse in Flemish Sport

Tine Vertommen, University of Antwerp | [tinevertommen@hotmail.com](mailto:tinevertommen@hotmail.com)

Kristine De Martelaer, Vrije University | [kdmartel@vub.ac.be](mailto:kdmartel@vub.ac.be)

Lore Vandevivere, International Centre for Ethics in Sports (ICES) | [lore.vandevivere@ethicsandsport.be](mailto:lore.vandevivere@ethicsandsport.be)

Whilst other (inter-) national sport governing bodies developed prevention strategies on sexual harassment and abuse in sport in the late 1990s or early 2000s, it was only recently Flemish authorities took action. One of the developed policy instruments is the flag system, an educational tool to assist sport stakeholders in the assessment of sexual behaviour involving children. The flag system is based on six assessment criteria: consent, equality, free will, age appropriateness, context appropriateness and self-respect. It gives a score on the six criteria and a global degree of seriousness (coloured flag from green, over yellow and red, to black) to assess

situations whereby children's sexual integrity might be violated. Each flag requires an appropriate reaction towards the victim, perpetrator and potential bystanders. This tool presents 30 situations in which sexual behaviour involving athletes are depicted, assessed and commented. It aims at raising awareness about sexual harassment, encouraging stakeholders to reflect on children's sexual integrity and empowering athletes to speak up about their experiences with unwanted behaviour. A critical evaluation of this tool and its position within the broader Flemish prevention policy will be given during this presentation.

## Narratives of Sexual Harassment Experiences among Norwegian Female Athletes

Kari Fasting, Norwegian School of Sport Sciences, Oslo | [kari.fasting@nih.no](mailto:kari.fasting@nih.no)

Trond Svela Sand, Norwegian School of Sport Sciences, Oslo | [t.s.sand@nih.no](mailto:t.s.sand@nih.no)

During the last few years a number of different approaches to sexual harassment research have been taken, from examinations of prevalence (Fasting and Knorre 2005), to investigations into athletes' perceptions, responses and coping (Volkwein et al. 1997, Fasting et al. 2002, Rodriguez and Gill 2011). Most of the studies on this subject thus far have used the passive voice, failing to acknowledge the social construction of the participants' own narratives. They have, in other words, been 'author-evacuated' (Geertz 1988). Interviews with athletes have been analyzed across cases, compared thematically, and reduced to categories-- thus ignoring the athletes' ontological reality or 'biographical

time' (Corbin and Strauss 1987). The purpose of this paper is to present Norwegian female athletes' experiences of sexual harassment in their own narratives and discuss how their stories can be explained. Two narratives are presented from an interview study among Norwegian sport students. The participants in the interview study were chosen based on their answers to a larger survey about gender relations in sports. The interviews lasted about one hour, and were transcribed and analyzed with the help of MAXQDA. The stories represented two different team sports. The women had experienced both verbal harassment and unwanted physical contact from their coaches. Their stories are discussed

in relation to the 'grooming' process that often occurs before sexual harassment and abuse occur, and in relation to socio-cultural models

that may explain the occurrence of sexual harassment in sport.

## RN33 - Poster Session

### Gender Studies in University Education in Greece

Eleni Nina-Pazarzi, University of Piraeus | [enina04@yahoo.gr](mailto:enina04@yahoo.gr)

Women or Gender Studies is an area of interdisciplinary studies developed in many countries during the last quarter of the 20th century. As an area of discourse, gender equality studies include topics of interest related to many aspects of socio-cultural realities. This paper presents the content and methodology in women or gender studies programs, both in undergraduate and graduate level, in Greek Universities during the first

decade of the 21st century. However, the decrease of University funding, after the beginning of the economic crisis, has led to the devaluation of these programs. New ideas and proposals are necessary for the continuation of the programs or courses of gender studies. Special reference will be made to the undergraduate interdisciplinary program of Gender Studies at the University of Piraeus ("gender equality and work").

## RN34 - Sociology of Religion

### 01RN34 - Studies Dealing with Religion in Crisis

Chair(s): Gladys Ganiel (Irish School of Ecumenics - Trinity College Dublin at Belfast)

#### Empty Churches, Holy Tweets. The Use of Technology in the Catholic Church in the Face of Crisis

Marta Kołodziejska, University of Warsaw | [kolodziejskam@is.uw.edu.pl](mailto:kolodziejskam@is.uw.edu.pl)

The aim of this presentation is to discuss important changes occurring within the Catholic church due to secularization and the decline in church participation. While Europe's church benches are getting emptier every year and people become increasingly mobile, the religious institutions are recognizing the need to communicate with their believers with the use of modern technology. The example of Pope Benedict XVI's twitter account will be given, along with such cases as the Vatican activity on Facebook, Catholic social media network in Poland (Deon.pl) and pastoral visits arranged via SMS. The abovementioned examples will be supported by statistical data.

The notion of "networked religion", as suggested by Heidi Campbell, will be discussed in view of the abovementioned development; due to changes in both religiosity and religious institutions in the face of crisis, it will be scrutinized how those new religious networks, based on loose bonds and individual interests, transgress the boundaries between individual motivations and the need for community. The conclusion of this presentation will consider the limits of 'networked religion', also called 'low intensity religion' by some researchers such as Bryan S. Turner, and it will also be used to reflect on the institutional reactions towards this trend.

#### Diffused Religion and Religion of Diffused Values

Roberto Cipriani, University Roma Tre | [rciprian@uniroma3.it](mailto:rciprian@uniroma3.it)

Modern diffused religion is not very different from that of the past. Indeed it is precisely its persistence that gives it its peculiar characteristic which Claude Lévi-Strauss would have understood as a hard core not easily touched by time but subject, nevertheless, to variations that may not be easily perceived. If anything has changed, it has done so at a secondary level that regards details rather than substance. Diffused religion is the result of a vast process of religious socialization that continues to pervade cultural reality and not only that. The pervasive character of religion arises from the religion

itself and is heavily imbued with religious connotations. Religion of diffused values embraces central categories of religious behavior. In particular the area that can be ascribed to the religion of values runs from the category defined as religious (church) critical to that described as religious (distancing self from church) critical, and thus includes both a part of church religion and the whole gamut of diffused religion, along with all forms of critical religion. Thus the framework of non-institutional religion appears much broader, being based on shared values which are represented by choices in terms of guiding

principles of life. It is reasonable to maintain that we are faced not only with a religion based on values largely shared, since they have been diffused chiefly through primary and, later,

secondary socialization, but these very values can be seen in themselves as a kind of religion. This religion has lay, profane, secular threads.

## **The Influence of the Crisis Phenomena on the Protestant Congregations in Modern Russia**

**Irina Kargina**, The Moscow State Institute of the International Relations | [kargina@mgimo.ru](mailto:kargina@mgimo.ru)

Analyzing of the trends in the religious sphere of Russian society in early 2000 shows that one of its specific features is the wide spread of Protestant religious groups over the past 10 years. This spread is characterized by a substantial confessional diversity of existing associations, as well as the dynamics of their growth. Their number in Russia had increased significantly - of 39 different Christian denominations officially registered as confessions, 26 were Protestant. Thus, by early 2000 there were about 4650 Protestant groups. But upon closer inspection, it is revealed that this growth, while contributing towards creating broad confessional diversity of Protestantism in Russia, does not necessarily

provide deep penetration of the Protestant religion in Russian society. For example, studies show that at the average level of religious self-identification in Russians of 50%, the percentage of Protestant believers therein has remained on a relatively low level (according to various surveys, it varies between 2% and 6%). The main aim of the analysis is to determine how the last 12 years influenced the activity of Protestant congregations in Russia, taking into account conditions of the social environment such as the increasing of sacralization trends in state institutions and the politicization of the Institute of the Russian Orthodox Church.

## **02RN34 - Religious Answers to Existential Crisis / to the Crisis of Modernity**

Chair(s): Roberto Cipriani (Scienze della Formazione - University Roma Tre)

### **The Paradox of Monasticism in Modern Times**

**Stefania Palmisano**, University of Torino | [stefania.palmisano@unito.it](mailto:stefania.palmisano@unito.it)

The rise of consumerism in the post-Second World War years, accompanied by the ever-growing and globalizing media sphere, has not left even Roman Catholic monasticism untouched. In this article I analyze the relationship between New Monasticism – conceived after Vatican Council II as a new form of traditional monasticism – and contemporary consumer society. I argue that

the processes of renewal in monasticism have been shaped by contemporary social and cultural changes driven by the all-pervasive influence of capitalistic market dynamics. I discuss particularly how and why New Monasticism stands in a paradoxical relationship with the contemporary social landscape. Through a qualitative study of seven New Catholic Monastic Communities in Italy, I

show that if, on one hand, they are an alternative to the accelerated, profit- and success-oriented demands of consumer

capitalism, on the other, they affirm and internalize some aspects of the ambient culture.

## **The Deconstructed Church – The Emerging Church Movement as a Response to the Crisis of Modernity**

Gladys Ganiel, Trinity College Dublin, Belfast | [gganiel@tcd.ie](mailto:gganiel@tcd.ie)

Gerardo Marti, Davidson College, North Carolina | [gemarti@davidson.edu](mailto:gemarti@davidson.edu)

This paper will explore material presented in a forthcoming book by Gerardo Marti and Gladys Ganiel, *The Deconstructed Church: The Religious Identity and Negotiated Practices of Emerging Christianity* (Oxford University Press, 2014). The Emerging Church Movement (ECM), a growing phenomenon in Western Christianity, can be understood in part as a response to the crisis of modernity. Part of the crisis of modernity is that many people no longer trust 'institutions' across all spheres of life. The ECM responds to the lack of trust in institutions by deliberately creating 'anti-institutional' structural forms, including pub churches, experimental congregations, and neo-monastic communities. Other aspects of the crisis of modernity are increased pluralism, and the hyper-individualization of the self. The ECM responds to these trends by creating religious communities with loose

boundaries of belonging and belief (so that pluralism is not just tolerated, but celebrated as a positive religious value); while at the same time encouraging people to follow individualized religious paths. In this Emerging Christians resemble Heelas and Woodhead's 'spiritual, but not religious' selves. But they differ by emphasizing the cultivation of tight-knit communities, in which the development of the individual religious self is linked to 'relationships' and participating in an on-going 'conversation' about faith. Ultimately, we argue that the ECM represents a religious critique and alternative to modernity not only by creating a 'niche' for 'post-modern' individuals to express their religiosity, but also by contributing to structural change in some 'modern' religious institutions, including traditional Western denominations.

## **Sayyid Qutb's "Battle between Islam and capitalism": an Islamic Solution to Egypt's Post-War Crisis**

Margherita Picchi, University of Napoli | [marghe.picchi@gmail.com](mailto:marghe.picchi@gmail.com)

The Egyptian writer Sayyid Qutb (1906-1966) is generally considered the father of radical political Islam, to the extent that, by some scholars, the word "Qutbism" is considered more proper than "Jihadism" to describe those Islamist groups that legitimise and use armed fight with the aim of establishing an Islamic state. However, it must be said that theorists of Jihad, as many Western scholars, take into account only to the later writings of Qutb, often ignoring most part of his work. With this paper

I aim to bring to light other aspects of Qutbian thought, analysing a 1951 pamphlet named "The battle between Islam and capitalism". This book was published during one of the roughest period in Egyptian contemporary history, only few months before the 1952 July Revolution of Nasser's "Free officers". Qutb's argument aims at presenting Islam as "the third way" beyond Capitalism and Communism, and the only mean to solve Egypt's pitiable conditions. Qutb takes into account all Islamic

social and economical provisions regarding what he identified as the most serious problems afflicting Egypt at that time, to conclude that “the Islamic solution” is the only way to effectively eliminate inequalities and establish social justice. By analysing Qutb’s socio-economic theories as presented in this

pamphlet, I aim to show how they bring him closer to an interesting – even though scarcely studied – current of thought known as “Islamic socialism”, and even to Nasserist ideology, rather than to Islamic extremism as it is commonly understood.

## 03RN34 - Salience of Religious Identities and Cultural Polarization (1)

Chair(s): Christophe Monnot (Institut des Sciences Sociales des Religions Contemporaines - University of Lausanne)

### Religion in the Balkans – A Cause or a Response to the Crisis

Danijela R Gavrilovic, University of Nish | [danig@filfak.ni.ac.rs](mailto:danig@filfak.ni.ac.rs)

The trends of revitalization of the social role of religion and the level of religiosity have not bypassed the Balkans. These trends were more pronounced in this region due to its war past, and the use of religion in the function of “cultural defence”. In the conditions of insecure national identities, religion was one of the basic sources of differentiation between the conflicted peoples of the Balkans. Today, in the post-war era, this region is affected by both the global crisis and the consequences of the recent past. The intention of the author is to examine the role of religion in the creation of conflicts and crisis today, as well as its use for the purpose of finding an answer to the comprehensive social crisis. The analyses will be based on the results of the research entitled

“The relation toward socio-economic changes in the Western Balkan societies” realized by the Centre for Empirical Studies of Southeast European Culture within the Program of Support for the Regional Research in the Field of Social Sciences (RRPP). The research includes a quantitative part comprising nationally proportional samples for Macedonia, Serbia, Bosnia and Herzegovina, and Kosovo (4000 respondents) and a qualitative part (140 in-depth interviews). The general intention is to recognize and enumerate the uses of religion in the conditions of the social crisis in the Balkans, as well as to interpret its social role in the correlation with other elements and specificities of each of these societies.

## Attitude Polarisation. Religious Transformation in Post-Communist Poland

Wojciech Sadlon, Cardinal Stefan Wyszyński University, Warsaw | [w.sadlon@iskk.pl](mailto:w.sadlon@iskk.pl)

The breakdown of communism in 1989 is the beginning of a new period in political and social history. New legislation relating Church was introduced. The ground for the Polish version of civil religion has been prepared. But in this new circumstances Church was strongly criticized in public opinion. It was regarded as sectarian and antidemocratic, as an obstacle to liberal democracy. After 20 years of transformation in 2012 despite strong Church criticism in vitro was factually legalized in 2012. In the recent elections in 2011 strongly anticlerical party won about 10% of votes which organizes the campaign for apostasy in Poland. This political overview is the background for the statistical analysis of the attitude polarization hypothesis of the Polish society in the recent 20 years. The result of the study is that 20 years of transformation of Polish

society is better described by the category of polarization than simplistic secularization. On the one hand data from dominicantes and communicantes census indicate the growth of active participation in Sunday mass, national Polish Social-Religion Surveys (PSRS) conducted regularly since 1991 proves 10 points growth of 'deep believers' in Poland and Catholic Third Sector Indexes show the growth of grass-roots and institutional faith-based organizations. On the other hand such indicators as: experience of God index, individual religious practices, moral attitudes parameters and attitudes toward religion in public are used to describe the outstanding of two opposite and influential minorities in Poland: active believers and anticlerical liberals.

## How do the Czech Followers of Reverend Moon Cope with Post-Communist Transformation?

Jiří Poslt, Palacký University, Olomouc | [jiri.poslt@upol.cz](mailto:jiri.poslt@upol.cz)

Jan Kalenda, Palacký University, Olomouc | [kalendajan@gmail.com](mailto:kalendajan@gmail.com)

The fall of communist regime in 1989 completely changed the basic conditions for the existence and functioning of religious organizations in the Czech Republic. Although it brought both political and ideological relief, the state continues to play a significant role in the regulation of religious life. This paper analyzes how one of the new religious movements in the Czech Republic - the Reverend Moon's Unification Church, has dealt with this transformation and how it reacted to changes in political regulation of the religious sector in the last twenty years. In our analysis, we use the theoretical framework of Rodney Stark and Roger Finke conceptualizing the existence of sects on the religious market. The

main argument is that the followers of Reverend Moon choose such a strategy, which minimizes the level of tensions with their socio-cultural environment. On this count, we describe the transformation of both the organizational structure of the Unification Church, and the nature of its religious practice. The paper also describes the character of negotiations and relations with the state and the anti-cult movement, which, in the Czech Republic, have close connections to media and scientific discourse, making a significant impact on public perception of the religious organization. Based on these analyses, we conclude that the Unification Church in the Czech Republic is forced to deal with two types

of crises - on the one hand, a set of small crises that are typical for the transformation of the religious sector in the Czech Republic after

1989, and on the other crises that arise within the organization resulting from conflicts with the state and the anti-cult movement.

## Muslim Immigrants and National Identity in Europe

Meyda Yegenoglu, Istanbul Bilgi University | [meyda.yegenoglu@bilgi.edu.tr](mailto:meyda.yegenoglu@bilgi.edu.tr)

The emphasis on European identity led to discourses that assess whether Muslim immigrants can be considered fully European or not. The boundary set between Islam and Western civilization is used to question Islam's compatibility with the West, resulting in claims that not all inhabitants of the European continent can be regarded really European. When Muslim immigrants' ways of life are represented as the antithesis of the values of Western civilization, cultural differences are framed as a clash of civilizations. The dominant secularist narrative, which insists on the rigorous separation of the private and public domains, can be traced in its articulation of the above issues in the instance of the headscarf debate also. Muslim migrant communities are seen as adamant on upholding their nationalist attachments to their home countries, and are criticized for maintaining nostalgic

attachments to home and the nation, which is regarded as a manifestation of outdated, traditional and pre-modern cultural forms. The new forms of belonging and cosmopolitan forms of attachment are thought to be born out of the disjoining of citizenship and nationality. The debates that revolve around the Muslim woman's headscarf in Europe today constitutes a rich field where the concerns with issues of cosmopolitanism and primordialist attachment to nationalist ideologies can be fruitfully brought together. I suggest that we need to establish a more democratic engagement with Muslim migrants, with the headscarf and the so-called archaic and primordialist nationalist attachments of immigrants and that we need to enhance the possibility of a different Europe which cannot to be simply searched in cosmopolitanism.

## 04RN34 - Salience of Religious Identities and Cultural Polarization (2)

Chair(s): Heidemarie Winkel (University of Potsdam)

### Islam in France and Switzerland Crises to Appear in Public Space

Christophe Monnot, University of Lausanne | [christophe.monnot@unil.ch](mailto:christophe.monnot@unil.ch)

Alexandre Piettre, University of Paris Diderot - Paris 7 | [a\\_piettre@yahoo.fr](mailto:a_piettre@yahoo.fr)

European Islam is struggling. It struggles for recognition: Islamic communities are organizing in associations to obtain the acknowledgment of the society and the local or national government. It struggles for visibility: actors attempt to appear in the public area. The appearance is at micro and macro level : 1)

the individual level by different modes of presentation (e.g. appearance clothing) ; 2) the collective level by the involvement of Muslim organizations in the civil society. This paper aims at presenting the results of ethnographic surveys led during several years in France and Switzerland among Muslims actors and

associations. The comparison between two situations allows us to observe the differences in issues and the objectives of the struggles conducted by Islamic actors or associations within contrasting environments. We will emphasize the fact that the crisis or cultural polarization are part of repertoire of maneuvers employed in order to appear (or be recognized) in public space. Forms of

appearance, whether at a collective or at an individual level, are shaped by the institutional environments. By comparing the two countries we will be able to observe the specificities of these struggles (by drawing in a religious register) and the type of repertoire depending on the location (and its civil society or local politics).

## Gender Attitudes among Urban Youngsters

Lilith Roggemans, Vrije University, Bruxelles | [lilith\\_roggemans@hotmail.com](mailto:lilith_roggemans@hotmail.com)

This paper compares the social determinants of youngsters' gender belief system and their attitudes towards cross-gender behavior and homosexuality. We rely on data from a survey conducted in 2011 in 33 secondary schools in the two largest cities of Flanders (the Dutch-speaking part of Belgium), Antwerp (n: 2156) and Ghent (n: 1711). Pupils from the 3rd – 7th grade (theoretical age: 14-18) filled out a questionnaire in class. This sampling frame yielded a diversified sample both in terms of ethnicity and religious denomination which allows us to scrutinize the relations between the relevant attitudes and different religious denominations. After first having assured that the three attitudes are empirically distinguishable in a measurement model, we use multilevel regression models to assess the specific determinants of these attitudes. The

results show that a strong religious conviction (irrespective of the specific denomination) goes along with high levels of prejudice towards homosexuals, rejecting cross-gender behavior and a more traditional view on gender roles. More interestingly, we find significant interactions for homophobia and the gender belief system between religious conviction and gender indicating that differences according to denomination are much more pronounced among boys as compared to girls. We also find that the presence of Muslims in school increases prejudice towards homosexuals irrespective of the personal characteristics of the pupil. All in all, then, social differences with respect to attitudes homosexuals are substantially larger than those related to cross-gender behavior and the gender belief system.

## Organized Hypocrisy: The Instrumentalization of Religion under Egypt's Muslim Brotherhood

Sabine Frerichs, University of Helsinki | [sabine.frerichs@helsinki.fi](mailto:sabine.frerichs@helsinki.fi)

Having been barred from political activity before, the Muslim Brotherhood won the first fairly democratic parliamentary and presidential elections after the Egyptian Revolution 2011. Moreover, its Freedom and Justice Party also dominated the constituent assembly drafting the new Egyptian constitution, which was approved in a public referendum in December 2012 but remains

hotly contested for its 'Islamic turn'. But references to Islam and Sharia law are nothing new in the Egyptian constitution, which has always combined 'secular' with 'religious' elements. In order to discern continuities from discontinuities, it is necessary to retrace what references to religion were already included in the constitutions of 1923 (marking Egypt's independence), 1956 (under Nasser) and 1971

(under Sadat and Mubarak; amended in 1980, 2005 and 2007). However, a sociological perspective has to go beyond the constitutional text and also to study the constitutional realities behind. While the Western public is preoccupied with the religious form of an 'Islamic democracy' which may slide into 'Islamist dictatorship', the economic and social content of Morsi's reign gains relatively little attention. This paper explores the interaction between law and religion in today's Egypt from

the perspective of 'organized hypocrisy', which has mainly been used in political science but will here be given a sociological interpretation. In the focus is the Muslim Brotherhood's continuation of an economy of self-enrichment by means of the law and under the veil of Islam. At the same time, the religious values shared by large parts of the (Muslim and Coptic) population could facilitate a real new beginning, e.g., by instituting forms of transitional justice.

## Religious Belief, Oscillation and Doubt, a Sociological Analysis

Anne-Sophie Lamine, University of Strasbourg | [anne-sophie.lamine@misha.fr](mailto:anne-sophie.lamine@misha.fr)

In time of crisis and critique, religious identity affirmations question social cohesion. Many social actors envisage religious belonging as intense and consensual, whereas anthropological observations of religion in the making reveals dynamics of belief and show that doubt and oscillation are much more frequent than certainty. The aim of this presentation is to discuss, in an ideal-typical manner, some modalities of articulating doubt and belief. Managing doubt takes various forms from "I doubt therefore I believe" until searching for pure religion or rigidifying of belief. Doubt and its management are not specific to religious matters but they are at their heart. For them too the "cartesian anxiety" - this harrowing alternative between fixed foundations for our knowledge or

intellectual and moral chaos (Bernstein) – play a central role that in various modes of convictions. Besides worldviews and moral concerns, this tension also combines with fear of identity loss and community fragmentation. A first modality of managing doubt is visible in the religion in the making when it takes the form of a ritual, a prayer or a social commitment. A second modality appears in the form disciplining the self (Mahmood) and in the search for pure religion (Roeland et al.). A third modality is to be considered in the process of rigidifying and radicalizing convictions, which may in extreme cases combine with feeling of omnipotence and rejection of otherness. The description of these three modalities will be supported by various empirical enquiries and text analysis.

## 05RN34 - How Religions Changes the Modern World in Europe and beyond (1)

Chair(s): Irene Becci (Institut des Sciences Sociales des Religions Contemporaines - University of Lausanne)

### Differentiation Revisited: Churches and Welfare in Finland and Croatia

Valdemar Kallunki, University of Helsinki | [valdemar.kallunki@helsinki.fi](mailto:valdemar.kallunki@helsinki.fi)

Sinisa Zrinscak, Faculty of Law, University of Zagreb | [sinisa.zrinscak@zg.t-com.hr](mailto:sinisa.zrinscak@zg.t-com.hr)

Though it is widely accepted that there is an inseparable link between functional differentiation and the process of secularization, there are different opinions about challenges that arise from the role of Churches in welfare sector, in particular as in many European countries that role have been expanding recently. The question is if and how public services offered by religious organizations contribute to social significance of religion, and to changing borders between religious and secular in contemporary societies. The aim of this paper is to engage in this discussion by focusing on the role of Churches in welfare sector in Finland and

Croatia. Specifically, the paper will describe the welfare role of majority Churches in two countries which have different confessional tradition (Lutheran and Catholic), different level of modernization, and secularization, but which are similar in terms of high public expectations from Churches. In analyzing the role of Churches in welfare the focus will be on the interaction between religious and secular institutions, and to an understanding of how the interaction operates in different social and cultural contexts. While the paper is mainly theoretical first results of the empirical research about the same topic will be also presented.

### Catholic Church and Public Life in Lithuania During the Period of Uncertainty and Change

Jolanta Kuznecoviene, Vytautas Magnus University, Kaunas | [j.kuznecoviene@smf.vdu.lt](mailto:j.kuznecoviene@smf.vdu.lt)

The paper analyzes Lithuanian Catholic Church (CC) activity in public life during postsocialist transformation and change, its influence and role for the social cohesion, questions the limits of the role that LCC represents, as well as discusses the ongoing debates regarding the changing public role of religion. Based on the research project conducted in 2011-2012 it might be argued that the groundwork for the LCC's involvement and active role in public life of Lithuania after the restitution of the Independence was formed by the state's chosen liberal secular politics of religion. Even though the state was (and still is) formally separated from religion, in practice state

regards LCC as an influential actor in the political arena, whose voice often determines the final outcome of political decisions and legislation. The paper argues that in the period of 1990-2011 Lithuanian CC has been actively participating in both political and civil spheres of the society. One of the main particularities of the activity of LCC in the public sphere is a continuous alteration and multiplicity of the ways of participation in political life of the society. It is seen through the clergy's participation in the elected institution of municipalities and their power to affect the legislative process in 90s and through active participation in the discussions on social,

moral and value problems preserving the symbolic power and an influential role in the

legislative process nowadays.

## Religiosity in Times of Social Change – the Case of Poland

Mirosława Grabowska, University of Warsaw | [grabomir@is.uw.edu.pl](mailto:grabomir@is.uw.edu.pl)

For nearly a quarter of a century in the post-communist countries, and in Poland, rapid social changes have been going on: the overthrow of communism, the transition to democracy and market economy, accession to the EU. Democracy has enabled various social groups and different social actors to articulate their interests and to seek their realization, which was not possible in the communist system. All these changes – at the systemic level, at the level of organizations (churches, political parties, media), as well as at the level of individuals – affect the "popularity of religion". Laws have been created, which define the framework of functioning of

churches and believers. For several years the Polish political class and Poles "are exposed" to direct influence from outside (through European structures, by media, as well as through their personal experience during working or studying abroad). However, not only the Church(es) and believers are free to operate, but non-believers, anti-clerical and anti-religious circles as well. At the example of the Polish case: religiosity and its changes over time will be analyzed; attitudes towards religion and the Church's presence in the public space will be presented; attempts will be made to explain them.

## 06RN34 - How Religions Changes the Modern World in Europe and beyond (2)

Chair(s): Stef D. Aupers (Department of Sociology - Erasmus University, Rotterdam)

### Meditation in the Modern World. Meditation as a Way of Surviving the Crisis.

Krzysztof Tomasz Konecki, Lodz University | [konecki2@wp.pl](mailto:konecki2@wp.pl)

Reactions to the crisis, communities and individuals can be various. They can take the form of social protest, an organizing of communities in order to solve specific problems, turning societies to religion. However, these reactions can be highly individualized, although at the same time rooted in specific social worlds. Meditation can be such an individual response to the crisis. From a sociological point of view, a meditation can be treated as a form of response to the social crisis of values and lack of trust in political and economic institutions of the

modern world. It may also be an attempt to change the world through personal transformation. The following paper will be an attempt to answer provisionally the following questions: 1. What religious influences are now observable in the propagated types of meditation? 2. What means a meditation for the meditating people in the West World (the reasons for and consequences of meditation)? 3. What kind of social worlds and sub-worlds promote meditation and what goals they want to achieve? 4. Does the meditation become a secular practice or para-religious one in the

modern world?

## Reimagining Social Worlds: The cases of Zen and Vipassana meditation

Antonio Carvalho, University of Exeter | [antoniomanuelcarvalho@gmail.com](mailto:antoniomanuelcarvalho@gmail.com)

I am interested in the couplings between inner experience and social change, and drawing upon two case studies – Vipassana meditation as taught by S. N. Goenka and Zen meditation in the tradition of Thich Nhat Hanh – this presentation reflects on the real-world impacts of spiritual practices. I will analyze three particular examples – Vipassana meditation courses in Prisons across the world; Thich Nhat Hanh's actions during the Vietnam war and his approaches to social conflicts as well as the links between meditation and deep ecology. These vignettes conjure up various forms of institutional reorganization, the use of meditation and spirituality as a technique of nonviolence and

suggest a re-conceptualization of the relationship between humans and nonhumans. Moreover, meditative understandings of the world are informed by particular ontologies – such as impermanence of interconnectedness (Interbeing) – that constitute an epistemological standpoint to analyze a diversity of social issues such as wars or the ecological crisis, based on versions of the self radically opposed to the paradigmatic homo clausus. In sum, these forms of meditation allow us to develop an exercise of sociological imagination, suggesting that practices of self-transformation can trigger social change and that processes of inner and outer transformation are deeply interrelated.

## Religious Youth in a Nonreligious Culture? Religious Orientations among Hungarian Youth

Eszter Kovacs, Semmelweis University, Budapest | [kovacs.eszter@emk.sote.hu](mailto:kovacs.eszter@emk.sote.hu)

Bettina F. Piko, University of Szeged | [pikobettina@yahoo.com](mailto:pikobettina@yahoo.com)

Contemporary literature focuses on religiosity and spiritual lifestyle in relation to adolescents. Previous studies suggested that investigating religious patterns is highly emphasized, because religious youth declares experiencing significant benefits due to their religious orientation. The aim of the present paper is to provide an overview of religious patterns of Hungarian youth. Questionnaire survey was conducted in Hungary in 2010 (N = 656, 49.2% females). Religiosity and spiritual lifestyle were measured by several items: denominational belonging, religious affiliation, level of religiousness, religious activity, private prayer, importance of religion, religious orientation of peers, spiritual beliefs, and spiritual well-being. The presence of non-religiosity was observed since 39% of young

people indicated religious affiliation. Furthermore, 36.1% of young people considered themselves not religious at all and only 7.2% very religious. Concerning religious practices, 56.5% of the respondents never go to churches, 4.7% attend weekly and only 9.5% prays weekly. Similarly, the rate of considering religion very important in life resulted in 7.2%. 4.4% considered very important having friends with similar religious orientation. The average means of spiritual beliefs and spiritual well-being were relatively higher than expected based on religious activities. Gender differences were examined; girls tend to be more religious and follow Traditional religious or New Age beliefs. Hungarian youth seems to be religious in low level. Girls were significantly more involved in religious

practices and showed higher level of religiosity. Besides religiosity, spiritual beliefs

seem getting more attention in adolescents' life

## The Problem of Religious Power

Irene Becci, University of Lausanne | [irene.becciterrier@unil.ch](mailto:irene.becciterrier@unil.ch)

Balancing freedom of religion and freedom of expression is certainly a difficult task. This has become clear a couple of years ago with the danish-global affair on the Muhammad caricatures. Public institutions in Europe underlined the importance of freedom of expression for the well-functioning of secular and democratic societies. A very recent case in Switzerland, however, concerning the censorship imposed on a photographer for his report on power in an evangelical youth group, illustrates very well the importance of considering the embeddedness of such debates in precise power configurations. In

Switzerland, the case of the censorship has hardly been debated publicly and freedom of expression was not a priority. Contrary to Muslim communities, the evangelical community concerned is well integrated in the political, juridical, intellectual and economic spheres of the Swiss society. Departing from the description of this case, this presentation offers an analysis and a discussion of the current manifestations of the entangled relation between religion and the state. This case demonstrates that religious and secular actors' visions of change can be opposite in a pluralistic and democratic society.

## 07RN34 - Sociology of Religion (1)

Chair(s): Anne-Sophie Lamine (University of Strasbourg, France)

### National Religious Environment and Orthodoxy of Christian Beliefs: A Comparison of Austria, the Czech Republic and Slovakia

Jan Vane, University of West Bohemia | [vanejan@kss.zcu.cz](mailto:vanejan@kss.zcu.cz)

Martina Stipkova, University of West Bohemia | [marsti@kss.zcu.cz](mailto:marsti@kss.zcu.cz)

The authors analyze the relationship between primary religious socialization and the preservation of religious orthodoxy expressed by attitudes and practices in adulthood. They aim to test the effect of socialization and the effect of religious practices in adulthood on the orthodoxy of people's beliefs in three countries (Austria, the Czech Republic and the Slovak Republic), which are similar in terms of their cultural context but have different religious environments. The authors see the different religious environment of each of the studied

countries as the main explanatory factor. They also try to demonstrate that in an era of pluralism, orthodox religious attitudes (corresponding to official teachings and practices) are more likely to be preserved in environments that are prevalingly secular in character. The authors work with data from the ISSP - Religion 2008 survey, tracking the following variables: primary religious socialization, religious practice in adulthood, and orthodoxy of faith.

## Religion and National Boundary Configurations in Germany, France and Poland – a Cluster Analysis of within-Country Cleavages and their Religious Dimension

Sabine Trittler, University of Göttingen | [sabine.trittler@sowi.uni-goettingen.de](mailto:sabine.trittler@sowi.uni-goettingen.de)

This paper analyzes how people draw upon religion to define membership in the nation. It does so by exploring different patterns of national boundary-making in Germany, France and Poland, three countries that are often analyzed in terms of the conventional distinction between civic-political and ethnic conceptions of national identity. The paper argues that this distinction too easily reduces national belonging to two, mutually exclusive dimensions and that it cannot capture within-country differences in national boundary configurations. To scrutinize such differences the paper applies cluster analysis techniques to identify groups with distinct patterns of national boundaries using data from the national identity module of the International Social Survey Program (ISSP 2003). Distance measures and similarity measures are used to identify different groups according to the

absolute distance in their evaluation of the elements used to define national membership, on the one hand, and according to the relative profile of their concept of national belonging, on the other. Religious boundary dimensions are thus scrutinized with a view to how they differentiate between groups and how they relate to other elements of national identity. Additionally, the socio-demographic characteristics of the different carrier groups of national identity are analyzed to better understand the role of religion in social or ideological cleavage formation. Comparing results across three highly different countries promises to shed new light on the role of religion in symbolic boundary configuration and thus to contribute to recent debates over the applicability and limitations of the civic-ethnic dichotomy in quantitative research on nationalism.

## Developmental Modalities of Constructed Glocal Identities and the Communitarian Search for Ideological Unity Among Muslims in Edinburgh

Stefano Bonino, University of Edinburgh | [s.bonino@sms.ed.ac.uk](mailto:s.bonino@sms.ed.ac.uk)

This paper focuses on the transformational and developmental modalities of constructed identities among Scottish Muslims within a post-9/11 socio-political climate. Drawing from an ongoing empirical project conducted within the Edinburgh's Muslim community, a broad focus will be placed on the fluid and complex process of identity building that younger generations have developed at the interplay between the negative structural socio-political labelling of Muslimness and micro- and meso-level intergenerational changes, cultural transitions, social experiences and political mobilisation. In particular, this paper will argue that, for younger generations of Muslims, an ideological vision of Islam has become a key aspect of their identity and

promoted the awakening of a Muslim consciousness. Younger generations' core identity has partly steered away from those ethno-cultural elements that characterise older generations' sense of Muslimness and has been imbued with global political connotations as a response to recent socio-political attacks on Islam. The younger generations' strengthening of Islamic identities and increased political mobilisation ideologically connect local Muslims to the global Muslim community in the search for unity in a moment of uncertainty, threat and crisis. This process shapes glocal Muslim identities that are influenced by global political events, religious sentiments and feelings of Islamic solidarity and are played out locally by

Muslims within their own communities, which are reshaped at the interplay between heterogeneous individual experiences of Scottish socio-cultural life and collective

conceptualisations of Muslimness as an ideologically homogeneous social, political and religious entity.

## 08\_b07JS28JS34 - Sport and Religion/Spirituality

Chair(s): Stef Aupers (Erasmus University, Rotterdam), Davide Sterchele (Leeds Metropolitan University), Hubert Knoblauch (Technische Universität Berlin)

### **“If you're Jewish how Can you not Believe in God?” Sport and the Challenge of Interfaith Dialogue in the Absence of Faith**

Lucy Mayblin, University of Sheffield | [L.mayblin@sheffield.ac.uk](mailto:L.mayblin@sheffield.ac.uk)

This paper reports on research conducted as part of an FP7 project, 'LIVEDIFFERENCE', which is investigating how people live with difference in Europe, and how 'meaningful contact' is, or might be encouraged, to occur. Here, I discuss one case study, a voluntary sector interfaith sports project in a British city. The project sought to bring Jewish and Muslim young men together across religious, geographical and class based divides in order to expose them to people who are different from themselves, open dialogue, and garner mutual understanding. These goals were not automatically achieved by sport activity itself and additional work was necessary to encourage meaningful interaction. And yet, depending on the 'common ground' of faith to bring the young men together brought unforeseen challenges: many of the Jewish

young men did not believe in God, they described themselves as 'secular' or 'cultural' Jews. While this identity was acceptable in their faith community, for the young Muslims such an idea was incomprehensible. For them, believing in God was the central tenet of their imagined commonality with their Jewish counterparts. The issue came up time and again: "if you're Jewish how can you not believe in God?" This paper therefore explores themes of religious identity and the ways in which sports projects are able to facilitate dialogue between diverse groups. The necessity of a central common interest, such as religion, above and beyond the sport itself, in enabling 'meaningful contact' is discussed, as are possibilities and limits of organizational strategies aimed at enhancing participants' reflexivity.

### **Embodied Spirituality in Yoga Practice**

Clemens W. Eisenmann, University of Bielefeld | [Clemens.Eisenmann@uni-bielefeld.de](mailto:Clemens.Eisenmann@uni-bielefeld.de)

In the field of contemporary spirituality, bodily practices like yoga are attributed central importance for achieving specific 'personal experiences'. Thus in ethno-theory, the body mediates between spiritual experiences and knowledge of salvation, although many

experiences, like the perception of chakras and energies, go explicitly beyond the physical, referring instead e.g. to the 'true self'. This leads to the central question of my presentation: What is the role of the body in the construction of spirituality? With regard to

yoga, Marcel Mauss already assumed a 'socio-psycho-biological' connection between 'mystical states' and 'techniques of the body', and thereby suggested it as an intriguing case for analysis. However, looking from a sociological point of view at a group of people standing on their heads is analytically and methodologically challenging. The sociology of spirituality has mainly focused on macro phenomena like secularisation, individualisation, or subjectivisation. Drawing on recent endeavours in practice theory and sociology of the body, I sketch an approach, which considers the actual yoga practices and

the role of the body in their relation to the construction of spirituality. Based on my ethnographic fieldwork and video recordings, I will show how the body becomes relevant on various levels ranging from the 'discursive body', over bodily interactions, indication, mediation, representation, to the actual lived body experience. I will argue that by taking the lived body experience into account, practice theory needs to be complemented by phenomenological considerations, which also calls for further methodological reflection to recognize the multiple dimensions of embodiment in yoga practice.

## **Manga, Wuxia and (New) Religious Syncretisms. The Orientalization of Western Imaginary, from Osamu Tezuka to Contemporary Oriental Disciplines**

Alessandro Porrovecchio, University of the Littoral Opal Coast | [alessandro.porrovecchio@gmail.com](mailto:alessandro.porrovecchio@gmail.com)

A new interest in various forms of spirituality and "mythical orients" is emerging in some subcultures of contemporary society. Wuxia movies, mangas, sushi bars and martial arts are some significant case studies to analyze the on-going orientalization process. These phenomena have become part of many people's daily life and have affected the ways of dressing, the way of eating and other major changes, as values, ethics and morality. To explore the orientalization process, in a first step I introduce some features of the diffusion of the "mythical orients" in the Western imaginary since the sixties. In particular, I focus on some media products (for example, mangas and wuxia movies) that supposedly played an important role in arousing interest in Other worlds. In this stage I'll refer to some

media theories, in particular to Gerbner's cultivation theory and to the medial socialization effect. In a second step I focus on the imaginary embodied in some oriental disciplines. I refer to some results of a research that I'm conducting in some martial arts gyms, starting from my experience as an instructor. In that context I performed an ethnographic research, I gathered several in-depth interviews with some masters, beginners, fighters and therapists, and I analysed the interactions within some online communities (virtual ethnography). This last method allowed me to come back to the first step, and to focus on how some features of the media imaginary are mediated through the interactions within the virtual communities.

## 08RN34 - Sociology of Religion (2)

### Maintaining Holiness: Social Mechanisms of Sacralization Maintenance - Analysis of a Marian Shrine

Nora Machado I Machado Johansson, Lisbon University Institute | [nora.machado@isc-te.pt](mailto:nora.machado@isc-te.pt)

This article focuses on the analysis of the mechanisms of sacralization maintenance in a large Marian shrine in Portugal, the shrine of Our Lady of Fátima, one of the largest Catholic sites of Marian apparition in the world. This article analyses the process and mechanisms by which the sacrality and identity of the shrine

is maintained. These involve diverse agents, and social and cultural processes that configure an important dimension in the "governance of sacralization." Finally and more generally, the paper discusses institutional processes of sacrality maintenance and the role of "materiality" in these processes.

### A Sociology of Religion Category: A Japanese Case and European Implications

Mitsutoshi Horii, Shumei University | [m.horii@chaucercollege.co.uk](mailto:m.horii@chaucercollege.co.uk)

'Religion' as a social category is an ideological construction. The meaning of the term in the English language and in others with Latin origins, has been developed through particular historical and culturally-specific circumstances in Western Europe and the United States. Given a specifically 'Western' construction of the concept, an uncritical application of the term to analyse non-Western societies is inherently problematic. There was no indigenous word equivalent to 'religion' in Japan, for example, and the Japanese concept of 'religion' had to be invented amidst the power struggle of international diplomacy in the mid-nineteenth century. Therefore, when one studies 'religion(s) in Japan' sociologically, what needs to be investigated is the process in which the modern Western category of religion

has been implanted and indigenised, and in which the whole of society was restructured in order to accommodate this new category. This is to be followed by the examination of various social consequences brought about by the implementation of this religion category, critically analysing ongoing tension and conflict over inclusion into, and exclusion from it. This kind of approach to 'religion' can also be useful for sociological studies of 'religion(s) in Europe', where various non-Western value orientations have been socially classified as religion. The conceptual boundary between religion and nonreligion (or the secular), is highly porous and ambiguous, whereas the discourse of religion reflects assumptions and interests of those who speak about it at all level of society, from the state to the individual.

## How to be a Pentecostal and Upper Middle Class in Argentina? – Renegotiating Appropriateness and Respectability within a Popular Religion

Jens Koehrsen, University Oldenburg | [jens-ole.koehrsen@uni-oldenburg.de](mailto:jens-ole.koehrsen@uni-oldenburg.de)

The Pentecostal movement has been the most successful branch of Christianity in the 20th century and deeply marks Latin America's Christianity today. In Argentina, Pentecostalism has experienced a vast expansion within the lower class whereas the middle class has so far showed little affection for the movement. Being the preferred religious option of the poor, the movement suffers from a low reputation within the middle class and tends to be depicted as a loud, emotional, uneducated, superstitious, and untidy expression of uncivilized lower class culture. The middle class, in contrast, imagines itself as European, civilized, rational, modern, and well educated. That said, Pentecostalism does not fit well with a middle class that aspires to be secular, decent and rational and for which respectability vis-à-vis class peers constitutes a crucial asset.

Nevertheless, there is a minority of middle class Argentines holding university degrees who are involved in the Pentecostal movement. These middle class Pentecostals have opted for an untypical religious choice that calls their class belonging and respectability into question: being Pentecostal, they cross the boundaries of the symbolic universe of the middle class and melt into that of lower class culture. They struggle between their Pentecostal identity and the need to adapt to the symbolic representations of the middle class. These tensions raise the question of how they redefine their middle class identity in the face of their "inappropriate" religious practice. Based on results from an empirical field research about middle class Pentecostalism in Argentina, the presentation will tackle this question.

## Spiritual Encounters in Azaroth: Religious Reflexivity and World of Warcraft

Julian CF Schaap, Erasmus University, Rotterdam | [jcf.schaap@hotmail.com](mailto:jcf.schaap@hotmail.com)

Stef D Aupers, Erasmus University, Rotterdam | [aupers@fsw.eur.nl](mailto:aupers@fsw.eur.nl)

Recently, academic attention has focussed on fiction-based religion i.e. re-enchantment via popular culture. Although predominantly identified as 'banal religion' (Hjarvard, 2011), 'invented religion' (Cusack, 2010) and 'hyper-real religion' (Possamai, 2005), religious contemplation that is derived from consumption of highly fictitious popular culture does not necessarily lead to forms of fiction-based religion. Rather, by adopting Hall's (1980) framework of media encoding and decoding, this paper investigates how players of the widely popular online video game World of Warcraft (WoW) engage with magical and religious in-game content and design in a

process of religious reflexivity. Instead of 'inventing' new religions, we found that actors reflect on existing religions in an interaction between personal biography and engagement with the game. After conducting in-depth interviews with active players of WoW from both Europe and North-America (n=22), we were able to differentiate between three different processes of religious reflexivity. First, players perform religiosity in character composition and play. This is either achieved by re-enacting religious biographies or by developing characters that diametrically oppose their offline religious worldviews and enacting this in-game. Second, in a process of

religious relativism, in-game content is cross-compared with worldly religiosity, influencing the gamers' opinions and openness towards religion. Third, actors are found to instigate spiritual quests in the game by actively seeking

out in-game spirituality and (trying to) export this into their worldviews. Rather than producing fiction-based religions, actors relate these quests to existing religions and spirituality as

## 09\_b07JS34 - Cultures of Religion – Religious Cultures (1)

Chair(s): Hubert Knoblauch & Regine Herbrich RH Regine Herbrich [herbrich@leuphana.de](mailto:herbrich@leuphana.de) ,  
Universität Lüneburg

### Behind the Youthful Façade: The Church of Sweden Abroad and its Older Visitors and Volunteers

Annika Taghizadeh Larsson, Linköping University | [annika.t.larsson@liu.se](mailto:annika.t.larsson@liu.se)

Eva Jeppsson Grassman, Linköping University | [eva.jeppsson-grassman@liu.se](mailto:eva.jeppsson-grassman@liu.se)

The Swedish Church has local parishes in around 45 places abroad. Their mission is to provide community and support for Swedes who stay in foreign countries permanently, or for long or short periods. This presentation will present and discuss results from a research project exploring the Church of Sweden Abroad, with particular focus on migration, ageing and the last phases of life. The project consisted of a qualitative case study, a mapping of the websites of all 45 parishes abroad, and an internet-based survey of all parishes. The case study and the survey

highlight the important role that older Swedes play in the parishes abroad. However, while people above the age of 65 in practice seem to “carry” many of the parishes activities – and also seem to be “carried” by the parishes in terms of receiving support – this age category is virtually invisible in the photographs and texts on the websites. This paradox will be discussed in relation to the phenomenon of ageism and by looking at the marketing of the Church of Sweden Abroad as an expression of the youth-obsessed culture that is today so prominent in many contexts all over the world.

### Cultures of Understanding the Other Self - Religious Dialogue as a (Small) Life-World of Intercultural Communication

Heidemarie Winkel, University of Potsdam | [hwinkel@uni-potsdam.de](mailto:hwinkel@uni-potsdam.de)

The paper introduces religious dialogue as a resource of intercultural learning processes. Empirically, it is based on a pre-study on the intercultural potential of interdenominational cooperation between globally operating churches and closely related organisations, in particular on interviews with churchwomen of the worldwide ecumene. Subject matter is the

social handling of cultural difference in these intercultural contexts. The thesis is that ecumenical collaboration incorporates a long-established, action-based experience pool of turning towards the other self. It is exemplary for a theoretical approach to everyday processes of understanding the other and demonstrates how the participants of

interdenominational encounters develop a life-worldly attitude to difference and otherness in these intercultural configurations. The question is how far the actors adapt and reorient themselves to others, despite the experience of difference and otherness. This will be discussed from the perspective of interpretive sociology, following Alfred Schütz, combined with the paradigm of communicative action. The latter describes culture as processual and dynamic, based on the performance of social action. I argue that,

methodologically, inter-cultural and intra-cultural communications differ only gradually from each other; both are characterized by the encounter of unrelated horizons of meaning as well as ambivalent representations of the self and the other. The paper will illustrate that women's ecumene functions as a small life-world of intercultural communication: action and thinking are developing here in a horizon of multiple realities and possibilities of meaning.

## Valorisation in Religious Cultural Heritage: Volunteering in the Religious Field

Giovanna Rech, University of Trento | [giovanna.rech@unitn.it](mailto:giovanna.rech@unitn.it)

In Europe, voluntary work in cultural heritage is a debated but also crucial phenomenon which involves both young and retired people. Volunteers carry out many activities related to caring and watching but also welcoming and guiding the attendance in these sites and institutions (e.g. project VOCH 2008). In Italy, a large interest for the heritage is quite recent and only dates back to the end of twentieth century even though this country owns one of the richest heritage in the world. This paper will present an original case study in North-eastern Italy, compared with similar experiences in Paris and in Europe on volunteering in Catholic Religious Heritage, in particular on guides to the catholic religious heritage specifically educated and trained by religious-oriented institutions. Voluntary work

of these lay guides who accompany tourists and pilgrims into the churches are not simply an instrument to cope with a lack of financial or human resources but also an answer to the increasing liturgical, iconographical and symbolical ignorance. On one hand, research hypothesis is that Catholic Church is less and less dealing with secularisation but with a phenomenon of heritagisation of religion (Walsh 1992; Hervieu-Léger 2011) which is weakening the centrality of Gospel announce. On the other hand, this volunteer activity is also a means of valorisation which sets religious values against lay values on the common object that is the historical and cultural heritage and its conservation and transmission.

### Religious Communities as Builder of Interreligious Social Capital?

Anna Koers, University of Hamburg | [anna.koers@uni-hamburg.de](mailto:anna.koers@uni-hamburg.de)

Inter-religious dialogue is to be considered as key issue for preventing conflict and supporting peaceful coexistence in a pluralistic and heterogeneous society. This is also expressed by the great efforts that have been made by inter-governmental organizations developing practical guidance and policy recommendations. For example the governments of the 47 member states of the Council of Europe (2008: 24) emphasized the relevance of interreligious dialogue in a "White Paper on Intercultural Dialogue" by stating: "Interreligious dialogue can also contribute to a stronger consensus within society regarding

the solutions to social problems". But what does this mean concretely? To what extent are religious communities actually in contact with each other and what are their potentials for creating interreligious social capital on a local level? The paper draws on the results of a quantitative questioning of religious communities in Hamburg carried out within the project "Religion and Dialogue in Modern Societies. Interdisciplinary and internationally comparative studies on the possibilities and limitations of interreligious dialogue" funded by the German Federal Ministry for Education (BMBF).

### Transnational Business Networks and the Restructuring of Islam in China

Yuting Wang, American University, Sharjah | [ywang@aus.edu](mailto:ywang@aus.edu)

Contrary to popular assumptions, Islam was brought to China by traders rather than soldiers. Arab and Persian merchants arrived in the middle of the 7th century established China's earliest Muslim communities and played important roles in the spread of Islam in China. In the next millennium, their descendants, Huihui, have managed to preserve their distinctive identity while gradually integrating into Chinese society. The unique structures of Chinese Muslim communities and their religious rituals constitute what known as "Chinese Islam." Since the Reform and Opening-Up, China's Muslim communities have reestablished connections with the Islamic world through religious pilgrimage, educational projects, cultural exchange programs, as well as

business activities (Gladney, 2003). Trading, as one of the traditional occupations among Chinese Muslims, is particularly important in strengthening such ties. As Chinese Muslim businesspeople encounter foreign Muslims while doing businesses, they also encounter different versions of Islam as practiced by Muslims elsewhere. Drawing on a pivotal study that examines the relationship between Islam and trust in China's rising market economy (Wang and Yang, 2011), this paper further examines the impact of economic activities on religious beliefs and practices. By conducting in-depth interviews with both Chinese Muslim businesspeople and foreign Muslim businessmen engaged in transnational trade in Yiwu- the world's largest small commodities market, this paper discusses how

transnational business networks may shape the future of Islam in China. This paper contributes to the ongoing discussions on the

compatibility of Islam with modernity and non-Islamic cultures.

## Successful Actions for the Management of Religious Diversity: a Model of Secularism for a Plural and United Society

Lena De Botton, University of Barcelona | [lenadebotton@ub.edu](mailto:lenadebotton@ub.edu)

Oriol Rios, University of Barcelona | [oriolrios@ub.edu](mailto:oriolrios@ub.edu)

Roger Campdepadrós, University of Girona | [roger.campdepados@udg.edu](mailto:roger.campdepados@udg.edu)

Increasing heterogeneity in our societies raises new debates and, occasionally, creates conflicts on the values. The accommodation of religious plurality is one of the main challenges, as recent outbreaks of racism towards some minorities reveal. The religious phenomenon, far from decreasing, experiences nowadays an apogee due to the change of the social paradigm and, therefore, the need to actively construct our own biography. The equilibrium between the acknowledgment of ethnic and religious minorities and the guarantee of equality for all members of society requires the definition of orientations for the management of plural societies. These should be based on scientific evidences that favour the construction of a society in which its members share a public culture, common

norms that have been agreed. In the opposite scenario, not strengthening social cohesion and allowing discrimination generates high human and economic costs. In this sense, the present communication deepens in the definition of a model of secularism that guarantees freedom of speech in the main social areas (education, health, housing, work, participation) with the limit of the protection of human rights for everybody. To that end, we identify strategies already developed in contexts of great diversity that are overcoming stereotypes and discourses of hate among religious traditions. All of this allows us to identify universal and transferable successful actions in this definition of a model of secularism.

## Consumer Society and Religion in Turkey

Ismail Demirezen, Istanbul University | [demirezen@istanbul.edu.tr](mailto:demirezen@istanbul.edu.tr)

Turkey experienced fast economic development in last decade. Its GNP per capita increased from four thousand dollars in 2000 to ten thousand dollars in 2011. Because of economic development, the establishment of culture industry and influences of mass media, Turkey has been becoming a consumer society recently. In Istanbul, many shopping malls have been opened in last decade. The use of credit cards has exploded after 2000. All of these are the symptoms of being a consumer society. On the other hand, in the last decade, Turkey has become more conservatives. AKP, a

conservative party, has been ruling Turkey since 2002 and increased its vote as well. It increased its vote from 34.2% percent of total vote in 2002 to 49.8% percent of the total vote in 2011, becoming the largest party in parliament. Because of AKP's policies and globalization, a religious bourgeois has been emerging in Turkey recently. Although they try to live according religious codes, they want to integrate to consumer culture as well. As a result, religious values and norms are changing such a way they fit consumer cultures. One of the examples of

transformation of religious values in consumer culture is fashion show of veiling. There are many other examples which indicate the complex relationships between consumer culture and religious values. This paper will

examine this complex relationship in Turkey. To understand this relationship, it will be explored the connection between consumer culture and secularization as well.

## 10\_b07JS34 - Cultures of Religion – Religious Cultures (2)

Chair(s): Hubert Knoblauch (Technische Universität Berlin), Regine Herbrink

### Ethno-Religious Conflict and the Meaning of Work: The Case of Jews, Muslims and Christians in Israel

Moshe Sharabi, Yezreel Valley Academic College | [moshes@yvc.ac.il](mailto:moshes@yvc.ac.il)

There are no studies that compared work values of Jews, Muslims and Christians, in and out of Israel. This paper examines and compares, for the first time, the meaning of work among Jews, Muslims and Christians in Israel and attempts to explain the similarities and the differences among the ethno-religious groups. In 2006/7 the Meaning-of-Work (MOW) questionnaire was conducted on 898 Jews, 215 Muslims and 103 Christians working respondents. The MOW dimensions were: economic orientation, entitlement norms, obligation norms, interpersonal relations orientation, intrinsic orientation and work centrality. The findings indicate that there are significant differences in most of the MOW

dimensions between the three religion groups, but some of them were not according to the hypotheses. The MOW differences among the three ethno religious groups can be explained by the different religious work ethics, the cultural differences, the high degree of segregation, the occupational discrimination against Arabs (especially against the Muslims), as well as the regional Palestinian/Arab-Israeli conflict. Overall, the demographic factors partially explain the MOW differences. The extra-high work centrality among Arab Christians and much more so among Arab Muslims reflects a high non-actualized potential for organizations and for the Israeli economy in general.

### Cosmopolitanism and Spiritual Consumption in Israel: A New (Jewish) Age to a New Middle-class

Dana Kaplan, Open University and Hebrew University | [danaka@openu.ac.il](mailto:danaka@openu.ac.il)

Rachel Werczberger, Tel Aviv University | [rachel.werczberger@mail.huji.ac.il](mailto:rachel.werczberger@mail.huji.ac.il)

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to

explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class determines religious affiliations and practices.

Sociologists of religion have recently pointed out that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Age option in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan, post-materialist, secular new middle class. Drawing on post-Bourdieuian cultural sociology, we start by describing the theological and experiential hybrid nature of

Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitanization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, *inter alia* and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

## Religious Individualism or Individualized Religion: A New Orientation in Modern-Day Turkish Society

Yılmaz Yıldırım, Afyon Kocatepe University | [ylmzyldrm@windowslive.com](mailto:ylmzyldrm@windowslive.com)

Religious individualism is a phenomenon that arose from the cultural crisis of modernity. In this sense, while modern individualism, immanent in enlightenment discourse, is a deliberate outcome of modernity, religious individualism is an unexpected result. Religious individualism, emphasized by P. L. Berger and N. Luckmann while researching religious pursuits in Western societies, is an element seen in the cultural change Muslim societies experienced during the modernization process; however there is not a great amount of research on this subject. The dynamic of cultural change created by Turkey's rapid and dramatic modernization process, peaking in the European Union accession period, leads to a significant crisis in both the erosion of the dominant status of the state in public life and the effect of religious

association in social life. In the current phase of modernization in Turkey, while the legitimacy of the state-centric cultural policies of an Islamist government is becoming problematic; the total effect of the institutional and binding character of Islam on individuals in social life has been facing a crisis. As a result, religious individualism, which can be regarded as a part of the cultural pluralism discourse that increased in Turkish society during the last decade, has reached a significant point especially among university youth. This study shows that both rapid socio-cultural change and reaction against the sense of conservative government that aims for a value and norm system have an effect on the increase of religious individualism among university youth in Turkey.

## Removing the Hyphen – Creating a Religious Feminist Identity without Hyphens

Galit Yanay-Ventura, Emek-Yezreel Valley College | [gality@yvc.ac.il](mailto:gality@yvc.ac.il)

This research explores the reciprocal relations between identity, religion and gender, the essence of which lies in how ultra-orthodox women in Israel create their identity as religious feminists. Using a semi-structured interview, 44 orthodox Jewish feminist women shared how they apply the religious feminist identity they constructed to their everyday reality. Seven perceptions of religious feminism emerged from the interviews. The "rabbi", for example was the boldest of the interviewees because she believes that her interpretations are permitted in orthodoxy. She is a biblical scholar who examines every issue of Halacha (Jewish Law) herself. The "interpreter" focused on the ability to offer a distinctly feminist interpretation to the Bible so her connection was mainly through teaching the Torah (the Pentateuch) while aspiring to promote women's prayer groups. Thus, there

were many subtle shades (which I will present) that reflect unique beliefs and practices of diverse types of religious feminism. Religious feminism is a new sphere that challenges both feminist and orthodox discourse. The dialectic between feminism and religion alters both categories and creates a new category which is neither a combination nor a collapse of the two. Therefore, based on the work of Judith Butler (1990), I suggest removing the hyphen from religious feminism. This reading is not merely a lingual or semantic change. This perception suggests reading the creation of the new religious feminist identity as a hybrid self-production process. The wider significance of this approach is that religious feminist identity is not a "subsidiary" category of feminism or of the religion; but rather a new category of religious feminist without hyphens.

## 11JS34 - Affects and Emotions in the Field of Religion

Chair(s): Stef Aupers (Departement of Sociology - Erasmus University, Rotterdam), Cécile Vermot (Université Paris 5-Descartes)

### Contemporary Spirituality, Ritual Creativity and the Importance of "Negative" Emotions

Anna Fedele, CRIA - Lisbon University Institute | [annafedele@yahoo.com](mailto:annafedele@yahoo.com)

This paper is based on fieldwork in Spain and Portugal among followers of the Goddess movement. It explores the role emotions play in contemporary spirituality and particularly in the context of crafted rituals. Taking as an example rituals that are created ad hoc to celebrate particular moments of women's reproductive cycle, I will analyze the specific function of ritual as a vehicle for the expression of emotions: those of participants

as well as those that the creators of ritual wish to solicit. Using as a departure point the approaches of Tanya Luhrmann (2001) and of Linda Woodhead and Eeva Sointu (2008) to contemporary forms of spirituality, I will argue that emotions, and especially "negative" emotions, play a central role in contemporary crafted rituals. These rituals allow women to express and come to terms with emotions they have learned to consider inappropriate and to

hide. In this context anger and other emotions such as fear become a powerful catalyst for transformation and healing. I will therefore also analyze to what extent these crafted

rituals allow their participants to challenge the “emotional regimes” (Riis and Woodhead 2010) and “feeling rules” (Hochschild 1983) of their social background.

## The De-Emotionalization of Religion and the Decline of Religiosity in Europe

Franz Höllinger, University of Graz | [franz.hoellinger@uni-graz.at](mailto:franz.hoellinger@uni-graz.at)

The strong decline of religiosity in Europe in comparison with other parts of the world is usually explained by a combination of various factors, such as the high level of material wellbeing and social security, the historical heritage of state-church systems, and the disenchantment of world-views as a result of the Enlightenment. In this paper I want to give an additional explanation that highlights the importance of religious emotions in this process: Religious feelings and experiences are aroused, to a large extent, by rituals. The more the ritual involves the whole person, body and mind, the stronger the religious feelings. Since the times of the Protestant Reformation,

the focus of religion in Europe has shifted from the holistic-ritualistic to the verbal-discursive dimension. The restriction to the cognitive level made the occurrence of religious feelings and experiences less likely; subsequently, also Christian religious practice and beliefs declined. This argument is supported by data from the Religionmonitor 2008 which show that respondents from Protestant and Central-European Catholic countries report much less frequently that they have religious feelings (i.e. positive or negative feelings towards the divine) than respondents from the USA and from Latin-American countries.

## The Affective Turn of Apocalyptic Sensibilities: Fear and Hope as Modalities of Religiosity in the Space of Exception.

Joost van Loon, Catholic University of Eichstätt-Ingolstadt | [joost.vanloon@ku.de](mailto:joost.vanloon@ku.de)

Fear and Hope are two affective modalities of Dasein that entail future projections and could be associated with risk. In this paper, I would like to explore the possibility of conceptualizing both in terms of Simmel's reflections on religiosity. However, rather than focusing on the field of religion, I intend to bring these theoretical reflections into an empirical engagement with what Agamben referred to as “the space of exception”. The space of exception constitutes “bare life” in terms of sheer corporeality and provides the inaugural ground, the ground zero so to speak, of the

(neuro-) political moment of decision-making (which is the original meaning of crisis in ancient Greek) as an exercise of sovereignty. The space of exception is the space of crisis, both in terms of decision but also in terms of “between life and death” (the body in crisis). By invoking examples from discourses of specific crises that allow us to associate fear and hope in relation to the space of exception, I aim to generate a theoretical conception of “the religiosity of crisis” as an attunement to being in the world as anticipation (or risk).

## Emotions between Inclusions and Exclusions from the Orthodox Jewish Community: The Case of Sabbateans Living in Prague

Silvana Greco, University Milan-Bicocca | [silvana.greco@unimib.it](mailto:silvana.greco@unimib.it)

Giulio Busi, Free University of Berlin | [busi@zedat.fu-berlin.de](mailto:busi@zedat.fu-berlin.de)

The paper and presentation will focus on the emotional impact of the relationship between orthodox majority and sectarian/heretical minority. This widespread and recurring pattern will be approached from the perspective of a specific case study concerning the members of a Jewish heretic movement (the Sabbateans living in Prague during the 18th -19th centuries) and their relation to the orthodox local community. The goal of the paper is to highlight both the contradictory

set of emotions which drive to belong to the heretic movement, such as joy and happiness, and the feelings which arise from the exclusion of the orthodox Jewish community such as shame, fear and guilty. The paper is based on a large literature concerning Sabbatianism and on the analysis of different forms of biographical narratives such as diaries, letters and autobiographies of the followers of the pseudo-messiah Sabbatai Zevi.

## 20JS34 - Qualitative Research on Religion

Chair(s): Regine Herbrink (Leuphana Universität Lüneburg), Bernt Schnettler (University of Bayreuth)

### Reflecting on How to Study Popular Religion

Carolina Nuti, University of Pisa | [carolina.nuti@sp.unipi.it](mailto:carolina.nuti@sp.unipi.it)

In Italy the very concept of popular religion draws its origins and evolved under the influence of Antonio Gramsci's theories, according to which popular religion acted in opposition to the hegemonic and institutionalized religion of the elite. Although an unanimously shared definition of popular religion has not been reached in the academic community, the concept is associated with a religiosity characterized by spontaneity and affectivity, responding to the need for a more direct and immediately profitable contact with the divine. However, with the complexification of social structures within advanced capitalist societies in the twentieth century, the idea of popular religion underwent a crisis from which it has not yet recovered. Nevertheless, while on the one hand the phenomena labelled as popular religion suffered, and still suffers,

from an "attrition" from a theoretical perspective, on the other hand, it continues to hold the interest of scholars and an empirical analysis is still needed. In this paper I will illustrate the methods used to study the devotion of people visiting the Sanctuary of Montenero (Li), adopting the perspective of Symbolic Interactionism with particular reference to the indications of Herbert Blumer. Following an initial phase dedicated to the exploration of social processes at work in this place, attention focuses on the analysis of the contents of the books of the pilgrims, in which they have left messages, on the visual analysis of the contemporary votive tablets, on the pilgrims themselves and on a prayer group composed of young devotees, studied through participant observation and in-depth interviews.

## **Territorial Transformations and Religious Rites: The Case of Saint Rosalia.**

**Rossana Marianna Salerno**, Kore University of Enna | [rossana.salerno@unikore.it](mailto:rossana.salerno@unikore.it)

The project of my research analyzes the correlation between the territorial transformations and religious rites, and the context which are development. Central focus of research is therefore the relationship that the religious rites entertains with the territory. The religious case of Saint Rosalia contains, in the context, the whole of the rites and meaningful symbolic elements. The Feast of Saint Rosalia in Palermo, Sicily's best-known religious festival, is traditionally held from 10 to 14 July and 3 to 4 September. The adopting research methodology into the territorial transformations and religious rites is essentially an ethnographic/qualitative analysis. The goal is to draw the main characteristics of a culture living "within" and "as a member" of the shared beliefs. The ethnographic research is a typical example of qualitative observations: firstly the survey is

conducted through field observations and secondly through observation lens by cameras, video cameras and voice recorders. Deriving and emphasizing empirically human behaviors, social facts and interactions among social actors. The dynamic relationship that exists among a religious rite and the territory that it entertains is interpreted and analyzed as a form of protection, offered from the sacred on the place in which he resides. This is the beginning of an analysis that sets on the same plan two varying specifications: one on side the rite (sacred and profane) and other from the territory. The religious beliefs and the rites are a circle in which the research of the meaning of the existence manifests. The social phenomenon and its characteristics is given by comparing acquired data and observation results analysis.

## **Uncovering Assumptions. Researching Protestant Churches in Ireland and Italy as an Insider and a Migrant**

**Alessia Passarelli**, Trinity College, Dublin | [passarea@tcd.ie](mailto:passarea@tcd.ie)

In this paper I question whether the inter-methods triangulation (Denzin, 1989) is the most accurate method to be employed in studying religious communities and whether being an insider can shed a different light to the data collected with the inter-methods triangulation. Thus, starting from my research on the integration policies and practices in Protestant Churches in Ireland and Italy in relation to the arrival of immigrants in their midst, I analyse the qualitative approach employed in my research and the different findings emerged in the two countries. The

paper critically reflects on my position as both a migrant and Protestant researcher in Ireland and as an insider policy maker and researcher in Italy. I rely on Ellis (1996, 1997, 2005), Flaherty (1992) and Byrne (2000) on autoethnography, however, although the research is not autoethnographic in the strict sense, there are evident links between what I research, and who I am. I also critically analyse my position – as a privileged insider, a migrant and also a researcher – with the various stakeholders to uncover underlying meanings and assumptions.

## Analyzing Media Material on Religion and Child Sexual Abuse

Andreas Häger, Åbo Akademi University | [ahager@abo.fi](mailto:ahager@abo.fi)

This paper discusses analysis of a media material on religion and child sexual abuse. The material relates to a case in Finland, involving a preacher from a conservative Lutheran group having sexually abused his grandchildren. The paper raises some issues relating to material and method in this particular study. The study deals with a complex and delicate topic which stirs up strong emotions and requires that the researcher avoids risks of either demonizing the religious group or belittling the crime. The material exists without the influence of the researcher, it is "spontaneous", and this fact has consequences. The method used is discourse analysis. In the study, I claim to find various discourses in the material, and a

central methodological question is the validity of these claims, particularly considering the complexity of the case. The significance of genres and channels, particularly anonymous web discussions, is also discussed. The main question is how discourse analysis of this material can contribute to knowledge of the particular case; of the issues of media, religion and child abuse; and of the place of religion in contemporary society in general. Power is a central aspect in discourse analysis, and the media discussion in this case, with editorial material and an extensive public debate on religion and child sexual abuse, can be seen as a power struggle between religious institutions, media and the secular public.

## Biographical Narratives and Religious Sects

Silvana Greco, University Milan-Bicocca | [silvana.greco@unimib.it](mailto:silvana.greco@unimib.it)

The paper will focus on the importance of biographical narratives such as diaries, letters and autobiographies in studying the rising and the development of religious sects and their relationship to orthodoxy, with special attention to their interaction with social and economic crisis. Drawn on a specific and still ongoing qualitative research on members of a Jewish sect, the paper will highlight how biographical narratives are particular useful in

showing deep motivations, which drive single individuals in moment of crisis to enter in a sect, and their ambivalent relationship with the orthodox religious community. In addition, the paper reflects on how biographical narratives permits to understand the influence of the broader social context on the choice to join but also to leave the sect. Gender differences for this particular religious adherence will be underlined as well.

## 34JS35 - Migrant Religions as a Challenge to European Identities (1)

Chair(s): Berta Alvarez-Miranda (Complutense University of Madrid), Heidemarie Winkel (University of Potsdam)

### Religion and Political Participation: Main Political Concerns of Muslim Youth in Latvia

Anita Stasulane, Daugavpils University | [anita.stasulane@du.lv](mailto:anita.stasulane@du.lv)

Analyses presented in this paper are a part of a broader FP7 collaborative research project "Memory, Youth, Political Legacy and Civic Engagement" (MYPLACE) on young people's social participation. It is based on survey, 36 qualitative indepth interviews with Muslim youth in Latvia and ethnographic research data. The presentation will briefly cover the development of the Muslim community in Latvia where the Muslim population (around 10 000) constitutes the second or even the third generation of immigrants predominantly from former soviet republics. Latvian Muslims represent a highly diverse mix of ethnicities:

Tatars, Azerbaijanis, Chechens, Tajiks, Uzbeks, Kazakhs, Algerians, Afghans, Iranians, Iroquoians, and Pakistanis. Like in the West Europe, the demographic profile of the Muslim population is younger than the general Latvian population. The Latvian Muslim community has particularly high number of young people involved in the religious life. The paper provides a summary of findings on the main political concerns of Muslim youth in Latvia and comes to conclusion that religious values are a source of civic and political activism among our interviewees.

### The Political and Religious Engagement in Switzerland: under the Veil of Appearance

Eva Marzi, University of Lausanne | [eva.marzi@unil.ch](mailto:eva.marzi@unil.ch)

My paper addresses the subject of Islamic Feminin Militantism in the Lemanic region of the Swiss Confederation in a crossed perspective of both social sciences of religions and migration. I propose to interrogate the lines between the "politic" and "apolitical" that enter in the history of the separation between religion and the state in European society, leading from the experiences of the protagonists of diverse muslim associations in Geneva. Specifically, I'll show how the incorporation of social practices and the shape of individual and collective migrant subjectivity is concomitant with the creation, by the actresses, of new ways of "transnational citizenship", attached to municipal/multicultural politics. The shape of

feminine (or feminist) islamic subjectivities correspond to a "rescaling politics" operation, leading from social and political participation of muslim immigrants in a specific urban context. The secular distinction between the civil and the religious is refunded in a world where cultural, religious and territorial references are in perpetual mutations, and there occurs a process of "indigenization" of transnationalised religion trying to negotiate his place in the public space of regional and national society. Leading from the activities of muslim women involved in a general process of "deprivatisation of religion", this work intends to highlight the relation between assimilation and transnationalisation, putting into question the controversial notions of

modernity, citizenship, and migrant incorporation in Europe.

## **The Muslim Diaspora after the Arab Spring: Young People between Taking their Distance and Religious Identity Revival**

**Viviana Premazzi**, University of Milan | [viviana.premazzi@unimi.it](mailto:viviana.premazzi@unimi.it)

**Roberta Ricucci**, University of Torino | [roberta.ricucci@unito.it](mailto:roberta.ricucci@unito.it)

The point of view of the Muslim diaspora has been underestimated in the political debate about the Arab Spring, yet the consequences of those events have reached some immigration countries, such as Italy, where there are significant North African communities. On the one hand, those events, especially among Egyptians, have stimulated a reflection on both ethnic and religious identity, emerging differences between first and second generations and between adults and young people. On the other hand, they have had both a political and religious impact in Italy, refocusing media attention on Muslims, stressing how difficult it is to integrate them

and revealing how fears about Muslims and their links with extremists are still today widespread among Italians. The paper will present an initial attempt, through 30 qualitative interviews, to analyse how Muslims living in Italy have reacted to and whether or not they continue to be linked with those events in the framework of a renewal negative attitude towards them, answering the following questions: Are they really interested? Is there a generational effect in their involvement? Or, do they prefer to take their distance from those events, living both their political and religious lives without public expression?

## **Homonegativity among First and Second Generation Migrants in Europe: the Interplay of Origin, Destination and Religion**

**Koen Van der Bracht**, Ghent University | [koen.vanderbracht@ugent.be](mailto:koen.vanderbracht@ugent.be)

Previous studies reported declining disapproval of homosexuality in Europe but have simultaneously identified the decelerating effect of religiosity on this decline and the higher disapproval of homosexuality among migrants. Moreover, especially Muslim migrants are often specifically referred to as lagging behind the European trend of low levels of disapproval. However, the aforementioned decline is largely due to generational replacement and the effects of religiosity on disapproval of homosexuality among migrants has not been assessed thoroughly. In this paper, we address the disapproval of homosexuality (1) among first- and second-generation migrants in Europe, (2) accounting for period and cohort effects and (3) taking the effect of religiosity into account in an

analysis of effects of origin and destination countries. We test hypotheses using a subsample of first and second generation migrants of the European Social Survey (ESS) in cross-classified multilevel analyses to disentangle period from cohort effects on the one hand and origin from destination effects on the other hand. Preliminary findings indicate that disapproval of homosexuality is declining among first and second generation migrants as well, although this is largely due to cohort effects. Both belonging to a denomination and attending services increases the disapproval of homosexuality, although the effects decrease when taking aspects of the socialization in origin and destination into account. Implications for further research into the effects of religiosity on attitudes among first-

and second generation migrants will be discussed.

## 34JS352 - Migrant Religions as a Challenge to European Identities (2)

Chair(s): Berta Alvarez-Miranda (Complutense University of Madrid), Heidemarie Winkel (University of Potsdam)

### Gender Attitudes of Muslim Migrants in Western and Northern Europe

Veronika V. Kostenko, Higher School of Economics | [veronika.kostenko@gmail.com](mailto:veronika.kostenko@gmail.com)

This study aims to analyze differences between gender attitudes of migrants and local population in 8 countries of Western and Northern Europe. It tests whether migrants from developing countries, especially from the Muslim world, tend to follow European trends in their attitude towards gender equality or they tend to treat gender equality issues in the same manner as in their countries of origin. This topic is of particular importance as attitudes towards women's rights are proven to be a strong predictor of support for democracy and of liberal values in general. This study uses European Social Survey Data, a representative national sample for the most European societies, where migrants are coded

separately. The results show that migrants are a little more conservative in their gender attitudes than local Europeans, but the influence of this factor is often overestimated, whereas age and level of education far exceed migrant status and Islam as predictors of liberal or conservative gender attitudes. Moreover, attitudes towards women's rights among migrants are very similar to the attitudes of the local population in any particular country. Consequently, migrants in the most liberal countries such as Sweden show more support for gender equality than locals in Germany or Switzerland. However, Muslim religion remains a robust medium-sized negative predictor of gender attitudes.

### Religion and Recognition – Experiences of young Muslim women in Germany

Aletta J. Diefenbach, Goethe University, Frankfurt | [alettad@gmx.de](mailto:alettad@gmx.de)

Recognition is considered to be a crucial condition for successful identity formation and agency in myriad social fields. According to the philosopher Axel Honneth, recognition takes place on, and is essential to, the legal, inter-group and inter-personal levels. This paper takes this approach to recognition into account in order to understand biographies and actions of young Muslim women growing up in German society. The study explores how experiences of non-recognition on these different levels cause

crisis and changes in the socio-religious identity formation of the women, but also shows which critique, strategies and settings help to overcome this crisis. The analysis is based on ethnographic field work and in-depth interviews with young women from a youth organization promoting a German-Muslim identity. Working from the empirical data, the paper also suggests new theoretical perspectives on religion and recognition.

## Migration, Embodied Suffering and Healing. Ethnographic Inquiries among Romanian and Romanian Roma Pentecostal Communities in Torino.

Cecilia Rubiolo, University of Torino | [rubiolo.cecilia@gmail.com](mailto:rubiolo.cecilia@gmail.com)

Nely, a self-defined țigan românizat woman of 49 years old, left her house in Oravița more than ten years ago. Nely, who was born-again eight years ago, lives in an unauthorized "nomad camp" at the margins of Turin, where she regularly attends the auto-constructed Pentecostal church. She suffers from thyroiditis. Reading the Bible and participating to several ritual with the community of faith are the practices through which she is able to symbolize her suffering. Ethnographic inquiries have shown that after the collapse of totalitarianism in Romania (Tichindeleanu, 2009), getting by in the newly edified social and cultural space of post-communism, underpinned by the "permanent transition" model (Sirbu and Polgar, 2009), has had profound consequences on the subjective experiences of people. Haunted by different forms of social and personal disruption during

over than twenty years of crafting of neoliberalism (Ban, 2011), people could chose migration and spirituality as narrow tactics of survival and creativity. My ethnographic investigation, resulting from over a year of multi-sited fieldwork between Turin and three villages in Romania, focuses on the biographies of Pentecostal converts among Romanian and Romanian Roma migrants. Linking the theoretical frameworks of works on the global spread of Pentecostalism, and also its political implications (Marhsall, 2009; Fosztó, 2009; Csordas, 2011) with the tools offered by medical anthropology and ethnopsychiatry of migration, especially the studies of faith and ritual healing (De Martino, 2001; Beneduce. 2005; Good, 1994), I aim to examine the way in which the Pentecostal system of belief enables processes of individual and collective politics of healing.

## RN34 - Poster Session

### Emotions and Non-Christian Non-affiliated Religiosity

Michal Kratochvíla, St. Elizabeth University | [kratochvila.michal@gmail.com](mailto:kratochvila.michal@gmail.com)

Our target is to explore the connection between the emotions of respondents and non-Christian non-affiliated religiosity. To understand the spiritual behaviour of people is complicated because more similar terms describe this phenomenon, such as religiosity, spirituality, mysticism, paranormal and supernatural occurrence. This research demonstrates the characteristics and attitudes of the non-Christian non-affiliated religiosity through horoscope, divination, magic, witchcraft, table-turning, superstition, east-

philosophies and phenomenon of UFO. The analysis indicates the emotions: feeling the confidence, safety, doubts; reason of life and the presence of God. The consequences are based on the interview of 2020 respondents. The population are habitants of Slovakia age between 18 – 60 years. Participants were chosen by representative choice after 6 quotas: gender, education, age, nationality, number of habitants in village/city, county. In the research were used univariate, bivariate and multivariate analyses.

## The Changing Face of British Islam: A Qualitative Exploration of Faith in a British City

Parveen Akhtar, University of Bristol | [parveen.akhtar@bris.ac.uk](mailto:parveen.akhtar@bris.ac.uk)

This paper reports on the empirical findings of ethnographic research conducted with Muslim migrants in a British city. It explores the continuities and changes in religious practices and values between the different generations in migrant families. While a number of studies have looked at the experiences of Muslim migrants in the West, this literature is limited in two crucial ways: first, it focuses mainly on socio-economic and political factors affecting migrant religious experience without analysing how religious faith itself may impact upon experiences and shape behaviour. The second

limitation is that most studies research on this topic only within the country of settlement and fail to take into the transnational nature of Islam and the actual lives, experiences and behaviour of many migrants. Using data from the UK and Pakistan, the paper argues that a 'British' version of Islam is emerging amongst young Muslims in the UK which diverges from the Islam of parents and grandparents. The paper reflects on the methods used in data collection, namely, participant observation and life-story interviews.

## Building dialogues: Pentecostalism and Guarani religion

Maria Beldi de Alcantara, University of Sao Paulo | [marialcantara@mac.com](mailto:marialcantara@mac.com)

This work is mainly focused the dialogue between religion and Pentecostalism Guarani of Dourados Reserve. This Reserve, Mato Grosso do Sul, is the most populous of the country, about 15,000 to 3560 hectares., is located between the two cities and is regarded by many as an urban reserve, in addition to have the highest suicide rate of Brazil. However, the Guarani rituals of the two sub-group Nandeva and Kaiowa remain, although with religious fragmentary narratives, however, this reserve has a high rate of adepts

to Pentecostalism, this can be proven by the high number of churches within it, about 33. Faced with this reality how is the dialogue among the Guarani rituals and cults? Where there is an identification between the two religions? How indigenous youth identify themselves with what we call hybrid Protestantism? This paper will present how Pentecostalism conducts a dialogue with religion Guarani by doing with young people to create a place of belonging.

## Is Multiculturalism a threat to Britain?

Hengameh Ashraf Emami, Social Sciences, Northumbria University | [hengameh25@yahoo.co.uk](mailto:hengameh25@yahoo.co.uk)

There is substantial evidence to suggest that the events of 9/11 and 7/7 have changed people's perceptions of British Muslims, and in some instances increased 'Islamophobia' more generally ( Pool, 2002;). As a result of these events, the British Muslim communities have

been awarded blame for terrorist activities. It is because of this intrinsic link between religion, ethnicity, culture and identity that is essential to examine all for factors in conjunction with one another. Research has been taken up with regards to diversity in

Britain, immigrants' history, history of enforced diaspora and new form of racism. Complexity of multiple identity and geography, transnationality, sense of belonging and home are considered key elements of culture and identity. Culture identity is a matter of "becoming" as well as "being". It belongs to the future as much as to the past (Hall, 2003). This paper will analyse integration, assimilation and acculturation, and formation of identity of Muslim communities in Britain, thus diverse elements such as

intergenerational culture gap, and language obstacles will be explored. Narrative will be used as a powerful tool to share the intergenerational diverse Muslims' voices and the challenges they encounter in Britain today. The paper will conclude with some suggestions to overcome obstacles and conflicts in multicultural Britain. At this pivotal time in British race relations, this paper will offer an original and deep insight into Islamophobia and will make suggestions regarding national and local policies and measures.

## **Impact Religion of Islam and Discourse of Martyrdom in Armed Conflict in Turkey**

**Esra Gedik**, Middle East Technical University, Ankara | [esragedik.34@gmail.com](mailto:esragedik.34@gmail.com)

for almost 30 years, there is an armed conflict and crisis between the army in Turkey and PKK. Both sides have lost much. In order not to have a crisis between soldiers families and the army in Turkey, martyrdom discourses based on Sunni Islam and Turkish nationalism has been used to silence families and to give meanings to death of soldiers. This discourse especially gives importance the mothers of soldiers and curtail their anger by using the immortality and holiness of their sons died in

the conflict area. Thus, this study argues although there is not an official religion of Turkey at the state level, this nation has a religion which people die for. For that reason, mothers of martyrs said that their sons are martyred for this nation, territory. My question is why secular concept nationalism is linked with martyrdom and death of soldiers is justified with a religious concept, martyr, when the role of religion in Turkish nationalism is considered.

## **Territorial Transformations and Religious Rites: the Case of Saint Rosalia.**

**Rossana Marianna Salerno**, Kore University of Enna | [rossana.salerno@unikore.it](mailto:rossana.salerno@unikore.it)

The religious case of Saint Rosalia contains, in the context (Palermo), the whole of the rites and meaningful symbolic elements. Sicily's best-known religious festival, is traditionally held from July and September. A plurality of factors (landscape, to become urbanized and symbols) to believe that transformation and adaptation between rites and symbol's territory. The dynamic relationship that exists among a religious rite and the territory that it entertains is interpreted and analyzed as a form of protection, offered from the sacred on the place in which he resides. This is the beginning of an analysis that sets on the same plan two varying specifications: one on side the

rite (sacred and profane) and other from the territory. The religious beliefs and the rites are a circle in which the research of the meaning of the existence manifests; the religious beliefs create sense and they produce an interpretation of the land. But the beliefs also respond to other demands: they make bearable and comprehensible "the illness and the mourning", the pain and the suffering. Other function of the beliefs is that to have normative character, in fact they contain of the "moral judgments" and ethical criterions that drive the behaviors and they furnish the certainty of the existence in a moral order. The adoption of a perspective that privileges the

interpretation has two consequences: the choice to attribute the priority to the beliefs in comparison to the ritual actions and the tendency to accept the apparent meanings of

the beliefs. To the human mind, symbols are cultural representations of reality. Every culture has its own set of symbols associated with different experiences and perceptions.

## RN35 - Sociology of Migration

### 01RN35 - Migration and Social Transformation Revisited: In Search for Integrative Approaches

Chair(s): Anna Amelina (University of Bielefeld), Bruno Meeus (KU Leuven)

#### History of Contemporary Polish Migration to Mexico and Identity Construction

Angélica Camacho, Monterrey Institute of Technology | [acamach@itesm.mx](mailto:acamach@itesm.mx)

There are two main waves of Polish diaspora to Mexico: first during the II World War years and the second between 1975 and 1990. Those who stayed have Mexican nationality, not only

Mexican citizenship and have contributed to the development of the country in terms of economy, art and education since they are well educated people as well as their children.

#### Transnational patterns of migration and mobility of the Romanian Roma community within the EU: challenges and opportunities for social inclusion

Emilia Aiello, Autonomous University of Barcelona | [mariaemilia.aiello@uab.cat](mailto:mariaemilia.aiello@uab.cat)

Mimar Ramis, University of Barcelona | [mimarramis@ub.edu](mailto:mimarramis@ub.edu)

Romanian Roma are increasingly pushed to emigrate due to their poor living conditions as well as the racist attacks they suffer. This increase is also explained by Romania's incorporation in the EU, since it has supposed that all Romanian citizens acquire the right to freedom of movement, which has been violated by some EU countries when closing their borders in an utterly discriminatory way. In this context, this paper presents some of the results obtained with RTD research "TRANSROMA. Strategies of mobility, return and transnational practices between Romanian Roma people" (2012-2014) funded by the Spanish Ministry of Science and Innovation, providing the scientific knowledge gathered during its first phase about the analysis of the

incentives and expectations that condition the choice of migration. One of the most innovative purposes of this paper lies in the research of the benefits arisen from transnational practices performed by Romanian Roma in Romania, Spain and the EU. From a cosmopolitan perspective, the study of the migration processes of Romanian Roma can be a critical contribution for the bottom up process of construction of an EU where the basic rights and living become a reality for all its citizens regardless their origin. Finally, findings in relation to the role of the Romani women in the migration process and the ways for promoting the overcoming of the double discrimination they suffer (for being women and Roma) will also be presented.

## Transnational Spaces of Social Stratification: an Approach to Assessment of Migrants' Vertical Mobility

Oleksii Shestakovskiy, Institute for Economics and Forecasting, National Academy of Sciences, Kyiv | [o.shest@gmail.com](mailto:o.shest@gmail.com)

Despite certain popularity of transnationalism in migration studies, migrants' vertical mobility has been still investigated within the framework of methodological nationalism. However, one can hardly obtain a comprehensive macrosociological view of their situation, typical social trajectories, relative opportunities, possible mobility success or traps when considering of their social positions in separate nation-states. It is, a fortiori, important in case of circular migrants. Elaboration of this question may also contribute into wider discussion about societal boundaries contested by globalization. To cover this question we propose an analytical tool we call transnational space of social stratification (TSSS). Our initial metaphor is that national societies are melting and interpenetrating

social structures rather than isolated entities. Stratification orders (partially) amalgamate as affected by processes such as emergence of an international labor market or higher education space accompanied with institutional and legal changes and technological advances. Hence TSSSs are multidimensional spaces of stratified social positions that belong to different societies and form binding corridors between them. TSSSs are operationalized for measurement as revised Blau spaces (Blau 1977, McPherson 1983) that may include necessary dimensions of stratification such as gender, ethnicity, income, occupation, education etc. The paper will contain a detailed exposition of TSSS conception and an empirical case of transnational migrants from Ukraine in Europe.

## Social Transformation, Crisis and Biopolitic. A New Approach to Unveil the Determinants of Heterogeneity of Migration Flows in Italy and Spain

Gabriele Tomei, University of Pisa | [g.tomei@sp.unipi.it](mailto:g.tomei@sp.unipi.it)

IN time of crisis, many of the migration paths from non-EU South and East countries that characterized European scenario in the last decades consolidated, whereas others (intra-European migrations) come back as a new trend in the economic dynamic of regional development. In the Italian and Spanish cases, the outflow of highly skilled young people that migrate to the northern and more dynamic economies joined the inflows of young job-seekers and refugee from North Africa, as a sort of dynamic of substitution in the national composition of the workforce. Despite the variability in structure, kind and quality of this multiple-dynamic mix of migrant flows, they indeed represent part of the same development process, whose nature and directions are embedded into the long-period

cycles of the capitalistic evolution that, in the era of globalization, deeply transformed even the pathways of human mobility. Approaching the recent debate on the structure/agency dynamic in determining the human mobility, the paper analyse the Italian case unveiling the interdependence between the arrivals of refugees and the departures of young professionals as both effects of the restructuration of the Europe economies. The Foucault's notion of biopolitic, will constitute a pivotal notion to unveil how distinguished flows of migrants do cross the same territory according with the same structural principle of the dialectical tension between the power over lives of the labour market, on the one hand, and the resilience of the personal aspirations and desires, on the other.

## 02RN35 - Human Rights Based Approaches to Migration Policies

Chair(s): Christof Roos (University of Bremen)

### Hunger strike as a tool to implement human rights? Human rights based approaches to asylum policies in Poland.

Karolina Łukasiewicz, Jagiellonian University, Cracow | [karolina.lukasiewicz@uj.edu.pl](mailto:karolina.lukasiewicz@uj.edu.pl)

Joanna Grzymala-Moszczyńska, Jagiellonian University, Cracow | [j.grzymala.moszczyńska@gmail.com](mailto:j.grzymala.moszczyńska@gmail.com)

In October 2012 in six Polish detention centers over 70 asylum seekers started a hunger strike. Discourse of the protesters was based on human rights (HR) arguments. During the strike every day Polish media published news about the situation in detention centers. It has also evoked lively discussion concerning migration policy in Poland. At the same time, both individuals and NGO's were supporting arguments of asylums seekers under strike in social media campaigns. Under pressure of public opinion, Ministry of the Interior introduced some human rights based reforms in Polish migration policy. Before the hunger strike was started, Polish NGOs conducted researches on situation in detention center and recommended changes to be introduced by Polish government, but achieved little result. Our presentation aims at discussing obstacles to apply HR approach to migration policies in

Poland, e.g. a general lack of comprehensive migration and antidiscriminatory policies in Poland, low awareness of HR issues and a public discourse on protecting national interests. We will also analyze tools applied by different social actors engaged in migration policies in order to reach HR approach. The actors interested in implementation of HR to asylum policies include two main categories, i.e. NGOs protecting migrants' rights and migrants themselves. Our presentation will be based on research results of a project Equal Treatment as a Standard of Good Governance. Within the project a desk research, a national survey and 36 IDI with NGOs representatives and policy makers were conducted. The presentation will also be based on further analyses conducted after the hunger strike in Poland.

### Collective Actors and their Position on Liberalism in Migration Policies. The Role of Human Rights and Cosmopolitanism

Lena Laube, University of Bonn | [lena.laube@sfb597.uni-bremen.de](mailto:lena.laube@sfb597.uni-bremen.de)

Christof Roos, University of Bremen | [christof.roos@sfb597.uni-bremen.de](mailto:christof.roos@sfb597.uni-bremen.de)

Liberal norms such as equality in rights, social justice, and freedom of movement are fundamental to EU member states' self-conception (Kleingeld 2012). At the border of most Western states, however, liberalism ends by excluding many non-members that seek access (Cole 2000). The tension between liberalism as a dominant societal norm and

illiberalism at the border is articulated in collective actors' positions on openness and closure (Lachat and Kriesi 2008). In the current EU economical crisis this tension more than ever becomes the subject of political debate and negotiation. Not only access of third-country nationals is debated but also freedom of movement within the EU is currently

renegotiated. We are interested in the question whether and how collective actors in Europe consider liberal norms in their claims on defining access. What is the normative stock they are referring to? Further, we focus on arguments in favour of or against openness and closure that go beyond the classical norms of political liberalism. In 2012, we interviewed three groups of collective actors, that is political parties, social partners, as well as NGOs in Finland and Austria. The findings of our research reveal that collective actors

flexibly refer to the protection of human rights and social entitlements to either promote openness or closure. Moreover, in these national debates there are new norms and values present touching on cosmopolitan ideas. Again, these are used both as arguments for more liberal or more restrictive policies. Studying normative patterns of the current debate reveals that the reference to human rights and cosmopolitanism does not necessarily push towards a more liberal migration policy.

## Understanding the Obstacles to a Human Rights-Based Approach to Migration Policies

Stine P. P. Nielsen, South Danish University, SDU | [sppn@sam.sdu.dk](mailto:sppn@sam.sdu.dk)

The paper explores, from a legal sociological perspective, obstacles of applying a human rights-based approach to migration policies, focusing on the nexus between labour immigrants and the universality of human rights. Roger Cotterrell's claim that 'sociology has no privileged way of approaching legal ideas' is questioned, taking a starting point in Stephen Castles' argument that sociology may help understand the processes of migration, and based on this understanding, contribute to the formulation of sustainable migration policies and law. The universality of human rights implies that these rights apply to all human beings. Yet, studies show that governments lack willingness to assign immigrants and natives equal rights. Thus, the universality of human rights is relativised to different groups of people; immigrants versus

natives. The legal nature of international standards and principles within the field of labour migration may also pose an obstacle to ensuring a human rights-based approach to migration policies. The non-binding nature of these principles and standards implies that states are not obliged to adhere to them. Applying a legal sociological approach to this fact, it may be suggested that the lack of binding law on labour migration leads to immigrant workers and native workers not being equal to law. The findings of this study suggest that the discipline of legal sociology contribute to an understanding of the processes of migration and the formulation of migration policies. The study suggests political and legal coherence as means to ensure a human rights-based approach to migration.

## 03RN35 - Socio-Anthropological Approaches in Migration Research

Chair(s): Catherine Delcroix (University of Strasbourg), Daniel Bertaux (Centre National de la Recherche Scientifique), Elise Pape (University of Francfort and Strasbourg)

### Influence of Labour Migration on Economic and Social Situation of Households and Family Relations (on an Example of Migrants from Tajikistan)

Sergey Ryazantsev, ISPR, Russian Academy of Sciences | [riazan@mail.ru](mailto:riazan@mail.ru)

Horie Norio, University of Toyama | [horie@eco.u-toyama.ac.jp](mailto:horie@eco.u-toyama.ac.jp)

Sharif Akramov, Russian Academy of Sciences, Institute Social-Politic Research | [sharif\\_akram@rambler.ru](mailto:sharif_akram@rambler.ru)

Elena Pismennaya, Russian Academy of Sciences, Institute Social-Politic Research | [nikitaR@list.ru](mailto:nikitaR@list.ru)

Tajikistan is one of the basic countries which send for work in Russia labor migrants. About 400 thousand Tajik labor migrants legally work in Russia. Undocumented a component of labour migration is large. Labour migration forms about 40% of GNP of Tajikistan. Influence of labor migration at micro level is great. Research has been spent in Tajikistan and Moscow. The statistics is collected, sociological poll is spent, "deep" interviews are taken from migrants and their families. Dynamics and structure of remittances from Russia to Tajikistan is analyzed. Features of formation of the budget of migrants in Moscow and households in Tajikistan, the basic items of

expenses, forms of current consumption and savings, investments into business are considered. Influence of labor migration on family relations is investigated; the phenomenon of "guest" ("parallel") marriages which the Tajik migrants in Moscow have is analyzed. Influence of migration on birth rate indicators in Tajikistan is considered. Recommendations are developed for the migratory policy on regulation labor migration. Also the idea of necessity of stimulation of employment of the population in Tajikistan for migration reduction, including by stimulation of investments of remittances of labor migrants in small business is proved.

### Re-thinking the Tensions of Ethnography as 'Caring' Relationship

Öncel Naldemirci, University of Gothenburg | [oncel.naldemirci@gu.se](mailto:oncel.naldemirci@gu.se)

Immigrating to a country and conducting research among well-established communities of migrant background pose significant methodological questions. When I decided to conduct a field work among Turkish early-in-life immigrants in Sweden by focusing on their elderly care ideals and arrangements, as a young, male, newly arrived immigrant, I stumbled through a myriad of methodological challenges concerning age difference with my informants, the way we understand ethnicity,

national identity and our class backgrounds, and the lenses through which we look at the country of settlement as well as at the country of origin. Members of ethnic communities are not eager to easily open the doors of their homes to unknown outsiders even though they share some common cultural patterns, such as habits of a same country of origin and language. Being originally from Turkey, except linguistic competence, did not present the possibilities of a field per se. As my inquiry

entailed a degree of access to the privacy of individuals and groups, their family life, their desires and frustrations, I continuously had to be emotionally responsive to their demands of privacy and cultural expectations from a young male Turkish researcher. Drawing upon methodological reflections of my field work, this article will discuss the advantages and

problems of conducting ethnography as 'caring' relationship. By doing so, the aim is to show how self-reflexivity of a migrant researcher transcends the confessional aspects of epistemology and pathways to an ontological stance where the researcher starts to understand her own experience as a migrant.

## **Mobile au pairs – Immobile left-behinds. A Multi-Sited Approach to the Study of the Costs and Meanings of Transnational au pair Migration**

**Mariya Bikova**, University of Bergen | [Mariya.Bikova@sos.uib.no](mailto:Mariya.Bikova@sos.uib.no)

Fleeing from years-long economic crisis, systematic underemployment and stalled gender roles in the Philippines, thousands of young Filipinas came to Norway during the last few years to work as au pairs in affluent Norwegian homes leaving behind husbands, children and old parents. Based on mobile multi-sited ethnographic fieldwork in Norway and the Philippines, and approaching the au pair-migration with the notion of global care chains, the paper aims to shed light on the consequences of the participation in the scheme for the au pairs, their left-behind family members and local communities in the country of origin. Based on interviews with Filipino au pairs in Norway and persons who

have been au pairs, the paper examines what impact the migration to Norway has had on the family lives of the migrants, who is taking care of the au pairs' left-behind children and family members, and how, if at all, gender roles have been reconstructed as a result of migration. 'Following' the au pairs to the villages and local communities they come from allows for exploring how the left-behind family members perceive of and experience being part of the au pair-migration and the global care chains. The perspective of the mobile migrants as expressed in the interviews with the au pairs is combined with the perspective of their immobile family members to reveal the meanings, mechanisms and costs of migration.

## **Marriage Migration between the UK and Pakistan: A Socio-Anthropological examination of Changing Gendered Subjectivities and Experiences**

**Parveen Akhtar**, University of Bristol | [parveen.akhtar@bris.ac.uk](mailto:parveen.akhtar@bris.ac.uk)

This paper examines how migratory flows between the UK and Pakistan impact upon traditional gender roles for both men and women in the diaspora and in Pakistan. Using ethnographic research including interviews and participant observation in both country contexts, I trace the changes as narrated by migrants in the UK their offspring and non-migrant counterparts in Pakistan. I am interested in how gendered subjectivities are

conceptualised and how changes are perceived and understood. In particular, I am interested in notions of temporality and levels of change both in terms of how they are viewed but equally in terms of lived experience and here I focus on the areas of intimate relationships and marriage in relation to aspirations and opportunities. In looking at marriageability and gender I also look at education and changes in this area too.

## Between the Devil and the Deep Blue Sea: Acculturation of Young Vietnamese Women in Poland

Ewa Nowicka-Rusek, University of Warsaw | [ewanowickarusek@gmail.com](mailto:ewanowickarusek@gmail.com)

The paper is based on qualitative research conducted among young Vietnamese women living in Warsaw. Field data were collected during twelve profound interviews and lasting many years acquaintance with Vietnamese diaspora in Poland. It is worth emphasising that the study was possible due to the fact that the researcher was a woman. The crucial problem of the paper is the confrontation between the theories of diasporic identities and the particular case of acculturation among young female immigrants from Vietnam, less investigated and more complex. Home/family on one hand and the Polish environment on the other, offer extremely different patterns of

behavior. Young Vietnamese women generally do not tend to escape from their Vietnam-ness though they found themselves rather Polish Vietnamese than simply Vietnamese. Polish cultural norms, particularly these concerning gender concept and gender relations, seem to them more attractive than their own traditional patterns. In the paper terms „traditional” and „modern” are used both as emic and etic categories. Usually, in the literature, the immigrant identity is described in terms of radical choices, fluidity, vagueness or flickering. However, in my research the concept of „additive”, „multi-storey” identity turned out to be more relevant.

## Peculiarity of Migration Process: Identities, Happy and Trust of Meskhetian Turks. (After Process Deportation and Repatriation)

Ekaterine Pirtskhalava, Iv. Javakhishvili Tbilisi State University | [ekaterinepirtskhalava@yahoo.com](mailto:ekaterinepirtskhalava@yahoo.com)

I propose to report on my research involving the life change of the Muslim Meskhetian (Meskhetian Turks) in Georgia after return to homeland and in USA after moving as refugees. . This presentation is a part of my research. I want show to you similarities and difference the life style this people, who was deported along time ago from homeland and now they live far away each others. In the 40s of 20th century, as a result of Stalin's social policy to clean the southern border of the Soviet Union from the “undesirable peoples”, the Muslim population, primordially comprised of the Turkish-speaking Meskhetians, were deported from the Caucasus to the Central Asia. It can be assumed, that even such closed and traditional society as it is the society of the

Muslim Meskhetians will be affected by the new social and economic mileau.. Within the scope of my research, I have closely worked with those who moved across onto the North American continent and observed Meskhetians living in Pennsylvania (Lancaster) and in Georgia ( Akhaltsikhe). My qualitative-research project participants are 30 Muslim Meskhetians living in the USA. settled in the Pennsylvania And Muslim Meskhetians living in Georgia, came back in the same period. I plan to report upon my findings that compare between the deportees who lives abroad in USA and the repatriants who lives in homeland in Georgia, in particular their identities, happy and trust.

## 04RN35 - Socio-Anthropological Research

Chair(s): Catherine Delcroix (University of Strasbourg), Daniel Bertaux (Centre National de la Recherche Scientifique), Elise Pape (University of Frankfurt and Strasbourg)

### Life stories of “pieds-noirs” in Spain as examples of the decolonization of Algeria

José I Garrigós, University of Alicante | [ignacio.garrigos@ua.es](mailto:ignacio.garrigos@ua.es)

The independence of Algeria brought with it the expulsion of the so-called “pieds-noirs” – citizens of European origin living in Algeria prior to its decolonization. Their arrival on the Spanish coasts began in the 1950’s and increased steadily until 1962. Ten in-depth, semi-structured interviews have been held with subjects who had lived in Algeria sufficient time to be able to remember their time there as well as their experience of expulsion and immigration. Posterior analysis has concentrated on social and cultural aspects along with the thoughts and feelings of the subject related to this life experience. The study aims to relate individual and societal

experiences – the lives of individuals with the society in which they find themselves – highlighting the ambivalences and contradictions which transnationality (the feeling of not belonging to any country in particular, thereby complicating social interactions and resulting in personal growth within two distinct societies at the same time) can cause. The study also highlights the importance of those social networks which existed between Algerian and Spanish families (whereby the children and grandchildren of Spanish emigrants maintained contact with their Spanish relatives) and which gave rise to the immigration from Algeria to Spain.

### Young People in Chain Migration

Pia E. W. Nyman-Kurkiala, Åbo Akademi University | [pnymn@abo.fi](mailto:pnymn@abo.fi)

Why does a group of young people from Jakobstad in Finland move to Gävle in Sweden? And why do they move back home again in a few years? What are the central circumstances affecting their decision to return? What are the mechanisms that make the migration of a few pioneers cause a whole series of migrations? Through a case study of chain emigration and chain remigration it is possible to throw some light on migration processes which are typical of our time. The study shows that migration is a collective act. In order to understand the phenomenon of migration, it is therefore necessary to deal with the level at which human relations emerge, that is, at the level of social networks. In a series of investigations into migration it has become clear that social networks play an important part when people decide to migrate and choose a destination for

their migration. Those who have studied the phenomenon of migration agree that collective processes are decisive for the phenomenon of migration. However, the question that has not yet been answered is how the collective processes are to be analysed. This study purports to show that these processes can be captured and analysed by means of network analysis and diffusion theory. By throwing some light on the social influence that can be discerned within the social networks in a process of migration, this study attempts to contribute to a deeper understanding of the social processes that play an active part in migration. The charting of the group structure of migrants and the social influence that can be discerned in connection with migration will be achieved by means of a case study concerned with chain migration to and from a

Finnish immigration colony at Gävle in Sweden.

## Theorising and Experiencing Return Academic Migration: An Autoethnographic Study of 'My' Return to Ukrainian Academe

Olena Fimyar, University of Cambridge | [olena.fimyar@gmail.com](mailto:olena.fimyar@gmail.com)

The paper is a part of a project 'Return Academic Migration in Post-Communist Europe', conducted at the Center for Area Study, Freie University Berlin in 2012. This particular paper presents an auto-ethnographic study of the author's own experiences of return to two Ukrainian universities during the academic year 2010-2011. To better understand return experiences, conflicts and struggles the author encountered during her stay, the argument draws on Foucault's (1988, 1991a, 2003) and Kharkhordin's (1995, 1999) theories about the production of subjectivity in post-communist and neo-liberal societies. Taking Foucault's

and Kharkhordin's conceptualisations further the paper argues that what we are witnessing through the examples of academic returnees and their interaction with post-communist regime is the emergence of a new type of subjectivity, subjectivity of Westernised post-communist intellectuals – a development that remains largely overlooked in the current literature. By bringing the focus of inquiry from macro-level analysis back to the subject, the paper offers powerful tools for understanding the conflict between structure and subjectivity and its particular articulations in the settings of post-communist academe.

## Native Informant, Cultural Broker? Migrant NGO workers in Austria

Sara de Jong, University of Vienna | [sara.de.jong@univie.ac.at](mailto:sara.de.jong@univie.ac.at)

This presentation seeks to synthesise migration research and postcolonial theory by tracing the (post)colonial figure of the 'native informant'/'cultural broker' in current migration regimes. It will present empirical research based on semi-structured narrative interviews with NGO workers with a migrant background whose work is to support migrants. In colonial times, selected actors of the local population served as native informants to anthropologists and colonial officers and were expected to possess privileged access to knowledge about their community. This paper will explore the parallels between the figure of the native informant and NGO workers with a migration background. It is increasingly common for organisations to have a diversity policy, with diversity being regarded as providing added (knowledge) value. Many NGOs supporting

migrants emphasise that their services are available in multiple languages and that their employees have intercultural competences. Migrant employees are therefore actively recruited to work in NGOs's service delivery for migrants. This paper will discuss how migrant employees of Austrian mainstream non-governmental organisations, who support migrants, are positioned within their organisation, with a particular focus on the knowledge that these workers are supposed to bring or consider themselves to be able to deliver. I will argue that while diversity approaches stressing 'ethnic capital' can be an important corrective to the earlier understanding of migration background as a deficit, it bypasses structural questions about power, inequalities and complicities with disciplinary asylum regimes and racialised discourses.

## Observe the Domination in the Country of Origin of Migrants : from Reflexivity of the Researcher to Analysis of Social Logics of Emigration

Hugo Bréant, University of Paris 1 Panthéon-Sorbonne | [breanthugo@gmail.com](mailto:breanthugo@gmail.com)

My thesis focuses on the trajectories of Togolese and Comorian migrants, heard as both geographical and social mobilities. By adopting the prism of the country of origin, I conducted a multi-sited research, both in France, Togo and Comoros, based on life histories and ethnographic observations. The objective is to analyze through individual trajectories, social mobility across borders and the weight of the social differentiation in migration profiles. Investigate in the country of origin brings new challenges to the researcher. First, by his presence, his skin color and all that can be associated with it, the researcher can be taken, often unwittingly, in a complex game that combines colonial history and postcolonial representations and fantasized illusions about the countries of origin and destination. These variable social

relations can both promote contacts or block certain relationships. Then, turning to the country of emigration, one realizes that beyond the domination experienced by international migrants in the host country, the domination can be very intense in the country of origin. Family expectations and social norms related to the social figure of the migrant are indeed very strong and migrants must fulfill a set of more or less tacit obligations to negotiate their new family and social status. But these personal reading of the researcher, in moral terms, beyond the strong reflexivity it can generate, must first be overcome in order to provide some analysis. Indeed, these social experiences observed during the survey can help expand the theoretical considerations, in my case social differentiation and inequality among migrants.

## 05RN35 - Diasporic Translations: Reformulating Ethnic and Political Identities in Diaspora

Chair(s): Ipek Demir (University of Leicester)

### Diaspora or just an Ethno-Linguistic Minority? Estonian Russians and Reception of Russia's Diaspora Policies.

Anna E. Korhonen, University of Helsinki | [anna.korhonen@helsinki.fi](mailto:anna.korhonen@helsinki.fi)

This paper looks into the dynamics of a specific diaspora-condition where an ethnolinguistic minority does not identify itself as a diaspora closely linked to an external homeland, but where this external homeland is making efforts to consolidate a diasporic sense among its co-ethnics abroad. The case examined is Estonia's proportionally large ethnolinguistic Russian and Russian-speaking community. The presence of Estonia's Russophone population

mostly dates back from the Soviet period. When Estonia regained independence in 1991, these people turned from being part of the Soviet core Russian ethnos into a group whose membership in the Estonian state and nation had to be negotiated, and the potential for them being, or being seen as, a diaspora related to Russia has throughout had ramifications in the relations of the ethno-linguistic group to its actual home country. In

particular, the potential for the “external homeland” to utilize diaspora issues for its power political purposes may complicate the relationship between the “host” country and the ethno-linguistic minority. The analysis is

based on interviews collected in 2010-2011 as well as media material. The presentation focuses on the reception of Russia’s intensified diaspora policies, especially among Estonian Russians and Russian-speakers.

## **The Second-Generation Kurdish Diaspora in Sweden**

**Barzoo Eliassi**, Lund University | [barzooeliassi@gmail.com](mailto:barzooeliassi@gmail.com)

This paper discusses the formation of Kurdish diaspora in Sweden with a particular focus on the second-generation Kurdish immigrants. Discussing various modes through which Kurdish identity is constituted, contested, affirmed and denied, I will propose a more nuanced discussion of what Benedict Anderson calls “long-distance nationalism” that is

according to him characterized by unaccountable acts, hypocrisy and extremism. In order to avoid homogenization of different diasporic groups, I will argue that any analysis and assessment of diaspora politics should take into consideration both group positions of diasporic groups and national contexts prior to and after migration.

## **Fighting ‘the Last Dictatorship in Europe’: the Case of the Belarusian Diaspora in Britain**

**Ivan Kozachenko**, University of Aberdeen | [r04ik9@abdn.ac.uk](mailto:r04ik9@abdn.ac.uk)

The concept of ‘diaspora’ has received a large amount of attention in sociological scholarship in recent years. It is valued for providing a solid theoretical and methodological foundation for the investigation into the political mobilisation and engagement of various migrant populations. Moreover, new information and communication technologies (ICTs) are thought to be of particular importance for diasporas to consolidate their political efforts, to influence the country of origin, and to express national belonging. The proposed paper investigates the case of the Belarusian diaspora in Britain – its expression of national belonging online and the ways ICTs are utilised to challenge the current political regime in Belarus politically. By some scholars the latter is portrayed as ‘the last dictatorships in Europe’. Resting on the theorisations of the nation as ‘imagined

community’ and ‘invented’ entity, this research points out the main historical narratives, symbols, and myths employed in the making of the Belarusian diaspora in Britain. Furthermore, it provides a detailed analysis of the role of ICT for the processes of political mobilisation and communal activities. In doing this the study employs a combination of online and offline research techniques that include qualitative content analysis of diasporic websites and expert interviews with the organisers of the Belarusian diaspora. The findings reveal distinct ways of ‘imagining’ of the Belarusian nation by the diaspora in Britain and by the ruling political elites back in Belarus. Moreover, they illustrate the importance of the new ICTs in opposing the supranational neo-Soviet narratives employed by the Belarusian government.

## Who is a Turk? Migration, Narratives and Identity in the New World

Zeynep Selen Artan-Bayhan, CUNY, the Graduate Center | [zartan@gc.cuny.edu](mailto:zartan@gc.cuny.edu)

This research is an attempt to comprehend the identity construction processes of first generation Turkish immigrants in New York. It aspires to understand how Turkish immigrants, coming from a society with long-lasting identity crisis, define their ethnic and religious identity among non-Muslims and other Muslim groups. Competing narratives (modernist and Islamist) that claim hold on different identities (European, Middle-Eastern) have influenced Turks' perception and definition of self. Modernist narrative, associated with the founders of the republic, claims a European identity denying

resemblance to Muslim societies. Islamist narrative, which became influential during the 1980s, asserts a Turkish identity that prioritizes Muslim-ness and aspires to reunite with the Muslim world as in the days of the Ottoman Empire while privileging Turkish culture. This study aims to uncover the ways in which these narratives resonate in the identity formation processes in the New World. It also aspires to understand how Turkish immigrants renegotiate their identity in a society where Islam has become stigmatized after the 9/11 attacks.

## 06RN35 - Diasporic Translations: Reformulating Ethnic and Political Identities in Diaspora

Chair(s): Ipek Demir (University of Leicester)

## National Vision Organization in Europe: a Path to Religious Transnationalism ?

Tomris Ozlem Yilmaz, Paris IV Sorbonne | [ozlemyilmaz15@hotmail.com](mailto:ozlemyilmaz15@hotmail.com)

The "National Vision" ideology which plays a key role in the process of gradual politicization of Islam in Turkey since 1960s takes place today in the Turkish immigrant community in Europe. Besides being a way of transmitting ideology, this immigrant community offers opportunities for religious socialization to its members and represents a relevant field to study the question of transnationalism. My research explains the political involvement of the community vis-à-vis the country of origin and the influence of Turkey's diaspora politics'

on the development of the community. This community would also allow us to study the politico-religious integration strategies in the host countries, especially in France and Germany. Finally it will focus on the formation of national identities in the host countries by discussing the role of religious communities on the (re)formulation of national identities and questions religious nationalism over the characteristics of "Turkish Islam" to show in particular the connection between the religious revival and the idea of the Turkish nation.

## Migration, Ethnicity and Identity Politics on Social Network Sites in the former Soviet Union

Alexey Gorgadze, Higher School of Economics, St. Petersburg | [alexei.gorgadze@gmail.com](mailto:alexei.gorgadze@gmail.com)

Daniel Alexandrov, Higher School of Economics, St. Petersburg | [alexandrov.daniel@gmail.com](mailto:alexandrov.daniel@gmail.com)

Many young people from the Caucasus (both from independent states and the republics of North Caucasus) live in respective diasporas in many cities all around Russian Federation as their parents moved there earlier or because they went to study in Russian universities. Social network sites provide them with powerful tools to form e-diasporas and engage in identity work and boundary work, forging networked virtual communities with different identity labels. We study diaspora groups from the Caucasus on VKontakte (VK), Russian social network service most popular among young Internet users in the fSU - about 195 million accounts by December 2012. Certain open features of VK profiles allow for analysis of geographic mobility and educational background of users, for example, how many graduates of high school in Baku (Azerbaijan) are now studying in the universities in different

cities. Another important feature is the ability to make 'friendship' ties between groups and public pages, which allows for network analysis on the level of groups. In particular we interested in groups and public pages that create virtual communities with local identities ("We are from Baku") or regional 'supra-ethnic' identities ("Men from Caucasus are cool" or "United Caucasus"). Many users participate both in ethnic groups narrowly defined ("True Armenians" or "Real Azeri Men") and 'supra-ethnic' groups at the same time. We will present the data on ethnic, gender and geographic composition of different groups, on their activity, and on inter-group ties. We will discuss the issues of migration, gender, language and ethnicity as bearing on identity performances and identity politics in online communities of migrant youth.

## "Good Romanian Gipsy Looking for a Home". Politics of Identity and Redefinition of Belonging between Roma and non Roma in Italy.

Pietro Cingolani, FIERI, Torino | [pietro.cingolani@fieri.it](mailto:pietro.cingolani@fieri.it)

A strong tradition of anthropological studies has highlighted how institutions tend to produce classifications and put in place a process of framing, in which immigrants are identified in advance and are therefore constructed as objects of policy (Amselle 2008). From the analysis of the policy towards the Romanians Roma in Italy, four recurring framings can be identified: Roma are described and dealt with as a criminal threat, as a group radically different and hard to integrate, as an invisible presence, or as a disadvantaged group to assist. These framings, in addition to directing social interventions and shaping the

public perception of the Roma, also mould the self-definition and projectuality of the migrants themselves. This paper is the result of an ethnographic fieldwork conducted among Roma and non Roma Romanians immigrant in Italy, in Turin, and in Romania. The research brought to light complex dynamics. Some migrants rediscovered their ethnicity, benefiting as "nomads" from special housing projects; some handle the features of their identity in a "segregating" form (Hannerz 1997) by presenting themselves to the institutions as Roma, and in their private life as non-Roma. Moreover, there are those who, despite not

having Roma ancestors, in Italy define themselves "gypsy", by adopting the survival strategies of the Roma. Some use the contraposition between their own Romanian identity and the Roma one, as the basis for a political career. In a time when a dramatic

economic and political crisis makes it more and more competitive for immigrants to gain access to resources and basic civil rights, this research has pointed up how, in Italy, the boundaries between identity categories are constantly moved.

## Ascribed versus Assumed Civic Engagement in the Diaspora

**Malina I. Ciocea**, National University of Political Studies and Public Administration, Bucharest | [malina.ciocea@comunicare.ro](mailto:malina.ciocea@comunicare.ro)

**Alexandru I. Cărlan**, National University of Political Studies and Public Administration, Bucharest | [alex.carlan@comunicare.ro](mailto:alex.carlan@comunicare.ro)

**Irina D. Madroane**, West University of Timisoara | [dianamadroane@gmail.com](mailto:dianamadroane@gmail.com)

Intensified cross-border mobility and practices shaped by transnational situations have led to the emergence of strategic discourses and categorizations in the public sphere. They engage in the repositioning of the new migrants both within the diaspora and within the homeland, according to a number of criteria, among which civic engagement. Our research will follow the relation between the self-definition of the Romanian diasporic community and recurring representations of the diaspora back home. We consider that more attention is needed to the public construction of diasporic identities and transnational situations, in particular from perspectives that go beyond the top-down analysis of policy documents, focusing instead on grassroots interpretations of public discourses or including homeland actors alongside members of the diaspora.

Establishing the role of public discourse in the construction of transnationalism and identity formation requires a comparative approach among various claims and projects, actors and transnational situations, ways of constructing distance and belonging to communities. Hence, we have conducted and analyzed focus groups with Romanians with or without relatives or contacts abroad as well as interviews with members of the Romanian diasporic community in Italy. Our main focus in analyzing the data in this corpus is to see how projects and identities assumed by the diaspora correlate with the civic engagement of the diaspora ascribed by the homeland. Our analysis aims to account for the emergence of competing definitions of diasporic identity and the construction of migration phenomenon in public discourse(s).

## Exploring the Armenianness and We-ness: Debating Identifiers of Ethnic Identity

**Lülüfer Körükmez**, Ege University, İzmir | [lulufer.korukmez@ege.edu.tr](mailto:lulufer.korukmez@ege.edu.tr)

Migration flows from Armenia to Turkey after dissolution of Soviet Union has brought out a debate and divergence among Armenians "the [Turkish] citizens" and "Hayasdanlılar" [those from Armenia]. At the time when first Armenian immigrants have started to come Istanbul, Armenian minority was surprised,

curious and constrained. On the one hand Turkish citizen Armenians were meeting Armenians from a country which is titled with the name of their ethnicity. During the Soviet period –also the oppression period for Turkish citizen Armenians in Turkey- there was almost no contact between Armenians in two

countries. So was surprising to meet “other countries’ Armenians”. On the other hand immigrant flows would put Turkish citizen Armenians in more vulnerable position since the immigrants might attract attentions on Armenians. In the meantime an “unexpected” contention appeared: what Armenianness is and who the proper Armenian is; since each group had been given shape their ethnic

identity in relation of politic, cultural and social environments they live in. In this paper, I’ll try to analyse how two groups of Armenians discuss and refigure the Armenianness and we-ness as well as shed light on the main sites where the controversies emerge which are accepted as identifiers of the ethnic identity by the members of two groups.

## 07RN35 - Who are Those Europeans who Leave Europe?

Chair[s]: Catherine de Wenden (Centre National de la Recherche Scientifique)

### The Impact of Economic Crises on Migration: A Case Study of the Changing Migration Patterns between Peru and Spain (1985 – 2012)

Miguel F Morillas, University of Barcelona | [mmorilga11@alumnes.ub.edu](mailto:mmorilga11@alumnes.ub.edu)

New evidence in international migration suggests there is a growing movement of Europeans to other continents due to the impact of the current economic crisis (2008 - ). In Southern European countries, where the crisis has particularly affected the labor market, emigration has noticeably become a prevalent phenomenon. Within the region, Spain is the country with proportionately highest number of labor migrants, the largest share of them originally from South America. Expelled mostly by an economic crisis at the end of the 80s, the Peruvian contingent was the first of South American nationalities to arrive in significant numbers to Spain since it turned into a destination country. Conversely, due to the current crisis, there is a marked increase in the presence of Spanish nationals in Peru, both Spanish-born and Peruvian returnees.

Using documentation on population movement between Peru and Spain, this case study aims to compare how the two economic crises have triggered different migration schemes. First, the paradigmatic pattern of South-North migration is compared with a more recent, allegedly increasing, North-South pattern. Second, migrants’ profiles in these two processes are investigated in order to explore their potential motivations to migrate. Special attention is given to push and pull factors for the migration of the Spanish nationals to Peru in the context of the current economic crisis. Through a quantitative and qualitative approach, this study illustrates the new configuration of migration in Europe and assesses its similarities and differences with the South-North migration pattern.

## Seeking Hope for the Future. Spanish and Italian Youths' New Migration to Ecuador.

Gabriele Tomei, University of Pisa | [g.tomei@sp.unipi.it](mailto:g.tomei@sp.unipi.it)

Sara Caria Mazzanti, Instituto de Altos Estudios Nacionales, IAEN | [sara.caria@iaen.edu.ec](mailto:sara.caria@iaen.edu.ec)

The recent economic crisis has had severe consequences on Southern European countries, where it generated high unemployment rates and an increasing number of people living in poverty, especially in low-middle class. Young and qualified Spanish and Italian professionals are among the most vulnerable sectors of society and many of them decide to migrate in search of better opportunities. Latin America has become an attractive destination, due to the opportunities offered by its growing economy, similar language and culture and the existence of migrant systems which link people, local societies and economic systems. This paper will focus on a comparison of Spanish and Italian new migration to Ecuador. Ecuador is an emerging economy and the best performing one in the Andean Community. Young and qualified people, who see no possibility of labour integration at home, migrate to Ecuador

with "great expectations" to start a rewarding professional carrier. Some of them are also attracted by the possibility to participate to and/or witness the political and social reforms process that characterizes Ecuador. These represent some of the elements that contribute to the sustained growth of a South European community in Ecuador. The research pretends to investigate the multi-dimensional drivers that determine the decision to migrate and, consequently, the pathways in the migratory project of the new arrivals into the Italian and Spanish communities in Ecuador. After a preliminary investigation of the forms, nature and quality of the emerging new migratory systems into the Italian-Ecuador and Spain-Ecuador corridors, the city of Quito will serve as pivotal area for an ethnographic analysis of the life-stories of the two target group

## Leaving Europe to go to Palestinian Territories? Looking for Work, Experience and Adventure

Clio Chaveneau, Paris Descartes - Sorbonne | [clio.chaveneau@gmail.com](mailto:clio.chaveneau@gmail.com)

Since the Oslo Agreements and the establishment of the Palestinian National Authority, the flow of international peoples into the Palestinian Territories has continuously increased. Since 1993, international donors have invested massively in aid and development sectors, increasing the number of aid workers in the West Bank, the Gaza Strip and East Jerusalem. This presence dropped sharply in the first years of the second Intifada, but inflows continue again at the first signs of a relative stability in the political situation. These foreigners, coming from developed countries – mainly Europe and North America- come to

live in the Palestinian Territories and to take advantage of job opportunities within international agencies, local and international Non-Governmental Organizations, as well as Palestinian institutions. This communication aims to present those thousands of young highly-qualified Europeans and North Americans who left their home countries in order to live and work in the Palestinian Territories – in a Southern country and in conflict context. Based on field study, it will show how expatriation is a significant professional opportunity for highly qualified youth working in internationalized careers.

Thus, this communication will be the occasion to analyze the pull factors that result in migration to the Palestinian Territories, but it will also highlight the push factors in the movement out of Europe. Indeed, this phenomenon in the Palestinian Territories

needs to be understood in the recent context of the economic crisis occurring in European countries, which has caused many young professionals to expatriate and to extend their time abroad.

## **A New Trend or More of the Same? Recent Emigration from Ireland and Italy**

Irial Glynn, University College, Cork | [irial.glynn@gmail.com](mailto:irial.glynn@gmail.com)

Guido Tintori, Leiden University | [g.tintori@hum.leidenuniv.nl](mailto:g.tintori@hum.leidenuniv.nl)

According to media reports and raw official data, the economic crisis of 2008/9 has led to the recurrence of emigration from Ireland and Italy. Emigration thus seems a path-dependent response the citizens of both countries resort to in times of economic difficulty. In recent decades, Ireland and Italy became countries of immigration. Significantly, a closer look at official statistics shows that immigrants returning home or moving on to other countries less affected by the crisis have made up a substantial proportion of the people leaving Ireland and Italy over the last five years. Nevertheless, many immigrants have remained in both countries and have been united in recent years with their family members as they settle down. This has led to

considerable immigration taking place at the same time as extensive emigration is reoccurring. Comparing and contrasting Ireland and Italy's experiences of mixed migration since the economic crisis will provide a timely overview of contemporary developments. By examining who is leaving Ireland and Italy today, why they are departing and, when possible, where they are going, this paper will build up a profile of an important group of people who have yet to be studied in any real detail. In addition to underlining parallels with past emigration, this paper will also highlight the novel aspects of the current flows of nationals, such as the increasing variety of destinations Irish and Italians are going to around the world today.

## **A case of European Emigration in Time of Crisis : the French Teachers in Casablanca (Morocco)**

Sylvain Beck, Paris 4 - Sorbonne | [sylvain\\_beck@yahoo.fr](mailto:sylvain_beck@yahoo.fr)

This presentation is focused on the different types of French teachers living in Casablanca. That is provided from my ongoing PhD ethnographic fieldwork. During a six-months trip in the city, I interviewed thirty teachers about their migration. The socio-anthropological analysis considers their individual life stories connected with their representation of time and space. The teachers are well located in the city because of their work at school and their involvement in social activities. They have different professional

status but they are working at the same kind of institutions of education. Their position in the social space within the city reveal the specificities of French people in the Moroccan context. This presentation highlights the characteristics of their departure. Why do they leave whereas the most of teachers stay in France ? Are the factors economic to remove to Morocco rather than another country ? My first observations emphasize that the subjectivity of French people is also determined by structural conditions. I will

propose a typology linking the discourses about their life stories and their everyday life in Casablanca at the local, national and transnational scope. Their options are conditioned by pictures, professional opportunities, individual influences, national and familial stories. Thus, the common word

'expatriate' to define French abroad appears to notice a social distinction between the migrants from the Northern countries and the migrants from the Southern countries. The distinction is rather their legal freedom of circulation because the reality is more complex than only the professional status.

## 08RN35 - What Kind of "Turn" for Migration Research? Methodological Challenges in Times of Crisis, Critique, and Change

Chair(s): Kenneth Horvath (University of Education, Karlsruhe), Rossalina Latcheva (European Union Agency for Fundamental Rights, Vienna)

### Neither Natural nor Irrelevant: a Different Theory of the Nation-State for Migration Studies.

Djordje Sredanovic, University of Bologna | [djordje.sredanovic2@unibo.it](mailto:djordje.sredanovic2@unibo.it)

Transnationalist theory presents a strong critique of the assumptions that nation-states are homogeneous, ancestral and autonomous realities that can be conceptualized as unitary social actors. While a large part of migration research is still characterized by methodological nationalism, on the other hand some researches posit unlimited cultural fluidity and/or generalized strong agency of the migrants. The latter theorizations sometimes assume that homogeneous nation-states existed in the past and that their weakening in the late 20th Century made them irrelevant. In other cases, as migrations disprove the idea of distinct and homogeneous social unities, the national dimension is rejected as deceiving. I will suggest to consider nation-states as loci of power, none of which correspond to homogenous or historically continuous cultures, but all of which promote nationalizing

cultural policies. In the same way, no nation-state can be considered an unitary actor, or to be autonomous from the global organization of power, but each nation-state is one of the strongest determinants of the opportunities of life of its population, citizen and non-citizen and permanent and temporary. This concepts of the nation-state allows to continue to study the national dimension of migrations avoiding both methodological nationalism and over-optimistic postnational approaches. It allows to study the power of states in defining possibilities of migration and migrants' rights without falling in fallacies as "national interest". It also allows to study cultures not as attributes of entire populations but as symbolic constructs that can be manipulated by hegemonic institutions, including the nation-states.

## Reactive Nationalism through the Lens of Methodological Transnationalism: Gains and Limitations

**Alexandru I. Cărlan**, National University of Political Studies and Public Administration, Bucharest | [alex.carlan@comunicare.ro](mailto:alex.carlan@comunicare.ro)

**Irina D. Madroane**, West University of Timisoara | [dianamadroane@gmail.com](mailto:dianamadroane@gmail.com)

**Malina I. Ciocea**, National University of Political Studies and Public Administration, Bucharest | [malina.ciocea@comunicare.ro](mailto:malina.ciocea@comunicare.ro)

Labour migration in the European Union has fostered strong nationalist attitudes among the population of host countries, which have, in turn, shaped public policies. At the same time, it has generated mixed reactions in the migrants' homelands, which amount to both the instrumentalization of diaspora for the purpose of attracting transnational capital, and what can be labelled as reactive nationalism: negative stereotypes, reinforcement of definitions of an allegedly threatened national identity, exclusionary behaviour – as regards, for instance, the migrants' participation in elections. While discriminatory practices and nationalist attitudes in host countries have been intensively studied, the engagement of homeland actors in similar practices remains under-researched. Moreover, proponents of transnational studies have strongly advocated methodological transnationalism as the

appropriate framework for gaining insight into the practices and discourses emerging from transnational situations. Is it possible, however, to completely discard methodological nationalism and its units of analysis? Our paper engages in the analysis of the Romanian diaspora from a position that is specifically transnational, looking at three levels of identification: 1. self-representations of the Romanian diaspora (analysing data from interviews); 2. national and diasporic media representations; 3. identity constructions of the diaspora, elicited through focus-groups with non-diasporans. Aiming to account for various instances of reactive nationalism, we bring new arguments for a dialectical complementarity between methodological nationalism and its counterpart – methodological transnationalism.

## Transnational Research Strategies for Migration Studies: MultiSite/Mixed-Method

**Margit Fauser**, Bielefeld University | [margit.fauser@uni-bielefeld.de](mailto:margit.fauser@uni-bielefeld.de)

Contemporary migratory dynamics, new forms of mobility and the other associated border-transcending phenomena importantly contribute to social change which requires reviewing existent and developing new sociological concepts and methodological approaches. In this debate transnational methodologies are currently emerging as a delineated field of epistemology, research strategies and techniques. From the critique on methodological nationalism, a transnational approach problematizes national borders and

the essentializing character of the 'ethnic lens' in search of ways to go move the nation state container. While there seems to exist a general agreement on the basic methodological principles, their translation into techniques and methods applied in transnational studies is starting to receive more attention now as well. This paper discusses several strategies that can be employed in the study of transnational phenomenon, especially in the field of cross-border movements and practices. Thereby it takes up relevant critiques, offers ways to

confront them and points to remaining limitations. It specifically discusses first, the increasingly acknowledged strategy of multi-site research, the debate on 'depth' it has provoked as well as the continued role of place and of (national) borders that sometimes have moved to the background in this strategy; and second, the use of mixed methods in

transnational research is addressed, especially the combination of qualitative and quantitative data and analysis, including the need for longitudinal data collection. The paper draws on experiences from an ongoing research project on transnational exchanges across the German-Turkish borders and its implications on both sides.

## 09RN35 - What Kind of "Turn" for Migration Research? Methodological Challenges in Times of Crisis, Critique, and Change

Chair(s): Kenneth Horvath (University of Education, Karlsruhe), Rossalina Latcheva (European Union Agency for Fundamental Rights, Vienna)

### Studying ATII Dynamics in Times of Crisis: Beware of Mislabeling Qualms as Hostility

**Sebastian Rinken**, Consejo Superior de Investigaciones Científicas (CSIC) | [srinken@iesa.csic.es](mailto:srinken@iesa.csic.es)

When studying attitudes towards immigration and immigrants (ATII), migration scholars often rely on group-competition theory as main conceptual tool; its premises are intuitively appealing and backed by ample evidence. Thus, increasing unemployment and surging immigration are widely expected to foster not only restrictive policy preferences on the autochthonous' part, but also a retrenchment against significant out-groups, with ethnic and racial prejudice potentially entering the fray. However, the vast acceptance of group-competition theory has come at the expense of analytical accuracy. It is not uncommon for ATII researchers to conflate the measurement of views regarding the impact of international labor migration on the receiving society, on one hand, with indicators regarding attitudes on ethnic and racial diversity, on the other. At its limit, any unfavorable opinions on immigration-

related policies come to be classified as evidence of gratuitous hostility. As will be argued in this paper, such procedures are both scientifically flawed and politically irresponsible. From a methodological viewpoint, the quest for indirect gauges of racist attitudes does not justify turning any unfavorable view on international migration and its administrative management, into supposed evidence of inherently illegitimate out-group adversity. From a substantial viewpoint, such de-legitimization of restrictive policy preferences potentially contributes to a pressure-cooker effect that eventually, is prone to enhance the appeal of populist demagogues. Recent empirical data are used to assess the extent to which, in conditions of severe economic crisis, both major ATII dimensions may follow distinct trajectories.

## Do 'Cultures of Life Satisfaction' actually Travel?

**Marian Vasile**, University of Bucharest | [marian.vasile@sas.unibuc.ro](mailto:marian.vasile@sas.unibuc.ro)

**Bogdan Voicu**, Romanian Academy of Science and Lucian Blaga University of Sibiu | [bogdan@iccv.ro](mailto:bogdan@iccv.ro)

This paper exploits the idea of cultural embeddedness of subjective well-being (Diener & Suh, 2000; Lu & Gilmour, 2006), and considers the natural experiment of international migration to further refine it. The migrants grow up in a certain culture of life satisfaction and may migrate to a different one. Social comparison theory (Suls & Wheeler, 2012) suggests that both cultures should work as reference frameworks to derive subjective wellbeing. We claim that their levels of life satisfaction will be subject of a dual contextuality. First, the cultural heritage from the country of origin has pervasive influence

long after migration. Second, there is the average level of satisfaction in the country of current residency, towards which a permanent upward adjustment is likely to occur. The two hypotheses are completed by structural constraints. At conceptual level they can be derived from Cummins' (2004) argument upon the normativeness of life satisfaction, from the life-cycle theory (Modigliani, 1957), and from insights drawn from the debate around the Easterlin paradox. For testing, we employ multilevel cross-classified models on data from the 2008 wave of the European Value Survey.

## The Crisis, Displacements, Cities, and Migrants

**Ayse Caglar**, University of Vienna | [ayse.caglar@univie.ac.at](mailto:ayse.caglar@univie.ac.at)

**Nina Glick Schiller**, Manchester University | [nina.GlickSchiller@manchester.ac.uk](mailto:nina.GlickSchiller@manchester.ac.uk)

This paper aims to address the varying relationships between migrants and cities that are differently positioned within the crises-ridden processes of the current neoliberal globalization. The impacts of the crisis on cultural industries, particularly on culture-led urban development, on its discourses and policies and on the powers of the nation states are central in addressing the location of migrants in the uneven landscape of urban economies, politics and culture. We argue that the reconfiguration of power hierarchies and the crisis might be changing the opportunities

available in different cities with consequences to the ways migrants are inserted in the social, political, economic and cultural landscapes and imaginaries of cities. On the basis of empirical data from different European cities (including the European Capitals of Culture), we explore the varied processes of urban renewal in cities of different scalar positioning and geographical location and analyse the dynamics unleashed by the crises in terms of spatial and social displacements and the place of migrants in these processes.

## 10RN35 - The Crisis' Impact on the Economic and Social Integration of Immigrant Populations in Europe: Empirical Evidence and Conceptual Frameworks

Chair(s): Joanna Napierala (Trinity College, Dublin), Anna Wojtynska (EDDA Center of Excellence), Sebastian Rinken (Instituto de Estudios Sociales Avanzados)

### The Nature of Russian Migration to Europe in Times of Crisis

Liubov Bronzino, Peoples' Friendship University of Russia, Moscow | [lbronzino@gmail.com](mailto:lbronzino@gmail.com)

Russian emigration has its own specifics related to the fact that for the general population a "crisis" is a part of a purely European phenomenon. The poorest part of the society is sure that Europe (European values related to human rights, market economy and liberal democracy) is failing, and this is manifested by the "crisis". So for traditionally the most vulnerable and marginalized populations, migration seems pointless. However, the statistical analysis suggests that migration to Europe from Russia is well gathered after the presidential election. It is specifically predominant amongst the middle class. Russian migrants in Europe tend to already have higher education, higher-paying jobs, own their own homes and are used to quite a high level of material and cultural consumption. All of this the migrant is ready to leave for the sake of (sometimes illusory)

prospects in Europe. Thus, the desire to leave Russia is expressed, and, increasingly, is undertaken by those who are the backbone of the Russian society. These are people who are sufficiently secure at home and their desire to emigrate is not related to any kind of financial distress. As it is shown in the biographical studies carried out by us, current migration is related to political reasons - the lack of the freedom of speech and the overall inability to influence the political destiny of the country. This general conclusion was made based on extensive research which sought to determine the nature of the Russian migration to Europe. It is defined as representing a kind of "new wave of dissent", caused primarily not due to economic distress, but rather, because of the political futility of the regime in the eyes of the middle class.

### Changing Attitudes to Immigration in Europe: Examining Time and Country Differences

Jacqueline L Scott , University of Cambridge | [jls1004@cam.ac.uk](mailto:jls1004@cam.ac.uk)

Rory Coulter , University of Cambridge | [rcc46@cam.ac.uk](mailto:rcc46@cam.ac.uk)

European societies have been experiencing increasing immigration. With the ongoing economic crisis and the widespread increase in job insecurity, it would not be surprising if the rise of anti-foreigner sentiment in European societies continued and increased. Using data from five rounds of the European Social Survey between 2002 and 2010, we use hierarchical

linear modelling to examine possible mechanisms that underpin changing attitudes to immigration, across time and place. We examine data from twelve countries in Europe (Denmark, Germany, France, Netherlands, Sweden, the United Kingdom, Norway, Ireland, Switzerland, Spain, Portugal and Poland). These differ markedly in terms of labour

market regimes, migration patterns, and response to the current economic crisis. We find considerable country differences in the trajectories of attitudes to immigration, across time. We use two distinct measures of attitudes to immigration: one which consists of perceptions of ethnic threat, and the other support for restrictions on immigrant numbers. Our multivariate findings broadly confirm the claims of Davidov and Meuleman (2012) about the consistent importance of

human values such as 'universalism' and 'security' for explaining attitudes towards immigration restriction, once economic and labour market factors have been taken into account. However, there are intriguing country and time differences in the main drivers of attitudinal change. We suggest that the ways immigration attitudes vary by time and country are more important than academic literature or policy rhetoric commonly acknowledge.

## Which Network Structures and Strategies Provide Greater Integration to Immigrants in Spain?

Roger Campdepadrós, University of Girona | [roger.campdepadros@udg.edu](mailto:roger.campdepadros@udg.edu)

Ana Vidu, University of Barcelona | [ana.vidu@ub.edu](mailto:ana.vidu@ub.edu)

In this paper, we present the results of a quantitative research on the role of social capital in determining the migrants socioeconomic position and their social mobility in Spain. This research is part of the RTD project "Social Networks as a Social Support Providers" (2008-2011) PSI 2008-01937, and we analyze data from the National Survey on Immigration, the largest in Spain to date. The theoretical framework draws from different classic contributions on social capital and social networks, and is then applied to the analysis of migrant social networks. For example, we focus on the effects that the different social ties have on social integration (Granovetter, 1973) or the kind of strategies migrants develop: concentrating a great number of family members in the country of destination, or a family network dispersion strategy between countries and regions (Stark

& Taylor, 1989). We constructed a typology of social network structures to indicate these strategies, and we analyzed the degree of socioeconomic promotion they provide. Likewise we highlight differences among countries of origin. In brief, we confirm, first, that in the case of first generation of migrants in Spain large networks, even though they help the migrant, do not provide an upward mobility; on the contrary, smaller networks sustained by a dispersion strategy do achieve this. Secondly, we found that the exclusion that migrants of certain origins face prevent them from having an upward mobility, even though they have extensive social support networks. Thus, the Spanish social structure, discriminates certain origins, and in addition, it does not favor the development of their social networks nor the promotion through these networks.

## Social Cohesion at Risk in Small Italian Cities

Micol Bronzini, Marche Polytechnic University | [m.bronzini@univpm.it](mailto:m.bronzini@univpm.it)

Immigration to Italy is a relatively recent process, become consistent in the last 15 years. For this reason, migrants, who were just undertaken integration in the labour market and in the social context, are those who bear the more hard consequences of the actual crisis. They have been the first at losing their job, and their homes. Moreover, the economic crisis and the impoverishment of Italian families have foster the competition between lower middle class natives and migrants, undermining a recent, fragile and ungoverned model of social cohesion. Beyond the abstract outlooks of migration policies it is the daily life, which takes place in neighborhoods and public spaces, that shapes multicultural relations and practices. Nonetheless, there is a lack of policies trying to detect preventively rising tensions and to prevent them, especially when small-medium sized cities are concerned. The

paper analyses the crisis impact on the economic and social integration of migrants in a relatively prosperous region of Italy, the Marche, through secondary data analysis, in depth interviews and focus group with local administrators, social workers, school managers, parish priests and immigrants themselves. Data collected show the risk of an increasing urban segregation, both in living settlements and schools attendance, but also alarming anti-immigrant populism, enhanced by the media, and reflecting in controversial policies, as those concerning exclusion in access to public housing or promoting repatriations. At the same time the paper aims at sharing good practices arising from the bottom, like social mediation projects in problematic neighbourhood and self building programmes involving both Italians and immigrants.

## Embittered by the Crisis: Native-Migrant Dynamics in the Prato Industrial District

Antonella Ceccagno, University of Bologna | [antonella.ceccagno@unibo.it](mailto:antonella.ceccagno@unibo.it)

This paper addresses the dynamics unleashed by the crisis by focusing on the relationship between Chinese migrants and the city/industrial district (ID) of Prato, Italy. Prato is famous as the 'exemplary' Italian ID (Becattini 2000) and one of the areas in Europe with the highest Chinese population density. A previously thriving textile ID, Prato has been hard hit by the crisis. More recently also the fast fashion centre run by Chinese migrants is confronted with a multi-layered crisis. This paper discusses how global, European and local forces contribute to shape the fate of Chinese migrants in the ID. Dramatic changes in the arrangements within Chinese workshops, mainly dictated by global shifts in international migration patterns, are

compounded with the fierce economic crisis in Europe and Italy. Building on conceptualization on the ways in which migrants and the cities shape and mold each other (Glick Schiller and Caglar, 2011), this paper contends that the crisis of the Chinese-run fast fashion industry is also a by-product of the crisis of the ID's core textile industry. Local stakeholders blame the crisis on China and its migrants and the local government enforces repressive policies against Chinese businesses. Based on long-term fieldwork, this paper argues that the case of Prato not only yields new insights into the interplay of scales in the dynamics between migrants and the locality, but also shows how the already complex native-migrant dynamics can be embittered by the protracted crisis.

## Solidarity Actions towards Migrants during an Era of anti-immigrant Rhetoric: An Explorative Study in a Greek Local Community

Stefania Kalogeraki, University of Crete | [s.kalogeraki@gmail.com](mailto:s.kalogeraki@gmail.com)

Marina Papadaki, University of Crete | [papadakma@uoc.gr](mailto:papadakma@uoc.gr)

Samy Alexandridis, University of Crete | [samy.alexandridis@gmail.com](mailto:samy.alexandridis@gmail.com)

In the context of the recent global financial crisis Greece has been Eurozone's Achilles heel. The country has experienced the most severe debt crisis in its recent history leading to multifaceted social impacts including among others the upsurge in anti-immigrant rhetoric which has recently taken more extreme forms of increasing racist violence incidents against migrants. Despite the prevalent hostile migrant-related sentiments, solidarity actions that embrace migrants have been organized all over the country. The main rationale of the paper is to investigate actions that aim to support socio-economically disadvantaged groups including migrants in a local community of Greece (Chania) and explore the potential impacts of such actions to migrants' lives. The study charts institutional and non-institutional agents who organize targeted

activities to improve the means of subsistence and healthcare of deprived individuals and investigates which of them include migrants as beneficiaries of such actions. The data derive from volunteer, Non Governmental Organizations (NGOs), non-institutional organizations and the Greek Orthodox Church as well as from analyzing articles of solidarity actions in the local newspapers (between May 2010 and May 2012). In addition, qualitative research unveils how migrants themselves interpret such actions during an era of anti-immigrant rhetoric and draconian austerity. The findings of the study shed light on the ways that recession brings individuals together to find collective solutions via solidarity actions towards vulnerable socio-economic groups as well as uncovers the impacts of such actions to migrants' realities.

## "One-way" Process, "two-way" Process, "three-way" Process? Ambiguities and Struggles on the Concept of Integration

Luca Sebastiani, University of Granada | [lucaseba78@ugr.es](mailto:lucaseba78@ugr.es)

The concept of integration lends itself to different resignificances, even when it is matched with adjectives like "social", "economic", "cultural" or it is linked to the notions of "participation", "active citizenship", "social cohesion"... Even at the European Union level, the specific definition of what integration means is the objective of a struggle between a diversity of situated actors (like the EC, the Council, the EESC, NGOs, "experts", regional and local administrations...), despite the fact that a "Common Agenda on Integration" based on soft policies and made up of several tools (like 11 "Common Basic Principles", a Fund, a Forum...) has been recently established. Some

researchers (Carrera, Faure Atger) argue that the ambiguity of EU's approach on integration (which is formally defined as a "two-way process") ended up legitimizing certain "one-way" statal practices (like binding tests based on the knowledge of receiving country's language or "culture"). Recent EU documents even define it as a "three-way process" starting from abroad, through the adoption of pre-departure measures. Dealing with the aforementioned concerns from a qualitative sociology approach, I will present the main findings of my PhD study (financed by the University of Granada "Plan Propio"), based in the fieldwork done in Brussels between 2011

and 2012 and made up of interviews to the main institutional and social actors active in the EU's framework for integration, as well as

observations of different meetings over the same issue -like sessions of the European Integration Forum.

## **Into which Jobs do the Unemployed Move? Differences between Foreigners and Spaniards in a Changing Economy**

**Jacobo Muñoz-Comet**, Universidad Nacional de Educación a Distancia (UNED) | [jmcomet@poli.uned.es](mailto:jmcomet@poli.uned.es)

This article studies the likelihood to become employed as well as the occupational attainment of those who leave unemployment. Specifically, this article analyses the factors that explain initial differences found between foreigners and Spaniards, and examines to what extent the economic context reduces or increases the gap between these groups. To do so, data from the Spanish Labor Force Survey from 2005 until 2010 is used. Logistic regression analysis show that Latin Americans and Eastern Europeans had a higher probability to be employed again, at least during the growth economic period (2005-2007), after controlling for human capital variables as well as socio-demographic factors and others related with the job characteristics before the unemployment. This advantage, however, disappeared during the financial crisis (2008-2010). Only Africans have a

significant and constant higher risk of being unemployed from 2008 onwards. Moreover, the effect of some factors that influence the likelihood to be employed seems to change depending on the economic cycle. Apparently, human capital only has a positive influence during the financial crisis. With respect to the occupational attainment, the analysis show that, while it is important to consider various socio-demographic factors, the type of occupation in which people worked before becoming unemployed has a remarkable influence on the skill-level of subsequent jobs. Even after controlling for all variables in the study, it remains more likely for foreigners from outside the European Union-15 to occupy the lowest positions of the occupational ladder than for Spaniards, regardless of the economic context.

## **11RN35 - Returning from the North to the South – European Labour Migration reversed?**

Chair(s): Gunnar Olofsson (Linnaeus University Sweden)

## **Long-term Effects of Labour Migration to Europe: Family Formation in Turkish Families in Turkey and Europe**

**Helen Baykara-Krumme**, Chemnitz University of Technology | [helen.baykara@soziologie.tu-chemnitz.de](mailto:helen.baykara@soziologie.tu-chemnitz.de)

Fifty years after the recruitment agreements were signed, we are today in the fortunate situation to be able to study the long-term

consequences of early labour migration. This research focuses on Turkish migration to Europe. It is based on a new and innovative

quantitative survey (NORFACE - LineUp). The survey includes three-generational family data of about 2000 labour migrants and their non-migrant peers from five formerly high emigration regions in Turkey. The family members today live in Turkey and dispersed across Europe. The analysis addresses the intergenerational transmission of family formation patterns, namely the prevalence of arranged as opposed to couple-initiated marriages over three family generations. By comparing patterns in migrant and non-migrant families from the same (cultural) regions of origin, we can identify the mediating effect of the (grandfather's) international migration experience on subsequent generations. In theoretical terms, this analysis

draws on concepts of intergenerational transmission, social change, host society assimilation and home society dissimilation. In line with nation-wide surveys in Turkey, our findings indicate a decline in the prevalence of arranged marriages in non-migrant families over the past decades (i.e. over three family generations). In the lineages of migrant grandfathers, their children and grandchildren in Europe, however, this decline is even more extensive. After controlling for composition effects we can conclude that effects of social change in the context of origin are outperformed by the migration and integration experience in Europe. The perspective of home society dissimilation sheds new light on old issues.

## The impact of Swedish Society on Greek Labour Migrants Returning "Home"

Gunnar Olofsson, Linnaeus University | [Gunnar.Olofsson@lnu.se](mailto:Gunnar.Olofsson@lnu.se)

Gunnar Olofsson, School of Social Science, Linnaeus University, Sweden, [Gunnar.Olofsson@lnu.se](mailto:Gunnar.Olofsson@lnu.se), Thomas Thomell, School of Social Science, Linnaeus University Sweden, [ptthomell@yahoo.se](mailto:ptthomell@yahoo.se) We have for almost 40 years closely followed a group of Greek labour migrants who immigrated to Sweden in the mid 1960's. Our group came from a small tobacco growing village in Northern Greece and they settled as factory workers in the industrial region of southeast Sweden. One group returned to Greece after 7-15 years to start a business in Greece. But most of our villagers remained as workers in Sweden until their retirement. Almost all of them have built new houses in the village where they were born and grew up. Some have resettled in Greece for good while others divide the year between Greece and Sweden. Based on a large number of life histories and

extensive interview data we will show how this group of emigrating Greeks handled their long stay in Sweden. We will discuss two effects of this emigration-immigration process. On the one hand we find that their perception of Greek society was "frozen", that is that they for a long time perceived the Greek society as it was when they left. Then they were both poor and politically persecuted. As immigrants in Sweden they met a society with a different mode of functioning in terms of labour relations, welfare policies, citizenship rights etc. They "changed" in a number of ways, due to their emigration. We demonstrate these changes by using the judgements they make of Greek society – and habits – when they return today, as well the reactions of those of their fellow villagers who remained in Greece all their life to the behaviour and mores of the returning "Swedes".

## Return Migration and the Migratory Process of Former Guest Workers

Jochen Baumann, Braunschweig Institute of Technology | [Jochen.Baumann@tu-bs.de](mailto:Jochen.Baumann@tu-bs.de)

Tatjana C. Mika, German Federal Pension Insurance | [Tatjana.Mika@hotmail.de](mailto:Tatjana.Mika@hotmail.de)

Germany was one a major immigration country for intra- European labour migration in the 1960s and 1970s. The migratory process of these working migrants and their families occurred in several recruitment waves (Lucassen 2005) and was the complex result of life course and labour market cycles of migrants (Castles/Miller 2009). The paper shows that migrants' social security rights and obligations played also an important role. Migrants served as buffer on the labour market in the 1960s and early 1970s. Limited labour contracts and the lack of unemployment insurance resulted in high remigration rates in times of crisis. Official statistics registered large numbers of immigrants and emigrants, but failed to account the actual amount of migrants behind those numbers. The paper tries to rectify this using personal data, thereby counting migrants and not moves. A large

proportion of former guest workers from countries as Spain, Portugal and Greece, to a lower extent Italy, Yugoslavia and Turkey, have returned after long stays, reaching retirement. The paper will distinguish between the amount of return migration after a short and longer stay using data from the German pension fund including all pensioners with foreign nationality or working background with focus on their place of residence. We explain the amount of return migration with legal conditions which enable or hinder return migration, and we focus especially on social rights of migrants. Labour market policy has coaxed many migrants to return in times of high unemployment. The possibility to take the already acquired social entitlements with them to their country of origin has enhanced many migrants to choose their country of residence more freely later in life.

## Is Return a Way to Overcome the Crisis? New Challenges and Patterns for Albanian Migration

Cristiana Paladini, Lumsa University, Rome | [crispaladini@yahoo.it](mailto:crispaladini@yahoo.it)

This paper intends to analyze several aspects of albanian migration focusing on the myth of return when it becomes a real project, with all the consequences that this event produces in the life of migrants and into their society. The work resumes a three years ongoing research on the return migration in Northern albania. The field work has been carried out through the methodological tool of life stories and in depth interviews in order to identify common trends and to outline some aspects related to the social impact of the return. Today Albania is a constantly evolving country, but its history and its present still are strongly connected to migration. The period observed, saw the most

important foreign destinations for albanian migrants (Greece and Italy) becoming the principal protagonists of the current political-economic crisis in Europe. How does this crisis affect Albania migration patterns and re-migration processes? who leaves and who comes back from Albania today? what is changing in migrants expectations? What are the challenges facing those who decide or are forced to come back in their home country? Discussing the main highlights of the research, the paper will try to answer some of these questions and to reflect upon the new patterns and effects of diaspora.

## 12RN35 - Migration Research and the Question of Social Spaces: Dynamic Boundaries and Issues of Belonging

Chair(s): Karin Peters (University of Wageningen)

### Ethnic Diversity in the Work Space and the Construction of Social Capital

Frederik Thuesen, SFI - The Danish National Institute for Social Research | [ftr@sfi.dk](mailto:ftr@sfi.dk)

Much existing international research on social capital in ethnically diverse societies focusses on civil society, housing and local communities or political institutions as important social spaces, while much less research is oriented toward social capital in the work place. Nevertheless, the ethnically diverse work place is an interesting focal point for investigations of social relations and the potential build-up of social capital along and across ethnic lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure and continuous social interaction between different employees depending on the work tasks. Therefore these social spaces represent sites in which workers may build-up social capital encompassing members of other

social and ethnic groups in their networks. This paper addresses research questions such as: Which is the impact of increasing ethnic diversity among the employees on social capital in the work space? Which is the impact of various forms of work processes (isolated vs. teamwork oriented work tasks) on the evolution of social capital in the work space? In what ways are the construction and transformation of social capital in the work space influenced by similar processes taking place in other social spaces – such as families and civil society, public institutions etc. The analysis will be based on interviews with 49 employees from three different ethnically diverse Danish enterprises.

### 'Inclusion' and 'Exclusion': Transnational Experiences of Turkish and Kurdish Youth in London

Dogus Simsek, City University, London | [dogus.simsek@gmail.com](mailto:dogus.simsek@gmail.com)

Many children of migrants grow up in the context of transnationalism which builds connections across the country of origin and country of settlement. In the case of Turkish and Kurdish youth living in London, transnational relations - more specifically their relations to the country of origin, the city of settlement and local neighbouring- are constructed through their everyday life experiences. They have developed different perceptions about 'home'. In this paper, I discuss in which ways the engagement of Turkish and Kurdish youth with these three locales influence their discourse on such identities and 'home'. By doing this, the paper

focuses on the experiences of Turkish and Kurdish youth with London -the city in which they live-, local neighbouring- North London and the country of origin- Turkey, and questions existing work on the second generation migrants that sees them in the circle of belonging and ethnicity. I argue that their positioning with these locales is transformative regarding everyday experiences. The findings presented here based on an ethnographic case study carried out in North London. I conducted in- depth interviews with forty-five Turkish and Kurdish young people, a mixture of male and female. The ages of the young people are between 18

and 23; most were born in London or came to London at an early age, and they were

educated in London. Most of them are bilingual and live with their parents.

## **Ambivalence of Social Belonging and Local Attachment: New Challenges for Research on Migrant Families**

**Thomas Geisen**, University of Applied Sciences and Arts Northwestern Switzerland | [thomas.geisen@fhnw.ch](mailto:thomas.geisen@fhnw.ch)

**Gwendolyn Gilliéron**, University of Applied Sciences and Arts Northwestern Switzerland | [gwendolyn.gillieron@fhnw.ch](mailto:gwendolyn.gillieron@fhnw.ch)

Transnationalism is an attempt to avoid methodological nationalism by focusing on the dispersion of migrants. Given this perspective the question of belonging arises anew: what gives migrants a sense of belonging with others and what is the relevance of belonging for migrants? And even more important: what relevance can be given to the location where people live? The proposed paper discusses the ambivalence of social belonging and local/regional attachments under modern conditions of social fluidity and multi-local attachment in social relations. In current migration research, there is a new emphasis on the disconnection/rupture of social relations and the local/regional nexus, but the question as to if and how new attachments to locality and region are created is rarely discussed. For a better understanding of the 'migrant condition,' there is a need to focus on the new constellations created by social

belonging and local/regional attachment. Taking this perspective into account, the 'migrant condition' can only be better understood by referring to concepts of both space and culture. The paper starts with the elaboration of the theoretical problem as sketched and explores methodological questions related to that. Second, referring to empirical research on migrant families, family practices are analysed in which social and cultural boundaries are negotiated with reference to the places to which family attachments exist. Empirical findings show that situating the family in a context of fluidity and constant change entails developing family practices in which belonging can be understood as the ambivalence of social and cultural affiliations as well as establishing individual and collective attachments to certain places.

## **Towards a Better Understanding of Inner City Diversity: Two South London Neighbourhoods Compared.**

**Ole Jensen**, University of Oxford | [ole.jensen@compas.ox.ac.uk](mailto:ole.jensen@compas.ox.ac.uk)

This paper draws on findings from the European research project CONCORDIA DISCORS: Inter-Group Relations and Integration Policies in Selected Neighbourhoods of Five European Cities. Problematising popular discourses that cast inner-city areas as neighbourhoods generally typified by high levels of socio-economic deprivation, a higher than average proportion

of immigrants and ethnic minorities and rapid population turn-over, we argue that the analysis of contemporary majority-minority dynamics in inner-cities can benefit from closer attention to the historical constituents of the urban system, more specifically Sandra Wallman's distinction between the closed type – characterised by overlapping spheres of ethnicity, employment and community – and

the open type that Wallman describes as heterogeneous, with social identity positions achieved rather than ascribed and, crucially, easier for the outsider to access. Based on fieldwork carried out in the neighbourhoods of Bermondsey and Camberwell in the London Borough of Southwark, we argue that Wallman's framework can be applied successfully. Bermondsey stands out historically as a homogeneous and white 'closed system' rooted in extensive local

kinship relations as. In contrast, Camberwell has historically been an 'open system', since the 18th century impacted by different drivers of settlement. But with the open/closed distinctions increasingly obscured in the present post-industrial context, we argue that the continued relevance of the distinction lies in the cue that it provides to the structuration of contemporary everyday diversity at neighbourhood level.

## Imagined Community Boundaries in Transnational Nation-States: A German-Australian Comparison

Sandra Kostner, University of Education, Schwäbisch Gmünd | [sandra.kostner@ph-gmuend.de](mailto:sandra.kostner@ph-gmuend.de)

The nation-state as the epitome of an imagined community features a variety of social, cultural and political boundaries through which it creates its national identity and offers its population a sense of belonging. These boundaries are in flux as they are subject to societal transformations – transformations which in turn shift the inclusion/ exclusion boundaries. In my paper, I delineate how and to what extent transnationalisation from above (e.g. supranational governance) and from below (e.g. ways of life and identities that have more than one nation-state as reference points) have impinged on the Australian and German nation-states' means to imagined community boundary setting. Australia and Germany are two countries whose imagined communities have been challenged in recent decades by unprecedented levels of migration-

induced cultural diversity as well as by transnationalisation processes from below and from above. I highlight the similarities and differences in the two nation-states' approach to the arisen challenges, furnishing explanations for similar and differing ways of boundary expansion and preservation respectively. Central to my deliberations are the following questions: To what extent has the degree of transnationalisation informed boundary expansion in terms of including migrants from diverse cultural backgrounds into community imaginings? To what extent have national aspects such as nation-state formation, the self-perception to be a country of immigration as well as the self-perception of being a culturally homogeneous or heterogeneous community remained the linchpin for setting community boundaries?

## Being, Becoming, and Belonging: Iranian Queer Refugees in Transit in Turkey

Eda Hatice Farsakoglu, Lund University | [eda.farsakoglu@soc.lu.se](mailto:eda.farsakoglu@soc.lu.se)

Turkey is a transit locality for non-European refugee communities due to its 'geographical' limitation to the 1951 Geneva Convention. Among other irregular migrants and transit refugees, Turkey hosts many Iranian queer subjects, who are seeking asylum based on

sexual orientation and gender identity persecution and waiting for resettlement to a third country in the global North. Time they spend between 'home' and 'final' destination affects and inflects their everyday life struggles and experiences as they shift across

multiple boundaries and hierarchical axes of difference within the conditions of cross-border mobility as well as of asylum seeking while living in the transit migratory space of Turkey. Looking at the everyday as a crucial site for being and becoming as well as for (re)shaping belonging(s) of marginalized social groups, this paper seeks to examine the everyday worlds of the exiled Iranian sexual dissidents in Turkey. By drawing on findings from 11-months of ethnographic fieldwork

among Iranian queer refugees living in different cities in Turkey, the main aim of the paper is to go beyond a panoramic snapshot of what the mundane activities of Iranian sexual refugee population in transit in Turkey looks like, toward a sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of the exiled Iranian sexual dissidents.

## 14RN35 - Sociology of Migration

Chair(s): Marco Martiniello (University of Liège)

### Migration Discourses in Flux: the Case of Migration from Senegal to Spain in a Time of Crisis.

María Hernández Carretero, Peace Research Institute, Oslo | [mariahc@prio.no](mailto:mariahc@prio.no)

In this paper I address the dynamic nature of discourses about the desirability of international migration from particular departure zones to particular destinations, and of the status assigned to migrants going to those destinations. I do this on the basis of a study of Senegalese migration to Spain, involving ethnographic fieldwork in both countries. Migrant and non-migrant perspectives suggest that the current financial crisis in Europe is altering discourses on the relative value of migration to Europe and the social status ascribed to international migrants. In recent decades, Senegalese migrants to Spain and more generally Europe came to gain important social status as symbols of success in Senegal. International migration to Europe was seen as a certain path out of socioeconomic uncertainty and

stagnation. As a result of the current financial crisis, however, some of these perceptions and attitudes have begun to change and the image of Spain as a land of opportunities is deteriorating. Following a brief presentation of until recently overwhelmingly positive discourses about migration from Senegal to Spain, I then discuss the feedback mechanisms that are leading to a questioning and transformation of these discourses: in a time of crisis, migrants' accounts, their transnational behavior as well as media reports convey different forms of information that influence perceptions about international migration and the migrant status. I examine how the current crisis is contributing to re-evaluations of the relative value of migration to Spain with respect to other destinations or to imagining alternative futures in Senegal.

## Immigrants Integration and Resources of Reputation

Daide Donatiello, University of Torino | [davide.donatiello@unito.it](mailto:davide.donatiello@unito.it)

This paper is composed of a first theoretical part where I introduce reputation as a fruitful perspective to investigate immigrants integration into host society. Reputation is a classic long-neglected concept of social sciences, closely related to that of recognition, which is useful to highlight social mechanisms of inclusion and exclusion. That because recognition of a specific reputation can affect social boundaries regulating relations between groups and between individuals. In many everyday situations immigrants have to deal with passive attributions of reputation - often negative - related to their diversity and their cultural background. These judgments, circulating within and through different social contexts, tend to feed stereotyped representations. At the same time is appropriate to consider the ability of immigrants (agency) to undertake reputation-

building strategies to get a positive social evaluation and to reduce the risk that attributions constitute a constraint to individual inclusion. This perspective emphasizes relational and procedural nature of integration: accreditation is often a not immediately solvable problem for immigrants but it is a not foregone effect of continuous negotiations. In a second part I discuss some results from an empirical research focused on "stories of success" of some Romanian workers in Turin. My proposal is to read heterogeneity in their trajectories in relation to initial endowment and the individual ability to acquire resources of reputation. In fact, three forms of reputation have supported their integration: the reputation emerging in interaction, the institutional reputation, the reputation of belonging.

## Crossing (Knowledge) Boundaries: The Role of Science in Integration Policymaking

Maren Borkert, University of Vienna | [maren.borkert@univie.ac.at](mailto:maren.borkert@univie.ac.at)

In recent years migration control has shifted from the surveillance of external borders to restrictive admission policies for so-called third country nationals, particularly from 'developing countries'. By moving boundaries 'in' society new mechanisms for safeguarding the 'national space' need to be installed. Societies are experiencing a rising sense of urgency to cope with the consequences of diversity and the permanency of migration, which are affecting the lives of many in very specific ways and have changed European societies at a tremendous pace. Social science research has played a pivotal role in the evolution of societal, as well as political discourse on migration and integration. However, the 'scientification' of the debate on migration and integration has also led to a

simultaneous 'politicization of science'. Thus the role that migration scholars and migration research institutes play in this domain has itself become increasingly contested. This paper explores the role that scientific expertise and scientists play in marking these boundaries in integration policy making. It analyses dialogues between science, politics and the wider society concerning the integration of international migrants in Austria. Special emphasis is given to three fiercely disputed integration key areas such as naturalization, the integration of migrant children in school and the accommodation of religious plurality (Islam). Evidence is drawn from a variety of methods including the analysis of key documents, media analysis, network analysis and some 27 expert

interviews.

## What can Internal Migration Tell us Sociologically?

Falvio Ceravolo, University of Pavia | [flavioantonio.ceravolo@unipv.it](mailto:flavioantonio.ceravolo@unipv.it)

Michael Eve, University of Eastern Piedmont | [michael.eve@unipmn.it](mailto:michael.eve@unipmn.it)

Migration is usually seen as sociologically interesting when it corresponds with "contacts between peoples". However, if seen in less "national" terms as a transformation of personal networks, migration has a number of consequences independently of nationality or ethnicity. The proposed paper will present results from a research project comparing long-term consequences of regional migration to Turin with those of the more recent international migration. Logistic regression shows that a kind of "second generation disadvantage" was created by internal migration to Turin even when we control for variables like parents' occupation, education or family size. Children of regional migrants were in fact less liable than children of locals to

graduate from high school or university. In this way, regional migration was deeply intertwined with the reproduction of the local class structure (even in the second generation, manual workers are mainly children of migrants, before the arrival of foreign migrants). This example illustrates how internal labour migration may have similar effects to international migration even in the absence of factors usually considered central in explaining "ethnic inequalities" such as citizenship status and visible "difference". This provides stimulating evidence for re-thinking the way inequalities associated with international migration are produced. The paper will draw on interviews with

## Family Migration and Political Discourses about Argentinean Migration Flows in the Veneto Region (Italy)

Ana Irene Rovetta Cortés, University of Padova | [arovetta@hotmail.com](mailto:arovetta@hotmail.com)

This paper aims to analyze political discourses about Argentinean migration that have been developed in recent years in the Veneto region (Italy) and their impact on the daily life of Argentinean families living in the region. Historically, migration flows between these countries have been significant. In the late nineteenth century and the first half of the twentieth century, the direction of the flow was North-South (from the euro-Mediterranean country to Argentina), while in the last forty years, the direction of migration flows would have been inverted, from South to North. The Italian State has facilitated access to formal citizenship to descendants of Italian migrants,

due to the recognition of the *ius sanguinis* right. Taking into account the processes of decentralization of the Italian state, the Italian regions are a privileged area to research. The case of the Veneto region is significant because it was the first region to develop specific measures to define and facilitate migration (defined as "return migration") of descendants of second and third generation of Italian and/or Veneto emigrants. From the initial analysis of a series of interviews with families (in which the members have Argentinean citizenship and live in the Veneto region) we study the impact of these policies on their daily lives.

## 15RN35 - Migrants and the Labour Market

Chair(s): Lena Näre (University of Helsinki)

### Social Capital as a Resource for Self-Employed Migrants

Elena Sommer, University of Bremen | [esommer@bigsss-bremen.de](mailto:esommer@bigsss-bremen.de)

Since the 1990s, the self-employment rate of migrants in Germany has been increasing. Social capital is an important resource for self-employment. Migration process often leads to the restructuring of the social capital and the access to different social networks in the new environment can strongly vary for the members of the same migrant group within the same destination country. The local structural framework as well as individual characteristics of migrants have an impact on the incorporation pathways and can influence their labor market integration. Based on the qualitative content analysis of 60 problem centered interviews with integrated network map data collection, the study explores the accessibility of migrants to different social networks within and outside their migrant community (vertical and horizontal networking) and examines different functions of bonding

and bridging social capital for migrants' self-employment strategies. The theoretical framework of the study focuses particularly on the concepts „Social Capital“ (e.g. Bourdieu 1983; Portes 1995; Lin 2001) and „Mixed Embeddedness“ (Kloostermann/Rath 2001). The empirical research concentrates on economic activities of migrants from the former Soviet Union in two contrasting areas in Germany (urban vs. rural). The sample differentiates between start ups (less than 5 years at the market), established companies (more than 5 years) and “failed” former entrepreneurs. The data analysis indicates that the structure, the use and the functions of business social networks partly depend on the chosen business strategy (e.g. local vs. transnational, ethnic niche vs. open market) and can change over time.

### Exploring Migration- and Mobility-Driven Diversity among University Faculty Staff

Kyoko Shinozaki, Ruhr University, Bochum | [kyoko.shinozaki@rub.de](mailto:kyoko.shinozaki@rub.de)

In no other year than 2012 Germany received so many highly skilled (potential) workers. Source countries are the economic crisis plagued Southern and Eastern European states and Germany has been experiencing labor shortages in skilled and highly skilled sectors. Higher education and research is one such sector that has been said to be undergoing the internationalization process, in terms of mobility of faculty staff, students and programs. This paper critically examines migration and mobility-driven diversity among faculty staff in three ways, taking two German higher education institutions as an example. First, drawing on primary and secondary

statistical data, it provides an overview of migrant scientists, defined in terms of legal citizenship, both women and men, according to scientific disciplines. Secondly, it looks at the practices of higher education institutions, the perspective that has largely been neglected in the extant sociological literature on transnational scientific mobility. More specifically, it analyzes the extent to which, and the ways in which, hiring and other related practices have been conceptualized and implemented, in order to promote scholars with a Ph.D. attained abroad and that of scientists with non-German citizenship. The paper ends with methodological challenges in

researching migrant academic staff.

## Vietnamese Ethnic Economy on the Margins

Michal Nekorjak, Masaryk University, Brno | [nekorjak@fss.muni.cz](mailto:nekorjak@fss.muni.cz)

Vietnamese are the second largest group of immigrants in the Czech Republic. Social integration of the first-generation immigrants is substantially shaped by their economic strategies, which can be best described through the concept of ethnic economy (Light, Gold 2000). I will try to answer the double-meaning question: why is the Vietnamese ethnic economy situated on the margins? By margins I mean the Czech borderland, where a significant number of them reside and where, in one selected region, I am conducting my qualitative (ethnographic) research. Beside geographical margins we can also speak about social margins, which constitute the second meaning of my question. Economic strategies based on ethnic economies are often (but not always) a consequence of social exclusion, or - in broader sense - problematic opportunity structure (Waldinger et al. 1990) available for

the immigrants in the given time and space. My explanation for (marginal) geographical distribution of Vietnamese immigrants and their dominant (marginal) economic strategies is grounded in three interconnected social phenomena. The first is organized labour migration during a communist regime - a topic, which is not usually taken seriously in migration studies of post communist countries. The second crucial phenomenon is political and economic change in 1990, which brought new opportunity structure. The third phenomenon are transnational processes, especially European integration and transnational business practices of Vietnamese immigrants. The transnational perspective is also inevitable as we have to take into account that Vietnamese ethnic economy is influenced by flows of immigrants, capital and customers from the neighbouring countries.

## Early Career Researcher Mobility in the Baltic Sea Region: From Former Soviet Union to Nordic Knowledge Economies

Marion Pajumets, Tallinn University | [marion@iiss.ee](mailto:marion@iiss.ee)

This project addresses early career researchers' mobility from less knowledge-intensive countries of to highly knowledge-intensive regions of Europe. The Bologna Process 2020 maintains that 'mobility shall be the hallmark of the European Higher Education Area' in this decade. Accordingly universities increasingly link job and individual funding opportunities to the experience of a period at a research institution abroad. Transnational mobility has become an institutionalised element of the career trajectory of early stage researchers in Europe (Leemann 2010). It is expected that 'transnational social capital' (contacts and cooperation), can be transformed into cultural capital (publications, language

skills) and finally symbolic capital (reputation in academia) (see also Bourdieu 1986/2004). Taken the benefits of transnationality, as well as institutional pressures, it has become urgent to explore how social origin, academic integration, but also gender and gender-related factors like partnership, family responsibilities and dual-career constellations affect post-doctoral researchers' experiences of mobility (Leemann 2010). While contemporary research often depicts the highly skilled as the 'economic agents', this project views them also as 'social agents'. A 'life course approach' (Moen & Sweet 2008), and 'intersectional approach' (McCall 2005) will be combined to gain an understanding of the

personal/familial, organisational and societal aspects forming the realities of the young foreign scholars in the Nordic countries both as professionals, and as citizens. Long

narrative interviews will be conducted. In Turin I would focus on the theoretical and methodological issues of the planned post-doctoral project.

Chair(s): Kàtia Lurbe i Puerto (ENS Lyon), Anders Petersen (Aalborg University Denmark)

### **Labor Migrants to Russia from CIS: Medical Social Control versus Health Care.**

Violetta M Khabibulina, St. Petersburg State Medical University | [vioksu@gmail.com](mailto:vioksu@gmail.com)

Medicalization of labor migration leads to intervention of hegemonic discourse of power into medical issues. This paper attempts to analyze President Putin's Migration Policy's concept (13'June 2012), recent relevant legislation (2002-Jan'2013), and practical implications in Kazan and St.Petersburg with main focus on medical exams for foreigners to receive work permit and on consequent deportation if dangerous diseases are revealed. Although there is a declarative sentence about non-discriminatory ideology of new Migration Policy, the adequate access to the health care settings is not clarified. We consider that the main feature of Russian political decisions towards labor migrants is to establish strict medical social control over process of a work permit issue and/or to create additional source for state budget or latent corruption. And this tendency is not

related to public health control and preventive preparedness. Arguments based on discourse analysis, observations, and on health&migration statistics data allow to reveal the discriminative nature of legislation and to present new model of 'doctor-patient interaction' where the doctor is a medical policeman rather than a healer. If medical exams are set up in order to prevent the infected or narcotized body from crossing the Russian border, so there are several discrepancies: i) not all labor migrants from CIS are subject to medical testing, it's not true for family members and illegal workers; ii) the screening itself can be postponed for a several months; iii) biomedical justification is not enough in a case of friendly regulations towards bodies from certain countries and social strata. So the main public sociology conclusion is to cancel the medical testing.

### **Beyond the Usual Suspects: Increasing the Representation of Disadvantaged Minorities in Health Participatory Spaces in Times of Crisis**

Cláudia De Freitas, ISCTE-IUL, Lisbon | [claudia\\_defreitas@yahoo.com](mailto:claudia_defreitas@yahoo.com)

Cuts on healthcare budgets and the increasing disinvestment in diversity sensitive care observed since the start of the economic crisis in Europe are likely to generate civil disobedience and impel service users to seek a

voice in healthcare governance. Many EU countries have created health participatory spaces where citizens can join government representatives to discuss healthcare policy and delivery. This development is grounded on

the idea that listening to users can help develop more responsive health policies and services. However, the citizens involved in these spaces are usually white middle-class people who are not necessarily sensitive to the needs of less vocal, disadvantaged groups. This may cause health participatory governance to become a mechanism by which health inequities are produced or exacerbated (instead of reduced) as services become progressively adapted to the needs of better-off majorities. Increasing the representativeness of health participatory spaces beyond the “usual suspects” is crucial at a time when reforms associated with the

economic crisis are threatening the loss of many healthcare rights. This paper looks at strategies that can promote the participation of disadvantaged groups. It draws on a qualitative study of user involvement in mental healthcare in the Netherlands employing participant observation and semi-structured interviews with Cape Verdean migrants affected by psychosocial problems (n=20) and stakeholders in the field of user involvement (n=30). We conclude that both governments and civil society organisations need to adopt a proactive approach to user participation in order to make health participatory spaces more inclusive and promote equitable change.

## **Health Inequalities in Accessing Health Care for Ethnic Minority Women: Regulative Contexts and Services in Comparative Perspective**

Genova Angela, University of Urbino | [angela.genova@uniurb.it](mailto:angela.genova@uniurb.it)

Ethnic minority women present higher risk of health inequalities. The aim of this study is to investigate the impact of the crises on the regulative contexts and the related services to tackle health inequalities for ethnic minority women in accessing health services in four EU countries. The study presents the results of EC co-funded project: Better Health for Better Integration, focusing on the regions of South West England in UK, Marche region in Italy, the county of Orebro in Sweden and the state of Romania. Analyses show that in Marche region there is a fragmented and incomplete regional regulation and few targeted services implemented, despite the high level of guarantee in accessing health services for migrant population claimed by the national law. In Orebro county, equal access and

treatment of all residents are emphasized and some prevention targeted services were recently introduced. In South West England, the universalistic health system guarantees high level of access to health services however the recent reform process has introduced copayment for some basic health services. In Romania, the occupational health care system limits access to health care for not insured and no reform has introduced to improve the contexts. The current economic recession has different impact on the regulative contexts and related services in the four geographical areas analyzed: in Orebro has increased the attention for efficacy and efficiency, while in Marche and Romania the institutional inertia risks to amplify the inequalities as well as the payment system in South West England.

## Living with Chronic Disease – Minority Experience

Kadi Lubi, University of Tartu | [kadi.lubi@ut.ee](mailto:kadi.lubi@ut.ee)

Triin Vihalemm, University of Tartu | [triin.vihalemm@ut.ee](mailto:triin.vihalemm@ut.ee)

This paper contributes to the research of the area that is especially vulnerable to the cuts in welfare provision and tense situation in the labor market due to the economic crisis in Europe – the possibilities of social rehabilitation of chronically ill people who are (partially) capable and willing to continue working and participating in the society life. We ask what are the prospects of ethnic minority members in realizing this vital desire under the double pressure: the need to cope with disease and with the tensions arising from overall economic and social depression from the other side? The analysis bases on the survey and in-depth interviews with younger Parkinson disease patients in Estonia. Informants were ethnic Russians with various levels of knowledge of Estonian language, educational and occupational backgrounds. We approach our data from the practice theory perspective

[Schatzki 1996, Reckwitz 2002, Shove et al 2012) that is novel in the health sociological research. We outline the practices of becoming re-tooled and re-skilled to maintain their social position despite of diminishing physical capabilities. In broad terms our analysis showed that on the everyday practical level people have re-tooled and re-skilled and position themselves as competent practitioners, less so when managing with the public discourse of the sick (minority) people that discourages their social rehabilitation. Finally we discuss the possibilities to mitigate the drawbacks rising from the strained relations between social groups in time of socio-economic depression as well as the methodological challenges of using practice theoretical approach in the research of health and ethnicity.

## 16RN35 - New Aspects within Migration Research

Chair(s): Parveen Akthar

### More than Economics? Migrant Selectivity and Cultural Integration

Antje Roeder, Trinity College, Dublin | [aroeder@tcd.ie](mailto:aroeder@tcd.ie)

Marcel Lubbers, Radboud University, Nijmegen | [m.lubbers@maw.ru.nl](mailto:m.lubbers@maw.ru.nl)

During the last decade, the focus of public discourse in Europe has shifted from concerns about the successful economic integration of immigrants to the perceived lack of social and cultural integration of some migrant groups. The failure of multiculturalism has been proclaimed by leading public figures, and in several European countries right wing parties promote the idea that there are irreconcilable cultural differences between the citizens of Western democracies and immigrants. Previous studies show that it is particularly around the role of women and sexuality where 'ways of life collide' (Sniderman and Hagendoorn 2007). This raises important questions about the attitudes migrants hold, whether this changes with longer residence,

and what factors can explain any change or lack thereof. Using data from a recent longitudinal survey of new migrants from several European and non-European countries to four Western European countries, this project aims to address these questions. It starts by asking whether migrants differ from the population in their origin countries, i.e. whether there is selectivity along cultural values (1). Secondly, it is of interest whether their attitudes and values change with longer residence (2). It determines whether this process is mediated by the prevalent context in the host countries (3) as well as by individual characteristics such as labour market integration, religious involvement and ethnic embeddedness (4).

### Creative Identities: Migration of Cultural Workers from Taiwan to China

Yen-Fen Tseng, National Taiwan University | [yftseng@ntu.edu.tw](mailto:yftseng@ntu.edu.tw)

This article focuses on investigating what identities issues are involved in realizing skills, when cultural workers move across borders. This is very different from the perspective of human capital put forward by economists. Economists tend to view professional migrants as engaging in a talent flow across border where internationally recognized human

capital removes the barriers of skill mobility. By cultural workers, this paper refers to those working in production of goods and services, with aesthetic or semiotic contents such as film, design, and art. This paper analyzes the migration of Taiwanese cultural workers in Shanghai and Beijing. Migration of Taiwanese cultural workers to these two cities has been

part of significant migration waves from Taiwan to China that have picked up speed and volume during the past decade, due to a removal of legal barriers for Taiwanese to work and live in China. The process of incorporation ultimately involves a key aspect, that is, whether being classified and/or self-classify as cultural workers from Taiwan enhances or hurts their utility (income, status, fame..) in cultural industry? Why and How? Data are drawn from 36 in-depth interviews

conducted between 2008-2012 with cultural workers in Beijing and Shanghai, including writers, publishers, journalists, film producers, artists, architectural, landscape, interior, and product designers. This study confirms that cultural workers from Taiwan value cultural understandings as essential parts constituting the skill/taste as asset specific. If this process goes smoothly, these workers gain identity utility in market recognition and salary rewards.

## **Newcomers in Polish Local Communities: Three Cases of Negotiating Spatial Relations and Boundaries**

**Kaja Skowronska**, Polish Academy of Sciences, Warsaw | [kaja.skowronska@gmail.com](mailto:kaja.skowronska@gmail.com)

**Anna Marzena Wrona**, Polish Academy of Sciences, Warsaw | [awrona@sns.waw.pl](mailto:awrona@sns.waw.pl)

**Bohdan Prystupa**, Polish Academy of Sciences | [bohdanprystupa@gmail.com](mailto:bohdanprystupa@gmail.com)

Migration, by its very nature, implies the appearance of strangers on an established group's territory. Hence, the local and spatial dimensions are crucial to understanding the processes of inclusion and exclusion of migrants. Newcomers take up spaces previously unoccupied or belonging to the "we" group and modify existing social relations, as famously shown in Norbert Elias's and John L. Scotson's work (1965). In this paper, we assume that a connection exists between spatial organization and social structure. Furthermore, we examine whether the process of negotiation of spatial organization depends on the type and degree of (self-)perceived otherness of migrants as compared to the local community. Indeed, a group does not only see others as different from themselves, but also

as differing in various manners (Nowicka, Łodzinski, Nawrocki, 1990). We look into those issues on the basis of a qualitative study (IDI and participant observation) of three cases, which vary in the type of otherness implied, and in the way in which migrants negotiate social spaces and interact with local actors: 1. Poles moving from cities to the countryside - inner migration 2. Ukrainian students coming to a university in a small town - international migration from a culturally and geographically near country 3. Chinese immigrants working in ethnic economic institutions - international migration from a very remote country and culture. Through the comparison of those three cases we hope to analyze the influence of those different types of otherness on the way spatial and social relations are negotiated.

## Distinctive Patterns of Transnational Migration from a Romanian Village

Alexandra G.I. Deliu, University of Bucharest | [alexandradeliu@yahoo.com](mailto:alexandradeliu@yahoo.com)

Transnational migration is a vast social phenomenon that has become a valid option for many Romanians, in the years after 1989. Romania is an emigration country, and the favorite destinations for its citizens are Italy and Spain. This is the context in which I present my work, focused on the formation of transnational migration patterns in a village from the Southern region of Romania. The data was generated during a field research conducted in August 2012, and the empirical material consists of field notes and interview transcripts, correspondent to recorded conversations with local migrants, authority representatives and people without any migration experience. In this particular community, two patterns of migration were identified, for which variables such as ethnicity (Roma/ Romanian) and religious orientation

(Orthodoxy/ Adventism) appear to have explanatory power. My inquiry takes as a starting point the identification of this variety of migration patterns, and it is concentrated on analyzing them, in the regional and the national context, in the scholar framework provided by network theory. Two major differences lay between them: the time frame of living and working abroad (either clearly demarked – 3 months, 6 months, or indefinite) and the nature of the work environment (departures based on a work contract between the migrant and a company located at the destination and departures accompanied by uncertainty in what concerns the workplace upon arrival). Making sense of these life strategies and their local configurations are the objectives of my work.

## The Reinvention of a Viennese Factory. About Migrants, Urban Renewal and the Real Estate Market in Times of Crisis

Daniele Karasz, University of Vienna | [daniele.karasz@univie.ac.at](mailto:daniele.karasz@univie.ac.at)

This paper focuses on the micro dynamics of capital transfer into the real estate market and its effect on those urban locations, which attract such investments. Special attention will be given to the role of migrants in these dynamics in the context of the current crisis. In exploring these processes I concentrate particularly on urban brownfields, the question of their reuse, and the locations of migrants in this form of urban renewal. I take neither the city itself, nor a certain pre-defined group of migrants as an entry point to the analyses. I

rather analyze these processes through a focus on the reuse of one particular brownfield in Vienna, namely the former bread factory “Ankerbrotfabrik”. This brownfield is situated in a traditional blue collar district with a high concentration of migrant population. It is currently undergoing a privately funded culture led development. The area is reassembled into a cluster for creative industries, including apartments, galleries, a private university and a music-education project for talented children from Vienna and all of Central Europe.

## 17RN35 - Human Rights Based Approaches to Migration Policies

Chair(s): Christof Roos (University of Bremen)

### Female Migrant Domestic Workers within the EU: Social Citizenship Rights and Transnational Care Strategies

Oksana S Gréen, Gothenburg University | [oksana.shmulyar@socav.gu.se](mailto:oksana.shmulyar@socav.gu.se)

Andrea Spehar, Gothenburg University | [andrea.spehar@pol.gu.se](mailto:andrea.spehar@pol.gu.se)

In recent years several researches have observed a growing amount of migrant female workers both in Europe and globally. Increasingly, women migrate in order to be able to provide for themselves and their families, while their children and families stay behind. Female migration to the expanding market of domestic services, characterised by temporary, irregular and low-paid working conditions, is now considered as one of the most important migration flows globally. Yet there has been few studies so far, paying attention to how this type of migration influence social rights and the transnational

care strategies of the female domestic workers. More specifically, this paper will analyse how the institutional framework governing conditions for domestic services in Europe (policies and regulation) influence the social rights and well-being of female migrant, especially with regard to their possibility to provide care across the borders. At this stage, the paper will analyse policy documents and secondary data in relation to the issues of social citizenship, transnational families and care on distance. The paper will focus on migration flows from non-member states of Eastern Europe to the EU.

### Erosion of the Right to Marry and of the Respect of Family Life: The Example of Binational Couples

Laura Odasso, University of Strasbourg - University of Venice | [laura.odasso@misha.fr](mailto:laura.odasso@misha.fr)

The contribution deals with the progressive erosion of the right of marriage and family life (cf. Arts. 8 et 12 European Convention on Human rights; art. 9 Charter of Fundamental Rights of the European Union and art. 16.1 Universal Declaration on Human Rights) due to “institutional racism” and “governmental xenophobia” in France and Italy. Since 2000, the political and media discourses, the genesis of the laws and the practices in the administrative offices create an atmosphere of suspicion of fraud around bi-national marriages. This leads to the stigmatisation of the migrant partner and to a similar contagious stigmatisation of the French and Italian one, that is suspected to attempt on the national identity for the simple reason of his/her choice

of couple. The power of discretion of the public officers and the attempt on the intimacy make the life course of these couples complex. To achieve their aim to built a family life together, the members of this couple have to resist and to act in a aleatory space where the time seem to widen and their patience seem to be challenged. They need to develop legal skills and sometimes they arrive to participate and to act collectively to defend their rights (i.e.: Les Amoureux au Ban Public in France and Tutto Stranieri in Italy) . The administrative and juridical difficulties emerge by a biographical work on some récits de vie of bi-national couples and observant participation in the activities of some associations.

## Political 'Springs,' Refugees, Cities and the Other Face of the War: Capital as the Eternal Winner in Humanitarian Crises

Mehmet Nuri Gultekin, University of Gaziantep | [mngultekin@gmail.com](mailto:mngultekin@gmail.com)

Vural Tarla, Kirkayak Culture Art and Nature Association | [kemalvural.tarlan@gmail.com](mailto:kemalvural.tarlan@gmail.com)

Syria's "Arab Spring" has transformed into a reality that now includes serious internal conflict. The withdrawal, in the face of escalating of violence, of most Syrians from the streets where they were demonstrating against the regime means the main actors have changed, irreversibly altering Syria for decades to come. Historic cities have been emptied, rural life and agricultural production have been halted, and most importantly the Syrian population from different social segments finds itself caught between the violence of the insurgents and the state. As a consequence, waves of refugees have come from every level of Syrian society towards Turkey, Lebanon, Jordan and Iraq. Turkey, a key player in the

region, has tried to solve the serious humanitarian problems caused by these refugees in the cities close to Syria, such as Gaziantep, Kilis, Hatay and Şanlıurfa. In the refugee camps and downtown areas of these cities, Syrians have adopted different patterns to adapt to their new circumstances on the basis of their social class, economic power, ethnicity and cultural backgrounds. The result appears to be as much a signifier of economic interests as of humanitarian issues. Syrian refugees offer a new and fresh source of high profits in the form of a cheap labour force for Turkey's growing economy. This paper looks at refugees' everyday life in the border cities of Turkey.

## 34JS35 - Migrant Religions as a Challenge to European Identities (1)

Chair(s): Berta Alvarez-Miranda , Complutense University of Madrid Chair: Heidemarie Winkel , University of Potsdam

## Homonegativity among First and Second Generation Migrants in Europe: the Interplay of Origin, Destination and Religion

Koen Van der Bracht, Ghent University | [koen.vanderbracht@ugent.be](mailto:koen.vanderbracht@ugent.be)

Previous studies reported declining disapproval of homosexuality in Europe but have simultaneously identified the decelerating effect of religiosity on this decline and the higher disapproval of homosexuality among migrants. Moreover, especially Muslim migrants are often specifically referred to as lagging behind the European trend of low levels of disapproval. However, the aforementioned decline is largely due to generational replacement and the effects of religiosity on disapproval of homosexuality

among migrants has not been assessed thoroughly. In this paper, we address the disapproval of homosexuality (1) among first- and second-generation migrants in Europe, (2) accounting for period and cohort effects and (3) taking the effect of religiosity into account in an analysis of effects of origin and destination countries. We test hypotheses using a subsample of first and second generation migrants of the European Social Survey (ESS) in cross-classified multilevel analyses to disentangle period from cohort effects on the

one hand and origin from destination effects on the other hand. Preliminary findings indicate that disapproval of homosexuality is declining among first and second generation migrants as well, although this is largely due to cohort effects. Both belonging to a denomination and attending services increases the disapproval of

homosexuality, although the effects decrease when taking aspects of the socialization in origin and destination into account. Implications for further research into the effects of religiosity on attitudes among first- and second generation migrants will be discussed.

## **The Muslim Diaspora after the Arab Spring: Young People between Taking their Distance and Religious Identity Revival**

**Viviana Premazzi**, University of Milan | [viviana.premazzi@unimi.it](mailto:viviana.premazzi@unimi.it)

**Roberta Ricucci**, University of Torino | [roberta.ricucci@unito.it](mailto:roberta.ricucci@unito.it)

The point of view of the Muslim diaspora has been underestimated in the political debate about the Arab Spring, yet the consequences of those events have reached some immigration countries, such as Italy, where there are significant North African communities. On the one hand, those events, especially among Egyptians, have stimulated a reflection on both ethnic and religious identity, emerging differences between first and second generations and between adults and young people. On the other hand, they have had both a political and religious impact in Italy, refocusing media attention on Muslims, stressing how difficult it is to integrate them

and revealing how fears about Muslims and their links with extremists are still today widespread among Italians. The paper will present an initial attempt, through 30 qualitative interviews, to analyse how Muslims living in Italy have reacted to and whether or not they continue to be linked with those events in the framework of a renewed negative attitude towards them, answering the following questions: Are they really interested? Is there a generational effect in their involvement? Or, do they prefer to take their distance from those events, living both their political and religious lives without public expression?

## **Religion and Political Participation: Main Political Concerns of Muslim Youth in Latvia**

**Anita Stasulane**, Daugavpils University | [anita.stasulane@du.lv](mailto:anita.stasulane@du.lv)

Analyses presented in this paper are a part of a broader FP7 collaborative research project "Memory, Youth, Political Legacy and Civic Engagement" (MYPLACE) on young people's social participation. It is based on survey, 36 qualitative indepth interviews with Muslim youth in Latvia and ethnographic research data. The presentation will briefly cover the development of the Muslim community in Latvia where the Muslim population (around 10 000) constitutes the second or even the third generation of immigrants predominantly from

former soviet republics. Latvian Muslims represent a highly diverse mix of ethnicities: Tatars, Azerbaijanis, Chechens, Tajiks, Uzbeks, Kazakhs, Algerians, Afghans, Iranians, Iroquoians, and Pakistanis. Like in the West Europe, the demographic profile of the Muslim population is younger than the general Latvian population. The Latvian Muslim community has particularly high number of young people involved in the religious life. The paper provides a summary of findings on the main political concerns of Muslim youth in Latvia

and comes to conclusion that religious values are a source of civic and political activism among our interviewees.

## **The Political and Religious Engagement in Switzerland: under the Veil of Appearance**

**Eva Marzi**, University of Lausanne | [eva.marzi@unil.ch](mailto:eva.marzi@unil.ch)

My paper addresses the subject of Islamic Feminin Militantism in the Lemanic region of the Swiss Confederation in a crossed perspective of both social sciences of religions and migration. I propose to interrogate the lines between the “politic” and “apolitical” that enter in the history of the separation between religion and the state in European society, leading from the experiences of the protagonists of diverse muslim associations in Geneva. Specifically, I’ll show how the incorporation of social practices and the shape of individual and collective migrant subjectivity is concomitant with the creation, by the actresses, of new ways of “transnational citizenship”, attached to municipal/multicultural politics. The shape of feminine (or feminist) islamic subjectivities

correspond to a “rescaling politics” operation, leading from social and political participation of muslim immigrants in a specific urban context. The secular distinction between the civil and the religious is refunded in a world where cultural, religious and territorial references are in perpetual mutations, and there occurs a process of “indigenization” of transnationalised religion trying to negotiate his place in the public space of regional and national society. Leading from the activities of muslim women involved in a general process of “deprivatisation of religion”, this work intends to highlight the relation between assimilation and transnationalisation, putting into question the controversial notions of modernity, citizenship, and migrant incorporation in Europe.

## **34JS352 - Migrant Religions as a Challenge to European Identities (2)**

Chair(s): Berta Alvarez-Miranda , Complutense University of Madrid Chair: Heidemarie Winkel , University of Potsdam

## **Gender Attitudes of Muslim Migrants in Western and Northern Europe**

**Veronika V. Kostenko**, Higher School of Economics | [veronika.kostenko@gmail.com](mailto:veronika.kostenko@gmail.com)

This study aims to analyze differences between gender attitudes of migrants and local population in 8 countries of Western and Northern Europe. It tests whether migrants from developing countries, especially from the Muslim world, tend to follow European trends in their attitude towards gender equality or they tend to treat gender equality issues in the same manner as in their countries of origin.

This topic is of particular importance as attitudes towards women’s rights are proven to be a strong predictor of support for democracy and of liberal values in general. This study uses European Social Survey Data, a representative national sample for the most European societies, where migrants are coded separately. The results show that migrants are a little more conservative in their gender

attitudes than local Europeans, but the influence of this factor is often overestimated, whereas age and level of education far exceed migrant status and Islam as predictors of liberal or conservative gender attitudes. Moreover, attitudes towards women's rights among migrants are very similar to the

attitudes of the local population in any particular country. Consequently, migrants in the most liberal countries such as Sweden show more support for gender equality than locals in Germany or Switzerland. However, Muslim religion remains a robust medium-sized negative predictor of gender attitudes.

## **Migration, Embodied Suffering and Healing. Ethnographic Inquiries among Romanian and Romanian Roma Pentecostal Communities in Torino.**

Cecilia Rubiolo, University of Torino | [rubiolo.cecilia@gmail.com](mailto:rubiolo.cecilia@gmail.com)

Nely, a self-defined țigan românizat woman of 49 years old, left her house in Oravița more than ten years ago. Nely, who was born-again eight years ago, lives in an unauthorized "nomad camp" at the margins of Turin, where she regularly attends the auto-constructed Pentecostal church. She suffers from thyroiditis. Reading the Bible and participating to several ritual with the community of faith are the practices through which she is able to symbolize her suffering. Ethnographic inquiries have shown that after the collapse of totalitarianism in Romania (Tichindeleanu, 2009), getting by in the newly edified social and cultural space of post-communism, underpinned by the "permanent transition" model (Sirbu and Polgar, 2009), has had profound consequences on the subjective experiences of people. Haunted by different forms of social and personal disruption during

over than twenty years of crafting of neoliberalism (Ban, 2011), people could chose migration and spirituality as narrow tactics of survival and creativity. My ethnographic investigation, resulting from over a year of multi-sited fieldwork between Turin and three villages in Romania, focuses on the biographies of Pentecostal converts among Romanian and Romanian Roma migrants. Linking the theoretical frameworks of works on the global spread of Pentecostalism, and also its political implications (Marhsall, 2009; Fosztó, 2009; Csordas, 2011) with the tools offered by medical anthropology and ethnopsychiatry of migration, especially the studies of faith and ritual healing (De Martino, 2001; Beneduce. 2005; Good, 1994), I aim to examine the way in which the Pentecostal system of belief enables processes of individual and collective politics of healing.

## **Religion and Recognition – Experiences of young Muslim women in Germany**

Aletta J. Diefenbach, Goethe University, Frankfurt | [alettad@gmx.de](mailto:alettad@gmx.de)

Recognition is considered to be a crucial condition for successful identity formation and agency in myriad social fields. According to the philosopher Axel Honneth, recognition takes place on, and is essential to, the legal, inter-group and inter-personal levels. This paper takes this approach to recognition into account in order to understand biographies and actions of young Muslim women growing up in German society. The study explores how experiences of

non-recognition on these different levels cause crisis and changes in the socio-religious identity formation of the women, but also shows which critique, strategies and settings help to overcome this crisis. The analysis is based on ethnographic field work and in-depth interviews with young women from a youth organization promoting a German-Muslim identity. Working from the empirical data, the paper also suggests new theoretical

perspectives on religion and recognition.

## RN36 - Sociology of Transformations: East and West

### a01RN36 - Rethinking and Theorizing the Experience of Transformations in Eastern and Central European Societies

Chair(s): Andreas Pickel (Trent University, Canada)

#### Postwar Modernization: Crisis, Science and Social Revolution in Poland. Case of Lodz.

Agata M. Zysiak, University of Lodz | [agatazysiak@gmail.com](mailto:agatazysiak@gmail.com)

The crisis is often a catalyst of wider social and political change. In modern history of Europe one of the most dreadful time was II WW and postwar years, which can be consider not only as crisis, but even a social revolution, especially for societies in the Central and Eastern Europe. I would like to focus on city of Lodz as a paradigmatic case study for examining identity changes in the postwar Central Europe with special attention put to its modernization dreams and peripheral position in constructing new egalitarian type of since and university. My attempt is to capture processes and trends which shaped and fallowed the development of science in the socialist reality in post-war Eastern Bloc. That is not only institutional alterations or political decisions, but also on the subjective level involved citizens reacting to and comprehending change, struggling in order to

be not only the objects but the subjects of change. A biographical working-through and making sense of peoples' roles in the change, being a reaction to and construction of the very process as well is a crucial dimension of change .Research is based on press materials and biographical interviews. Lodz is post-industrial city in Central Poland (similar to Torino), after the year 1945 over 70% of Lodz's population was lost, but it become temporary capital of Poland and most vivid center of social experiments, as it was magnet of leftist intellectuals and had no previous structures to be reproduced. The historical perspective and understanding of the past leads to better understanding of the present times and ourselves. The topic enables to make claims emerging from a local context and empirical data, but also opening path to trans-local validity.

## Institutional Dynamics of Russian Society in Macro-Historical Perspective

Ruslan Braslavsky, Russian Academy of Sciences | [braslavru@yandex.ru](mailto:braslavru@yandex.ru)

Vladimir Kozlovskiy, St.Petersburg State University | [vyk\\_soc@mail.ru](mailto:vyk_soc@mail.ru)

Yulia Prozorova, Russian Academy of Sciences | [yulia.prozorova@gmail.com](mailto:yulia.prozorova@gmail.com)

This paper explores the macro-historical dynamics of social institutions in Russia through the lens of civilizational analysis and multiple modernities theory. A critical review of the four extensively applied 'classical' approaches to macro-dynamics of Russian institutes (linear modernization, local civilizations, institutional matrixes, world-systems) is provided. These approaches construct the coherent and reductionist models of sociohistorical configurations, which inadequately represent the institutional processes in Russia. The trajectory of conceptual changes from the middle of 20th century is traced from the theory of linear modernization to multi-dimensional and multivariate modernization and further to the views of plurality of cultural and institutional

forms of global modernity. The recent versions of neo-institutional analysis, world-system analysis and civilizational analysis admit the idea of contingency and heterogeneity of sociohistorical configurations as an analytical starting point in the study of institutional dynamics. Russian sociological discourse usually disregards these theoretical innovations. The paper aims to bridge the gap between the old problem and the new analytical approaches in case of Russia. Basic 'problematics' of the Russian historical development, as well the emergence and competition of alternative interpretations and institutional designs in the fields of economy, politics and culture are considered in the article.

## State Capture: Eastern Lessons for the West

Klaus Mueller, AGH University of Science & Technology, Cracow | [muelacde@zedat.fu-berlin.de](mailto:muelacde@zedat.fu-berlin.de)

Over the last two decades, several scales of transformation have been used to measure the democratic quality of post-communist change. "State capture" has been identified as the central mechanism by which an unclear differentiation between the political system and private sector interests undermines the integrity of the state and erodes democratic procedures: interest groups with privileged access to privatization processes, to legislation or public offices can change the rules of the game to their advantage. While the concept of "state-capture" was quite successfully applied to Eastern Europe it is hardly used to analyse post-democratic developments in the West. Liberal democracy plus market economy was inflated to the benchmark of post-communist transformations, but not evaluated itself. It

took the global financial crisis in general and the crisis of European integration in particular to become aware of the lessons to be learned from the post-soviet experience. The incapability of the US government to overcome the constellation that led into the crisis can be explained by the deep interpenetration of the US financial sector and the administration ('Government Sachs'). The unwillingness of the EU to consider policies beyond the austerity it imposes on its 'peripheral' members indicates how deep the proclaimed values of coherence and solidarity are corrupted by the subordination to financial markets. If this is true – as to be illustrated by two examples – this affects the democratic credentials of western governments

## **b01RN36 - Rethinking and Theorizing the Experience of Transformations in Eastern and Central European Societies**

Chair(s): Zenonas Norkus (Vilnius University, Lithuania)

### **Attributions for Poverty in East Central European Countries**

**Mikko A A Niemelä**, The Social Insurance Institution of Finland | [mikko.niemela@kela.fi](mailto:mikko.niemela@kela.fi)

**Markus Kainu**, University of Helsinki | [markus.kainu@helsinki.fi](mailto:markus.kainu@helsinki.fi)

Citizens' attitudes towards the poor can be seen as reflecting the dominant ideology of country as well as the moral economy of the welfare state. Findings of the comparative studies have emphasised clear differences between Western and Eastern European countries. Eastern Europeans are more inclined to blame either the individual behaviour or the flaws of the economic system of country than their Western counterparts. However, there is a shortage of comparative studies on attributions for poverty in particular focusing on the East Central European countries. Utilising The Life in Transition Surveys (LiTS) conducted jointly by the European Bank for Reconstruction and Development (EBRD) and the World Bank in 2006 and 2010, the purpose of the paper is to provide a more up-to-date picture on the public

perceptions of the causes of poverty in East Central European countries. Paper examines cross-country differences in attributions for poverty. As an individual-level determinants, article test to what extent risk factors related to financial hardship are associated with perceptions of the causes of poverty, and whether these factors are associated with perceptions similar way regardless of the groups of countries studied. As country-level determinants, article examines the effects of economic growth, income inequality, the quality of governance and the post-socialist legacy on poverty perceptions. Our follow-up dataset focuses on (the effects of) financial crisis and therefore a special emphasis is given to public perceptions of the financial crisis and its association with attributions for poverty.

### **Local Perspective on Post-Soviet Transformation and Social (Dis)Order**

**Ksenia Tenisheva**, National Research University - Higher School of Economics, St. Petersburg | [tenishewa.soc@gmail.com](mailto:tenishewa.soc@gmail.com)

**Daniel Alexandrov**, Higher School of Economics, St. Petersburg | [alexandrov.daniel@gmail.com](mailto:alexandrov.daniel@gmail.com)

**Alexander Lukoyanov**, National Research University Higher School of Economics | [lukoyanov414alexander@gmail.com](mailto:lukoyanov414alexander@gmail.com)

Political and economic transitions are always accompanied by some level of social disorder. In post-soviet transformation it is often treated in a very general way by analyzing national rates of alcohol consumption, violence, crime, drug use etc. On the contrary, we propose to shift attention to the local level of

communities. In the villages and small towns the national transformation processes are mediated by local contexts. For the everyday life of their inhabitants, local minor forces are more important than national policies. We conducted a mixed-method research in three rural areas. In one area in Leningrad Region

we carried out a 4-year case study combining anthropological observation, multiple semi-structured and in-depth interviews as well as a survey of school students and their parents - we used schools as easy entry points. In addition in 2011-2012 we carried out rapid-assessment anthropological surveys of two-week field research in 2 districts of Moscow Region where we visited all organizations of social sphere (schools, kindergartens, hospitals, libraries etc.) and talked to many informants on the street. We will present the data on the impact of economic transitions on

local lives in three districts and on local perceptions of crisis's duration in each particular village of one region. We measured different levels of social (dis)order by the abundance of cues, such as litter in public places (cf. S. Lindenberg, R. Sampson), and it corresponded well with alcohol and drug use, and tuberculosis rates as reported by local doctors. The transition affected local lives of diverse settlements and areas differently, due to their traits such as geographic location, historical context, and infrastructure.

## **Cultural Capital of the Young Intelligentsia of Central and Eastern Europe**

Jan P. Galkowski, University of Rzeszow | [jpgalkowski@yahoo.com](mailto:jpgalkowski@yahoo.com)

Hubert Kotarski, University of Rzeszow | [kotarski@univ.rzeszow.pl](mailto:kotarski@univ.rzeszow.pl)

Our paper aims at systematic confrontation of Pierre Bourdieu's theory of cultural capital with social reality of the four countries of Central and Eastern Europe: Poland, Slovakia, Hungary and Romania with particular emphasis on the role played by the intelligentsia in these societies. This confrontation will include both: a theoretical reflection, focusing on the problem of application of Bourdieu's theory to describe societies of Central and Eastern Europe, as well as the presentation of results of empirical research conducted among the students of public universities in above mentioned

countries. The particular objective of the empirical research was the analysis of the concept of cultural capital as a key factor in building the identity and social and political position of contemporary intelligentsia in Poland, Slovakia, Hungary and Romania, based on the example of the youngest generation - current students of public universities. The main hypothesis of the research is thesis that there are historical and social differences in the treatment of cultural capital as a symbolic resource among Polish, Slovak, Hungarian and Romanian students.

## **"But How Do You Know That?" ... Old-turned-New abilities of ex-Communists for Market and Democracy in Lithuania**

Vaida Obelene, Uppsala University | [vaida.obelene@ucrs.uu.se](mailto:vaida.obelene@ucrs.uu.se)

This paper is about how post-socialist citizens conceive the "new" social order in terms of continuities, and how this transmission throughout the change of regimes enforces their self-concept as able members of the new citizenship regime. The empirical interest is on the narratives of worthiness by ex-Communists, - Komsomol functionaries, - in

Lithuania. I am interested in how they navigate the waters of market economy and liberal democracy in "novel" situations of everyday life, such as communicating with a foreign entrepreneur or writing a business grant application. The question is: what makes them worthy of inclusion (e.g. partnership)? While narratives of worthiness may concern various

aspects, such as effort, need and merit, my primary focus is on how the topic of skills & abilities is addressed when proposing oneself as worthy in fairness transactions within society. The paper interrogates understandings such as “entrepreneur’s competency” or “politician’s competency” through the analysis of life stories recounted by ex-Communists. The ensuing discussion seeks to contemplate continuities, for example, as incubated within state socialism but also to consider them as practices of market economy that do not differ

from those of plan economy – it’s just how we call them that is “new”. In the context of post-socialist transformation the inclinations of local people not once were proposed as obstacle in “transition”, ever more so those of the former elites. This paper reverses the perspective: if studied through the lens of biographical continuity, the “new” social order may appear to be nothing more than “old wine in new bottles”. This paper is about visions and enactments of capitalism and democracy.

## **a02RN36 - Varieties of Capitalism in New EU Countries**

### **Class in the Baltic States: A Comparative Neo-Weberian Analysis**

**Vaidas Morkevičius**, Kaunas University of Technology | [vaidas.morkevicius@ktu.lt](mailto:vaidas.morkevicius@ktu.lt)

**Zenonas Norkus**, Vilnius University | [zenonas.norkus@fsf.vu.lt](mailto:zenonas.norkus@fsf.vu.lt)

A Neo-Weberian class theory developed by Robert Erikson, John Goldthorpe, and Lucienne Portocarero (known as EGP class schema) in late 1980s is a mainstream approach in the research of social structure, its transformation, and social mobility in the old EU member states, with core module of the European Social Survey (ESS) providing reliable information necessary to chart EGP class structures. While usefulness of EGP class schema is demonstrated by its many applications, it remains almost not utilized resource in the research of social transformation in the Baltic States. False association of class analysis (a classical strategy in sociological explanation) with Marxism-Leninism may be one of the reasons for this neglect. However, it seems that the lack of comparative data was also very

important obstacle, because only Round 4 of the ESS (2008-2010) included all three Baltic States. In this presentation we use available data of the ESS Round 4 and 5 for the comparative analysis of the class structures of the Baltic countries presenting their 3, 5, 7 and 11 EGP class models, and exploring class dimensions of social inequality and political behavior using the framework of the 7 EGP class model and employing statistical correspondence analysis. The research of V. Morkevičius was carried out implementing a project “European social survey: attitudes, values and behaviour of contemporary Lithuanian society” funded by the Research Council of Lithuania (Contract No. MIP-022/2012). The research of Z. Norkus is funded by the European Social Fund under the Global Grant measure (VP1-3.1-SMM-07-K-01-010)

### **Varieties of Post-Communist Welfare Capitalisms with Their Religious Origins**

**Karmo - Kroos**, Tallinn University | [karmo@tlu.ee](mailto:karmo@tlu.ee)

Although the world is globalizing, it is important to recognize that there are still

plenty of differences within and among countries, including the post-communist ones. Economic sociologists have argued that in reality there is no unified model of capitalism that all actually existing systems follow and have proposed the framework of comparative capitalisms instead. Extending this to the post-communist countries, one could argue that as long as the former command economies are not converging into a unified capitalist type we should expect to find varieties of post-communist socio-economic systems. Yet, there is a tendency in the welfare regimes literature to treat all post-communist countries as similar to one another. This "unity in diversity" seems to be produced by the comparison of East European countries to West as well as reliance of easily accessible data from a short list of international organizations (with their

own missions and focus). This paper is an attempt to challenge this view and highlight the dissimilarities between former socialist countries. Extending the typology of King & Szelenyi (2006) "Max Weber's Theory of Capitalism and Varieties of Post-communist Capitalisms" to as many ex-socialist countries as the combined macro-level data from various databases allows, I hypothesize that there are five distinctive post-communist worlds that follow a distinctive path from socialism to capitalism with the unique relationships that they have developed between the non-competitive welfare state and competitive economy typical just to these countries. These five clusters are: the (1) Catholic, (2) Orthodox, (3) Buddhist, (4) Buddhist-Confucianist, (4) Lutheran and (5) Muslim.

## Nations, National Cultures, and Political Economies: A Reconceptualization

Andreas Pickel, Trent University | [apickel@trentu.ca](mailto:apickel@trentu.ca)

The fundamental transformations that have occurred in Central and Eastern Europe, Russia, China, and India over the past 25 years towards capitalism have directed most theoretical attention to questions of political economy. The ideological victory and dominance of neoliberal ideology and policy have reinforced this trend. A "varieties of capitalism" literature has perhaps made the most significant steps in bridging the gap between political-economic approaches and social-cultural approaches. This paper seeks

to contribute to expanding and deepening the connection between the two sets of concerns. It proposes a reconceptualization of "nation", "society", and "culture" in terms of a systemic and mechanistic approach arranged around the key concepts of national cultural systems and nationalizing mechanisms. The relevance of this reconceptualization for problems of political and economic transformations will be illustrated with reference to postcommunist countries as well as China and India.

## **b02RN36 - Varieties of Capitalism in New EU Countries**

Chair(s): Grazyna B Skapska (Institute of Sociology - Jagiellonian University, Poland)

### **Varieties of capitalism and perception of CSR. Expanding 'mirror – substitute' debate**

Katarzyna Piotrowska, Kozminski University | [katarzynaw@kozminski.edu.pl](mailto:katarzynaw@kozminski.edu.pl)

Marta Struminska-Kutra, Kozminski University | [martastr@kozminski.edu.pl](mailto:martastr@kozminski.edu.pl)

The debate over the institutional conditions of diversified capitalisms and – in consequence – corporate social responsibility (CSR) policies of firms, mainly focuses on macro level institutions. An alternative approach is a micro analysis of individual perceptions, that regards institutions as mental models. These approaches are complementary, the second one seems to receive less attention. Based on Polish public opinion survey, we explore economic attitudes indicating mental models connected to liberal market economies and coordinated market economies. By intersecting them with attitudes towards CSR, we verify mirror and substitute hypotheses at the level of individual perceptions. The first claims that CSR activities tend to mirror institutionalized forms of stakeholder coordination, second sees CSR as a substitute for institutionalized forms of stakeholder participation. We expand

the debate over this relation, studying opinions about whether social responsibilities should be addressed 'internally' through the voluntary behaviour of firms or 'externally' e.g. through instruments of public policy. We demonstrate that in Poland attitudes supportive of coordinated market economies and attitudes hostile to it both correlate with a lower appreciation of CSR. Comparing those findings to surveys conducted amongst business leaders in CEE countries supports the existence of a 'post-socialist effect', displayed in sceptical opinions towards CSR. Interestingly however, in the group of youngest respondents, expectations towards business are growing together with a decline of trust in state institutions, which is consistent with the substitute hypothesis. The only groups presenting tendencies consistent with the mirror hypothesis

### **Native and Foreign Professionals in East European Local Institutional Environment: Interaction and Transformation of Labour and Management Practices**

Anna Krasilova, National Research University - Higher School of Economics | [anna\\_krasilova@mail.ru](mailto:anna_krasilova@mail.ru)

Vladimir Karacharovskiy, National Research University - Higher School of Economics | [vladimir.karacharovskiy@gmail.com](mailto:vladimir.karacharovskiy@gmail.com)

The aim of the paper is to present an innovative research agenda for applied comparative studies of national labor and management culture as a phenomenon which is, on the one hand, highly resistant to external institutional and cultural influences, yet, on the other, also

capable of certain transformations. In addition to a classical regard on labour culture (or labour "mentalité") as a persistent feature of certain ethnical/national systems this research aims to address the issue of workers' behavioral characteristics from the standpoint

of their changeability under the following factors: (1) local institutional environment within which ethnical/national cultural codes are being reproduced and reasserted and (2) alien cultural influences, which might foster the transformation of these codes. The project aims to analyze the processes of interaction and transformation of practices of native and foreign professionals (highly skilled workers) who work in native institutional environments,

which shape their work behavior through the general system of economic relations as well as certain systems of corporate norms. Along with analysis of degree and direction of change in work behavior of professionals the project also aims at evaluating the efficiency of this change from the standpoint of costs and benefits to their organizations and economy as a whole.

## Comparing Inequalities across European Societies: Linking 'Varieties of Capitalism' with 'Real Social Groupings' Approach

Gordey Yastrebov, National Research University "Higher School of Economics" | [gordey.yastrebov@gmail.com](mailto:gordey.yastrebov@gmail.com)

The paper suggests to speculate on the heuristic possibilities of linking "varieties of capitalism" (VoC) approach [P. Hall, D. Soskice, D. Lane, including most recent extensions attempting to embrace economies in CEE, Latin America and South-Eastern Asia] with the concept of "real social groupings" [D. Grusky, K. Weeden] for the purpose of comparing social inequalities across European societies with different underlying institutional settings. While the first approach represents new theoretical framework for understanding existing institutional similarities and particularities among existing capitalist economies, the latter draws from the claim that existing social structures cannot be comprehensively studied via some universal theoretical explanations of inequality (e.g. those of J.H. Goldthorpe, E.O. Wright, G.

Esping-Andersen, etc.) and that relevant studies should rather more explicitly address the issue of institutional embeddedness of these societies' social structures (hence, the variety of modes of social inequality). The problem with VoC is that it has so far successfully mapped the major institutional particularities of existing socioeconomic models, but it has yet little to deliver on their stratification systems alone. And so the general idea for future studies is to establish whether these certain "varieties of capitalisms" actually produce distinct patterns of social orderings (or stratification systems) and investigate these patterns in greater detail by employing (and developing) the "real social groupings" approach (rather than sticking to conventional "cliches" such as EGP and the like).

## VoC and Varieties of Beliefs? Business Leaders in the New Europe

Vera Trappmann, Otto-von-Guericke University | [vera.trappmann@ovgu.de](mailto:vera.trappmann@ovgu.de)

Katharina Bluhm, Free University | [katharina.bluhm@fu-berlin.de](mailto:katharina.bluhm@fu-berlin.de)

This paper introduces a new variable into the the debate on the emerging variety of capitalism in Central and Eastern Europe, that on corporate responsibility. The paper explores how business leaders perceive their

responsibility for the wider society. With a newly developed theoretical design, we can identify a variety of cognitive concepts of responsibility, linking these to the institutionalist CSR debate. Our findings show

great country-specific variations. While in Germany the neocorporatist concept of corporate responsibility has remained more current than is suggested in the literature, Hungarian and Polish business leaders are more likely than their West and East German

counterparts to embrace a minimalist concept of corporate responsibility and a greater preference for state intervention. The liberal concept of high-commitment, often associated with 'explicit' CSR, is seemingly rare in all three countries.

## **a03RN36 - Problems of Democratic Consolidation and Civic Society**

Chair(s): Marju Lauristin (Social and Educational Sciences/Institute of Journalism and Communication University of Tartu, Estonia)

### **Cliquecracy as the Form of Quasi-Democratic Regime Consolidation**

**Sergey Patrushev**, Russian Academy of Sciences | [patrushev2009@hotmail.com](mailto:patrushev2009@hotmail.com)

**Tamara Pavlova**, Russian Academy of Sciences | [tamarapavlova@mail.ru](mailto:tamarapavlova@mail.ru)

**Lyudmila Filippova**, Russian Academy of Sciences | [ludmila\\_filippova@hotmail.com](mailto:ludmila_filippova@hotmail.com)

Consolidated democracy is the result of institutional interaction between autonomous civil, political and economic spaces based on the rule of law and supported by the usable state. Democracy defines ways of including citizens in the political process and thus the nature of political regime; there are no significant actors trying to create non-democratic regime, the public majority believes in democratic procedures and does not support anti-system alternatives, finally, all political forces are committed to the democratic norms and determined to resolve conflicts within the framework of democratic institutions. Analysis of the Russian realities reveals a weak differentiation of these spaces to be the main problem of democratic consolidation. The situation is aggravated by the coexistence of divergent trends – societal disintegration of macroenvironment and social

integration of microenvironments (sociologically defined as cliques), a mismatch between needs of citizens and institutional structure (formally supposed to satisfy them), a gap between formal rules and actual practices. The mode of interaction between formal and informal institutions is determined by the patrimonial domination / subordination, which, while not legal, is legitimate thanks to high practical relevance of personal relationships as the most appropriate means to protect and realize the civil rights and to avoid conflicts with the authorities. The Russian power system does not correspond to any model of modern political order and, in particular, does not withstand scrutiny by modern criteria of legitimacy, and can be described as cliquecracy. Empirical data of the paper is based on all-Russian surveys in 2001

## Understanding Democracy in Poland: Changes in Support over time (1992-2011) and Reasons for Support and its Withdrawal

Tadeusz Szawiel, University of Warsaw | [szawiel@uw.edu.pl](mailto:szawiel@uw.edu.pl)

„Support for democracy” is a multi-level concept. David Easton made a distinction between diffuse (generalized attachment) and specific (performance of institutions and political authorities) support. Others (e.g. Pippa Norris et al) claimed that there exists rather a continuum from very general to very specific support. In empirical research various indicators of general support for democracy were used, but the one most frequently used, was a degree of affirmation or negation of the statement: “democracy may have problems but it is better than any other form of government”.

When analyzing the general support for democracy almost invariably emerges the question: what do people really mean when supporting or withdrawing support for the above statement? The project “The method and the meaning” (Institute of Sociology, University of Warsaw, 2011) explores the reasons Poles give for and against democracy as a form of government by analyzing answers to open-ended questions from a representative survey and analyzing transcriptions of focus group interviews.

## The Churchill Hypothesis Revisited: Crisis, Regime Performance, and Satisfaction with Democracy in Post-Communist Europe

Krzysztof Jasiewicz, Washington and Lee University | [jasiewicz@wlu.edu](mailto:jasiewicz@wlu.edu)

The current socio-economic crisis in Europe led to certain developments, such as the emergence of the “Occupy” and “Outraged” movements on the one hand, and the electoral successes of extreme right-wing parties in countries as diverse as Greece, Hungary, or Finland, on the other, that may indicate a trend toward withdrawal of legitimacy for modern pluralist democratic regimes. This trend seems particularly acute in new democracies, from post-authoritarian Greece, Spain, or Portugal, to post-communist nations of Central and Eastern Europe. Hence, there is an opportunity to retest the so-called Churchill hypothesis (“democracy is the worst form of Government except all other forms;” see Rose, Mishler, Haerpfer 1999). If people who have personally experienced the shortcomings of both democratic and undemocratic regimes

opt in favor of the former, then the “Churchill hypothesis” stands. If, however, those people prefer the undemocratic alternatives to the imperfections of democracy, then the Churchill hypothesis is false: Democracy falls short of even the “lesser evil” threshold. Data gathered at the beginning of the current crisis (2009) by the Pew Center seem to point out to the strong positive relationship between variables measuring government’s performance and democratic legitimacy: of the eight post-communist nations investigated, Poland, essentially untouched by crisis, recorded the highest level of satisfaction with democracy, while Hungary, where crisis struck the strongest, the lowest. This paper inquires further into this issue, utilizing multi-variate analyses of survey data from Pew Center, EES, CSES, and other sources.

## Political Trust and Citizens Participation in Lithuania: from Alienation toward Active Citizenship

Jurate Imbrasaitė, Vytautas Magnus University, Kaunas | [j.imbrasaitė@smf.vdu.lt](mailto:j.imbrasaitė@smf.vdu.lt)

Democracy is rather fragile, when it is based on formal democratical institutions. Support for governmental institutions and citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Citizens are free to choose a number of ways to influence the political process. However, not all modes of political participation are equal with respect to the consolidation of newly established democratic system. Support for democracy, high levels of institutional trust and conventional modes of participation constitute a precondition for a stable democratic system. On the other hand, other authors argue that participation in legal protest actions may be considered as acts of self-expression and it is not dangerous for stability of democracy. The focus of this paper is to identify and to investigate types of

citizenship in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of interest in politics, political efficacy, trust to political institutions and participation in political acts? What are the factors that determine the differences between types of citizens? What are the causes and explanations of different patterns of political trust and participation between types of citizens? Based on the survey conducted in Lithuania in 2010 and 60 semi-structured interviews, the paper draws conclusions that four types of citizens (trustful reserved, trustless reserved, trustless active, trustless non-active) may be identified and they significantly differ by age, membership in nongovernmental organizations, interpersonal trust, evaluations of his/her own economic situation before the Independent

## „Civil Society Goes to the Courts? Juridical and Procedural issues in Eastern Europe”

Grazyna B Skapska, Jagiellonian University, Cracow | [g.skapska@iphils.uj.edu.pl](mailto:g.skapska@iphils.uj.edu.pl)

This paper discusses a phenomenon of a growing number of complaints directed from Eastern Europe to the European judicial institutions – predominantly to the European Tribunal of Human Rights. Moreover, also the trust to these institutions is in Eastern Europe higher, than to any other national institution. Two possible, but not competing, hypothetical explanations of both – the number of complaints and the high trust – are pondered upon. The first of them seeks to explain the behavior by the high sensitivity of Eastern European societies to the protection of rights: the legacy of violation of rights experienced by the Eastern European societies before 1989.

The second explanation implies that the high number of complaints and the high trust result from the functioning of public sphere in Eastern Europe: of courts, public prosecution, governmental bodies on the local and national level, that leads to the still unusually high civic rights violation, accompanied by the phenomenon known as „normative empty space” - the lack of extra legal norms (moral, ethical, professional) regulating public sphere functioning. In conclusion, a hypothesis follows on the importance of juridical and procedural issues „from above” (i.s. from „Europe”) for the Eastern European public sphere functioning.

## **b03RN36 - Problems of Democratic Consolidation and Civic Society**

Chair(s): Peeter Vihalemm (Institute of Journalism and Communication University of Tartu, Estonia)

### **Democracy through Europeanization: The challenge of the Western Balkans**

Tatjana Sekulic, University Milan-Bicocca | [tanja.sekulic@unimib.it](mailto:tanja.sekulic@unimib.it)

The topic of this presentation is the sociological analysis of the patterns and effects of the social and political transformations of European societies through the European Union integration and enlargement, with the intention of discussing the relationship between the processes of Europeanization and democratization. The specific case study regards a set of countries called 'Western Balkans': some of them with the 'Accession country' status (Croatia), others with the 'Candidate' (Former Yugoslav Republic of Macedonia, Montenegro and Serbia), and 'Potential candidate' status (Albania, Bosnia and Herzegovina), or 'Special treatment' as Kosovo. First, I will focus on the communicational dynamics and flows among different collective and individual actors involved in the formal institutional procedures of the enlargement; then, I will try to explore

the way in which the process itself is perceived and influenced by the multiplicity of civil society voices. The empirical analysis combines a set of methods: the first part of the investigation contains a comparative content analysis of the Progress Reports of the European Commission on the Western Balkans countries from 2005 to 2012. Then, I will present the main statistics about opinion and attitude towards EU integration and enlargement of citizens both of member countries and countries in accession procedure (Eurobarometer, other local and independent sources). Finally, the results of these analyses will be compared with the findings of my ethnographical research on the enlargement process (2009-2012), that involved the formal institutions' officials from both sides, and NGOs representatives and intellectuals of the WB countries.

### **Conflict Between Transitional Consequences and Proclaimed European Values as the Main Cause of Continuous Destabilization of the South-West Balkans**

Uros V. Suvakovic, University of Pristina, Kosovska Mitrovica | [uros-s@eunet.rs](mailto:uros-s@eunet.rs)

Starting thesis is that disintegration of the former Tito's Yugoslavia is the key factor for destabilization (again) of this area after 45 years of peaceful living and good relations with neighboring states in the region. Introspecting the causes of continuous destabilization and potential conflicts, it is possible to point out: proclamation of so-called "independency of Kosovo", its recognition by the leading Western states and simultaneous disavowal by Serbia and its powerful allies – Russia and China; keeping Serbia in the condition of a

"permanent blackmail" regarding its admission to the EU, which increases the Euro-skepticism with citizens, either the blackmail is based on cooperation with the ICTY or on relinquishment of the part of its territory; attempt to blame Serbian people and Serbia for all events in Yugoslavia during the 1990s; anti-modernization flows in all the states of the South-West Balkans, like strengthening clericalism (again) of societies, as a respond to the feeling of jeopardized national and cultural identity or as a need to prove own difference;

non-functionality of the Dayton B&H; corruption; economic crisis overwhelming this relatively poor region that generates discontent of wide layers of citizens affected by deprivation and unemployment, difficult position of pensioners, social status of workers who do not get wages in privatized companies whose owners do not fulfill commitments,

mass "working on black market", discrimination of women at employment, heavily debts of these states, etc., which make them dependant societies. Therefore, consequences of the transition in these societies are in conflict with proclaimed European values of the societies.

## **Between Interest Group and Common Good. The Diagnosis of Polish Transformation by Tenants' and Anarchist Movement Participants**

Karol Haratyk, University of Warsaw | [karolharatyk@gmail.com](mailto:karolharatyk@gmail.com)

Economical, political and social aspects of the polish transformation can be observed in the case of changes of housing policy and of the dynamics of tenants' movement. Housing policy has become less and less important in the political agenda. Simultaneously, it has become more and more important in the agenda of leftist and anarchist movements. However, the existence of civil society and social movements in Poland is still questioned. In 2010 as much as 72% of Polish women and men did not participate in the activities of any kind of social organization. Some scholars call into question the existence of civil society in Poland. As noticed by Piotr Gliński, Poles are characterised rather by an anti-, than pro-civil

awareness . If civil society is to be – according to the republican tradition – the sphere of activity dedicated to common good, let us consider the more basic question: are Polish women and men able to fight for their own good in the broader sense. To what extent are they able to take part in the forming of municipal politics in agreement with their basic interest? The paper presents the polish transformation in the relation between dynamics of housing policy and the development of the tenants' movement. The biographies of the participants in the movement constitute a tool to understand changes of the last two decades.

## **Civil Society and Participatory Democracy in Post-Reform Russia**

Mikhail K. Gorshkov, Russian Academy of Sciences | [director@isras.ru](mailto:director@isras.ru)

It is hard today to speak of a common and well-formed civil society in Russia. Civil society exists, but it is fragmentary and divided across both horizontal and vertical sections of the population. The paper contains the results of sociological researches, including a description of the strengths and weaknesses of Russian civil society and the environment in which it develops, as well as recommendations on strengthening civil society in Russia. The author draws a complex, and in many respects inconsistent, picture. The condition of civil society in Russia is not subject to unequivocal

judgments in terms of «good» or «bad». The breadth and variety of the information allows the author to depart from simple, sometimes speculative perceptions about Russian civil society. A sincere interest in civil society can tempt to make too many a priori assumptions, but when the empirical base is rich enough, it is impossible to draw black and white conclusions. The author of the paper felt obliged to inform international audiences not so much about his own points of view as about empirical facts and expert judgments. Certainly, the picture is not complete. As will

be shown, the research tools capture different aspects of the development of civil society unevenly. Nevertheless, the data obtained are sufficient to assert with confidence that

Russian civil society is in the difficult process of development, and it has considerable, if yet unrealized, potential.

## **The Development of Civic Participation as a Civilizing Process. Consideration on the Relevance of the Elias'an Concept.**

Arkadiusz Peisert, University of Gdańsk | [zorgus2@wp.pl](mailto:zorgus2@wp.pl)

The aim of the paper is to put forward a systematic treatment of the concept of civilizing process which has been introduced (in sociological term) by Norbert Elias. In spite of the popular meaning, Elias considered this process on very general terms (not only limited to the manners of good behavior). According to Elias (in fact, this idea comes at least from Adam Ferguson), the civilizing process is the essence of the development of civilization of Europe. Particularly, I consider the level of "civility" as an important factor of the development of civic participation after the collapse of communism. Contemporary authors such as Etzioni, Touraine, Sennet and Putnam have made a point about the meaning of the specific individual attitude being

essential in the emergence of true civil society. Polish sociologists – Nowak, Wnuk-Lipiński, Tarkowski and Turska have pointed in their works that the Polish society is characterized by weak sense of civic virtues. But what it really means? Should sociologist put it aside as a non-sociological factor or not? I think that the concept of civilizing process should be employed in order to explain this factor. A strong empirical basis for me are my long-lasting research on the housing cooperatives in Poland (see my paper in the last ESA Conference). However, I'm looking for this perspective for every civil society organizations in the Central-Eastern Europe. I'm open for critical discuss on it.

## **a04RN36 - Cultural Changes and Public Sphere: Identities, Values, Images, Mass Media**

## **Culture-Specific Aspects of Value Systems and their Relations to Socio-Economic Contexts in Post-Socialist Countries**

Marko Sõmer, Tallinn University | [markos098@hotmail.com](mailto:markos098@hotmail.com)

More than 20 years have passed since the fall of the Iron Curtain. Former socialist countries have gone through immense transition process and it is clear that as didn't those countries have similar starting point, they also haven't ended up with similar results. Economic situation, political culture and social

environment vary and have varied a great degree between them. One of the reasons is that behind those socio-economic factors lies cultural system, being influenced and influencing different transformation trajectories those countries took and are shaped by. The purpose of this paper is to

explore and to evaluate different post-socialist countries based on their levels and forms of cultural specificity. Which cultural formations are universal and which are specific to different post-socialist countries? And furthermore, how these culture-specific aspects are related to different social, political and economical developments those countries are characterized by? Cultural differences in this study are formalized through the concept of human values, which are considered to function as building blocks in construction of

the foundations of cultural systems, forming intersubjective value structures, in order to support, give meaning and purpose for cultural realities. Therefore, the diverse value systems are being distinguished within different Eastern/Central European societies, those value systems are being compared between societies and culture-specific aspects of them are being allocated and related to wider socio-economic contexts. Multi-group latent class analysis is conducted and data from European Social Survey is used to accomplish this task.

## Basic Human Values Conflicts Nature in Eastern and Central European countries

Indrek Tart, Tallinn University | [itart@tlu.ee](mailto:itart@tlu.ee)

Eastern and Central Europe countries development in the last decade has been as successful and positively dynamical as was expected not only due to the monetary crisis and openness of the EU borders but also from intrinsic reasons involving differentiating value constellations of ethno-linguistic communities. Most robust estimates of basic values trends and groupings will be applied to Shalom Schwartz' quasi-circular model of their types. We will concentrate on conflict-exposing potentials of its bi-polar axis solutions. Schwartz Portrait Value Questionnaire (PVQ) had served well to research human values landscape and its correlates into broad social and political activities fields in different cultural environments. Now we have opportunity to test the model for Eastern and Central Europe countries using European

Social Survey (ESS) five rounds (2002-2010) 21-item PVQ data (249232 respondents reduced to 231802 after adapting to criteria of not more than 5 missing & 16 repeated values per respondent). Response style for each respondent is adjusted by using centred personal values which can be effectively calculated at any aggregate level. Comparison of the empirical results with the (multidimensional scaling) ideal model is achieved by the help of Procrustean method. The research will clarify reclaims of one-dimensionality (lack of openness to change vs. status quo dimension) of Eastern and Central Europe countries value-worlds. Also some correlations with social and cultural indicators available in ESS will be found and discussed. Divergences from Western Europe countries will be also assessed.

## Specific Features of Individualization in Postsocialist Context

Elena Danilova, Institute of Sociology - RAS | [endanilova@gmail.com](mailto:endanilova@gmail.com)

In post-communist countries the process of individualization has been reinforced and accelerated during last two decades. Not denying similar globalizing factors, the extra pushing forces of individualization in these countries seem to be different from those in the western societies. Such forces are

encapsulated in the consequences of the dramatic social transformation. Research shows a rapid rise of individualist values and claims in CEE societies. Russian society is a telling example of these trends. There seems to be a lot of 'naked individualism' in the way people arrange their lives and social practices

under the conditions of unadjusted norms. However it is arguable that we are also looking at pseudo-individualism and presence of patrimonial relations. The paper searches for explanation in the field of competing theories. The structural framework in which individuals and groups act is constantly reinterpreted and

in this way the setting acquires new shapes. Changing paradigm of social development and an increased risk have led rather to the mobilization of traditional mechanisms of survival and self-preservation, resulting in a co-presence of modern as well as patron-client relationships.

## Work Values in European Countries: Intrinsic Vs Extrinsic Priorities

Vladimir Magun, Higher School of Economics | [maghome@yandex.ru](mailto:maghome@yandex.ru)

Galina Monusova, Higher School of Economics | [g.monusova@gmail.com](mailto:g.monusova@gmail.com)

The opposition between intrinsic and extrinsic (Deci, 1975) motivation and values has been central for studies of work morale for many years and we expect that this dimension will be responsible for cross country variance. The employed respondents from 26 European countries were asked to nominate two main reasons why they put effort into their work (Gallie et.al., 2009; ESS, 2010). In most transition and Mediterranean countries an extrinsic value such as job security or wage and promotion is the most popular choice. Just the opposite is true for Western European and Nordic countries where the intrinsic work value "to be satisfied with what I accomplish" appeared to be of top priority. The common interpretation of such extrinsic-intrinsic country differences relies on the logic of deficit-growth motivation outlined by A. Maslow. What remains unexplained by this

approach is the fact that job security and wages are still considered important by big shares of Western and Nordic countries' employees after constraints on the number of choices are taken away. Our point is that there is an alternative/complement explanation assuming the cleavage in regard to general institutional structure of the labor markets between less (transition and Mediterranean) and more advanced European countries. The latter countries are more meritocratic which means that such extrinsic rewards as job security, wage and promotion follow the intrinsic accomplishments "automatically" and these accomplishments are the only way to receive such rewards. So instead of caring of these rewards directly an employee should care about accomplishments. And it is not the case in transition and Mediterranean countries.

## b04RN36 - Cultural Changes and Public Sphere: Identities, Values, Images, Mass Media

Chair(s): Vladimir Magun (Institute of Sociology Russian Academy of Sciences, Higher School of Economics, Russia)

## Everyday Practices as Basis for Forming European Social Imaginary

Evelin Pullerits, University of Tartu | [evelin.pullerits@gmail.com](mailto:evelin.pullerits@gmail.com)

The possibility of an emerging European public sphere has been the subject of debate mainly

through examining EU related media coverage. Conclusions from research on media coverage have been quite cautious if not skeptical regarding the presence of an actual European public sphere with respect to the absence of several features, which constitute the classical Habermasian concept of the public sphere. However, the present debate and empirical research has not touched much upon the actual experience of people in social networks that stretch over the national boundaries. The hypothesis is that these networks are bringing the European dimension into everyday lives of people, which becomes a basis for building a

common (European) social imaginary and changing attitudes and interest towards EU. The paper examines data from two surveys ("Me, the world, and media") conducted by University of Tartu, Institute of Journalism and Communication in 2008 and 2011, uncovering dimensions of EU interest and the influence of personal experience in EU countries, and of participation in cross-national and EU-related social networks. The analysis will give a better understanding of the factors influencing the formation of common social imaginary, which can be argued as necessary premise for a European public sphere.

## **The Effect of the 2008 Russo-Georgian War on Estonian Public Confidence in Nato: A Mixed Methods Study**

**Alexi Gugushvili**, European University Institute, Florence | [alexi.gugushvili@eui.eu](mailto:alexi.gugushvili@eui.eu)

**Jeroen Moes**, European University Institute, Florence | [jeroen.moes@eui.eu](mailto:jeroen.moes@eui.eu)

**Inge Melchior**, University of Amsterdam | [i.melchior@vu.nl](mailto:i.melchior@vu.nl)

Using a mixed methods research design, this study investigates how the 2008 war between Russia and Georgia affected public confidence in the North Atlantic Treaty Organization (NATO) in Estonia. Data for this study derives from three different sources. Firstly, the fourth wave of the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in NATO. Answers on a survey question 'how much confidence do you have in NATO?' serve as the dependent variable of the current study. The timing of the interviews in EVS defines the quasi-experiment's treatment and control groups.

Respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organizations such as NATO, or the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

## Social Trust: Transformation and Regeneration

**Magomedgabib Magomedov** , Chairman of the Trade Union Organization of Employees | [srasto@mail.ru](mailto:srast@mail.ru)

Transformation processes in the late 80's - early 90's. had substantially impacted on deformation of institutions of social trust in the post-soviet period that have been producing pathological and dysfunctional social consequences for the whole society. Growing distrust between people was accompanied by xenophobia in Russian society as a rejection of any unknown or poorly known ethnic and cultural systems, and the externalization of social trust, i.e. wide distribution and use in public interactions of functional substitutes that have been transferring trust outside the Russian society. The modern Russian society requires a gradual regeneration of social trust

in order to increase the efficiency of the post-industrial transformations. Maintaining the active role of the state in ensuring of social stability can contribute to restoration of social trust, as well as dissemination of post-materialistic values in public discourse. Among these values are: common good, religious and ethnic tolerance and social justice. The implementation of such values in the institutional sphere of Russia will be the basis for the resumption of social cooperation on a broad cross-group basis and confidence in the political-administrative relations between society and the state, the individual and the government.

## Multicultural Policies towards Regional and Minority Languages in Central and Eastern European Countries

**Katarzyna Andrejuk**, Polish Academy of Sciences, Warsaw | [katarzyna.andrejuk@gmail.com](mailto:katarzyna.andrejuk@gmail.com)

The object of this presentation is to describe transformations of state policies regarding regional and lesser-used languages after the systemic transition in Central and Eastern Europe in the last decade of the 20th century. The presentation will compare national policies and institutional measures of protection of minority languages in Central and Eastern European countries on the examples of Poland and Ukraine. Protection of minority languages encompasses vast measures in areas such as education or access to media, which have a huge impact on collective identity. The levels of protection of minority languages in Europe are diversified. In spite of the increasing internationalization of protection of national and ethnic minorities, the solutions functioning in particular European states vary. As the examples from Poland and Ukraine explain,

the policy towards minority languages is shaped by numerous factors: historical relations between the minority and majority group; traditions of multiculturalism and indigenous / immigrant character origins of minority communities; belonging to specific international bodies (CoE, EU). The main question of the presentation is how the national institutional surroundings and historical circumstances influence and modify the international standards of protection of regional and minority languages. The analysis is based on policy documents issued by international bodies, such as Council of Europe (reports monitoring the application of the European Charter for Regional or Minority Languages by state parties), European Commission, as well as reports of non-government organisations.

## **a05RN36 - Cultural Changes and Public Sphere: Identities, Values, Images, Mass Media**

Chair(s): Marju Lauristin (Social and Educational Sciences/Institute of Journalism and Communication University of Tartu, Estonia)

### **The Transformation of Value Orientations in the Popular Consciousness of the Soviet and post-Soviet Society**

**Natalya Orehovskaya** N.A. Orehovskaya Natalya Orehovskaya , Bauman Moscow State Technical University. | [orehovskaya@yandex.ru](mailto:orehovskaya@yandex.ru)

The importance of understanding the value orientations as the phenomenon of social life is that every individual, collective, social group assess the public environment that determine its behavior and realize ourselves through the prism of value orientations. So you need to consider the important fact that represents an exceptional feature of Soviet society. It is about the depth of the social devastation, when together with the remote was destroyed and sprouts identity, autonomous from the State, and the backyard so the field was very special,

unique system of value orientations of the Soviet citizen. This system was significantly different from those of value orientations that prevailed in Western and Eastern Europe. Unlike these countries values prevalent in Soviet society, effectively blocked the formation processes of the modern civil society and market relations. Hence the transition to democracy and to a market economy in Russia turned out to be a very uncommonly, contradictory and in some ways unprecedented processes in the value field.

### **Consolidation of Russia and Characteristics of Russians' Identities**

**Irina O. Tyurina**, Institute of Sociology (RAS) | [irina1-tiourina@yandex.ru](mailto:irina1-tiourina@yandex.ru)

Russia may be one of the easiest nations to locate on a globe, but to define a Russian is a far more difficult proposition. To a Westerner, ideas about Russians are inherently complex and paradoxical. This difficulty is even more pronounced and crucial for Russians themselves. At the same time an issue of identity is quite important as it provides certain characteristics of state as well as characterizes it in the context of other states. National identity together with language, traditions, culture is the main specific traits of Russian nation and forms the basis of its self-definition. Russian identity is very unique in Western civilization. Its peculiarities lie within historical development and its specific features in comparison to Western civilization in

general. Russian identity has its own value and is motivated by internal factors, as well as by external factors, for example in the context of the EU. The problem of identity of Russia has been quite actual during the last 20 years. Russians are undergoing the processes of a new identity formation, however there is some uncertainty. The paper is aimed to study the identity of Russia. The author will mostly concentrate on how Russia formed its identity in the past and in the present and will question, why it is so important to identify Russia as a nation. Besides, it contains a brief description between the view of Russian identity introduced by Russian, as well as by Western scholars, who reflects ideas about Russian identity.

## Russian Identity in the Context of Western Culture

Mikhail K. Gorshkov, Russian Academy of Sciences | [director@isras.ru](mailto:director@isras.ru)

Under conditions of globalization the national identity takes on special significance. Globalization creates unprecedented opportunities for the cultural convergence, expansion of the communicative space, lifestyle enrichment. However it causes many challenges and destructive tendencies, including a trend which is defined as «identity crisis». Ambivalence and ambiguity of globalization practices affecting not only the outer structure of social relations, but also individuals' inner world reinforce the need to define their own national and cultural identity. This need is global. However in every society it has its specific manifestations and gives rise to different social consequences. Russia isn't unique in the fact that it experiences the problem of identity. As elsewhere Russians are rethinking, comparing themselves and the

world, trying to understand the general and the particular in their identification characteristics. Problems of transformation of Russian identity assume ever greater importance. They mediate the future of the country, its ability to face the challenges of modern world as well as to carry out cultural, economic, social and political modernization. The images which will dominate in mass consciousness will affect the prospects for civil society in Russia, the functioning of political institutions, the social climate of the society. At the same time the Russians' perception of themselves, of their own place in the world and of the others affects the formation of political, social and cultural orientation, which mediates the mass sense of place and role of Russia in the modern world, people's attitude to the Western countries, institutions and values.

## Creativity as a Condition of Transformation of Russian Society

Yury Volkov, Southern Federal University, Rostov-on-Don | [infoipk@sfedu.ru](mailto:infoipk@sfedu.ru)

Today the transformation of Russian society can be regarded as a condition of the formation of a creative society. This is due to the fact that the role of creativity and the creative class in Russia is actualizing. And these tendencies have both positive and negative consequences. The positive aspect is that a formation of independent, responsible for their own fate, people has appeared in Russia for the last period. The negative thing is strengthening of social and political inertia, indifference to national problems, inability to mobilize for solving common problems. The changes caused by creativity put the elites and the masses in terms of social values consensus. Authorities are interested in self-development and actualization of citizens, increasing of their social activities in order to remove the excess

social and protective functions from the state. But the integration of society depends not only on the level of income, quality of life. Values, ideas of social life have integrating or disintegrating influence too. It is hard to expect innovation in the catching up with or surpass the level of consumption of the average European country. Ultimately, this is a goal that can be considered as difficult to achieve, because of the social deprivation, self-doubt and degradation in society. In the search for the sense of life, a national idea, creativity, creative society is a society approaching the ideals of freedom and social justice that are demanded by the Russians. Russia's population could drop the load of social and political inertia, the clear general interest objectives will be given to the society.

## **b05RN36 - Cross-border Relations and Mutual Perceptions: East and West in Europe**

Chair(s): Vaida Obelene (Uppsala Centre for Russian and Eurasian Studies Uppsala University, Sweden)

### **Central Europe – between East and West. The Local History of Ideas and Traveling**

**Marta Cobel-Tokarska**, The Maria Grzegorzewska Academy of Special Education, Warsaw | [mcobelto@gmail.com](mailto:mcobelto@gmail.com)

Over the last two decades, the revival of interest in Central Europe constituting former Eastern bloc countries, was observed in Poland. The paper aims at the description of this phenomenon, in terms of either ideas or social practices. The first part of the project focuses on the ideas. In Poland, there exist two institutions: Czarne Publishing House, in Lemko village in the Carpathian Mountains and the Borderland Sejny Centre, in a small town near the Lithuanian border. The idea of resurrecting the Central Europe was born in these two centres. The last time it had been expanded, was in the 1970s and 1980s, by such authors as Milan Kundera, Vaclav Havel and Czeslaw Milosz. The analysis of ideas was conducted on the basis of the statements of leaders and other texts published by the members of two centers. The following issue is

the reception and processing of this ideas for the specific category of respondents: travelers choosing Central Europe as their destination. In 2012, there were carried out 20 individual interviews, which were then rewritten and analysed. The questions, which arouses are the following: how do young Polish travelers see Central Europe? why do they choose this direction? what do they think about it? Generally, the travelers are asked how they put into practice, during their journeys, the ideas of Central Europe being present in several discourses in Poland. The observations of travelers make a significant contribution to the discussion on the new shape of the united Europe, a European identity in the time of transformation, the internal differentiation of the continent, and the way Polish people perceive themselves as Europeans.

### **The Influence of the Twinning on the Political Culture of Urban Elites in Central – Eastern Europe (research concept)**

**Agata Nijander - Dudzińska**, University of Rzeszów | [anijander@gmail.com](mailto:anijander@gmail.com)

Urban elite political culture can be understood as meanings, symbols and values which determine the types of political activities in the field of political power. It is shaped by many factors, among which worth mentioning are contemporary transnational relations. An interesting form of this relationship is a

partnership of cities (twinning). The paper proposes the concept of the research on this factor's impact on the political culture of the elites in the three partner cities of Central Europe, situated on the border of Poland, Slovak Republic and Ukraine.

## **“Intercivilizational encounters”: A Conceptual Framework for Understanding Relationship between Russia and the West in 1991-2000**

Yulia Prozorova, Russian Academy of Sciences | [yulia.prozorova@gmail.com](mailto:yulia.prozorova@gmail.com)

The present paper discusses the prospects for application of civilizational analysis as a theoretical framework for comprehension of the post-soviet transformations in Russia. In particular, it explores the relationship between the post-soviet Russia and the Western countries during the period right after the collapse of the USSR to 2000s. The changes in the interaction process and Soviet efforts towards the rapprochement with the West began in the 1980s with the reconsideration of the USSR-West relationship, which is reflected, for example, in the concept of the “Common European Home”. However, the period in question is characterized by a new format of contacts between Russia and the West, i.e. intense interactions in different spheres resulting in Russia’s infiltration with Western cultural elements and institutional forms. Interactions of this kind were impossible

before and acquired more limited, regulated or ‘filtered’ character later, around 2000s. The period in question is seen as a historical moment when Russian society relying on the recent experience of the “soviet project of modernity” with its specific cultural-institutional configuration and self-image of the USSR as a particular geopolitical, sociopolitical and cultural space, “meets” the Western modernity. The paper proposes to use a civilizational analysis to conceptualize interactions of this period as “intercivilizational encounters” (B. Nelson and J. Arnason). Changes and innovations in Russia induced by the “encounter” in the fields of cultural orientations, interpretation of power, institutional forms and design, and “structures of consciousness” (B. Nelson) are considered in the paper.

## **The Building of a Transborder Local Community**

Anna Pokrzywka-Szklarska, Jagiellonian University, Cracow | [a.szklarska@gmail.com](mailto:a.szklarska@gmail.com)

Transformation in the Middle and East European countries after 1989 shows both astonishing similarities and differences. Many of the former communist countries are now undergoing yet another transformation: europeization and “EUization”. Individuals, local communities and whole societies have to adapt to new political and social situations and solutions. Those changes and transformations are especially interesting and visible in smaller social units: local communities. The important questions are: how do they cope with emerging problems, how does these processes look like in their local environment, what are the tensions, what are the goals? The presented paper, showing the transformation path of local communities, will be based on research conducted on the Polish-German border.

Border regions seem to be an ideal target of research due to a criss-cross of bottom-up influences – civic, local and state, as well as European influences. Moreover, the regions forming parts of a Euroregion - a cross-border structure, special form of cooperation over the borders - are subject to reciprocal influences of the member states involved. Meanwhile, the borderland is not only a peripheral area, needing special action aimed at socio-economic activation, but also an interface, a transient zone, and thus - an area of good potential and a bridge between cultures. Consequently, borderland regions with their local communities stand an extraordinary chance of development, constitute testing grounds for European integration, and eventually, have a prospect of becoming a true,

pluralistic, democratic European community.

## **a06RN36 - Global Crisis and Socio-Economic Outcomes of Transformations**

Chair(s): Zenonas Norkus (Department of Sociology, Faculty of Philosophy Vilnius University, Lithuania)

### **Societal Attitudes to the Public Sector and Welfare State in Poland**

Gavin Rae, Kozminski University, Warsaw | [vro@kozminski.edu.pl](mailto:vro@kozminski.edu.pl)

The transformation from Communism in Central Eastern Europe involved a transition from public to private ownership. This included the idea that the private sector and market were more efficient than the state. Yet, a large public sector remained after the political and economic transition was completed. This included services such as health care, education and social transfers such as pensions and unemployment benefits. Large sections of society are connected to this public sector and are reliant upon it. Simultaneously, these are seen by some as remnants of the previous system, which hold back the development of a healthy market economy. These public services and welfare benefits take on a greater importance in light of the economic crisis. On the one hand, more people became dependent upon them, whilst political

pressure to cut public spending also increased. As members of the EU, countries such as Poland are incorporated into the European-wide debate around issues such as public debt, welfare and austerity. This incorporates issues such as taxation, redistribution, individual responsibility and economic efficiency. This paper looks at societal attitudes to the public sector and welfare state in Poland. It draws on data gained from a questionnaire (carried out by the Public Opinion Research Centre in 2012, commissioned by the social science department at Kozminski University) on economic attitudes after the crisis. It finds that there is strong support for publicly funded services and benefits, although certain social groups are more supportive of dismantling or privatising them.

### **External and Internal Factors of Resilience in the Times of Crisis: Comparing New and Old EU Members**

Marju Lauristin, University of Tartu | [marju.lauristin@ut.ee](mailto:marju.lauristin@ut.ee)

Peeter Vihalemm, University of Tartu | [peeter.vihalemm@ut.ee](mailto:peeter.vihalemm@ut.ee)

The paper explores strategies of coping with the Euro crisis in the 'new' and 'old' democracies, trying to find answer to the question how is capability of transitional societies to cope with economic crisis (resilience) related to the inner factors of each country: quality of democracy and governance,

values and identities of people and political trust, on the one side, and transnational (incl regional) economic and political environment, on the other side. Using data from European Social Survey, Eurobarometer and other relevant international statistical data, authors build a typology of European countries

according to their level of resilience and character of inner and external resources. In particular, the Baltic countries, Poland, Slovenia, Czech Republic, Hungary, Slovakia, Romania are compared with the Nordic countries, Austria, Germany, Italy and Greece.

Theoretical frame of analysis is based on the ideas of general theory of transformation (Karl Polanyi), variety of capitalism (North, Hall & Soskice), theoretical models of transition (Aslund, Bohle & Greskovits, Norkus, Adam et al), social trust (Putnam, Sztopka).

## **The Economic Imagination in Times of Crisis. Did the Economic Crisis Arrive in Poland?**

Mirosława Grabowska, University of Warsaw | [grabomir@is.uw.edu.pl](mailto:grabomir@is.uw.edu.pl)

The analysis of perception and sensing of the economic crisis requires a frame of reference: (1) in comparison with other countries and (2) in a longer time span. Ad (1) In 2009-2012 opinions of Poles, Czechs, Slovaks and Hungarians on the crisis and assessment of their household financial situation were compared several times. In these comparisons – both at the macro and micro level – Poles turned out to be more satisfied and optimistic. Ad (2) In the time span from the early 90s Poles

also turned out to be more satisfied and optimistic. Only against this background one can analyze the perception and feeling of the economic crisis: it will be argued that Poles perceive the crisis, fear it, and with increasing anxiety look to the future. But do they feel it? What – in their opinion – should government do in the situation of economic crises? We will look for answers to these questions at both quantitative and qualitative data.

## **b06RN36 - Global Crisis and Socio-Economic Outcomes of Transformations**

Chair(s): Tadeusz Szawiel (Institute of sociology University of Warsaw, Poland)

## **The More Things Change, the More They Stay the Same: Crisis and Continuity in Zimnicea**

Alexandra Sindrestean, University of Vienna | [alexandra.sindrestean@univie.ac.at](mailto:alexandra.sindrestean@univie.ac.at)

It is often taken for granted that crisis is tantamount to change. Such assumed myopia is fruitful when it helps forge new objects of analysis but it might also divert attention away from the kind of continuities that might better explain the global transformations of the last thirty years. Taking the example of Zimnicea, a small Romanian city on the banks of Danube, I contend that the effects of economic crises are sometimes best revealed when looking at the stickiness rather than the resilience of urban

policies. In this sense, I wish to comparatively trace the parallels between the 1979 and the 1997 crises through the lens of an export oriented zone. Looking at the political economy of Zimnicea as a special economic zone during two different crisis-ridden temporal frames will allow me to convey an understanding of crisis that is marked by continuity rather than change. Given the fact that in the case of (post)socialist countries, 1989 is still taken to be ground zero for radical change, this analysis

goes against the grain and looks at Zimnicea from within the global economy that took

shape from the 1970s onwards.

## Types of Social Embeddedness in Estonia before and after the Economic Crisis

Maie Kiisel, University of Tartu | [maie.kiisel@ut.ee](mailto:maie.kiisel@ut.ee)

Crisis is always about social – otherwise there would be no crises. Crisis poses questions about social viability and change. What kinds of changes have taken place during the economic regression and how has this affected social relations that help to cope with and to adapt to new challenges? My paper provides another empirical insight to this question. The presentation is based on cluster analysis of a quantitative social survey from Estonia. I'll compare data from 2005 and 2011: the periods before and after the economic recession. The analysis focuses on the mechanisms of social embeddedness, and on the changes in peoples' access to structural relations. I emanate from Anthony Giddens's ideas of structuration – that human action and social structure are

mutually challenging. The analysis will outline five types of social embeddedness according to individuals' activity in performing certain social actions. The central issues that form the basis for the cluster analysis are: participation in consumer culture and in workplace-related decisions, activity in personal relationships and in civic movements, commitment to sustainable consumption and nature-related practices (like gardening, hiking). For not to exclude people who have lost their (certain) social relation temporarily (e.g. due to maternity leave or short-term unemployment), the estimation about one's personal position in the social structure as a seventh component was added to the cluster.

## Social Solidarity in Distorted Times: Unfolding the Romanian Case

Horatiu M. Rusu, Lucian Blaga University of Sibiu | [horatiu.rusu@ulbsibiu.ro](mailto:horatiu.rusu@ulbsibiu.ro)

Andrei Gheorghita, Lucian Blaga University of Sibiu | [andrei.gheorghita@ulbsibiu.ro](mailto:andrei.gheorghita@ulbsibiu.ro)

We have learned from the dawn of sociology that social solidarity and cohesion act as the cement of societies, the fabric that ties people together (Durkheim 1964 [1895]; Tönnies 1957 [1887]). However, social solidarity has been seriously undermined by a long series of transformations: the expansion of markets, globalisation of social problems, growing relevance of international organisations and laws, etc. (Stjernø 2004). Furthermore, the sustainability of social solidarity within and across distinct economic and welfare settings became a central issue (Ellison 2011), especially in the context of a global economic crisis. This is particularly the case of Romanian successive governments that continuously

extended the inclusiveness of social welfare programs during the last decade. This raised a need for severe adjustments in the context of crisis, with likely effects on social solidarity. Our paper aims to explore the relation between variation in public spending, social spending, income, unemployment, ethnic diversity, etc. – within and between specific settings in Romania (i.e. cultural areas, regions, urban/rural) and variations in social solidarity. A special focus is given to the impact of the austerity measures implemented by the Romanian government in 2010-2011 on social solidarity. We employ a longitudinal approach, based on data from EVS/WVS 2005, 2008 and 2012 and similar survey data.

## **a07RN36 - Individual Strategies of Coping with the Economic Crisis in East and West of Europe**

Chair(s): Gordey Yastrebov (Laboratory for Comparative Analysis of Post-Socialist Development, National Research University "Higher School of Economics", Russia)

### **Polish Migrants in Ireland after the Celtic Tiger: Strategies for the Recession**

Alicja Bobek, Trinity College, Dublin | [bobeka@tcd.ie](mailto:bobeka@tcd.ie)

James Wickham, Trinity College, Dublin | [jwickham@tcd.ie](mailto:jwickham@tcd.ie)

Justyna Salamonska, Trinity College, Dublin | [salamonj@tcd.ie](mailto:salamonj@tcd.ie)

Elaine Moriarty, Trinity College, Dublin | [EMORIAR@tcd.ie](mailto:EMORIAR@tcd.ie)

Unlike mobile individuals from Western Europe whose movements are often analysed from a lifestyle perspective, those coming from the New Member States are still perceived as 'target earners'. In other words, their main goal is to accumulate as much of a financial capital as possible and thus there is an assumption that they would leave the host country if the economic situation changes. Data presented for this paper, however, suggests that this is not always the case and that the individuals may choose a variety of paths at the times of the economic downturn. They can also exercise the options given to them by the notion of European citizenship and moving back home is just of them. By using the example of Polish migrants in Ireland we will discuss different approaches undertaken by

migrants during the recession. Those who decided to stay in Ireland deployed a variety of strategies for surviving the economic downturn including re-skilling, choosing a different career path, or pursuing transnational careers. We will also argue that the issue of lifestyle becomes more significant for these young individuals who decided to stay in their host country for other than economic reasons. Data presented in this paper was collected through a Qualitative Panel Study in which a small number of Polish migrants were interviewed several times over a period of two years. This method allowed us to track the changes in 'work life' of these individuals that occurred during both the boom and the bust and also examine the changing motivations for staying or going 'back home'.

### **Changing Perception of Luxurious Goods by People Experiencing Poverty in Poland**

Piotr Binder, Polish Academy of Sciences, Warsaw | [pbinder@ifispan.waw.pl](mailto:pbinder@ifispan.waw.pl)

One of the immediate consequences of the experience of transformation in Poland in the 1990's was a significant growth of poverty. In the recent years, according to the Central Statistical Office the scope of this phenomenon in Poland undergone a significant decrease even after 2008. As a result contemporary Polish sociologists are not only concerned with most striking aspects of poverty, but also

stress the importance of the relational, symbolic, and subjective dimensions of poverty as a complex phenomenon. Analyzing the role luxury goods play in lives of people living in poverty, the way they define them (including food), their attachment to goods they possess, as well the goods they dream of brings us closer to individual conceptualizations of the notions typical of culture of consumption,

moral aspects of consumption, as well as to the understanding of the degree of compatibility of individual understandings of luxury with the models served by the cultural texts. The empirical basis comprises the analysis of over 20 in-depth interviews conducted with people living in poverty (young parents of large families and pensioners) and postal survey (N=319) conducted in 2012 as a

part of research project "Luxurious Poverty: Socio-Moral Contexts of Consumption" financed by the Ministry of Science and Higher Education (grant agreement: No. 2229/B/H03/2010/39). The results of the survey "Poles on the Scale of Poverty" [BS/51/2012] conducted by Public Opinion Research Center (CBOS, N=1015, 2012) will serve as a reference point.

## **To Leave or not to Leave: Economically Deprived High-School Graduates in Latvia**

Ieva Karklina, University of Latvia | [ieva@petijums.lv](mailto:ieva@petijums.lv)

Aleksandrs Aleksandrovs, University of Latvia | [aleksandrsa@gmail.com](mailto:aleksandrsa@gmail.com)

The purpose of the study is to explore the impact of family economic situation on the regional identity of Latvian youth, and its relation to emigration plans for the near and distant future. The analysis is based on the data from the first wave of a longitudinal study "Youth career choices and formation of social identities" carried out within the frame of Latvian national research program "National Identity" in 2011. The survey provides data on the opinions of young high-school graduates (academic year 2010–2011) in Latvia collected based on a multistage stratified cluster sampling (n=1730). The group of "economically deprived youth" is defined by employing a relative dichotomous measure (economically deprived youth vs. others), and by using a

subjective assessment of the possibilities for a family to ensure normal nutrition and clothing. The results reveal that a large proportion of the economically deprived parents not only provide limited financial support, but also are very passive to offer assistance to their children in regard of non-formal educational activities and formation of their cultural capital. Many of the families have limited social capital, parents are highly pessimistic, and are reluctant to participate in planning of their children's future educational activities. At the same time, the sense of belonging and identity of young people is one of the statistically significant factors that promote or hinder decision-making in favor of leaving the country.

## **Private and Public Sector Employers' Strategies Adapting to Crisis in Rural Post-Socialist Latvia**

Līga Rasnaca, University of Latvia | [liga.rasnaca@lu.lv](mailto:liga.rasnaca@lu.lv)

Labour market relations take place in a space where there are differences between central and peripheral structures, social and territorial characteristics. The labour market in rural areas is affected by the global linkages and dependencies. Labour Market relations are relations between employers and employees. Manuel's Castell's space of flows is concept which allows the justification of social

differences due to the place of settlement (Castells, 2000). There is a lack of protection mechanisms in rural areas against dangerous influence of space of flows (Marsden, Smith, 2005). Changes in the labour market relations in rural areas are affected by previous social experience. Barriers to the adaptation of labour market relations are analysed in the context of the notion "path dependency". The

main focus is on rural employers' adaptation strategies to the changing socio-economic situation in 2006-2012. The study is based on interviews with private and public sector employers. The post-socialist features of society in rural areas are expressed as nostalgia for previous possibilities in industrial type enterprises. The strong local rootedness of employers' facilitates labour market activities on the local scale. At the same time the readiness of employers' to adapt to the new

social and economic situation in the labour market changing the industry of the activities, position and a former career path, indicates to the ability to become "path breakers". The author refers to those labour market agents with the notion "path breakers" who, adapting to the labour market situation in the post-socialistic society, are ready to start a new direction of professional activity and a career path in private or public sector.

## **29JS36 - European Integration Revisited: from Teleological to Critical Approach**

Chair(s): Marju Lauristin (Social and Educational Sciences/Institute of Journalism and Communication University of Tartu, Estonia)

### **Waking up from the European Dream - Declining Faith in the Common European Future**

Piotr Cichocki, Adam Mickiewicz University, Poznań | [cichocki@me.com](mailto:cichocki@me.com)

European integration has always been stronger on the systemic than the social level. The weak sense of common European identity as well as the effective fragmentation of the European public sphere have long been recognized as great challenges for the integration project in the long-run. Almost a decade has now passed since the last time there was hope that this weakness could be overcome, and the optimism of Habermas' belief in the European constitutional patriotism or Rifkin's endorsement of the European over the American dream seem now to belong to a very distant past. The mood of the present appears

more promptly captured by Laqueur's "The Last Days of Europe" and its recent sequel "After the Fall: The End of the European Dream and the Decline of a Continent". While from the point of view of the present, no hope for the common European future seems warranted, the question remains whether the optimism of a decade ago has still anything to teach us today. There might be no direct way back to the heyday of hope in constitutional patriotism binding European citizens together, these position might perhaps still have something to offer for the future.

### **European Societal Integration: Contested Institutional Sets of Conflict**

Johannes M Kiess, University of Leipzig | [johannes.kiess@uni-leipzig.de](mailto:johannes.kiess@uni-leipzig.de)

European societal integration is best described as a conflictual process within which new institutional sets are being configured. This

shapes the terms and conditions of social conflicts i.e. an emerging European society itself. I further suggest that social conflicts on

the meso-level (classically between trade unions and corporations) are not only about resource allocation itself. Institutional sets in which conflicts are to be negotiated are also part of the strategies of social actors and, furthermore, institutional sets become contested. Exploring the institutional sets of conflicts and the emerging of these sets promises a deeper understanding of European society, based on and opening a gradualistic understanding of society in general. Last but not least, the question arises how the emergence of European institutional sets of conflict affects the already existing national sets of conflict. This aims at the main question for a sociology of Europe: is there a European

society, and, if so, what does European society mean? The suggested conflict theoretical perspective is relevant to this question, both politically and for academia, because conflicts emerging from modernization and transformation processes most likely produce winners and losers which directly (re-)configures questions of identity, social integration, and legitimacy. The sociological and particularly the conflict theoretical perspective, pointing at the meso-level of social actors – in contrast and amendment to intergovernmental meta-level or horizontal, attitude oriented analysis – adds significantly to efforts of explaining European integration processes and dynamics.

## Calling for “More Europe”: Ideology and Motivation

**Stefan Immerfall**, University of Education, Schwäbisch Gmünd | [Stefan.Immerfall@ph-gmuend.de](mailto:Stefan.Immerfall@ph-gmuend.de)

A confluence of political and social crisis, sovereign debt crisis, banking crisis and economic disequilibrium among them, has hit hard the European Union and its member states. It has exposed deficits in policy adjustments and inadequacies in the institutional regime of the Euro. As a consequence, “More Europe” is being regularly advocated as the proper way out of the crisis. While it may be doubtful, whether “More Europe” is more of a solution or a problem, the diverseness of the advocates of the battle-cry for “More Europe” is even more remarkable. They comprise politicians and intellectuals from the left as well as conservatives and assorted members of the financial industry. All are pushing for more centralized European power to determine the economic and tax policies of the member states albeit in slightly different shapes and colors. Another

commonality of this group is their disposition to brand all those as anti-European who are skeptical about more power going to Brussels and who are pointing to the unwillingness of the peoples of Europe for a fast-track towards a genuine political union. The presentations will sort out the different ideas for a genuine Union and put them into the perspective of a social analysis. It will elucidate the continuing attractiveness of the European idea despite the apparent shortcomings of the European Union and it will illustrate the EU elites’ efforts to confuse the former with the latter. It is also important to analyze how different sections of the elite explains and takes into account the apparent popular objections to many of Europeanizing ideas. The growing disjuncture between the European elite and the people at large may serious derail the European project as whole.

## The Modernist Thrust of the European Union and its Limits. A Critical Assessment of EU Integration from a World-Polity Perspective

Sebastian M. Büttner, Friedrich-Alexander University, Erlangen-Nuremberg | [sebastian.buettner@soziol.phil.uni-erlangen.de](mailto:sebastian.buettner@soziol.phil.uni-erlangen.de)

The current Euro crisis has uncovered, once again, the highly fragile nature and ambivalent perceptions of European integration. Anti-European attitudes and anti-EU parties are on the rise in many countries all around Europe. Some government leaders of EU member states have openly expressed EU skepticism and coqueted with withdrawal of EU membership. Thus, there are clear signs of exhaustion with regard to ongoing EU integration, and there is a growing sense of alienation between the existing European Union and the EU citizens who are still majorly embedded locally and in national frameworks of policy-making. Against this backdrop, however, it appears as an ironic paradox of EU integration that despite all growing skepticism EU integration is further proceeding and even deepening in light of the Euro crisis. This must be acknowledged in theories of EU integration,

and it constitutes a major challenge to contemporary social theories to account for this “double movement” of EU integration. This paper aims to contribute to this debate by offering a world-polity perspective on EU integration. From this perspective EU integration is conceived as a highly specific expert-driven project of “social mobilization” (Deutsch) enforcing a whole array of highly modernist (‘world-cultural’) norms and standards of policy-making and social organization. Many of these norms and standards, such as ‘non-discrimination’, ‘tolerance’, or ‘freedom of employment’, are perceived skeptically by huge segments of EU citizens, since they challenge existing local traditions and popular in-group/out-group distinctions. Until today this has not prohibited EU integration from continuing; this relation will be further explored in this contribution.

## Anomie: Social Reality or an Abstract Concept Depicting all the Possible Negative Phenomena?

Ekaterina Lytkina, Higher School of Economics, Moscow | [ekaterina.lytkina@gmail.com](mailto:ekaterina.lytkina@gmail.com)

The proposed paper addresses the classical theory of anomie which underwent a rebirth in the 90-ies of the 20th century and has been used as a means of describing transformation societies such as Eastern Germany (Heinz 1994), Hungary (Vingender 2001), Ukraine (Golovaha and Panina 2008), Russia (Krivosheev 2008). Nevertheless anomie theory has been widely implemented in relation to the Western Europe (Faßauer and Schirmer 2007, Atteslander 2006, Legge 2010) and the USA (Merton 1964, 2006, Messner and Rosenfeld 1997) and also in a cross-cultural context (Messner and Rosenfeld 1997, Atteslander 2006). The original meaning of Durkheim was re-analyzed after the Merton’s theory followed

by “strain theory” (Cohen (1955), Cloward and Ohlin (1960), Dubin (1959), Agnew (1992)) and institutional anomie theory (Messner and Rosenfeld (1994)) with the emphasis on the tension within the societal structures. Another set of theories was on the border of social psychology (McIver (1950), Olsen (1965), Legge et al. (2008)) with the key differentiation between the objective state of social structure (anomie) and subjective individual attitudes of anomie (anomia). Besides, the concept of anomie has been used together or as a part of other concepts such as alienation (Seeman 1959, Dean 1961, Olsen 1965), anomia (Srole 1965, Olsen 1965, Merton 1964), deviance, aspirations and success (Merton 1938), social

disorganization, abnormity, etc. Thus clarifications are to be made and the central question is to be answered: can anomie be seen as a relevant concept for description of

contemporary societies or is it an abstract concept depicting all the possible negative societal phenomena.

## RS00 - The EU Zone Crisis - Critique and Changes

### a01RS00 - Is There Really a Crisis in Europe?

Chair(s): Jim Arrowsmith (Massey University)

### Is there Really a Crisis? European Citizens' Support of EU's Fiscal Solidarity Mechanisms

Holger Lengfeld, University of Hamburg | [holger.lengfeld@wiso.uni-hamburg.de](mailto:holger.lengfeld@wiso.uni-hamburg.de)

Before global financial crisis reached Europe in 2008, the EU's concept of transnational solidarity has been focused on territorial cohesion measures. Since 2009, the EU and its member states have stepwise established solidarity mechanisms supporting member states facing fiscal troubles. Nonetheless, it is questionable if these immense efforts are supported by the citizens of states either financing or receiving loans distributed by EU institutions. In my paper, I present findings from a survey carried out in summer 2012, at the crisis' height. In this survey, we asked citizens from two countries, Germany (EU's most important credit grantor) and Portugal, a

loans receiving state (N = 2000). Results show that in both countries up to 50% support fiscal help for member states in depth crisis. Moreover, supporting fiscal solidarity is strongly guided by moral motives, especially by those which are related to reciprocity norms. Using scenario technique questions, up to 46 % of the respondents would be willing to contribute to solidarity measures by paying parts of its monthly income. In sum, these results may be taken as a hint to the fact that in times of crisis, Europe's social integration seems to be stronger than often expected in science and public.

### Crisis and the Welfare System in Italy

Flavia Di Mario, Link Campus University, Rome | [flaviadimario@dimario.eu](mailto:flaviadimario@dimario.eu)

In Europe the present economic and social crisis has helped establish governments bent on austerity plans involving an extensive dismantling of the welfare system. In Italy a new cycle of neoliberalism has come into force with the Monti Cabinet and its policies of structural reforms. The neoliberal cabinets, such as Monti, are no longer an expression of the old bourgeois class of politicians but are composed of "technocrats" responding only to the imperatives of financial power. Being an expression of the financialised economy this new cycle of neoliberalism is intangible, and the neoliberal agents are not people but

anonymous entity. By gaining direct control over political institutions and orienting political reforms from within the immaterial economy, Neoliberalism has affected the basic elements of the material economy, e.g. lowering social and economic rights. The Monti/Fornaro labor "reform" has introduced a legal framework, e.g. for apprenticeship, and other legal provisions, that generates a new era of generational and social divide for several classes of workers. Developing the above premises, this paper reviews the peculiarity of the Italian labor market and welfare state system from its original corporatism to the

neoliberalism of the Monti-Fornero “reform”. We argue that the framework and details of the “reform” design matter to a great extent for labor market outcomes and for the social costs

associated with these reforms. The effect of such a reform of labor rights and employment protections may be an increase in inequality.

## The Effects of the Financial-Economic Crisis on the Families and Individual Life in Western Romania

Georgina SZGY Szilagyi, Partium Christian University, Oradea | [szilgyorgyi@yahoo.com](mailto:szilgyorgyi@yahoo.com)

Andrasgy Gyorbiro, Partium Christian University, Oradea | [andrasgyorbiro@yahoo.com](mailto:andrasgyorbiro@yahoo.com)

In our paper we present the main changes of attitudes, social and economic behaviours and economic choices that have been emerged as a result of the economic-financial crisis. Western Romania has a relatively advanced economical structure and a higher standard of living compared to the other parst of Romania. This has partly historical roots, buti t is also a result of the fact that due to the proximity of three borders the trade has always played and plays even today a relevant role int he region’s economy. However, the same fact made the region even more vulnerable, as the trading partners and all the companies and small businesses that have based themselves partly on he markets of the other countries are also heavily affected by the crisis. Romania has been hit by the crisis while it was on an

economic rise, due to the recent connection to the European Union in 2007 and to the strict economic reforms of the former governments. We analyze (using empirical collection of research data and qualitative techniques like focus-group interviews) the adjustment that the population has made in order to restructure its spendings, how the people changed their way of life trying to ensure themselves a fall in living standard as small as possible while saving up as much as they can. We present the level flexibility which characterizes the entrepreneurs and some socio-economic phenomenas which were hardly likely to happen before but are usual nowadays. We also provide information ont he predictions of the population and we present some main ideas they share about the crisis.

## Accelerating European Integration in the Wake of the Crisis: Midwife or Gravedigger of the Ever Closer Union?

Stefan Immerfall, University of Education, Schwäbisch Gmünd | [Stefan.Immerfall@ph-gmuend.de](mailto:Stefan.Immerfall@ph-gmuend.de)

The growth of interconnectedness in Europe has often been expected to bring forth a kind of transnational (European) citizenship. There are good sociological arguments to undergird this expectation. Examples are the transactionalism approach (Deutsch), the idea of a cosmopolitan citizenship (Beck) or even Durkheim’s idea about organic solidarity following the division of labor. The recent EU- and Euro-crisis have cast severe doubts on this train of thought, however. The presentation

discusses factors why European community building remains subdued, at best, including such factors as sociotropic framing effects, parameters of the contact hypothesis, and the media confines of the nation-state). The presentation than goes on to argue that the current crises in its varieties differs from previous crisis European integration has gone through. While the current crisis has its roots in the neoliberal model and its aftermath, it has also a peculiar European flavor. This is

because of Europe's paradoxical social heterogeneity and its political make-up. "More Europe" has been called upon as an antidote. While "More Europe" may be a solution to the "tragedy of the commons" associated with the Eurozone, it would exacerbate other social

dilemmas. The presentation finally discusses potential consequences of these findings for the future of European integration, e.g. subsidiary, bounded solidarity, moderating the belief in supervisors' ability. The call for "More Europe" is rejected as counter-intentional.

## **The Perilous Politics of Austerity in the Euro-zone Crisis. What lessons can Europeans learn from the Anti-IMF movements during the Asian Financial Crisis of 1998**

**Mi Park**, University of British Columbia | [mipark@alumni.lse.ac.uk](mailto:mipark@alumni.lse.ac.uk)

This paper comparatively examines diverse responses from three major actors in the global political economy (the state, civil society, international financial institutions) to the Asian financial crisis of 1998 and the current Euro-zone crisis. First, it analyses conditional lending policies of international financial institutions (IFIs) such as the International Monetary Fund (IMF), the World Bank (WB), and the European Central Bank (ECB) toward countries in fiscal needs. It critically examines how the lending policies of IFIs engendered social tensions and conflicts as austerity measures such as cuts to public sectors (education, old age pension, health

care, etc.) hit hard on the populace. As with the case of the Asian Crisis of 1998, citizens' anger and frustration with austerity measures in Europe have not only been directed to IFIs and the state elite but also toward a politically most vulnerable section of civil society, i.e., the poor, ethnic minorities and migrants. Examining how the state and civil society in Asia reacted to and, as a result of contentious state-civil society interactions, altered the policies of IFIs, the paper critically discusses political challenges of anti-austerity movements in Europe as the perilous politics of austerity fuels the rise of far-right political parties in Europe.

## b01RS00 - Crisis

Chair(s): Frank Welz (Innsbruck University)

### Governing the Ungovernable: The Political Meaning of Crisis in EU Debt Discourses

Hannah Richter, University of Edinburgh | [s1266688@sms.ed.ac.uk](mailto:s1266688@sms.ed.ac.uk)

Be it economic difficulties, violent conflicts or social inequality – the concept of crisis proves to be extremely fashionable when referring to issues which seem to require political governance. This constitutes an empirical puzzle which calls for a theoretical engagement in the political meaning of ‘crisis’. Departing from positivist as well as critical-normative approaches to crisis research, I employ a relativist ontology to denaturalize the socially constructed meaning of crisis. On this basis, the concept becomes accessible as a discursive ‘dispositif’ in the Foucaultian sense. But what is the political quality of the crisis concept? In which way does it shape political discourses? Engaging in those questions, the theoretical dimension of my project draws on the writings of post-structuralist thinkers such as Ernesto Laclau and Gilles Deleuze to

constitute an innovative perspective for grasping the role of crisis discourses in politics. Most centrally, I identify the crisis concept as a discursive means of reducing complexity, establishing ontological security and constituting political practicability. In the empirical dimension of my project, I turn to the EU debt crisis to assess the plausibility of my perspective. Here, I aim to identify possible similarities beyond a specific crisis discourse to shed light on the general political meaning of the crisis concept. For this reason, I use the macro-focused methodology of Discourse Theory developed by Laclau/Mouffe to compare the national crisis discourses in Germany, France and the United Kingdom. Retracing dominant meaning frames, I seek to understand the divergent political outcomes through the specific crisis discourses.

### Crisis: Politics against Markets

Antonios Papparizos, Panteion University of Athens | [apaparrizos@yahoo.gr](mailto:apaparrizos@yahoo.gr)

Crises are nothing more than a way for societies to change, develop and evolve or otherwise face possible retrogression and collapse. Crises are not exceptional in the human history. One could further say that times of crisis force societies to think collectively about their history and acquire new forms of historical and political conscience. This crisis is an opportunity to discuss again the relationship between politics and economy, but also to discuss anew what is politic and what is

economy. Does the systems of production and the relationships of production are separated of power relationships and of the political systems, as it is almost general accepted during the last decades, or we can observe and realize that any kind of human relation is first of all a relation of power (political) and at the same time equally a relation of production (economic)? In this paper, I will try to present one hypothesis about what is politic and why all the production relationships, ownership and

labor, are at the same time political relationships. More correctly, the relationships of ownership and labor, supply, exchange and commerce are simultaneously and above all, always relationships of acknowledgment and friendship, confrontation and animosity,

cooperation and justice or exploration and injustice, and as such always relationships of power and politics. (From Aristotle's hypothesis and the ancient monopolies to the present days) Papanizos Antonis Professor of Sociology

## Morphogenesis of Crisis and Critical Configurations

Gilles Verpraet, University Paris Ouest Nanterre | [verp@ehess.fr](mailto:verp@ehess.fr)

The crisis process can be framed within different analytical methods : The historical and genetic critics and the structural critics of a system. Contemporary critical theories intend to configure the dimensions of the new social system before its breakdown ( Stiglitz, Boltanski). Critical pragmatism can be dispersed between the variety of positioning, between the variety of resistance .The genealogical critics on the crisis process begins as a response for knowledge (Mannheim). The systemic critics framed by Marx require large complements on money, on the question of high salaried, on the new system of governance's incentives who frame the financial circulation ( London, Laval) Critical realism and morphogenesis : We consider the contribution of critical realism inside these morphogenesis (financial

economy, social and national disruption, heterodox theories) . Socio historical analysis can specify the different periods inside the economic system and its breakdown (Wallerstein). The governmentality approach gives a methodology to move from the internal critics (rationality, expertise, optimum, adaptation,) to the external critics (the management of population, the capacity of resistance ) (Foucault,, 2000). The relevance of theoretical explanation focus on the adjustments between different historical criticism (Koselleck) : Genetic critic, Morphogenesis critic, New social history, critical realism (Archer, Sayer). This sociological argumentation require to combine morphogenesis of crisis and critical configurations

## The Meaning of Solidarity in Times of Crisis: Lessons to Learn and Questions to Ask

Vasiliki Kantzara, Panteion University of Social and Political Sciences, Athens | [v.kantzara@gmail.com](mailto:v.kantzara@gmail.com)

Greece finds itself in a deepening social crisis that affects people's lives in many respects and in a profound manner. A diminishing or a non-existent source of income and high rates of unemployment feed a feeling of powerlessness as the immediate threat of starvation knocks on the door of many people. Recently, some photographs showing a mass of people receiving a bag full of vegetables and fruits provided for free by a farmers' organisation hit even the international press. The incident

shows the importance of providing relief and help, which in the meantime is organised at a large scale and in the context of solidarity. Organisations and groups have been set up (more than 100 only in 2012) by the Church, Local Authorities, NGO's, political parties, unions, and individuals (not belonging to the previous categories), who are active in the fields of subsistence (food, clothing), health (medicine, medical help), and education (e.g. language lessons free of charge). In a way,

solidarity actions substitute state social services, signifying the organisation of social relations from the bottom up and on a different basis. The situation poses several questions: how do various groups approach solidarity? What do they envisage about the organisation of social relations? Do solidarity actions point to a revival of civil society? And what would be the implications for the organisation of social

relations in the long run? The paper proposed attempts to discuss processes and developments from the field together with theoretical perspectives on solidarity (e.g. Durkheim's approach and conceptions from social movements) attempting to contribute to discussion and theorising crisis, embodied and embedded critique and change.

## 02RS00 - Critique

Chair(s): Gallina Tasheva (University of Muenster)

### Critique and Crisis: Enlightenment and the Pathogenesis of Contemporary Polish Social Sciences

Zbigniew Rykiel, Rzeszów University | [gniew@poczta.onet.eu](mailto:gniew@poczta.onet.eu)

The paper refers to the work by R. Koselleck by analysing the sources of the crisis within Polish social sciences. While critique is the essence of the science in its post-Cartesian Enlightenment meaning, the atrophy of critique implies stagnation and is characteristic of the periphery of sciences. The structural conditionality of normal sciences, including state ideologies and financial support, may either reinforce critique or contribute to its atrophy. Paradoxically, Polish social sciences under communism profited from the geopolitical rent, i.e. the fact that Poland, as the most open communist society, was able to serve as a channel of the promotion of Western ideas across the 'Iron Curtain'. The collapse of the Soviet block made the mediator unnecessary any longer. The system transformation, based on the neo-liberal ideology involved the dependent development

model not only to the economy but also to science, with its dramatic decrease of expenditures. This reinforced stagnation, including a negative selection of the scientific cadres, who, by the inter-generation transmission of values and norms, were unable to adopt criticism as the essential element of the scientific ethos. The government's attempts to regulate scientists' behaviour by bureaucratic means resulted in forced adaptation of Anglo-Saxon conventions rather than norms, i.e. the production of papers rather than making science. In sociology, this development superimposed the fact that the discipline had not experienced any solid neo-positivist turn, the fact that resulted in a pseudo-humanisation of the discipline, which declaratively follows literary rather than scientific narration while in fact tends to imitate journalist rather than scientific norms.

## Contemporary Cultural Critique, Urban Memory and the Displacement of Originary Violence.

Csaba Szaló, Masaryk University, Brno | [szalo@fss.muni.cz](mailto:szalo@fss.muni.cz)

In the same year as the big oil crisis of the mid 1970's emerged as an extension of Yom Kippur War, a book titled *Legitimationsprobleme in Spatkapitalismus* was published in West Germany. Habermas' book became one of the best attempts to interpret the character of crisis in contemporary societies. The inspiration we can gain from Habermas' theory of legitimation crisis today consists in the importance of meaning for grasping sociologically the crisis. As in the 1970's we have to move beyond an image of a temporary breakdown of a machine like economic-political system which can be repaired by experts. Our crisis is rooted in deeper than financially and administratively mediated interactions. Simply, one has to take into consideration the meaningfulness of these interaction as well as the cultural

preconditions of this meaningfulness. Following this theoretical logic I propose to develop an understanding of crisis by focusing on contemporary forms of cultural critique, especially in the field of urban memory. Today's cultural critique has its origins in the critical spirit of the 1970s, particularly in its anti-reductionist and anti-technocratic ideals. However this critical spirit contained dilemmas over a political sensibility that emerged in the 1950s. When Koselleck's book *Kritik und Krise* was published, the historical sense of time was still marked with the idea of the constitutive role of political violence. Thus, to understand contemporary forms of cultural critique, we have to take into consideration the moral delegitimation of the idea of "originary violence" as a way out of societal crisis.

## Grounding Critique: Informational Basis of Policies and the Issue of "Cognitive Representation"

Vando Borghi, University of Bologna | [vando.borghi@unibo.it](mailto:vando.borghi@unibo.it)

One of the most relevant elements of impasse of any critical effort seems to be the particularly effective ability of capitalism in absorbing the different critical arguments as forces and instruments for innovating, regenerating and reproducing itself. Avoiding this impasse needs a (new) scheme of relationship between expert and codified knowledge – social research, scientific information, intellectual interpretations – and living forms of critique – movements, protests, networks. Such a new scheme moves the terrain of the critical effort towards the key dimension of the contemporary capitalism, that is knowledge. A promising way of structuring that terrain of critical research comes from Sen's concept of "informational basis of judgement in justice". A sociological approach

to that perspective of research can be very fruitful in order to inquiry what kind of knowledge (/informational basis) counts in the decision-making process of policies, in which way that knowledge is produced and treated, which actors are assumed to be relevant in the knowledge production process, how that informational basis frames the range of possibilities, etc.. At the same time, this perspective allows us to focus on the terrain through which movements, networks, associations, etc. can avoid of being easily absorbed by the logics of capitalism. How the 'informational basis' can result through a processes of elaboration, discussion, conflict and compromise, with the participation of a plurality of voices? What are the strategies, the practices and the experiences which enabled

the capability for voice of the directly interested to be displayed and to get “cognitive representation”?

## 03RS00 - Change

Chair(s): Esther Oliver (University of Barcelona)

### Sociology of Critique

Claudia Globisch, University of Innsbruck | [claudia.globisch@uibk.ac.at](mailto:claudia.globisch@uibk.ac.at)

Critique and the forms it is articulated in is a product of society in which it is articulated. This postulate is why Luhmann put an end to Critical theory. He thought it was part of a society in transition – a bourgeois society – that does not exist any more. Luhmann seems to have borrowed this thought from Koselleck who historically located the development of critique within the becoming of depoliticized spaces, that is, as a result of the differentiation of political reality and moral utopia (in the spirit of philosophy of Enlightenment). According to Koselleck, this dualistic differentiation was made to legitimize bourgeois society. Luhmann took two consequences from his analysis: Sociology is bound to a second order observation. From this perspective it can absorb information from society's

environments and reflect on it scientifically. On the other hand, Luhmann argues that the „second order observation“ as well as the observation of critique within society, is a “first order observation”. This means that sociology has no objective that exists outside the observation. If Luhmann is right, sociology has to give up its claim for true statements about the condition of society, e.g. to say: we are in a critical condition or a crisis. I will argue in the tradition of the historico-genetic theory with Luhmann's insight against Luhmann and show (1) why and how sociology has to be critical without being normative and (2) how such a sociology of critique can be used to reflect on different forms of critique and crisis within society.

### Cars, Debts and Banking Crisis: Urban Mobility in the Crisis

James Wickham, Trinity College, Dublin | [jwickham@tcd.ie](mailto:jwickham@tcd.ie)

After housing, for most people their major investment is a car. However, car purchase often involves substantial debt and the expansion of car ownership is interwoven with the development of the financial services industry. Like home ownership, car ownership is both entangled with the growth of the financial services industry and involves particular risks especially when some policies (e.g. limited public transport, dispersed settlement pattern) make car ownership crucial. The final stages of the Celtic Tiger

boom appear to have been an extreme case of this convergence: with a credit bubble and massive housing price inflation, home ownership, suburban sprawl, environmental degradation, car ownership and consumer debt all expanded together. Against this background, the paper investigates the relationship between social exclusion and mobility in an epoch of financialisation and in the specific conjuncture of financial crisis. It uses case studies of two distinct suburban areas of Dublin: an established ‘working class’

area with high levels of unemployment even during the boom years, a second an area with new private sector housing constructed during the boom. The paper shows how in the current crisis those most threatened by new social exclusion are those most dependent on the expansion of both mobility and credit in the

boom – those on first time mortgages in new suburban areas. The crisis has created new forms of exclusion for new social groups, and their experience is very different to those groups who already have a long term experience of social exclusion.

## **Institutions in Russian Social Reality: a Crisis Interpretation**

Vladimir N. Petrov, Kuban State University | [degnev20@rambler.ru](mailto:degnev20@rambler.ru)

Inna V. Ponomareva, Kuban State University | [podsadnyaya@mail.ru](mailto:podsadnyaya@mail.ru)

Radical institutional transformations that began in the second half of the 1980s in Soviet society and continued in the 1990s led to the collapse of the USSR, fall of socialism as an ideology and social practice, construction of new social relations in modern Russian society. The whimsical combination of the ideology of liberalism, uncritically accepted and adopted experience, strong inertness of traditions and conservatism gave occasion to that renewal. Attempts to combine such antagonistic contradictions have led to the appearance of a condition of permanent crisis in Russia's modern social reality. This crisis condition makes itself evident in the fact, that institutional innovations have caused the appearance of several groups of contradictions. Contradictions between the need for construction and spread of modern institutions and maintenance, reproduction of

frankly outdated institutional complexes. Contradictions of interaction and correlation of formal and informal institutions. Contradictions between evident and latent functions, functions and dysfunctions. Contradiction between impersonal and personal character of institutional statuses. Contradictions between the rate of introduction of institutional innovations and lagging behind the need for the institutional infrastructure development. Contradiction between the need for stability and instability of institutions themselves. It is characteristic of some sociological traditions (Sorokin) to consider crisis not as a process leading to catastrophe, disintegration and collapse, but as a condition of anomie and transformation when social diseases generated by a previous state and its conflict with a contradictory new one become more obvious.

## RS01 - Arts Management

### 01RS01 - Issues in Arts Management

Chair(s): Constance DeVereaux (Colorado State University)

#### Arts Management Education: Innovate or Perish

Alan Salzenstein, DePaul University, Chicago | [asalzens@depaul.edu](mailto:asalzens@depaul.edu)

As arts production and presentation continue to transform due to influences of environment and economy, the skills required to manage the arts continue to evolve and adapt. Arts management is considered fragmented, creating difficulty in establishing best practices. However, this fragmentation merely serves to prove that as the sophistication of the field develops, so does the need for well-educated, forward-thinking managers. The notion that arts management is anachronistic belies the path associated with how arts are created and consumed. Current proficiencies have evolved exponentially from traditional practice; future needs are difficult to predict. While historically reactive, this field is now compelled to be innovative and anticipatory, in order to thrive and advance. This evolution of the field is ultimately the focus and responsibility of those that educate and mentor

the arts leaders of the future. The question has been raised whether the movement towards professionalization has come to its end. The response is an unequivocal “no”; in fact, the professionalization of the field (and thereby its professional training) is merely in its infancy with a greater need than ever before. We can look towards organizations such as ENCATC, AAAE, and ANCER for insight and inspiration, as they work to elevate arts management and its training, legitimizing professional opportunities for the next generation. Arts management has been in a race to mature; and innovative methods of training are imminent. As art itself is rooted in history, so should arts management training. And yet, novel approaches are needed. The arts need and deserve to be managed with the same creativity, thought, and novelty that are used to create it.

#### How relevant is HRM in German Arts Organizations? An Exploratory Study

Andrea Hausmann, European-University Viadrina, Frankfurt | [hausmann@europa-uni.de](mailto:hausmann@europa-uni.de)

Arts management researchers from different countries have acknowledged employees' importance for the performance of arts organizations and the resulting necessity to manage this strategic resource effectively. Surprisingly, this is not the case in Germany – after all a country with an impressive number of arts organizations and with almost 3 million employees working in the cultural and creative sector. However, as a comprehensive literature

review revealed, profound empirical research on HRM in German arts organizations is practically non-existent. Though findings from other countries will be usually relevant for arts organizations in Germany as well, there remains the question as to what extent results are transferable. Because of this, the contribution of this paper is twofold: First, it extends the research base on human resource management in Germany by presenting and

discussing results of an exploratory study undertaken with German arts managers (n = 48). Second, it aims to identify differences and similarities between research in Germany and other countries. The results of the survey are expected to be highly helpful for German arts

organizations to align their activities on HRM with the needs and preferences of their employees. Managerial implications and recommendations for further research will be derived from the study results.

## **The Participatory Process in Museum Management: the Case of the Thyssen-Bornemisza Museum of Madrid**

Gloria Romanello, University of Barcelona | [gromanello@ub.edu](mailto:gromanello@ub.edu)

Since 1959 André Malraux had as its objective 'to render accessible great works of art and of the mind to the largest possible number'. Over time, this ambition to democratise culture, which, from the start was full of ambiguities, became increasingly complicated (Donnat, 2003). Recent changes in the cultural and social frame bring to consider that the audience, as a neutral and concrete concept at the same time, is increasingly getting more implication in modern cultural institutions management, despite its various interpretations among the cultural world. That is actually confirmed by the still young and prosperous debate about public-oriented cultural policies (Zolberg, 2010). This debate often becomes a hot field where cultural managers seem to fight an eternal struggle between an emphasis in big popular artistic exhibits (hype) and a participatory approach

towards audiences (Simon, 2010). This could be also seen as the evolution of the ancient dilemma about custodial or marketing approaches (Gilmore & Rentschel, 2002). The case of the Thyssen-Bornemisza Museum is emblematic of this dispute: while their programming has achieved big popularity by placing priority on holding temporary exhibits, they are putting up big efforts in order to strengthen their link with the local community, through significant social and educational programs. Observing the documents and using the results of qualitative interviews to museum staff, this paper aims to be an initial endeavour in analysing the significance of this dichotomous managerial approach and attempts to highlight the principal steps in the definition of the participatory strategies of the museum.

## **Dual leadership in Finnish theaters**

Heli Ansio, Finnish Institute of Occupational Health | [heli.ansio@ttl.fi](mailto:heli.ansio@ttl.fi)

Dual leadership has become a trend in Finnish theatres in recent years. Theatre as a work setting requires cooperation, so it is not surprising that sharing leadership tasks in theatres has always been common. In many theatres, there is a division between an administrative manager and an artistic director. However, it is a newer phenomenon that two leaders share the same position at the top – in business terms, a “two in a box” leadership model. My paper is based on the

research project Self-leadership in art and culture – innovations in liminal states at the Finnish Institute of Occupational Health. In my paper, I discuss the organizational highlights and challenges presented by the dual leadership model. I propose that dual leadership in the theatre setting may entail some innovative practices that could be useful in many other fields. The research is based on interviews conducted in 2012 with leader duos of Finnish theatre organizations, as well as

people working in theaters led by a leader duo. The interviewees represent different kinds of theatres in size, organizational type and geographical location. The analysis of data is currently in progress, and preliminary results show that one effect of dual leadership may be an organizational culture that encourages

participation and dialogue by contesting the traditional one-leader model and its implications. The project draws upon existing research on dual leadership, on postindustrial, post-Fordist work, and on creative industries and work in the art field.

## 02RS01 - Is There Too Much Art?

Chair(s): Constance DeVereaux (Colorado State University), Karen van den Berg (Zeppelin Universität)

### Is There Too Much Art - For Whom?

Melissa Rachleff Burt, New York University | [mjr2007@nyu.edu](mailto:mjr2007@nyu.edu)

In visual art production and consumption, the question "Is there too much art?" incorporates elitism, an issue defined by Vera Zolberg as central to the experience of visual art. Others identify the visual art the market as cultural arbiter and those participating in market valuation become part of an exclusionary discourse (Crane, 2009; Klammer, 2009). In practice, visual artists have challenged market value, dating from 1960s conceptualist work to today's incisive critiques of globalism and neoliberalism (Velthuis, 2009; Harvey, 2007; Lippard, 2002). Artists position themselves outside elite valuation systems by situating their work in public spaces in order to (1) critique society and (2) engage a broader public. This "social turn" (Bishop, 2006), in which the public performs a vital role in art's conception/experience, led sociologist Pascal

Gielen to develop a new theoretical framework in which to evaluate art, an axis from "allo relational" (art serving society) and "auto relational" (art serving the artist). My presentation will extend the session's question to a dialogic consideration of cultural value. Socially situated art does not accept a dominant, mainstream view of art and its monetary resources, even as the work circulates among art networks. Such projects merge fields outside of art – particularly Freire's dialogue theory, urban planning, and social work – to form new genres requiring new patron structures. Community-based cultural practitioners have also produced texts on social practice (Helguera, 2011; Sholette, 2011), and their writing coalesces upon art's role as catalytic exchange among artists, art managers, and audiences through dialogue.

### Too Much Opera? Sustaining Opera Houses in the 21st Century

William O Beeman, University of Minnesota | [wbeeman@umn.edu](mailto:wbeeman@umn.edu)

This paper presents the results of a year long study and seminar dealing with the "Culture of Opera" in the United States, Germany and Austria. Opera is one of the most heavily subsidized art forms in the world with many

sources of funding. As the economic crisis in Europe and North America continues, the question of the continued support of opera theaters and opera performance is a critical issue for cultural policy. In the Northeast

German state of Mecklenburg-Vorpommern there are five major opera houses for a population of 1.6 million people--a population roughly the size of Marseille, France. The state is losing population, and the sustainability of these opera theaters through public funding is a social and economic crisis. Austria has fewer opera theaters per capita, but they also face serious funding challenges. In the United

States there is very little public funding for opera; most support comes from private contributions, but these funds are also diminishing with the drop in national economy. In this paper I will compare the strategies contemplated by the opera establishments in these three regions, and speculate on their prospects for future financial and public policy support.

## Reflections on the Changing Functions of Art

Judith Siegmund, Berlin University of the Arts | [judithsiegmund@udk-berlin.de](mailto:judithsiegmund@udk-berlin.de)

To describe adequately the currently occurring transformations in the functions of art, it is necessary that aesthetic theory poses new questions. The assumption of the autonomy of art, which effectuates the autonomy of the artist, is being put to the test. My objective is to address a number of phenomena and developments occurring within and outside the art world that appear to contradict the traditional theoretical structures regarding aesthetic autonomy according to which the artistic act must be regarded as a suspension of everyday orientation of purpose. From any practical point of view, however, it seems to be evident that purpose, gain, politicization and/or efficiency play a more prominent role in

contemporary art than they did in the past. That which has historically been understood as autonomous art is in the midst of metamorphosis, perhaps even disappearing. This is not just to the detriment of art, but to the benefit as well: namely, in the future the players and participants are no longer going to be perceived as "the others" whose contributions are located in a realm of indeterminateness. Thus the question of whether there is too much art can be answered as follows: there is neither too much art nor too many artists, but the manner with which it and they are being integrated in modern society is different than before.

## The Use of Narrative in Cultural Policy Analysis

Constance DeVereaux, Colorado State University | [constance.devereaux@nau.edu](mailto:constance.devereaux@nau.edu)

The narrative turn in policy analysis associated, e.g., with the discursive methods of Fishcer (1993), Majone (1989), Stone (1989), and others was hailed as a fresh approach for understanding policy processes and outcomes. Its development mirrored hermeneutic trends in fields where scholars increasingly investigated discursive practices and narrative, both as seemingly innate human approaches to the world and as frameworks for analysis. While the value of interpretive approaches has been recognized, they have also been criticized for lack of synoptic rigor. Translating narrative

approaches into empirical, measurable methods has occupied recent scholarship (Shanahan, Jones, McBeth 2011) but does so, in some views, by reducing the scope of narrative and its applications into discrete characteristics that ignore some narrative types. For example, they define narrative as "a story with a temporal sequence of events" (McComas & Shanahan, 1999) or something unfolding "in a plot (Abell, 2004; Somers, 1992), populated by dramatic moments, symbols, and archetypal characters (McBeth, Shanahan, & Jones, 2005), or that culminate "in a moral to

the story” (Verweij et al, 2006). Given narrative as both part of culture and tool for observing culture, while still recognizing a place for quantitative analysis, this paper looks at how theories of narrative emerging from the field of narrative study can be adapted for use by policy

scholars and analysts. Using schemas developed by Vladimir Propp and Aarne-Thompson-Uther, the paper demonstrates how such an approach might work as applied to specific cultural policy examples.

## 03RS01 - Arts Management – Hype, Narrative, and Self-Reflection

Chair(s): Karen van den Berg (Zeppelin Universität)

### Arts Management and the Jargon of Experience

Njordur Sigurjonsson, Bifrost University | [njordur@bifrost.is](mailto:njordur@bifrost.is)

By way of Pine and Gilmore (1999; 2007) the concept of ‘experience’ is finding its way into arts management and policy discourses (Silvanto, Linko and Cantell 2008; Power 2009; Bille 2012), where it has been used hand in hand with the concepts of ‘creative industries’ and ‘creative classes’ (Bille 2009: 94). However, as Boswijk, Thijssen and Peelen (2007) have pointed out, the idea of ‘experience’ with Pine and Gilmore is an idea of market exchanges and consumption. In the ‘experience economy’ the company remains at the forefront and the ‘customer’ is secondary. The role of managers is to stage the customer’s experience, as spectacularly as possible, so that the ‘consumer’ connects in a different way with the producer. As the cultural historian Juliet Steyn observes, there is an ever increasing

prevalence of art and museum exhibitions in which the visitor ‘in the name of “accessible experience” – is encapsulated in and by the works on display, as display’ (Steyn 2009: 1). The experience thus becomes a short hand for any perception or sensation, however brief or shallow. My contribution to the session Arts Management Crisis, Critique, and Change is a critical discussion of the concept of experience in arts management and cultural policy debates. The paper explores some of its underlying intellectual foundations and looks beyond the reductive language of arts management. The idea is to provoke questions about the role of products and institutions, human development and what seem to be almost too everlasting and mechanical organizational structures.

### Critical Issues for Research in Arts Management.

Antonio C Cuyler, Florida State University | [acuyler@fsu.edu](mailto:acuyler@fsu.edu)

Over the last fifty years, Arts Management has made considerable progress towards developing into a viable academic discipline globally (Evard and Colbert, 2000). Nevertheless, Jeffri (1988) argued that some academicians view Arts Management as soft, undisciplined, and not rigorous enough. Furthermore, Dorn (1992) warned that Arts

Management needed to create a body of knowledge through scholarly research to develop a more respectable image as a field of inquiry and employment. Arts Management should respond to these critiques in order to foster self-reflection and self-initiated change with regard to research. Yet, four critical issues impede the success of Arts

Management research in terms of discipline-building. In this paper, I will discuss valuing research, developing a research agenda, faculty preparedness to supervise research, and student education as impediments to Arts

Management research. I will also discuss solutions that may help address these issues so that the field may accomplish Dorn's goal while protecting and benefiting from the enterprise of its intellectual capital.

## **Marketing Practices within the French Book Industry: The Case of a Persistent Conflict between Arts & Management**

**Sandra Painbeni**, European Business School, Paris | [spainbeni@gmail.com](mailto:spainbeni@gmail.com)

French publishers are like Mr Jourdain speaking prose in *Le Bourgeois Gentilhomme* (Molière, 1670): they « have always implemented marketing practices without being aware of it » (Desaive and Poggioli, 2006, 135). For example, the choice of the cover of a book is part of marketing, i.e. « mediation between supply and demand » (Evrard, 1991, 37). Nonetheless, there is a major difference between Mr Jourdain and French publishers: being proud of speaking prose versus considering marketing as a taboo. According to the sociologist Pierre Bourdieu (1992, 165), "books" and "marketing" were historically opposed as « the hierarchy between book categories (and authors) based on the peer judgement was more or less the opposite of the hierarchy based on best-sellers ». Moreover, Chiapello (1998) demonstrated that marketing management within French publishing houses is focused on consumers

instead of creation although there are differences between publishers. This conflict between Arts & Management is more prominent in the book industry than in other cultural industries in France. However, there is limited academic research in this field. Therefore, our main research question is: How does marketing influence management within the French book industry? This research aims to analyse perceptions and practices of marketing (on the basis of 38 semi-structured interviews with French book experts) in order to understand the social aspects that characterize marketing management. The results reveal that publishers can implement marketing strategies successfully without compromising artistic creation and particularly the uniqueness of books. Our research also provides recommendations to legitimate marketing practices in the French book market

## **Creativity between Enterprise and Management: Strategies for Professionalisation in Cultural Fields**

**Valerio Zanardi**, University of Barcelona | [valerio\\_zanardi@yahoo.es](mailto:valerio_zanardi@yahoo.es)

**Matias Zarlenga**, University of Barcelona | [matiaszarlenga@yahoo.com.ar](mailto:matiaszarlenga@yahoo.com.ar)

In recent decades, the figure of the cultural manager has grown in companies engaged in the production of cultural goods and services. However, their positions, relationships, and especially their professional recognition within institutions and cultural industries is quite problematic. Cultural managers are still a group becoming professionals with a lack of

recognition of their qualifications and consolidated features. In this paper we explore, on the one hand, the alternative strategies employed by recognised cultural managers when their degree is not entirely effective as a legitimate credential for professional definition and occupational integration. On the other hand, we point out the

ways in which these strategies occur within the cultural industries. For these purposes we use the notion of social rituals with reference to Bourdieu and Collins. The importance of social rituals, both formal or informal and condensed into symbols that influence the behaviour of members (symbolic efficiency), is 1) to generate emotional solidarity and beliefs shared by the members involved; and 2) to establish recognition outside of the group. For cultural managers, these social rituals are

oriented to self-recognition and to achieve a place in the public sphere through professional articles from scientific, educational and socioeconomic studies, the proliferation of training activities related to certain functional aspects, and the crystallisation of a normative professional figure. This paper concludes that creativity works as a symbol or emblem that makes positioning and recognition possible for a professional group, auto-defined and auto-recognized as cultural managers.

## RS02 - Capitalist Crises, Critique of Growth and the Perspectives for a Post-Growth Society

### 01RS02 - Crisis of growth-based Societies

Contact: Barbara Muraca (University of Jena - Research Group Post-Growth-Society), Chair: Stephan Lessenich (University of Jena, Research Group 'Post-Growth-Societies')

### The Subjective Limits to Growth: Growth Models as Modes of Subjectivation

Dennis Eversberg, Friedrich Schiller University, Jena | [dennis.eversberg@uni-jena.de](mailto:dennis.eversberg@uni-jena.de)

So far, limits to growth have mostly been investigated in terms of ecological unsustainability. My contribution addresses another dimension of limits to the expansive and escalatory dynamics of capitalist growth: its effects on people's lives and subjectivity. Rising incidence of illnesses like burnout and AD(H)D and a surge in consumption of psychopharmaceuticals appear as symptoms of pathological effects of the acceleration of everyday life and the imperative to be ever more productive. However, such wholesale diagnosis may prove too hasty. My paper explores some reference points of a more sophisticated framework for investigating the subjective effects and limits of economic growth. Linking a materialist reading of Foucault's notion of dispositif to the idea of historically and geographically differentiated growth models, I interpret the latter as general

frames of subjectivation: of how people are to become productive subjects and generate maximum value within the respective growth regime. This enables an account of the diverse modes of production of 'capitalist subjectivity' and their psycho-physical or social limits. Historically, the 'Fordist' growth model with its standardized occupational subjectivities and rigid gendered division of labour has been succeeded by de-collectivizing and fragmenting regimes of 'individualization' and, more recently, what I would call a dividuallising mode of subjectivation, framing labour power as competence and calling on each worker to create a unique, ever-evolving portfolio of competences. Geographically, further differentiation is needed as to what other modes of subjectivation exist in other regions of the globe, and what subjective limits each of those might be approaching.

### Save me From my Friends: How to Discuss Degrowth and Capitalism Relation.

Michał L. Szostek, University of Warsaw | [szostekm@is.uw.edu.pl](mailto:szostekm@is.uw.edu.pl)

In my presentation I would like to discuss the theoretical issue of degrowth-capitalism compatibility. Since prominent theorists of degrowth as S. Latouche or T. Jackson clearly avoid delivering deceive answer for this question I start with analyzing pros and cons of these tactics. Furthermore, I argue that they

decision not to prioritize discussion whether degrowth is or is not by its nature anti-capitalist should be considered as a reaction to the condition of modern capitalism theory. As argued, current discipline's most influential discourses about capitalism are highly abstract, totalizing and to great extent

semiosphere oriented. Simultaneously they have a tendency to depict capitalist system as overwhelmingly powerful and in effect extremely hard to change, what weakens and undermines degrowth movement basic assumptions. I will conclude with an attempt to

present theoretical approaches not belonging to the mainstream, but which could fruitfully enrich and empower both theory and practice of degrowth. In this section I will refer mainly to B. Latour and M. Callon writings.

## The Price of Growth. Why the National Debt Increases in Economic Growth?

**Mateusz S. Stachura**, University of Heidelberg | [mateusz.stachura@soziologie.uni-heidelberg.de](mailto:mateusz.stachura@soziologie.uni-heidelberg.de)

According to conventional views there is a positive correlation between economic growth and the reduction of public debt. But this is true for short-term analysis only. In the long run there seems to be an inverse relation between the two variables. The more aggressive the policy of growth the stronger the increase of the public debt. As appropriate data of the developed countries show, the growth volume of the last two decades is in many cases equal to the volume of the new public debt in the same period. How can this surprising and hardly known fact be explained? One possible approach is to examine the role of the deregulation in creating the economic growth. If the normative deregulation really

generates growth (as the neoliberal paradigm asserts) while at the same time producing externalities (contrary to the neoliberal assumption) that cannot be wholly internalized by the economic actors, then the public institutions are supposed to bare the burden of the internalizing the cost of the economic growth. Increasing public debt is a result of the growth strategy which grounded in the deregulation of the economic relationships. The main conclusion of the study drawn from an evolutionary approach of the social norms. According to this theory norms are evolutionary grown defense mechanism against the occurrence of externalities in the course of the collective action.

## Austerity, Inequality and Sustainability in a Context of Degrowth

**Ernest Garcia**, University of Valencia | [ernest.garcia@uv.es](mailto:ernest.garcia@uv.es)

This paper maintains that austerity will be necessary within the framework of the forthcoming degrowth period. The first part criticises the widespread conviction that austerity is bad and undesirable while growth is good and necessary. It is maintained, on the contrary, that austerity is going to be essential to prevent a catastrophic collapse, while more growth would be undesirable even if it was again feasible. Austerity means abolition or renunciation of all things unnecessary in order to maintain what is necessary. However, in Spain as well as other countries, the government calls austerity to the abolition of what is necessary (education, healthcare) in

order to maintain what is unnecessary. And the opposition takes on this corruption, identifying austerity with abusive and unjust cuts. This way, by identifying it with rising prices, deteriorating public services, and increasing inequalities, the notion of austerity is being completely perverted. However, from the perspective that the present situation is not only a fraud, but also a real crisis, a more proper notion of austerity must be vindicated. Recalling that austerity has been claimed on more than one occasion by egalitarian political and philosophical thought can help in this context. To think a relatively benign degrowth era, the hidden connections between austerity

and well-being should be explored. The second part examines the relationship between environmental sustainability, socio-economic equality and prosperity, analyzing data from eight European countries and pointing out

some consequences of all this for the social practices. The paper belongs to the research project "Transitions to a post-carbon society", Spanish R&D Programme, CSO2011-24275.

## Precarious Wealth and Sustainable Consumption

Klaus Kraemer, University of Graz | [klaus.kraemer@uni-graz.at](mailto:klaus.kraemer@uni-graz.at)

The term "precarization" has been introduced into the social scientific debate about changes in modern capitalist societies in order to analyze new forms of unequal employment opportunities. The debate revolves around claims that precarious employment is no longer restricted to the margins of society only, but now extends far into the middle classes. According to this thesis, job-related social insecurity and fears of precarization are spreading particularly among those segments of society that increasingly perceive their own, hitherto stable social status as insecure or even threatened. Sustainable consumption patterns can be observed especially among segments of society whose social status is secure or at least not vulnerable. Given the increase in living conditions characterized by insecurity and precarious wealth, we are faced

with the question as to how this will affect the households' willingness and capability to engage in sustainable consumption practices. Precarious social conditions hardly allow for a longer-term perspective in planning for everyday issues and life in general. Therefore, we can expect precarious living conditions to take their toll on the sustainability of private consumption. Bearing this in mind, the presentation pursues two objectives: First, I want to show how experienced ("objective") and perceived ("subjective") precarization affects the conduct of everyday life in private households, and how these effects influence the social opportunities for sustainable patterns of consumption. Second, I will show the opportunities and limitations of sustainable consumption patterns under changing socio-economic conditions for prosperity.

## 02RS02 - From Growth Critique to Degrowth

Contact: Barbara Muraca (University of Jena - Research Group Post-Growth-Society), Chair: Stephan Lorenz (University of Jena - Institute of Sociology)

## Increasing Knowledge? Problematic Prospects of a Post-Material Capitalist Economy

Tilman Reitz, University of Jena | [tilman.reitz@uni-jena.de](mailto:tilman.reitz@uni-jena.de)

Not everyone who sees material limits of growth and recognizes the growth imperatives of capitalist economies has to become anti-capitalist. A different way out seems to be offered by the knowledge economy, whose

expansion not necessarily exhausts resources and heaps up waste. In my presentation I want to argue that the case is less clear. For knowledge, culture, and other informational products and services hit limits of capitalist

exploitation. There is reason to think that the knowledge economy is only capable of yielding capitalist profits where it is connected with its dirty, material other. This will be explored in a rather abstract, but hopefully comprehensive way. I want to proceed in two steps. In the first I will argue that knowledge economies face a dilemma between technological unemployment and “cost disease” (Baumol). While innovation which increases productivity thereby reduces the need for human labour – and thus the chances to exploit it –, expanding

cognitive services tend to fall behind in productivity. As far as their quality depends on work time, they cannot be rationalized and become increasingly cost intensive. In a second step I want to discuss a systemic solution which is only beginning to be understood in the commons debate: even the most marketized knowledge societies entertain huge sectors of voluntary and collectively funded knowledge production – which give the word exploitation an important new sense.

## Is Degrowth Reactionary? The Question of Identity Closure

Francois Schneider, Autonomous University of Barcelona | [francois@degrowth.net](mailto:francois@degrowth.net)

Being against growth and globalization leads automatically to some accusation of being reactionary. Supposedly such position is a call for going back to identitarian closed-communities against the liberal democracy and the “open-society” as defined by Popper. As a matter of fact, although most of extreme right is fiercely pro-growth, there are also groups who adopted an anti-growth discourse. In this article outline the clear boundary between degrowth emancipatory responses and extreme right/reactionary ideas. We argue that the discourse of the degrowth process and project, if taken in consideration with the integrality of its philosophical origins, dimension and strategies is actually a important remedy for identitarian closure. Although neo-liberals defend the idea of open-society through economic growth, economic

growth in the real world, the one which has limits, leads to closure. Localism, on the other hand, need not be closed. Within degrowth we talk about the importance of practicing the so-called «open-localism». Change of lifestyles related to degrowth leads to giving up identitarian attributes related to consumption items like the car, the big house etc... As opposed to many movements who have a strong identity based on an artificial marker against «an enemy», the degrowth movement is composed of a wide diversity of actors, concerns and approaches that do not define one enemy. We develop the idea that the difference between the degrowth movement and the reactionary elements of society is at the level of identity closure. Degrowth requires going out of closure, developing open and multi-level communities of project.

## Reconceptualizing Consumption as if Nature Mattered: from an Unsustainable Preanalytic Vision to a Sustainable one

Kristoffer Wilén, Hanken School of Economics | [kristoffer.wilen@hanken.fi](mailto:kristoffer.wilen@hanken.fi)

Mainstream literature – informed by the assumptions made in neoclassical economics – has theoretically decoupled the economy and the concept of consumption from the environment, the biophysical reality and the material basis of the economy. But what the

current ecological crisis and its symptoms keep telling us, is that this decoupling or disconnection has happened only in theory, not in reality. Since all schools, which in one way or another study the economy, can be divided into two: the dominant social paradigm ‘Infinite

Planet Theory' and the alternative 'Steady State Theory' (degrowth & planet with boundaries) [Zencey, 2011], I will in this conceptual paper tentatively outline some of the most basic but major differences between the two schools' preanalytic vision. The most basic and yet irreconcilable differences that I refer to, are the hierarchical levels and dependency relationships between the environment/nature, society, and the economy. This is where the preanalytic vision comes into the picture. It is the vision that has to change, because what is left out before the analysis cannot be captured or understood at a later

stage through more refined analysis of the same picture through the same vision. By applying Schumpeter's (1954) concept of a preanalytic vision – which by its very nature is ontological and ideological – and insights gained in ecological economics, it becomes possible to reconceptualize and reconnect consumption with the environment, the biophysical reality. In doing so, making it unnecessary for biophysical and social (society) reality to change in order to better fit current hegemonic and unsustainable theories, and instead making it possible for theories to better reflect the world.

## Decoupling Environmental Impact from Economic Growth

**Eivind Stø**, National Institute for Consumer Research, Oslo | [eivind.sto@sifo.no](mailto:eivind.sto@sifo.no)

**Pål Strandbakken**, National Institute for Consumer Research, Oslo | [pal.strandbakken@sifo.no](mailto:pal.strandbakken@sifo.no)

**Gunnar Vittersø**, National Institute for Consumer Research, Oslo | [gunnar.vitterso@sifo.no](mailto:gunnar.vitterso@sifo.no)

The theme of this paper is the decoupling of environmental impact from economic growth, where the book "Prosperity without Growth" by Tim Jackson is our point of departure. He distinguishes between relative and absolute decoupling and the main conclusion is that even if some progress has been made in reducing the ecological load (mainly the energy intensity) of growth, there is an "absence of absolute decoupling" (p. 75). Jackson's principal message is that decoupling is necessary, but that it probably will not be enough to rise to the challenge of the urgent climate crisis. Further, he asserts that without confronting the structure of market economies it will not be possible to achieve deep cuts in resource use and emission levels. At present, Norway is a very rich country. Its economy has been growing steadily since the early nineties, both measured in GDP and as private affluence. The country's economy even seems to have remained largely untouched by the

current global financial crisis. In this context, any signs of a reduced environmental impact from Norwegian households/consumers are potentially interesting, because this would suggest that it might be possible to break the relationship between affluence and eco impact. This is the starting point of this chapter. We have observed interesting trends in two consumption areas in Norway; trends we hold to be relevant to the debate over decoupling: firstly, and by far most important, the average consumption of domestic energy more or less stopped growing in the early nineties, peaking in 1998, and then tailing off; secondly, two ecologically rather positive tendencies in Norwegian meat consumption. One is that average meat consumption does not seem to have grown since 2007. This is potentially important because the greenhouse gas load of meat is very high. Another is a shift from beef to poultry, a change that is held to be beneficial to the environment.

## 03RS02 - Practices of Transformation Beyond Growth and Paths of Transition

Contact: Barbara Muraca (University of Jena - Research Group Post-Growth-Society), Chair:  
Viviana Asara (ICTA, Autonomous - University of Barcelona)

### Common Goods between Volunteering and Post-growth Culture.

Massimiliano Ruzzeddu, UNICUSANO | [mruzzed@hotmail.com](mailto:mruzzed@hotmail.com)

The phrase "Common goods" denotes a peculiar category of goods, both material and immaterial, that are belong not to private citizens nor to institutions, but to civil society -or specific parts of this. One of the main theoretical problems, that have been affecting the debate on this issue, is the lack of a shared definition, i.e. an objective criterion to assess clearly what is to be included or excluded from this category. My paper will focus on the two main approaches to this problem, that literature states, and will try to assess the theoretical and empirical consequences of both. From on side, the "content-based" approach includes the initiatives of groups of citizens that, produce services not existing before, as a way to face financial crisis. Typical example are the collective restorations, the

reuse of abandoned buildings or the cultivation of unused urban land. On the other side, the "management-based" approach implies considering as common goods, objects such as public water, environment, education etc. This approach claims for management criteria that do not base on linear trends of financial accumulation, but on ethic and social values. Those approaches are different from each other, but they both represent a cultural change, that put into discussion the modern development models based upon a quantitative trends of economic growth. Basing upon theoretical debate and empirical data, I will try to construct two idealtypes of Common goods, that can be the theoretical base for future researches on this topic.

### Degrowth, Commons et "Jardins Partagés" : the Bruxelles case

Elisabetta Cangelosi, University of Siena | [betta.cangelosi@gmail.com](mailto:betta.cangelosi@gmail.com)

Although urban-gardening is not a recent social experience (the first- the Liz Christy Community Garden- grew up in Manhattan in 1973) urban-gardens are getting more and more present all around Europe and their importance as a matter of resilience is notably growing. This paper is part of research plan (in progress) on the idea of commons in social movements involved in degrowth, re-appropriation of urban spaces and based on participation and cooperation; furthermore, because of the connection between urban-gardening, resilience and degrowth, this presentation belongs to larger and a

particularly timing analysis on commons and degrowth. The specific aim of this contribution is to present how the idea of commons is part of the discourse of urban-gardeners in Brussels. In fact the discourse about the commons is increasingly relevant in the political and social arena and it seems to be permeating different fields of activism. Despite its importance, however, it is not yet defined and the interaction between different disciplines can contribute to its development. Urban-gardens, and Brussels' ones particularly, offer good material: on the one hand urban-gardening is an "old" social

experience where the idea of commons is recently incorporated, which makes paradoxically easier to understand how and why it became so relevant; on the other hand Brussels is a perfect location because of the high number of gardens and because of its peculiar international but also local condition.

The idea of commons among Brussels urban-gardeners, explored thanks to the data collected, will be presented, analyzed in relation to different approaches to the commons and, when possible, compared with information coming from other cases

## **Degrowth as Transition. An Exploration of Prospects of Realization and Conditions of Possibility**

**Yannick Rumpala**, University of Nice | [rumpala@unice.fr](mailto:rumpala@unice.fr)

Broadly speaking, the theme of “sustainable degrowth”, as an alternative collective project, has mostly been presented and justified as a new common horizon allowing populations to find solutions to current challenges concerning ecological sustainability and human living conditions. However, if it is a question of moving from one state to another one with different characteristics, the problem will be to find a transition. For this project to be credible, a process of reflection should be undertaken about such a transition that would allow a movement towards a “sustainable degrowth”, and notably about the manner and modalities of this transformation. From this point of view, while it is a question of turning away from paths considered to be harmful, propositions about “degrowth” suffer from not truly being

linked to a theory of change. And yet, this theory appears to be essential to conceive the conditions to which this type of vast project could apply. As a starting point for moving forward, three foci of reflection are suggested, which prove to be determining factors because they also correspond to realms of confrontation that such a project would be faced with in the present world: - the relationship with dominant values which largely influences the conditions of the diffusion and acceptance of ideas; - the capacities of generalizing (counter-)practices and of facilitating the accumulation of alternative experiences; - the possibilities of reducing structural constraints thanks to the coordination and networking of existing initiatives.

## **Real Utopias? The Worlds of Sustainable Community Movements**

**Paolo Roberto Graziano**, University Milan-Bicocca | [paolograziano@hotmail.com](mailto:paolograziano@hotmail.com)

**Francesca Forno**, University of Bergamo | [francesca.forno@unibg.it](mailto:francesca.forno@unibg.it)

In the current economic crisis, social movements are simultaneously facing two types of challenges: firstly, they are confronting institutions which are less able (or willing) to mediate new demands for social justice and equity emerging from various sectors of society; secondly, giving the highly individualized structure of contemporary society, they are also experiencing difficulties in building bonds of solidarity and cooperation

among people. In our paper we intend to discuss and analyze in a comparative fashion new forms of self-organization that address both the intensification of economic problems and the difficulties of rebuilding social bonds and solidarity within society, emphasizing solidarity and the use of ‘alternative’ forms of consumption as a means to re-embed the economic system within social relations. In fact, despite the rapid growth of experiences

such as the Italian GAS (Gruppi di Acquisto Solidale) groups, the French AMAPs (Associations pour le Maintien d'une Agriculture Paysanne), the CSA (Community Supported Agriculture) movement, the so-called Transition Town Movement, the Latin American Solidarity Economy Network, the nature and role of these organizations has been often underestimated and misinterpreted. The paper will discuss theoretically the main features of

contemporary Sustainable Community Movements (SCM) by discussing their similarities and differences with more contentious social movements as well as with cooperative and mutualist movements of the past. While discussing what is new (and/or what has been renewed) in new Sustainable Community Movements, the article will develop an analytical framework which will combine insights from social movements and interest groups theories.

## Engaging comparative political economy and ecological economics: from varieties of capitalism to a variety of post-growth economies?

Hubert Buch-Hansen, Copenhagen Business School | [hb.dbp@cbs.dk](mailto:hb.dbp@cbs.dk)

Comparative political economy (CPE) and ecological economics (EE) are two branches of political economy that have developed completely independently of each other. CPE scholars have produced an impressive body of literature on the institutional configurations that characterise various national forms of capitalism. Yet, the unsustainable nature of contemporary capitalist societies is not a theme in this literature, which also consistently ignores the downsides of economic growth. EE, on the other hand, notes the problematic structural reliance of capitalism on economic growth, emphasising that natural resources are limited and that there are also limits to how much pollution and 'global warming' the fragile ecosystems of the Earth can sustain. This has led to the formulation of visions of, for instance, a post-growth society or a steady-state economy. The

aim of the present paper is to contrast these two traditions in political economy, and to suggest that they both could benefit from an engagement (albeit CPE more than EE). CPE scholars can no longer afford the luxury of neglecting the environmental downsides of capitalism and growth. They need to start paying attention to alternative (existing) ways of organising economic life, such as cooperatives, eco-villages and transition initiatives. EE, on the other hand, could benefit from focusing more on variety. Drawing inspiration from CPE scholarship the paper suggests that it is highly unlikely that one form of post-growth society will emerge from the multitude of institutional arrangements characterising contemporary society. In other words, it is necessary to consider the possibility of a variety of post-growth economies.

## 04RS02 - Towards Degrowth: Lifestyles, Happiness, and the Good Life

Contact & Chair: Barbara Muraca (University of Jena - Research Group Post-Growth-Society)

### Growth at the Root of Global Ecological Distribution Conflicts

Ole Busck, Aalborg University | [oleb@plan.aau.dk](mailto:oleb@plan.aau.dk)

In the media and among influential organisations in Europe, increasing attention is being paid to the seemingly rapid changes and improvements in the growth rates of developing countries, not least in former 'hopeless' Africa. Simultaneously, private sector involvement in poor countries' economies is being proclaimed as the lever of this development. However, a closer look reveals that economic progress most often is linked to the extraction of one or more mineral or biological resources, which only adds to the distorted and unequal relationship between poor and rich countries and deepens problems of equity and ecological sustainability. Neoliberal policies accommodating the growth-based need for resources and markets of companies in industrialized countries still dominate global trade and investments and apart from the negative environmental and

social effects of their involvement, beneficial economic effects in general are hard to establish. Investments in raw material and energy extraction have long been known to give little return to the host countries and often create major imbalances in their economic and social systems. However, investments in agriculture (monocultures, cashcrops) and forestry (timber, pulp), in addition to their malign ecological effects, increasingly seem to distort the social fabric of rural communities in developing countries. Land grab in poor countries by companies and governments to satisfy their own growth needs is the latest phenomenon. More attention to such negative global effects of the growth paradigm and alternative paths of development should be given by the academic community to raise public awareness.

### Bhutan: A Model for a Post-Growth Future?

Anders Hayden, Dalhousie University, Halifax | [anders.hayden@dal.ca](mailto:anders.hayden@dal.ca)

Many critics of economic growth have been inspired by the Himalayan state of Bhutan, which has adopted Gross National Happiness (GNH) rather than Gross National Product (GNP) as its core societal objective. More recently, Bhutan has sought international support through the UN system for a "New Development Paradigm" for both the global North and South. This paper will draw lessons from the Bhutanese experience for a politics of sufficiency that questions the infinite growth of production and consumption. What do GNH and a "New Development Paradigm" imply for government policy and the way the political-economy is organized? What obstacles is

Bhutan facing- domestically and internationally- in implementing its vision of a new development paradigm? It will be argued that replacing GDP with GNH does not in fact represent a direct challenge to a growth-based economy- indeed Bhutan's economy is one of the most rapidly growing in the world. However, it does represent an indirect challenge by downplaying economic growth as a priority, even if GDP growth remains a possible outcome. GNH is thus more in line with notions of "a-growth" (focusing on social and ecological priorities, regardless of the impact on GDP), which may be more politically viable than the pursuit of "de-growth"

(intentionally aiming to downscale the size of the economy). The research will include interviews with Bhutanese officials, analysis of documents related to the new development

paradigm initiative, and the author's participation in related workshops at the UN in New York and in Bhutan.

## Lifestyles in Growth-Critical Societies – some Conceptual Reflections

Dietmar J. Wetzel, University of Bern | [wetzel@soz.unibe.ch](mailto:wetzel@soz.unibe.ch)

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-) growth. Concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the rejection of growth as the dominant social imaginary (Castoriadis 1990, Latouche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented: (1) Social-theoretical focus: From

the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies. (2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandel 1995, Nussbaum 2010).

## The Burnout Patient – an Involuntary Antihero of Post-Growth Society?

Sighard Neckel, Goethe University, Frankfurt | [neckel@soz.uni-frankfurt.de](mailto:neckel@soz.uni-frankfurt.de)

Greta Wagner, Goethe University Frankfurt | [greta.wagner@soz.uni-frankfurt.de](mailto:greta.wagner@soz.uni-frankfurt.de)

Beyond the financial crisis, the debt crisis and the ecological crisis, there is a crisis of the subject that manifests itself in a growing epidemic of depression symptoms and burnout. The average days of incapacity to work due to burnout have risen about eighteenfold since 2004. The diagnosis burnout was first mentioned in 1974 and gained great popularity in the seventies and eighties among social workers, teachers and nurses, i.e. in fields where professionals have to include their whole subjectivity into the work process. The fact that burnout symptoms are now observed

in almost all sectors, coheres with the requirement of the entrepreneurial self to commodify its emotions, personal interests and its striving for self-fulfillment. As the logic of growth in financial market capitalism has come to an end, the burnout epidemic puts an end to the idea of endless resources of the modern subject. In the past two years there has been an ongoing media discourse about burnout. This discourse is full of metaphors that suggest that burnout is a result of wastage of resources; an example is the symbol of a low battery. In our presentation we will pursue

the question if burnout patients are involuntary antiheroes of a post growth society or if they just find themselves in a status passage to new

forms of growth by enhanced resource management.

## RS02 - Poster Session

### The Impacts of Energy Technologies to Enhance Sustainable Degrowth

Petra Wächter, Austrian Academy of Sciences, Vienna | [petra.waechter@oeaw.ac.at](mailto:petra.waechter@oeaw.ac.at)

Current energy demands are feasible neither with renewable energy nor with technically induced energy efficiency. Therefore, it is indispensable that energy demand has to decrease substantially to come to sustainable levels. The envisaged transition includes a break with current energy system and a fundamental change of the structures, energy technologies, policy framework and also a normative change of values and attitudes of all stakeholders involved. Technology plays a crucial role in regard to the environment: On the hand, technology facilitates the extraction and exhaustion of natural, mainly fossil, resources needed for energy production and are decisive for the unsustainable ways energy is used. On the other hand, technology can also contribute to a more efficient energy use and provide new forms how energy can be

produced in a less harmful way for the environment. The paper wants to explore how and which energy technologies can be used that they constitute an enhancement to sustainable degrowth. One of the challenges consists of a rebuilding of large infrastructure systems such as smart grids where electricity production, storage and consumption are net to be able to incorporate renewable energy as efficient as possible. Another issue is the self-construction of energy technologies to contribute to an enhanced citizen's engagement and to strengthen DIY approaches and to enforce people's independence from monopolistic energy providers. Although improvements in energy technologies and self-construction of energy technologies are a valuable contribution to degrowth an overall decrease of energy demand is unavoidable.

### Complementary of Diverse Sources, Dimension & Strategies of the Degrowth Movement

Francois Schneider, Autonomous University of Barcelona | [francois@degrowth.net](mailto:francois@degrowth.net)

Degrowth is a slogan, a missile word. It sparks a contentious debate on the diagnosis and prognosis of our society. "Degrowth" as voluntary societal change, launched by activists in 2001, quickly became an interpretative frame for a social movement where numerous streams of critical ideas and political actions converge. It is an attempt to re-politicize debates about desired socio-environmental futures and an example of an activist-led

science now consolidating into a concept. We discuss here the definition, origins, proposals, evolution, practices and construction of degrowth. The main objective is to explain degrowth's multiple sources, dimensions and strategies in order to improve its basic definition and avoid reductionist criticisms and misconceptions. To this end, the article presents degrowth's main intellectual sources, dimensions as well as its diverse strategies

(oppositional activism, building of alternatives and political proposals) and actors (practitioners, activists and scientists). Finally,

the article argues that the movement's diversity does not detract from the existence of a common path.

## RS04 - Culture, Conflicts and Public Memory

### 01RS04 - Cosmopolitan and Uncosmopolitan Memory

Chair(s): Anna Lisa Tota (Università degli Studi Roma Tre)

#### Jewish Memory and the Cosmopolitan Order

Natan Sznajder, The Academic College of Tel-Aviv-Yaffo | [natan@mta.ac.il](mailto:natan@mta.ac.il)

My paper starts with the assumption that Europe at the beginning of the 21st century is looking for some shared cultural imageries providing the cultural backbone to the crisis-ridden currency of the Euro. What could that cultural imagery look like? Many intellectuals have repeatedly invoked the seminal role of the memory of the Holocaust as a foundational event for such a shared past. This scenario is only the starting point for my look at the prospects for a new Europe, how they relate to memories of the Holocaust, and the cosmopolitan promises attached to them. In addition, I want to pose the question whatever happened to the Jewish voices in this new cosmopolitan constellation? And looking at Europe from a Jewish vantage point, what is

the meaning of a future Europe? My focus will be on Jewish memory. Here one discovers a kind of travelling/cosmopolitan/multi-directional memory. These kinds of memories are very often based on experiences originating spatially in Eastern Europe, but moved and travelled from there to Western Europe, to the USA, South Africa, to Latin America and to Israel while at the same time being able to travel back to Eastern Europe. It is my argument that these kinds of memories pose challenges to the ideas which bind history and borders tightly together and open up the possibility that territoriality is not the only possible means of social and symbolic integration.

#### The Uncosmopolitan Memory: Conflicting Narratives of the Israeli-Palestinian Conflict in the Western Media

Jerome Bourdon, Tel Aviv University | [jerombourdon@gmail.com](mailto:jerombourdon@gmail.com)

This paper approaches the public memory of conflict from an unusual angle. First, it focuses journalists, more specifically on the correspondents of the Western media in Israel as agents of memory. Based on 45 interviews and the study of numerous public debates, it examines how journalists have constructed a certain memory of the Israeli-Palestinian conflict, with specific characteristics, a given starting point (the Six-Day-War) and the valorization of victimhood (be it on the Jewish-Israeli side or the Arab-Palestinian side).

Second, it shows that these memories of the Israeli-Palestinian conflict, despite their common characteristics, diverge, mostly on the basis of different national cultures. It will focus on three different cultures: the American one, where the identification with Israel is the strongest, the British one, where the criticism of Israel and the support for the Palestinian contrast vividly with the US memory of the conflict, and the French one, which occupies an intermediate position, torn between the uneasy relation with the Jewish world (and French

guilt for collaborating with the Germans during the war] and a tendency to support the

Palestinians.

## **New Sacred Spaces for the Dead: The German Army Memorial as a Place for Mourning and Identity Building**

Nils Meise, Konstanz University | [nils.meise@uni-konstanz.de](mailto:nils.meise@uni-konstanz.de)

In September 2009 a memorial for the deceased members of the German Army was inaugurated in Germany's capitol Berlin. This was done mostly unnoticed by the general public and was the result of three years planning and construction. The memorial and its shape demonstrate a change in how the German Army constructs their own history and uses the site of the memorial for discontinuity and continuity in collective remembrance of dead army members. Interestingly, the architect of the memorial is known to be famous for planning churches and the memorial was built on the Bendlerblock area

that also houses the German Resistance Memorial Center. What I want to show in my presentation is how the memorial discourse deals with the past and future deaths of German Army members and link it at the same time to the shape of the memorial, conducted rituals, and the overall discourse of its construction. I am applying a Durkhemian model of space and also include a visual historical analysis of the memorial and its use. Furthermore I compare the German Army Memorial with other war memorials to understand its uniqueness on a global level.

## **Competing Victimizations or Multidirectional Memories? Notes on the Politics of Collective Memory in post-Nazi and post-colonial Left-wing Contexts**

Julia Edthofer, University of Vienna | [julia.edthofer@univie.ac.at](mailto:julia.edthofer@univie.ac.at)

The proposed paper explores contentious entanglements of collective memory, memory politics and politics of location regarding the Holocaust and colonialism in Austrian inner-left debates. Due to the national history of the Austrian post-Nazi and post-colonial national context, conflicting political standpoints reflect the multi-directionality of memory as well as its reverse elements condensed in "competitions of victimization". Since the 1990ies, debates about anti-Semitic frames within Austrian left-wing criticism are part of radical movement politics - most prominently in controversies about the Middle East conflict. In the wake of 9/11 and the upswing of anti-Muslim resentment, quarrels escalate and split parts of the Left in an anti-fascist, pro-Israeli camp and an anti-racist, pro-Palestinian one. On the one hand, these camps debate if

anti-Muslim resentment has taken the place of anti-Semitism. On the other, memory politics is an important matter and discussions focus on the comparability of the Holocaust and colonial atrocities. All these quarrels refer back to the Middle East conflict, when the Israeli state is supported as outcome of the annihilation of the European Jewry by the ones and contested as racist colonial state oppressing a Muslim collective by the others. I analyse such clashing memories as logical „competitions of victimization“ in a post-Nazi and post-colonial society and propose a multidirectional perspective that discusses the legacies between colonial orientalizing racism and anti-Semitism and allows for a synthesized approach to post-Holocaust and post-colonial memories. Such a perspective would treat racism and anti-Semitism as different but

interwoven power relations.

## 02RS04 - National Memories and Ethnic Consciousness

Chair(s): Rudi Laermans (University of Kuleuven, Belgium)

### Narration, Experience and Memory: Remembering 1980 Coup D'etat in Turkey.

Elifcan Karacan, Siegen University | [elifcan.karacan@gmail.com](mailto:elifcan.karacan@gmail.com)

This presentation will focus on the problem of narrating past experiences in the case of the military coup d'etat realized in 1980 in Turkey. In to what extent could it be possible to narrate an experienced violence? How is the past experience being reconstructed while remembering it in the present? What are the roles of present social frameworks of the narrator while reconstructing the past? I will discuss the relation of memory, narration and experience through the findings of my PhD research done with exiles living in Germany and revolutionaries who continue to live in Turkey. From a comparative point of view I analyse how especially the brutal violence is experienced during the Junta and how it is

being reconstructed in the narrations of revolutionaries. The biographical case reconstruction method used in this study, provides the possibility of distinguishing experienced life history and narrated life story. Similar to Halbwachs' theory of collective memory (1950), biographical case reconstruction method suggests that every remembrance is a process of reconstructing within the present social frameworks of the individuals (Rosenthal, 2006). In this manner, through my empirical findings, I try to discuss how the phases of violence and trauma are narrated in the biographies of revolutionaries by combining Halbwachs' theory and Rosenthal's methodological approach.

### Revertebrating Collective Memory's Backbone: the Changing Logic of Periodization in Romanian Historical Consciousness

Mihai Stelian Rusu, Babes-Bolyai University, Cluj | [mihai.rusu@ubbcluj.ro](mailto:mihai.rusu@ubbcluj.ro)

Starting from the assumption that every collective sense of the past must be structured along certain temporal lines, this presentation reveals how the Romanian historical consciousness had been succeedingly periodized in separate temporal epochs in reaction to the changing political conditions and ideological imperatives of the day. By presenting how the temporal structure of the national past had been consecutively "revertebrated," the central argument of the presentation suggests that the periodization of the past, as the symbolic backbone of

collective memory, is a deeply ideological operation, carried out in order to convey a presently usable image of the past. By analyzing the social punctuation of the past, i.e. the reasons and symbolic implications behind the selection of the temporal watersheds of history understood as defining moments fracturing the continuity of historical time, this presentation unveils the "social (ideo-)logic of periodization." The analysis reveals that the periodical structure of Romanian past underwent six stages starting from the mid-19th century to present day corresponding to:

a) national romanticism (mid-19th century – World War I); b) critical nationalism (during the interwar period); c) anti-nationalism (1947-cca.1965); d) national communism (cca.1965-1989); e) post-communist upsurged nationalism (1989-cca.2000); f) postnationalism (cca.2000 onwards). In conclusion, it is implied

that, although imbued with ideological presuppositions, some system of partitioning historical time must be employed as cognitive prerequisite for understanding the past. Nevertheless, “carving the (past’s) reality at its joints,” as Plato put it, is not a possibility.

## Politics of Memory During Times of Crisis: The Nation-State’s Imagery to Tame the Critique

Idil Cetin, Galatasaray University | [idilcetin@gmail.com](mailto:idilcetin@gmail.com)

A crisis, being one of the stages in a sequence of events, differs from these events as it refers to a decisive turn in the direction of the sequence. Critique is an inherent part of a crisis, as it is mostly in such times that the assessment and the re-assessment of the present, the past and the future is called for. The nation-state building process, which can be thought as a crisis as it refers to a break from the conventional state of affairs and marks an indeterminacy about the direction of the sequence of events, and the political crises it faces in the subsequent years inevitably elicit critique, as different groups might envisage a different sequence. The state officials might try various methods to dismiss this critique in order to implement their project as they wish. One such method that I want to deal with, within the context of Turkey, is the use of a certain visual repertoire, consisting of

the photographs of Atatürk, the founding father of the republic, in order to delimit critique. The production of these images and their circulation throughout the history of the republic aim at providing the citizens with an image of the “ideal Turk” and turning them into a coherent body by offering a certain way of belonging to the state and remembering its past. By pursuing a certain politics of memory during times of crisis through the circulation of images, the state officials attempt to delimit the critique with what is portrayed as the norm in these images. In my presentation, I will focus upon the use of photographs during different political crises in Turkish history to show how these images were used as mnemonic devices which would reestablish the loyalty to the state and to delimit the content of the critique.

## Turkish Collective Memory: Remembering and Forgetting

Gülcan Ergün, Anadolu University, Eskişehir | [gergun@anadolu.edu.tr](mailto:gergun@anadolu.edu.tr)

Unity of a nation is a very important issue for the states, so every state tries to create a collective identity. A collective identity is something that is built and it is based on a social engineering. In this building process, culture, religion, symbols, nationalism are often used or invented. Past is also very important to build the future. So some past events are never allowed to be forgotten by collective memory. But some other events of

the past are immediately erased from collective memory. How is it decided to remember or forget something or who decide? In this article, it is intended to argue the building process of collective identities by analysing some important events of Turkish history. At the same time, it is aimed to examine the point of view of Turkish collective identity to some other collective identities. In other words, another issue of the article is how

the hostilities between nations are produced in the process of building national identity.

## 03RS04 - Cultural Trauma and Public Discourse

Chair(s): Natan Sznajder (School of Behavioral Sciences - The Academic College of Tel-Aviv-Yaffo)

### Remembering Chernobyl: Public Representation of Cultural Trauma in Ukraine and Belarus

Ekatherina Zhukova, Aarhus University | [ezhukova@ps.au.dk](mailto:ezhukova@ps.au.dk)

The paper explores how Chernobyl nuclear catastrophe as a cultural trauma is remembered in Ukraine and Belarus. Particularly, it focuses on how Chernobyl is publicly represented by conflicting political elites and intellectuals for national identity construction. It argues that public representation of a cultural trauma is a matter of power exercise. The paper analyses Ukrainian and Belarusian Chernobyl touristic sites, museums, monuments, commemoration ceremonies, and exhibitions starting from the break-up of the Soviet Union in 1991 till the present day. The analysis is built on the collection of visual data about the material culture (video, photography, description of artifacts, etc.) accessed on-line and through participant observation. Content analysis and discourse analysis are applied to analyze these data. Content analysis helps to demonstrate

what is presented about Chernobyl, while discourse analysis shows how Chernobyl is presented. The research finds that memory of Chernobyl is contested as each actor represents Chernobyl in a different way for their political purposes. Selective memory of Chernobyl developed by political elites affects nation-building projects in Ukraine and Belarus. While one political coalition represents Chernobyl as an event of the past to conclude that the nation has already overcome it, the contested view on Chernobyl is that the disaster is an event of the present that the nation is living through today. The paper discusses the implications of these two major contested representations on nation-building. In general, the study brings a new insight to theories of small-nation formation in post-imperial era that experience lack of self-image.

### Commemorating Piazza Fontana: Memory, Media and Public Discourse

Lia Luchetti, University of Rome La Sapienza | [lia.luchetti@uniroma3.it](mailto:lia.luchetti@uniroma3.it)

This paper is about the relationship between the collective knowledge and memory of terrorist attacks in Italy and the process of their being fixed and shaped into commemorative social practices and cultural objects. The paper is based on the results of a research about the relationship between media, memory and public discourse and the

inscription in the Italian public discourse of Piazza Fontana terrorist attack in 12th December 1969. A commemoration takes place every 12th December in Piazza Fontana, but today only a few Milanese citizens take part in the anniversary ceremony. Through the representation of the massacre in the newspapers and interviews with Associations

of the victims' families, I proceed to reconstruct the event and places, the description of the subjects involved, the ways of relatives' elaboration of trauma (Alexander et al., 2004), their collective actions and their relationships with other members of the public sphere and with the State. Then, I analyze the commemorative ceremony during the years, to understand the meaning and functions of all the social practices and the controversial symbols of this memory, like the three memorials of Piazza Fontana (Foot, 2002). At

last, I analyze all the commemorative artifacts and the different forms of public art that have represented this tragic memory (books, movies, songs, paintings, theatrical performances etc.). Now may we know the story of Piazza Fontana through a movie ("Romanzo di una strage" by Marco Tullio Giordana, 2012) or a graphic novel ("Piazza Fontana", published by BeccoGiallo)? Do these forms of objectification of memory produce in the audience, particularly in young people, a change in the perception of memory?

## A Polish Film as Expression of Ways of Dealing with the Past

Aleksandra B. Biernacka, Polish Academy of Sciences, Warsaw | [abbi30@gmail.com](mailto:abbi30@gmail.com)

As Anthony Smith postulates the new pan-European identity may arise only out of the nationally grounded, historically developed cultures. These cultures have overcome significant modifications in recent years initiated by the political changes of the fall of communism and its far reaching consequences on economy, everyday behaviors and convictions, as well as the collective identity. The paper would examine a process in which the Polish film slowly and gradually attempts to re-examine the national history and creates a new mythology of a state in transition as it is visible in the examples of films produced during the 90s and the first decade of the

2000s. There are generally three basic approaches distinguishable: 1. adaptations of the major literary works of the past; 2. genre films depicting a state-in-transition; 3. attempts of critical re-interpretation of history and national stereotypical way of perceiving the past events and relationships with the other nations. Through the various points of view the authors of films represent, there will be delineated a way in which a process of forming the new opinion about the nation's recent history, this time unregulated and uncensored as it was a case of the past political regime, is gradually being reached out.

## The Role of the Art in Building a new Nation

Atilla Tekin, Anadolu University, Eskişehir | [tekin.atilla@gmail.com](mailto:tekin.atilla@gmail.com)

In this article i treid to indicate how is built a new idea in the public opinion. Art always was a good conveyer for it. For example in Turkey after the Ottoman dynasty collapsed and a new republic was built, new Turkey goverment tried to change a lot of thing, (from daily life, to the

bureaucracy) and was built an new nation. At that process art was used pretty much. I already tried to indicate that process in Turkey and compare to other countries. What is the similarities and differences.

## 05RS04 - Cultural Differences and Collective Memories

Chair(s): Jerome Bourdon (Tel Aviv University, Israel)

### Nation Building in Ethnically, Geographically and Culturally Diverse Societies, and the Impact of Racism in Social Development: The Case of Peru

Luis E Escobedo, University of Warsaw | [lescobedo@jacobs-alumni.de](mailto:lescobedo@jacobs-alumni.de)

The ethnic, geographical and cultural diversity of Peru have for long been portrayed in its History and Historiography, arts, and official and colloquial discourse. Yet, racism has only been questioned since the end of the 18th century. Economic societies during the Viceroyalty proposed policy-making and investigation on ethnic diversity, but were interrupted by Independence in 1821. So racism began growing in complexity. Only 100 years later, Peruvian intellectuals got back to the concept of nation building, a process interrupted again in the 1930s. However, internal migration had already started. Although it enabled the participation of more cultural groups, it also made the ethnic-based conflict more complex and inconspicuous. So is how racism runs today in an all-against-all social dynamic, especially bursting during situations of conflict. Since the 1980s, racism is

addressed as an individual subject. Today, racism in Peru is hidden deep within complex social relations. This study aims at, on the one hand, untangling this knot by scanning Peruvian Historiography; analyzing comparatively universally accepted concepts of nation and nationalism; scrutinizing today's Peruvian racism and its players; and supporting these arguments with interdisciplinary – various scientific fields – and cross-cultural – international cases – comparative approaches. On the other hand, this study is focused on finding whether racism in Peru is an impediment for development and stability as a main social problem. Open interviews to scholars, practitioners, and experts contribute qualitatively to this study, while statistics drawn from official, academic and private sources do it quantitatively.

### Politics of Memory and Memory as Politics

Marta Vignola, Complutense University of Madrid & Consortium | [marta.vignola@emui.eu](mailto:marta.vignola@emui.eu)

Memory as a social concept may be declined both theoretically and empirically. In the first case, it raises a number of questions related to the interconnection between individual and collective identities. In the second case, it may be adopted as an interpretive tool to be used in the empirical analysis of social processes. Both the perspective (theoretical and empirical) will be adopted here in order to understand the social and political relevance of memory and its recover in present-day Argentina. The human rights movement operating in Argentina since 1976, is our focus,

conceived here as an instances of the employment of social memories as a political tool. As an example of the social recovery of memory as a political instrument, the organization of Madres (Mothers) and Abuelas (Grandmothers) de Plaza de Mayo and HIJOS (Sons) will be analyzed. Those organizations adopt creative methods to make memory and the past, having been socially reconstructed by the regime, as a form of political struggle and vindication. The political organizations of the Mothers, Grandmothers and Children, with their imagination and their symbolic

representations are analyzed not just as a movement able to re-activate falsified memories as proposed by the dictatorship

from 1976 to 1983, but also as a paradigmatic model of a struggle against power and power confiscation of social identities.

## Collective Memory in India: How Different Age, Sex and Religious Groups are Remembering Turbulent Socio-Historical Events

Aude A. Martenot, University of Geneva | [aude.martenot@unige.ch](mailto:aude.martenot@unige.ch)

Michel Oris, University of Geneva | [michel.oris@unige.ch](mailto:michel.oris@unige.ch)

This communication focuses on adults living in the slums of Mumbai (India) and the memory they have of the past. James Liu and colleagues analyzed the representation of history and they showed that this representation is similar across countries, strongly Eurocentric but seems to have a national dimension as well. Furthermore, they claimed that the selected historical events tend to have a violent, political and negative meaning. Given this background, we aim to find out whether this principle holds true for a different context such as India and for a population with low living standards. India has experienced ruptures and violent social crises since its independence in 1947. The partition with Pakistan, riots between Hindus and Muslims and terrorist attacks are an important part of its modern history. However, in this paper we are looking at the individual memory

of these events. More concretely, results are based on data compiled under the CEVI international research project – Changes and Events across the Life Course. Our analyses consider data collected in early 2012 in the slums of Mumbai. The questionnaire was filled by 633 individuals in five age groups: 20-24, 35-39, 50-54, 65-69, and 80-84 years of age. Among other questions, participants were asked to mention up to four major events or changes that occurred in their country or in the world during their life. In a context of daily tensions generated by crowding and poverty, we wanted to observe differential socio-historical memory by age, sex and religious groups. We indeed found differences but also commonalities that lead us to question the presence of a "collective memory" and to complete Liu et al. conclusions.

## Rethinking the Metaphor of "Text" in the Study of Commemorative Place-Naming

Evgeny Terentyev, Higher School of Economics | [Terentev.e@gmail.com](mailto:Terentev.e@gmail.com)

The so-called critical turn in social sciences produced a large amount of studies, where previously neglected political factors of space production were taken into consideration. Traditionally toponymic research was focused on etymologic and taxonomic problems, but later urban and cultural issues were also under the investigation in critical place-name studies. The concept of "collective memory" is the key notion in theoretical schemes of such research orientation. Critical scholars explore the commemoration of historical figures,

places, events and notions in terms of its ideological engagement. To describe urban landscapes textual metaphor ("text of memory") usually is applied. Apart from all advantages, critical approach has some significant shortcomings, such as: "ideological focus" (only political dimension is analyzed), the lack of strong methodological program of analysis and poor empirical foundation, which can be traced to the use of textual metaphor. Applying of the broader concept - "discourse" - expands theoretical and methodological

perspective of place-name studies and opens far-reaching opportunities for future investigations, which will be able to overcome the current problems. "Discourse" metaphor

creates the foundation for taking into account different empirical sources and dimensions of place-naming practices, and employing methodological program of discourse analysis.

## 06RS04 - Nostalgia and Historical Memory

Chair(s): Graciela Trajtemberg (Academic College of Tel Aviv Jaffo, Israel)

### Urban Nostalgia

Radim Marada, Masaryk University, Brno | [marada@fss.muni.cz](mailto:marada@fss.muni.cz)

Studies on post-communist urban memory all too often focus on 1) capital cities (Berlin especially), and 2) the memory work of museums, monuments and memorials. Much less attention has been paid to past oriented urban reconstructions of peripheral cities taking place since the early 1990s. The paper addresses this deficit in (not only) sociological literature as it proceeds in two general directions. First, it points to some typical differences between post-communist capital and non-capital cities in how the process of urban reconstruction triggers the collective memory struggles (concentrating on the differing roles of the narratives of nationalization and modernization). Second, it

discusses the implications of these struggles for the urban and architectural reconstruction in wider sense (going beyond building new museums and erecting new monuments, while tearing down the old ones). Within this framework it argues that while the capital cities readily take on the task of representing national traumas, the peripheral cities have more often built their identities around architecturally echoing nostalgic pasts largely taken out of the national context. This thesis is illustrated on various examples from the central European countries, but the Moravian cases of urban revitalization of Brno's functionalism and Ostrava's early industrialism will be discussed in greater detail.

### Beyond Essentialism? Nationalism, Culture and Collective Memory in the Case of Cyprus.

Chrystalla Vassou, London School of Economics and Political Science | [cv262@cantab.net](mailto:cv262@cantab.net)

The way societies remember seems to be in tension with the hybridity of cultural identities that 'real' history and increasing mobility in the world suggest. This tension is explored with reference to Cyprus, and its implications for cultural studies are considered. Dealing with 'recovering' its past as a postcolonial nation (1960- ), Cyprus experienced ethno-cultural nationalism, inter- and intra-communal conflict, and eventually war (1974). Since 1974,

it is a divided society in political, territorial and cultural terms. The politics of reconciliation that EU and other supra-national entities encourage rejects conflict and war as solutions, thus culture becomes the arena in which nationalist struggles and discourses take place. The two communities (Greek Cypriot and Turkish Cypriot) maintain their own nationalist versions of the past, despite counter-histories and the mobility between

them (since 2003) and between Cyprus and the EU. This is exemplified through various cultural artefacts (projects for the restoration of cultural heritage, national commemorative ceremonies, national symbols and historical narratives), which are mobilised within the educational system. Memory work in the Cypriot context (Spyrou 2002; Christou 2006) shows that how societies remember the past, construct their collective identities, and

imagine the future reflects the 'needs' of the present, thus collapsing time and historical contingency. The author argues that this tension between 'real' and 'artefactual' history connotes that the study of culture might be unable to rid itself of essentialism; even counter-memories make available multiplicitous pasts for differently positioned publics and their discursive and cultural practices.

## Historical Memory: On the Methodology of Comparative Empirical Study

Elena Stepanova, Baltic State Technical University | [len.stepanova@gmail.com](mailto:len.stepanova@gmail.com)

Olga Vorontsova, St. Petersburg State University | [olga-vorontsova@mail.ru](mailto:olga-vorontsova@mail.ru)

Alexei Sidorin, Russian Academy of Sciences | [sidorinaleksei@gmail.com](mailto:sidorinaleksei@gmail.com)

This paper focuses on the methodology of studying the attitudes of Russian people towards their country through their perception of two historical eras: the Soviet period and Russian history of the last twenty years. A matter of principle here is a comparison of views of three generations of the country - (a) youth, who did not live in the Soviet era, (b) middle age generation, whose active life has been in both eras: Soviet and post-Soviet ones, and (c) elderly generation with active life in the Soviet era. Particularly it's important to understand what patterns about own country's recent past are formed in mind of youth, what are their specific characteristics, what is historical views impact on actual lives of youth and their value orientations. Two reflexive methods are used: qualitative-quantitative

technique based on systems of open-ended questions, and interview method. The key features of the methodology are as follows: (1) Involvement in the study of three different (in relation to country's history) demographic generations, (2) Actualization of their attention to the two different eras, (3) Revealing of people's personal social notions due to their textual answering in the system of open-ended questions, (4) Classification of the received statements array, revealing the parameters and quantitative indicators related to these Social Epochs through notions of different generations, deepening the interpretation of findings through comparative contexts, and (5) Use of special computer program for storage and analysis of textual studies.

## Love, Peace & Happiness? An Exploration of the Folk Music Fan's Pursuit of Authenticity

Julie Badisco, Vrije University, Bruxelles | [julie.badisco@vub.ac.be](mailto:julie.badisco@vub.ac.be)

In this contribution we develop a conceptual framework on the concept of 'authenticity'. Even though the concept is widely spread and often used in common sense, it is most unclear how it has to be defined. Authenticity is related to purity, sincerity, and genuineness, but since

there is no objective procedure to determine whether something is 'real' or not, the concept of 'authenticity' is inevitably under discussion. Using the theoretical framework of Hobsbawm, Adorno, Frith and Goulding, among others, we aim to find out the meaning of the 'authenticity'

concept. Our main focus is on folk music, a music genre often connected to authenticity. In our exploration of the genre we ask questions such as 'What musical styles are defined as folk music and which styles are not?', 'What are the borders of the genre?', 'How are those

borders created and by whom?' and 'Why do we find it so important to divide folk music in different categories?'. Using depth-interviews with folk music pioneers we try to formulate an answer to those questions.

## RS04 - Poster Session

### How Polish Cultural/Ethnic Minority Groups Remember the Past. Case of Silesia.

Maria Szmeja, AGH University of Science and Technology, Cracow | [maria.szmeja@agh.edu.pl](mailto:maria.szmeja@agh.edu.pl)

How Polish cultural/ethnic minority groups remember the past. Case of Silesia. I would like to examine case of Silesia, and the way people used history. For leaders of Silesian group it is important to get legitimization, it's why they recall by gone time. They do interpretation and manipulation of group memory in a very flexible way. In some discussion they presented very pro Polish, on the other pro German or simply Silesian view of history. I would like to go through situations and show how the memory has been changed, how it

become instrumentalized depending on situation. Several version of the same event or several interpretation of the same event gives impression of the value of history. I am also interesting in dissimilarities of interpretation of historical facts in public and private stories. Oral history versus official state history, oral history versus Silesian leaders version of history consists of data I would like to discuss. I am going to study the official statements concerning past, private opinion and www pages of Silesian minority in Poland.

## RS05 - Digital Citizenship

### 01RS05 - Digital Citizenship

Chair(s): Dimitris Tsapogas (MSc Research Assistant and PhD Candidate Department of Communication University of Vienna)

#### Reimagining the Metropolis: Sense of Place in Expatriate Blogs

Rhythma Kapoor, Erasmus University, Rotterdam | [kapoor@eshcc.eur.nl](mailto:kapoor@eshcc.eur.nl)

Current discourse on transnational patterns of migration and belonging to the city, calls into question the significance of sense of place in increasingly globalized urban spaces. The experiences of moving from place to place and of having places change around them, push people toward a notion of place that is not bounded or permanent but something that is in flux and in need to be constantly recreated. This study engages in understanding the practices of ascribing meaning to place by expatriates, a highly cosmopolitan group of migrants, in order to foster a deeper sense of place. The increasing ubiquity of communications technologies in general, and blogs in particular has further inspired new kinds of engagement with place. Expatriates turn to blogs to create discursive spaces for observing, reporting and making sense of their everyday lived experiences in the city.

Observing the active and reciprocal role blogs play in the perception, representation and experience of place, this study explores the social construction of place in blogs maintained by expatriates living in Europe, and investigates what role expatriate bloggers play in contributing to our sense of place. For this study, a total of 40 blogs by expatriates living in 5 European cities were identified. Given the exploratory nature of this research, a qualitative study is proposed, using ethnographic methods (interviews) and narrative analysis from a grounded theory perspective to investigate emergent themes. This research offers a better understanding of the synergistic relationship between the city, people and digital media as well as the implications of this collective and ontological sense of place towards a deeper engagement with the city.

#### Relating Digital Citizenship to Democratic Hopes in the South Caucasus

Wayne Buente, University of Hawaii, Manoa | [wbuente@hawaii.edu](mailto:wbuente@hawaii.edu)

Lala Hajibayova, Indiana University | [lhajibay@indiana.edu](mailto:lhajibay@indiana.edu)

The concept of digital citizenship has received little attention outside of Western countries and contexts. This exploratory study seeks to evaluate the utility of the concept of digital citizenship by comparatively examining three countries in the South Caucasus: Armenia, Georgia, and Azerbaijan. Everyday Internet

users comprise a very small part of the population in the South Caucasus and are an educated, computer-savvy elite. Digital citizenship is defined as having Internet access at home and using the Internet frequently (every day). Prior research by Mossberger and colleagues (2007, 2008) demonstrates that

digital citizenship is a prerequisite for engaging in political life both online and offline. However, countries in the South Caucasus lack the presence of an effective civil society and, like many countries in the former Soviet Union, are ruled by pseudo-democratic regimes. Therefore, what are the possibilities for digital citizenship in the South Caucasus? This paper will examine two possibilities. One possible avenue for political participation is traditional political participation such as the likelihood to vote. Preliminary research results have shown that digital citizenship is not a good predictor

for the likelihood to vote in an upcoming election. Another possibility is the belief in democratic principles. Perhaps where expressions of traditional political participation are viewed as inauthentic, could digital citizenship predict the belief in democratic ideals? Using 2010 survey data from the Caucasus Research Resource Center, an empirical model will be evaluated and tested. Comparisons between Armenia, Georgia, and Azerbaijan on the possibilities for digital citizenship will be discussed.

## Digitalized Citizen - Chances or Obstacles? The Case of National Census (2011) in Poland.

Katarzyna Warmińska, Cracow University of Economics | [kwarminska@o2.pl](mailto:kwarminska@o2.pl)

The role of ICT in creating social relations in modern state could be discussed in many contexts. In my paper I will concentrate on one of its possible aspects e.g. the role of Internet as a medium of communication between a state and citizens. I am going to take to consideration the context of the last National Census in Poland and a problem of national and ethnic identity of Poles which were under investigation in 2011. Statistics are regular way of collecting and presenting data in a modern society. That data might have different meanings and importance for those who are counted and who do counting. For minorities the Census results potentially mean a lot – a chance to get funds for their cultural needs, to get some political and educational rights as well as social and political recognition. Therefore, on the occasion of the Census,

different activates in the field of identity politics could be observed. The Census of 2011 data collecting was carried out on two methods – a sample survey and additionally on Internet self-enumeration, what was a quite a new phenomenon. According to the opinion shared among members of minorities, especially activists, the first procedure minimalized their chance to be counted rightly. Therefore, they decided to focus their actions on the Internet. I am going to analyze various projects which were implemented by mentioned communities (beginning with promotion of Census, organizing a self-enumeration, ending up with spreading information concerning desirable, from the point of view of a given minority, self-descriptions in national/ethnic aspect of a census participant), as well as consequences of digitalization of ethnic discourse as such.

## Social Barrier's to Participation in the Digital World: A Qualitative Study of the Privacy and Trust Concerns of Retired and Unemployed Internet Users

Iain Crinson, St George's, University of London | [icrinson@sgul.ac.uk](mailto:icrinson@sgul.ac.uk)

The term 'internet-user' is not a homogeneous. There are very different levels of participation within the digital world of social networking, financial transactions, file-sharing and e-democracy. The findings of surveys of internet users consistently demonstrate that high levels of digital participation are strongly linked with particular socio-economic and demographic characteristics, but the social processes that link the level of digital participation with the attitudes that people hold regarding personal information disclosure, and the trust accorded to both corporate and state digital services, is much less well understood. We do know is that the ever more pervasive role of the Internet in almost every facet of our daily lives, from mediating personal relationships, to transacting an ever-expanding

range of public services (the 'personalisation' agenda within the UK), and the potential of more direct political and civic participation, presents a challenge to those who hitherto have conducted all such relationships only on the basis of direct personal interactions. For those social groups who are not fully digitally engaged, the future appears to offer an ever increasing social and political marginalisation. This paper present the findings of a qualitative study of two groups of 'non-expert' internet users, retirees and the unemployed, characterised by their limited involvement in the digital world and with the world of work, a social connection that will be drawn attention in challenging the notion that dual (off/on-line) identity is now a universal norm of modern societies.

## The Changing Perceptions of Privacy and Surveillance and their Relation to Digital Democratic Participation: an Empirical Investigation

Dimitris Tsapogas, University of Vienna | [dimitrios.tsapogas@univie.ac.at](mailto:dimitrios.tsapogas@univie.ac.at)

Only a number of U.S.-based studies have tried so far to understand the relationship between surveillance users' perceptions and online civic and political participation. This literature focuses mainly at the organizations' level but it doesn't provide with insights on the experience of surveillance by individuals and, in particular, civic and political activists (Best and Krueger 2011). Apart from the analysis of the direct structural barriers that the various forms of social control and, in particular, surveillance pose, researchers need also to reflect to the longer term, indirect and emotional impacts as well as to focus on both sides of repression, the institutions and its targets (Cunningham and Noakes 2008). My PhD research focuses on the changing notions of privacy and

surveillance and their implications on digital/online civic/political engagement and participation. This research seeks to answer whether and to what extent surveillance, as a mean of social control, is mobilizing or preventing citizens to take part in the various forms of contemporary digital/online political participation. Additionally and most importantly, it intends to explore the procedure of how such social controls efforts raise different kinds of direct and indirect, intended and unintended costs and benefits of mobilization attempts. Drawing on an online survey that collected data from Greek respondents, this paper is discussing the first results of this study and is presenting a updated methodological and theoretical

framework that can be tested across other countries.

## RS06 - Disability and Society

### 01RS06 - Disability Models and Theories

Chair(s): Bill Hughes

#### Social Ontology of Disability: Meanings and Interpretations in the Perspective of E. Laclau theory

Jolanta Rzeznicka-Krupa, University of Gdansk | [pedjrk@univ.gda.pl](mailto:pedjrk@univ.gda.pl)

Searching for the contemporary concepts and theories which could be an intellectual tool used in the process of analysing and defining the disability phenomenon and exceeding the area of disability studies, we can focus on the critically oriented, socio-political theory of discourse, developed by Ernesto Laclau and others. Within the theory discourse is defined as a kind of structure consists of different elements set up by the relations between them and their mutual references. The meanings of socio-cultural phenomena are constructed in the constant play of references, which transforms the relations into the synonyms something objective. In consequences the

relations connecting some elements of discursive processes are getting the status of ontology, which tell us about the nature of social world. So we can say that the concept of "social ontology" refers to the perspective of a discourse understood as a rule of constructing the social objectives. The main goal of the proposal is to present the process of discursive construction of "dis-abled" subjects in the context of basic categories and thesis within the area of ideas building the Laclau theory and a trial to link it up with the cultural model of disability. Some empirical data coming from the qualitative studies will be included to illustrate the considered issues.

#### Blaming the Victim all over again: The Biopsychosocial Model of Health

Nick Watson, University of Glasgow | [nicholas.watson@glasgow.ac.uk](mailto:nicholas.watson@glasgow.ac.uk)

Tom Shakespeare, University of East Anglia | [tom.shakespeare@uea.ac.uk](mailto:tom.shakespeare@uea.ac.uk)

Faced by the crude dichotomy in materialist disability studies between the medical and the social models of disability, attempts have been made to develop multi-factorial approaches which give due weight to different aspects of the complex phenomenon which is disability.

The BioPsychoSocial (BPS) model is one such development and has become a controversial approach to conceptualizing disability in the context of social policy. The BPS was originally developed by the psychiatrist George Engel in the 1970's as a corrective to the biologisation

of mental illness that predominated in psychiatry at the time. Engel called for an approach that incorporated the biological, psychological and social dimensions of health arguing that rehabilitation must address all these factors. The bio element refers to the impairment and the social corresponds to restrictions of function imposed by the way society is organized: the latter aspect is underpinned with reference to social model theorists. However, most controversial about this approach is the psycho dimension. BPS emphasises that an individual must take some

measure of personal responsibility for their behaviour. This paper will present a critique of the BPS model, examining its origins and its explanatory assumptions. The current usage of the BPS means that any potential advantages have been overshadowed by its cynical exploitation by governments seeking to shrink public spending and allocate responsibility to disabled people for their own poverty and economic marginality. The paper will draw on ideas from critical realism in order to develop an urgently needed critique.

## **Fostering Social Capital for Persons with Disabilities: Implications and the Potential Contribution of International Classification of Functioning, Disability and Health (ICF)**

**Eleni Koutsogeorgou**, National School of Public Health, Athens | [e\\_koutsogeorgou@hotmail.com](mailto:e_koutsogeorgou@hotmail.com)

**Matilde Leonardi**, Neurological Institute Carlo Besta IRCCS Foundation, Milan | [Matilde.Leonardi@istituto-besta.it](mailto:Matilde.Leonardi@istituto-besta.it)

**Jerome E Bickenbach**, University of Lucerne and SPF | [jerome.bickenbach@paranet.ch](mailto:jerome.bickenbach@paranet.ch)

**Milda Cerniauskaite**, Neurological Institute Carlo Besta IRCCS Foundation, Milan | [Milda.Cerniauskaite@istituto-besta.it](mailto:Milda.Cerniauskaite@istituto-besta.it)

**Rui Quintas**, Neurological Institute Carlo Besta IRCCS Foundation, Milan | [rui.quintas@istituto-besta.it](mailto:rui.quintas@istituto-besta.it)

**Alberto Raggi**, Neurological Institute Carlo Besta IRCCS Foundation, Milan | [Alberto.Raggi@istituto-besta.it](mailto:Alberto.Raggi@istituto-besta.it)

This paper explores theoretical and practical implications for fostering social capital for persons with disabilities. These implications have been considered in accordance with the biopsychosocial model of health and disability of the World Health Organization (WHO)'s International Classification of Functioning, Disability and Health (ICF). Based on this framework, the notion of social capital is viewed within the current literature review as a contextual factor that can have a facilitating or hindering impact on levels of disability of people. Research has shown that there are associations between social capital, health, and disability, while environmental factors that contribute to the enhancement of social

participation for persons with disabilities still need measures to be fully evaluated. This fact, along with the variation of measuring and defining social capital, makes the enhancement of social participation and strengthening of social network's ties even more difficult to achieve. Participation and trust, being core elements of social capital, are found to be vital elements for health promotion; therefore, social capital building can have beneficial impact on health, at individual or community level, through health promotion and health education employing an ecological approach and the use of the ICF framework. The main conclusion of the present paper is that the ICF biopsychosocial

framework could be valuable to measure and monitor if and how social capital can contribute as a determinant of health and disability, and as such, offer an informational platform for

conceptualizing and potentially measuring the causal linkages between social capital and health and disability.

## **Moral Wrongs, Disadvantages, and Disability: A Critique of Critical Disability Studies**

**Simo Vehmas**, University of Jyväskylä | [simo.vehmas@jyu.fi](mailto:simo.vehmas@jyu.fi)

**Nick Watson**, University of Glasgow | [nicholas.watson@glasgow.ac.uk](mailto:nicholas.watson@glasgow.ac.uk)

Critical Disability Studies (CDS) has emerged as an approach to the study of disability over the last decade or so and has sought to present a challenge to the predominantly materialist line found in the more conventional disability studies approaches. The result of this development has been the production of some very interesting and worthwhile research and theorization around disability. In much the same way that the original development of the social model resulted in a necessary correction to the overly individualized accounts of

disability that prevailed in much of the interpretive accounts that then dominated medical sociology so too has CDS challenged the materialist line of disability studies. In this paper we review the ideas behind this development and analyse and critique some of its key ideas. The paper starts with a brief overview of the main theorists and approaches contained within CDS and then moves on to normative issues, namely, to the ethical and political applicability of CDS.

## **02RS06 - Body and ableism**

Chair(s): Nick Watson

### **Negotiating an Understanding of Inclusive Embodied Citizenship through the Lens of Public and Private Toilets**

**Phillippa Rieck**, University of Glasgow | [p.robertson-rieck.1@research.gla.ac.uk](mailto:p.robertson-rieck.1@research.gla.ac.uk)

Toilets and going to the toilet are often seen as private and intimate and furthermore far removed from traditional understandings of citizenship, yet for disabled people good access to toilets is essential for their participation. Toilets and their use provide a useful lens through which to explore both the private/public divide and also a lens through which to understand how citizenship, inclusion and exclusion are experienced through the body. This paper is taken from an ongoing PhD

which explores the everyday experience of embodied citizenship for disabled young people in Scotland. By shedding light on the toilet as a terrain through which inclusion and exclusion are played out it allows us to better understand the everyday experience of citizenship for the young disabled people that took part. It allows a more grounded understanding of the ways in which public policies, around toileting and toilets for instance, impact on the everyday private activities of disabled people which have

far reaching effects on inclusion and exclusion. Participants found that a lack of access to toilets or poor toileting provisions meant that their capacity to take part in everyday life was

greatly impacted. Similarly good toilets promoted good inclusion and contributed to participants' feelings of belonging, participation and self esteem.

## Challenging Ableism: the UK Disability Movement & Practices of Resistance.

Tom W H Campbell, University of Leeds | [t.w.campbell@leeds.ac.uk](mailto:t.w.campbell@leeds.ac.uk)

Angharad Beckett, University of Leeds | [a.e.beckett@leeds.ac.uk](mailto:a.e.beckett@leeds.ac.uk)

This paper is part of the 'White Rose Studies of Ableism' panel of papers and emerging collaboration:

(<http://whiterosestudiesofableism.wordpress.com/about/>). Employing a Foucauldian analysis, we argue that the original social model of disability, outlined by UPIAS (1975) and critical to the resistance practices of the UK Disability Movement, can be understood as a 'technology'. Positioning the model thus allows us to explore how the UK Disability Movement has articulated relations of power to reframe disability as a form of oppression, rather than as individual biological deficit. We propose that as a 'technology' the social model has a number of operations including: 1) The

transformation of the individual body, via the expulsion of the personal tragedy narrative. 2) The invention of a collective body of 'disabled people', affirmed against the individualising forces of bio-power and capital, and allowing for the proliferation of practices of resistance. 3) The introduction of a new system of signs, allowing the activist agenda to be broadened as new sites for resistance become visible and these signs become diffused across the machinery of government. Our aim is to develop a new way into debates about the social model (its character and operation/s) and direction of disability activism in a period of prolonged economic crisis.

## The Incorporation of Disability

Ana Marques Salvado, ISCTE-IUL, Lisbon | [anasalvado1@gmail.com](mailto:anasalvado1@gmail.com)

This communication is based on an ongoing doctorate research project which aims to analyse how congenital physical disabilities are manifested in individuals with disability, namely in a specific dimension of social life – their sexual and intimate relationships. Individuals with visible marks of physical disability were considered as the study subjects, and the methodology chosen was based on biographical methods which aimed to analyse their process of identity building. Some of the empirical results obtained will be put forward as possible contributions to a suitable problematization around the sociology of disability, which is supported by social theories that combine the roles played by individual

action, reflective processes and the impact of structural conditions in the life trajectories of individuals with physical disabilities. The empirical work was developed combining three domains. Firstly, recognising the body as a support factor for self-identity, considering how the subject has experienced their body across different socialisation contexts. Secondly, considering the theme of personal identity, in an attempt to understand how individuals define themselves in different moments of their life trajectory. Lastly, the third analytical domain was exclusively dedicated to the practices and representations about sexuality so as to understand the "incorporation" of disability.

## Theorising Ableism and Disablism: Queer, Crip, Gendered and Raced: for Tomorrow we Ride

Dan A Goodley, University of Sheffield | [d.goodley@sheffield.ac.uk](mailto:d.goodley@sheffield.ac.uk)

This paper is part of a panel of papers entitled 'White Rose Studies of Ableism' which links to an emerging collaboration (<http://whiterosestudiesofableism.wordpress.com/about/>). What could it mean to take an intersectional approach to the analysis of the dual process of disablism and ableism? In a time of austerity and economic downturn, rising unemployment and growing divide between rich and poor across the globe, to what extent could it be argued that analyses of disablism and abliesm demand parallel and entangled engagements with processes of racism, homophobia and sexism? When one evokes the image of 'the able' to what extent or

other processes associated with whiteness, heterosexuality and maleness? This paper will carefully tease out a number of intersections between disability and other forms of oppression and, simultaneously, demonstrate the ways in which ableism is linked to white, Western and European, Global North, male, heterosexual, mentally healthy capitalist preoccupations. Three themes ripe for analysis will be introduced (i) Queerly disabled, crippling queer; (ii) Racism and disablism: experiencing the Other, becoming a race-able traitor and (iii) Feminisms: Outing the personal, publicising the private

### 03RS06 - Relationships; Personal and Economic

Chair{s}: Dan Goodley

#### From Innocence to Guilt: Disability Representation and Socio-Economic Crisis

Bill Hughes, Glasgow Caledonian University | [w.hughes@gcal.ac.uk](mailto:w.hughes@gcal.ac.uk)

Cultural shifts in perceptions of disabled people are particularly ambivalent and accentuated during period of economic crisis when the material well being of non-disabled people are particularly precarious; a time that geneareally coincides with re-appraisals of the nature and scope of the burden - social, emotional and economic - that 'broken' bodies supposedly bring to communities in crisis. In such times, disabled people undergo a re-assessment in terms of their (potential)

contribution to the labour market and their welfare costs and in such times disability is much more likely to be regarded as 'crooked' or to use Stoddart Holmes (2004) expression, a form of 'guilty indigence'. This paper examines the shift in cultural representations of disabled people from targets of charitable sympathy to fakes and scroungers, comparing Victorian sensibilities with contemporary mediatised, neo-liberal perspectives in the UK

## On being a Couple with Intellectual Disability - Postcolonial Perspective

Dorota Krzemińska, University of Gdańsk | [sidosi@o2.pl](mailto:sidosi@o2.pl)

The presentation is devoted to a phenomenon of being couple with a severe intellectual disability in Poland. Being a couple with this particular disability remains oppressed and marginalised making this group of people excluded from some important spheres of life and role playing. It seems to remain a very

strong taboo. In the presentation the author aims to show some socio-cultural mechanisms which are /or are not constructed to cope with a couple. The most accurate perspective which appears applicable to see this phenomenon is postcolonial theory.

## 'Us' and 'Them': the Limits and Possibilities of a 'Politics of Neurodiversity' in Neoliberal Times

Katherine A Runswick-Cole, Manchester Metropolitan University | [k.runswick-cole@mmu.ac.uk](mailto:k.runswick-cole@mmu.ac.uk)

The neurodiversity movement claims that: there are neurological (brain wiring) differences in the human population of which autism is one, and that autism is a natural variation among humans (not a disease or a disorder), just 'a difference' (Jaarsma and Welin, 2012). A 'politics of neurodiversity' (Singer, 1999) is, then, based on the claim the 'neurodiverse' population constitutes a political grouping comparable to those of class, gender or race (Jaarsma and Welin, 2012). This paper considers the limitations and possibilities of political activism which is dependent the construction of the 'cerebral subject' characterised by a differently wired brain (Ortega, 2009). The paper exposes and rejects the ways in which difference has been constructed and commodified in neo-liberal

societies and concludes by calling for a politics of identity that does not depend on a politics of 'us' and 'them' (Ruffolo, 2009). References Jaarsma, P. and Welin, S. 2012. "Autism as a Natural Human Variation: Reflections on the Claims of the Neurodiversity Movement." Health Care Analysis, 20 (1): 20-30. Ortega, F. ## Aspirations of a Normal Family Life: An Exploration of Social Barriers Impacting on People with Motor Neurone Disease.

Joanna Ferrie, University of Glasgow | [Jo.Ferrie@glasgow.ac.uk](mailto:Jo.Ferrie@glasgow.ac.uk)

Nick Watson, University of Glasgow | [nicholas.watson@glasgow.ac.uk](mailto:nicholas.watson@glasgow.ac.uk)

Disability Studies with its focus on the material aspects of disablement and its bracketing of impairment has marginalised the private

experiences of living with an impairment. Little has been written from a disability studies perspective on how having an impairment or

chronic condition can impact on family and family relationships. Most previous research in this area has been the confine of medical sociology and feminism. In this paper we use data drawn from interviews with adults who have motor neurone disease (MND) and their partners and focus groups of family members who have supported someone with MND to explore how living with a terminal, chronic condition impacts on family and relationships and how this can be explored from a disability studies perspective. The data suggest people facing chronic and life-limiting illnesses face significant disabling barriers as 'private' impairment effects [following the work of Thomas and Reeve] grow in number and

severity. The home becomes a site where this challenge becomes of critical importance. This emerges in terms of the changing role of the parent or partner with MND, family relationships and in terms of how spaces are used. Negotiations with professionals can become conflictive as the preservation of the 'family home' is eroded by increasing intrusions. 'Specialist' equipment reinforces an identity of dependency which can impact negatively on the family and on their roles and relationships. The paper ends by re-engaging with the social model to explore how it can evolve to incorporate experiences of private spaces.

## 04RS06 - Contemporary Issues (1)

Chair(s): Joanna Ferrie

### A Critique of the Biopsychosocial Model of Health and its Application to Work Capacity Assessment

Nick Watson, University of Glasgow | [nicholas.watson@glasgow.ac.uk](mailto:nicholas.watson@glasgow.ac.uk)

The biopsychosocial model of health has seen renewed interest from Governments and from insurance companies as they seek to reduce entitlement to welfare benefits and insurance payments. It was originally developed by the American psychiatrist George Engel in the 1970's as a corrective to the biologisation of mental illness and medicalising psychiatry that predominated in psychiatry at the time. Engel called for an approach that incorporated the biological, psychological and social dimensions of health arguing that rehabilitation must address all these factors. The bio element refers to the impairment and, whilst important, according to the model problems and incapacity often also depend on psychological factors, claiming that an individual must take some measure of personal responsibility for

their behaviour, and on social factors. These latter are described as restrictions of function imposed by the way society is organized and the approach is justified by reference to social model theorists. This paper will present a critique of this model, examining its origins and its claims. It will argue that its potential for genuine inter-disciplinary cooperation and the holistic and humanistic benefits for disabled people as envisaged by Engel are not now, if they ever have, fully realized. Its current usage has meant that any benefit it may have offered has been kept in the shadows by the emergence of a reactionary force which has sort to employ its eclectic freedom to their own ends. The paper will draw on ideas from within disability studies and critical realism as it seeks to make its critique.

## Call Center Work as a Precarious Organisation: The Case of Workers with Disabilities

Mine Ersoy Özcan, Middle East Technical University, Ankara | [mine\\_35290@yahoo.com](mailto:mine_35290@yahoo.com)

During the last decade, the standard norm of employment as permanent, full-time, one employer with social security has been eroded and new forms have been emerged. The standard relationship has been shifted to precarious employment including fixed-term and part-time, temporary, unsecured, low-paid jobs in terms of flexibility in the neoliberal global world. Related with the new forms of work organization, more diversified and complex modes of business organizations, like call centers, have been developed. Some categories of workers like women, youth and people with disabilities are more frequently affected by precarious working conditions. Employment is asserted as the most important stage of full participation into the society. In the disability policy, the importance of employment is related with 'decent' and 'productive' work. The job must increase the disabled worker's self-reliance, self-respect

and self-development as a human being. Call centers are seen to be the most acceptable type of employment for the people with disabilities in terms of social inclusion. However, with its' precarious character, the call centers seem to be far from creating decent and productive work, instead, they reproduce the social inequality based on the concept of disability by reducing the human being into a machine. So what are the mechanisms behind this? How does the call center work create inequalities for the people with disabilities? What is the meaning of work and how do they handle with the call center work in terms of social inclusion and exclusion? This research aims to investigate whether the new forms of work are acceptable as a tool for inclusion of the disabled. In this study, semi-structured in-depth interviews were conducted

## Anti-oppressive Education and Disability: towards an Anti-Ableist Pedagogy?

Angharad Beckett, University of Leeds | [a.e.beckett@leeds.ac.uk](mailto:a.e.beckett@leeds.ac.uk)

This paper is part of the 'White Rose Studies of Ableism' panel and emerging collaboration: (<http://whiterosestudiesofableism.wordpress.com/about/>). The paper rests upon a 'critical conversation' between theories of 'anti-oppressive education' and theories of disability. It asks the question: what pedagogy might be adopted by an educator concerned with challenging disability as a form of social oppression? In Childhood Studies, there is now much agreement that children are 'active agents', as much the producers of their social worlds as products of those worlds. If children are active in constructing the society within which they are embedded and within which they participate, then it makes sense to be concerned about the form that this 'active

agency' might take and to consider the role schools might play in encouraging a particular form of agency - one that disrupts ableism. The inspiration for the paper lies with the findings of an ESRC-funded study, conducted by the author, exploring primary-age non-disabled children's perceptions about disability and the role English primary schools play in promoting positive attitudes towards disabled people. This research concluded that non-disabled children enact various meaning systems that sustain their privileged position as non-disabled people and the subordinate position of disabled people. Further, the study revealed that many English primary schools, by their own admission, 'could do more' (much more) to address this problem. In this paper I explore

the pedagogical implications of the study and, in particular, how theorising within Disability

Studies might inform the development of anti-ableist pedagogy.

## Students with Disabilities and Migrant Backgrounds: An Intersectional Approach

**Dominik Baldin**, Max Planck Institute for Social Law and Social Policy, Munich | [baldin@mpisoc.mpg.de](mailto:baldin@mpisoc.mpg.de)

Over the recent years, the concept of intersectionality has gained high attention in social sciences: Initially not more than a minority critique of gender-related research, it is now presented as a new paradigm by some academics. However, whilst “race” has always been a core category in the debate beside “gender” and “class”, “dis/ability” remains ignored in many studies. This fact is not surprising: If taken into consideration by mainstream sociologists at all, only the “general” discrimination of persons with disabilities has been emphasized for a long time. Intra-group differences or specific forms of discrimination (e.g. of women with disabilities) have never played a major role. As most Disability Studies researchers tend to neglect the relevance of other categories than “disability”, their contribution on

intersectionality research has remained rather modest so far. In my PhD project, I aim to close parts of this gap. My focus is on people with disabilities and migrant backgrounds, who work and study at German universities. The following questions shall be answered: What specific risks of exclusion are my interview partners threatened by? What other categories of power (gender, class) facilitate and/or hinder their success? And what strategies of action exist as a consequence? Currently, I am working on the analysis of my interviews by drawing on the so-called “intersectional multi-level analysis”, which was developed by Gabriele Winker and Nina Degele. Depending on the progress of my work, my theoretical approach and preliminary findings will be presented in Turin.

## 05RS06 - Contemporary Issues (2)

Chair(s): Simo Vehmas

### Work Disability Determination and the International Classification of Functioning, Disability and Health – a Marriage Made in Heaven?

**Bruno Trezzini**, Swiss Paraplegic Research | [bruno.trezzini@paraplegie.ch](mailto:bruno.trezzini@paraplegie.ch)

National disability insurance schemes have been facing mounting financial pressures due to an accelerated growth in the disability rolls and stagnant public revenues. Where the distribution of scarce resources is involved, the question of proper eligibility determination becomes paramount. With regard to disability benefit entitlements the evaluation of a

claimant’s work (dis)ability plays a central role in establishing eligibility. While legal provisions and procedural specifics vary across time and place, the objectivity and perceived fairness of the decision making process are constitutive of the legitimacy of its outcomes. However, it is precisely the validity and reliability of specific assessments and the evaluation process as a

whole that are often put into question. The International Classification of Functioning, Disability and Health (ICF) has increasingly been brought into play as a potential framework and tool to improve this unsatisfactory state of affairs. Conceptually, the ICF aims to transcend the divide between the medical and the social model of disability by advancing four major theoretical claims regarding the nature of disablement, i.e. multidimensionality, interactivity, etiological neutrality and universality. I will examine

whether and to what extent these fundamental theoretical commitments are compatible with the exigencies and challenges faced by current disability determination systems. I conclude that while the ICF framework and taxonomy may help to enhance standardization and transparency, expectations that it could be used to directly address the root causes of the unhappiness with existing disability determination systems seem problematic due to divergent underlying rationales.

## **The Changing Social Status of Deafness: between Disability and Cultural Minority. The case of Poland.**

Agnieszka Figiel, Adam Mickiewicz University, Poznań | [aga.figiel@gmail.com](mailto:aga.figiel@gmail.com)

Status of deafness is ambiguous in contemporary world. On the one hand it is defined as disability, body defect. On the other hand deafness may be treated as an aspect defining the membership of specific social group: the cultural minority using not phonic but the sign language. Both ways of understanding deafness entails important social consequences: a) different definitions of identity: the deaf (disabled people who treat deafness as a handicap) vs. the Deaf (people who are proud of being deaf and emphasize their cultural difference); b) social relations between hearing and non-hearing people: the deaf who needs help and care vs. the Deaf who expects tolerance and acceptance of his/her Otherness; c) social practices: the medical treatment or prevention of illness

(rehabilitation, hearing aid, cochlear implant) vs. the support of cultural Otherness, especially by protecting the sign language and confirming its status as the rightful language. In my speech I would like to describe the Polish case of these discussions of social status of deafness. The situation of deaf people in Poland is very specific because cultural otherness of Deaf have not been present in public discourse for a very long time. The status of deaf community is still changing and there are many questions to answer: are deaf people disabled or not? what is the status of the sign language? what hearing majority should do for deaf minority? which solutions in education, health care, public sphere and everyday life are appropriate and why?

## The Aesthetic of Oppression and Power of Scopic Regime under Modernity and Karma Ideology: Living with Impaired Body in Post- Peasant Society of Thailand

Prachatip Kata, Amsterdam University | [pra\\_gt@hotmail.com](mailto:pra_gt@hotmail.com)

This paper is based on ethnographic fieldwork conducted among blind singers and groups of musician working in the streets of Bangkok. The paper shows that blind singers experience who migrate from rural area to sing songs at the city relate with urbanization of Bangkok and social transformation era in Thailand is called the 'post-peasant society'. It is the era that agriculture is not a major income of households anymore. Main income of each household is from production sections of industrial factories, small service business in the city and sending the money back to the households in rural villages. It is also the era that the most population in the country lives in the city, especially in Bangkok. After urbanization of Bangkok and post-peasant

society era in Thailand, it was found that blind singers could not sing easily at street side as they were viewed like beggars and pollution in the eyes of urban people. Bangkok urbanization has resulted in emerging of many Sunday markets at villages locating on the outskirts of Bangkok to serve nostalgia of migrant workers from other provinces. This is new work places of blind singer as this work place is free from urban people's sightscape and city police officer to arrest them. However it turns out that in the present day blind singers are encountering a new set of power which is power of sight or scopic regime, a product from modernity ideology and Karma ideology of Buddhist, which act on their body.

## Disability Hate Crime in Portugal

Fernando Fontes, University of Coimbra | [fernando@ces.uc.pt](mailto:fernando@ces.uc.pt)

Based on the Social Model of Disability, this paper considers the issue of violence targeting disabled people in Portugal. The notion of 'disability hate crime' will be used as any criminal offense socially perceived to be motivated by prejudice against disabled people, including different forms of physical, verbal and symbolic violence. Diverse studies conducted in other geographical contexts have highlighted the phenomenon of violence exercised over disabled people and its impact on disabled people's lives (OPM, 2009; Roulstone et al, 2011). Portugal is not an exception to this reality, which needs to be made visible in order to promote protective measures as well as social and legal answers to the phenomenon. This paper is based on my Post-Doctoral research funded by the

Portuguese Foundation for Science and Technology (SFRH/BPD/80059/2011) and will explore the materials gathered during the first phase of the research. This paper is divided in three main parts. First I briefly outline the phenomenon of violence targeting disabled people in Portugal, identifying major victims, main types of crime and typical profiles of the perpetrators. The second part considers the legal dispositions already in place in Portugal in order to protect disabled people, highlighting areas and disabled imagery privilege by the legislator. Finally, I assess the effectiveness of the existing laws and will explore the advantages and disadvantages of the legal recognition of disability hate crime in Portugal.

## **Towards a Network Society. The Social Participations of the Disabled by the Social Networks in the Internet.**

**Dorota Żuchowska-Skiba**, AGH University of Science and Technology, Cracow | [zuchowskadorota@gmail.com](mailto:zuchowskadorota@gmail.com)

**Maria Stojkow**, AGH University of Science and Technology, Cracow | [stojkoff@gmail.com](mailto:stojkoff@gmail.com)

In contemporary societies a clearly visible social change is taking place. Direct communication still plays the most important role here, but alongside it there appear some new forms of communication which exist in the space between personal and mass communication, e.g. chats, internet communicators, fora, and they start to play an important role in everyday life of individuals. It is the place where virtual communities are created. This is how some new communities of self-help nature can be developed and function; they stem from the needs of the disabled, and are realized in social networks which are based on interpersonal mediated communication. They play a vital role in contemporary society because the ongoing process of individualization makes the individual, who functions in various social

networks, cope on their own; they can no longer count on solidarity of others belonging to their environment. Traditional local communities, families, big bureaucratic institutions fall apart to smaller elements. Instead of them, some new types of communities emerge. The individuals function at the same time in traditional and extensive social networks of dispersed nature. They have to fight for their place in the network; otherwise they are threatened with exclusion and isolation. In our paper we want to show that an important role is played in the social participation of the disabled by the social networks which appeared in the Internet. We will focus particularly on community portals and fora to show the significance and functions performed by the virtual social networks according to the disabled themselves.

## **06RS06 - Contemporary Issues (3)**

Chair(s): Katherine Runswick-Cole

### **"Coming Home": The Experience of Coping with Acquired Disabilities**

**Adi Finkelstein**, The Hebrew University, Jerusalem Israel & Jerusalem College of Technology (JCT) | [adilan@netvision.net.il](mailto:adilan@netvision.net.il)

**Randi Garber**, Israel Unlimited, JDC-Israel | [randig@jdc.org.il](mailto:randig@jdc.org.il)

We will present a study of people who acquire a disability during the course of their adult life as a result of chronic illness. The study is intended to serve as a basis for planning services for a person with acquired disability during the initial coping period, making the person feel "at home" through building supportive and accessible environments –

family, home, and service systems. What we call "coming home" (from the hospital, doctor's visit or other) can occur in an instant or over time. From this point forward, the lifestyle of the person changes – in relation to the family, emotionally, socially, professionally and otherwise. "Coming home" has significant impact as well on close family members who

must deal with the changes in their loved ones' health conditions and their consequences. We will report on our findings from in-depth interviews, using "coming home" to open up

discussion on topics that include the challenges that chronic conditions pose for the "social model" and more generally for disability studies theory.

## **"Fareassieme" (Doing together) in the Sector of Mental Health: a Strategy to Improve the Well Being.**

**Nicoletta Pavesi**, Catholic University, Milan | [nicoletta.pavesi@unicatt.it](mailto:nicoletta.pavesi@unicatt.it)

This paper aims to present the experience of "Fareassieme" (Doing together) in the sector of mental health. The "Fareassieme" (Doing together) is a movement of the third sector in Italy that promotes: the autonomy of people with problems of mental illness, the family solidarity and the culture and the experience of self help-mutual aid. This movement is born from two conditions: first, the economic crisis in Italy with the contraction of welfare state and social and sanitary services, second the awareness of parents of mentally ill, that they have an experiential knowledge which asks to be recognized and enhanced. The experience of "Fareassieme" (Doing together) is interesting because it stands itself on the Public service in a dialectical and collaborative way to join

different knowledges (professional and experiential knowledge) to design and furnish services that can improve the quality of life of ill, relatives and community. The key-words of this movement are: the empowerment of individuals, relatives and community; the integration of different knowledges; the personal responsibility, even in conditions of difficulty; the networking. The research which is presented, was realised through 20 in depth interviews with relatives (parents, brothers, sisters) of mentally ill, members of the association "Fareassieme" in Milan, and with 3 mental health workers involved in the partnership between the public and the private sector.

## **A Difference without a Name: Autobiographical Accounts of Adults who Have Found out their Dyslexia in the Adulthood.**

**Michele Cioffi**, University of Torino | [michele.cioffi@unito.it](mailto:michele.cioffi@unito.it)

In Italy the prevalence of dyslexia is much lower than other countries due to the shallowness of the Italian orthographic system. This is one of the reasons why in this country dyslexia has a recent story: the first diagnostic protocols to assess dyslexia in Italy were developed in the '90s and only in recent years (2010) the Italian government has enacted a framework legislation which protects the dyslexic learners and sets the guidelines for intervention in scholastic contexts and for practitioners. In the paper I examine the biographical accounts of dyslexic adults who attended schools before the '90s, in a time

when – using the words of participants – "dyslexia didn't exist", and so have been diagnosed only in the adulthood. I will focus particularly on the personal experience of dyslexia during their life courses. I discuss – on the one hand – the life trajectories of participants, highlighting how social factors have (not) contributed in transforming the impairment that these persons have into a disability, the successful and unsuccessful strategies to manage their difference at school as well as in the work places; and – on the other hand – the scripts the participants used to describe dyslexia and themselves as

dyslexic. By proposing a classification of the stories based on their narrative genres, I discuss how personal and social factors

contribute to shaping the identities (as “disabled” or as “just dyslexic”) of the participants.

## How might the Capabilities Approach Enhance the Social Understanding of Mental Distress? Early Findings from an Empirical Study

Richard Brunner, University of Glasgow | [r.brunner.1@research.gla.ac.uk](mailto:r.brunner.1@research.gla.ac.uk)

Increasingly predominant in social science discourses, Sen’s capabilities approach distinguishes between what a person actually achieves (‘functionings’) and what s/he could potentially achieve (‘capabilities’) to understand inequalities between social groups. It maintains a focus on both agency and wellbeing. In developing an original framework for evaluating social justice, Sen successfully argues for diversity, disability and health differences to be accounted for. However, no analysis is made of the implications for people with mental distress. Similarly, Nussbaum’s acknowledgement of mental distress is marginal whilst incorporating normative judgments about a life worth living, good health, dignity and rationality. Both authors underplay issues of power and the role of the state which significantly shape the agency and wellbeing of people with mental distress. This

paper argues that the capabilities approach provides a strongly theorised model offering broader possibilities for the social understanding of mental distress, including a more complete analysis of agency/structure relations, and sensitivity to different social, economic and cultural contexts. It presents the methodology and early findings from a study that uses Sen and Nussbaum’s concepts and domains as an analytical framework to explore what a sample of former psychiatric hospital inpatients in Glasgow are subsequently able to do and be in life. It suggests that capabilities provides a means to critique choice, control and recovery – key contemporary issues in the sociology of mental health – and suggests that exploring capabilities through the lens of mental distress may critique the model’s assumptions of rationality and the normative ‘good life’.

## Ableism and the Problematisation of Difference: Towards a Genealogy of Dyslexia

Tom W H Campbell, University of Leeds | [t.w.campbell@leeds.ac.uk](mailto:t.w.campbell@leeds.ac.uk)

This paper is part of the ‘White Rose Studies of Ableism’ panel of papers and emerging collaboration: (<http://whiterosestudiesofableism.wordpress.com/about/>). This paper draws upon a forthcoming monograph that utilizes a number of Michel Foucault’s analytical concepts to map the genealogy of dyslexia. Two processes are investigated herein 1) the problematisation of a specific human difference and 2) the subsequent creation of an impairment category. It is argued that the clinical criteria were then negotiated in relation to rationalities concerned with capitalising the population and

resultant shifts in the government of literacy. It is proposed that impairment categories should be analysed as ‘technologies of power’. This opens two spheres of analysis 1) the values, moral, political and economic, that coalesce to problematise human difference and make an impairment category ‘technically feasible’; 2) the operations that an impairment category is engineered to achieve. It is argued that studies in this vein will provide insight into the interplay of different rationalities and the circulation of capital in the formation of ableist agendas and the constitution of a disabling society.

## RS07 - Field Theory

### 01RS07 - Field Theory in Dialogue with Other Theories

Chair(s): Sabrina Zajak (Humboldt-Universität zu Berlin)

#### Field Theory and the CCO Approach in Organizational Communication: a Bridging Attempt

Christoph Haug, University of Gothenburg | [haug@gu.se](mailto:haug@gu.se)

One of the most fascinating aspects of “A theory of Fields”, is that Fligstein & McAdam trace the origins of collective meaning making back to the “the acquisition of language and the expanded capacity for communication” in human development some 50,000 ago. But despite the core role that language and communication plays in rooting the theory of fields in human history, it remains strangely absent from the rest of the theory. Communication neither appears as a term in the book’s index nor does it play a role in the text itself. In this paper, I suggest that this absence is not an error inherent in the theory but merely a gap that needs to be filled in and I turn to the works of François Cooren and the communication-as-constitutive-of-organization (CCO) approach in organization studies to fill the gap and to assess the compatibility of this theoretical tradition

[rooted in Greimas and Latour] with that of field theory. There is one striking resemblance between the CCO approach and the theory of strategic action fields: both emphasize that social orders are not usually as consensual as they appear (or as the power holders make them appear). But while Fligstein and McAdam merely observe the contradictory and fragile nature of institutional orders as a fact, CCO scholars provide an explanation why sociologists are repeatedly tricked into believing in the inherent harmony of social orders. And interestingly, their explanation very much resembles one that a field theorist could have come up with: According to them, the belief in transcendental orders, as it were, originates in an early constellation of actors in the emergence of (the field of) sociology: the rivalry between Gabriel Tarde and Emile Durkheim.

#### Legitimized Narratives – Social Fields and Institutional Logics

Nils Müller, University of Oldenburg | [nils.mueller@uni-oldenburg.de](mailto:nils.mueller@uni-oldenburg.de)

One of the central aspects of the theory of strategic action fields (SAF), as presented by Fligstein and McAdam, is the idea that social fields are not autonomous but embedded in a complex network of interconnected and mutually dependent fields. The theory develops a taxonomy for describing those relations and interactions but leaves out the actual mechanisms by which fields influence each

other – other than direct personal contact. By drawing upon ideas from the sociology of space and institutionalism, this presentation aims at enhancing the toolkit of field analysis in this regard. According to the theory of SAF, struggles within social fields are carried out on the basis of the power distribution within the field and the strategic skill of individual actors at crafting shared and unifying narratives. But

the question where those narratives originate is not considered. Of course, field specific norms and reasoning patterns do play an important role in this process, but especially in political fields there is a strong connection to the general public that is affected by the decisions (outputs) of those fields and, to a certain extent, influences the power distribution within the field and legitimizes the field itself. To be able to account for those

observations, this presentation sketches how social spaces can be considered a complementary concept to social fields and how “institutional logics” (cf. Thornton, Ocasio, Lounsbury 2012) can be transferred between social fields and spaces to transmit legitimized reasoning patterns and, thus, empower skilled strategic actors. The conceptual argument will be illustrated by the empirical example of the current EU crisis.

## **Productive Practice, Government, Conflict and Struggle: How Looking at the Labour Market Forces us to Revise Field Theoretical Views**

**Dennis Eversberg**, Friedrich Schiller University, Jena | [dennis.eversberg@uni-jena.de](mailto:dennis.eversberg@uni-jena.de)

While field theorists widely agree that markets can be conceived of as fields, extending this claim to labour markets immediately brings up tricky conceptual problems. My paper uses this theoretical irritation as a heuristic device, taking a few of the problems of an analysis of “labor-markets-as-fields” as symptoms of inherent shortcomings of field theory. Firstly, I suggest to sideline the centrality of the notion of strategic action in favor of a concept of productive practice, focusing on the confrontation between incorporated and objectified social structures and the different means of production brought to bear in it. Whatever agents do, they produce something (material or symbolic), and it is the product of their action that is at stake in a field. This,

incidentally, also calls for a systematic account of the importance of fields of consumption (which, according to Bourdieu, are always co-present with fields of production). Secondly, I want to point to the necessity of a more elaborate concept of government, as a mode of hierarchical interaction between fields that consists of attempts to channel, organise or constrain the productive practice of the field governed. As a theoretical tool for such enquiry, I draw on a materialist interpretation of Foucault's notion of *dispositif*. And thirdly, I want to argue for a wider notion of struggle that encompasses not just open conflict between actors, but also the practice of individual and collective actors in dealing with effects inflicted on them from different fields through governmental mechanisms.

## **Prestige and Networks among Danish Corporations**

**Anton Grau Larsen**, University of Copenhagen | [alar@soc.ku.dk](mailto:alar@soc.ku.dk)

**Christoph Houman Ellersgaard**, University of Copenhagen | [che@soc.ku.dk](mailto:che@soc.ku.dk)

By combining social network and principal component analysis this paper investigates how the inclusion into the central parts of the corporate network of the top 1000 corporations in Denmark is controlled by company prestige. Prestige is in this context a combination of economic and symbolic resources inspired by

the concept of symbolic capital by Bourdieu (1986; 1979). By constructing the space of the economic field of large business with principal component analysis, the role of symbolic capital in corporate power is examined; in particular the positions of prominent family-owned businesses that are integrated

disproportionately to their size. These prestigious corporations have ties both centrally within the business community and other sectors as science, politics, arts and law. The foreign companies are the antithesis of the prestigious family businesses. Being part of a foreign transnational corporation or being owned by foreigners disintegrates the network position of the corporation and reduces the corporations prestige. This study is one of few

studies using data on Danish corporate interlocks and will give an insight into the relationship between nationally embedded and transnational corporate networks in the strong nation state of Denmark and the role of the strong symbolic economy in the organization of the Danish business elite. Furthermore we hope to contribute to the methodological discussion within elite studies.

## 02RS07 - Field Theory and Social Skill

Chair(s): Gerhard Fuchs (University of Stuttgart)

### Symbolic Power and Social Skills – Analysing Social Change from a Bourdieusian Field Perspective

Christian Schmidt-Wellenburg, University of Potsdam | [cschmidt@uni-potsdam.de](mailto:cschmidt@uni-potsdam.de)

In A Theory of Fields Fligstein and McAdam analyse emergence, stability, and change as effect of temporary settlements between different groups of actors that are influenced by the current state of the field and its surroundings. Social skill is one of the key concepts used to understand how order is imposed/or not on a certain social space. Skilled social actors possess qualities needed for modifying social order as well as inventing new cultural concepts leading up to the creation of 'new' institutions. The concept of social skills puts a lot of emphasis on the abilities of individual actor and at the same time loses sight of the relational and practical structuration of these abilities in fields. At this point a more thorough investigation into the Bourdieusian concepts of symbolic struggles, discursive practice and symbolic power might

enrich the idea of social skills. Such a perspective can shed light on the structural background that allows 'institutional entrepreneurship' to develop in the first place. It opens up the 'how' of creating and establishing a symbolic order and takes into account, that discursive practices only really function if they follow a non-material logic of 'disinterest'. And it allows to analyse change as one aspect of domination and countervailing initiatives fought out on the symbolic plain. From such a perspective socially skilled actors are seen as relying on skills that are part of social relationships of symbolic domination. The paper discusses some of the methodological implications field theory has for analysing phenomena of social change and will hopefully contribute to the ongoing debates in the research program.

## Conceptualizing Social Skills: Integrating “Action Science” Constructs into Strategic Action Field Theory

Victor J. Friedman, Max Stern Yezreel Valley College | [victorf@yvc.ac.il](mailto:victorf@yvc.ac.il)

The goal of this paper is to contribute to the theory of strategic action fields by using the “theory of action” perspective from organizational learning as a basis for conceptualizing “social skills” and their relationship to the field as a whole. This conceptualization aims at helping fill field theory’s promise of overcoming the agency-structure dichotomy. In order to do so, field theory must provide of a single set of constructs that capture both the phenomenological world of individuals (e.g. Lewin’s “lifespace”) as well as the configurations of meaning and rules that define fields at the structural level (e.g. Bourdieu’s “habitus”). In strategic action field theory, such constructs ought to be equally applicable to conceptualizing the “social skills” that shape

fields as well as the field-level meanings and rules that shape individual behavior. A promising set of constructs can be found in the “theory of action” concept, which was introduced by Chris Argyris and Donald Schon to capture the link between individual reasoning in action and organizational learning. Theories of action are causal propositions in people’s minds that guide behavior and enable people to evaluate and predict the behavior of others. This same construct can be used to infer theories of action at the individual level and the collective, field level (e.g. group, organization, society). Most importantly, the constructs provide a conceptual tool for observing and tracing the mutual shaping processes between the individual and field levels.

## Success by Hazard? Gurus and the Emergence of Light Business Books’ Field on Brazilian’s Editorial Market.

Monise F. Picanço, University of Sao Paulo | [monise.picanco@usp.br](mailto:monise.picanco@usp.br)

Since the 1990’s, Brazilian’s editorial market watched amazed the bustling rise of self help to the best sellers book charts. Harshly criticized by the main press, these books not only pullulated in the charts on the 1990’s, but have gathered the status of an editorial niche in Brazil, successful to this day. Such success acquires answers to some questions: How the emergence of these market has been made possible? With translations of career manuals dating from the 1960’s, why the understanding of these books as a new genre was achieved only by the 1990’s? To answer those question, I understand this editorial niche as a strategic action field, meaning, a meso-level social order where actors acknowledge one another under a set of common understandings about the purposes of the field, the relationships in

the field (such as distribution of power), and its rules (Fligstein & McAdam, 2011, p. 3). The main hypothesis is that this phenomenon has been made possible by the appearance of an social skilled actor: the guru. Gurus are the authors of this successful books and speakers, commonly hired by companies to address motivation skills. My aim is to show how the conjunction of their strategies, activities and self-presentation has acquired them a sort of “motivational healer” appeal, which, combined with their continuous transit throughout worlds that frame the actions and strategies of this emergent field (editorial, corporative and media spheres of action) highlights what made it possible to light business manuals to succeed as a genre into the editorial market on Brazil.

## **Bourdieu Refined: Conceptualizing informal cooperation in the European Parliament's Intergroups!**

Laura Landorff, University of Bremen | [landorff@bigsss-bremen.de](mailto:landorff@bigsss-bremen.de)

This paper introduces a novel perspective on the European Parliament (EP) focusing on the informal practices and power relations between European Parliamentarians in the EP's Intergroups. Intergroups are cross-party coalitions that bring together Parliamentarians from different parties and countries, representatives of the European Commission and civil society organisations. Starting from Bourdieu's antagonistic conception of fields, the paper analyses how Members of the European Parliament (MEPs) through their work in Intergroups, mobilize different types of capital to challenge the status quo of political, economic and social order in the EU. The paper makes two major contributions: First, by adapting the field concept to a transnational and supranational institution, the paper presents a conceptual refinement of Bourdieu's original notion. The EP is analyzed

as a transnational field with permeable boundaries that consists of settled and emerging fields; Intergroups constituting emerging fields. Thereby, it goes beyond the fragmented perspective of a European institutional field, and accounts for the broader field environment of the EP, namely the EU which is characterized by an overlap of transnational settings and an interdependence of various fields. Second, by presenting original empirical findings from interviews with MEPs, the paper reveals what interactions are regularized by Parliamentarians in and through Intergroups, and what skills are used by actors to induce cooperation. Substantiating field theory with novel empirical data, the paper contributes to the growing scholarship which employs political sociology to gain new insights on the social and political forces shaping EU politics.

## **03RS07 - The Emergence of New Fields**

Chair(s): Christoph Haug (University of Gothenburg)

### **"Energiewende" - The German Electricity Supply System as a Strategic Action Field in Transformation**

Gerhard Fuchs, University of Stuttgart | [gerhard.fuchs@sowi.uni-stuttgart.de](mailto:gerhard.fuchs@sowi.uni-stuttgart.de)

The proposed paper presents the research framework and first empirical results of a project that aims to analyze ongoing changes in the German Electricity Supply System. The analytical approach of the project is informed by the Theory of Strategic Action Fields as developed by Neil Fligstein and Doug McAdam (2011, 2012). The project is subdivided in four subprojects which analyse (a/b) the strategies of the incumbent energy providers and network operators, (c) new actors mainly active on local

and regional levels which try to promote a new decentralized system of electricity provision. The projects use mainly qualitative methods (cases studies based on expert interviews and document analysis) and network analysis. The empirical point of reference of the projects is the German Government's proclamation of a "Energiewende" (Energy Transition) following the Fukushima disaster. This decision entailed the provision that all nuclear power plants have to be gradually shut down. This "external"

decision has put the field of electricity provision under serious stress. Following the liberalization of the electricity supply system in the late 90ies and the gradually increasing importance of renewable energies in the German energy mix the field had already been characterised by an open, highly conflictual process of realignment within the field. After

the Energiewende decision the necessity to look for alternative sources of energy supply created a new challenge to adapt to changes which rather quickly has led to a removal of the lead managers of all old energy providers and geetic activities of challenger actors from all sorts.

## **"Energy Transition" in Germany: Movement Activists and the Emergence of New Categories on the Electric Power Market**

Thomas Kern, Heidelberg University | [thomas.kern@soziologie.uni-heidelberg.de](mailto:thomas.kern@soziologie.uni-heidelberg.de)

This study examines how protest movements shape the patterns of legitimacy in market fields by introducing new category systems. Recently, the research on cognitive categories has shifted to the center of economic sociology since they "provide the mental organization of the social environment and thereby contribute to the order of market fields" (Beckert 2010: 610). This presentation analyzes the emergence of new category systems on the case of the so-called "energy transition" in Germany: Since the early 1970s, environmental activists have organized a strong public resistance against nuclear energy and climate damaging emissions. On the occasion of institutional changes in the late 1990s, a number of leading environmental organizations entered the energy market as

suppliers of electric power in order to promote the expansion of renewable energies. They aimed at preventing climate change and challenged the hegemony of the large nuclear power companies in Germany. This presentation is divided in three parts: In the first part, I will compare how institutional economics and economic sociology explain the emergence of category systems in markets. In the second part, I will investigate how environmental activists introduced new quality standards for "clean" energy. In the third part, based on a correspondence analysis of press statements from 25 electric power companies (2005 – 2011), I will illustrate how the environmental activists introduced a new principle of evaluation and shaped the pattern of legitimacy on the electric power market.

## **Cosmopolitan Capital and the Internationalization of the Field of Economic Power**

Felix Bühlmann, University of Lausanne | [felix.buehlmann@unil.ch](mailto:felix.buehlmann@unil.ch)

The aim of this contribution is to explore how the recent internationalisation and the increasing importance of "cosmopolitan capital" has impacted the structure and character of the field of economic power. For this purpose we will theoretically develop the notion of cosmopolitan capital, discuss it in relation to cultural capital and social capital and reflect on its heuristic value in a bourdieusian framework. Following this we will use the concept in order to investigate the field

of the Swiss Business elite in 1980, 2000 and 2010 with multiple correspondence analysis. We can show that in this period international managers with transnational careers and networks not only grow in number, but come to conquer the apex of the biggest and highest capitalised Swiss firms. In terms of Fligstein and McAdam, a group of challengers endowed with a new, but symbolically powerful form of capital has managed to marginalise the national incumbents. The latter's national

forms of capital – army, extra-parliamentary commissions, national political mandates – lose in importance and contribute thereby to the relative demise of this group. However, other fractions of the traditional Swiss

economic elite become themselves more international and thus manage to stay in power. This prompts an increasing differentiation between a national and an international fraction of Swiss managers.

## Testing Field Theory in an Urban Restructuring Analysis: The Case of Antalya

Reyhan Varli-Gork, Cankiri Karatekin University | [reyhanvgork@gmail.com](mailto:reyhanvgork@gmail.com)

In this study, Antalya is defined both as an actor with its own urban collective capital, and as a sub-field in the general field of power. Bourdieu's theory of a field and actors' strategies of taking a position in the field to transform their species of capital for the maximum exchange rate in sub-fields seems relevant in understanding Antalya's restructuring process. Accordingly, four sub-fields were selectively defined– art and culture, urban policy, economy, and tourism– since they are closely related to the key production and service sectors in Antalya. For the purposes of this study, the representative(s) of various interest groups in Antalya are defined as the actors in the sub-fields aiming to change the exchange rate among various species of capital with their strategies while aiming to maximize the

species of capital they possess, which also changes the structure of the field in which they invest. Most of the qualitative data employed in this study was collected through direct interviews (28 representatives of six distinct interest groups) and a group interview conducted in Antalya between 2006 and 2009. During the unique case of Antalya's restructuring, along with the Antalya Greater Municipality as an institution and the mayor himself as an individual, the central government can be regarded as the most subversive agent. As empirically proven, the state as the most subversive agent while restructuring the subfields in Antalya, has taken a position to ease the new players' entry into the field by changing the rules of the game played

## 04RS07 - Responses of Existing Fields to Exogenous Shock

Chair(s): Victor J. Friedman (Max Stern Yezreel Valley College)

### Onset, Dynamics and Settlement of Waves of Contention: Evidences from the Bolivian case (2000-2005)

Bettina M. Schorr, Free University of Berlin | [bettina.schorr@fu-berlin.de](mailto:bettina.schorr@fu-berlin.de)

In my study on the Bolivian wave of contention (2000-2005) I tested hypotheses generated by SAF theory that deal with the onset and dynamics of contention. Based on the respective theoretical assumptions I explored three questions: which mechanisms accounted

for 1) the onset of and 2) the end of the wave of contention? And 3) which factors influenced its course? The results of the study confirmed the three key mechanisms mentioned by Fligstein&McAdam (2011): The collective construction/attribution of threat or

opportunity (based on internal resources as well as external conditions) combined with the articulation of a resonant collective identity; Organizational appropriation and innovative collective action. The study also stressed the social skill factor and added new insights about the community-specific conditions that contribute to the general perception of skilled leaders as legitimate leader. The course of the wave was shaped by dynamic and strategic interactions among various and different actors. Interactional effects repeatedly led to the reconfiguration of the political context

generating new political opportunities and threats that spurred further conflict involving both already mobilized groups and new challengers. While Fligstein&McAdam do not focus on specific mechanisms at work in the settlement of waves, my research found several interrelated mechanisms that cause the return of “a generalized sense of order and certainty”: State authorities perceived as legitimate and committed to public welfare, the implementation of reform demands, the institutionalization of challengers and their cooptation through clientelistic exchanges.

## Between Disruption and Settlement - Mechanisms of Proto-Institutionalization

Valeska P Korff, Stanford University | [vpkorff@stanford.edu](mailto:vpkorff@stanford.edu)

Achim Oberg, University of Mannheim | [oberg@ifm.uni-mannheim.de](mailto:oberg@ifm.uni-mannheim.de)

Walter P Powell, Stanford University | [woodyp@stanford.edu](mailto:woodyp@stanford.edu)

Karina Kloos, Stanford University | [karinakloos@gmail.com](mailto:karinakloos@gmail.com)

Carrie Oelberger, Stanford University | [oelberger@stanford.edu](mailto:oelberger@stanford.edu)

Field theory has pointed out that institutional arrangements are often less cohesive and clear than assumed in traditional neo-institutional conceptualizations. Increasingly, analysts view fields as fluid, changeable in both content and membership, and populated by organizations that are subject to contrasting pressures and influences. In analyzing these dynamic systems, novel combinations of social movement and institutional theory have shown much promise. These ideas, such as strategic action fields, enhance understanding of the disruption and settlement of institutional arrangements, producing an image of the process of institutionalization as alternating between mobilization, framing, and contestation on the one hand, and legitimation, diffusion, and isomorphism on the other. Conceptualizing institutionalization as such a process, however, requires theorizing the

period of transition from disruption to settlement. With old orders de-stabilized and new ones not in place, this period constitutes a distinctive phase, an interregnum during which relations between disparate and contesting entities may be harmonized and potential new orders explored. We posit convening, information processing, and strengthening as organizational roles that facilitate progress toward a new common order. In so doing, we develop a framework to understand the mechanisms of proto-institutionalization. With the rise of metrics and a focus on evaluation, the US nonprofit sector is currently undergoing a period of transformation and is an apt example to explore our theoretical concepts. Utilizing novel network and linguistic methods, we analyze the relations among the diverse community of organizations involved in the evaluation of civic activity.

## Enterprises in Reunified Germany - Merging Strategic Action Fields by Force

Tobias Gummer, GESIS – Leibniz-Institute for the Social Sciences | [tobias.gummer@gesis.org](mailto:tobias.gummer@gesis.org)

As a consequence of the ongoing theoretical exchange between social movement and organization theory, Fligstein and McAdam (2011, 2012) developed the unifying concept of strategic action fields (SAF). SAFs allow for a more complex understanding of changing organizational fields in a multilayered system. However, the approach longs for broader empirical testing of its central assumptions - a fact being even more important for parts of the concepts concerned with rare occurring events such as field crises. German reunification in 1990 is a rare macroevent where a political regime collapsed. Afterwards, the organizational fields of eastern Germany were merged with their western counterparts. A perfect reunification should result in an integration of the eastern organizations into

the respective SAFs with the same logics of existence, i.e. selection. On the other hand, if the merge failed one would expect existential disadvantages for the newly introduced organizations. I apply Fligstein and McAdam's "A Theory of Fields" on this case of field crisis and merging of SAFs. Hypotheses formulated during this discussion are tested by using data of the Establishment History Panel (BHP) from 1972-2010 (east: 1992). Determinants of organizational failure are estimated for both German regions. In a second step, predicted probabilities are calculated for different settings of organizational characteristics in East and West Germany. Finally, the treatment effect of merging SAFs is discussed in form of east-west differences between predicted probabilities of each setting.

## 05RS07 - Stability and Change in Strategic Action Fields

Chair(s): Bettina M. Schorr (Freie Universität Berlin)

### Public Battles over Legitimacy Perceptions: Reframing Legitimacy as Strategic Action within Fields

Sabrina Zajak, Ruhr University, Bochum | [sabrina.zajak@staff.hu-berlin.de](mailto:sabrina.zajak@staff.hu-berlin.de)

This article contributes to the ongoing debate on strategic action field theory by adding the idea of strategic battles over legitimacy perceptions as a major mechanism for field level change. One core claim of the strategic action theory is that skilled social actors can produce new cultural frames which help to mobilize and build coalitions, finally leading to change in the structure and order of the field. However, the theory does not specify what kind of frames are produced and why certain frames should be more successful than others. This article argues that established concepts in institutional theory on the "three pillars of

institutions" (Scott) can be made fruitful when combining them with a social movement perspective. Instead of treating these three pillars - pragmatic, cognitive and moral legitimacy - as stable sources of legitimacy within fields, less powerful challengers can reframe these sources of legitimacy to destabilize powerholders within fields. As incumbents try to defend their position, actors engage in cycles of public framing wars. If challengers can modify the legitimacy perception not only depends on their discursive capacity, but also the structuration of the field. The article exemplifies this argument by

analyzing cycles of public framing wars between a corporate critical campaign of trade unions and NGOs and Wal-Mart in the US. It shows that reframing legitimacy has been a partially successful strategy for movement actors to challenge Wal-Mart's position within

the field; however the company has been able to stabilize its position by transferring legitimacy from other issue areas. This finding suggests that legitimacy transfer could be a viable defense mechanism for incumbents.

## **Intra-movement Dynamics over Strategic Events: the Relation between Structure and Agency in Irish Contentious Politics.**

**Donagh Davis**, European University Institute, Florence | [donagh.davis@eui.eu](mailto:donagh.davis@eui.eu)

**Lorenzo Bosi**, European University Institute, Florence | [lorenzo.bosi@eui.eu](mailto:lorenzo.bosi@eui.eu)

Fligstein and McAdam's theory of strategic action fields has revived interest in the structure-agency problem. It has also sparked debates over their approach to the causation of episodes of contention (are fields destabilized by challengers and exogenous shocks, or by chronic long-term structural problems and ill-fated elite interventions?) and over their approach to temporality. These theoretical clashes need to be explored empirically. We present a cross-time comparison of two crux moments from Irish history - the transformative events that effectively started the Irish Revolution in 1916, and the Northern Irish "Troubles" in 1969. We think that these episodes provide striking evidence of the highly complex and contingent relationship between long-term structural problems and the agency of "challengers" in bringing about episodes of contention. We focus on intra-movement

dynamics - on the different choices and strategic initiatives taken by radical and moderate elements within the same movements - as a relatively overlooked way to get at agency, notoriously difficult to study empirically; and we pay close attention to the dimension of temporality - from "long-term change processes" to "transformative events", to new "cycles of contention". We cannot understand constraint or structure at determinate junctures unless we understand what stands behind transformative events, since the causation and interpretation of these events is still not sufficiently specified. Our "eventful" perspective places time and action centrally in the analysis, and it implies that contentious politics needs to be understood not only as a cause of action, but also as the product of action.

## Expanding the Realm of the Possible: “Enclaves” and the Transformation of Fields

**Victor J. Friedman**, Max Stern Yezreel Valley College | [victorf@yvc.ac.il](mailto:victorf@yvc.ac.il)

**Israel Sykes**, World Council of Jewish Communal Service | [israels@wcjcs.org](mailto:israels@wcjcs.org)

**Markus Strauch**, University of Freiburg | [markus.strauch@web.de](mailto:markus.strauch@web.de)

The goal of this paper is to examine fields that are in a vertical, or hierarchical, relationship with each other. In doing so, it will also challenge the assumption that the dynamics of strategic action fields can be reduced to the essence of competition over resources and a win-lose dynamic. The paper begins by proposing that the relationship between a more dominant, incumbent field and a subfield over time can follow five trajectories: knowing your place, migration, emigration (or conversion), forming an enclave, and transformation. The paper will then focus on “enclaves,” which are defined as fields that consciously differentiate themselves from the incumbent in terms of the relationships between field constituents, the meanings that make the field coherent, and the rules of the

game that guide action. Enclaves may attempt to remain as closed as possible and interact with the incumbent only as much as is necessary to obtain the necessary resources to ensure their survival and distinctiveness. On the other hand, they may engage in interaction aimed at challenging the incumbent field and changing it over time. The paper will illustrate the concept of “enclave” through the presentation and analysis of a social entrepreneurship venture that played a significant role in transforming the field of services provided to families of children with developmentally disabilities in Israel. However, as this case will illustrate, challenging the incumbent can be framed as “expanding the realm of possibility” rather than as a win-lose struggle over resources.

## RS08 - Gendering Varieties of Capitalism and Varieties of Gender Regimes

### 02RS08 - Gendering Varieties of Capitalism and Varieties of Gender Regimes (1)

Chair(s): Heidi Gottfried (Sociology, Wayne State University, USA), Sylvia Walby (Sociology, Lancaster, UK)

#### The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across European countries.

Karin Gottschall, University of Bremen | [k.gottschall@zes.uni-bremen.de](mailto:k.gottschall@zes.uni-bremen.de)

Andrea Schäfer, University of Bremen | [a.schaefer@zes.uni-bremen.de](mailto:a.schaefer@zes.uni-bremen.de)

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. Part of this inequality has been attributed to the overall division of labour in society which implies lower labour market integration of women. During the last two decades a whole set of national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While these policies usually are seen as separate, the first addressing discrimination, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective. We will address this lacunae by looking at the impact

of work, family and gender equality policies on vertical occupational sex segregation. The article will start with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 22 West European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, female concentration at the lower end might be less affected. Thus, we will additionally include policies regarding low-wage work to cover their impact on occupational stratification among women. The multilevel models applied use data from Multilink and the European Social Survey for the year 2009/2

## Varieties of Gender Regime and Varieties of Capitalism: Why don't they Map onto each other?

Sylvia Walby, Lancaster University | [s.walby@lancaster.ac.uk](mailto:s.walby@lancaster.ac.uk)

There are varieties of gender regimes as well as varieties of capitalism. These range from neoliberal to social democratic. But do they map onto each other? Is the position of a country in a typology of gender regimes, from neoliberal to social democratic, the same as its position in a typology of forms of capitalism? Innovative ways of operationalising these variations for empirical investigation are developed, including indicators of the strength of equality regulations. The variations in class and gender regimes are investigated empirically using data from OECD countries.

The findings are that, while there are some over-laps, there is also divergence. These findings challenge not only the reduction of gender to class, but also the reduction of gender to the family. The paper offers a deeper ontology of the gender regime that includes a wider range of institutions including the gendered polity. It investigates the significance of gendered forces in the economy and polity for the nature of the gender regime. Finally, it draws on complexity theory in order to theorise the intersection of gender and class in varieties of capitalism and varieties of gender regime.

## Changing Gender Orders and Inequalities in Modernity

Ilse Lenz, Ruhr University, Bochum | [ilse.lenz@rub.de](mailto:ilse.lenz@rub.de)

The presentation builds on the theory on gender orders in order to investigate present changes of gender relations more systematically. It proposes that gender orders can be defined as gendered structures and institutions which create and reproduce inequalities and social hierarchies. The presentation will develop three stages of gender orders in modernity mainly basing the argument on the division of power and labour: the main factors are the gendered structures and institutions in the division of power and labour, the forms of capitalism and of the welfare state. In the first stage of national modernisation and capitalist consolidation, the neo-patriarchal gender order was established. A difference-based gender order developed as the neo-patriarchal authority receded. It was

prompted on growing women's rights in politics and education as well as by Fordist mass production and the development of the welfare state and the earner-/housewife model. Gender division or polarity (and not male superiority) was institutionalised in the labour market, the family and power distribution and gender difference was the leading ideology legitimising this gender order. This difference-based gender order has been eroding as well by women's educational advancements, by the women's movements and the resulting legal and social reforms as well as by globalisation and economic change. Presently a transformation towards flexible gender orders based on a pluralisation of gender and gendered employment can be observed while its future shape is still open.

## Varieties of Reproductive Bargains: Re-Regulation and De-Regulation

Heidi Gottfried, Wayne State University | [ag0921@wayne.edu](mailto:ag0921@wayne.edu)

This paper proposes a framework integrating varieties of capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance models and related labor regulations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic models. Without a systematic account of the gender dimensions of employment practices, institutions, and regulations, the varieties of capitalism approach cannot decipher the gendered patterns of nonstandard employment and its variation across countries. National

variation in gendering of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargains. A reproductive bargain constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalist countries, including the United States, the United Kingdom, Germany and Japan, typically paired in typologies, and then contextualizing specific country developments reveals a complex picture of the gendered character of nonstandard work in each country. I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of lab

Chair(s): Heidi Gottfried (Sociology, Wayne State University, USA), Sylvia Walby (Sociology, Lancaster, UK)

## Gender Dynamics in the Dualisation of Coordinated Market Economies: Germany and Japan in Comparison

Karen A Shire, University Duisburg-Essen | [karen.shire@uni-due.de](mailto:karen.shire@uni-due.de)

Recent research about growing inequalities in some of the most protected employment economies has pointed to the dualisation of employment conditions originating in the expansion of non-standard employment and the deregulation of social protection coverage for significant segments of the workforce. This paper will focus on the gendered dynamics of dualisation in Germany and Japan, and show

that dualisation is not novel, but rather deeply rooted (1) in the failure in both countries to pursue social and family policy changes in strong male breadwinner models of employment and (2) well established occupational segregation of work by gender. As a result, class-based inequalities have become more salient, though these were considered less relevant in the coordinated market

economies. In Japan, the expansion of temporary and part-time labor over four decades has exposed women and less educated youth to market-based employment systems at odds with the employment conditions of better educated segments and older cohorts of the male core workforce.

German policies and practices designed to protect skilled male workers in manufacturing have failed to transfer to occupations performed mainly by women, while sub-forms of part-time and temporary work have deepened the divisions between men and women in non-standard employment.

## **Politicizing Everyday Life, but not Gender: the Agenda-Setting of Life Politics in Contemporary Japan**

**Hiroko Takeda**, University of Tokyo | [takeda@global.c.u-tokyo.ac.jp](mailto:takeda@global.c.u-tokyo.ac.jp)

With demographic and socio-economic transformations progressing, family-related issues have been elevated to one of the most focused political agenda items in the Japanese political process since the 1990s. This has resulted in the increased attention directed towards 'everyday life', in particular, family life, amongst the policy-making elite, and the reforms of family-related policies have frequently been mobilized as a representation of 'political change' in Japan. Despite this, however, statistical data indicate that little progress has been made in the area of family-related policy. Some political commentators have pointed out that the change in government from the Liberal Democratic Party to the Democratic Party of Japan and back has obstructed the Japanese state system from implementing a consistent set of policy reforms. By analysing the logical construction

behind policy-making through the examination of political discourses, this paper argues that the Japanese state's failure in the area of family policy reform stems from a more fundamental problem, i.e. the exclusion of 'gender' from the agenda-setting process concerning life-related politics. This implies not only a lack of ideational difference amongst the male-dominated policy-making elite (contrary to mainstream political analysis that asserted the realization of the two-party system with the 2009 general election) but also the influence of the socio-political arrangement of reproduction on the state policy-making process. In so doing, this paper aims to demonstrate that discourse analysis is useful to understand the nature of the gendered national political economy in Japan through the unpacking of the logical configuration of its structure.

## **Gender Contracts or Reproductive Bargains? Examining the Crisis and its Consequences for Gender Equality from a Comparative Historical Perspective**

**Jacqueline O'Reilly**, University of Brighton | [jo72@brighton.ac.uk](mailto:jo72@brighton.ac.uk)

**Tiziana Nazio**, University of Torino | [tiziana.nazio@unito.it](mailto:tiziana.nazio@unito.it)

We examine debates related to the sexual and gender contract, and reproductive bargains. We look at how useful these concepts are to understand the historical balkanisation of the labour market and the way families organise different work-care arrangements. We consider how the consequences of austerity

will impact on attempts to implement greater gender equality. We argue that progress in gender equality has gone hand in hand with a continued balkanization of gender contracts within and between countries reflecting societal and class specific legacies of the integration of women into paid work. These

balkanized trajectories, evident before the crisis, are likely to become more entrenched as job opportunities diminish, and unless a more radical policy agenda to address these is implemented. The value of a gender contract perspective in examining these developments

is to directly draw attention to the gendered dimension at the base of how these rules governing the organization of production and social reproduction were both established and are still evolving.

## RS09 - Maritime Sociology

### 01RS09 - The Problems of Seaside Areas Local Communities and Institutions

#### Organisational Change Processes in the Transitioning Maritime Industry – Case Study of a Polish Shipyard

Witold Nowak, Adam Mickiewicz University, Poznan | [witoldnowak@wp.pl](mailto:witoldnowak@wp.pl)

System transformation in Poland, apart from the political consequences led to a change in almost all areas of social life. There is no doubt that the transition to market oriented economy of the Polish system and the adoption of new economic models have been the fundamental aspects of the transition from socialism to a parliamentary democracy system. Transformation of the centrally planned economy to a market economy began on the macroeconomic level to cause changes of meso and micro levels. Good examples of this phenomenon are processes occurring in Polish enterprises. However, the economic and political transition started in the 1989 in Poland had various consequences for different industrial branches of the economy. The

maritime industry, especially shipyard industry was in 1990s undergoing particularly intense changes and was particularly intensely present in the public discourse. The unique conditions of that industry branch transition – overlapping political, economic, social and technological influences – make it an interesting area of organisational research. This paper will concentrate on reconstructing the process of organisational change and identifying its essential determinants in one of the main polish shipyards undergoing restructuring. The analysis will particularly include the perspective of change agents – persons acting as catalysts of the organisational change. The case study method will be applied to attain the mentioned aim.

#### The European politics of Bluefin Tuna Fishing - A case study from Malta

Michael Briguglio, University of Malta | [michael.briguglio@um.edu.mt](mailto:michael.briguglio@um.edu.mt)

This paper puts forward an analysis of the European politics of Bluefin Tuna Fishing, using the Maltese situation as a case study. Through discourse analysis, this study investigates the construction or otherwise of hegemonic formations on the bluefin tuna issue. Due importance is given to the ideologies and strategies of environmental NGOs, the fishing industry, the Maltese state, the EU and International Commission for Conservation of Atlantic Tuna (ICCAT), in the first 5 years following Malta's EU accession.

The paper concludes that despite Malta's EU accession, there was no such thing as a hegemonic formation around the 'ban bluefin tuna fishing until stocks recover' signifier and conservationist ideology as propagated by environmentalists. Instead, neo-liberal ideology was structured in dominance to the benefit of the fishing industry, supported by the Maltese state, ICCAT and the EU, albeit having the latter two being characterised by condensation of internal conflicts.

## To Keep Afloat - Fishing in the Tagus Estuary

Madalena Corte-Real, Faculty of Social and Human Sciences, Lisbon | [mcortereal@sapo.pt](mailto:mcortereal@sapo.pt)

Fishing must be understood within a complex system dependent on environmental, political and institutional circumstances, both local and global and framed in a territorial context, aspects that confer a lot of uncertainty and vulnerability. The activity is particularly permeable to situations of risk, a concept considered particularly relevant to the construction of the theoretical work. It forces the ability to adapt to constant changes so it instills in their professionals a great capacity of flexibility. In this sense, the investigation line was to develop a retrospective look on the ways of life of fishermen in the context of structural and coercive changes. For the present work local fishing in the Tagus estuary

constituted the place of observation. Interviews were applied to several fishermen from the different anchorages that are trustees of specific ways of living, printing cultural forms and singular systems that end up in particular practices. The individuals from the various fishing nucleus under study are descendants from people from different parts of the country that came to the Region of Lisbon during the 20th century. In theoretical field, emphasis was also given to the Sociology of the territory in order to understand the dynamics of institutional models and social practices that guide the processes of appropriation and transformation of space.

## 03RS09 - Maritime Professions

### The Generation Gap Onboard Ships and its Impact on Seafarers' Experiences of Ill-treatment

Manasi Dutt, Cardiff University | [duttm@cardiff.ac.uk](mailto:duttm@cardiff.ac.uk)

There have been several drastic changes in seafarers' working environment over the last 30 years. Faster turnaround times in port combined with reductions in crew size and work intensification have created a more fast-paced and stressful working environment onboard than before. Fewer seafarers regard seafaring as a life-long career and the pace of progression through the ranks is changing. The stress of these changes, combined with the strict hierarchy in place, raises questions about the potential for ill-treatment onboard ships. Qualitative data collection using semi-structured interviews incorporated a modified negative acts questionnaire that has been previously used in research on bullying and harassment. Fieldwork was carried out in a

multinational company and an Indian company in Mumbai, India, and interviews were conducted with seafarers across all ranks to incorporate views from all levels of the hierarchy. The results discussed in this paper emerged from thematic analysis of the data. The research found that seafarers' experiences of ill-treatment can be caused by differences in age and rank and the associated socio-cultural connotations of this onboard a ship. Higher-ranked seafarers encountered difficulties working with subordinates who were older and more experienced. Other seafarers chafed against the management style of older superiors which was in contradiction to the 'new' style of management learned through training seminars. The

generation gap onboard ships can create conflicts in communication and general management and has the potential to

encourage ill-treatment and negatively impact the health and safety of seafarers.

## **Cultural and Structural Aspects of the Work at Sea - Qualitative versus Quantitative Research**

**Arkadiusz Kolodziej**, University of Szczecin | [kolodziej.socjologia@gmail.com](mailto:kolodziej.socjologia@gmail.com)

The aim of the paper is to compare the qualitative and quantitative research strategies in the context of research on the sailors. The author presents the results of qualitative research on the people of the sea and the main theses related to the structural and cultural circumstances at sea (the importance of

formal and informal structures, the importance of cultural diversity). The study became the inspiration for further quantitative research. The comparison of the both studies results will be focused on the identification of constraints of both research strategies.

## **Educational and Occupational Choices of Students of Maritime Studies**

**Michalis Pazarzis**, University of Piraeus | [mpazarzi@yahoo.gr](mailto:mpazarzi@yahoo.gr)

**Georgia Pazarzi**, University of Piraeus | [gpazarzi@yahoo.gr](mailto:gpazarzi@yahoo.gr)

This paper presents the empirical analysis of data collected by questionnaires distributed to students, both male and female students of the department of Maritime Studies at the University of Piraeus. This paper examines several factors that affect the educational and occupational choices of students. The factors

examined are gender, area of permanent residence, family background (father's and mother's educational background and profession etc.) and work experience. Our presentation will also refer to the relevant literature and the institutional framework of the maritime sector of employment in Greece.

## **Fishing along the Border of Europe: a Changing World. The Cases of the Small-Scale Artisanal Fishing Communities of Lampedusa and Fuerteventura.**

**Giacomo Orsini**, University of Essex | [gorsin@essex.ac.uk](mailto:gorsin@essex.ac.uk)

When sociologically involving individuals, European studies left aside European society: a ground-level sociological study of how European citizens experience the EU is missing. Within this frame this study aims to assess how the EU affect European citizens' daily lives. In particular, it focuses the cases of two small-scale fishing communities living along the European external border, in the islands of Lampedusa - Italy - and

Fuerteventura - Spain. Local fishermen activities and their lives in the islands are indeed strongly impacted by two EU policies such as the Common Fishery Policy - CFP - and the European external border management. Fishery is indeed strictly regulated and largely subsidised by the EU inside the frame of the CFP. At the same time, the extremely isolated geographical location of the islands - closer to Africa than to Europe -

transformed them into spots of the widening European external boundary and, since the end of the 1990s, first safe port for thousands of boat-migrants coming from the coasts of Africa. Thus, through a period of study of five to six months for each island, this investigation qualitatively assesses the combined impacts that these two policies have on the local small-

scale fishing communities. In practical terms, the field-work consists of several in-depth interviews with local small-scale artisanal fishermen, ethnographic-like observation and a consistent number of semi-structured interviews with local, national and European institutional stakeholders.

## **The Repetitive Longing and the Sense of Temporality: Social World of Seafarers Life Companions**

**Robert Bartłomiejski**, University of Szczecin | [robert\\_bartlomiejski@poczta.onet.pl](mailto:robert_bartlomiejski@poczta.onet.pl)

Virtual social worlds are perceived as a primary subject of researches because they enables satisfying interaction and effective communication in cyberspace. In terms of social world's theory, Internet forums and discussion groups can be considered as arenas. Social worlds perspective applied to maritime theory allows to find out and understand a common problems of seafarers life companions that they are sharing on the arena of forums and discussion groups in

Internet. The article will discuss the life cycle of seafarers' life companion and consequences of temporality on family life and social relations on the base of research online forums and discussion groups of seafarers' life companions. Particular attention will be given to strategies of coping with the temporary separation and stress arising from concerns about health, safety and sexual fidelity of their relationship partners.

## **05RS09 - Ecology**

### **Work and Identity in a Contemporary Japanese Whaling Community: Practices of Resilience in a Globalised World**

**Frank Sowa**, Institute for Employment Research (IAB), Nuremberg | [frank.sowa@iab.de](mailto:frank.sowa@iab.de)

After the whaling moratorium came into force in 1986, the Japanese coastal whaling continued as 'scientific whaling' which is internationally criticized as an illegitimate practice because behind there are suspected commercial interests. The consideration of the regulation of the international whaling as a form of global environmental regimes shows that the decisions within the International Whaling Commission are determined by a specific perception. Developed industrialized

countries are not allowed to continue whaling due to cultural reasons. In a qualitative research project, interviews of retired whalers and town inhabitants were carried out in a contemporary whaling town in Japan. This fieldwork shows that the moratorium had an enormous influence on small-type coastal whaling in remote rural areas in crisis. Whaling was from the very beginning an industry as economic activities but it was so overwhelming ("whales are my life") that all

inhabitants were involved in whaling related activities (sharing, arts and crafts). People in the community experienced pressure from anti-whaling campaigns performed by global environmental groups and animal welfare organizations. Due to these experiences people

feel powerless and changed their self-perception of work, vocationalism and identity as whalers. While whaling is decreasing the symbolization of whales are increasing as practices of resilience.

## **Incentives for Participation of Artisanal Fishermen in the Regulation and Control of Fisheries Protection Areas – a Case Study from Greece**

Eirini Ioanna Vlachopoulou, University of the Aegean | [socd12054@soc.aegean.gr](mailto:socd12054@soc.aegean.gr)

As fisheries have a vital role in maintaining the social and economic cohesion in insular areas, where the majority of the population is employed with the fishing sector, regulation and control of the activity affect directly the fishing communities. Self-regulation has a significant impact on managing effectively Fisheries Protection Areas by gaining access to local expertise, resources and developing working relationships between the fisheries professionals and the local control and regulation authorities. In Greece, 18.8% of the territory consists of insular areas, enhancing thus the significance of fisheries communities for social cohesion. However, the notion of participation in regulation and control is still not widespread in the fishing communities as it is only practiced sporadically. Insufficient

statutory control of illegal fishing heightens the need for promotion of self-regulation as a means to protect the marine resources, as well as promote local development, local employment and economic growth. Thus, creating incentives for fisheries professionals' participation in regulation and control of the fishing activity is pivotal for the realisation of self-regulation. The study focuses on three main categories of incentives, namely financial (refunds and grants), infrastructural (provision of communal fishing vessels-refrigerators and other infrastructure) and educational/vocational training (transferrable know-how and lifelong education), as well as the effect they will have, if introduced, on the Greek artisanal fisheries communities.

## **Fishing Community's Response to Marine Ecosystem Change: the Case of Jeju Island, South Korea**

Shin-Ock Chang, Jeju National University | [changshinock@gmail.com](mailto:changshinock@gmail.com)

Flint and Luloff (2005, 2007) proposed a conceptual model of natural resource based community response to natural disaster, risk, and ecological change with an example of forest community in Alaska, USA. Three factors are suggested in their study in explaining natural resource based community's differentiated response to ecological change: a community's biophysical and socioeconomic risk context; (2) a shared community perception or social construction of risk; (3)

local interactional capacity to work together on community's issues and problems (Flint and Luloff 2007: 432). While their study is thought provoking, it has not applied to any other natural resources based communities than forest for further test. Drawing upon the conceptual, empirical insights from Flint and Luloff's study, this research examines empirically fishing community's response to marine ecosystem change in Jeju Island, South Korea. The island's fishing community is

formed along the coastal lines of the island and has communal marine field where fishers and women divers work. The community consists of 100 fishing village based associations with 7 300 members included. The study selects three fishing village associations that are high, middle, low ranked in 2011 for the local government's evaluation for managing village seawater field. By looking

into the context of the local government's evaluation schemes as well as analyzing information collected from the fishing village association members with a questionnaire employed in Flint and Luloff's study (2007), the research aims to identify factors that influence fishing village community to act differently for marine ecosystem change

## RS10 - Power and Communication in Time of Crisis

### 01RS10 - Theory of Power and Cultures of Communication

Chair(s): Silvia Leonzi (Department of Communication and Social Research - Sapienza University of Rome), Giovanni Ciofalo (Department of Communication and Social Research - Sapienza University of Rome), Antonio Di Stefano (Department of Communication and Social Research - Sapienza University of Rome)

### Crisis and the Information Economy: Re-Reading Herbert S. Schiller

Mandy D. Troger, University of Illinois at Urbana-Champaign | [troger5@illinois.edu](mailto:troger5@illinois.edu)

In 1984, the critical US communication researcher Herbert S. Schiller's, in *Information and the Crisis Economy*, analyzed how information and new information technologies and processes were being used to overcome the multiple crises afflicting the U.S. and other advanced, industrial, market societies. Facing the current crisis, Schiller's work reads more current than ever and re-reading it allows for constructive ways to conceptualize the role communication technologies play in crises of capitalism. Taking Schiller's work as a basis, this paper looks at the ways in which the development of new technologies creates new

industries to make up for older ones lost to international competition; the application of new instrumentations throughout the industrial system raises productivity by eliminating labor; the utilization of advanced communication systems polices and checks opposition in poor parts of the world, and how the privatization of the public sector reduces production costs at the expense of social welfare. The overall question is in how far advanced market economies' unilateralism in international communications derives advantage for information processing, and the industrial enterprise.

### Does Big Brother Exist? Freedom, Power and Mode of Sense Production in the "Three Party System".

Marialuisa Stazio, University of Cassino and Southern Lazio | [marialuisa.stazio@gmail.com](mailto:marialuisa.stazio@gmail.com)

Over fifteen years ago, Ien Ang (1994) – while was criticizing theoretical positions in which were emphasized «uncertainty, ambiguity, the chaos that emanates from institutionalization of infinite semiosis» – asked: «how are power relations organized in a global village where everybody is free and yet bounded?». To answer this question, this paper is focused on the “mode of production” of meanings by audiences, in which the individuals are in a sort of double bind: everybody is free to making sense in media products' interpretive

cooperation, but bound to convert himself into a commodity by acceptance of a communicative contract in which «a third party pays to participate» (Andersons, 2009). In the industrialized cultural production era, in fact, we stay in a communicative dynamic in which most of messages are designed and manufactured as commodities (the co-production of meanings of which is also creation of their use value and exchange value) and conceived to sell goods (advertising). Moreover, the most of communication systems

are envisaged to aggregate/segment «audience commodity» (Smythe, 1977) and/or «prosumer/produser commodity» (Fuchs, 2009). In these relations of productions, meanings production is also value production. So, as human beings, we can't live without

communicate but, in the economic media system, each and everyone of us while free communicates he devotes a part of his freedom to somebody else profit: more he works in freeing sense, more value as commodity he adds himself.

## Theorizing the Relations between Time, Media and Politics in a Context of Crisis

Emília R. Araújo, University of Minho | [era@ics.uminho.pt](mailto:era@ics.uminho.pt)

Ana B Moreira, University of Minho | [ana\\_moreira@hotmail.com](mailto:ana_moreira@hotmail.com)

This communication argues that time and temporality are key elements to understand the multiple incongruities marking modern modes of making and being in politics. Almost all temporal biological and natural processes are ultimately amenable to intervention, colonization, simulation, reconstruction, and invention. New regimes of temporality are bringing about effective challenges to democracy, as they facilitate communication processes, but also convey new forms of selection and control, as well as new demands and difficulties for politics to achieve its ultimate goal towards the accomplishment of common public need. Overall, these new critical regimes of temporality crossing all fields of action are characterised by uncertainty, risk and discontinuity. This presentation aims to discuss the relationship between different modes of temporality

inscribed in modern political and media contexts, arguing that the regimes of temporality of new media technologies represent challenges for democracies to survive, particularly as regards the chance they have to maintain a participatory decision-making process, as long as it needs a specific type of waiting which comes to be ever more difficult to obtain in contexts of ever higher ubiquitous temporality inscribed in media cultures. This communication conveys ideas from different authors, particularly from time sociology and media and communication studies. The assumptions are analysed and discussed on the light of empirical data obtained through content analysis of a set of political episodes that have been marking political debates and programs nowadays both at national and European level.

## 02RS10 - Power Relations in a Complex Media Environment

Chair(s): Silvia Leonzi (Department of Communication and Social Research - Sapienza University of Rome), Giovanni Ciofalo (Department of Communication and Social Research - Sapienza University of Rome), Antonio Di Stefano (Department of Communication and Social Research - Sapienza University of Rome)

### Shifting climates of opinion: The strategies of British think tanks to cope with, and seize, the economic crisis of 2008

Marcos Gonzalez Hernando, University of Cambridge | [mjg221@cam.ac.uk](mailto:mjg221@cam.ac.uk)

Whenever there is a crisis, there is demand for explanations. The crash of 2008 allowed for the production of countless diagnoses that flooded the public domain, frequently addressing the basic tenets of our economic system. Even concerning actors that did not question their core views, there was pressure put onto them to reaffirm them in the public debate, once new suspicions on the sustainability of the financial system became ubiquitous. This is how the crisis was also a crisis of our self-understanding. In this backdrop, acting became unavoidable for intellectual agents, as explanations were widely demanded in the face of trauma. For, without a minimum narrative, action becomes unbearably uncertain and the future dangerously contingent. Hence think tanks become significant institutions to observe, as their murky character -often hovering over the edges of advocacy, academia,

consultancy and politics- allows them to use diverse types of claims of expertise, styles of public performance, intellectual tools and strategies. This makes think tanks, sociologically interesting, since their relevance depends on a complex bundle of resources, in different volumes and proportions, varying through time: E.g. links with academia, media outlets and political parties, perceived cognitive autonomy, sources of funding and use of social media. Using secondary data, their media presence and interviews to key informants, I intend to trace the process by which a set of theoretically sampled British think tanks -focused on economic policy-reacted, learnt from and acted upon the public debate after the crash, describing how their responses reflect in complex ways the tensions, resources and constraints those institutions possess.

### Communication on Emerging Infectious Diseases: Implicating Changes of Power Balance between the One-Party State and its Citizens in Vietnam

Huong Thi Minh Nguyen, University of Amsterdam | [t.m.h.nguyen@uva.nl](mailto:t.m.h.nguyen@uva.nl)

Christian Bröer, University of Amsterdam | [c.broer@uva.nl](mailto:c.broer@uva.nl)

Muriel Figuié, CIRAD | [muriel.figuie@cirad.fr](mailto:muriel.figuie@cirad.fr)

Increasing numbers of emerging infectious diseases (EIDs) that have spread transnationally have brought renewed attention to global health during two recent decades. Vietnam like other Southeast Asian countries is acknowledged as a hotspot for

EIDs. Being a member state of global institutions like World Health Organization, Vietnam, an authoritarian state, is requested to adopt a global governance paradigm in the context of rapid globalization. In this situation, the way these EIDs are communicated by state

authorities to citizens is also a recurring issue. Communication, as Boholm (2009) notes, is a complex social process of meaning creation and interpretation situated in real life. Change in communication is the mirror of social and cultural change. Our research is interested in exploring the evolution of communication on EIDs from the angle of the State and citizen relations within a complex social network of different key stakeholders in the context of globalization. Applying method of qualitative content analysis mainly, this paper shows national communication in Vietnam was

evolved from very top-down approach (propaganda) before the year of 1990 to various types of more participatory approaches (behavior change communication) in the beginning of 2000 as a result of emerging social actors' involvement in the context of globalization. We also analyze the risk rhetoric in public health discourse programs as an overview of how different actors in the health communication field exert their power over the human body and of individuals' assumptions and understandings of health risk in health care settings.

## **Between Diagnosis and Prognosis – Media "Instructions" of the Economic Crisis in View of Framing Analysis Perspective**

Karol Franczak, University of Lodz | [karol.franczak@wp.pl](mailto:karol.franczak@wp.pl)

One of the main tasks of contemporary media experts is to provide audiences with clear descriptions of social reality. To accomplish this task, elites use ideologically useful interpretative schemes facilitating understanding of issues presented in the media agenda. Since 2008, one of the most important topics generating media activity and stimulating public presence of symbolic elites is the global financial crisis. In Polish press, attempts to explain the crisis took the form of journalistic instructions – “guidebooks”, “compendia”, “essentials”. Their role is symbolic, ideological influence on the recipient and pragmatic positioning of the reader so that he accepts a certain point of view. This paper aims to analyze a set of texts that meet the criteria of a “crisis manual” – a supplement of a Polish weekly *Polityka* titled “Earthquake capitalism. How the crisis began and how it will

end” (January 2012). Explaining practices in “crisis manuals” proves an interesting subject in the field of the so-called “framing analysis”. Research in this area can help distance from the dominant explanations about origins, sources, moral judgments and preferred “repair policies” of crisis. According to framing analysis researchers, “to frame” means to choose certain elements of perceived reality and construct a biased narrative about the links between them. It allows to build and promote a particular interpretation of objects, events or processes of social reality. “Framing” enables to highlight some ideas at the expense of others and activate patterns likely to provoke at least some recipients to think in a certain way. In this perspective, media not only shape the daily agenda, but also affect people’s opinion on issues discussed.

## Crisis in Representation and Digital Populism: the “5 Stars Movement” Case

Erica Antonini, Sapienza University, Rome | [erica.antonini@uniroma1.it](mailto:erica.antonini@uniroma1.it)

“The thing he has better done is his anti-politics breakthrough: he is a better actor now as a politician than when he tried to become an actor. I think he is gaining a lot of money now. Be careful, though: there is nothing Grillo’s in the character he is playing. The fact that he has become an anti-political voice does not coincide with the real Beppe. At the time I have never got the impression that he was interested in these topics, for instance. He has understood what it is profitable and he is inventing it. He realized that saying banal things is a profitable business. Nothing better for the Italians, who always wait for a leader”. With these words the Italian director Dino Risi commented the political Beppe Grillo’s breakthrough in an interview for the

newspaper “Corriere della Sera” in 1997, far before his electoral consolidation (Santoro 2012, p. 20). The paper offers insights on a number of factors – typical of the wider international context, and of the Italian one –, which have contributed to the rise and development of the “5 Stars Movement”, with a particular regard to crisis in representation and spreading of new forms of populism; on its main features and critical issues (praise of “the new” and of the “common man”, eclipse of ideology, linguistic simplification, manichaeism, uncritical exaltation of the web); on the possible “antidotes” to the last “genetic mutation” of a constant affliction of Italian political system, the populist rhetoric, although declined in a new digital form.

## RS11 - Sociology of Celebration

### 02RS11 - Religious and solemn celebration (1)

Chair(s): Ismo Kantola

#### Celebration of Ramadan in Turkey: The Case of Ankara

**Gunnur Ertong**, TUBITAK (The Scientific and Technological Research Council of Turkey) | [gertong07@gmail.com](mailto:gertong07@gmail.com)

**Huseyin Odabas**, Aataturk University | [odabashuseyin@gmail.com](mailto:odabashuseyin@gmail.com)

**Zuhal Odabas**, Ataturk University | [yoncaodabas@gmail.com](mailto:yoncaodabas@gmail.com)

It is widely known that the month of Ramadan has holy meaning for Muslim societies. During this month people fast in day time and in the evening it is allowed to eat. In addition to this physical activity people have to do other religious activities that have to do in their daily lives such as praying, not to tell lie, etc. Ramadan is sacred because it is the time of giving, of charity, of sharing, of remembering those in need and reaching out and praying for being excused. Since the times of Ottoman Empire, there have been some social activities in the Ramadan evenings in Turkey. But during these periods these celebration activities at the public level had to stop some times because of the political and ideological interests of governments. Since the last two decades, the awakening of these celebration activities have been emerged again. These celebrations have different aspects. But in this presentation the politicizing of these celebration activities by the politics and lay persons understanding of Ramadan festival are examined.

## The Celebration of Christmas. A Longitudinal Sociological Analysis of the Festive Feeling

Ozana Cucu-Oancea, Romanian Academy | [ocucuoancea@yahoo.com](mailto:ocucuoancea@yahoo.com)

The aim of this paper is to present one of my ongoing researches focused on Sociology of Celebration, performed within a postdoctoral project. The main objective of the research is to carry out a longitudinal sociological analysis of Christmas, in order to catch the dynamics of how people relate to the festive phenomena, not only in the context of the cultural globalization pressures, but also of the changes in the festive potency level (type) taking place during the life cycle. By using the Grounded Theory methodology, my study provides a parallel analysis of the data obtained in a previous research (the "reference" research), carried out in 2004/2005, with those resulting from a new

collection campaign launched with a view to this longitudinal study, in 2010/2011, on a sample of sixteen subjects out of the ones who participated at the "reference" research. Moreover, I intend to repeat the analysis periodically, once every five or six years. The subjects, selected based on their representativeness for the types and subtypes resulted from the previous research, will also be a study sample for the other long-term planned panel stages. The main collection technique has been, just like in the "reference" research, the solicited private diary, an appropriate technique for catching the behaviors, attitudes, but especially the feelings related to the social-spiritual reality.

### Celebrated Ambivalence. Carnival in Germany's Rhineland

Yvonne Niekrenz, University of Rostock | [yvonne.niekrenz@uni-rostock.de](mailto:yvonne.niekrenz@uni-rostock.de)

Men dress up as women, children collect candies off the streets, shops are closed all day, beer-soaked revellers toast to each other, and people dance, sing, and celebrate everywhere. What is going on in Germany's wintery Rhineland? This region is a carnival stronghold where each year in the six days leading up to Ash Wednesday, the world is turned upside down. Rooted in Catholicism, Carnival has become an annual event with several million visitors and tourists. Based on an ethnographic study focussing on street carnival, this analysis investigates the structuring frames of the festivity and is guided by the categories of space, time, and body.

These categories are useful to systematize the study of collective chaos. Carnival's collective effervescence has its defined space and time limit, allowing individuals to resurrect rituals in physical proximity. They wear costumes, dance, sing, and celebrate themselves. Ritual practices constitute feelings of belonging, creating a 'we' and symbols of community. Carnival consolidates group solidarity and affirms the imagined entity of society. Nevertheless, this Rhenish corroboree is an ambivalent event: it stands for order and chaos, vitality and transience, diversity and unity, individualization and collectiveness, for happiness and melancholy, the sacred and the

profane. This paper concludes that events like carnival are a chance to face up to ambivalence which is an elementary experience of today's

social world. It answers the question: How does Carnival deal with this key feature of contemporary societies?

## **'It all depends on the story...' Medial-aided construction of mega-events on the example of the 'European Capital of Culture RUHR.2010'**

**Gregor Betz**, Technical University of Dortmund | [gregor.betz@fk12.tu-dortmund.de](mailto:gregor.betz@fk12.tu-dortmund.de)

Organizing Events implies the implementation of diverse tasks. The technical requirements must be fulfilled, necessary personnel for safety and realization must be made available and the content of the event – whatever it may consist of – must be prepared and put into a presentable form and sequence. Furthermore, through activities of marketing and public relations a critical mass of participants must be mobilized to ensure a feeling of an extraordinary experience. The accomplishment of the tasks regarding content, personal and technical implementation is usually a question of know-how, resources, coordination and risk analysis and therefore projectable. The mobilization of participants and the fulfillment of superior targets as image- or structural change however implies a multilevel and complex process of construction during which

the event-maker are involved in a complex setting of stakeholder, interdependencies and dynamics. This process is in high extent influenced by media and medial discourse. In my paper I will analyze the 'European Capital of Culture RUHR.2010', which took place in the Ruhr Region in western Germany in the year 2010. Within this project-bundle, about 6.500 cultural events and activities took place in the region with about five million inhabitants and it is therefore considered the most extensive cultural project in Germany for decades. By looking at the European Capital of Culture as a 'trajectory' I will analyze the activities of the event-organization and outline a model of the (media-aided) construction of mega-events. I thereby will revert to the output of an ethnographic research project I executed from 2009 to 2011.

## **Experience, Consumption and Exchange of Alcohol in the Fiestas of the Indigenous People of Otavalo (Ecuadorian Andes)**

**Jérémie Voirol**, University of Lausanne | [jeremie.voirol@unil.ch](mailto:jeremie.voirol@unil.ch)

Alcohol consumption, and its excess, is a central aspect in the experience of fiestas of the indigenous Otavalos, a kichwa-speaking people of the Ecuadorian Andes. It plays an important role in many celebrations around the world as Caillois, for example, argues. Therefore, my contribution to the RS "Sociology of Celebration" will focus on the role of alcohol in Otavalan fiestas. The following questions will be discussed: Who drinks alcohol and how? How the alcohol abuse is experimented and considered? It appears that alcohol consumption and exchange are

particularly important for the sociability, even beyond the fiesta space-time, and that its goal is to affirm one's religious confession (since the evangelical and Mormon people are not allowed to drink alcohol, replacing it by soda). However, the excess of alcohol consumption tends to lead to frivolity and disorder. Consequently, I want to think about the ways to talk about excess, frivolity and disorder in social sciences. Considering that anthropology has been more concerned by structured, determined or ordered elements of social life, I will explore some tools, elaborated by social

sciences, to think these elements characterising fiestas. I will talk from a pragmatist perspective to analyse indetermination of disorder and frivolity, while using the concepts of “performance”, “mode mineur de la réalité” (Piette) and “surplus of

signifiers” (Babcock). Finally, I will talk about the reasons that lead the indigenous elite to not consider alcohol in its public discourses about fiestas in the current context of culture reappropriation.

## 04RS11 - Religious and Solemn Celebration (2)

Chair(s): Ismo Kantola, Seija Risten Somby

### Rites of Passage and the Redefinition of Social Roles: the Celebration of Marriage in Contemporary Italian society

Laura Arosio, University Milan-Bicocca | [laura.ariosio@unimib.it](mailto:laura.ariosio@unimib.it)

As known, people's life courses are marked by events that imply the transition from one phase to another in their lives (Elder 1985; Bengtson and Allen 1993). The transition events are usually celebrated through ritual forms, to which was given the name of “rites of passage” (Van Gennep 1909). Marriage is one of the rites of passage most documented and studied. Even in contemporary Western societies, marked by deep transformations in couple and family processes, marriage is an event yet highly ritualized, in relation to issues such as civil or religious celebration, banquet, honeymoon (Segalen 1998; Verlinden 2009). This paper aims to investigate what can be the meaning given today to the celebration of marriage. The empirical hypotheses derive from the perspective that the ceremonial practices would serve as a reinforcement of the transitions in the life course, especially in

situations characterized by greater uncertainty (Kalmijn 2004). A quantitative analysis will be performed concerning Italian situation. Data come from the national survey “Family and Social Subjects” carried out by Istat in 2009. The empirical work is divided into three phases: 1) Preliminary analysis designed to detect the proportion of couples who: a) celebrate their marriage with a religious or civil rite, b) offer a banquet after the wedding c) leave for their honeymoon. The evolution of these behaviors over time will be highlighted. 2) Multivariate analysis of the link between individual and couple variables and the use of ceremonial practices related to marriage. 3) Searching for a relationship between the forms of ritualization of marriage and the need for the couple to define new social roles and gain consensus among the family circle

## Ethnic Dress in Evangelist Lutheran Confirmation Ritual

Seija Risten Somby, Sami University College, Kautokeino | [seija.somby@samiskhs.no](mailto:seija.somby@samiskhs.no)

Dress and clothing research in the ritual context has attracted many anthropologists from the late nineteenth century. This paper focuses on clothing expressed by Northern indigenous Sami people in the celebration of the Evangelical Lutheran confirmation. Sami dress as one of the cultural artifacts is the most visible element of the Sami culture. It demonstrates knowledge of craft, natural materials and cultural esthetic which is transmitted among generations. The craft is manifested in the confirmation ritual ceremony where main actors are young boys and girls who are dressed in Sami traditional dress. The

research material is based on interviews and participant observation in the churches and celebrations of the parishes in Northern Finland, and Northern Norway in the 2000s and 2010s. The Lutheran confirmation as a collective ritual and a rite of passage has become an important institution where the Sami people maintain and transfer their cultural traditions of clothing and craft in modern Sami society. In my presentation I will discuss the embodiment, how ethnicity and identity are performed by the ritual body and senses of embodiment.

## Celebrating a New Epoch. Articulation of New Structures of Feeling in the Texts of St. Augustine and Toni Morrison

Ismo J Kantola, University of Turku | [ikantola@utu.fi](mailto:ikantola@utu.fi)

Based on the analysis of two texts: Toni Morrison's *Jazz* and St. Augustine's *De civitate Dei* - and by using Raymond Williams' analytical concept of structures of feeling, the paper discusses the means new modes of celebration can provide for societal peace and reconciliation. While Morrison's text paints a historical picture about the end of slavery and gradual achievement of civil rights, St. Augustine's is about the end of a certain kind of

oppression and gradual discard of old divinities. Both depict a new order emerging, and a new kind of peace. To some extent, both authors speak on a meta-level and across creeds. The paper proposes that the thing that has the power to reconcile conflict and to pave the way to the advent of new structures of feeling is in St. Augustine, Christianity; in Morrison, it is jazz.

## RS12 - Urban Sociology and Public Spaces

### 01RS12 - Urban Sociology and Public Spaces in Times of Crisis and Change

Chair(s): João Carlos Martins (New University of Lisbon)

#### Revisiting the Public Spaces: Social Thinking, Urban Intervention and Diversity of Uses.

Luciana Teixeira Andrade, PUC Minas Gerais, Belo Horizonte | [lucianatandrade1@gmail.com](mailto:lucianatandrade1@gmail.com)

Luis Antonio Vicente Baptista, Universidade Nova de Lisboa | [luisv.baptista@fcsh.unl.pt](mailto:luisv.baptista@fcsh.unl.pt)

One of the foundational texts in urban sociology, *The Metropolis and Mental Life*, by Georg Simmel, deals with social interactions in PUBLIC SPACES in big cities, even though such expression was not used by him. With the exception of a few works, it was not until decades later that public spaces as arenas for social interaction between different players gained prominence in social thinking. That will happen when traditional public spaces such as squares and parks are confronted with other types of closed, privatized spaces such as shopping centers and condominiums. The emergence of these new types of spaces will influence the debate that will become known as the crisis or death of public space. Two works have paved the way for such discussion:

The fall of the public man [1974], by Richard Sennett, and *City of Quartz* (1993), by Mike Davis. While drawing on these works, this paper intends to discuss three issues: 1) the view held by these authors where empirical reference is made to new spaces aimed at high-income groups which are not inviting places to meet or get together with the different; 2) the relevance of the category "public spaces" and how this designation brings together different types of spaces and interactions that can neither be reduced nor represented in a homogeneous manner; 3) and, finally, it intends to show how significant the idea of diversity of public spaces is for empirical investigation in Portugal and Brazil.

#### A Neighborhood Polity in the Era of Neo-liberal Governance. The Emergence of "Ownership Civism" in the Neighborhood of Better Waverly in Baltimore.

Alessandro Coppola, Polytechnic of Milan | [coppola\\_alessandro@libero.it](mailto:coppola_alessandro@libero.it)

During the 20th century the theme of "neighborhood politics" has been the subject of much attention. More recently there has been a revival of studies in this field mainly on the initiative of scholars working on neo-liberal urban governance. These new forms have been characterized by an emphasis on empowering

hyper-local polities and on the mobilization of owners' interests in the promotion of "development" and the provision of local goods once provided by government. The paper presents a case study that is specifically significant to this debate for 1) the peculiar characteristics of neo-liberal governance in

the city given the persistent condition of crisis and shrinkage involving the city and for 2) the strong evolution in the neo-liberal sense experienced by community organizations, for 3) the important role played by narratives of neighborhood ascent and decline and class selection in the shaping of the neighborhood polity and policy. Based on work conducted on the field, the paper discusses 1) the design, by the ruling circles of the "neighborhood polity", of a neighborhood "hegemonic geography" imbued with social and class representations typical to the context of declining US Inner

Cities, 2) the structuring of residents' activation forms within the patterns of neo-liberal culture of the so-called "Community Development Industry", 3) the occurrence of a strong selection of participants in the "neighborhood polity" based on a cleavage between middle-class owners and lower class renters, 4) an agenda focussing on a) the expansion of the number of owners and the increase in property values, b) the increase in urban safety, on c) the improvement of the network and normalizzazione local business

## **Between Jealousy and Contempt. New Ghettoisation in an old Industrial Region.**

**Weronika Slezak-Tazbir**, University of Silesia, Katowice | [nigusia@interia.pl](mailto:nigusia@interia.pl)

Traditionally the notion of ghetto causes an association with World War II and the problem of isolation of the Jewish community from the rest of the society; however, few people know that the first ghetto in the world was set up as early as in the 16th century in Venice and was a clearly separate spatial unit in the urban system of the city in those days. More and more frequently a notion of space ghettoisation is used to describe a phenomenon of dividing urban space into various enclaves of social life – or socially isolated worlds. New ghettoisation that I describe results from various social processes which are increasingly reflected in urban space. It results either from differences in the economic standard of inhabitants of given areas (riches – poverty), also demographic criteria can be taken into account

(old age – young age), medical criteria (health – illness). Today's ghettos may result from relatively automatic choices (lifestyles) and relatively objective processes – marginalization. I will try to make a general outline of the problems of ghettoisation in a traditional industrial region, namely in Upper Silesia, related to diversification of income as well as the aesthetic and architectonic and urban criteria. The main goal of this article is describing two types of ghettos: social and spatial, located in traditional industrial region, Upper Silesia. The first of them are ghettos of poverty. The second type, which are not very often in Silesia region yet, ghettos of affluence, have the roots in the transformation processes.

## **Plural Presence and Innovative Public Space: the Persistence of the Public Realm in the Contemporary City. The Case of the Public Library Sala Borsa**

**Luca Daconto**, University Milan-Bicocca | [l.daconto@campus.unimib.it](mailto:l.daconto@campus.unimib.it)

**Gabriele Manella**, University of Bologna | [gabriele.manella@unibo.it](mailto:gabriele.manella@unibo.it)

The paper addresses the issue of contemporary public space. In the urban setting, social groups form different publics, that become mutually inter-visible in public

spaces: relational arenas, in which learn to live with strangers is possible, recognizing the right to the city for all people. In contemporary city, some theories argue that we would assist

to the crisis of public space. Indeed, the forming of a public realm is more difficult, because social groups build separate and self-segregating routes and urban public spaces are increasingly privatized, controlled, and reorganized to be more compatible with the global city, the city-users, and the hypermobile upper classes. Shifting the attention to Sala Borsa (a public library in the centre of Bologna), the paper argues that the changes in the socio-spatial morphology of contemporary cities do not prevent the forming of a public arena, accessible also to the marginal groups, as the homeless. Because of its centrality, its free access, its innovative and multimedia

environment, Sala Borsa is a crowded, lively, and symbolic public space. In this public library, social groups appropriate different spaces and times through the production of porous boundaries. Nevertheless, the identity of public-library-user taken once in Sala Borsa produces an inclusive regime of inter-visibility, where also homeless people are present. The paper presents the first results of a wider research on urban public spaces in seven Italian cities. Our case study was analysed mainly through 20 key-informant interviews and 80 days of direct field-observation over one year.

## The Crisis of Public Space: Residential Projects Constructing 'Public' Spaces

Aysu Kes- Erkul, Hacettepe University, Ankara | [aysukes@hacettepe.edu.tr](mailto:aysukes@hacettepe.edu.tr)

The construction sector in Turkey has been considered the locomotive of the economy for almost a decade now. Therefore the government took part in the mobilization of the sector and redefined the role of state. Housing Development Administration of Turkey, founded in 1984, took on new roles with the changes in the legislation in 2003. For example it started to form partnerships with private construction firms. These public- private partnerships started numerous housing projects. Today all billboards in most cities show the ads of these projects. The projects and the advertisements promise the potential residents more than a house or an apartment, but they promise a certain lifestyle, complete with a public space of its own. Many projects have shopping malls of all kinds, sports

facilities, kindergartens and elementary schools, recreation areas etc. The residents do not have to leave the gates of the project to engage in leisure and social activities. Consequently, they automatically withdraw from the actual 'public spaces' of the city they live in. Today, all of the new developments in Turkish cities follow the same pattern, likely to cause new and deepened segregation, even in smaller and more traditional cities. This paper will examine the development of these projects from a sociological point of view, questioning peoples' perceptions and preferences when choosing to live in these projects. It will also discuss the role of advertisements of these 'constructed public spaces' on the perceptions of people and whether their conception of 'public space' is being distorted.

### Rethinking Public Spaces in Waterfront Areas: Notes from Lisbon

Patrícia Pereira, New University of Lisbon | [patricia.pereira@fcsh.unl.pt](mailto:patricia.pereira@fcsh.unl.pt)

In port-cities with declining industries, waterfront redevelopment is one major part of the competitive agenda. The increasing economical importance of service, leisure and tourism industries created an opportunity to reuse urban waterfront areas no longer considered profitable. The heritage site of a cultural mega event, Expo'98, Parque das Nações in Lisbon (Portugal) is a newly built mixed-use waterfront neighborhood that assumes a ludic centrality for different populations of the Lisbon metropolitan area. Its public spaces were planned to be used as relaxing, breathing spaces in the heart of a modern and busy metropolis and have been managed in order to remain particularly safe and clean. I discard the idealized conception of public spaces that characterizes them as havens of diversity and accessibility as well as the more contemporary idea of public spaces

as strongly controlled, sanitized and empty spaces that no longer promote encounters with others, serving mainly as marketing tools for real-estate developers. Building on Lefebvre's (Lefebvre 1974) and de Certeau's (De Certeau, M. 1980) work, I intend to discuss how the planned public spaces of Parque das Nações produce and become products of multiple forms of spatial practices, experiences and social interactions and how the tactics of everyday become embedded in their public atmosphere. I will do so by analyzing conventional and emergent, but not necessarily transgressive (Koch & Latham, 2011), patterns of urban space use. Although focusing on everyday life experiences, practices and perceptions of urban dwellers, I seek to enrich the understanding of global spanning social processes.

### Public space – between Political Theory and Urban Studies

Nikolai Roskamm, Berlin University of Technology | [n.roskamm@isr.tu-berlin.de](mailto:n.roskamm@isr.tu-berlin.de)

The concept of public space is a crucial point in urban studies and it has a long tradition. Already in the ancient world the big questions of philosophy and political theory are indivisibly combined with the concept of public space. Up to the present this linkage is effective (i.e. Foucault 2012; Derrida 2000). The contemporary debate on 'public spaces' has had its climax in the 1960s. Milestones of the debate are Hannah Arendt's 'The Human Condition' (1958) and Jürgen Habermas' 'The Structural Transformation of the Public Sphere' (1962). Both essentials of political sciences

relate the issues 'public sphere' and 'public space' with topics of urbanism. In the debate of urban planning this discussion was continued and became an important position with Edgar Salins' famous lecture about Urbanität (1960), Hans Paul Bahrdts' 'Die moderne Großstadt' (1961) and Jane Jacobs' 'Death and Life in great American Cities' (1961). Despite the origins of the debate in political theory and despite the strong linkage to the essentials of philosophy, the political and philosophical dimensions are rarely activated in the recent debates of urban

studies and urban planning. Most of the contributions to 'public spaces' are concerned with planning and designing of public places, while the background concepts and models go more or less unheeded (Bauhardt 2009, 423).

This valuation is the starting point for my paper. I suggest enhancing the debate on public spaces with focusing on its concepts in urban studies and in political theory.

## Leisure in Place. Towards a Gentrification of Renewed Sea Fronts.

**Pedro Miguel Almeida**, Faculty of Social Sciences and Humanities - New University of Lisbon  
| [pedro.m.almeida@fcsh.unl.pt](mailto:pedro.m.almeida@fcsh.unl.pt)

Can a public space like a beach be gentrified? We believe so, and so tell us our research. The safe use of the Beach of Carcavelos in Cascais was put in stake when a supposed strawler took place in July 2005, with robberies and violence in between. A well known phenomena in Brazil, it was new in Portugal with tremendous impact in social medial and public conscience. Concrete proofs of the strawler lacks, said the State, but the feeling of insecurity and unrest were already installed in the public consciousness. Since then, the state joined local public authorities and started to reconvert and requalify, i.e., to gentrify that territory to change and revert the public image of the space. Also joined forces with local entrepreneurs to obtain a common goal: a

reconversion that would allow a strengthening in the feelings of security and thus repopulate space with "desirable" actors. The urban equipments were highly improved and small business engaged on strategies aiming individuals considered in higher places of the social stratification. Middle class and high middle class individuals were now the desirable to appropriate the space in the everyday life. Today we can say that the beach of Carcavelos, one of the most prominent in the Lisbon metropolis, is a safer place for the ones who were targeted both by the State and private agents, and so it says the reality of the everyday life which we studied for the past four years, using the extended case method.

## The Social Value of the Public Spaces in the Central European City: The Case Studies from Gdańsk, Poznań, and Wrocław (Poland)

**Marek Nowak**, Adam Mickiewicz University, Poznań | [marek.nowak@amu.edu.pl](mailto:marek.nowak@amu.edu.pl)

The main aim of the presentation is discussion of the public spaces in the context of decisive (e)valuation. The subject of public spaces in the city is found in the center of humanistic paradigm of the urban sociology from the beginning of its formulation). The main problem for the researchers remains the same: how to 'operationalise' the social phenomena of (e)valuation. In presented investigation the subject is analyzed in the multitude of available public data and results of investigation based on socio-psychological tools like interviews, social survey, observations, and spatial and economic data

from the real estate market. The methods and techniques we decided to use were inspired by the tools from the management studies: the 'multi-criteria analysis'. The main goal we suggest uncovered the problems of the necessity of "re-rationalization" (based on the socio-psychological data) of the process of planning, and the decision making in the city. The researchers' focus was on the differences between selected types of public spaces: town squares (with their social, symbolic and cultural functions), market squares (with more prominent service profile), and open spaces in residential areas (with dominating

communication, and recreation functions). Those "decisive" differences were found through factor analysis, and the qualitative investigation based on the interviews. Our presentation will show the profiles of the three types of public spaces, including their social

specificity, and social dynamics (class dynamics), which are features of the Central European urban relations (the "re-urbanization" process) after twenty years of the post-socialist transformation.

## 02RS12 - Spaces of Ideas: the Urban Issue and the Importance of Sociological Questions about the City

Chair(s): Patrícia Pereira (New University of Lisbon)

## Educational Composition and Development of Living Unit Area Effects for Wellbeing

Marian Vasile, University of Bucharest | [marian.vasile@sas.unibuc.ro](mailto:marian.vasile@sas.unibuc.ro)

This paper studies the impact of population density on wellbeing. The topic has a long history within the literature. Since the beginning of XXth century, scholars including Georg Simmel (1903) and Louis Wirth (1938) noticed the role of population density for inhabitants' wellbeing. Components of overall population density (Galle et al, 1972), congestion (Mitchell, 1971), or crowding (Rodgers, 1981) influence the wellbeing of individuals. Many studies suggest that the livability (Veenhoven, 1993) of the living unit area (i.e. access to resources that meet the needs) is fundamental for individual happiness. From a different perspective, the social comparison theory (Michalos, 1985; Graham et al, 2010) argues that happiness is relative: one tries to be consistent with own's reference

framework. I use this literature to argue that the relation is moderated by the discrepancy between one's education and average education in the area of residence of one's living unit. More exactly being lower or higher educated than the average in own NUTS2 region decreases wellbeing. I show that interaction effects with the general development of the area mold the relation: the higher the development, the lower the impact of the discrepancy. Multilevel modeling on the European Quality of Life Research 2007 data provides empirical testing for the hypotheses, also controlling for endogeneity. In the end I discuss how the findings may affect regional development and existing population dynamics and may provide push-pull factors for internal and international migration.

## Urban Mobilizations in the Field of Housing and Local Environment: the Case of the Post-communist City of Vilnius

Jolanta Aidukaite, Lithuanian Social Research Centre, Vilnius | [jaidukaite@yahoo.com](mailto:jaidukaite@yahoo.com)

The major problem since the fall of the communist regime has been the liberalization of housing and urban policy allowing market forces to take almost full responsibility for it. This has been accompanied by such problems as inadequate state policies and legislation, policies in favor of new construction, lack of experience in public-private partnerships, etc. Vilnius is no exception to this situation. Problems associated with housing management issues, sustainability and environmental issues are at the forefront in Vilnius. Nowadays, many community organizations and environmental movements bring up housing and local environmental issues in the public debate. However, few studies evaluate community organizations and their impact on housing policy and community development. The aim of this paper is to explore urban mobilizations in the field of

housing and local environment in the post-communist country of Lithuania, focusing on the city of Vilnius. Specifically, it explores mobilizations at the community level, which involve environmental issues, but also strives for community's socioeconomic improvement and development. In a broader sense, the paper seeks to highlight major issues related to housing and community development in the post-socialist city and contribute to the understanding of how civil society shape housing policies and urban environment in the context of state's withdrawal from direct intervention in the housing and urban policies. The paper employs a qualitative approach to study community organizations in Vilnius. The 28 in-depth interviews were conducted with community leaders, with the state officials and NGOs leaders involved in the housing and urban planning issues.

## Is the City Unnecessary? New Life Spaces of Young City Inhabitants

Marta Smagacz-Poziemska, Jagiellonian University, Cracow | [marta.smagacz-poziemska@uj.edu.pl](mailto:marta.smagacz-poziemska@uj.edu.pl)

The aim of the paper is to analyse the attitude of young city inhabitants towards the traditional urban space and commercial space. The main questions are: is the City (as a space of the citizen inhabitant community) unnecessary for teenagers? What role is played in their lives by the urban centre, and what by the mall? The space of shopping centres is taking over many of the public functions of the space of the city, but studies conducted in Poland on adult population samples show that the spaces of malls are unable to fully replace the functional and symbolic values of the city, although of course each case is subject to local variables and therefore slightly different. The case is not the

same for teenagers in Poland as for adults; for them, malls are a "natural" element of the urban space. My own comparative studies conducted in two major Polish conurbations, Krakow and Katowice, show that for a large proportion of teenagers malls are not just a "complement" to the city, but an emanation of it. For them, spending time and functioning in a mall is not just a lifestyle, but also an element of individual and group identities. The young urbanites studied also included a category of people absent from "third places" and of those "rebellious" against shopping centres, socialising in traditional city spaces, but there too looking for opportunities for consumption rather than creation. It is vital to understand

the developing typical relations of young people with urban spaces to see what the “city is becoming”.

## **a02RS12 - Spaces of Ideas: the Urban Issue and the Importance of Sociological Questions about the City (2)**

Chair(s): João Teixeira Lopes (University of Oporto)

### **Urban Dog Shit: Spaces of Public Pooping and Actor Networks of Not Knowing**

**Matthias Gross**, Helmholtz Centre for Environmental Research - UFZ | [matthias.gross@ufz.de](mailto:matthias.gross@ufz.de)

Urbanites tend to have a comparatively high preference for pet dogs. Consequently, especially in European cities many pedestrian areas and green spaces tend to be dog fouling hotspots. This presentation aims to explore the “networked” practices of urban dog owners when dealing with excrement while walking their dogs, combining insights from actor-network theory (ANT), practice theory, and the

sociology of ignorance. This is done in order to highlight the relational ties between dogs and humans in densely settled urban areas that are manifested in strategies for dealing with a highly important “actant” in the network: poop. It is suggested that a causal connection exists between the banishing of all things fecal in urban life and the greater freedoms granted to dogs to poop wherever they want.

### **Urban Nostalgia**

**Radim Marada**, Masaryk University, Brno | [marada@fss.muni.cz](mailto:marada@fss.muni.cz)

Studies on post-communist urban memory all too often focus on 1) capital cities (Berlin especially), and 2) the memory work of museums, monuments and memorials. Much less attention has been paid to past oriented urban reconstructions of peripheral cities taking place since the early 1990s. The paper addresses this deficit in (not only) sociological literature as it proceeds in two general directions. First, it points to some typical differences between post-communist capital and non-capital cities in how the process of urban reconstruction triggers the collective memory struggles (concentrating on the differing roles of the narratives of nationalization and modernization). Second, it

discusses the implications of these struggles for the urban and architectural reconstruction in wider sense (going beyond building new museums and erecting new monuments, while tearing down the old ones). Within this framework it argues that while the capital cities readily take on the task of representing national traumas, the peripheral cities have more often built their identities around architecturally echoing nostalgic pasts largely taken out of the national context. This thesis is illustrated on various examples from the central European countries, but the Moravian cases of urban revitalization of Brno’s functionalism and Ostrava’s early industrialism will be discuss in greater detail.

## Artists' Studios in Urban Areas : a Comparative Study between Paris and London

Dominique Billier, School of Management Audencia-Nantes | [d.billier@free.fr](mailto:d.billier@free.fr)

In the late 19<sup>th</sup> and early 20<sup>th</sup> century, the newly attached Montmartre and Montparnasse districts became neighborhoods for artists living in popular quarters. Inspired by philanthropic initiatives for the benefit of the workforce, the City of Paris began the construction of social lodgings for employees and social workers at the city's gates. This activity marked by solidarity was extended to include also painters and sculptors. It received a new impulse in 1960's from the Ministry of Culture, a clear expression of the welfare state promoting artists. In housing renovation programs in Paris and in the suburbs, the construction of residential studios for artists was then included in many social housing

projects. A residential studio in the urban context became a reality for professional artists. As the Greater London Authority (GLA) remodeled the urban context of London in 2000, promoting the turning of industrial buildings into financial ones, industrial buildings became opportunities for artists. Various artists' associations, such as Space and Acme, real expression of solidarity, turned industrial areas into artists' studios. It mainly concerned studios in the city and to the east end of London. The presentation provides a comparative perspective of the artist's studio in the urban context, through the analysis of two different institutional and political approaches of the artist in the city.

## New Urban Spaces for Tourism. The Seasonal Metropolis in Algarve

Joao Carlos Martins, New University of Lisbon | [joaomartins.cf@fcsh.unl.pt](mailto:joaomartins.cf@fcsh.unl.pt)

The late transformations (demographic agglomeration, economic networks and symbolic distinctiveness) on cities and new forms of dispersive urbanization require a renewed sociological awareness of urban spatialities, their social morphology and the intense relationships that exist within them (Remy 1992; Harvey 1989, Castells 2000; Bryman 2004). The late postindustrial changes in West European societies and their cities since the 1970s have resulted in a deep economic and urban third sector dynamization through activities like tourism (Mullins: 1991) by national/regional public powers promoting their territories as being adequate for travelers and for the private sector in terms of real estate and hospitality. Such areas have felt the effects of consumption and leisure (Saunders: 1986, Bauman: 2007) on people's lifestyles and the integration of these expectations in new or

renewed urban areas, which are hierarchized in a worldwide ranking. Some urban Mediterranean territories were initially created, regulated and planned to be exclusively dominated by tourism/leisure territorial appropriations, in seaside spaces with weak economic and demographic occupations at that time. The Algarve, one such place, was a peripheral region of Southern Portugal, functionally oriented towards agriculture, fishing and local industries. Its historical city structure was developed around medieval times, but the its urban, economic and morphological transformation especially those located near the seaside, were the result of the commodification of space (Fainstein: 2005), towards a 'sun and sea' model of tourism, creating a distinctive urban form in between a polycentric and metropolitan territory which we will try to describe.

## Ideological Space. Why does Material Practice Matter?

Karol Kurnicki, Jagiellonian University, Cracow | [kurnicki@gmail.com](mailto:kurnicki@gmail.com)

Neither materialistic nor idealistic approach seems to be explanatory for the complexity of urban space. It is justified to search for explanations in the theory of social production of space. The theory underlines social processes as crucial for the construction of materiality and at the same time defines space as important active element of the social reality. By focusing on the dialectical socio-spatial relations it also bridges the gap between 'imaginary' and 'real', and even 'thought' and 'body'. In my presentation I would like to talk about the possible development of the theory of social production of space with relation to the notions of ideology and practice. The former term, despite all its vagueness might serve as critical element for understanding of space. Ideology here is apprehended as intermediary between society

(which produces its own specific space), and – reversely – as embedded in space and influencing (re)production of society. This kind of ideology is also enmeshed with practice as a concrete, material, bodily action of material production and reproduction of space. This viewpoint poses a few questions which I would like to ponder upon in my presentation. - What is the relation between ideology and practice and in what way both of these elements might be active in the social production of space? - What are epistemological consequences of "ideological space"? Does this kind of approach enables new takes on the city, urban society or architectural analysis? - What is the political potential of "ideological space"? Are there possible strategies which could employ ideology and practice for the change in societal relations?

## 03RS12 - Spaces of Exclusion

Chair(s): Luís Baptista (New University of Lisbon)

### Can models from The Chicago School be relevant for gentrification studies?

Oddrun Sæter, Oslo and Akershus University College | [oddrun.sater@hioa.no](mailto:oddrun.sater@hioa.no)

Can models from The Chicago School be relevant for gentrification studies? The main topic for this paper is gentrification, this comprehensive phenomenon of replacement of inhabitants in central urban neighborhoods worldwide, where middle class groups move into former working-class and low income neighborhoods. The phenomenon of, and the research on, gentrification, will be discussed from the perspective of The Chicago school of urban research, which developed ecological models, nature like, in descriptions of urban development and patterns of inhabiting the city. These questions will guide the

presentation: Do we see gentrification like an inevitable force of nature, in research texts as well as in general discourses of urban living? If we do, how does this discourse concur with politically steered gentrification, or what we can call production of urban space and landscapes? (Harvey, Lefebvre, Zukin). Some chosen texts from the early phase of the Chicago school will be used for the analyse (Park and Burgess, Shaw and Moore, Foote Whyte), and texts in gentrification studies from today (Ley, Slater, Lees, and others), and this will be connected to my research on gentrification in Oslo and New York.

Throughout the discussion the paper will show, by help of Andrew Abbot, how the Chicago school can help us to clear out some methodological and theoretical issues and standpoints. The old models of urban development and (dis)placement of groups of

inhabitants are to a certain extent relevant, both methodologically and theoretically, but in a somewhat surprising and contradictory way. Key words: gentrification, Chicago school, nature, politics

## **The Magic of a Local Flea Market: a Case Study of Sustainable Urban Cultural Densification?**

**Niklas L. M. Hansson**, University of Gothenburg | [niklas.hansson@cfk.gu.se](mailto:niklas.hansson@cfk.gu.se)

Geographer Watson has in several publications focused on street markets as sites of sociality and the making of diverse publics. She has argued for the centrality of such markets as sites of trade, social innovation, urban regeneration, healthy eating, environmental sustainability and social interaction. As sites of interactions of people, goods and information, marketplaces are directly linked to the everyday life of the city. They are prominent motors of urban growth, while simultaneously providing sustainable solutions to accommodate this growth. Arguably, novel conceptualisations of marketplaces might have the capacity to put them onto the urban policy agenda, but not as places of exclusion and gentrification, but as creative strategies to improve the lives of people, the city and urban culture in general. As such, flea markets could

have a role to play in building new sustainable cultures through forms of densification: bringing people and communities together, acting as a 'community builder' that initiates civic activity and values, somewhere to meet and learn about new cultures. The purpose of this paper is to present an ethnographic case study of a local flea market in Gothenburg, Sweden, and discuss the results within the framework of sustainable cultural densification. The main issues addressed in the paper were what cultural values this flea market revealed; what the flea market meant for visitors and vendors; and what the driving forces behind its existence and popularity were. We applied an interpretative ethnographic methodology and build our analysis on previous research on flea markets.

## **Gated (Poor) Communities as A New Form of Segregation**

**Aysu Kes- Erkul**, Hacettepe University, Ankara | [aysukes@hacettepe.edu.tr](mailto:aysukes@hacettepe.edu.tr)

Housing Development Administration of Turkey, produced more than 500.000 housing units since 2002, 467.000 of which are social housing for the lower- income groups and the poor. These housing projects have various aspects in terms of location, size, the quality of the units, facilities and price. On the other hand, the applicants should meet certain criteria to be able to apply to get in the projects. Some of the prerequisites are low-income (maximum monthly income is determined by the administration), being a

single parent or being a widower, being disabled etc... Given these regulations for housing provision, these new social housing projects are likely to produce a significant segregation in the urban context and forming almost- gated poor communities by filtering the applicants and potential residents. While upper income gated communities and luxurious high rises are mushrooming all around the cities, it is becoming more and more difficult to find public places where different income and SES groups mix. This

research is a part of an ongoing project about new urban renewal and slum clearance policies in Turkey. The paper will use the data collected from the residents of new social housing projects, through interviews. Their experiences and perceptions as applicants will be examined as well as their opinions about

the change in their lives as the residents of these new social housing projects. The paper will discuss whether the new communities formed by these projects effect people's perceptions with regard to their social position in the wider urban community and whether they feel isolated.

## Interstitial Spaces and New Forms of Sociality

Emanuele Rossi, Università degli studi Roma Tre | [emanuele.rossi@uniroma3.it](mailto:emanuele.rossi@uniroma3.it)

The contemporary city is extremely complex. Beside those spaces and those actually established places, within which we have learned to move with ease because that is where we spend our daily life, there are really unusual places with special features, as if they were created by chance. These are the places of poverty, disorder and improvisation. These places are hard to decipher since their most intimate features contrast with everything surrounding them, but at a careful analysis they are able to express intense vitality and an extraordinary "social energy" that is no longer possible to ignore. This paper focuses on some of these unseen realities taking shape in the interstitial spaces of a big city like Rome.

Among a number of examples of interstitial spaces the focus will be on an illegal market that periodically takes place nearby a metro station in Rome, where those who live the experience of migration try to reconstruct the symbols and representations of their native world. In a similar way, the interest will be focused on a tent city opening in the heart of Ostiense train station, where young Afghan refugees have created a sort of "collective haven", although living in dramatic health conditions. All this aims to show that it is possible to create a stable network of relationships and solidarity even within a space hanging in the background of social life, in order to make living in a big city less traumatic.

## Ruling the Practices of Everyday Life: the Production of Space through Legal Means

Danielle A.M. Chevalier, University of Amsterdam | [danielle.chevalier@uva.nl](mailto:danielle.chevalier@uva.nl)

A consequential but underexposed subject matter within urban sociology is the struggle between civilians over the symbolic order of public space through legal means, by endeavouring the codification of social norms. The ramifications of such 'juridification' (Habermas 1987) surpass the impalpable level of the legal. Building on the work of Habermas, a Bourdieusian approach to juridification of social norms in public space is proposed, arguing it to be a strategy to restore a doxic norm (Bourdieu 1977), that has been disclosed by the 'practices of everyday life' (de Certeau 1984) exercised by persons with a different

mode of 'producing space' (Lefebvre 1991). This challenges traditional viewpoints, in urban sociology (for example: Jacobs 1961) and sociology of law (for example: Black 2010), that formal social control in public space varies inversely with informal social control. Subsequently, the actual enactment of 'emotional ownership' of public space is investigated in relation to the concept of juridical stakeholder, e.g. the appropriated right versus the juridical right to decide whose reality shared space constitutes. This paper empirically draws from three case-studies, researched both from a juridical angle and by

ethnographic fieldwork, in which local residents morally entrepreneured (Becker 1963) their social norms on proper behaviour in public space to be codified. Though the desired municipal bylaws criminalising an everyday

practice by fellow residents in shared parochial (Lofland 1998) space were not always implemented and/or enforced, the juridification attempts did in all cases significantly change the symbolic order of the spaces.

## a03RS12 - Spaces of Exclusion (2)

Chair(s): Luís Baptista (New University of Lisbon)

### The Immaterial Walls of the City: a Dual or Fragmented Structure? Reflections on Inequality and Exclusion/Inclusion in Inner Cities undergoing Globalisation. The Case of Madrid

Juan\_Jose Villalon\_Ogayar, The National Distance Education University (UNED) | [jvillalon@poli.uned.es](mailto:jvillalon@poli.uned.es)

This paper raises some doubts as to which is the most appropriate theoretical vision for the conceptualising of the emerging social and spatial structure in large European urban areas. Now that the pyramidal system has been abandoned as only possible in industrial societies, the analysis of two alternatives is suggested: dual or fragmented. The question is, which of the two cognitive references is more suitable if we are to understand the social and spatial stratification in the metropolis together with the inclusion/exclusion or regeneration/degradation processes of urban neighbourhoods? In order to do so this proposal brings up for discussion the results of a piece of research that was carried out in 2012 and 2013. The aim of this project was the analysis of the relation between the objective

structuring trends of the urban population and social identification discourse. The population under study was that of towns from the extended urban area of Madrid during the economic crisis that began in 2008. The results obtained are analysed from a micro-situational perspective. This allows the emergence before the researcher of invisible local barriers to integration and social cohesion as they have been referred to by the subjects researched in conversations on the neighbourhood and its problems. These results are put into perspective to develop the image of the system of situational stratification. Those obtained up to now would seem to strengthen the fragmentary image compared with the dual image with an added problem: the individualisation of ties compared with the socialisation of differences.

## On the Global Production of Local Atmospheres: Professional Expertise and Place-making

Giovanni Semi, University of Torino | [giovanni.semi@unito.it](mailto:giovanni.semi@unito.it)

As the world is experiencing an increased role of cities in the geography of power, wealth and influence, the way citizens, passengers and consumers apprehend this shift happens mostly at the local scale. In neighborhoods, streets, crossroads, squares, marketplaces, stores, cafés and restaurants people spend a significant part of their life as well as of their income. If we give a closer look to the relationship between the localization of policies and interventions and uneven development within specific cities, we observe the materializing of central zones that are reputed as being quintessentially authentic and bearing the city's soul, both in good and

bad. Some places, we might say, are more urban than others and have the power to subsume the whole city. The production and transformation of these places, mostly under commercial gentrification, may be interpreted as a strategic tool for cities longing for attracting financial resources, altering their reputation towards a more seductive image of success and uniqueness. This paper is theoretically oriented and explores the nexus between place-making policies, contemporary commercial architecture and design and the global manufacturing of localized authenticities.

## San Salvario e Porta Palazzo in Turim: Disputed Symbolic Spaces of the 'città extracomunitaria' and of the 'multicultural city'

Sílvia S.A. Cardoso, University Institute of Lisbon | [silvia.mail@hotmail.com](mailto:silvia.mail@hotmail.com)

The touristic cultural project 'tours with Turim's migrant-guides' is one of the processes that are transforming the narratives from and about the city of Turin creating an itinerary in the neighborhoods of San Salvario and Porta Palazzo and the figure of the migrant-guide. These are neighborhoods where the phenomenon of migration is more visible and therefore they have been the two most disputed areas of the city with regard to the 'cultural construction of various mitographies, images and narratives that each city chooses to dress' (Cordeiro e Firmino da Costa 2003). In this paper I reflect upon the relationships between the multicultural city that is experienced in real life by the migrants-subjects - and also by the 'middleclass italian' - and the city imagined and designed by the speech behind the migrant tours, but also the

one of policymakers 'multiculturalism of difference' (Turner 1993). I pretend to establish this relationship presenting ethnographic frameworks from my fieldwork with the migrant-guides that can give an account of the "official" experience of space in the tours comparing them with the informal experience of guides-subjects in this same space. I look further to connect this framework to a reflection about the vehicles of social production of space: from the representations created by real conditions of social life in neighborhoods-symbol of multiculturalism, to media (and mediated) representations that interpellate these experiences reelaborating them, to the work of policy agents that want to change the value (symbolic, but also economic) of these spaces.

## A Space of their own. Marginal Forms of Dwelling in a Southern-Italian Town

Domenica Farinella, University of Cagliari | [domenica.farinella@gmail.com](mailto:domenica.farinella@gmail.com)

Pietro Saitta, University of Messina | [pisait@gmail.com](mailto:pisait@gmail.com)

This paper explores the historical development of urban stratification in an Italian Southern city, Messina. By means of 85 in-depth interviews and the analysis of the most important phases of the re-development following a disastrous earthquake taking place in 1908, the authors investigate the coercive forces that, over the course of a century, pushed thousands of individuals to occupy shanties and deprived project areas within the city. The authors claim that the “economy of disaster” and the “shock economy” are not a specific feature of current epoch. On the

contrary, the elements characterizing the contemporary disaster-related speculative processes were largely active at the beginning of the XX century. This paper, then, shows the long-lasting social consequences of speculative approaches to the management of disasters, and reflects on the forms of resistance of subaltern populations to an organization of life that started in the aftermath of a remote earthquake, and still affects their life condition and methods of reproduction.

## A Space for their Own? Women-Only Parks in Iran, Pakistan and U.A.E

Reza Arjmand, Lund University | [reza.arjmand@cme.lu.se](mailto:reza.arjmand@cme.lu.se)

Masoumeh MIRSAFA , Lund University | [masoumeh.mirsafa@cme.lu.se](mailto:masoumeh.mirsafa@cme.lu.se)

As part of systematic endeavor to Islamize the society, Iranian Islamic government has bestowed efforts to create gender-segregated public urban spaces. The gender segregation was formally enforced in public places such as schools, sport halls, swimming pools, transportation facilities, etc. in last three decades. The most recent effort of the government includes “women-only parks”, claimed to be designed and administrated by women to accommodate the needs of women and provide space for social interaction and activities. The model was emulated in other countries across the Islamic world and received differently: some argue that such gendered spaces limit the already restricted interaction of sexes in such strictly engendered societies, taking the social exclusion of women yet another step further; while others consider it re-appropriation of an indigenous spatial

dichotomy (biruni/andaruni) in the religion and the local culture. Those engaged, however, maintain that parks have taken women’s needs and requirements into consideration in such otherwise patriarchally structured society. This paper is part of a larger empirical cross-disciplinary study on urban public spaces in Iran, Pakistan and U.A.E and is based on an ethnographical field study conducted in a number of parks (both women-only and mixed) in the respective countries. As a cross-disciplinary comparative study in collaboration with Centre for Middle Eastern Studies and School of Architecture and Environmental Design of Lund University, it endeavors to address and compare a wider array of perspectives on gendered urban spaces with foci on women parks among various groups of women as well as the urban designers and policy-makers in the countries studied.

## 04RS12 - Spaces of Intervention

Chair(s): Patrícia Pereira (New University of Lisbon)

### Nowa Huta - Between Marginal Gentrification and Program Revitalisation

Jacek Gadecki, AGH University of Science and Technology, Cracow | [jgadecki@agh.edu.pl](mailto:jgadecki@agh.edu.pl)

The paper is presenting the complex situation of the Cracow district of Nowa Huta. This former perfect city of the socialism faced a crisis in 1990, and now is a site of a spontaneous and grass-roots processes of gentrification, and - simultaneously - an object of the of the politically implemented program

of district revitalization. However these two processes are occurring in great measure independently of each other. The text is based on 3 years study of pioneers of gentrification and transformations of the district, both in material and representational sphere.

### Shaping a Territory

Madalena Corte-Real, Faculty of Social and Human Sciences, Lisbon | [mcortereal@sapo.pt](mailto:mcortereal@sapo.pt)

The intervention that is taking place in the neighborhood of Mouraria, in the city of Lisbon, is related with urban policies directed to old city centers aiming to recover buildings and public spaces, promote social and economic development as well as cultural activities in order to attract consumers, especially tourists. Culture assumes an important role as tool to sell the city. Multicultural, historical and patrimonial symbolism is rescued to help the city to position itself on the international scene as a destination to visit. In the globalized world, in constant change, these urban spaces are characterized by a tangle of distinct narratives: poor socio-economic conditions, elderly, marginality, immigrations from different parts of the world, along with the influx of new residents with high cultural capital that print

new identities to the place. In this sense, it is important to understand the position that the different local groups adopt in a process of change, which conflicts and alliances are formed and transformed in a space marked by contradictions as a result of different dynamics, interests and visions. In the regeneration process, as well as in society, the dominant social practices are imposed. How do local people react? In a regeneration process how people invest in social relations? How do the actors adapt to the social capital available? Regular visits to the territory, assisting to different activities and establishing a close relationship with the central protagonists, municipal technicians, leaders of local associations, residents, tenants and users is the main methodology used.

## Participatory Methods of Urban Planning - a Remedy for The Crisis of the City?

Dorota Zofia Olko, University of Warsaw | [dorota.olko@gmail.com](mailto:dorota.olko@gmail.com)

Nowadays cultural, economic and political life concentrates in cities. However, sociologists claim that city – as a spacial form as well as an organizational model of social life – is in crisis. Instead of public spaces, which were the essence of traditional city, we have more and more economical spaces. Simultaneously urban community is disappearing. Social ties between the inhabitants are weakening. People who live next to each other have nothing in common. Some theorists announce death of city as a political idea. One of the answers to the crisis of the city are new methods of public consultations (workshops, city games etc.) on

city development and urban planning issues. Involving local community in decision-making process, giving inhabitants a chance to meet and discuss planned investments – it can potentially be the way to create people-friendly public spaces and integrate local community. But how does it look in practice of governing cities and urban planning? In this presentation the author will try to answer, if participatory methods of urban planning can actually be consider a remedy for the crisis of the city. The presentation will be based on some Polish case studies of public consultations on investments which change urban space.

## Revitalization as the Past and the Future Connection. Examples of Practical Implementation in the Silesia Region

Grzegorz Gawron, University of Silesia, Katowice | [ggawron77@interia.pl](mailto:ggawron77@interia.pl)

The high level of industrialization in Silesia Region, which used to determine its dominant position in national economy, stopped being its advantage a long time ago. With the beginning of the transformation and restructuring process, which generated economic, financial and most of all social costs, the unprofitable industry turned out to be a problem and local authorities were supposed to deal with it. Gradual resignation from activities in these areas meant that many Silesian cities have

problem with "urban fallow"- degraded areas of public space, hampering development (with a total of about 11 thousands of hectares). Therefore, one of the more frequently adopted methods of dealing with this situation is the revitalization. The proposed speech will be a presentation of the Silesian industrialization as a phenomena of Europe, industrial heritage for the Silesia and the examples of practical applications of revitalization which gradually changing this specific region of Poland.

## Contested Cityscapes. Debates on High-Rise Monuments and Cultural Heritage in Paris and Vienna

**Andrea Glauser**, University of Applied Sciences in Business Administration, Zürich | [andrea.ilse.glauser@gmail.com](mailto:andrea.ilse.glauser@gmail.com)

The landscape of European cities is by no means homogeneous. Nonetheless, a similar type of conflict has occurred in different places in the last few years: From Seville to Vienna, from Cologne to St. Petersburg, high-rise projects have provoked conflicts between urban planners and investors on the one side and key actors of historic preservation– even the UNESCO world heritage committee– on the other. Whether and how European cities should integrate more high-rise buildings is a highly controversial question. This paper focuses on strategies of vertical construction and related debates about the cityscape in both Paris and Vienna. Based on in-depth interviews with various urban actors and other relevant qualitative data, this paper aims to

demonstrate that these cities converge and diverge in their politics of vertical construction: Although both cities define themselves to a wide degree with reference to historic structures, the image of tall buildings varies drastically in these cities, which correlates with these cities' diverse histories and hence experiences with high-rise-buildings. Based on these empirical case studies, this contribution reflects on the potential for urban sociology to consider urban conflicts as a starting point to explore current social trends. With reference to Georg Simmel's sociology of conflict, I maintain that arguments about the cityscapes are focal points to understand the contradictions and challenges of a society in which city competition is a crucial feature.

## a04RS12 - Spaces of Intervention (2)

Chair(s): João Carlos Martins (New University of Lisbon)

### When Public Matters: on the Re-invention of Public Place in Moscow

**Boris Stepanov**, Higher School of Economics | [steppann@mail.ru](mailto:steppann@mail.ru)

**Oksana N Zaporozhets**, Higher School of Economics | [ozaporozhets@gmail.com](mailto:ozaporozhets@gmail.com)

For two centuries Tsaritsyno was an uncompleted residence of Russian Empress Catherine II in Moscow. It became famous for the complex of beautiful buildings with the ruin of Great Palace in its center and an English style park around it. There were many projects of its renovation, but none of them was realized till last decade. Meanwhile Tsaritsyno became a place for different public activities and a scene for various groups: tourists and summer folks in the XIX century, different subcultures

in the end of the XX century. Several years ago Tsaritsino was totally renovated by Moscow authorities, who refused to take into consideration the experts and public critique on the methods of renovation. The exposition of the museum symbolically connects initial design concepts of Empress Catherine II and the achievements of contemporary authorities, but not the public history of the place. Today Tsaritsyno is one of the biggest open air places in Moscow attracting thousands of visitors.

Although it is thoroughly controlled by the police and museum security service, Tsaritsyno tends to overcome its museum status and become a vivid public place. The numerous visitors change the scenarios attached to the place through the series of micro-events and multiple co-activities (amateur dancing, making photos, spontaneous communication, etc.). These

activities valorize not the glorious past of the place but its present as a place of shared experiences. Thus Tsaritsyno is being produced rather through interventions and interactions of fellow citizens, who introduce new ways of space usage and communication in quite alienated and slowly developed Moscow public landscape.

## **Negotiating Public Space and Urban Identities. A Symbolic Event at the Tallinn Waterfront.**

Katrin Paadam, Tallinn University of Technology | [katrin.paadam@ttu.ee](mailto:katrin.paadam@ttu.ee)

Liis Ojamäe, Tallinn University | [liis.ojamae@tlu.ee](mailto:liis.ojamae@tlu.ee)

The site of our interest unfolds on recently liberated space at the central waterfront area in the city of Tallinn, Estonia. With high promise for transgression as public space of multiple informal and formal uses and of enhanced attractiveness, the access to water's edge is attributed long-anticipated symbolic change - a sense of freedom and positive turn of citizens' identity as well as growth of economic activities. In the current phase of pre-design, re-invention of the waterfront as an organic part of the city is supported by cultural events. The future location of the new city administration building with its spectacular architectural design, manifesting innovative mode of governance is intended to promote openness, transparency, access and participation opportunities in the whole area. The prospects for revitalisation of this former

military and industrial zone closed until early 1990s' societal transformation are, however, overshadowed by manifold historical and recent interconnected barriers of socio-cultural and economic nature. Encumbered not only due to current economic recession but also fragmented interests of property owners, the new symbolic divisions having followed downright land privatisation, the waterfront regeneration demands a shift in values negotiated in constructive civic partnership between the municipality, property owners, entrepreneurs and citizens. Drawing on the 2012 qualitative research, the paper highlights the potential dual user perspective - consumers and producers - of the urban waterfront, with public space and the symbolic meanings of access to the sea in a particular focus.

## **MOTHERING THE CITY: Urban Re-generation through Interventions in Parenting in Rotterdam, the Netherlands**

Marguerite van den Berg, University of Amsterdam | [m.a.vandenberg@uva.nl](mailto:m.a.vandenberg@uva.nl)

This paper is about the role policy interventions in childrearing practices play in imagining urban futures beyond the industrial past. It departs from the observation that in interurban competition today, mothers are recognized as key actors in what I term urban re-generation:

efforts to renew the city by either investing in children (the next generation) of the current population or replacing the current population of children by a new generation in the form of material and economic restructuring. Urban re-generation supplements urban

regeneration in the form of material and economic restructuring. It focuses on the city as a reproductive milieu. I researched one form of urban re-generation: parenting guidance practices in Rotterdam, the Netherlands. These are organized (almost exclusively) for mothers by the local state in collaboration with schools. I argue that parent classes are a distillation point of the city: a specific space in which much of the city's conflicts, problems and challenges can be witnessed. On the basis of my ethnographic

material, I show that in the practices, mothers and teachers (co) produce a reflexive, communicative and emotionally balanced subjectivity in ritual-like transactions. This subjectivity shows remarkable resemblance to the desired employers for the new service economies that many cities are aiming to stimulate. I therefore propose to see the (co) production of a post-industrial vocational ethic and mothering practices as a *Wahlverwandtschaft*, an elective affinity.

## From Exclusion to Participation: Spaces of Intervention in Context of Public Housing

Carla Moretti, Marche Polytechnic University | [c.moretti@univpm.it](mailto:c.moretti@univpm.it)

Micol Bronzini, Marche Polytechnic University | [m.bronzini@univpm.it](mailto:m.bronzini@univpm.it)

The paper aims to analyse an innovative experience of intervention in the context of public housing in Italy. For the last ten years, in Italy, neighbourhoods with a high concentration of public housing have increasingly become spaces of exclusion, where conflicts are rife, due to a multiplicity of factors (e.g. immigration, social deprivation, aging, health problems). Despite the fact that housing and urban policies are still residual in the political agenda especially for middle sized towns; this implies an ungoverned rise of small cities which are not accompanied by a consequent citizenship. However, at a local level, more active municipalities are starting to promote innovative interventions thanks to the sharing of national and international best practices. In particular we want to focalise on

social mediation processes implemented to prevent conflict and promote a sustainable cohabitation, improving relationships between neighbours and fostering empowerment and participation. Even if social mediation practices sometimes differ as regards to the focus, the approaches (eg. on conflict or on community promotion) or to the professionalism involved (eg. psychologist, social workers, educator, law graduates) they are contributing towards the construction of new spaces of intervention from the bottom. Moreover, these experiences prove the need to integrate social, urban and housing policies in order to support the social capital community. At this point sociologists can act as facilitators and foster a reflection and a dialogue between practices, by now rich in experiences, and theories, and vice versa.

## PHD - PhD Workshop

### PHD - PhD Workshop

#### Down Syndrome and Autism: Parents, Professionals and Children's Agency.

Alice Scavarda, University of Torino | [alice.scavarda@unito.it](mailto:alice.scavarda@unito.it)

Sociology has often conceived disability as a medical issue, an individual problem derived from a physical or mental impairment. The disability right movement challenged the medicalization of disability by reframing it as a social problem, related to the exclusion and discrimination that disabled people experience. The British social model distinguished between biological deficit and social oppression, thus understanding body and impairment in terms of medical discourse. Therefore second wave writers refocused attention onto impairment as a discursively-embodied phenomenon, within an anti-dualistic approach to the body in social sciences. This "turn" to the impairment can be particularly interesting in the study of developmental disabilities, since it reveals the social and cultural formation of inability, by deconstructing the meaning of labels and taking into account the perspectives of people with "learning difficulties" (this is the term used by the organizations of disabled people in England, instead of "mental retardation" or "intellectual disabilities"). Learning disabled individuals, particularly children, rely upon the continuing support of informal carers such as parents, who hold responsibility and advocacy rights for them. However, they are competent social agents, able to develop personal interpretations of their "difference", to manage their day-to-day lives and to resist the barriers they face; nonetheless, their own discursive spaces are influenced by the attitudes and practices of adults, that can also have a negative lasting impact on the child's identity. The research project aims to take together children's, parents' and professionals' perspectives about two key issues: the social

construction of the impairment and the consequences on both children's and parents' self-definitions. I'll examine the relationship between the three social actors, while most studies consider only two: parents and professionals or children and professionals. The main goal is to identify the elements that facilitate or hinder parents-professionals partnership and children's agency, because the two themes are intertwined: some researches show that partnership between parents and professionals occur when the latter value the child for his personal characteristics, without framing his actions in terms of his "syndrome"; lots of scholars maintain that professionals can help the child to have an influence on his affairs by respecting diversity and children as individuals. It seems that in both cases the crucial factor is the shift from a paternalistic, expert model to a more democratic, client-sensitive way of thinking; indeed recent studies about parents-professionals relationship indicate that the latter are beginning to address the need for clear information and intervention, to acknowledge parental needs and expertise, whilst the former function within the role of service consumers. However, further investigation is required, for three reasons: first the empirical data are controversial, since there is evidence of dissatisfaction among parents and old models seem to survive; second the professionals' point of view is rarely considered; third there's a lack of interest in the role of parents' associations and of Websites and blogs, as collective actors able to disseminate not only information, but also counter-narratives, that lead to practices of resistance to

medicalization (i.e. "neurodiversity" in the case of Asperger Syndrome). So the first research question concerns the extent of parents' negotiating experiences, but in order to answer this I'll explore how they reconstruct a framework of meanings after the diagnosis and how they "come to terms" with the problem of their child, managing the courtesy stigma and defining the situation in interaction with significant others and professionals. Parental interpretations of impairment are crucial for the development of the child's identity and agency; few empirical studies have addressed this issue, particularly in relation to learning disabled children, however the small body of literature shows that adults have to value child's opinions and to develop appropriate communication skills. Nonetheless it is possible that professionals consider parents the real clients, thinking that the child would not understand information and colluding with them to exclude him from medical consultation or educational decisions. The second research question is whether professionals and parents take the child's view into consideration or not and which role professionals play in the relationship between parents and child. The qualitative study, which is at the preliminary stage, will take place in Italy, my supervisors are Mario Cardano and Willem Tousijn and the dissertation will be delivered to University of Turin. Since I chose a theoretical sampling, the characteristics of the cases are based on an attribute space: age (7-18) and gender of the child, type of developmental disorder/visibility of the condition (Down Syndrome and Autism Spectrum Disorder-High Functioning), socio-

economic status of the family and membership in associations. I'll focus my attention on Autism and Down Syndrome for two reasons: first, they are widespread in the country, but also related to opposite stereotypes: a national survey reveals that Down children are considered "mild, loving and kind" whereas Autistic children are portrayed as "isolated, aggressive, extraordinary". Furthermore, Down Syndrome is well-known, on the contrary Autism is a rarely encountered phenomenon for most Italians; second, they represent two cases of "emergence of the difference" and stigma management: at one side Down Syndrome is a chromosomal condition, that can be discovered at birth or before and is associated to a range of specific facial features, so it is related to the situation of "discredited", on the other Autism is a disorder of the neural development, whose signs develop into the first three years of the child's life, but also later, and children present normal physical appearance (so they are "discreditable") alongside repetitive behavior, and problems with social interaction. However, since disability needs not to be the master status, I consider gender of the child (particularly for Down children) and social class as selection criteria. The participants will be recruited from local neuropsychiatrist departments; data collection methods are in-depth, semi-structured interviews to parents, children (I'll use specific communication aids such as spidergrams and world choice exercises) social/health professionals (neuropsychiatrists, psychologists, educators and social workers) and shadowing.

## The Beautiful and the Damned: The Influence of Specialized Media on the Development of Professional Rock Climbers.

Guillaume Dumont, University Claude Bernard Lyon 1 - Autonomous University of Madrid | [guidumo@gmail.com](mailto:guidumo@gmail.com)

Research: This research is the continuation of a descriptive and explorative study (Dumont, 2010, 2011) that took place during my M.A. thesis focused on the practice of rock climbing as a lifestyle. We previously explored the multiple relationships between the sport of rock climbing at a high level and the intense lifestyle of travelling and commitment associated with the activity. We analyzed several phenomena within the broader rock climber lifestyle, as the learning processes, the construction of the space of practice or the construction of "core climber" identities. In this project, the aim is to go further and develop a deeper understanding of the previous outcomes by the description and the analysis of how a passion can become a professional vocation, allowing us to play with the specifics of a recent sport activity, to suggest keys of understanding contemporary phenomena. Indeed, my research thesis focuses on new forms of professionalization emerging within the field of "lifestyle sports". This concept focuses on previously called "Subcultural" or "Alternative" sports such as snowboarding, skateboarding or surfing. By the mobilization of the sociology of sport and the sociology of work, profession and mobilities, I want a greater understanding of the ways in which individuals passionate about climbing, turn their passion into their profession. I focus on how climbing instructors, filmmakers, professionals and guides convert their passion into a profession through phenomena of socialization. Between the construction of a singular professional status within the broader field of the sociology of profession and the activity of rock climbing, this research is centered on the professionalization of a leisure activity through a conceptual transition, forgoing the concept of "lifestyle sports" for the proposal concept of "lifestyle sport

profession". Furthermore, we aim to study how these new lifestyle sports, by their importance in contemporary society provide different point of view on some of the more central and classical themes in sociology such as the construction of identity, space, professions or sports, intrinsically related to specialized media and social networks. The data from the previous research was produced during a multi-sited ethnographic fieldwork in Spain and Switzerland. I choose to follow these nomadic "Core climbers" in their everyday life and developed a meticulous "All-day-in" approach, living in these climbing "spots". For the Ph.D research and the study of the professionalization of the activity, I made the choice to conduct the ethnography in a single location and the more specific context of the city of Boulder, USA, but also parallel contrastive fieldwork in France and Spain. In the social world of rock climbing, Boulder is one the central locations of the development of the activity. The playground constituted by the Rocky Mountains and the presence of climbing companies, gyms and professionals makes Boulder the best place to conduct qualitative research. After several years of theoretical review, the fieldwork started in January 2013 and will continue along this year. The data is produced through classical qualitative methods, including semi-directive interviews, life-stories, participant observation, the writing of field notes and a in depth analysis of social media. The following year, 2014-2015, will be dedicated to the analysis of the data and redaction of my Ph.D dissertation and the continuation of the diffusion of the research.

Abstract: This paper focuses on the relationship between the recent professionalization of climbing and the role played by specialized media, more specifically the intense circulation of information through

internet and social media. If physical performance in the sport is a central aspect of the professionalization within rock-climbing, it appears that the development and pursuit of a career as a professional rock-climber depends on other matters too. Being the strongest does not seem to be the key to becoming a professional athlete. Rather, the ability to create, develop and maintain strong relationships with the specialized media and the industry, and promote oneself as an athlete. Mobilizing the “lifestyle sports” theory

and recent studies on the relationships between sport and media in the so-called “subcultures” or “post-subcultures”, we will examine how the media and the diffusion of the performance through social and visual networks construct a climber into a professional. Based on multi-sited fieldwork in Europe and the USA, this paper is the continuation of a descriptive and explorative long-term ethnographic study centered on the professionalization of rock climbing.

## Networks of Cultural Production Facing the Change. Evidence from Italy

Andrea Gallelli, University of Torino | [andrea.gallelli@unito.it](mailto:andrea.gallelli@unito.it)

Introduction Changes in political and economic assets imposed by the financial crisis has, in recent years, caused a deep reduction in public expenditure and in State's action toward less leading and non-autonomous sectors of the economy. The field of cultural production is involved in this process. For example in 2001 the expenditure of one of the most significant public institution for cultural promotion (Fus) was 0.042% of the Italian GDP, while in 2011 it was 0.029; dropping from 517 million euros to 407 (Mibac 2011). The Italian model of cultural production has always been qualified by high external support for funding cultural activities. Arts, because of their intrinsic merit value, are often excluded by marketplace rules and competition among producers. For these reasons, concrete artistic production processes are characterized by a high dependence on exogenous resources. State and private institutions, both from a normative point of view as well as financial supporters, have always acted as guarantors of the creation, distribution and promotion of artistic and cultural goods and activities. How does the field of cultural producers react to new changes? Theoretical framework Moving from a general overview in the literature of sociology of culture, it is possible to conceptualize the field of cultural production as the synthesis of three macro aspects: the properties of the concrete cultural goods or activities (Hirsch

1972), the characteristics of the organizations that produce them (Di Maggio 1987), and the features of the spaces in which they operate (Caves 2003); respectively, that is, the object, the subject and the environment. The production of culture perspective (Peterson, Anand 2004) shows how symbolic elements of culture are shaped by the contexts in which they are created and distributed. Some features of the cultural field can be framed according to theories of the relationships between organizations and their environments (Hannan, Freeman 1977; Pfeffer, Salancik 1978) Units operating in conditions of high dependence on exogenous resources, are subjected to high level of reactivity to environmental turbulence. Mechanisms of selection or adaptation of the organizations to new conditions may reshape the structure of the field. The new economic sociology (Granovetter 1985) highlights the role of relations among individuals and organizations involved in economic processes. Structural analysis (Wellman and Berkowitz 1988) provides important tools for analyzing the marketplace according to the perspective of the ties and relation that constitute it. Combining these approaches, a theoretical and methodological framework is proposed which affirms the importance of the networks of organizations for the analysis of cultural production. The literature emphasizes the

existence of some kind of recurrence among relational variables and the performance of cultural producers (Potts, Cunningham, Hartley, Ormerod 2008). Often, informal key configurations of stable subjects are responsible for sustaining processes of production and divulgation of cultural goods and activities in the marketplace (Starkey, Barnatt, Tempest 2000). Relational resources seems to replace management and organizational difficulties. Nevertheless empirical demonstration is hardly ever offered on these topics. The main goal of the research is to provide a prime insight into this subject, starting with evidence from the Italian case. Are cultural production organizations in touch with each other? Does some kind of influence between their ties and their action exist? Is it possible to describe a system of the influence between the structure of ties and the configuration of the supply? The research proposes to analyze these associations following two directions: firstly understanding the level of reactivity of the market of cultural goods and activities to macro changes, like the progressive reduction of external funding; secondly, understanding how the producers' networks are modified. The findings will show if the structure of relations is the base of reaction to change, and possibly an efficient support to the difficulties. Data and analysis

The research is based on three orders of empirical documents: a secondary series of data – collected on both public as well as private institutions – concerning demand and supply of live entertainment in Italy; and two relational dataset, a first one on professional theater organizations and a second one on festival producers, both related to Piedmont, Italy. The first set of indicators is used to give a general overview of the tendencies of production, consumption and resources for culture, with the aim of describing the phenomenon and identifying general tendencies. By applying clustering technics the main differences in the regional systems of cultural production and consumption are

shown. The datasets on theater companies and festival producers constitute the base on which network analysis technics are applied. This is the core of the research. The purpose is to empirically show the structure of ties within the cultural production field, possibly evaluating its reaction to change and the influence of relations on the producers' performance. In the case of relations among theater companies – collected from administrative sources – the tie is defined by a relation of hospitality: the case in which one company performed in the structures of another one. Almost five hundred ties are analyzed, and general network properties about connection, embedding, centrality are inferred. Relations among 80 festival producers are collected through an on-line questionnaire designed to reproduce a whole net of multiple relations for information exchange, structures utilization, co-production. In this period (January 2013) an intense revision of the multidisciplinary literature on cultural production and network analysis was accomplished. An important amount of secondary data on cultural production and consumption in Italy has been collected and organized so as to provide a broad description of the phenomenon's tendencies. Preliminary analysis, based on Ucinet network analysis software, show an intense net of relation among theater companies, as well as interesting issues on the relational dimension of the field. So far, the online questionnaire on festival production has been completed by 50% of the receivers. Conclusion The research proposes a contribution to the discipline of the sociology of culture, through the innovative and effective perspective of social relations. New economic sociology and network analysis foster the research both from a theoretical and a methodological point of view. Findings will possibly illustrate new strategies of action for single cultural producers according to a relation-based conception of the marketplace, as well as for institutions involved in processes of creation and promotion of culture.

## Breast Reconstruction in Oncology and in Cosmetic Surgery: a Comparative Sociological Analysis

Cinzia Greco, Ecole des Hautes Etudes en Sciences Sociales / Centre de recherche, médecine, sciences, santé, santé mentale, société - CERMES3 | [cinzia.greco@ehess.fr](mailto:cinzia.greco@ehess.fr)

Breast reconstruction in oncology and in cosmetic surgery: a comparative sociological analysis My Ph.D. research deals with doctor-patient relationship in the case of breast reconstruction following a cancer-linked mastectomy. The research is conducted in the context of the doctoral formation "Santé, Populations, Politiques sociales" of the École des hautes études en sciences sociales of Paris, under the supervision of Professor Ilana Löwy and in the context of the CERMES3 centre. This research focuses on the analysis of the experiences of post-mastectomy breast reconstruction in the Ile-de-France region. These experiences are compared with cosmetic surgery of the breast in the same region, and the French case is compared with the experiences of breast cancer reconstruction in Italy. Reconstructive and cosmetic surgery of the breast share several elements, as they are often performed by the same surgeons, who use techniques pertaining to the same discipline; in the private sector sometimes the same structures provide reconstructive and cosmetic surgery. Nevertheless, reconstructive surgery is considered an integral part of the cure of cancer, and is performed on a sick body, while cosmetic surgery is considered a voluptuary practice and is performed on a healthy body. On the other hand, in several cases aesthetic motivations can influence to some degree the choice of approach in the cancer context, and a number of cosmetic operations are considered to be situated on the boundary between esthetical and pathological. Both surgeries are performed to adapt female breasts to the contemporary standards of beauty, respectively in their number and in their size and shape. As the breasts have an important role in the normative definition of the female body, these practices have a strong influence in the reproduction of the dominant ideas of how

the female body has to be. Moreover, public discourses present breast cancer as a threat to femininity, and the campaigns for prevention use sexualized images of female body and breasts, inciting women to save specifically "their breasts". In this context, breast reconstruction is considered an important step for healing physically and psychologically. There are two techniques to perform a breast reconstruction: the insertion of silicon prostheses or the transplant of autologous tissue. Both in France and in Italy the transplants of autologous tissue are a minority of the operations and surgeons mostly use prostheses. Some quantitative researches conducted in France at the local level have shown that only a minority of the women who had a mastectomy undergo reconstruction. Women, indeed, have a large gamma of interests and goals in mind when they choose to undergo breast reconstruction, but they also have several doubts and difficulties. They do not simply wish to have a two-breasted appearance. They also have to confront the fear and the risk of undergoing another operation, to accept a second transformation of their body, and to re-negotiate their expectations with the medical establishment. Breast reconstruction is thus not just a surgical practice, but it is a complex bundle of phenomena at the intersection of medical, esthetic and social contexts. The main objective of this research is therefore to analyze the doctor-patient relationship both in the oncologic and cosmetic context; in particular, I am interested in analyzing how the gender schemas are reproduced in these cases and how the normative vision of the female body can influence not only the cosmetic field, but also the oncological one. The main method of the research consists in in-depth interviews with the actors involved in the field – oncological and cosmetic surgery

patients, oncologists, surgeons who perform breast reconstruction, aesthetic surgeons and other medical figures. I am also conducting participant observations of meetings of patients and/or medical personnel organized by both health institutions and patients' associations. I am currently enrolled in the second year of my Ph.D. program. During the first year I have conducted 45 in-depth interviews with medical professionals and patients in France and Italy, and observed several meetings organized by a number of patients' associations and by medical institutions. While medical professionals present post-mastectomy breast reconstruction as a "personal choice", the interviews I conducted show that the medical and personal context in which the patient is enmeshed can play a key role in the decisional process. The family, and especially the partner, has an important role: in a number of interviews, both with doctors and with patients, the reconstruction has been presented as a choice of the "couple". The medical professionals, especially the surgeons, can act as gate keepers, choosing the amount of information about the possibilities of reconstruction to give. Patients often report a lack of information about reconstructive techniques and process. This operation is covered by the National Health System both in France and in Italy; however it is often

performed in private structures, which entail extra costs that can discourage women from undergoing a reconstruction. Breast reconstruction raises therefore several important questions about the social construction of female body, about the asymmetries of knowledge and often gender between doctors and patients, and class asymmetries between the patients that result in different opportunities of receiving the preferred cure. Moreover, the analysis of the activity of patients' associations shows that some of them aim their efforts at redefining the meaning of the mastectomized body. Some associations organise photographic exhibitions or produce videos about the breast cancer experience. Some others try to enlarge the boundaries of normative female body appearance to include the asymmetrical body; one of the actions in this direction was the creation of the first asymmetric bra by a French patient. Such activities are, however, scarcely known, and for the majority of patients the reconstruction is the only known solution to regain the "normal" appearance altered by the cancer. In the next steps of the research I intend to develop themes raised until now, in particular the doctor-patient relationship, and to realize interviews on cosmetic surgery experiences for the comparison of the two fields.

## European Societal Integration: Contested Institutional Sets of Conflict

Johannes M Kiess, University of Leipzig | [johannes.kiess@uni-leipzig.de](mailto:johannes.kiess@uni-leipzig.de)

European societal integration is best described as a conflictual process within which new institutional sets are being configured and that thus shapes the terms and conditions of social conflicts i.e. an emerging European society itself. This includes that social conflicts on the meso-level (classically between trade unions and corporations) are not only about resource allocation itself. In fact, institutional sets in which conflicts are to be negotiated become part of the strategies of social actors and, furthermore, institutional conditions are

contested. The initial hypothesis of my dissertation project is: conflicts on institutional sets of conflicts become the core of the European societal integration process. Social change is reflected in changes of institutional sets of conflicts, for example specific systems of collective bargaining. Exploring European institutional sets of conflicts and the emerging of these sets promises a deeper understanding of European *Vergesellschaftung* (Georg Simmel), based on and opening a gradualistic understanding of society in general. This aims

at the main question for a sociology of Europe: is there a European society, and if so, what does European society mean? Last but not least, the question arises how the emergence of European institutional sets of conflict affects the already existing national sets of conflict. Starting point of this conflict theoretical approach is the assumption that "society" is always a set of conflictual relations. Such an approach aims at and explains the protracted and complex development of European society on the basis of interest constellations. This is important, both politically and for academia, because conflicts deriving from modernization and transformation processes most likely produce winners and losers which directly (re-)configures questions of identity, social integration and legitimacy. In my dissertation project I examine two examples to show the far reaching consequences of this idea. To account for the classical capitalist antagonism between capital and labor, I first turn to the debates on transitional rules on free movement of labor in the wake of the 2004/2007 EU-enlargement. These rules expired for the 2004 accession countries in 2011 and will end for Bulgaria and Romania with the year 2013. The example shows that, especially in Germany, the inevitable (free movement is a core principle of the European Treaties) opening of the labour market for East-to-West migration was highly contested. Trade unions, business organizations, conservative and social democratic parties alike were highly skeptical of the extension of free movement to the Eastern European newcomers – because this was understood as changing the terms of conflict with unknown consequences. Soon business organizations changed their opinion and spoke out for faster opening, hoping for cheap labour. At this point though, the transitional rules had become an integral part of the enlargement process; especially the German public was not willing to give up this imaginary shield that should protect German wages. Even though the false perception of a high migration potential was misleading the German social actors, in the long run their problem stays the same: a single European market challenges the nationally

institutionalized sets of conflict. Second, I analyze the development of the access conditions to national pharmaceutical markets within the EU. Pharmaceutical markets until at least the 1970ies used to be highly regulated, transnationals were even forced to establish or buy smaller national businesses to enter these highly regulated markets. The single European market slowly opened up these closed markets, triggering internationalization of businesses and causing far reaching consequences on financial aspects of public health systems. Comparing the British National Health System and the German public health sector with its strong organizations it is obvious, that this integration process is not to happen quietly. European regulation will interfere with the traditional (until now: national) "rules of the game" (Douglass C. North). At this point, at the latest, business organizations and other actors become involved. Every organization will try to direct or halt this process following their basic interests. Both case studies examine the conflicts on a specific institutional set of conflict. In each case, a mainly stable institutional set of competition – between providers of labour or between pharmaceutical suppliers – and of interests – trade unions and business organizations respectively producers, pharmacists, and consumer and public interests – became contested in the wake of European integration, one enforcing the principle of free movement of labor, the other enforcing the principle of free movement of goods. The fact that a similar conflictual change of the institutional sets of social integration can be observed in two very different fields, underlines the validity of the theoretical approach and helps explaining the process of European societal integration. This paper will cover the theoretical and conceptional chapter of my thesis. I develop the conflict theoretical approach through (1) examining political science and sociological state of research on the European integration process and (2) laying out the idea of (European) societal cohesion as a shared and contested conflict on a certain set of institutional conditions of conflict. It appears

that the sociological and particularly the conflictual perspective on the meso-level of social actors – in contrast and amendment to intergovernmental meta-level or horizontal, attitude oriented analysis – adds significantly to efforts of explaining European integration processes and dynamics. Currently I collect and analyze documents published between 1997 and 2013 by relevant social actors on the free movement of labour and the transitional

rules for the newcomers of 2004/2007. Before the conference I will have started data analysis on pharmaceutical markets. I expect the research phase including data collection, evaluation and interpretation to continue through 2013 and will start writing in January 2014. Supervising this PhD-project is Prof. Georg Vobruba of the University of Leipzig. The dissertation will also be delivered to the University of Leipzig.

## The Spread of Mega-churches on a Global Scale

**Janina Stefanie Coronel Regul**, Max-Weber-Institute of Sociology at the University of Heidelberg (Germany) | [janina.coronel@web.de](mailto:janina.coronel@web.de)

1. Stage of research I have started working on my doctoral thesis in November 2012. Since September 2012, I have been involved in the research project “Why are megachurches attractive? Network Structures and Cultural Reproduction of a New Organizational Form in the United States” as a research assistant. Professor Dr. Thomas Kern from the University of Heidelberg is the PI of the study. My doctoral thesis, which focuses on the global emergence of megachurches, is thematically related to this research and draws on some of its data. Thomas Kern is also my doctoral adviser, which means that upon completion of my dissertation, I will receive a Ph.D. from Heidelberg University. 2. Description of the doctoral thesis My doctoral thesis centers on exploring why megachurches have been spreading on a global scale. I am seeking to answer this question using the Qualitative Comparison Analysis. Since the 1970s, there has been a rapid worldwide diffusion of Protestant evangelical congregations with more than 2,000 adults and children attending a typical weekend service. Such congregations are called “Megachurches” (Thumma/Travis 2007: 6-7). Although the United States are the nation with the largest number of megachurches – their number hovers around 1,600 (Thumma/Bird 2012: 1) – data show that not a single one of the world's forty largest churches is located in the United States or another Western nation. The emergence of

mega-churches is taking place basically outside of the western world (Martin 2011, 1991; Davie 2009; Berger 1999), most notably, in East and South Asia, Africa, and Latin America. Megachurches have access to a wealth of resources that are not available to little churches. They tend to be innovators in terms of how they use technology and created new institutional church forms, like satellite-services, televangelism and multi-campus. With those new institutional church forms they impact a lot of unchurched people, but also other religious organizations (Bird 2010). However, as of now, there are no studies examining the cultural and institutional consequences of the emergence of megachurches. Furthermore, no systematic inquiries have examined the institutional conditions which are facilitating the global spread of megachurches. I am seeking to address this research gap in my study by drawing on the framework of new institutionalism (DiMaggio/Powell 1991). The study relies on insights from the sociology of religion in order to make sense of the religious aspects of megachurches around the world. Hereby, it mainly ties in theories about secularization and the cohesiveness of religion in the context of globalization and modernization (Weber 1934; Beyer 1999, Berger 1967; Beckford 2003; Robertson 1973). Several theoretical frameworks are essential for analyzing the spread of megachurches

worldwide. First, the religious market model is helpful for understanding the environment of the megachurches. Second, institutionalist theories of organizations are useful for understanding the organization of megachurches. Those theories help to develop the following propositions, which will be probed in this study. Proposition 1: Megachurches emerge in countries with a high degree of religious freedom and religious pluralism. According to religious market theory, higher religious freedom and religious pluralism should facilitate higher degrees of religious participation. If religious market is heavily regulated, mainly by the state, it will be more difficult for new churches to enter it (Iannaccone 1990, 1991; Gill 1999; Stark 1992; Stark/Bainbridge 1985; Chaves/Cann 1992; Finke/Stark 1992; Stark/Iannaccone 1994). Proposition 2: Megachurches exist in countries with a low level of economic growth and human development. The "Weberian" approach focuses on the idea that the strength of religious beliefs should diminish as modernization and rationalization progress (Weber 1904, 1922; Berger 1967, 1999; Lechner 1991; Martin 1978; Wilson 1969). This argument rests on the idea that religion is a system of beliefs and practices that derive from the sacred or the supernatural. Individuals do not like fear and uncertainty. Thus, secularization is closely related to economic wealth and physical security in a country. Proposition 3: Megachurches exist in countries with a high percentage of evangelicals. The institutionalist concept of isomorphism provides an explanation for the similarity of different organizations (DiMaggio/Powell 1991; DiMaggio/Powell 1983). While institutions tend to have a "primary logic" derived from their purpose, they often import "secondary logics" from

other institutions in the same organizational field. Stout and Cormode label this process "cultural isomorphism". (Stout/Cormode 1998: 68). Protestant churches could be influenced by evangelical organization, for example in terms of their network structures and mission statements, which are crafted to pursue three goals: (1) to evangelize a lot of people, (2) to integrate them into the congregation, and (3) to bring them together in services. The Qualitative Comparative Analysis (QCA) seems to be the best method for the study, because it combines qualitative and quantitative data and it helps to differentiate between necessary causality, sufficient causality and the combination of those causalities. (Schneider/Wagemann 2007: 49-73; Ragin 1987: 93-102; Rihoux/Ragin 2008: 56-64). Furthermore, QCA is specialized in cases of the size of medium N and in analyzing the contextual backgrounds of these cases. (Goodman 1972; von Eye 1990). Thus, the independent variables of this study could be religious freedom, state-religion relationship, modernization, economic growth, and the number of evangelical organizations in a country. The following cases were identified as being important for this study: Nigeria, Ghana, South Africa, USA, England, Australia, South Korea, Indonesia, Philippines, India, China, Brazil, Chile, Columbia, Nicaragua, Honduras, and Trinidad. The data for the independent variables will be collected from various international databases, for instance, the Herfindahl-Index, Gallup Religious Index, the Hartford List and World Value Data. In addition to these religious databases, I will also draw on databases from the United Nations and the World Bank about national wealth and income inequality. The empirical findings in this study will provide a new understanding of church growth, globalization, and secularization.

## Regional vs. Central Tendencies in People's Republic of China? Analysis of Chinese Press Discourse on Local and Central Level

Lukasz Blonski, University of Warsaw | [L.blonski@is.uw.edu.pl](mailto:L.blonski@is.uw.edu.pl)

In my PhD dissertation, I will to analyse regional differentiation and People's Republic of China (PRC) public administration working styles, which find their expression in the variety of forms of media discourse. My project is based on the assumption that the key instrument for researching social phenomena in each state is media, both on central and local level. PRC is often regarded as highly centralized state, with a minor autonomy of local ruling committees. However, there is a great differentiation amongst provinces, which is being expressed in various forms of local press discourse. The purpose of the project will be the analysis of mentioned differentiation, allowing to reveal tensions behind the facade of allegedly monocentric system, which results in various (often seemingly contradictory) strategies of state governance, actually being implemented. The research tool, which I will use, is the critical analysis of public discourse – press, in that case- treated as an instrument used for shaping social reality. I believe, that it is worth to handle that issue, because so far, monocentric approach is dominating in China's analysis and it does not take into account the importance of provinces and tensions on various levels, which often yield crucial outcomes for the country. As the outcome of interactions on central and local level, social and economic practises are being shaped and they are worth investigating in order to understand the essence and characteristics of governance in PRC. The most important form of communication and social influence on citizens for the last 50 years has been media, in particular – the press. It is the cheapest, the best spread and the easiest to absorb instrument of communication, therefore its scope of influence has not changed. On the contrary, together with the increase of literature there are more and more

newspapers being established, therefore, the press is an object of my analysis. In order to understand how the social reality is constructed and shaped (what is as well a derivative of accepted model of economy's development and governance style), the critical discourse analysis is essential. 1. Key discursive categories PRC's media, which are to a certain extent subordinated to authorities, are using different discursive figures, by which they are trying to create functional image of reality. These categories are adjusted to the needs of context. Even though, that PRC is a unitary country with centralized political system, provinces can be characterised as having significant scope of freedom in their activities, what is the most visible in their economic performance. In order to understand differentiation that is characteristic for PRC on different levels of governance it is essential to distinguish, describe and analyse these implemented discursive categories. Based on my own preliminary analysis of newspapers, I have noticed a certain way these categories are used. I would like to describe and classify them after "translating and cataloguing" them to certain theories: a) The Stranger, introduced by Georg Simmel; b) Opposition Friend – Enemy, described by Carl Schmitt; c) Scapegoat category, developed by Rene Girard; Depending from the authorities' interests, above categories are used and it influences specific description of certain events by daily newspapers. Therefore, analysing the discourse, I will continuously ask: why is this topic being mentioned here and how it influences the opposition: centre vs. regions? To grasp the relations between the centre and regions, it is vital to proceed with the discourse analysis on both central and local level. At first, I would like to focus on the regional level in three different provinces – taking into consideration local characteristics and

situational context, which determine applied discursive categories. Then, I would like to confront these three different discourses with the narration produced on the central level. On the last stage of analysis I will refer mentioned categories to discursive procedures that can be noticed in the international PRC's press, which content is destined for foreigners. Thanks to it, various strategies of authorities can be interpreted, depending on the social and economic context, as well as indicating social consequences of bringing them into life: Newspapers analysed on the local level: - Chuntian Jibao (Hubei province-ethnically homogenous, with agricultural characteristics); - Zhejiang Ribao (Zhejiang province - one of the wealthiest and the best-developed region, with homogenous ethnicity); - Xinjiang Jingli Bao (Xinjiang-to a great extent settled by Uighurs, Islam is a dominating religion in that region). Newspapers on the central level: - Renmin Ribao – the biggest PRC's newspaper. It is considered to present official Party's worldview. - China Daily-published in English, which target is to present PRC's official narration to foreigners. Newspapers have been chosen in such a way that possibly the largest scope of described categories can be covered, analysing various and much different provinces. The discourse

plays a great role in each of them, but in each case is constructed in a different way. 2.Temporal framework According to Ricoeur discourse is always taking place in the time and at the present, what Benveniste calls "discourse's flicker". In my research I would like to focus on these "flickers". When they occur, turning points in system's functioning occur, which leads to swaps of changes of state's/ provinces' development strategies or just the opposite, to the amplifying of up to now strategies. Because of leaders' change in PRC and the on-going process of economy remodelling, it is justified to assume that in the following years media will exploit many discursive categories. Description and interpretation of these "critical" moments is one of the most important strategies used by authorities to influence society. Analysis of its evolution will enable to indicate, which way PRC will be following in the next years. Communist Party of China is not a monolith, which is governing by presenting cohesive ideological image. The Party, according to a various level of analysis, is using different strategies of governance. Getting to know them is a key for a better understanding of wielding power mechanism in China and researching its influence on lives of regular citizens.

## Who Tells Fortunes to Theatre Companies: The State, Experts or Peers?

Ellen Loots, University of Antwerp | [ellen.loots@ua.ac.be](mailto:ellen.loots@ua.ac.be)

The evaluation of performance is difficult in general. The evaluation of the performance of arts organizations, which have multiple goals and are subject to accountability toward several stakeholders, is even more challenging. In this PhD-dissertation we elicit some demands (apart from consumer/market demand) that arts organizations are confronted with, and we demonstrate how these external queries and/or pressures affect organizational performance in arts. The measurement of performance has been described as one of the thorniest issues in management and organization science (Venkatraman &

Ramanujam, 1986). In the canonical literature performance indicators are being used to study which structures, strategies and environments are (sub)optimal. Mostly financial indicators are being used to indicate the performance of organizations (as ROI). Within society several not profit driven organizations pursue other than financial missions. Their relevance is often being acknowledged, as by a state. Arguments therefore have been advanced, as their public/merit good character, or their ability to generate externalities (a.o. Frey, 2008). Also the arts are recognized to possess social and economic advantages to society.

Since the 1980's states have ceased with providing most of the cultural supply themselves. Instead, organizations at 'arm's length' develop cultural activities, for which they obtain public funding. Most art organizations cannot survive from the market (demand) alone. A state can choose to support these organizations. Applicable to most art forms is the idea that artistic creativity is not as much an act of individual genius as it is the outcome of a collaborative effort by many, as expressed by sociologists with Howard Becker a pacer in the 1970's (Becker, 1974). Several have studied the critical role of a range of actors that are complementary to the artist in the creating and getting art work public (Caves, 2000; Hirsch, 2000; White & White, 1993 [1965]). The interests and values of these actors do not necessarily align. As such, the field of arts or "cultural production" (Bourdieu, 1983; Peterson & Anand, 2004) can be comprehended as one at "a juncture of different societal logics" (Goodrick & Reay, 2011: 406). Hence, the cultural sector has become affected by logics of the market (consumer demand) as well as by that of the professions (Oakes, Townley, & Cooper, 1998) that in arts do not only include artists, but likewise arts managers, public officials, critics and other experts. Besides that, as argued, also the state is strongly involved. All parties would want an audience to meet the art produced, for sure; but the endogenous dynamics navigating each, such as interests, values, power dependencies, and capacity for action (Greenwood and Hinings (1996) do not necessarily align. If performance may be defined as the extent to which predetermined goals are achieved (Chow et al., 1994), one can imagine that the involvement of several stakeholders may lead to a multifaceted bundle of possibly conflicting performance goals. What are the implications for arts organizations (we here scope upon theatre organizations)? On the one hand, arts organizations can be understood as commodity producers that generally attempt to convert all actions into the buying and selling of commodities, or converting an audience to their artistic offering. On the other hand,

relying upon revenue grants for their operations, these organizations to some extent resemble public sector organizations that must be organized in accordance with state logics, as one of meeting particular needs of citizens as well as one of imposed efficiency (a business-like logic of cost-effective operations) (Reay & Hinings, 2009). So these grants have strings attached in that they stipulate an organization how to behave, at least on some dimensions. In the paper that we want to present at the ESA workshop, we study the peer-panelled evaluation system, which has been introduced by central governments to assess the eligibility of arts organizations for support. In the countries under scope, Belgium and the Netherlands, the state formulates the criteria to which an arts organization is subject. They include instances as artistic quality, position and reputation, the pursuit of access maximization (also by social groups as ethnic minorities) and other social goals, as a contribution to social cohesion. The mere evaluation is executed by an external committee consisting of members who are supposed to be more proficient in these qualitative assessments. Our mixed method approach includes content analysis (in line with Kassarian, 1977; Kolbe & Burnett, 1991) and statistical testing. Our major source of information are the judgments elaborated by the panels. Additionally to quantifying the content (recognizing the presence and strength of the criteria, and transforming this into a quantifiable variable), we seek to bring out the meanings of a text from the perspective of its author, which has been labeled 'a critical hermeneutic approach' (Bryman, 2008). Thereto, we have also eye for aspects of text structure which go beyond the subject matter and signal the presence of the authors, involving linguistic elements that help to realize the rational, credible, and affective appeals that contribute to the persuasiveness of a text (Hyland, 1998). More specific we scope upon logic within a text, which is signaled by 'metalinguistic markers of argumentation', as those that express semantic relations between main clauses (but, therefore...). These have been referred to as "logical connectives"

[Hyland, 1998: 226]. In brief (analysis is ongoing), we find that far from all the state's proposed criteria are being applied in the evaluation by the panelists: artistic dimensions are prevalent, social functions appear 'in words' to be taken into account, but show no significant effect on the final evaluation outcome. Some latent criteria materialized during our analysis: whether or not an organization has a future vision and is in constant development (in the Netherlands), and whether one's whereabouts are significant (in Belgium). Further, we find the assessors to expose emotional behavior in these assessments, by invoking trust and

unambiguously using it as a decisive factor in the evaluation. Trust has been described as an emergent state during a process where rational evaluations tend to come short (Mayer, Davis, & Schoorman, 1995). Further, we find that the panels give voice to an economizing government, in composing a divers and complementary landscape of theatre supply, in a way a 'scenarist' would design a setting. We discuss the sensibleness of these latent criteria, advance some hypotheses on probation about their origin and highlight implications for art producers for who state sustenance is a prerequisite.

## **The Aesthetic of Oppression and Power of Scopic Regime Under Modernity and Karma Ideology: Living with Impaired Body in Post- Peasant Society of Thailand**

Prachati Kata, Amsterdam University | [pra\\_gt@hotmail.com](mailto:pra_gt@hotmail.com)

My research is based on ethnographic fieldwork conducted among blind singers and groups of musicians working in the streets of Bangkok, analyzed texts such as available literature, public policy, and law documents relating to disabled people, and interviewed governmental and non-profit organizations. My research is about the life worlds and social experiences of disabled people within the context of blind singers on social transformation era in Thailand are called Post-peasant society. I attempt to examine whether alternate experiences of blindness exist, beyond those represented and reiterated by mainstream media and discourses characteristic of Thai society. I also try to answer how do the blind establish their life-worlds and social experiences through their distinctive sensory modes of perception in their everyday lives that are concurrently shaped by specific social, cultural and political contexts? My research assumes the blind's body to be the existential ground of life as well as the locus of personal resistance, creativity and struggle. I study bodily practices in shaping the life-worlds and social experiences of the blind through dynamics of specific social, cultural and political contexts or politics of everyday

life. I focus on various social discourses and Thai cultural prejudices that stimulate sensory and emotional experiences and expressions for the blind in everyday life. Furthermore, I explore the spaces and forms of dynamic resistance and contestation that emerge and subsist at the margins of cultural and sensory hegemony in the everyday life worlds of the blind. My research will exam life-world experience of blind singers as historic construction of power and knowledge of Thai regime in each era and is also affected from international organizations' ideas and policies. The blind singers live world has developed in accordance with urbanization of a capital city of Bangkok and social transformation in Thailand or 'Post peasant society era'. To illustrate, during golden days when Bangkok was not urbanized, blind singers were free to sing at any street side and in front of any shopping mall. After Bangkok has been later developed its economic growth, it was found that blind singers could not sing easily at street side as they were viewed as beggars. Bangkok urbanization has resulted in emerging of Sunday markets at villages locating on the outskirts of Bangkok to serve nostalgia of migrant workers from other provinces.

Becoming blind singers at Sunday markets is how they get away from surveillance of government officers and city police officer to arrest them. However it turns out that in the present day they are encountering a new set of power which is power of sight or scopic regime, a product from modernity ideology, which acts on their body. My research shows that impaired bodies of blind singers rely on 'the esthetic body' under both the Karma ideology of Theravada Buddhist and modern ideology. The Theravada Buddhist beliefs in merit-making and the Karma ideology does not only make people with impairments confine themselves in order to pay back karma debt, they also turn people with impairments into objects of charity. In another way, the impaired body of a blind singer is in contrast to the assumption of modernism and Industrialisation, which considers the body as

the basic unit of producing citizen status, supported by being a producer or having work. My research argues that on the one hand by walking and singing simultaneously the blind singers break the unique social representation of them, while on the other hand walking enables the blind singers to become independent despite their limited state, by the very act of walking away from the gaze or power of the scopic regime of sighted people. Walking while singing is a tool which challenges both the concept of body under the Karma ideology of Theravada Buddhist, that disabled person must not work at all, and the concept of modern ideology that states that the body needs to work. Walking while singing also breaks the concept of the singular self and stable body to shift impaired body of blind singers like "rhizome" which is ready to assemble and becoming at all times.

## Internal and External Networks in Renewable Energy Research in Portugal

Luís Junqueira, University of Lisbon | [luís.junqueira@ics.ul.pt](mailto:luís.junqueira@ics.ul.pt)

Renewable energies have become an important topic in political, economic and social agendas, as a strategic priority for reducing energy imports by replacing fossil fuel based energy systems with domestic production, and fighting the global warming effect by reducing greenhouse gas emission. Scientific research and technological development on renewable energies has thus become an increasingly relevant field, providing an excellent opportunity to study the various dimensions of science-society relations, particularly knowledge transfer to the industry and dissemination of science to the general public. The aim of this PhD thesis is to understand the processes linking science and society in an area of knowledge production that is part of a central program of transformation of contemporary economies - developing sustainable energy sectors. The Portuguese case provides the opportunity to study these processes in a semi-peripheral scientific context, marked by the research trends in the main production centres of

science and heavily influenced by policy priorities set at the European level. This work is associated with the research project "Socio-technical consensus and controversies about renewables energies" (PTDC/CS-ECS/118877/2010), underway at the Institute of Social Sciences, University of Lisbon. The contemporary literature on the organization of scientific production, of which the description of "Mode 2 - knowledge production" is the most influential example [1], has alerted to the increased porosity of the border between science and other sectors of society. Thus, science-society relations have been a fertile area of study, both as a general trend and in its national [2] and disciplinary variation [3]. Other studies have explored the external relations of science with individual sectors of society. First, in dealing with the political sphere, the development of public policies in areas where scientific advice plays a key role [4,5]. In some of these studies, the use of broader definitions of epistemic community, which are not restricted to the researchers themselves but

include stakeholders and experts involved in the development of public policies based on scientific and technical content, has been particularly useful [6,7]. Secondly, the links between researchers, research institutions and the business sector have been broadly studied, with emphasis on the formation of networks of innovation and technology transfer. [8] Finally, the literature has also focused on the connection to society at large, through the work of scientists as communicators for non-specialist public [9]

**Stage 1: Analysis of Context** During this stage the available national indicators on economics, science, and energy sector will be collected and analyzed. The most important science and innovation policy documentation related to the energy sector will be collected, both at national and European level. It aims to characterize the environment in which the object of study operates, taking into account its various dimensions and its recent political and economic developments in Portugal and in Europe.

**State 2: Internal Networks** This stage consists of the analysis of the renewable energy research community and its scientific production, taking into account the following elements: the networks of researchers in renewable energies and its national and international connections; their scientific production; and the status of this area of research within the institutions. The research will be based on bibliometric data, data bases of renewable energies research projects and document analysis, in order to perform social network analysis. It seeks to reconstruct the development of this area of research, identifying key scientists and research teams and their national and international positioning.

**Stage 3: External networks** This phase aims to analyze science-society relations in renewable energy research. To provide an in-depth perspective on the research, the analysis developed in the previous stage will be used to select key figures in the scientific community, focusing on their experiences in developing relations with the private sector, policy makers and the general public. Other specific data will also be collected and analyzed. The analysis of

science-economy relations will take into account patents developed in renewable energy, the creation of science based start-up companies, with special attention to those formed in technology parks and business incubators in the universities and national and European projects that join academics and business partners. The research on science and politics will survey the presence of researchers in advisory bodies, and the production of technical documents, such as studies and reports on renewable energy. Finally, the study of dissemination to the general public will be supported by media and document analysis, as well as interviews. This PhD research started in September 2012 and is currently at an early stage. The bibliographical research is currently in progress, and some exploratory interviews were carried out in January. By June 2013, the analysis of context will be completed and by August 2013 the data on internal networks will be already collected.

## Situation of Women Selling Sexual Services in Poland in the Perspective of Recognition Theory

Anna Ratecka, Jagiellonian University, Cracow | [anna.ratecka@uj.edu.pl](mailto:anna.ratecka@uj.edu.pl)

In my thesis I will be analysing the situation of women selling sexual services in contemporary Poland. In my project I will focus on the sociological and critical analysis of the ways of problematizing prostitution in Poland and the influence those ways have on the recognition of women selling sexual services in Poland. It is crucial to explore the phenomena of commercial sex in such framework since there has been no deeper analysis of the sex business in Poland. Up to date the Polish academic work on sex work stigmatizes sex workers, pathologises this group and does not investigate the power relations shaping the politics of prostitution in Poland. The theoretical perspective based on the critical theory of justice is the recognition theory. Yet I do not adopt any of the definitions of recognition already formulated, and I am treating "recognition" as a theoretical device which allows me investigating this phenomena without imposing ready-made definitions on the social world. Such approach is also justified by the heterogeneous character of the phenomena of commercial sex and the polarization of views on prostitution among social actors dealing with this issue (such as activists, social workers, feminists). The central question of my project is: How recognition of women selling sexual services is understood in contemporary Poland? In the course of my research I am investigating how rights (which are one of the key dimensions of recognition) of women selling sexual services are defined and respected in Poland. Special focus is put on the legal dimension, practices of state institution who deal with this phenomena (police, social welfare, health services etc) and nongovernmental organizations delivering services for sex workers. Still crucial for my research is the

voice of women selling sexual services and their subjective sense and understanding of recognition. Study of commercial sex poses several difficulties for researchers. The marginalized character of the group and consequently difficulty in accessing respondents requires a long term research allowing for establishing a trustful relationship, a necessary condition for gaining insight into the life of women selling sexual services. Therefore I chose qualitative and anthropological methods as central method for my research. I decided that multi-sited ethnography in nongovernmental organizations providing services for women selling sexual services will be the best method. It enables me to firstly, have insight into the practices of those organizations and secondly, to gain access to sex workers. Therefore since September 2009 I have been working as a volunteer in three organizations: Po-Moc in Katowice, Parasol in Kraków and Foundation Against Human Trafficking La Strada in Warsaw. I have been entrusted in performing a variety of activities while working there: providing outreach services for street sex workers as a streetworker, working in shelter for victims of violence, assisting trafficked persons in court, performing social work and counselling for sex workers, participating in numerous conferences and workshops preformed by members of those organizations, carrying out numerous informal interviews with members of those organizations, developing grant applications for those organizations, analysing documents, archives and pamphlets, networking between organizations etc. Working as a streetworker I have the possibility to carry out participant observation of street sex workers, their clients and pimps. Presently I am in the process of

conducting interviews with sex workers in Krakow (there will be both quantitative questioners and in-depth unstructured interviews) and interviews and FGI with activists from NGOs. Ethnographical research is accompanied by the analysis of the situation of women selling sexual services in context of state institutions which encompasses the socio-legal analysis of legal acts and practice of courts, prosecution and police and the analysis of the practices of state agencies in respect to sex workers. Preliminary outcomes The preliminary outcomes of my research concern mainly the legal dimension of the rights of sex workers and the activity of NGOs assisting women selling sexual services. I am still ahead the interviews with sex workers which would allow for presenting their perspective. One of the key mechanisms of lack of recognition is Polish law. The context in which Polish legal acts put prostitution causes many violations of the rights of women selling sexual services. Prostitution is not illegal in Poland and women selling sexual services are not criminalized. Nonetheless since all activities around prostitution are illegal (deriving profits from prostitution by third persons or facilitating prostitution), sex workers de facto exist in a "grey area" between legal and criminal world. Legal situation contributes to marginalization of sex workers and gives their activity a semi-criminal character. Another dimension of legal discrimination is the fact that sex workers are

not considered victims in the cases against pimps or procurers. Stigmatization of sex workers is mirrored in the sentences and court acts also in the opinions of judges and prosecutors. Additionally the legal system discriminates rape victims what makes the situation of sex workers, who are especially vulnerable for this kind of violence, even more difficult. The non-state organizations assisting persons selling sexual services are very few and not very visible in the public sphere. The framing of prostitution and the definition of recognition of women selling sexual services depends on the profile of the organization. The catholic Po-Moc has an abolitionist perspective, seeing prostitution as violence. Parasol and other outreach organizations act in the harm-reduction frame, delivering extemporary assistance for sex workers, are more rights-oriented however their activity is restricted to grassroots practices. La Strada on the other hand focuses on the assistance for trafficked persons in close collaboration with the state and delivers a variety of services for sex workers but only if they can be identified as victims of trafficking. None of the organizations I researched engages in struggles for recognition of sex workers i.e. legal change or introducing non-discrimination practices in state agencies dealing with this sex workers. Only La Strada engages in the development of legal standards which would be indirectly beneficial for sex workers, however only in the context of sex trafficking.

## Intersection of International Migration, Gender and Sexuality in the Case of Contemporary Turkey

Eda Hatice Farsakoglu, Lund University | [eda.farsakoglu@soc.lu.se](mailto:eda.farsakoglu@soc.lu.se)

My research interests lie at the intersection of international migration, gender and sexuality in the case of contemporary Turkey. Turkey, both as destination and as transit locality, is a significant hub for migrants, refugees and asylum seekers from many different near and neighboring countries. As a part of these multifaceted migratory flows, since the beginning of the 2000's, Turkey has also

experienced a visible and rising amount of refugee status claims on the basis of sexual orientation and gender identity persecution. LGBT refugees from Iran form the most significant part of this type of migratory flow to and through Turkey, which is largely caused by the discriminatory treatment and persecution that they face on the basis of their sexual orientation and/or gender identity in their

country of origin. On the other hand, the geographical and cultural proximity, the short-term visa free regulations between two countries, the existence of a UNHCR office as well as the so-called free environment of the country can be listed as the most important factors for Iranian LGBT refugees in choosing Turkey as a transit area in their search for protection from persecution and in their pursuit of a 'better' life. Turkey is a transitory center for refugee communities due to its 'geographical limitation' to the Geneva Convention and to the 1994 Regulation, meaning that non-European asylum seekers/refugees are ineligible to stay permanently in the country. This leads to a situation whereby, like in the case of all other non-European refugee claimants, the protection of LGBT refugees and prospects for a durable solution mainly falls on UNHCR in Turkey until the time that they may be resettled in a third country in the global North. Based on the recent reform in Turkish Asylum Law; however, non-European asylum-seekers must also apply to Turkey's Ministry of Interior after their arrival to Turkey to be able to stay under asylum-seeker status temporarily and 'legally'. After the registration, refugees are sent to one of the pre-designated "satellite cities" to reside during their 'temporary' stay in the country. These "satellite-cities" are chosen among such cities in Turkey, which are, relatively seen, less metropolitan and more conservative, located inland and relatively far from the European Union border. On the other hand, it is also important to note that the recently increasing flow of LGBT refugees from Iran has induced discernible growth in local and international civil society organizations that provide legal, social, and financial services to these refugees and promote their rights both in Turkey and in the international arena. However, these refugees are still among the most marginalized migrant groups in the country. To date, despite the magnitude and significance of this migration flow, little research has been done on the subject and much of this existing literature is descriptive. By taking these factors into account, this dissertation project seeks to examine the

intersections of international migration, gender and sexuality by focusing on the lived experiences of Iranian (self-identified) gay men and lesbian women, who are seeking asylum, waiting for resettlement as 'recognized' refugees or 'retrying' as 'rejected' asylum seekers in the migratory space of Turkey. Particularly, the project seeks to analyze: 1) how sexuality and gender shape and organize international refugee migration and 2) how the migration experience itself may mark sexual identities, communities, and politics. This necessitates focusing on practices, politics and perceptions of other core actors in the above-mentioned picture in order to gain a greater understanding of the issues that are important to the Iranian queer refugee population in Turkey. For this study, these key actors are UNHCR Turkey and several local and international civil society organizations such as the Turkish LGBT organization and Iranian-origin diasporic queer/human rights organizations. In this sense, the main research questions of this dissertation project may be formulated as following: (1) How is Iranian asylum-seeking mobility to and via Turkey influenced by sexuality? (2) How do Iranian queer refugees experience the processes of exclusion and inclusion as they shift across multiple boundaries and hierarchical axes of difference (in terms of their sexual orientation, class, gender, race/ethnicity, and status in the refugee determination process) in national and transnational contexts? (3) How do they (re-) produce and (re-) negotiate 'queerness' and refugeeeness in the migratory space of Turkey? (4) How do decision-makers deal with Iranian sexual refugee claimants in Turkey? (5) Why and in which ways do local and international organizations engage in the organization of LGBT refugee migration to and via Turkey? To answer these questions, this dissertation delves into queer and feminist theories – particularly of border-crossings, and the literature on citizenship/human rights as well as on international migration and refugee studies. Funded by the Centre for Middle Eastern Studies at Lund University under the larger research project called "Migration and Mobility in the Middle East", this study is

currently based on fieldwork and interviews conducted between December 2011 and January 2013 in Istanbul, Ankara and in three different “satellite” cities of Turkey. The study focuses on ethnographic data and narratives collected through in-depth interviews with 35 Iranian gay men and 8 lesbian women, who create a sense of self and belonging(s) within the conditions of cross-border mobility as well as of asylum seeking while living in Turkey and in the face of emerging notions and practices of the international asylum regime. During the fieldwork, family members, non-/Iranian friends and partners of the informants as well as some other Iranian refugees (single woman, political, transgendered and transsexual) were also interviewed. Additionally, interviews were conducted with experts from UNHCR Turkey as well as from a Turkish LGBT organization, which works with Iranian LGBT refugees in

Turkey. In order to have a better understanding, it has been planned to further the fieldwork by conducting additional interviews with key informants who work for above-mentioned non-governmental Iranian-origin queer/human rights organizations.. Using a multi-sited ethnographic approach and multi-dimensional theoretical platform, I aim to go beyond a descriptive analysis of what the situation of Iranian queer refugees in transit in Turkey looks like, toward a sociological analysis of how international asylum migration, gender and sexuality intersects in the lived experiences of Iranian gay men and lesbian women. In so doing, my work will contribute to the academic debates on cross-border activities of queer refugees and on migrating sexualities as well as to the larger academic knowledge on international migration.

## **Intergenerational Relationship: Changing meaning and impact As the World Ages: Making sense of the Only Increasing European Resource**

**Dragos Lucian D. Ivan**, The National School of Political Studies and Public Administration | [i\\_dragos\\_lucian@yahoo.com](mailto:i_dragos_lucian@yahoo.com)

So what is happening to the European Union? A lot of people have asked this question, but remarkably few asked it about Romania. Romania, just like the EU is under tremendous pressure. It is registering changing trends with powerful effects, such as demographic change, which is widening rapidly. The real sting behind demographic change resides in the elements that have led to it and which ensure future similar trends. The largely unnoticed extension of the new intergenerational relationships in Romania has brought their own contribution to demographic evolution. The above discussion it is not just about demographics, but, it is crucially a social inquiry on “meta demographics” or who gets to make the rules within which demographic transition takes place. From the start, we notice the fact that Romania even in comparison with other ex-communist countries relied remarkably little on social protection from the state. Although the state provided little social security

Romania did not experience population loss before the 1990's. As a consequence we believe this can be explained through the fact that the social security system was based more on intergenerational relationships than on state policies. Such relationships compensated for the lack of direct intervention from the state. Presently, we observe a lack of reconciliation between family life, manifested through intergenerational relationships, and the state. By identifying the nature of the expectations and presuppositions which have constructed such social relations we may understand the way in which they function. More particularly, the concern is to show that there was a difference between the way in which social protection was envisaged and the way in which it functions today. The changing of demography and of society led to a change in intergenerational relationships, no longer able to cope with the new social risks. We assume that the importance of intergenerational

transfers for the well-being of the ageing population in Romania is pivotal in ensuring social stability and economic development. These are some of the research questions: R.Q. 1. : What intergenerational relationships represent for young-adults and for adults? R.Q. 2. : What benefits and what new social risks accrue from a multi-generational families and communities? R.Q. 3 : How can age diversity provide intergenerational mutual benefits and ensure social protection? R.Q. 4.: What are potential best practices and models that can work to engage the different generations in life-long learning and prosperity building in the family and the community? R.Q. 5. : What is the impact on social security and family dynamics of caring for family members? R. Q. 6.: Is young adults behavior towards risk taking and ageism is in any way linked with the existence or absence of an intergenerational relationship of the type young adult-older adult? R. Q. 7: What are the characteristics of effective intergenerational practice in a welfare state? Forming relationships between methodological concerns in Intergenerational Research The sensitive nature of the topic, investigating intergenerational relationships, meant that particular attention was also afforded to ethical processes and protocols. The integration of both quantitative and qualitative methods demonstrated that the biographical, experiential, social and the cultural interwove. Through the mixing of methods, we captured the multilayered face of intergenerational relationships. The methods were chosen selectively so as to augment each other strengths and to counteract the threats to validity. The data triangulation consisted of several mixed research methods that will be briefly discuss in this presentation. By triangulating data obtained through different research methods the result of the research is presented in a more comprehensive analysis of the questions that we tried to answer. 1. Literature review. Various sources of information were reviewed in order to identify and analyze the policy frameworks, strategies and action plans related to Intergenerational relations and family in the context of the EU and Romania. 2. The second stage of the

research consisted in a quantitative study. A. The questionnaire was constructed around topics related to risk-taking (we used a modified version of the YRBS, Youth Risk Behavior Survey), agist attitude (we used a modified version of the Fraboni Scale of ageism), agist behavior (we used a modified version of the ROPE, Relating to Older People Evaluation; Cherry and Palmore, 2008), closeness to adults (10 questions indicating the level of closeness to the adult; we used a four point scale where 1= not at all and 4=a lot); sensation-seeking scale (Zuckerman, 1978). SPSS and Q were used. B. We have access to quantitative data from the World Bank, EUROSTAT, The National Romanian Institute of Statistics that will further support this research. 3. The third stage of the research was build around mixed qualitative methods. This approach can extend the understanding of the interiority or affective experience, daily family practices, intimacy and the external socio-cultural factors. A. The third stage of the research consisted in organizing focus groups. B. The research of family manifested through intergenerational relationships, intimacy and extended family relations needed also a graphic method. To generate graphic data we have used a visual technique called the emotion map. C. The Sociogram was used to complete the qualitative study so as to analyze the interactions within the focus-groups. D. Vignettes and photographs were used in the focus-groups. E. These participants also agreed to complete research diaries. 4. The forth stage of research consisted in in-depth, semi-structured interviews. The data gathered during the qualitative research was imported into NVvivo software (NVivo, version 8) in order for us to perform thematic analysis. The rise of a new generational structure within the Romanian population linked with the proliferation of a new development model has tended to destabilize the societal structure. An increasing number of researchers have debated the negative role that demographic change has upon the social policies of the welfare state. We wish to investigate this situation and propose a way of transforming these weaknesses into strengths through

proper social policies. Through a research into intergenerational relationships the aim is to explore indirectly the dynamic relationships between health and functioning, social networks and participation, and economic position as people plan for, move into and

progress within the family and the society. These relations within the family and the community carry the potential of save guarding a community from over-spending on social and health care and improve the over-all quality of life.

## **Social Cohesion, Integration and Indicators of Immigrants' Active Participation. The Case of Sweden.**

Veronica Riniolo, Università del Sacro Cuore, Milan | [veronica.riniolo@unicatt.it](mailto:veronica.riniolo@unicatt.it)

Social cohesion and integration, as new challenges that European multiethnic societies are facing, are the main topics of my research project. In particular, I assume the perspective of active participation to redefine these terms – social cohesion and integration – in a context characterized by several social changes. The research questions of the present project are:

- European societies are characterized by increasing diversity which poses new conditions for social cohesion: how can European societies maintain social cohesion in multicultural contexts?
- what do 'social cohesion' and 'integration' mean for European institutions as it emerges from official documents and how are they declined in integration policies addressing migrants?
- what indicators are able to measure the level of active participation of immigrants in hosting societies?
- Sweden gets, according to the most recent researches (e.g. Migrant Integration Index III), the highest score in integration policies: is integration effective in this Nordic country? The methodology consists of both qualitative and quantitative social research methods in line with the goals of my research. On the one hand I've developed a field research organized in two phases in Sweden. In the first phase – realized in Stockholm and Malmö between August and October 2012 – I conducted 13 semi-structured interviews to relevant and key actors of Swedish society (institutional actors, equality body representatives, NGOs, migrant associations and so forth) and 4 informal informant interviews with academics and representatives of the Government. In the

second phase of field research – that is planned for April and May 2013 – I will complete the semi-structured interviews also in the light of the results of the first phase. The field research aims at examining in depth integration issues in Sweden through the view of key actors of Swedish society and in order to study the level of immigrants' active participation also with a view to develop specific indicators on this topic, as explained below. On the other hand the quantitative part is based on the analysis of secondary sources: data for active participation indicators are drawn from official statistics (e.g. Eurostat, Statistics Sweden), European Social Survey (ESS), European Value Survey (EVS), Eurobarometer. The renewed emphasis on the classical sociological concepts of social cohesion and integration is the result of changes occurring in our contemporary societies: welfare state crisis (Barberis, Kazepov, 2010), fragmentation, widespread perception of insecurity (Beck, 2000; Bauman, 1999; Castel, 2011), increasing pluralism and multiethnicity (Cesareo, 2000), failing of coincidence among society, culture and territory (Giaccardi, Magatti, 2006), worsening of xenophobia phenomena, new forms of mixofobia (Bauman, 2006) and enduring financial crisis. In the light of the abovementioned social changes, I try to formulate a redefinition of these terms – social cohesion and integration – through the perspective of active participation, as explained later. Since European societies handle increasing diversity, social cohesion and integration are one of the main topics also at

the European level. My research analyses how they are defined in the European context as it emerges from official documents (from European Commission, Council of Europe and so forth) and how they are declined in policies and practices. In EU policy discussions, social cohesion often appears to be a simple catchword generally used without any specific definition and, in spite of this ambiguity, it appears to be one of the main objective to be reached. In this context, integration is assumed as a means of safeguarding social cohesion and a driver for it (European Ministerial Conference on Integration, Zaragoza 2010). In the light of the theoretical sociological perspectives and of the European normative framework, my research addresses a specific and less studied dimension of social cohesion and integration: active participation. Active participation can be considered a new frontier in integration processes and an important area of development: indeed immigrants – as active citizens – can support their integration and enhance their sense of belonging. Moreover 2013 is the European Year of Citizens. Therefore my effort is to measure the level of immigrants' active participation through the elaboration of a set of indicators, part of which are drawn from existing ones and others are new ones. These last ones are also the result of semi-structured and informal interviews conducted in Sweden. Many European documents and meetings underline the centrality of evaluating outcomes of integration policies through the development of core indicators (e.g. Indicators and monitoring of the outcome of integration policies, Malmo 2009). After a conceptual clarification of active participation, I identify its main dimensions (political, civic, cultural/religious, economic ones, sense of belonging and identity) and for each one of these dimensions, I propose a

number of indicators which should allow 1) diachronically comparison within the same social context and 2) comparison among different contexts (e.g. European Member States), even if in this last case many variables should be taken into account. Finally data regarding this set of indicators are collected in relation to Sweden. I chose Sweden as case study because it ranks first in integration policies among 31 countries in Europe and North America (MIPEX III). Nonetheless other reports (e.g. ECRI Report on Sweden 2012) highlight several problems, emerged also during the first phase of my field research. This last one showed the existence of a gap between policies – as they are on paper – and effective integration of immigrants. Indeed, as underlined by many of the interviewees, several “invisible walls” separate native Swedes from migrants and from Swedes with an immigrant background. Moreover field research emphasises the central role of cultural issues: “Swedishness” appears to be not accessible to all citizens. Also discrimination plays a central role in creating barriers to an effective cohesive society. Among the first results, it is worth mentioning the low level of participation of immigrants in Swedish society though Sweden for example is the country with the highest number of migrant associations. To sum up the field research highlighted aspects that I have not taken into account in my research hypothesis. The second phase of field research will deepen these unexplored dimensions. ## Small-Scale Fisheries as Means of Employment Development and Artisanal Communities' Cohesion: the Hellenic Seas Case Study

Eirini Ioanna Vlachopoulou, University of the Aegean | [socd12054@soc.aegean.gr](mailto:socd12054@soc.aegean.gr)

In countries with extensive insular peripheries, the recognition of the importance of the notion of insularity for territorial cohesion and the maritime professions for social cohesion is pivotal for even local development. Approximately 18.8% of the geographical area of Greece is insular, with 154 inhabited islands, the vast majority of which have fish dependent population. Consequently, although the fishing industry contributes only about 0.4% to the GDP, it is pivotal for the socio-economic cohesion of those areas. The artisanal fisheries communities of Greece are facing multiple significant problems. Firstly, they are antagonising with industrialised fishing activity, both local and international. Additionally, illegal fishing practices threaten their income source. Furthermore, almost 80% of the primary catch species are being overexploited by both legal and illegal fisheries. After Greece entered the European Union in 1981, the fisheries sector experienced phenomenal growth, peaking in 1994. Yet since that time, the annual quantity of Greek fisheries landings has been steadily dropping in spite of a rapid evolution of technology available. Nowadays, the combination of EU policies and large-scale catch technologies are increasingly displacing artisanal fishermen, as well as generating competition amongst fishing groups, e.g. professional, artisanal and recreational fishermen, creating thus conflict between the industrial and artisanal fisheries. Research conducted in the Aegean Sea indicates that the EU laws are being disrespected and no management plan has been put in place. Furthermore, the majority of the population is not involved in the control and regulation of the national waters, as the state is highly centralized. As a consequence, the current status quo does not seem to change, even though the quality of life of the artisanal fishermen and their families has been

deteriorating. Multiple researches have shown that social capital plays a major role in the well-being of artisanal fishing communities. As a result, investments in the relationships governing the decision-making process have great potential in adding value to the targeted fisheries by developing sustainable resource management techniques. Increasing social capital in fisheries management affects positively the community income in many ways, both directly and indirectly. More specifically, it increases natural capital through sustainable use of the common resource, increasing thus the income of the fishing households and allowing for more households to enter the market. In the area of Fourni Island, in the Aegean Sea, the fishermen are currently attempting to establish a self regulated Marine Protection Area (MPA) in collaboration with the NGO Archipelagos. Both the collaborating parts believe that a self regulated mechanism is the only way to protect the habitats and the fish stocks of the area from illegal and destructive fishing practices and overcome at the same time the conflict between local economic growth and conservation of the marine life. The establishment of an MPA has the potential to promote the local entrepreneurship and open employment opportunities. By establishing local partnerships and developing social capital, local communities are enabled to subserve their collective interests and attract attention from the national level. The basic principle of the Third Sector, in which local partnerships belong, is not the maximisation of profits; instead, it is based on local growth and development. The Third Sector functions differ significantly from both the public and the private sector as they encompass elements of the two, as well as introducing the idea of volunteering. Most importantly, it is structured upon relations of networking and provides the

interacting parts with the benefits of immediate interplay, creating thus working relationships of trust. It is significant that the Third System enhances local employment and affects private consumption by promoting local produce and services. However, a community cannot achieve the goal of complete self-organisation and self-regulation. Intervention and regulation from the state is necessary, as the state itself should form the supporting pillar for the creation of the Third Sector. Additionally, complete localisation of the production of both material products and services is virtually impossible, in order to reach sustainability. Contribution from various agents, such as the state, multinational enterprises, NGOs and local communities, is pivotal for the planning and realisation of growth policies and investment plans, otherwise there will be obvious underdevelopment of rural areas. This project aims to follow through the establishment of several MPAs in order to evaluate their impact on the illegal and destructive fishing activity in the areas. Possible collaborations between the various communities will be discussed and workshops with the fishermen and other stakeholders will take place. The researcher will then attempt to develop an MPA model to apply on other areas. In the final steps, when an adequate model of an MPA has been developed, local fishermen will be asked to personalise the model according to the needs of their respective communities and the special characteristics of the habitats upon which their

communities rely. Furthermore, the research aims at developing an understanding of the processes which govern participation and community empowerment in isolated insular areas. Given the fact that the European Union has established a planning scheme for the insular areas different from the one for mainland, it is highly likely that different aspects of community capacity development and empowerment will be the main focus as the different external conditions affect insular societies and economies. As an example, transportation costs and communication with the mainland are more expensive and much more difficult in comparison to non-insular areas. As a result, insular community structures may vary from the mainland ones. The project will be based mostly on qualitative research methods. The researcher will conduct semi-structured interviews with the local fishermen and other stakeholders regularly, in order to determine the current state of small-scale fisheries and determine alternative routes of action. Moreover, the researcher will organise workshops with the members of the communities under examination in order to determine their conservation and ecosystem service priorities, as well as the various environmental and social parameters, characteristic of their respective communities. The workshops will also include Public Participation Geographical Information Systems (PP GIS) meetings, during which the participants will be asked to locate their local knowledge on maps.

## **Social Discourse about Nuclear Energy in Hungary - Identification and Analysis of Constructed Parallel Realities**

**Gabor Sarlos**, ELTE University Budapest / PepperR 21 PR | [gabor.sarlos@pepperpr.hu](mailto:gabor.sarlos@pepperpr.hu)

My dissertation research focuses on the discourse analysis of the present and the future of nuclear energy in Hungary, in view of the planned extension of the one single current nuclear power plant. The hypothesis states that as the majority of the Hungarian society has no first hand information on nuclear energy, therefore any relevant social discourse

is based on constructed realities. Discourses themselves also contribute to the creation of social realities. As people lack direct empirical knowledge therefore reality is replaced by a constructed space, created primarily by claimed or true experts and decision makers. In the construction of space media plays a crucial role. Upon the research of the topic

facts play a crucial role. It is the language that bridges the gap between facts and the text, therefore language itself is also an important actor in creating reality and social context. During the process the facts themselves also gain new interpretation and become part of the interpreted reality. "Within the linguistic construction facts are not independent and objective situations, institutions, structures and acts, but rather the objective reality interpreted in the mind, language, speech and text - empiria as a construction (Szabó, 1988, 282). Selective exposure theory (Klapper, 1949) gives a tangible framework for text reality to become fact reality. According to this the receiver regularly selects among the messages. People look for those messages that reinforce their existing opinion and avoid those that are contradictory to this. External information therefore serves internal reinforcement. In fact, selective exposure is realised on three different levels. Selection of sources prioritise points disseminating information. People have a tendency to follow those sources the information from which is not contradictory to their existing beliefs. Selective recognition refers to not noticing other types of information than those that fall into the existing frame of thinking. Finally, selective remembrance refers to forgetting those information that may have contradicted to the prevailing line of thought. The argumentation of Klapper does not extend to the preconditions of selective exposure. According to my hypothesis selective exposure prevails more in complex issues than in simple issues, and it has less validity in topics with personal empiria than in those where various media create representation of the issue. Geographical and chronological distance also presumably increase the probability of selective exposure. Klapper could not take into account that changes in and the effects of technology turn the direction of a prevailing trend. With exponential growth in internet and social media the vision of the global village (McLuhan, 1962, 1964) becomes reality and a growing number and proportion of people can connect into and become part of issues of large geographical distance. Consequently media as

a source of information becomes the source to reinforce our view. This is to reinforce ourselves by avoiding cognitive dissonant situations. The cognitive dissonance reduction theory (Festinger, 1957) clarifies that we intend to avoid the review of a given topic as it would require unproportional energy and time and would create considerable inner tension. Based on the combination of constructing reality and selective exposure theories, highly complex issues lacking personal empiria and forming on various geographical and chronological layers result in the construction of parallel realities. Parallel realities strive to interpret the same facts, they have the construction of reality and the setting up of a valid interpretational framework as its objective. A possible method of analysing constructed realities is through philological analysis of texts. This analysis serves for identification of panels that form the basis of constructing realities. Combination of these panels provide the argumentation for the given constructed reality. Argumentation in complex issues, such as the use of nuclear energy, are not acting against each other but rather parallel to each other. Argumentation in media serves to convince the public however, due to the complexity of the issue, the indifference of the public and the specialities of the related political - economic decision making, winning the public is not really of importance. Argumentation rather serves to reinforce the image of the own competency and weaken the competency image of the other party. Finally, important to note that interpretation agents have a specially high level of responsibility. Framing creates panels and possible relational and attitudinal forms. A number of examples prove that due to the growing distance between science and society, the competence and the responsibility of agents doing the interpretation of science and technology need to be in balance. Underestimating and overestimating risks as well as misinterpreting technological and scientific data can easily have its human, financial and material toll. Examples of 2009 H1N1 flu communication, 2010 Italian earthquake forecast and 2011 Fukushima cunami disaster interpretation prove

the case. As a final remark I would summarise that the social discourse in Hungary about the use and future of nuclear energy is based on constructed realities, where, together with the indifference of the majority of the public, the various actors shape their own interpretation of the situation. Their goal is to position themselves as competent experts who are in the position to influence and make the relevant decisions. Literature Festinger, Leon. (1957). *A Theory of Cognitive Dissonance*. ## Protest and Politics in Turkey, 1971-1985

**Selin Bengi Gümrükçü**, University of Zurich / Izmir University of Economics (Turkey) | [bengigumrukcu@yahoo.co.uk](mailto:bengigumrukcu@yahoo.co.uk)

In the PhD Workshop organized by the European Sociological Association I would like to present two chapters from my dissertation which is work in progress. In my dissertation project I am trying to elaborate the wave of mobilization in Turkey that took place in 1970s. The objective of the study is threefold: its first aim is to further develop the current analysis of the relationship between, on the one hand, political opportunity structures and social movements by reconstructing the cycle of protest. More specifically, I will try to elaborate the effects of regime changes in a general sense on mobilization. Finally, by doing so, I am hoping to have an understanding on how analytical approaches developed in Western societies work in "non-Western" societies, departing from the debates on institutionalization and radicalization. By the late 1960s, students in Turkey, as in many other countries over the world, were demonstrating about their demands on the streets. This was also the starting point of a long wave of collective action that rose and fell from the late 1960s until September 1980; in the meantime the wave was disrupted by another military intervention in March 1971. While the wave started with peaceful left-wing student actions demanding university reform, it soon expanded to other segments of the society, adapting various different ideological

stances. Political violence became an ordinary feature of politics in Turkey, especially from mid-1970s, resulting with a military coup d'état held on September 12, 1980. I believe that working on this phase of mobilization in Turkey is important since what happened in Turkey in 1970s is still an important part of the political agenda in Turkey and frequently becomes a debate topic in news media and press. The reason behind this fact is argued to be the "unscabbed wounds" of these years (Ergüden, 2012). The chapters that I want to present at the PhD workshop are the first two empirical chapters of my dissertation; a chapter on the actors participating in protests in Turkey in 1970s and another chapter on the "repertoire of action" which is "[...] at once a structural and a cultural concept, involving not only what people do when they are engaged in conflict with others but what they know how to do and what others expect them to do" (Tarrow, 1994: 30). Studying the actors and the repertoire of action also leads us to study the radicalization and institutionalization processes which are expected to occur over the course of a cycle of protest (della Porta and Tarrow, 1987; Tarrow 1989; Koopmans 1993; Kriesi et al. 1995). Analyzing the repertoire of action used by various actors in 1970s in Turkey is important also since the actors of those years, both from the right and left wings, today, claim that they

have to make self-criticism with regards to their mobilization and action dynamics, especially with regards to the violent repertoire used in those years. Some of the left-wing organizations, for example, claim that they have "abandoned" the repertoire of action of 1970s and adopted more peaceful ways to protest. For this study, I am employing "protest event analysis" which is used to "systematically map, analyze and interpret the occurrence and properties of large numbers of protests by means of content analysis, using sources such as newspaper reports and police records" (Koopmans and Rucht, 2002: 231). Thus, my unit of analysis is protests that are perhaps the main characteristic of social movements for distinguishing them from institutionalized and established political actors, as Taylor and Dyke (2004: 263) mentions. I am working with a dataset of 5361 protest events that took place in Turkey from

March 1971 until the end of 1985. I collected my own data from the archives of a Turkish daily newspaper *Milliyet* by reviewing all issues published within the mentioned time period, and gathered data by coding every other article I collected which usually reported more than one event. I have already finished the first chapter of my dissertation on actors and I am currently working on the chapter on repertoires of action. I am hoping to finish it by February. Thus, if I am accepted for the PhD Workshop, I will not have any problems in distributing my paper to the other participants. Since I didn't present my results anywhere else before, I believe that participating in the PhD workshop is going to make a great contribution to my work's progress through the valuable feedbacks. My dissertation will be delivered to University of Zurich, Institute of Political Science and my supervisor is Prof. Dr. Hanspeter Kriesi.

## Attitudes towards Parenthood among Lesbians and Gay Men in Great Britain

Robert Pralat, University of Cambridge | [rp422@cam.ac.uk](mailto:rp422@cam.ac.uk)

**SUMMARY** In the context of today's Britain, my project explores the perspectives of lesbian and gay non-parents on having children and their attitudes towards a range of issues related to parenthood, including the various ways of achieving it such as adoption and assisted conception. Although there is now a vast empirical literature about lesbian and gay intimacies and family life, no UK study has thus far addressed how non-heterosexual individuals "of reproductive age" perceive and make sense of the newly available possibilities to pursue parenthood. My project aims to examine the ways in which lesbians and gay men in their late twenties and early thirties approach the opportunities and barriers to procreate. The study's findings will contribute to the understanding of this group's reproductive choices and of the relationship between sexual orientation, gender and parenthood. This research should inform the practice of public services such as adoption agencies and fertility clinics, which

increasingly often work with same-sex couples and non-heterosexual individuals, but sometimes have a limited understanding of their specific circumstances as members of a sexual minority group. **BACKGROUND** Over the past decade, changes in the British law have opened up unprecedented opportunities for non-heterosexual people to become parents. In sum, just ten years since homosexuality ceased to be legally defined as a "pretended family relationship", same-sex couples are now allowed to jointly adopt and it is easier for them to pursue parenthood through assisted conception. The changes in law have been followed or accompanied by a growing visibility of lesbian and gay parenting in the public sphere and an increasing availability of information about it. In the meantime, however, forming relationships that do not lead to procreation and "doing family" that does not involve reproduction have also gained previously unheard-of social acceptance as "alternative lifestyles", especially when it

comes to those who are not expected to have children in the first place, that is, lesbians and gay men. Still, both having and not having children may be challenging for different non-heterosexual people, not least because of prevailing and often contradictory social norms, within sexual minority communities and in society as a whole. Sociological research on lesbian and gay intimacies has thus far focused either on those who have pursued parenthood against all odds or on those who have deliberately rejected it as heteronormative (e.g. Weston 1991; Weeks et al. 2001; Stacey 2011). As such, it has provided invaluable insights into how non-heterosexual people reinvent family life. However, by doing so, it has paid little attention to individuals who can be placed neither into the category of "pioneers" in lesbian and gay parenthood nor into that of "extra-familial", proudly childfree queers. The purpose of my research is to explore the perspectives of a segment of this under-researched "middle" by looking at what is behind non-heterosexual young adults' considerations about whether to have children or not, if they engage in such considerations at all. Lesbians and gay men in their twenties and thirties are uniquely positioned for this empirical inquiry: in Britain, they are the first cohort of openly non-heterosexual people who enter their adulthood and progress through it with "reproductive opportunities" that were unavailable to their predecessors. The novelty and importance of this research extends beyond the British context as many European countries are currently involved in debates about same-sex marriage as well as "parenting rights" of lesbians and gay men. The findings of this project will also contribute to different sociological traditions: lesbian and gay studies and the sociology of sexuality, kinship studies and the sociology of the family, and the study of social attitudes.

**RESEARCH AIMS** The study has three main aims: 1. To investigate how young adult lesbians and gay men in Great Britain make sense of the newly available possibilities to be an openly non-heterosexual parent and what prospective parenthood or childlessness means to them. 2.

To explore how the above group communicate about potential parenthood with their partners, friends and their own parents, and in what contexts the topic of parenthood features in these everyday interactions. 3. To examine what affects individual attitudes towards parenthood, as well as aspirations and expectations about intimate life, and what are the likely facilitators and inhibitors for considering parenthood itself and specific methods of achieving it.

**RESEARCH DESIGN AND METHODOLOGY** The project is a qualitative study based on in-depth semi-structured interviews with lesbian and gay non-parents aged 25-35. Up to 30 interviews will be conducted across Britain. The interview transcripts will be analysed using narrative analysis, focusing both on content (what is said) and on form (how it is said). The early findings will be consulted with a selection of informants using group interviews. In the thesis, the findings will be integrated with secondary empirical evidence and theoretical literature in the area of lesbian and gay parenthood, with additional references to research on attitudes and family values, reproduction and kinship. A post-doctoral research project is intended to use this qualitative research as a foundation to design a large-scale attitudinal survey, which will enable me to explore attitudes towards parenthood in Britain's lesbian and gay population more systematically.

**PROGRESS SO FAR AND NEXT STEPS** I am currently at the early stages of completing my fieldwork, which will finish by the end of summer 2013. This means that, by the time the PhD workshop takes place, I will have had a good grasp of my data as well as some ideas about what I intend to argue in my thesis. Thus, the opportunity to receive feedback that the workshop offers will be very timely. At that stage, it will be most useful for me to refine my empirical approach and theoretical understanding through discussions with other sociologists from different countries. With one more year before submitting my thesis, I will also have enough time to incorporate what I learned at the workshop into the dissertation.

## Parental Background, Intergenerational Educational Mobility and Timing of First Birth

Adriana Duta, University of Southampton | [ad3e11@soton.ac.uk](mailto:ad3e11@soton.ac.uk)

Introduction & brief theoretical background  
Societal changes brought by modernization were hypothesized to be associated with a decrease in the importance of parental background on offspring's educational attainment (Treiman, 1970). Initially, empirical research based on thirteen European countries did not find support for this hypothesis, suggesting persistent inequalities over much of the 20th century (Shavit and Blossfeld, 1993). However, more recent evidence based on cohorts born in the first two-thirds of the 20th century, from eight European countries, suggests a decline in educational inequality between individuals with different social origins (Breen, 2009). Moreover, comparative research on Germany, Sweden and Britain, shows that educational expansion brought an increase in the overall social mobility (Breen, 2010). These combined findings suggest an increase in both relative and absolute intergenerational educational mobility. At the same time, at the aggregate level, the rise in educational enrolment is often used as an argument to explain the delay in childbearing faced by developed societies during the last decades. Recent empirical evidence provides strong support for this argument (Ní Bhrolcháin and Beaujouan, 2012) in Britain and France. Earlier in the 20th century, in response to the changes in fertility in developed societies, Dumont formulated the "social capillarity" hypothesis (Bejin, 1989) or "luggage hypothesis" stating that for people interested to climb the social ladder, having numerous children represents a burden that slow them down. Therefore, the competition between fertility and upward mobility has been considered a key factor in explaining fertility decline during first demographic transition (Dalla Zuanna, 2007). At the individual level, researchers investigated various links between social mobility and fertility. The influence of social mobility on fertility received a great

interest during the mid-20th century (Berent 1952; Blau and Duncan 1967; Hope 1971; Bean and Swicegood 1979; Zimmer 1981; Westoff 1981; Sobel 1985) but the findings were contradictory and much of the debate concentrated on how to measure mobility effects which culminated with Sobel's diagonal mobility models (Sobel, 1985). Therefore, in order to emphasise differences between various methods, researchers replicated each other's work, disregarding the diversity of contexts. Moreover, the datasets were usually limited to men participating in the labour force and women were neglected. Also, since the interest was more on completed fertility and the assessment of social mobility was made based on the occupation later in life, little attention was paid to other time-points in the life course that could be relevant for other fertility dimensions such as timing of first birth. The aim of the current study is to contribute to the understanding of mobility-fertility relationship by investigating the timing of the first birth. In addition, intergenerational educational mobility will be used, and implicitly adopting an earlier assessment of intergenerational mobility. Such an approach can reveal if intergenerational educational inconsistencies are already at play earlier in the life course, before the start of the occupational careers. The research questions to be answered are the following: (1) Does parents' education influence timing of first birth over and above respondent's education? (2) Does intergenerational educational mobility influence timing of first birth over and above parents' education and respondent's education? (3) Is the timing of first birth of mobile individuals more similar to non-mobile individuals in the group of destination or to the non-mobile individuals in the group of origin? (4) How do these vary by gender and cohort groups? Answering these questions will improve our knowledge of how individuals'

lives are connected to the lives of their parents, what is the interplay between ascription-related and achievement-related educational characteristics when it comes to the timing of first birth, and whether intergenerational educational mobility matters for the timing of first birth. Data and empirical approach The data used in this study come from BHPS (British Household Panel Study), a nationally representative random-sample panel survey comprising a total of 9000 households in Britain. Given the outcome variable, timing of first birth, the observation window was limited to reproductive ages only, thus, respondents were observed only within the age interval 16-49, which is a widely used age interval in similar demographic studies. Different variables were gathered from different waves up to the last wave (wave 18/2009). Modelling strategy and preliminary findings The modelling strategy combines diagonal mobility models with discrete-time hazard models, taking advantage of two approaches. First, the major advantage of diagonal models is represented by the assigned weights or salience parameters, accounting for the potentially asymmetrical effects of the origin group relative to the destination group on the response variable (Sobel, 1981, 1985, Breen, 2001, Hendricks et al. 1993). Also, it allows testing exactly whether the mobile's behaviour is closer to the immobile from the destination group or to the immobile of their origin group (de Graaf, 1995). Second, the great asset of discrete-time hazard models is that it treats

fertility as a process, as opposed to a static outcome, and moreover, it accommodates right censoring, namely it incorporates respondents who did not yet have a child or did not have a child at all. Models were run separately for males and females and mobility was interacted with broad cohort groups (1904-1944; 1945-1959; 1960-1970; 1971-1987). Preliminary results indicate that parental education has a significant influence on timing of first birth, independently of respondents' education. The direction of the association is the same as displayed by respondent's education, namely negative in the case of low educated groups compared with the highly educated ones. This can be interpreted as evidence that parental education influences timing of first birth not only via social reproduction but through other unmeasured characteristics of the family of origin. Regarding, intergenerational educational mobility, some first results suggest that these effects are gender and cohort-specific but further research is needed before reporting any detailed results. For this purpose, current work explores: different alternatives to define intergenerational educational mobility (e.g. absolute vs. relative measures) and comparison of diagonal models with other analytical strategies used to model mobility. Also, different starting-times for exposure are examined: date when respondent turns 16 (including enrollment) and time when respondents first left full-time education (post-enrollment).

## How Healthy is Healthy Enough? Making Sense of Pre-implantation Genetic Testing through Reframing the Concept of Health: the Case of Co-Production

Volha Parfenchyk, University of Bologna / University of Torino | [volha.parfenchyk@unibo.it](mailto:volha.parfenchyk@unibo.it)

Pre-implantation genetic diagnosis (PGD), screening (PGS) and tissue typing (PTT), together known as pre-implantation genetic testing (PGT), represent one of the most developed, implemented and demanded techniques used by geneticists nowadays. The recourse to PGD and PGS by future parents is explained by their socially, medically and

morally justified intentions to have a healthy child, free from any pathology, from which they might suffer or to which they might be predisposed. PTT, in its turn, is used to assist future parents to have a child who could be a tissue-matched donor for his or her older sibling suffering from a blood disorder which is best treatable by stem cells from cord blood of

a tissue-matched relative. Nevertheless, such a wide spread of PGT throughout the world attracted attention of scholars criticizing it in terms of potential negative consequences it might engender, most importantly, "geneticization" of society or discrete eugenics (Lippman, 1991; Dreyfuss, Nelkin, 1992; King, 1999; Kass, 2002, Fukuyama, 2002). This article attempts to demonstrate that, albeit PGT indeed lacks an unequivocal and universal legal and moral foundation and significantly transforms our self-understanding and self-perception, geneticization, eugenics or other ramifications of wide social acceptance and diffusion of PGD should not be taken for granted. Rather, as it will argue, introduced within different contexts and specific country-bound social, legal and institutional settings, by different means and actors, PGT has been framed in distinct ways and has been conferred different legal and moral standing. On the other hand, having sprouted in different grounds, it has reasserted old and inviolable, reconceptualized unfit and has given rise to new social concepts, moral and legal rights, duties and values in varying ways. In other words, the article will demonstrate mutual constitution (or co-production) of the regulatory framework for PGT, normative knowledge involved in its diffusion, social and institutional landscape accommodating it, and its proper development. The article itself, and its methodology, in particular, are inspired by Science and Technology Studies (STS) interdisciplinary program. It emphasizes the mutually constitutive process of the formation of natural and social orders (Jasanoff, 2004; Latour, 1987; Tallachini, 2012) and rejects both technoscientific and social reductionism. In addition, it draws on ideas of "somatization of individuality" implying an increased self-understanding of individuals in bodily terms due to the progress in medical sciences as well as the concept of "biopolitics" whereby life itself is put in the center of political order (Rose, 2006; Foucault, 1979; Novas, Rose, 2000). Methodologically, the article will have the form of a comparative research paper with two countries being the object of analytical gaze: Italy and Spain. Despite close legal

tradition, cultural and religious background, the two countries have completely different approaches towards the treatment of PGT: while Italy completely outlawed it, Spain took one of the most permissive approaches in Europe where near one third of the European PGT is performed. Having these differences in regulatory regimes for PGT in mind, the article will thereby explore geneticization dynamics, if any, in these two European countries and local legal, social and institutional practices and discourses meditating it. As a comparative axis, the article will build on and evolve around the concept of health as it is understood, interpreted and (re)constructed by actors engaged in the constitution of the technoscientific design for PGT in these two countries. Inasmuch as "health" is a multi-dimensional phenomenon, the article will account for its framings within different contexts and will build on its following "ontological dissections": health both as a subjective individual and collective good; health as an intangible social and moral value and a capital able to produce "biovalue"; and health as the antipode of pathology distinguished from the latter by a constantly shifting, context-dependent and constructed boundary. Thereby the article will attempt to demonstrate how two countries' different legal, social and institutional environments correlate with innovation in PGT and, through producing different framings of health, promote or, on the contrary, foreclose its development. To answer the research question the article will primarily engage with the comparative analysis of medical, legal and policy narratives which are induced by the controversial development and deployment of PGD in two target countries and which simultaneously involve the constitution and reinterpretation of the concept of health. They include the relevant articles from medical journals, interviews, policy documents of expert committees and regulatory bodies, lawyers' commentaries, legislation, case law produced starting from mid-1980 till present being the period of the most active development of PGT. I will introduce this discourse with an account for changes in

institutional configurations taking place in the clinical, legal and political environment of Spain and Italy within these timeframes. As a result, the article will try to render explicit the network of the relationships between

“practices, discourses and things” and will thereby demonstrate their mutual shaping as well as the way such entanglements determine the actual place of PGT in these two European countries.
