# Crisis, Critique and Change: Which crisis? Whose critique? What changes?

---

Making the world safe for banks is only one side of the coin. The present crisis is multi-faceted. It is not just a debt crisis, but also a political and a social crisis.

The debate calls for a sociological turn. Crises do not follow natural laws, they increase the viability of agency. A country is more than an economy. What are the historical roots and social effects of the financialization of the economy? Does the crisis of the Eurozone threaten the political existence of the EU? Will it push aside the social agenda of the European Union? The crisis is likely to produce seismic shifts in and for European sociology — across its substantive areas of research — from ageing, biographies, and families, all the way to religion, science, theory, and women's studies.

What is behind the crisis? Two processes are at work. First, there has been a systemic transformation driving the shift from public to private power and adapting the state to capital markets. But, second, there has been a proliferation of vital types of critique too. Think about the deepening of existing divides. The Occupy protests, the social uprising in the Arab Spring, the unrest in Greece, and discontent in other European countries are all indicative of a reconfiguration of the link between crisis and critique.

To foster an understanding of the crisis and the dual role of critique in interpreting and affecting changes, European sociology has to rely on (1) rediscovering its subject matter as being more than a technical order, as a social world that has a history and a place, and (2) a broad-ranging debate on consequent conceptual and empirical questions. Toward both ends, we cordially invite sociologists and social scientists from around the globe to join us in Turin — to attend the conference, to participate actively in the discussions, and to contribute their own work.

## The President's Welcome

---

This time there is no question about what sociologists mean when they talk about crisis. The European integration project has never since its inception been as close to a crash as it is now. Nor do we need much justification for the view that what now is needed is critique, a social science that offers views on how modern societies work, stick together and change. This is what our 11<sup>th</sup> conference in Turin will do.

This major fair of sociology with over 2500 registered participants will not only demonstrate the intellectual capacity of our scientific community to address the survival issues of our contemporary societies but also offer solutions, new perspectives and radical views beyond political rhetoric that often confuses interests more than mobilises them into

meaningful action for change.

The European Sociological Association is 22 years old —an adult. It has grown from a handful of enthusiasts into one of the largest sociological platforms and scientific networks in the world. Coming of age is a crisis, too. This conference is a turning point in the life course of our Association. The Local Organizing Committee led by Tiziana Nazio, and the Executive Committee, especially its Conference Programme Committee led by Frank Welz, have worked very hard to set up a conference programme that maximises the visibility of every session while offering space for a record number of presentations. The Research Networks have been involved even more than before in building the scientific content of the conference. Coming of age is symbolised by a new ESA journal starting to appear next year, the *European Journal of Political and Cultural Sociology*, published by Routledge. In administrative terms, the General Assembly as well as the Councils of the Research Networks and member National Associations will have a more important role in shaping the future of the ESA, and with that the future of sociology in Europe.

I am sure that we will all be very busy here in Turin, offering our best ideas to colleagues, returning home with a rich intellectual experience. Enjoy the city, too!

**Pekka Sulkunen - President of the European Sociological Association**

## PS - Plenary Sessions

---

17:30 – 20:00 / Wednesday 28 / Piazza Castello Teatro Regio

### 01PS / Opening Plenary

Chair(s): Frank Welz

Frank Welz (Austria) teaches sociology at Innsbruck University. He has received his PhD from Freiburg University and his Habilitation (2nd dissertation) from Innsbruck. He publishes on social theory, the sociology of law and the history of the social sciences. From 2007 to 2011 he coordinated the ESA RN 29 on social theory. He organized the network's mid-term conference Social theory and the sociological discipline(s) at Innsbruck and coordinated further meetings in Lisbon, Prague and Geneva. He currently serves as chair of the programme committee of ESA's 11th Conference (to be held in Turin this coming August) and as ESA's Vice-President. From 2009 to 2011 he further served as Vice-President of the Austrian Sociological Association.

**Mary Mellor** (Northumbria University), *Finance in Crisis - the neglected Critique of Money*

Mary Mellor will argue that while the crisis in finance, banking and the economy generally has been widely addressed, the impact on money and the money system has been largely ignored. She will argue that the last decades of the twentieth century saw a privatisation of money as the money supply became subsumed by the supply of credit. As a result communities became increasingly indebted leading to an inevitable crisis. Her work has explored the history and nature of money in order to expose the fallacies of conventional economics and its myths about the origins of money and banking. She sees the flawed analysis of money, banking and finance as leading to the economically and socially destructive policy of austerity. Mary Mellor makes the case that sociologists rather than economists should be at the forefront of the analysis of money and the consequences of its privatisation and abuse. However, due to the hegemonic dominance of neoliberal economic theory and practice, money has not been seen in its historical context as a social and public phenomenon. The public rescue of the privatised money system shows clearly that it is the private money system that is dependent upon public money rather than the public being dependent upon entrepreneurial 'money-makers'. The neglected critique of the nature and role of money opens up a fundamental analysis of modern economies and provides the opportunity to reclaim money as a social and public resource that could be used to enable sufficiency, that is, ecological sustainability with equality of provisioning.

**Biography:** Mary Mellor is Emeritus Professor in Sociology at Northumbria University in the UK. Her research throughout her academic career has been devoted to the nature and possibility of social change. She began with research on cooperatives and then broadened this to the theory and practice of cooperative development, community development, community finance, social investment and financial exclusion. She has been actively involved in policy development including the use of participatory research and other techniques oriented to social change. Another major theme in her research is gender, environment and sustainability and she has published many books and papers on ecofeminism. The last decade saw her develop research on the nature of money arising from her feminist concern about paid versus unpaid work and environmental concern about ecological destruction being excluded from economic accounting. This grew into a major critique of the economics of money and a sociological analysis of the theory and practice of money and banking. Her present work is aimed at developing a sufficiency approach to socio-economic provisioning. She currently speaks widely on the critique of both austerity and growth and the necessity of sufficiency. Her books include *The Future of*

## The Politics of Money and Feminism and Ecology.

**Stephan Lessenich** (University of Jena), *What's Critique Got to Do with It? Crisis, Sociology and Change*

In recent years, and driven by the ongoing European socio-economic crisis, critique has found its way back into academic sociology throughout Europe. At the same time, the dualism between what is being called "critical sociology", on the one hand, and "sociology of critique", on the other, has become ever more prominent. While one party to this paradigmatic division credits sociology with a professional responsibility to evaluate the social acceptability of late-capitalist society, the other one claims that sociologists should restrict themselves to observing people in their everyday practice of social critique. The presentation argues for a critical sociology of critique or, more properly, for a sociology of social critique without consequences (or of a critical practice without practical consequences). To be sure, "ordinary people" who take a critical stance on the society they live in and the structural constraints they are subjected to, typically tend to contribute themselves to the reproduction (or even to the production) of those "systemic forces" they eventually criticize. From the perspective of critical sociology, they thus are actively involved in inhibiting the very social change that a sociology of critique shows them to be advocating for. While not making the world a better place in itself, bringing together both sociological perspectives might at least help explaining why it is so hard to change the world at all.

**Biography:** Professor for Comparative Sociology and Co-Director (together with Klaus Dörre and Hartmut Rosa) of the Research Group on "Post-Growth Societies" at the Department of Sociology of the Friedrich-Schiller-University in Jena (Germany). President of the German Sociological Association (DGS/GSA). Main areas of interest: theory of the welfare state, comparative welfare state research, political sociology, sociology of ageing, social theory of modern capitalism. Most recent book publications: *Theorien des Sozialstaats zur Einführung* (2012), *Der Vergleich in den Sozialwissenschaften. Staat – Kapitalismus – Demokratie* (2012, co-edited with Jens Borchert). Most recent English publication: *The many meanings of „active ageing“: confronting public discourse with older people's stories*, *Recherches Sociologiques et Anthropologiques* 44-1 (2013, co-authored with Silke van Dyk, Tina Denninger and Anna Richter).

18:00 – 20:00 / Saturday 31 / CLE Aula magna

## 02PS / Closing Plenary

Chair(s): Tiziana Nazio

Tiziana Nazio (Italy) is Lecturer in Sociology at the University of Turin and Affiliate Fellow at Collegio Carlo Alberto (Italy). She was research scientist at the Universities of Bielefeld (Germany), at the Centre d'Estudis Demogràfics and at the University Pompeu Fabra in Barcelona (Spain), and at the Sociology Department at the University of Oxford and Nuffield College (UK), contributing to several EU projects and leading a ESRC one. Her research focuses on gender inequalities and life course transitions in a comparative perspective. Among her publications "Cohabitation, Family and Society", Routledge.

**Rajeev Bhargava** (Jawaharlal Nehru University), *The Crisis of European Secularism: A non-western Perspective*

Secularism has a precarious life in non-western societies. What is not clear is that the cluster of conceptions that we call secularism which have not traveled well to other societies have all developed in the west. Even less acknowledged is the fact that such conceptions and the secular states they underpin are coming under strain even in Europe where only some time back they were believed to be firmly entrenched and secure. Why so? It is true that substantive secularization of European societies has also brought in its wake extensive secularization of European states. Regardless of their religious affiliation, citizens have a large basket of civil and political rights unheard of in religion-centered states, past or present. But still, two problems remain. First, migration from former colonies and an intensified globalization has thrown together on western public spaces pre-Christian faiths, Christianity, and Islam. The cumulative result is unprecedented religious diversity, the weakening of the public monopoly of single religions, and the generation of mutual suspicion, distrust, hostility, and conflict. This was dramatically by the issue of mosques and minarets in Switzerland and Italy, the cartoon controversy in Denmark, highlighted by the headscarf issue in France and the murder of filmmaker Theo Van Gogh in the Netherlands shortly after the release of his controversial film about Islamic culture.<sup>4</sup> Second, despite substantial secularization, the formal establishment of the dominant religion does little to bolster better intercommunity relations or reduce religious discrimination in several European states. As it turns out, the widespread belief of a secular European public sphere is a myth. The religious biases of European states have become increasingly visible with deepening religious diversity. European states have continued to privilege Christianity in one form or another. They have publicly funded religious schools, maintained real estates of churches and clerical salaries, facilitated the control by churches of cemeteries, and trained the clergy. In short, there has been no impartiality within the domain of religion, and despite formal equality, this continues to have a far-reaching impact on the rest of society.<sup>5</sup> To repeat, the crisis of secular states in Europe is due in part because the secular humanist ethos endorsed by many citizens is not fully shared, particularly by those who have newly acquired citizenship. Any further secularization along secular humanist lines is not likely to resolve the crisis of European secular states. As it turns out, the widespread belief of a secular European public sphere is a myth. The religious biases of European states have become increasingly visible with deepening religious diversity. European states have continued to privilege Christianity in one form or another. They have publicly funded religious schools, maintained real estates of churches and clerical salaries, facilitated the control by churches of cemeteries, and trained the clergy. In short, there has been no impartiality within the domain of religion, and despite formal equality, this continues to have a far-reaching impact on the rest of society.<sup>5</sup> To repeat, the crisis of secular states in Europe is due in part because the secular humanist ethos endorsed by many citizens is not fully shared, particularly by those who have newly acquired citizenship. Any further secularization along secular humanist lines is not likely to resolve the crisis of European secular states. Also, many of these states have formally or informally established religion, and establishment of a single religion, even of the weaker variety, is part of the problem not the solution. What, in the face of this imbroglio, are European

states to do? This paper will elucidate the nature of the crisis and reflect on what Europe needs to do to overcome it.

**Biography:** Rajeev Bhargava is currently, Director, CSDS. He has been a Professor at the Centre for Political Studies, Jawaharlal Nehru University, New Delhi, and between 2001 and 2005 was Head, Department of Political Science, University of Delhi. Bhargava did his BA in economics from the University of Delhi, and MPhil and DPhil from Oxford University. He has been a Fellow at Harvard University, University of Bristol, Institute of Advanced Studies, Jerusalem, Wissenschaftskolleg, Berlin, and the Institute for Human Sciences, Vienna. He has also been Distinguished Resident Scholar, Institute for Religion, Culture and Public Life, Columbia University, and Asia Chair at Sciences Po, Paris.

Bhargava's publications include *Individualism in Social Science* (1992), *What is Political Theory and Why Do We Need It?* (2010), and *The Promise of India's Secular Democracy* (2010). His edited works are *Secularism and Its Critics* (1998) and *Politics and Ethics of the Indian Constitution* (2008). His work on secularism and methodological individualism is internationally acclaimed. Bhargava is on the advisory board of several national and international institutions, and was a consultant for the UNDP report on cultural liberty.

**Chiara Saraceno** (Collegio Carlo Alberto), *Understanding the Crisis in order to assess Alternative Pathways for Change*

There is more than one crisis going on in Europe, although the front place taken by the financial one in public discourse and in national and EU policies risks overshadowing the other ones, thus also reducing the space for a constructive, not only destructive change. This risk is particularly strong with regard to the welfare state, although not to the same degree in all countries depending on their past history and institutional framework. These cross country differences, furthermore, which in part overlap with different positionings in the EU and world economy and with the de facto power relations within the EU as they developed through the financial crisis, are increasingly becoming themselves one of the reasons of the EU crisis. The "non debtor countries" feel that the solidarity with the "debtor" ones may be too costly for them and their welfare states. After a synthetic overview of the different crises affecting the national welfare states and the European social model and of the risks of an exclusive financial approach, I will discuss whether they also present opportunities for change in the direction of greater efficacy and equity, at what conditions.

**Biography:** PhD in Philosophy, until October 2008 she was first associate professor at the University of Trento and then full professor of sociology at the University of Turin. From October 2006 until July 2011, she was Research Professor at the Wissenschaftszentrum Berlin für Sozialforschung with the task of developing research projects in the area of Demographic Development, Social Change and Social Capital. Retired, she now lives in Turin, where she is honorary fellow at the Collegio Carlo Alberto, a research institute linked to the University.

Her research topics concern comparative family, gender and intergenerational arrangements, comparative social policies, social inequalities and poverty. Among her recent volumes, *Coppie e famiglie. Non è questione di natura*, il Mulino 2012; *Families and Family policies*, (edited, with J. Lewis, A. Leira), Edward Elgar, 2012; *Conciliare famiglia e lavoro* (with Manuela Naldini), il Mulino 2011; (ed.) *Families, ageing and social policies*, Edward Elgar 2008; *Handbook of Quality of Life in the Enlarged European Union*, Routledge 2007 (edited with J. Alber and T. Fahey)

## SPS – Semi Plenary Sessions

---

09:00 – 10:30 / Thursday 29 / CLE A1

### 01SPS / Activating Citizenship in Times of Crisis

Chair(s): Virginie Giraudon

Virginie Guiraudon is Research Director at the National Center for Scientific Research (CNRS) posted at Sciences Po Paris Centre for European Studies. A recipient of several other prestigious prizes, such as the Descartes-Huygens prize, and most recently the ECPR Mattei Dogan prize in political sociology, Professor Guiraudon has published widely on European public policies, citizenship, immigration and multiculturalism in Europe. Among her professional engagements, Virginie Guiraudon was a co-founder of the political sociology research network of the European Sociological Association, and she is a member of the Executive Committee for the Council for European Studies. Virginie Guiraudon holds a PhD in Government from Harvard University. She has been a Marie Curie professor at the EUI (Italy) and visiting professor at UCLA (USA), Doshisha University (Japan), UNISA (South Africa) and the CEPC (Madrid). She recently coedited *Realignments of Citizenship* with Rainer Bauböck (2010) and *Sociology of the European Union* with Adrian Favell in 2011.

**Juan Diez Medrano** (Universidad Carlos III de Madrid), *Activating Citizenship in Times of Crisis*

Not available

**Michèle Lamont** (Harvard University), *Social Resilience in the neo-liberal Age: Lessons from Stigmatized Groups in Brazil, Israel and the United States*

Neo liberalism is raising new challenges for social resilience. The spread of market fundamentalism and the privatization of risk have been accompanied by the diffusion of narrow scripts for defining social worth that are centered on self-reliance and individual mobility. Yet, more inclusive bases for cultural citizenship are needed as social recognition is an important contributor to social resilience. Drawing on a collective research program on "Successful Societies," I discuss cultural and institutional structures that sustain such social resilience. I also analyze modes of resilience through a close examination of responses to stigmatization by middle class and working class African Americans, Black Brazilians and three groups in Israel (Arab Israelis, Ethiopian Jews and Mizrahis). The analysis connects contrasted patterns for negotiating belonging and difference to collective imaginaries and national institutional contexts. I draw broader implications concerning the role of ordinary citizens in the transformation of group boundaries, highlighting the changing dynamics between symbolic and social boundaries. I conclude with a discussion of inequality in Europe, where the dualisation of the economy and increased immigration raise new challenges in a time of recession.

**Biography:** Michèle Lamont is a Professor of Sociology at Harvard University. She is a fellow of the Canadian Institute for Advanced Research and has co-directed its research program on Successful Societies since 2002. Her scholarly interests center on shared concepts of worth and excellence, and their impact on hierarchies in a number of social domains. She is the author of *Money, Morals and Manners: The Culture of the French and the American Upper-Middle Class* (1992), *The Dignity of Working Men: Morality and the Boundaries of Race, Class and Immigration* (2000) and *How Professors Think: Inside the Curious World of Academic Judgment* (2009). Publications from collective projects

include: *Rethinking Comparative Cultural Sociology: Repertoires of Evaluation in France in the United States* (with Laurent Thévenot, 2000), *Successful Societies: How Institutions and Culture Affect Health* (with Peter Hall, 2009), and *Social Resilience in the Neoliberal Era* (with Peter A. Hall, 2013). Recent papers include "Toward a Comparative Sociology of Valuation and Evaluation," (*Annual Review of Sociology*, 2012) and "Why Social Relations Matter for Politics and Successful Societies." (with Peter Hall, *Annual Review of Political Science*, 2013).

09:00 – 10:30 / Thursday 29 / CLE A2

## 02SPS / Critical Political Economy of Media and Communications in Times of Capitalist Crisis

Chair(s): Peter Golding

Peter Golding is Pro Vice Chancellor (Research and Innovation) at Northumbria University (Newcastle, UK). Before going to Northumbria in 2010 Peter was Professor of Sociology at Loughborough University. From 1990-2006 he was also the Head of the Department of Social Sciences there, and from 2006-2009 Pro-Vice-Chancellor (Research). He was a member of the UK Research Assessment Exercise panel for his field in 2001 and 2008, a member of the UK Expert Advisory Group for the 2014 equivalent for which he is chair of the communications, media and cultural studies sub-panel. He founded the European Sociological Association Media Research Network and is now its Hon Chair. Peter was Co-Chair of the European Science Foundation Programme 'Changing Media, Changing Europe' and founder Chair of the UK subject association for his field from 1993-1999, since when he has been Hon. Sec. of its successor body, the Media, Communication and Cultural Studies Association. He is an editor of the European Journal of Communication. Professor Golding has been a Visiting Professor at universities in Switzerland, New Zealand, Japan, Estonia, and Brazil and has lectured and taught in over 20 countries. His research interests are in media sociology generally, journalism, media political economy, social inequality, international communications, new media, and media constructs of public and social policy. His books include *The Mass Media; Making The News; Images of Welfare: Press and Public Attitudes to Poverty; Excluding the Poor; Communicating Politics: Mass Communications and the Political Process; The Politics of the Urban Crisis; Taxation and Representation: The Media, Political Communication and the Poll Tax; The Political Economy of the Mass Media; Cultural Studies in Question; Beyond Cultural Imperialism, Researching Communications: a practical guide to methods in media and cultural analysis; European Culture and the Media; Digital Dynamics: Engagements and Disconnections*

**Bob D Jessop** (Lancaster University), *Critical Political Economy of Media and Communications in Times of Capitalist Crisis*

This contribution defines crises as objectively overdetermined, subjectively indeterminate events, conjunctures, or processes in which a given set of previously reproducible social relations can no longer be reproduced. They may be accidental or rooted in inherent crisis-tendencies of these social relations; they may be crises within this set of social relations (to be 'repaired' through appropriate crisis-management routines) or of these relations (associated with crises of crisis-management, requiring more fundamental changes to restore 'business as usual' or move beyond it). Crises can be moments of profound disorientation, leading to rival construals, not all of which adequately reflect the objective nature of the crisis. Hegemonic or dominant construals shape crisis-responses and the likely forms of subsequent crises. After sketching a cultural political economy approach for addressing these general issues, my contribution illustrates it from the North Atlantic Financial Crisis and the Eurozone crisis. Topics explored include: the specificity and periodization of the crises, the mediatization of crisis construals and the importance of power relations in crisis responses, technologies of crisis-manage-

ment, the factors behind the capacity to transform a crisis of finance-dominated accumulation into a fisco-financial crisis and sovereign debt crisis, and the strengthening of neo-liberalism through the dominant processes of crisis-management.

**Biography:** Bob Jessop (b. 1946) is Distinguished Professor of Sociology at Lancaster University, UK. He is a state theorist, critical political economist, and social theorist and has published widely on these issues as well as welfare state restructuring and critical governance studies. He is reaching the end of a 3-year Professorial Fellowship on the Cultural Political Economy of Crises of Crisis-Management in relation to the North Atlantic Financial Crisis. His recent work proposes a creative and original synthesis of critical semiotic analysis and critical political economy. Key books include: *The Capitalist State* (1982), *State Theory* (1990), *The Future of the Capitalist State* (2002), and *State Power* (2007). With Ngai-Ling Sum, he has also published *Beyond the Regulation Approach* (2006), and *Towards Cultural Political Economy* (2013).

**Graham Murdock** (Loughborough University), *Crisis and Critique: Reconstructing Political Economy*

The key role played by digitalisation in the reorganisation of economic life at every level, from institutional organisation and processes to everyday experience and action, has shifted the analysis of communication from the margins to the centre of current debates on the transformation of capitalism. This places scholars of communication under an obligation to contribute to debates on the nature of this transformation and the possibilities for alternative trajectories of change. The current economic crisis of capitalism has severely dented the credibility of mainstream market economics and left the way open for a revival of interest in traditions of inquiry rooted in critical political economy. In present circumstance however, we cannot simply return to these traditions. We need to reconstruct them. This paper explores three major currents in present debates around this process of reconstruction, looking respectively at notions of; moral economies, cultural economies, and social economies. I want firstly to examine the revival of interest in the role of moral philosophy and definitions of moral economies in grounding critique. Secondly, I want to explore the debates generated by the cultural turn in political economy and the economic turn in cultural studies. I will illustrate the first using recent work on financialisation and the second through a critical reading of the rhetorical promotion of 'creative industries' as drivers of future growth and innovation, focussing on the key elisions and silences of this framework. Thirdly, I want to examine the renewed attention to vernacular social economies grounded in relations of sharing and reciprocity I want to conclude by suggesting a way we can combine these three dimensions of reconstruction into a model that offers both a foundation for critique and a basis for constructing alternatives.

**Biography:** Graham Murdock is Professor of Culture and Economy at Loughborough University. His research explores the relations between culture, communications, power and inequality through a distinctive critical political economy. His writings have been widely anthologised, cited, and incorporated into university curricula around the world and been translated into nineteen languages. He has held the Leerstoel (Teaching Chair) at the Free University of Brussels, the Bonnier Chair at Stockholm University, and been a visiting professor at the universities of : Auckland, Bergen, California at San Diego, Mexico City, Helsinki and Fudan. His recent publications include as co-editor; *Digital Dynamics: Engagements and Disconnections* (Hampton Press 2010); *The Idea of the Public Sphere* (Rowman and Littlefield 2010); and *The Handbook of Political Economy of Communication* (Wiley-Blackwell 2011). His latest book, *Money Talks*, co-edited with Jostein Gripsrud, will be published by Intellect. His current work explores the struggle to establish a cultural common on the internet.

09:00 – 10:30 / Thursday 29 / CLE A3

## 03SPS / The Crisis and the Consumer Society

Chair(s): Csaba Szalo

Csaba Szalo, coordinates the Social Theory Research Network (RN29), ESA. Works as a Chair at the Department of Sociology, Masaryk University, Brno, Czech Republic. His sociological interest focuses on cultural processes of identity formation. His last book is on theories of transnational migration.

**Pekka Sulkunen** (University of Helsinki), *The Crisis and the Consumers Society*

The boom of private mass consumption started in the 1960s accelerated enormously in the 1980s in the industrialized world, coinciding with the liberalisation of the international financial market that now is in a global crisis. The consumer society seemed to have profound ramifications not only in people's everyday lives but also in culture, ideology and values, political engagements, and the principles of justification. In many countries the consumer boom led to growing debts that created new forms of poverty and hit seriously the middle class, and therefore engendered structural changes in the labour market as well as in the consumer market, not to forget the welfare state, which in itself is an instrument, producer and mediator of consumption. Growing inequalities are also a consequence of these developments. Structural economic factors of global scale directly affect consumption in Europe, but on the other hand consumption is not to be ignored as one of the interfaces where people experience the current crisis. Not only economic sociology and sociology of consumption should again meet; also theoretical reflection is needed in this area, for example for understanding what is money, and with that what is the state, and what are the principles of justification related to consumption. These are classical themes in sociology, and there is a great need to come back to these issues soon in our field.

**Biography:** Professor of sociology, University of Helsinki, Fellow at the Helsinki Collegium for Advanced Studies 2011-2014. President 2011-2013 and Member of the Executive Board 2007-2011 of the European Sociological Association, and a long-time President of The Westermarck Society. His research interests are addictions, public sector, power and social theory. Publications include *The European New Middle Class* (1992), *Constructing the New Consumer Society* (eds.) 1997, *The Saturated Society* 2009, *Introduction to Sociology* (several editions in Finnish and Swedish since 1987), and a number of other books in Finnish, Swedish, English and French. He has a total of 230 scientific publications, including 34 refereed articles in English. Member of the Finnish Academy of Science and Letters, the Jellinek Memorial Award 1997 for research in cultural and policy studies on alcohol.

**Sokratis Koniordos** (University of Crete), *The Crisis and Consumerism Loop*

The ongoing crisis unfolded within a specific socio-cultural context of life-style expectations imbricated with economic dimensions and meanings. Given this, in my presentation I intend to delve on the complexity of the issue of the crisis, its nature and breadth, and the role of consumption in it. Then, I provide a brief overlook with respect to the several European societies that have directly experienced the repercussions of the economic crisis, and the dominant attempts to counter it. In this respect, an emphasis is laid on Greece as that society which has taken the full bearing of the crisis. Following this I look how, after the eruption of the crisis, shifts in consumption uneven as they are, can reflect earlier patternings. Also, uneven reductions in consumption (reflected on both private and the more socialized welfare-type consumption) appear to reinforce existing social inequalities and identities, and perpetuate them at both the symbolic and material levels. At the same time deep imbalances are observed between such developments and the political aims of EU unification. A last part concerns the theoretical status of the crisis: how to integrate the crisis and the problems it raises for everyday living and social stratification to neoliberalism, financialization, and to certain varieties of capitalism rather than others.

**Biography:** Sokratis Koniordos, is Professor (elect) at the Dept. of Sociology, University of Crete, Greece; currently Director of its Graduate Studies Programme. Main research areas: economic sociology, and sociology of work. He has published 15 volumes and several research articles. Key publications include: *Towards a Sociology of Artisans: Continuities and Discontinuities in Comparative Perspective*, Aldershot: Ashgate (2001); *Networks, Trust and Social Capital: Theoretical and empirical investigations from Europe*, Aldershot: Ashgate (2005); *Conflict, Citizenship and Civil Society*, (with Baert, P., Procacci, G. and Ruzza, C. (eds), London: Routledge (2010); *The Handbook of European Sociology*, (with Kyrtsis, A-A. (eds), New York and London, Routledge (forthcoming-2013).

09:00 – 10:30 / Thursday 29 / CLE A4

## 04SPS / Young people and the economic crisis: no winners, all losers?

Chair(s): Tracy Shildrick

Tracy Shildrick is a Professor of Sociology at Teesside University. She has researched extensively on young people's transitions and she leads the ESA Youth and Generation research network.

**Andy Furlong** (University of Glasgow), *Young People, the Economic Crisis and its Aftermath: Temporary Episode or New Reality?*

Across Europe young people are having to negotiate labour markets in which traditional opportunities have all but collapsed. In many places youth unemployment is at record levels, while increasing numbers are underemployed or endure precarious working conditions. Discourses that focus on the idea of a lost generation promote the view that current conditions represent a temporary aberration: those affected by contemporary conditions may be scarred by the experience, but the cohort following close behind them have every reason to expect to see a return to the sort of opportunities that prevailed pre-recession. The alternative analysis put forward in this paper is that the post recession labour market will offer little in the way of 'traditional' opportunities and securities with the future being marked by precarity, as is the case in Japan's post-bubble economy. This paper examines the likely contours of the post-recession economy and, drawing on the work of Guy Standing, explores the implications for youth.

**Biography:** Andy Furlong is Professor of Social Inclusion and Education in the School of Education at the University of Glasgow, Scotland. Andy is an educational sociologist with a longstanding specialism in the study of youth and a strong interest in the reproduction of inequalities and in processes of social change. He completed his PhD on youth transitions and unemployment in the 1980s and has since worked on a wide variety of youth orientated research projects. Since 1998 Andy has been editor-in-chief of the *Journal of Youth Studies*, one of the leading journals in the field. He has produced several books on youth, notably *Young People and Social Change* (with Fred Cartmel, 1997, 2nd edition 2007, Open University Press), *Higher Education and Social Justice* (with Fred Cartmel, 2009, Open University Press) and the *Handbook of Youth and Young Adulthood* (Routledge): his work has been translated into twelve languages. Andy has held visiting positions at Deakin University, the University of Melbourne and Monash University, and has held an Invitation Fellowship from the Japan Society for the Promotion of Science. He is an Academician of the UK Academy of Social Sciences and has recently been awarded a Doctor of Letters by the University of Leicester.

**Metka Kuhar** (University of Ljubljana), *The Effects of the Current Global Recession and Economic Crisis*

The effects of the current global recession and economic crisis are very diverse in the individual European countries or at least in the clusters of countries (e.g. with distinct welfare regimes) and at the same time it affects young people and their future prospects very differently. For sure there are also similarities: the extension of education as a response to the lack of employment has become a global phenomenon. Young people try to reduce some of the systemic uncertainty by continuing with education; this behaviour rather points to fewer options in the labour market than to better ones in education and the foundations of the European idea of 'knowledge society' have been eroding. Further common general outcome of this development is the tightening of relationships between parents and children and the extended dependence of children upon the family of origin. In some countries, such as Slovenia, (classical) youth transitions to adulthood can even be characterised as almost frozen. On the one hand, this socio-economic context invites protests. Youth protests occurring in many European countries in recent years are not isolated or accidental phenomena. Certain parallels can be drawn between the essential factors of the student movements of the 1960s which were part of the world-wide student revolt that severely unsettled local environments and the world and those of the contemporary (youth) protests. Researchers of the student movements of the 1960s have attributed their massive scale and universal nature to a subconscious response of the young to imminent social change. The student movements are thought to have been the first to herald the beginnings of post-industrial society, the information or "knowledge" society, promoting innovation, information, and communication instead of mass industrial production. Four decades later, numerous social contradictions are equally evident. The promises about constant growth and progress, made by neo-liberal economists and politicians, have obviously proved to be flawed, and the effects are particularly hard on the generation that is on the threshold of economic and social maturity. The young are entering a future that seems to be worse than the past and present of their parents. As demonstrated by the recent political protests in Slovenia, mostly the educated, predominantly working precarious population (over 30 years) is activated – the one that has awakened from the (safe) moratorium sleep and dreams. But there is a lot of evidence that for a certain group of youngsters current present and the future still hold promises, not just threats – especially for those who are in front of the technological developments. For example, open source design and 3-D printing are seen as driving the next big wave in the global economy. But for majority of young people (rather overprotected than those lacking family's economic and social capitals) it still seems that the adolescent characteristics, such as imagination, innovation, creativity, activity, the need to overcome or change the world, boldness, rebelliousness are rather drowning in a flood of marketing- and media-oriented culture and entertainment offered by the contemporary technological possibilities. A (growing?) group of proactive and innovative young people, and current (protest) eruptions of dissatisfaction do not hide a more common paralysis of young people, rocked in private niches, and their alienation from the public sphere. And even the present youth protests are less enthusiastic, more defeatist than the massive and lasting students revolts in '68. Not only a clearer image of changes is needed, but especially strong belief that such change is possible.

**Biography:** Associate Professor Metka Kuhar is teaching professor and researcher at the University of Ljubljana, Faculty of Social Sciences. Her areas of research expertise are transitions to adulthood and family life, youth participation and interpersonal communication. She has been cooperating with the Council of Europe in the field of youth studies and youth policies and has been involved in many domestic and certain international research projects on young people (e.g. research for the Youth Office of the Republic of Slovenia Youth 2000; postdoctoral research financed by the Slovenian Research Agency Communicative and authority relationships between parents and young people, 2007-2008; Up2youth – Youth as an actor of social change under the Sixth European Framework, 2006-2009; bilateral project with Serbia Young people as actors of social change – comparison between Slovenia and Serbia, 2010-11).

09:00 – 10:30 / Friday 30 / CLE A1

## 05SPS / Italian - Torino Session

Chair(s): Sonia Bertolini

Sonia Bertolini is Assistant Professor at the University of Turin, Department of Cultures, Politics and Society, where she teaches Sociology of Work. Her research interests concern youth labour market entry; female labour market participation; labour market flexibilisation and transition to adult life; Sociology of Professions. Among her publications we remember: Blossfeld H.P., Hofäcker D., Bertolini S (eds) "Youth on Globalised Labour Market. Rising Uncertainty and its Effects on Early Employment and Family lives in Europe", Barbara Budrich Publishers, Opladen (Germany) and Farmington Hills (USA), 2011.

**Francesco Ramella** (University of Torino), *The «Enterprise of Innovation» in Hard Times. Lessons from the Italian Case*

The crisis started in 2007 has had a negative impact on the innovative activities of economic systems. A study conducted by the European Commission shows that the share of Italian firms which reduced their investment in innovation, between 2008 and 2009, was higher than the European average (26% against 23%). Having said that, we know very little about the strategies used to cope with the crisis by Italian entrepreneurs, especially by the more dynamic ones of them in the high and medium-high tech sectors. Have the Italian innovative firms adopted a pro-active behaviour or taken a more defensive attitude? And in any cases, what kind of results have they obtained? Finally, the social embeddedness (strong ties + weak ties) and the territorial embeddedness (short-range networks + long-range networks) of the firms have influenced their strategies and performances during the crisis? The presentation analyses the effects of the crisis through a sample of over 400 Italian innovative firms with European patents (EPO-Firms). These firms were studied for the first time in 2010 and then a second time in the last months of 2012 (using a CAWI method). The research, therefore, is a panel-survey: a longitudinal study carried out on the same firms at different times. This analysis has two main goals: 1) to describe the EPO-Firms' innovative strategies during the present crisis and their effects; 2) to explore the influence of some firms characteristics on their performance.

**Biography:** Francesco Ramella is an Associate Professor of Economic Sociology at the University of Turin (Italy). He is also Editor in chief of the scientific journal "Stato e Mercato" and member of the Editorial Boards of "Environment and Planning C: Government and Policy" and "South European Society & Politics". He has carried out research on innovation, local development and political cultures.

Among his recent books: *Sociologia dell'innovazione economica* (*Sociology of Economic Innovation*, Il Mulino 2013); *Governare città. Beni collettivi e politiche metropolitane* (*Governing Cities. Collective Goods and Metropolitan Policies*, Donzelli-Meridiana Libri, 2012 with F. Piselli and L. Burroni); *Imprese e territori dell'alta tecnologia in Italia* (*High Tech Firms and Territories in Italy*, Il Mulino 2010, with C. Trigilia); *Invenzioni e inventori in Italia* (*Inventions and Inventors in Italy*, Il Mulino 2010, with C. Trigilia).

In English he has recently published: *Society, Politics and Territory in Italy: What is Left?* (in "South European Society & Politics", 2010); *Negotiating Local Development: The Italian Experience of "Territorial Pacts"* (in "Environment and Planning C: Government and Policy", 2010); *Political Economy* (in G. Ritzer and Mike Ryan, eds, *The Concise Blackwell Encyclopedia of Sociology*, Blackwell, 2010).

**Roberta Sassatelli** (University of Milan), *The Ordinarity of Crisis. Exploring Consumption, Gender and Class*

The financial and economic crisis has impacted greatly on middle-class families. Looking into consumer practices and how they get mobilized to face the crisis is a powerful tool to consider how the economic crisis is perceived and faced in everyday life. The paper considers how gender and class dynamics are implicated and get realized through a transformation of consumer practices and attitudes. The re-organization of the patterns of consumption tell us something not only of the survival strategies of middle-class families, but also of their creativity and resourcefulness. Exploring their strategies and attitudes we get a sense of how gender arrangements and class distinctions are getting transformed or otherwise and how the realm of everyday life is linked to wider social structures. In particular, deploying the notion of the “glass cliff” and “futurework”, the paper explores how emotional and moral codes are intertwined with economic strategies and how the crisis becomes a social fact in the ordinariness of social relations.

**Biography:** Roberta Sassatelli teaches sociology and consumer studies at the Università Statale of Milan (Italy). Her research focus on the historical development of consumer societies and the theory of consumer action, with a particular interest for the contested development of the notion of the consumer as against notions such as citizen or person. She has done research on the commercialization of sport and in particular on the way the fitness movement has been variously appropriated as a leisure pursuit. She also works in the sociology of the body and has just completed work on the representation of the feminine body in the media. She has conducted research in the domain of critical consumption and sustainability both in Italy and the UK, and she is currently completing work on how the financial crisis is impacting on middle-class consumption in Italy. Among her recent books in English you find *Consumer Culture. History, Theory and Politics*, Sage, 2007 and *Fitness Culture. Gyms and the Commercialization of Fun and Discipline*, Palgrave, 2010.

09:00 – 10:30 / Friday 30 / CLE A2

## 06SPS / European Culture and Religion in Crisis

Chair(s): Anne-Sophie Lamine.

Anne-Sophie Lamine is Professor of Sociology at Strasbourg University. Her research focuses on religious plurality and on belief. She is currently finishing a book on dimensions of belief. From 2007-2011, she led an ANR research project on religions and conflicts in France. She is the editor of *Quand le religieux fait conflit. Désaccords, négociations ou arrangements* (PUR, 2013).

**Renate Siebert** (Interdepartmental Centre for Women's Studies - Università della Calabria ), *Which kind of Mediterranean do we want? Changing European Cultures and Postcolonial Perspectives*

In this paper, taking the analysis of European collective memories marked by the experience of modern totalitarian regimes as a starting point, I apply the notion of "cultural trauma" (generally deployed for the analysis of the Holocaust experience) to investigate the articulation between the colonial and the postcolonial periods in European history. The central hypothesis brought about by this paper suggests that this situation is connected to the partial or total lack of re-elaboration of the European colonial past. The absence, in Europe, of a collective elaboration of the colonial responsibilities facilitated the emergence of new forms of postcolonial racism, that is, the progressive racialization of labor and migration. The social construction of races is produced through the interception of a number of variables, which includes gender, class, sexuality, religion, national identity and citizenship. And racism is in turn interrelated with other forms of discrimination such as sexism, xenophobia, religious intolerance, economic exploitation and legal discrimination. Such an analytical perspective is today at the center of the so-called "postcolonial studies": while keeping a critical distance from this paradigm, I believe that today a thorough discussion about Europe and the Mediterranean space cannot be developed without seriously taking this perspective into account.

**Biography:** After completing her studies at the Institut für Sozialforschung in Frankfurt under the supervision of Th.W.Adorno, and after working there as research assistant for one year, Renate Siebert taught sociology in a number of Italian universities until retirement. She spent most of her career at the University of Calabria, where she is still a member of the Interdepartmental Centre for Women's Studies. She has published widely, both nationally and internationally, on racism and ethnic prejudice, on gender and generational differences in Southern Italy, on mafia and violence, and on the role of women in mafia. Over the past few years, she has rediscovered her early career interest in the work of Frantz Fanon, an author she has worked on when still in Frankfurt, and has investigated the application of his postcolonial approach to the study of the Italian and Mediterranean contexts.

Her main publications are:

*Voci e silenzi postcoloniali.* Frantz Fanon, Assia Djebbar e noi, Carocci, Rome, 2012.

*Il razzismo. Il riconoscimento negato,* Carocci, Rome, 2003.

*Le donne, la mafia, Il Saggiatore,* Milan, 1994 (*Secrets of life and death. Women and the Mafia,* Verso, London and New York, 1996; *Im Schatten der Mafia. Die Frauen, die Mafia und das Gesetz.* Hamburger Edition, Hamburg, 1997).

*"E' femmina, però è bella" - Tre generazioni di donne al Sud,* Rosenberg & Sellier, Turin, 1991.

**Valérie Amiraux** (University of Montreal), *European Culture and Religion in Crisis*

Over the last thirty years, the visible “otherness” embodied by the Muslim population in the European Union has sparked transnational movements of moral panic, driven mainly by the fear of the collapse of “national cohesion.” Islamic women’s attire is presented as an increasingly delicate problem, an issue at the center of legal battles and the subject of virulent political controversies in various countries. What does the omnipresence, not to say ubiquity, of public discussions about religious otherness reveal about the current political crisis? This talk is more specifically concerned with the “public texture” of the discussions surrounding the recent ban on the wearing of the full veil in public spaces. Occurrences of local frictions, tensions, and more recently, episodes of outright violence, have emerged in different contexts, regardless of the national conventions with regards to immigration politics, the relationship between church and state and the wider construction of national identity. They are part of a racializing configuration about which I wish to develop three arguments. The first hinges on the unintelligibility of certain manifestations of belief in secularized European public spaces. The second develops an analysis of the racialization of the indicators of religious belonging, which most specifically affect the Muslim population of the EU. The third finally proposes some speculative readings of the public experience of the different crises arising from the visibility of Islamic religious signs and the capital attached to their visibility: what does this fetishism surrounding religious attire tell us about the European political adventure?

**Biography:** Valérie Amiraux is a full professor in the department of Sociology at the Université de Montréal and Canada Research Chair in Religious Pluralism and Ethnicity (CRSH, 2007-2017). Before moving to Montreal, she held several different positions in Europe, including at the Centre Marc Bloch (Berlin), the Robert Schuman Centre for Advanced Studies (Florence, Italy) and at CNRS-CURAPP (currently on leave from her CNRS position). Her research, initially focused on Muslim minorities in Europe, is today more concerned with the role of the legal arena in regulating conflicts produced by the experience of religious pluralism and on the ethnography of the relationship between pluralism and radicalization within an urban context.

Among her recent publications:

*Racialization and the Challenge of Muslim Integration in the European Union*, in S. Akbarzadeh (ed.) *Handbook of Political Islam*, London, Routledge, 2012, pp. 205-224;

*Religion and political sociology*, E. Amenta, K. Nash, A. Scott (eds.), *The Wiley-Blackwell Companion of Political Sociology*, West Sussex, Wiley-Blackwell, 2012, pp. 336-346;

*État de la littérature. L’islam et les musulmans en Europe: un objet périphérique converti en incontournable des sciences sociales*, *Critique internationale* 2012, 3, n° 56, pp. 141-157.

09:00 – 10:30 / Friday 30 / CLE A3

## 07SPS / Patients, Citizens and Professionals in Europe: Modern Health Care Societies in Crisis

Chair(s): Ruth McDonald.

Ruth McDonald will be Professor of Health Policy and Management at Warwick Business School from September 2013. She has also held posts at various UK Universities and she spent one year as a Harkness Fellow at the University of California, Berkeley. Her research concerns change and resistance in health care organisations. Much of this in recent years has concerned financial incentives for quality in the UK and beyond and she has published widely on the subject.

**Ivy Lynn Bourgeault** (University of Ottawa ), *What Economic Crises Reveal of the Relationship Between Professions, Public and the State*

The financial crises experienced across a wide range of world economies has had (and will continue to have) profound effects on public health care systems, shifting traditional relations between different health professions, the public/patients and the state. Specifically, the state, under increasing pressure to constrain public health care spending, will be intent on limiting public access to health care services and increasing the responsabilisation of citizens for their health, as well as shifting the tasks of professions from higher to lower cost providers thereby shifting traditional professional boundaries. Health professional organizations have tended to respond to these strategies in a typical guild-like manner, bolstered by the policy legacies reflective of pre-crises contexts. The sociology of professions literature has tools to help explain these changing dynamics, but nevertheless require important modifications to address these post crisis strategies and concerns. The gendered nature of the inputs and implications of state cost containment strategies for both the public/patients and professions in particular requires further consideration. The shift in tasks from higher (largely male) to lower cost (largely female) professionals, for example, embodies traditional thinking about the value and skill of women's and men's work.

**Biography:** Ivy Lynn Bourgeault, PhD, is a Professor in the Institute of Population Health at the University of Ottawa and the Canadian Institutes of Health Research Chair (CIHR) in Health Human Resource Policy, jointly funded by Health Canada. She is also the Scientific Director of three research networks, the Population Health Improvement Research Network, the Ontario Health Human Resource Research Network (both with funding from the Ontario Ministry of Health and Long-term Care), and the CIHR and Health Canada funded Canadian Health Human Resources Network. She has garnered an international reputation for her research on health professions, health policy and women's health. She has published widely in national and international journals and edited volumes on midwifery and maternity care, primary care delivery, advanced practice nursing, qualitative health research methods, and on complementary and alternative medicine. She has been a consultant to various provincial Ministries of Health in Canada, to Health Canada and to the World Health Organization. Dr. Bourgeault sits on the international editorial board of *Sociology of Health* and is the founder of the Canadian Society of the Sociology of Health.

**Mike Dent** (Staffordshire University), *Choosing and Trusting in Health Care: Patients, Citizens and Professionals*

There is, in Habermas' famous phrase, a 'legitimation crises' in health care. While current policies are increasingly based on rational (evidenced-based) choice and self-management sociological evidence suggests that patients still prefer to take a 'leap of faith' and trust the doctor. The new 'responsibilised' governance arrangements intended to improve the confidence people can have in their health care services does not appear to have always been successful. Yet, taking responsibility for one's health (based on good information) has become a watchword within health policy with the pro-market neo-liberals strongly inclined to this view too. Their commitment more from an ideological standpoint than a scientific one. All of which is a potent mix in face of the economic and financial crises currently affecting Europe. A challenge that has led to an imperative to continue reforming health services and reconfigure the relations between citizens, patients and professionals in the organisation and delivery of health care services. It is against this backdrop I will set out how we might better understand citizen and patient involvement in health care - and how this varies across Europe. I will distinguish between the dialogic, consumerist and participative logics ('voice', 'choice' and 'co-production') and examine their potential to change the relations between professional and patient.

**Biography:** Mike Dent is Professor of Health Care Organisation at Staffordshire University. He has published extensively on comparative studies of the medical and nursing professions across Europe, as well as on the subjects of new public management, governance and e-health. In recent years he has extended his interest to the comparative study of patient and public involvement in health care within Europe. He has written or edited (with others) a number of books on these topics including the following: *Leadership in the Public Sector: promises and pitfalls* (Routledge 2012), *Questioning the New Public Management* (Ashgate 2004), *Remodelling Hospitals and Health Professions in Europe: Medicine Nursing and the State* (Palgrave 2003), *Managing Professional Identities: knowledge, performativity and the 'new' professional* (Routledge 2002).

He currently chairs the User Voice working group within the European COST Action IS0903: *Enhancing the role of medicine in the management of European health systems - implications for control, innovation and user voice*

09:00 – 10:30 / Friday 30 / CLE A4

## 08SPS / The Eurozone Crisis and Social Impacts

Chair(s): Laura Horn.

Laura Horn is Associate Professor at the Department of Society and Globalisation, Roskilde University (Denmark). Her research is on the political economy of European integration, with particular focus on economic governance and the role of (organised) labour. She is part of the coordinating team of the Critical Political Economy research network (RN06 ESA).

**Maria Kousis** (University of Crete), *Economic Crisis, Troika, and Protest Campaigns in Greece and Southern Europe*

The presentation will focus on national protest campaigns against Troika (EU, IMF, ECB) Memoranda and Austerity policies that followed the recent global financial crisis, in Greece and other deeply affected Southern European states – i.e. Ireland, Spain and Portugal. Using multiple online news sources (including Reuters, Guardian, BBC, and CNN) the dataset involves large protest events (LPEs) comprising the campaigns, which voice national level justice claims resisting sweeping structural changes. These LPEs engage broad, cross-class coalitions involving large numbers of groups and the general public, targeting power-holders within and beyond national borders (e.g. parliament, banks, EU offices). Although LPEs are mostly based in the capitals of each country, they are accompanied by parallel synchronized protests in cities and towns across the nation with the same claims, or with the participation of citizens from other cities. Sparked by the recent crisis, the LPEs are primarily combinations of demonstration-marches, general national strikes and/or public space (squares/streets) protests. The discussion will center on how these campaigns developed in the past few years and on the implications of their claims concerning the impacts of the unprecedented troika/austerity laws and measures, which include job cuts, dramatic wage and pension decreases, tax increases, privatization of public enterprises and education, as well as loss of sovereignty and democratic decline.

**Biography:** Maria Kousis is Professor of Sociology (Development & the Environment), and Vice Director of the MSc in Bioethics at the University of Crete. Her research activities include coordinating the EC DGXII project "Grassroots Environmental Action & Sustainable Development in the Southern European Union" and participating as partner in projects under EC's Environment and Climate Research Programme, the 6th EU Framework Programme for Research and Technology (STREP), and EuroMed Heritage II. She has co-edited: *Contested Mediterranean Spaces* (with T. Selwyn and D. Clark, Berghahn Books, 2011), *Economic and Political Contention in Comparative Perspective* (with C. Tilly Paradigm Publishers, 2005), *Contentious Politics and Social Change* (with C. Tilly, special issue of Theory and Society, 2004), and *Environmental Politics in Southern Europe: Actors, Institutions and Discourses in a Europeanizing Society* (with K. Eder, Kluwer, 2001). With interests in environmental and contentious politics, as well as sustainability and social change, she has published articles in journals including *Mobilization*, *Environmental Politics*, *American Behavioral Scientist*, *Annals of Tourism Research*, *Theory and Society*, *South European Society & Politics*, and *Sociologia Ruralis*.

**Vicente Navarro** (Johns Hopkins School of Public Health/Pompeu Fabra University Barcelona), *The Eurozone Crisis and Social Impacts*

Analyze the political context of the current economic and political crisis and its consequence on the social wellbeing of populations.

**Biography:** Vicenç Navarro was born in Barcelona, Spain. He received his MD from the University of Barcelona, and left Spain for political reasons due to his active participation in the Spanish anti-fascist underground. He studied Political Economy at the London School of Economics, as well as Health Administration at Edinburgh University. He received his PhD in Public Policy from the Johns Hopkins University. He is Professor of Health and Social Policy at the Johns Hopkins University and is Editor-in-Chief of the *International Journal of Health Services*.

In Spain, he has been an Extraordinary Professor of Economics in the Complutense University of Madrid, a Professor of Economics at the Barcelona University and a Professor of Political and Social Sciences at the Pompeu Fabra University, where he directs the Public Policy Program jointly sponsored by the Pompeu Fabra University and the Johns Hopkins University. He is also the director of the Observatorio Social de España.

09:00 – 10:30 / Saturday 31 / CLE A1

## 09SPS / Arts, Immigrant Integration and Social Cohesion in the Global Crisis

Chair(s): Elisabeth Scheibelhofer

Dr. Elisabeth Scheibelhofer is an assistant professor at the University of Vienna (Department of Sociology) and since September 2011 Chair of the first Board Team of the Research Network „Sociology of Migration“ within ESA. Her focus in research and teaching is on migration, mobility and transnational social spaces as well as on qualitative theories and research methods in social sciences. Most recently, she was invited to lecture about "The consequences of a space-sensible approach to the study of migration and mobility" at the 13th international conference "Migration and Urbanity" in Basel.

**Marco Martiniello** (University of Liège), *Immigrant and Ethnic Minorities Incorporation in popular music - Immigrant Incorporation through popular music: a trans-local European comparison*

The academic literature on immigrant integration and incorporation is huge both in Europe and in America. However, there two important problems in that literature: the weakness of transatlantic academic dialogue and the relative neglect of some topics and issues, for example the relationship between the arts and the integration of migrants and their offspring at the city level. This paper precisely examines the relevance of popular music in the theoretical debates about immigrant integration and diversity in migration and post-migration cities. It could so by relating to three domains, which taken together constitute the framework of the paper: local culture, social relations and local politics. At the cultural level, the aim is to examine how migrants and ethnic minorities' musical productions inspired by their experience of migration and/or discrimination change and enrich local cultures through processes such as "cultural métissage", fusion and invention. At the social level, the paper explores how popular music can become a means of communication and dialogue between different groups to build some form of shared local citizenship. At the political level, the relations between popular music, collective identities and the forms of the social and political mobilisation in multicultural cities need more careful investigation (Martiniello and Lafleur, 2008; Mattern, 1998). First, we need to better understand how musical expressions play a role in the negotiation and the assertion of various conceptions of the local (ethnic, transethnic, etc.) identity. Second, how do musical expressions serve the protest against and denunciation of the local social and political order but also the expression of a support for the established local order and for its mystified values? This paper addresses these issues in a trans-local perspective by studying neighbourhoods in European cities. The choice to focus on neighbourhoods as units of analysis is justified by the fact that integration and incorporation take place primarily at the local level, below the national level, the regional level and even the city level.

Biography: Marco Martiniello (1960), BA in Sociology, University of Liège; PhD in Political Science, European University Institute Florence (Italy) is Research Director at the Belgian National Fund for Scientific Research (FRS-FNRS). He teaches Sociology and Politics at the University of Liège. He also teaches at the College of Europe (Natolin, Poland). He is the director of the Center for Ethnic and Migration Studies (CEDEM) at the University of Liège.

He was visiting scholar or visiting professor in different universities: Columbia University, New York University, Cornell University, University of Pittsburgh, University of Malmö (Sweden), Sciences Po Paris, University of Warwick (UK), University of Queensland (Brisbane, Australia), University of Kwazulu Natal (Durban, South Africa), European University Institute (Florence, Italy), etc.

He is also a member of the executive board of the European Research Network IMISCOE (International Migration and Social Cohesion in Europe) and President of the Research Committee n°31 Sociology of Migration (International Sociological Association). He is the author, editor or co-editor of numerous articles, book chapters, reports and books on migration, ethnicity, racism, multiculturalism and citizenship in the European Union and in Belgium with a transatlantic comparative perspective. *They include Citizenship in European Cities* (Ashgate, 2004), *Migration between States and Markets* (Ashgate 2004), *The Transnational Political Participation of Immigrants. A Transatlantic Perspective* (Routledge 2009), *Selected Studies in International Migration and Immigrant Incorporation* (co-edited with Jan Rath, Amsterdam University Press, 2010), *La démocratie multiculturelle* (Presses de Sc Po, 2011), *An Introduction to International Migration Studies. European Perspectives* (Amsterdam, Amsterdam University Press, 2012) (with Jan Rath)

**Margarida Marques** (NOVA University of Lisbon), *Migrants' Popular Arts and the City. Popular culture, institutions and globalization*

In many cities, strolling around the streets is as much a lesson of history as it is an experience of globalization and of diversity. In Europe, promoting culture as a strategic “soft-power”, and protecting the expression of diversity as recognition of human rights are important contexts. So is the action of global industries. Yet, the part played by the settlement of migrants and their families cannot be overlooked. A variety of regular activities or exceptional events is associated with this presence, which is part of the metabolism of several European cities and may coexist in different ways with “mainstream” expressions of culture. According to scholars, some cities are no longer magnets of national economies; they have been rescaled as nodes of transnational networks. This has been studied for global cities, but “peripheral” cities may also be involved in such a “denationalization” trend (Sassen, Brenner). It has been argued that migrants, as builders of transnational fields, are agents in this process (Çaglar, Glick-Schiller & Çaglar). But different cities are differently involved in the globalization process, and migrants’ role in the transformative process of society cannot be conceived as an aggregate effect of undifferentiated pieces. Migrants’ “real culture” can be a strategic site to explore their part in this process and the very nature of the process itself, as it provides references for building up shared interpretations of collective identities. My talk will address the question: How are migrants, who are still not recognized a status as peers, transforming European cities?

**Biography:** A sociologist and professor at NOVA University of Lisbon, M. Margarida Marques’ research interests have focused during the past two decades on migration, particularly on post-colonial migration, institutional quality, and globalization.

She is presently involved in two research projects: one on Values, Institutional Quality and Development, a joint initiative of the Center for Migration and Development at the University of Princeton, and CesNova at the NOVA University of Lisbon; and the second one on Migrants Popular Arts and Diversity in Post-Migration Cities, a research network initiated inside the EU-funded IMISCOE network of excellence.

She is the author, co-author or editor of several books, book chapters and articles, such as *Lisboa Multicultural* (Fim de Século, in print), *Post-colonial Portugal: between Scylla and Charybdis* (Berghahn Books, 2012); *Estado-nação e migrações internacionais* (Livros Horizonte, 2010), *Immigrant entrepreneurs in Lisbon: from diversity to Lusophony* (International Journal of Business and Globalization, 2008), *Migrações e participação social* (2008), *Building a market of ethnic references: Activism and Diversity in Multicultural Settings in Lisbon* (Routledge, 2007).

09:00 – 10:30 / Saturday 31 / CLE A2

## 10SPS / Moving forward on the Environment? Sociological Debate on Families, Consumption and the Environment in Europe

Chair(s): Lydia Martens

Lydia Martens is Senior Lecturer in Sociology at Keele University (United Kingdom). She has published widely on research that explores the intersections between consumption, families and intimate relations. Through projects, such as the ESRC seminar series on Motherhoods, Markets and Consumption, her work illustrates a cross-disciplinary and cross-cultural engagement. In recent years, she has turned her attention to a questioning of the methodologies for researching the mundane in intimate settings. She co-edited (with Halkier and Katz-Gero) a special issue for the *Journal of Consumer Culture* (2011) on applications of practice theory in the sociology of consumption. She is currently developing a research agenda on children, families and the collection of experience in outdoor life.

**Lynn Jamieson** (University of Edinburgh), *Moving forward on the Environment? Sociological Debate on Families, Consumption and the Environment in Europe*

Sociologists who are committed to exploring the possibilities of human activity turning away from current levels of environmental harms (high carbon footprints, eradication of non-human species and depletion of natural resources) have good empirical and theoretical reasons to attend to the rich European tradition of research on and theorising of families, relationships and personal life. Given the urgency of such issues, researchers and theorists of families and relationships must step up to more explicitly and routinely address the challenge of understanding how to foster pro-environmental action. Family practices and practices of intimacy are intertwined with practices of consumption – the meal, the shopping, the car, the holiday, the visit, the gift, the 'night out' are some of many examples. Despite theoretical fashions that overlook them, emotionally charged personal relationships continue to profoundly influence individuals' senses of self, predispositions and capacities for empathy and action, including empathy with nature and pro-environmental and political action. Understanding the dynamics of how social practices in everyday life can change can only be enriched by attending to relationships of personal lives, and these are not confined to household. The growing trend of living alone across Europe and diverse patterns of mobility and migration do not spell the end of social embedding in families and personal relationships, whether local or dispersed, nor end their part in framing pro or anti-environmental practices.

**Biography:** Lynn Jamieson is a Professor of the Sociology of Families and Relationships at the University of Edinburgh. She has researched many aspects of intimacy, personal life and social change, analyzed through theoretical approaches that acknowledge the part played by relationship in making selves and social worlds. As one of the directors of the consortium Centre for Research on Families and Relationships [www.crfr.ac.uk](http://www.crfr.ac.uk), she is committed to research of relevance to and in engagement with people outside of academia and is actively encouraging family researchers to focus on intersections between personal life and issues of carbon footprints, sustainability, climate change and biodiversity. She is an associate editor of the journal *Families Relationships and Societies* and a co-editor of the Palgrave Macmillan *Families and Intimate Life* series in which, *Living Alone: Globalization, Identity and Belonging* (Jamieson and Simpson) will be published in September. She is currently seeking contributions to an edited collection on *Families, Relationships, Sustainability and Environment*.

**Gert Spaargaren** (Wageningen University), *Sustainable Living in Globalized Modernity: a Challenge for Sociology*

European societies are confronted with major crises that have to be dealt with in such a way that major parts of societies do not fall apart or become excluded from the global network society. Next to the economic crisis, the environmental crisis challenges sociologists to develop realist utopias on 'sustainable living' which might feed into the political debates on the future of European societies. In the discourse on sustainable development, the need for more sustainable modes of dwelling our homes, moving around, eating and leisuring has been recognized from the beginning. A number of scholars reflected upon the changes needed in everyday life. The solutions to the environmental crisis suggested over the years reflected the general characteristics of the times. In simple modernity, nation state policies connected technology and society in a top down and linear way. In reflexive modernity, a range of actors combined market dynamics with diverging sustainability goals. In the present phase of globalized modernity, the key issue is how to connect the local and the global in meaningful ways. How does slow/local food relate to the globalization of the food sector? Is a 'European smart grid' a contradictio in terminis? And what about eco-tourism? The challenge for environmental sociology is to develop a compelling analysis of glocalization processes and dynamics in order to prevent civil society actors to take their resort to the local without considering the global.

**Biography:** Gert Spaargaren is Senior Researcher and Professor of Environmental Policy for Sustainable Lifestyles and Consumption in the Environmental Policy Group at Wageningen University. His main research interests are in environmental sociology, sustainable consumption and behavior, and globalization of environmental reform. His work has appeared in *Global Environmental Change*, *Environmental Politics*, *Society and Natural Resources*, *Organization and Environment*, *Sociologia Ruralis* and numerous other journals. Spaargaren's most recent books are *The Ecological Modernisation Reader* (edited with Arthur Mol and David Sonnenfeld) and *Food in a Sustainable World: Transitions in the Consumption, Retail, and Production of Food* (edited with Peter Oosterveer and Anne Loeber).

## 11SPS / Racism, crisis, critique and change

Chair(s): Robert Fine

Robert Fine is Professor of Sociology at the University of Warwick and a member of the ESA Executive Committee. He is a founding member of RN 31 on 'Ethnic Relations, Racism and Antisemitism' and RN 15 on 'Global, Transnational and Cosmopolitan Sociology'. He recently co-edited and contributed to two special issues: of European Societies on Racism, Antisemitism and Islamophobia, and of the Journal of Classical Sociology on Natural Law and Social Theory.

**Jean-Yves Camus** (Institut de Relations Internationales et Stratégiques (IRIS)), *Racism, crisis, critique and change*

Not available

**David Theo Goldberg** (University of California), *Racial Religiosities, Religious Racialities*

Modern secular societies have been surprised by the intense energy with which religious commitments have re-emerged recently. I will consider how race, religion and militarized socialities interactively have shaped European self-conception historically and contemporarily. And I will argue that it is impossible to understand fully the renewed religious interest and commitment without addressing the complex of issues at the intersection of religion, race, and war-making. This address will make some formative observations about the fraught social articulation of these issues, their impacts and implications.

**Biography:** David Theo Goldberg is the Director of the systemwide University of California Humanities Research Institute and Executive Director of the MacArthur-UC Irvine Digital Media and Learning Research Hub. He holds professorial appointments in Comparative Literature, in Anthropology, and in Criminology, Law and Society at UC Irvine. He has published widely on race and racism, on social and critical theory, and on the current state of the humanities and the impacts of digital technology on higher education. His most recent books include *The Threat of Race: Reflections on Racial Neoliberalism* (Wiley-Balckwell, 2009), and *The Future of Thinking* (MIT Press 2010).

09:00 – 10:30 / Saturday 31 / CLE A4

## 12SPS / Work and employment in times of crisis

Chair(s): Mirella Baglioni

Mirella Baglioni is associate professor of Industrial Relations. She is currently teaching Sociology of Economics in the Department of Economics (University of Parma). Since April 2010 she has been chairing the ESA RN 17 - Work Employment and Industrial Relations. She has published on workers' participation, employers' associations and comparative industrial relations in Europe.

**Lucio Baccaro** (University of Geneva), *The Liberalization of European Employment Relations Regimes and its Consequences for Growth and Inequality*

European employment relations and collective bargaining regimes are still characterized by remarkable institutional diversity: while in the UK and France collective bargaining is decentralized, in Germany and Italy the main locus of bargaining is still at the industry level, and in Ireland and Sweden there has even been in recent years an unexpected renaissance of centralized collective bargaining. Yet, behind the appearance of institutional continuity, all country regimes have been transformed in a common neoliberal direction, defined operationally as the increase in employer discretion (in wage setting, hiring and firing, work organization, etc.). In most cases liberalization has not been accomplished through a direct attack on institutions, but rather through a process of institutional conversion whereby similar institutional forms operate differently from the past and produce different outcomes. The clearest example is centralized bargaining which has with time turned from the cornerstone of negotiated capitalism into a conduit for the top down liberalization of labour markets and welfare states. With the recent financial and economic crisis, centralized collective bargaining institutions have been rather unceremoniously jettisoned and replaced by government unilateralism. The liberalization of employment relations institutions has contributed not just to the surge in wage and income inequality but also to the instability of the European growth model. These arguments are based on an analysis of quantitative trends in 12 European countries as well as on case studies of France, Germany, Ireland, Italy, Sweden and the UK.

**Byography:** Lucio Baccaro is professor of comparative macrosociology at the University of Geneva in Switzerland. Previously he held faculty positions at Case Western Reserve University and MIT and research positions in the International Labour Organization. His research focuses on the comparative political economy of employment relations and labor market institutions and on the effects of deliberative decision-making. His work has appeared in various international journals in industrial relations, political science, and sociology. He is currently completing a book manuscript with Chris Howell (Oberlin College) tentatively titled: *European Industrial Relations: Trajectories of Neoliberal Transformation*, on which the presentation is based.

**Valeria Pulignano** (KU Leuven), *The Transformation of Employment and Labour Relations in Europe. Perspectives and Alternative Scenarios*

The ostensibly integrative processes involved in the 'widening' and 'deepening' of the European Union have had the effect of fundamentally fracturing employment and labour relations across and within member states. The recent financial crisis has revealed deep "economic" fissures within the EU, and the crisis itself has had profound dis-integrative implications for employment relations. Industrial relations institutions such as collective bargaining structures, trade unions and their system of representation have had to contend with the rapid intensification of competition on one hand. On the other hand, institutionalized mechanisms for the regulation of the relationships between employers, trade unions and the state at sector and national levels have been reinvented to serve a competitive agenda based on wage restraints and the decentralisation of collective bargaining. Moreover the growth of multi-national companies; financial deregulation and heightened capital mobility; intense technological change; as well as changes in the labour market associated with the growing importance of the service sectors have all placed a new premium on 'flexible' forms of pay and working time, labour market regulation and work organization, at the same time as weakening the representative scope and authority of organised labour and welfare states. What are the perspectives for the future? In particular, is an alternative scenario possible how can it be realised? Valeria Pulignano has recently written a book jointly with Jim Arrowsmith on "The Transformation of Employment Relations in Europe. Institutions and Outcomes in the Age of Globalisation" (2013) Routledge - Research in Employment Relations Series, on which this presentation is based.

**Biography:** Valeria Pulignano is Professor of Labour Sociology and Industrial Relations at the Centre for Sociological Research (CESO) at the Katholieke University of Leuven (Belgium). She is Associate Fellow at the Industrial Relations and Research Unit (IRRU) at Warwick University (United Kingdom), core researcher at the Interuniversity Research Centre on Globalization and Work (CRIMT). She has widely published in comparative industrial relations in Europe and labour markets. She co-edited a book entitled *Flexibility at Work*, Palgrave Macmillan in 2008 and a book on *The Transformation of Employment Relations in Europe. Institutions and Outcomes in the Age of Globalisation*, Routledge in 2013.

---

### MD - Midday Specials

#### MD01 - On the Future of Social Science

Chair(s): Ellen Kuhlmann, University Siegen

#### Horizon 2020 and the European Research Area: What Future for the Social Sciences?

Helga Nowotny , President of the ERC, European Research Council | [helga.nowotny@wwtf.at](mailto:helga.nowotny@wwtf.at)

Over the last seven years, the European Research Council (ERC) continues to fund research projects in all fields of science and scholarship in a genuine bottom-up mode, without thematic priorities and with the sole criteria of scientific excellence. So far, more than 1 bio Euro has been spent on projects in the social sciences and humanities, more than in any other EU programme. In my

presentation, I will give an overview why the ERC is a particularly interesting funding scheme also for sociology, which general trends have emerged and some exemplary projects that have been funded. I will also highlight the opportunities offered for the social sciences under H2020 and the particular demands posed by their integration into the „Societal Challenges“ pillar of H2020.

#### MD02 - EU Zone: Which Crisis? Views and Experiences from Different European Regions (1)

Chair(s): Georg Vobruba, University of Leipzig

#### Transformation and Trauma: Coping with Collateral Damage from the Eurozone Crisis

Dennis Smith, Loughborough University | [d.smith@lboro.ac.uk](mailto:d.smith@lboro.ac.uk)

The Eurozone crisis is a traumatic event in the socio-historical process of Europe-formation. This process is driven forward by dynamic disequilibrium, like a cyclists' peleton. The peleton has struck dense mud and is in the process of transforming itself into a stronger,

more robust vehicle to avoid collapse and maintain forward momentum. The outcome may be a European Union with increased coherence and greater geo-political weight but the 'collateral damage' – ie, the humiliation of national electorates that became 'fall guys' –

will have abiding socio-political consequences if it is not acknowledged and repaired. The trauma experienced by many of the EU's national populations demands sociological analysis. Millions of 'ordinary' citizens, voters and consumers in the EU have suddenly and with very little warning been threatened with loss of their incomes, jobs, homes, pensions, public services, and welfare benefits. Their dignity and security have been under attack. People have responded with a mixture of anger and fear, in four main ways, by attempting to: take revenge, eg, by voting out their national

governments or attacking immigration (eg Greece); escape, eg through suicide, emigration, seeking independence (eg Catalonia), or threatening withdrawal (UK); reject the humiliation, eg, by resistance on the streets (eg Ignados) or through parliament; or accept the humiliation, turning it into shame, hoping to alleviate the pain (eg Ireland). These responses are analyzed both theoretically and empirically in this paper, with examples, and placed in their comparative and socio-historical context, drawing on the presenter's current research.

## Dis/connecting People: Communication Governance in Times of Crisis

**Katharine Sarikakis**, University of Vienna | [katharine.sarikakis@univie.ac.at](mailto:katharine.sarikakis@univie.ac.at)

**Joan Ramon Rodriguez-Amat**, University of Vienna | [mon.rodriguez@univie.ac.at](mailto:mon.rodriguez@univie.ac.at)

**Peter Maurer**, University of Vienna | [peter.maurer@univie.ac.at](mailto:peter.maurer@univie.ac.at)

**Dimitris Tsapogas**, University of Vienna | [dimitrios.tsapogas@univie.ac.at](mailto:dimitrios.tsapogas@univie.ac.at)

**Asimina Koukou**, University of Vienna | [minakoukou@gmail.com](mailto:minakoukou@gmail.com)

**Lisa Winter**, University of Vienna | [lisa.winter@univie.ac.at](mailto:lisa.winter@univie.ac.at)

The governance of crisis produces further points of tension between European and national political institutions and the citizenry, disconnecting people from their institutes. Opinion polls and social media activity stand in contrast with the dominant opinion presented by the major newspapers across the EU. The paper questions the degree to which opinion-leading media's role to re/present a dominant ideological frame to interpret and treat the issue of crisis manages or not to inform citizen's understanding and attitudes on politics. Given a range of instances where this is not the case, especially with political and other institutions, we hypothesise that elite press is distanced from the political directions of the public. This paper explores the relation between expressions of public opinion in the

elite press and those from the civil society. We explore elite-mediated debates focusing on aspects of the crisis that diverge strongly from those on social network sites. Both dynamics will be contrasted to citizens' concerns expressed in public opinion polls. The data collected comes from three sources: first, the editorials of the major national presses of Greece, France, Germany, Austria, UK and Spain published during the month of June of 2012 coinciding with the French legislative and Greek national elections (June 10th and 17th, 2012); second, large data-sets of national surveys and Eurobarometer polls concerning citizens's orientations towards EU institutions and policies; and third, citizens' communicative action in social media.

## MD03 - Author Meets Critics (1)

Chair(s): Maggie O'Neill, Durham University; Discussant: Wolfram Fischer, University of Kassel; Kaja Kaźmierska, University of Lodz

### The Evolution of European Identities: Biographical Approaches

**Robert Miller**, Queen's University, Belfast | [r.miller@qub.ac.uk](mailto:r.miller@qub.ac.uk)

**Graham Day**, Bangor University | [g.a.s.day@bangor.ac.uk](mailto:g.a.s.day@bangor.ac.uk)

The 'European project' is in a state of perpetual crisis in which the root cause is a lack of identification by ordinary citizens with Europe and European institutions. The *Evolution of European Identities* employs state of the art analysis of in-depth interviews by experienced practitioners of the biographical method to give a unique 'bottoms up' perspective on the development (or its lack) of a sense of 'European mental space'. Linking conceptual findings with case studies, the book provides unique insights into groups that have been

especially sensitized by their life experiences to question what it means to be European in the twenty-first century. The groups explored in this book include: adults who experienced European education exchanges when they were young; transnational workers; civil society organization activists; persons involved in cross-border intimate relationships; farmers who are subject to European markets, regulations and subsidies; and migrants into 'fortress Europe'.

## MD04 - Author Meets Critics (2)

Chair(s): Bernt Schnettler, Bayreuth University; Discussants: Hubert Knoblauch, Technische Universität Berlin Alain Quemin, Université Paris-Est

### The Dynamics of Auction: Social Interaction and the Sale of Fine Art and Antiques

**Christian Heath**, King's College London | [christian.heath@kcl.ac.uk](mailto:christian.heath@kcl.ac.uk)

Each year art and antiques worth many billions of pounds are sold at auction. These auctions consist of numerous, intense episodes of social interaction through which the price of goods rapidly escalates until sold on the strike of a hammer. In this book, Christian Heath examines the fine details of the interaction that arises at auctions, the talk and visible conduct of the participants and their use of various tools and technologies. He explores how auctioneers, buyers and their representatives

are able to transact the sale of diversely priced goods in just seconds. Heath addresses how order, trust and competition are established at auctions and demonstrates how an economic institution of some global importance is founded upon embodied action and interaction. The analysis is based on video recordings of sales of art and antiques gathered within a range of national and international auction houses in Europe and the United States. More info at: <http://www.cambridge.org/auction>

## MD05 - Specials & Workshops (1)

Chair(s): Sergio Scamuzzi, Università degli Studi di Torino

### Rethinking Gramsci

Ursula Apitzsch, Goethe-University Frankfurt | [Apitzsch@soz.uni-frankfurt.de](mailto:Apitzsch@soz.uni-frankfurt.de)

Gramsci's theory has been recognized by present sociology „as the social science of advanced capitalism“ (Michel Burawoy 2001). My thesis in this paper follows Michael Burawoy's insofar as it underlines the importance of Gramsci's theory for the analysis of contemporary societies. It differs, however, insofar as it doesn't see the structure of advanced capitalism as the main object of Gramsci's work, but rather human individual and collective subjectivity under the pressures of enlarged, globalizing industrial-statal complexes connected and divided among themselves by continuing struggles about hegemony. This perspective brought Gramsci as early as the thirties of the 20th century to a critique of all existing forms of sociology, including the Soviet Marxist sociology of his time which he severely criticized in his analysis of Bukharin's writings. In his 4th Prison Notebook, Gramsci writes: "Sociology .. has become a tendency on its own, it has become the philosophy of nonphilosophers, an attempt to classify and describe historical and political facts schematically, according to criteria constructed on the model of the sciences. In any case, every sociology presupposes a philosophy, a conception of the world of which it is itself a subordinate part. Nor should the particular internal 'logic' that gives the various sociologies their mechanical coherence be confused with general 'theory' or 'philosophy'." (§ 14). It is my aim to confront the main points

of Gramsci's critique of the various forms of sociology he mentions. For Western Sociology this is mainly Max Weber's, Robert Michels' and Henri de Man's sociology, "Au delà du marxisme ", which he analyses in order to develop his own critical theory of society. In the first and second part of my paper I will outline these two strategies of critique of Marxist and non-Marxist Sociology. In the third part of my paper I want to develop Gramsci's very original theory of "subalternity", which in his view should overcome the limits of unhistorical descriptions of society and should allow for an analysis of collective and individual manifestations of subjectivity under the pressures of various forms of domination. Here I want to show that Gramsci does not follow the Foucauldian way of putting the subaltern in a position to represent their own knowledge and to speak for themselves as the subjects of desire. Instead, I want to explain Gramsci's reconstruction of subaltern history as indispensable experiences of determinate times and determinate social positions, different from "atavisms" in the form of historical regressions to primitive forms of social life, while continually developing new attempts to strive for autonomy. In this way, I will also try to explain why Gramsci's critical theory of society has become so important for postcolonial critique in the various forms of contemporary Subaltern Studies.

## MD06 - Specials & Workshops (2)

Chair(s): Ricca Edmondson, National University Of Ireland (Galway); Anne Ryen , University of Agder

### Network of Social Science Laboratories

Luise Corti, University of Essex | [corti@essex.ac.uk](mailto:corti@essex.ac.uk)

Jane Gray, National University of Ireland, Maynooth | [jane.gray@nuim.ie](mailto:jane.gray@nuim.ie)

Two experts are invited for discussing the practical and theoretical challenges and opportunities associated with qualitative data storage, and in particular how scientific

societies such as ESA could be of help in acquiring infrastructure funding for this activity.

## MD07 - On the University

Chair(s): Suvi Ronkainen, University of Lapland

### The Neo-Liberal Knowledge Regime, Public Higher Education, and the Future of the Social Sciences

John Holmwood, University of Nottingham | [john.holmwood@nottingham.ac.uk](mailto:john.holmwood@nottingham.ac.uk)

This paper will address the privatisation of knowledge and universities as a consequence of neo-liberal public policies, such as those adopted in England after the Browne Review. Where previously universities had operated according to a mixed model of private and public activities (described by Kerr as a 'multiversity'), they are now to be subjected to market disciplines and government regulation designed to secure a privatised knowledge regime. In this context, protests like the

'Occupy' movement draw attention to diminished public spaces of debate, with a corollary in the demise of the public university. The idea of the 'public', it will be argued, is also central to the development of the social sciences and sociology in particular (as indicated by recent calls to re-invigorate public sociology). The paper will address the likely consequences of the attack on public higher education for knowledge production in the social sciences.

### A decade of disruption. Italian University in the Neoliberal Era

Massimiliano Vaira, Università di Pavia | [massimiliano.vaira@unipv.it](mailto:massimiliano.vaira@unipv.it)

The paper examines Italian university reform policies in the last decade dominated by centre-right governments (2001-2006 and

2008-2011). Although other industrialized countries have experienced higher education reform processes inspired by the neoliberal

ideology, agenda and policies, Italy distinguishes in the international landscape for efforts to destabilize the public university system, as a part of a wider and aggressive strategy of attack to public education. The Italian case allows some reflections about the role of political institutions as a source and producers of disruption on an organizational field. While Zucker (1986;1988b) argues that a given institutional order (macro-level) is exposed to entropy, erosion and disruption produced at the micro-level, the Italian university reforms and policies represent the opposite process: it is the institutional order (i.e. polity and politics) that undermines and disrupts the lower institutional sphere of

university. As several researches, data and the last OECD Report Education at a Glance testify, those policies gave university relevant troubles, and on the other change process itself is made very difficult, uncertain and very close to a permanent liminality state. The presentation will deal with the following arguments: 1. Policies dynamic, aims and contents of the last decade; 2. The development and the use of delegitimizing rhetoric addressed against public university; 3. Fact-checking and data demystifying the mystified representation of the university arising from the delegitimizing rhetoric; 4. Policies effects on university system functioning, performance and change.

## MD08 - Critique and Crisis

Chair(s): Frank Welz, Innsbruck University

### Occupy Movements, a New Repertoire of Mass Resistance?

Lev Luis Grinberg, Ben Gurion University of the Negev | [grinlev@gmail.com](mailto:grinlev@gmail.com)

Following the demonstrations in Tunis and Egypt, that succeeded to overthrow their respective dictators, a new wave of mass mobilization and popular struggle spread all over the world. The wave traveled to Spain in May, to Chile and Israel in July-August, and to the US in September. Although the events in one place encouraged activists in other places, the content and impact of the new movements was determined by the local political conditions. It is my argument that despite all the differences, peculiarities political goals, there is a common pattern to all movements: the need to occupy the public space in order to be recognized and to talk in the name of the people, the masses or 99%. All mobilizations are resisting the economic damage caused to

middle and lower classes by the neo-liberal economic policies. Two main effects of neo-liberal policies gave rise to the occupy movement's new repertoire: the individualism that destroys social solidarity, and the weakening of political parties as the locus of negotiations between civil society and the state. Occupying the public sphere is an innovative repertoire designed to reconstruct social solidarity and "peoplehood" that have been destroyed by the neo-liberal policies, and to make claims in its name. The paper will compare different cases seeking to comprehend how the local political conditions facilitate or obstruct the success of occupy movements.

## From Art Criticism to the Commentary of Art?

Karl-Siegbert Rehberg, Dresden University of Technology | [karl-siegbert.rehberg@tu-dresden.de](mailto:karl-siegbert.rehberg@tu-dresden.de)

My thesis is that instead of an art criticism which no longer exists, nowadays a phenomenology of the artistic practice is dominating, which is ranging between praise and concealment. In so doing and along the market necessities, it propagates the new – new artists as well as new styles. Therefore, the loss of criticism in the arts can be considered as a symptom of its crisis – contrary to the thesis of Koselleck, who states that the crisis in the process of modernization causes a politicization and temporalization of social key concepts. At the same time modern art has a need for commentary, as A. Gehlen has elaborately made clear in his sociology of the arts (Zeit-Bilder, 1960). Thus, one has to ask, if this help in the reception of artwork (which in most cases is based on the principle of non-expectability and innovation) has led to a new form of reflection, which makes

criticism seem anachronistic. Thereby, the relation between picture and reality as well as between picture and word has changed. While in the past (biblical or mythical) words came first, then pictures, today it is the other way round: pictures are made plausible verbally, contexts are found, which make an understanding possible and an opaque artistic production is often justified by a witty interpretation. The crisis that has led to this discourse shift can certainly not be found in a weakness of artistic modes of expression (as stated by cultural criticism) or in a loss of the artistic evidence. Rather, there are incomparable renewals of the presentation principles, which do not require binding standards any longer. This, though, is often considered as “crisis” of the arts. The consequences for the métier “critique” have to be analysed.

## The Natural Law Foundations of Modern Social Theory. A Quest for Universalism

Daniel Chernilo, Loughborough University | [D.Chernilo@lboro.ac.uk](mailto:D.Chernilo@lboro.ac.uk)

After several decades in which it became a prime target for critique, universalism remains one of the most important issues in social and political thought. Daniel Chernilo reassesses social theory's universalistic orientation and explains its origins in natural law theory, using an impressive array of classical and contemporary sources that include, among others, Habermas, Leo Strauss, Weber, Marx, Hegel, Rousseau and Hobbes. The Natural Law Foundations of Modern Social Theory

challenges previous accounts of the rise of social theory, recovers a strong idea of humanity, and revisits conventional arguments on sociology's relationship to modernity, the enlightenment and natural law. It reconnects social theory to its scientific and philosophical roots, its descriptive and normative tasks and its historical and systematic planes. Chernilo's defense of universalism for contemporary social theory will surely engage students of sociology, political theory and moral

philosophy alike.

### Dove batte il cuore delle donne? Voto e partecipazione politica in Italia

Francesca Zajczyk, Università degli Studi di Milano Bicocca | [francesca.zajczyk@unimib.it](mailto:francesca.zajczyk@unimib.it)

Assunta Sarlo, \* | [assunta.sarlo@gmail.com](mailto:assunta.sarlo@gmail.com)

"Voto e partecipazione politica in Italia" (Laterza 2012) is an essay about electoral choices of Italian women and problem of low female representation in the political institutions. The authors, the journalist Assunta Sarlo and the sociologist Francesca Zajczyk, describe the controversial relationship between women and politics, starting from 1945, when Italian

women obtained the right to vote, to the present, analyzing the most important political events. Collecting data from different sources, the essay clarifies the influence of public and private roles of women in their electoral choices and political engagement and stresses the Italian delay in the realization of equal opportunities.

### Internationalisation of Qualitative Research - Perspectives and Challenges

Uwe Flick, Alice Salomon University | [flick@ash-berlin.eu](mailto:flick@ash-berlin.eu)

Giampietro Gobo, University of Milan | [giampietro.gobo@unimi.it](mailto:giampietro.gobo@unimi.it)

Anne Ryen, University of Agder | [anne.ryen@uia.no](mailto:anne.ryen@uia.no)

"It is often assumed that qualitative research is heading towards an increase in internationalisation of research. But what does internationalisation of Qualitative Research mean? What different perspectives can we share? What critiques can be brought forward? What are the challenges when internationalising qualitative research? For instance, how do we deal in an international

research context with different traditions? How do we try to do "verstehen" when we are lost in translation? Will we have to internationalise in English? How do we internationalise anyway? Three qualitative researchers from across Europe and working from different methodological points of view, will present their perspectives on internationalisation, and discuss on it afterwards."

Harriet Payne, Routledge | [Harriet.Payne@tandf.co.uk](mailto:Harriet.Payne@tandf.co.uk)

Zoe Sternberg, Managing Editor, Sociology & Development Studies, Routledge | [Zoe.Sternberg@tandf.co.uk](mailto:Zoe.Sternberg@tandf.co.uk)

Charles Turner, University of Warwick | [D.C.S.Turner@warwick.ac.uk](mailto:D.C.S.Turner@warwick.ac.uk)

Cultural sociology has been the fastest growing area both in the U.S. and Europe in recent years, and the Culture section in the ASA and the Sociology of culture research network in ESA are the biggest in terms of membership. The growth is also reflected in the emergence of new journals in that area or approach. Political sociology, often related to

transnational phenomena and to global governance, is also a burgeoning field. The European Journal of Cultural and Political Sociology (ECPS) aims to be a forum not just for both of these growing fields of study, but for all sociologists wishing to explore the cultural/political aspects of their work.

### Is a Science of Society still Possible?

Pekka Sulkunen, University of Helsinki | [pekka.sulkunen@helsinki.fi](mailto:pekka.sulkunen@helsinki.fi)

Several authors suggested in the last decades of the twentieth century that the end of the social has arrived, or at least that the constitutive structures of modern societies - the nation state, social class and political mobilisation for progress - have changed. The reaffirmation of action in social theory, or the "return of the actor" (Touraine), although necessary for understanding social movements, consumer practices and uses of culture, created a long-standing ambivalence about structure and action. Synthetic attempts such as Practice Theory have been successful but at the same time shifted the focus from

society to behaviour. This paper argues that sociology as a science of society rather than as one of the behavioural sciences is possible and necessary for understanding the contemporary crisis. Leaning on the theory of justification outlined by Boltanski and Thevenot, itself based on 18th century theories of self-policing society, it will be argued that agency rather than action is a structural concept that belongs to the criteria of belonging and differentiation in contemporary society. Autonomy in the sense of self-determination and self-control is a requirement imposed on citizens, and not only an ideal to be strived for. This principle of

justification has implications for the role of the state in society, and consequently for the type

of democracy that is possible today.

## **MD14 - EU Zone: Which Crisis? Views and Experiences from Different European Regions (2)**

Chair(s): Luigi Pellizzoni, Università di Trieste

### **When the Future Becomes Tomorrow: The Experience of the Crisis in Southern Europe**

Natàlia Cantó-Milà, Open University of Catalonia | [ncantom@uoc.edu](mailto:ncantom@uoc.edu)

This paper focuses upon the experience of the current economic crisis in Catalonia. In order to analyse these experiences, I have realized 40 narrative autobiographical interviews in different cities, villages and towns of Catalonia, asking my informants to tell me about their current lives, and about their daily routines, worries, joys and experiences. I have not asked them to focus on the economic crisis, in fact, I have not mentioned it at all; neither in the preparation of the interviews or in the initial input of the interview. However, they have all spoken about the crisis, and have related their

quotidian experiences to the existence of this crisis, and to the way in which this crisis affects not only their everyday lives, but also the way in which they construct their identities, relationships, the way they view their pasts, and the way in which they have come to think about their futures. This paper offers a sociological view upon the current economic crisis, and the way in which it moulds and shapes lives in Southern Europe; particularly in the Catalan region (in which the interviews have been collected).

### **The European Union as a Community of Law. How its crisis can be tackled without a further integration**

Max Haller, University of Graz | [max.haller@uni-graz.at](mailto:max.haller@uni-graz.at)

Today, many argue that the integration of the European Union should be intensified. However, there are several aspects which seem to make this problematic. First, the EU is still far away from constituting a political community capable of acting as a nation state. Second, the politics of the EU has itself contributed to the present crisis in Europe through the liberalization of financial markets; the support for large infrastructure projects in the Southern countries; the introduction of the Euro in a non-optimal currency area. The diversity of Europe and the autonomy of its

states is one of its great strengths (Baechler 1977). The majority of citizens EU reject the idea of "United States of Europe". My thesis is that the character of the EU can best be grasped if it is understood as a socio-political community of law (see e.g. Weiler 1999). A Tocquevillian and Weberian sociological perspective (Immerfall 2006; Bach 2008) can contribute to such an understanding of the character of the EU and to an alternative interpretation of its problems; it can use concepts from the sociology of constitutions and of law, of financial sociology and by

analyzing the interests of elites and citizens (Haller 2008), the role of national and regional

elites, and the attitudes of the population at large.

### Trying to Measure Globalization: Experiences, Critical Issues and Perspectives

Marco Caselli, Università Cattolica del Sacro Cuore, Milan | [marco.caselli@unicatt.it](mailto:marco.caselli@unicatt.it)

The aim of this book is to conduct a critical survey of the main tools devised for the synthetic measurement of globalization processes. The first part of the book discusses the meaning of the concept considered, highlighting the different and often contradictory interpretations put forward in its regard in the literature. Subsequently analysed are the passages and issues that must be addressed when constructing an instrument intended to measure a social phenomenon of such complexity as globalization. Stressed in particular is that the researcher's subjectivity is repeatedly involved in these passages, so that no instrument can have objective validity. Given these premises, the book presents the principal tools employed in attempts to measure globalization, starting with those

whose unit of analysis is the state. In this regard, particular space is devoted to indexes which take a multidimensional approach to the concept of globalization. There follows a comparison among the results obtained using these indexes, and criticisms are made of the ways in which the latter have been constructed. A limitation, or if one wishes a paradox, concerning such tools is that they measure in relation to states a process which has as one of its principal features the fact that it extends beyond the confines of states. For this reason, the final chapter considers whether globalization can be measured with different units of analysis – in particular people and cities. The book concludes with discussion of the general limitations of globalization indexes.

### Open Access: Dilemmas and Challenges – A UK View from the British Sociological Association

Howard Wollman, University of Edinburgh | [h.wollman@gmail.com](mailto:h.wollman@gmail.com)

Open access has been seen by many as a welcome challenge to what are considered the unreasonable profits made by global

publishing conglomerates often from publicly funded research. The models proposed for open access have often been oriented towards

the needs of science and technology disciplines rather than the humanities and social sciences. A missing perspective has often been that of learned societies and professional associations who themselves publish journals and whose journals contribute to their viability. The implementation of open access in the UK has been particularly problematic for such associations. This presentation will explore the UK model, including the difference between 'green' and 'gold' access; the proposed licenses and embargo periods. There will be a

discussion of the policies of the UK Research Councils and the Higher Education Funding Council. It will raise issues of concern for academic staff in the future publication of their work and the potential threat posed to intellectual property and the public university by the license requirements for open access publishing in the UK. Implications for collaborative work and publication across Europe and elsewhere will be briefly considered.

### European Research Council - Funding for Sociologists

Lionel WL Thelen, European Research Council | [lionel.thelen@ec.europa.eu](mailto:lionel.thelen@ec.europa.eu)

^Not only banks, institutions, companies or even countries are under pressure but also citizens. Periods of crisis are simultaneously periods of change, which unfortunately occur in the worst possible times since people are consequently searching for stability and security. Such an ambivalence between people's aspirations and the challenges they have to face in crisis time can be of the utmost interest for social sciences in general and for sociology in particular. Unfortunately another feature of our 'turbulent times' are, in various European Countries, financial difficulties to make ends meet as well as limited budgets for universities, research centres and, subsequently, frequent cuts in social sciences research funding. Taking the exact opposite position, the ERC funding capability increases each year and the part of the budget devoted to

social sciences will be bettered from 2013 onwards. "What do the ERC schemes have to offer to sociologists?" "How to get started with an application?" "How to increase your chances to get funding?" "What are the main hitches to avoid?" These are all relevant questions that will be raised during this presentation. Do not hesitate to bring yours! This session is opened to all sociologists aiming to design and lead to their good end ground-breaking and innovative research projects. The presentation will be followed by a Q&A session and presenters are of course available during the whole duration of the Conference to answer your queries. The ERC also has a booth in the exhibition area where flyers, reports and publications as well as ERC officers will be available to help you inasmuch as possible.

### RN01 - Ageing in Europe

#### 01RN01 - Ageing Societies and the Welfare State

Chair(s): Sarah Gibney (Dublin)

#### The Good and Normal Life: Prioritizing Older and Younger Users of Municipal Health - and Care Services in Norway

Heidi Gautun, Norwegian Social Research | [heidi.gautun@nova.no](mailto:heidi.gautun@nova.no)

Anne Skevik Grødem, Fafo Institute for Labour and Social Research, Oslo | [anne.skevik.grodem@fafo.no](mailto:anne.skevik.grodem@fafo.no)

The ageing population in Europe calls for vast expansions in health- and care services for the elderly. This is a well-known long-term challenge for crisis-ridden countries as well as for countries less affected by the current financial crisis. A less debated challenge is the increasing demand for care services among younger (under 67) users. In Norway, long-term trends such as deinstitutionalization and decentralization, combined with more attention toward drug abuse and mental illness, has led to a rapid increase in the demand for municipal care among people of working age. This implies a de facto competition for scarce municipal resources between “old” and “young” users. In this paper, we first document the trends indicating that younger users increase in numbers, and are in fact given

more generous services. Then, we briefly review legal and political documents, concluding that all users formally have equal rights to services. This is a puzzle: when rights are equal, why do younger users receive more generous services? To answer this question, we have interviewed decision makers in five municipalities. Municipal decision makers see as their mandate to ensure that all users get the services they “need” in order to live a “normal life”. Constructions of “need” and “normality” in different phases of life implied that activation and rehabilitation became crucial for young, but not for old, users. Our results call for a more open debate on which levels of activity and social contact can reasonably be expected in different phases of life.

## The Association between Social Capital and Health in European Welfare Regimes: A Focus on Older People

Fredrica Nyqvist, National Institute for Health and Welfare (THL), Vaasa | [fredrica.nyqvist@thl.fi](mailto:fredrica.nyqvist@thl.fi)

Mikael Nygård, Åbo Akademi University | [mikael.nygard@abo.fi](mailto:mikael.nygard@abo.fi)

Mikael Rostila, Stockholm University/Karolinska Institutet | [mikael.rostila@chess.su.se](mailto:mikael.rostila@chess.su.se)

This study aims to investigate the relationship between different aspects of social capital and health among older people in Europe, in order to find out whether there are differences in the association between various welfare regimes. Previous findings suggest that the universal welfare regimes in Scandinavia experience higher levels of social capital as reported in other countries. However, we do not know whether structural (e.g. social participation) and cognitive (e.g. interpersonal trust) aspects of social capital have similar associations with health in Social Democratic welfare regime type as those reported in Mediterranean, Conservative or in Post-Socialist welfare regime types. Although, it is generally assumed that social participation foster trust, the relationship between structural and cognitive aspects of social capital is questioned

and it is argued it is the trustful people who already engage socially. In this paper we test the association between structural and cognitive aspects of social capital and health in older people (50+) by using the European Social Survey (ESS) Data from year 2010. Different methods will be undertaken on the ESS data to estimate the paths between social capital and health. We anticipate, firstly, that those with greater personal resources have more access to social capital regardless where they live, and secondly that we find large variations in the association between social capital and health between European welfare regimes. Finally, we anticipate that the relationship between social capital and health is moderated by age. It is reasonable to assume that the function of social capital is not uniform across older age groups.

## Ageing in the Faroe Islands; the Meaning of Place

Ása Róin, University of Linnköping | [asa.roin@skulin.se](mailto:asa.roin@skulin.se)

There has been a great amount of research on ageing related to place. Most studies have concentrated on either urban or rural regions but studies investigating both urban and rural ageing within the same national context are scarce. The Faroe Islands, being a small scale state with home rule and a total population of 48.350 people scattered around 17 islands, offers an interesting ground for studying the experience of ageing from the perspectives of a variety of older people living in diverse geographical settings within the same national frame. The aim of this ongoing study is to explore how older people construct meaning of place and ageing in their daily living. It has

been put forward that as the individual grows older there are characteristic changes of emphasis both within and among the modalities of experience. Social politics, especially proposals related to demographic changes e.g. age distribution, depopulation of outskirts regions, accessibility to services and the financial capacity to deal with a society ageing, seem to take their point of departure from a view on older people as a homogeneous group in homogenous communities with a homogenous set of lived experiences. The study is expected to contribute to a broader and more nuanced view on ageing and place. Social constructionism forms the

methodological frame of the study. Data consists of focus group discussions and in-depth interviews in different settings around

the islands and will be analysed using a discourse analytic approach.

## Change and Continuity in Leisure Patterns in Old Age: Micro and Macro Aspects

Dana Avital, Tel-Aviv University | [dana1907@gmail.com](mailto:dana1907@gmail.com)

The research examined which factors may cause individuals to start or to stop participating in leisure activities at retirement and during old age, and asked whether these factors vary across different welfare regimes. The database consisted of 9007 subjects (ages 60-102, all coming from 11 different European countries) who participated in both the 2004 & 2007 SHARE surveys. In both years, subject's leisure involvement was tapped by asking whether they actively participated in either volunteer-work, adult educational studies, and/or sports. The sample divided into country-clusters according to Esping-Andersen's (1990) theory of welfare regimes. For each cluster logistic-regression analyses examined what influenced the odds of starting or ceasing participation in each of the leisure activities between 2004-2007. Results showed: (1) Chances to start participating in any leisure

activity were highest in Socio-democratic countries; (2) Throughout all clusters, age, health, education, gender and household income consistently influenced leisure participation, albeit not always uniformly; (3) Each cluster was also subject to unique influences (e.g., number of grandchildren in Conservative countries); (4) Retiring didn't influence leisure participation; being retired had a negligible effect. The results suggest that retirement itself doesn't explain change or continuity of one's leisure patterns at old age, whereas more elementary factors do. Furthermore, the welfare regime was found to be influential on changes in leisure participation, a finding whose importance is emphasized due to the fact that the leisure activities examined here are perceived as customary and as essentially universal throughout western society.

## 02RN01 - Ageing in the Crisis

Chair(s): Julia Twigg (Kent)

### Poverty in the Old Age

Dana Sykorova, Palacky University, Olomouc | [dana.sykorova@upol.cz](mailto:dana.sykorova@upol.cz)

The research project "Seniors in the Society. Strategies for the Maintenance of Autonomy in Old Age" (2002-2005, supported by the Grant Agency of the Czech Rep.) brought profound information on how seniors experience their life situation. Apart from others, it refuted the idea of seniors as incompetent, passive individuals, complaining about lack of financial means and delegating responsibility to others. It was shown that seniors apply a wide range of procedures in daily household management which help them to justify the austerity

measures, which they had to resort to, and to put up with them. They strongly emphasized financial self-sufficiency and independent decision making. However, the findings related to the "common" population of seniors living in their own households, not reliant on social support (ie not to those who social work would denote as endangered by poverty or poor). Moreover, the data were obtained at the time of more favourable socio-economic conditions in the Czech Rep. In this context questions have been raised which are a basis for the following

research project of “Poverty in the Old Age”: How do poor old people define their life situation? What strategies do they use to manage poverty, particularly in cases when the strategy of economical household management (saving) does not suffice? When and who do they turn for help to? In the paper, the author will present results of a qualitative

study conducted in 2012–2013. The presented results will be set into the framework of discussions on the capacity of the theoretical “resources-of-poverty model of survival” and the inspiring proposal to replace it by the “model of poverty-of-resources” allowing for the limited nature of survival strategies.

## **Class and Health Inequalities in Later Life**

Ian R Jones, Cardiff University | [JonesIR4@cardiff.ac.uk](mailto:JonesIR4@cardiff.ac.uk)

Paul F D Higgs, University College, London | [p.higgs@ucl.ac.uk](mailto:p.higgs@ucl.ac.uk)

For more than sixty years researchers have been concerned with the extent to which the effects of social class over the life-course have determined or contributed to an individual's economic and social fate in old age. This body of work has addressed and elaborated on a whole host of conceptual and measurement issues drawing on insights from social epidemiology, gerontology and sociology. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, a body of work that raises questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. In this paper we interrogate these issues as they relate to the role of class in later life using the prism of health inequalities. We

will suggest that the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is curious given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. The paper considers two important questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be conceptualised in relation to a population that may have been out of the workforce for many decades?

## **Pension Income Differences between Retired Men and Women: Is it a Question of Increasing Age or Gender? Evidence from Spain and the UK**

Eva Martinez Cruz, University of Surrey | [e.martinez@surrey.ac.uk](mailto:e.martinez@surrey.ac.uk)

Pension regimes across Europe are being reformed due to international pressures on welfare states at the same time that “private” (often tax-subsidized) pensions are increasing. This agenda of pension reforms have included measures to improve how pension policies deal with gender differences in pension income and there is evidence that the reforms will bring greater gender equality, at least in state

pensions. Yet, the lack of retrospective application of reforms of this nature on pension systems might be creating income inequalities between age cohorts of retired individuals; the oldest being worse off than young old individuals. Therefore, it is important to examine whether gender differences in pension income are smaller among the retired in their sixties than among the oldest in their

eighties or above. This paper explores age cohort differences in pension income among retired men and women comparing two different pension regimes, Spain and the UK. It analyses cross-sectional data based on the latest waves (2010) from the ELSA and SHARE surveys, analysing 2571 retired individuals for Spain and 6955 for the UK. The analysis considers three age groups to allow cohort

comparisons (60-69, 70-79 and 80+). Logistic regressions compare the impact of age and gender on pension income among the retired in Spain and the UK, while adjusting for other variables. The paper suggests that although women's pension income is generally lower than men's in both countries, increasing age has a greater impact on pension income in the UK than in Spain.

## **After the Silent Revolution: Poverty among the Elderly Population in Switzerland 1979-2012**

**Rainer Gabriel**, University of Geneva | [rainer.gabriel@unige.ch](mailto:rainer.gabriel@unige.ch)

**Michel Oris**, University of Geneva | [michel.oris@unige.ch](mailto:michel.oris@unige.ch)

Half a century ago, when any person in Switzerland celebrated his or her 60th birthday, this also meant two things: First, this person could expect to have few years left to live and second, chances were quite high that this person would also encounter material difficulties, if this was not already the case. Poverty and old-age are two terms that have for a majority of the 20th century been almost inseparable. Socio-structural changes – above all in social institutions and pensions systems – have transformed this image. Numerous studies in Switzerland show that the economic situation of the elderly has steadily improved from the 1950s onwards. But the question

remains whether these improvements have been universal: Is poverty among the elderly population on the decline? Which population is most affected? Are there significant tendencies over the last three decades? To answer these questions, we compare three waves of a multidisciplinary, cross-sectional survey on the health- and living conditions of the population aged 65 and older in two cantons of Switzerland. This unique database enables us to perform an analysis on both, the evolution of poverty over the three waves (1979 / 1994 / 2012) as well as to compare the characteristics of individuals who are in precarious conditions or who are below the level of poverty.

## **03RN01 - Critical Perspectives on Ageing**

Chair(s): Magnus Nilsson (Karlstad)

### **Performing Euthanasia: Civil Society on Ageing, Free Will and a Fulfilled Life**

**Bernhard Weicht**, Utrecht University | [b.weicht@uu.nl](mailto:b.weicht@uu.nl)

**Bernhard Forchtner**, Humboldt University, Berlin | [forchtbn@hu-berlin.de](mailto:forchtbn@hu-berlin.de)

In the context of increasing longevity, autonomy and independence have become crucial elements of end-of-life decision

making. Opinions on the latter are, however, strongly divided and remain contested in public and political discourses. This paper will look at

a recent Dutch civil society initiative which vigorously promoted the right to die. This proposal was equally vigorously rejected by a variety of groups, drawing on religious and/or humanist arguments and values. In order to analyse this debate, we draw on relevant articles published over a two-year period (2010-2012) in Dutch national newspapers associated with three struggling groups: religious, liberal and (left-leaning) humanist perspectives. In order to do so, we utilise quantitative (corpus linguistics) and qualitative discourse analysis, raising the following questions: which perspectives and positions can be identified in the discursive struggle? How do the different parties position

themselves with regards to a 'fulfilled life' and a 'good death'? To what extent do these positions create clear demarcations between the 'us' and 'them'; and how are the latter discursively constructed? We show that the debate developed along the lines of five key topics: ageing; the meaning of a fulfilled life (and thus death); the issue of dependency versus autonomy; the related issue of freedom and self-determination; and the issues of responsibility and compassion. Drawing on Alexander's conceptualisation of the civil sphere and its binary code, we identify how the different, struggling narratives employed by the participants of the debate define different visions of dying as 'legitimate'.

## The Dynamics of Old Age Poverty: Germany and the US in Times of Economic Crisis

Kathrin Komp, Umea University | [kathrin.komp@yahoo.com](mailto:kathrin.komp@yahoo.com)

Daniel Larsson, Umea University | [daniel.larsson@soc.umu.se](mailto:daniel.larsson@soc.umu.se)

Since 2008, the industrialized world has been hit by the most severe economic crisis since the 1930s. Stock markets tumble, countries have to consider bankruptcy, and companies foreclose. But in the wake of the crisis follow not only fiscal, but also social problems. For example, high numbers of older workers had to be laid off and many of them remain unemployed until they retire. This lowers their pension benefits. Moreover, these older people sometimes drain their private pension funds or sell property to balance out the loss of income. While such actions increase the amount of available funding on the short run, they might simultaneously increase the poverty risk on the long run. This presentation studies the

development of old age poverty in the wake of the economic crisis. It investigates amount and composition of older people's wealth and income over the time period from 2004 until 2010. In doing so, it compares the situations in Germany and the United States. Germany stands for a country where the state strongly intervenes to protect older people from poverty, whereas the United States represent a country where such intervention is scarce. The analysis utilizes longitudinal data from the German Socio-Economic Panel Study and the US American Health and Retirement Survey. The findings elucidate the situation of older people in times of economic crisis, and they reveal needs for political intervention.

## How Activate and why Marginalize? Manifest and Latent Functions of UTAs – the Polish Case.

Paulina Świątek, Jagiellonian University, Cracow | [paulina.swiatek@poczta.onet.eu](mailto:paulina.swiatek@poczta.onet.eu)

Universities of Third Age (UTA) are one of the most popular forms of continuing social and intellectual activity in retirement. Currently, only in Poland there are almost 350 UTA, which constitute an important form of spending free time for a constantly growing group of seniors. They perfectly fit into the promoted in recent years, trends of active aging and lifelong education. Without a doubt, UTA are designed for seniors activation. Certainly, they help old people maintain intellectual activity and build interactional networks. Rarely is noted that in a less visible way they may work for the marginalization of seniors. Examples of such marginalization may be: specific subject of class, which focuses almost only on the problems stereotypically linked with aging, isolation of seniors from other age groups, lack of adaptation classes and buildings to the various dysfunctions that old age brings with it

(for this reason it seems that these classes are only for healthy and efficient seniors, and therefore, may marginalize those who need activation the most). Key research questions focus not only on real activating potential of UTA, but also about the other side of such institutions, which is special kind of marginalization of the elderly. Answering these questions is particularly important in the context of an increasing number of elderly people in Polish society. Empirical material was gathered by the in-depth interviews with UTA students and lecturers, participant observation and data analysis. Triangulation of research methods can be presented a comprehensive analysis of this phenomenon. Description of education service market provided by UTA will be made on the example of Polish big and small cities and rural areas.

## Revisiting and Revising the "Structural Lag"

Pirjo Nikander, University of Tampere | [Pirjo.Nikander@uta.fi](mailto:Pirjo.Nikander@uta.fi)

In 1987, Mathilda Riley, a sociologist, coined the concept 'structural lag' to characterise on-going dynamics in ageing societies. The term refers to the mismatch between the drastic changes concerning the ageing process on the one hand, and the numerous social structures, norms and cultural images that still lag behind these ongoing, global transformations. Further developed by Riley and her colleagues in 1994, the structural lag was originally defined as a trend marking changes across the human lifespan. In this paper, I examine the dynamics of the structural lag with a special focus on later life and the 50+ population in Finland. Key to the inquiry is to explore how on-going socio-

demographic trends, the increasing longevity, plasticity and diversity of ageing populations clash with societal, institutional and organizational arrangements that still build on outdated, relic and monolithic notions of ageing, decline and disability. The paper treats age limits and strict age categories as cultural, textual and interactional devices of establishing difference and distinction between individuals and groups. Second, the paper focuses on how to best operationalize and use structural lag as a heuristic concept that also taps into and makes visible the diverse dynamics and practices of everyday ageism.

## 04RN01 - Ageism

Chair(s): Anita Tisch (Nürnberg)

### Why Do you Have to be Old to be a Superstar Artist in the Contemporary Art World Today ?

Alain Ph. Quemain, Université Paris-8 | [aquemain@univ-paris8.fr](mailto:aquemain@univ-paris8.fr)

Although art historians tend to consider that contemporary art emerged just after the end of the Second World War, curators generally agree that it appeared in 1969 with the seminal show "When Attitudes Become Forms". Exactly at the same time, a German economic journalist with strong concern for contemporary art created a ranking, the *Kunstkompass*, in order to try and objectivate the visibility and success of the top 100 contemporary artists in the world. Since 1970, this ranking has been published nearly yearly which makes it possible to observe and analyze the transformations not only of the instrument, but more importantly, those of its results. In this presentation, we will explain how the *Kunstkompass* is built and what its analysis

over more than 40 years can tell us about the transformations of the contemporary art world in terms of age. We will show that during that period of time, although the most recognized artists could be as young as slightly more than 20 years old in 1970 (!), the most successful artists have constantly aged over time. Today, a star artist is a mature one not to say an old one as our figures will show. After analyzing the previous results that are based on quantitative analysis, we will try and analyze the influence of age in the contemporary art world through the results given with qualitative methods and the in depth or informal interviews that we made with decision makers in the contemporary art world.

### The Dog that Didn't Bark? The (Non)Politicization of Age Discrimination in Relation to the Enactment of Anti-Discrimination Laws in Finland and Sweden in the 2000s

Mikael Nygård, Åbo Akademi University | [mikael.nygard@abo.fi](mailto:mikael.nygard@abo.fi)

Fredrik Snellman, Umeå University | [fredrik.snellman@socw.umu.se](mailto:fredrik.snellman@socw.umu.se)

The introduction of anti-age discrimination legislation in Sweden (2009) and Finland (2004) can in many ways be seen as important steps towards a more just society. Both these amendments were set in motion by the EU directives (2000/43/EC and 2000/78/EC) on anti-discriminatory policies in order to enhance social inclusion and raise the overall employment level of EU citizens. This paper analyses the politicization of age discrimination on the national policy-arena by scrutinising how governments as well as MPs in Finland

and Sweden, respectively, debated on this particular issue during the legislative implementation of the EU directives. More specifically, the aim is to assess whether, and if so, in what ways age discrimination was constructed as a problem, and what policy measures were presented in order to rectify this particular problem. The results show that although age, among other things, was posed as a thinkable ground for discrimination in both countries – focussing specifically on the young people, older workers as well as retirees – the

documents and debates did not elaborate in detail on this problem (e.g. the causes and effects). For instance, the legislative process was not anchored in a scientific debate on age discrimination and ageism. The fact that the dog didn't bark, to paraphrase Sir Arthur

Conan Doyle, should therefore not be seen as evidence of a non-existent political controversy of age discrimination. Rather it suggests that the real controversies are to be found on other arenas of the political system than the arena analysed in this paper.

## Is Old Age Stigma?

Gražina Rapolienė, Vilnius University | [g.rapoliene@gmail.com](mailto:g.rapoliene@gmail.com)

„What means to be old? What is ageing identity in Lithuania?“ – questions raised in recently defended dissertation, based on analysis of media texts (N=1106), qualitative interviews with elderly (N=24) and ESS Round 4 data. The ageing identity both in Lithuanian public discourse and by older people themselves is associated with chronological age and constructed negatively, relating ageing to the loss of social status, social roles (except family) and value, also to the health decline. The dominant ageing identity theories and the concept of reflexive self of A.Giddens poorly explain the old age identity in today's Lithuania. More suitable for this purpose is E.Goffman's

stigma concept. Old age in Lithuania is stigma: verbal praise of older people, high assessment of their morals and polite declaration of respect conceals intolerance, disregard and discrimination on the behavioral level. In everyday interactions old age stigmatization is manifested by denial of old age, by marginalizing behavioral norms, direct and indirect age discrimination, institutionalized in private and public structures. The old age stigmatization and discrimination in Lithuania is stronger than in advanced European countries, and its level is close to other post-communist and in Mediterranean countries.

## Negative Attitudes towards Older Persons in the Labour Market: the Case of Poland

Jolanta Perek-Bialas, Jagiellonian University, Cracow | [jperek@sgh.waw.pl](mailto:jperek@sgh.waw.pl)

Patrycja Antosz, Jagiellonian University, Cracow | [antosz.patrycja@gmail.com](mailto:antosz.patrycja@gmail.com)

Justyna Stypinska, Freie Universität, Berlin | [Justyna.stypinska@fu-berlin.de](mailto:Justyna.stypinska@fu-berlin.de)

Not only employers but in general the Polish society – especially in times of economic slowdown – perceives older workers in a negative manner. Already in the mid 90's the WVS showed that in the period of high unemployment more than 70% of Poles agreed that older people should be forced to retire. At the end of 2011, a unique representative survey was carried out in Poland (n=1715), which allowed to analyze attitudes towards older persons and workers. Factors including individual characteristics of respondents responsible for particular negative opinions

about the ageing workforce were identified. To examine the factors shaping the attitudes towards older workers an overall scale of ageism was invented. It enabled controlling for general attitudes towards the aging workforce and made identification of individual characteristics that influence attitudes towards functioning of older workers in the labour market possible. Among the potential factors education and gender proved to be statistically significant. Compared to the WVS (mid. 90's) percentage of Poles who agreed that older workers should be forced to retire in times of

unemployment decreased by 20%. Since both researches were carried out in a period of economic crisis, a question about other factors influencing attitudes towards the older persons in the labour market arises. Latest data shows that those attitudes are driven not only by

general perception of older people but also by socio-demographic characteristics of individuals. Presented analysis call for international comparisons in order to determine the universality of observed patterns.

## 05RN01 - Care (1)

Chair(s): Clary Krekula (Karlstad)

### Trajectories in Use of Informal and Formal Care: Results from the Longitudinal Aging Study Amsterdam

Marjolein I. Broese van Groenou, VU University, Amsterdam | [m.i.broesevangroenou@vu.nl](mailto:m.i.broesevangroenou@vu.nl)

Dorly Deeg, VU Medical Centre, Amsterdam | [djh.deeg@vumc.nl](mailto:djh.deeg@vumc.nl)

The use of care in later life is assumed to follow a general path: starting with acute care (GP, medical specialists), followed by the use of informal care, social care (e.g. home adaptations), professional home care and ending with residential care. Given the foreseen changes in long term care allocation, it is important to know under which conditions older adults make the transition to professional long term care. There is limited empirical evidence regarding how many different care trajectories exist among older people and how variations in care trajectories reflect different trajectories in health and social factors. Using data from four waves (1998-2008) of the Longitudinal Aging Study Amsterdam, we examined how many different care trajectories are present in a sample of 1768 persons aged 65-plus at baseline. We

distinguished seven hierarchical forms of care: none or only GP, specialized acute care, informal care, social care (home adjustments, meal services, volunteer help), professional domestic care, professional personal care at home, and residential care. Using cluster analysis and data from four waves, we calculated six different trajectories in care use: 1) stable low levels of care, 2) increased usage of informal and then social care, 3) stable levels of social care, 4) increased levels of social and then professional home care, 5) heavy use of professional home care and transition to residential care, and 6) three-year mortality with/without use of care. Regarding their psychosocial and health characteristics, the six groups had clear distinct profiles. Implications for long term care policy are discussed.

### Elderly Carework as Body Work: Experiences of Paid and Unpaid Careworkers in Turkish Context

Yelda Ozen, Yildirim Beyazit University, Ankara | [yeldaozen73@yahoo.com](mailto:yeldaozen73@yahoo.com)

This study aims to understand elderly carework practice at home in Turkish context

by conducting a qualitative research based on experiences and perceptions of family

caregivers, paid careworkers, and nurses. Fieldwork was conducted in Ankara by interviewing with 19 carers. In the study, carework is conceptualized within the scope of body work. In Turkey, body work and/or carework has not been much studied and the existing ones have not approached the issue sociologically. Instead, elderly care is commonly approached medically or from the social work perspective with paying attention to its policy aspect. The main questions of the study are: how carework practice is performed; which social and cultural processes are influential and which actors plays role in management of care; how ageing, the aged body, elderly, and carework at home are conceptualized by careworker and; how carework experiences of paid careworkers,

nurses and family caregivers differ. It is founded that the distinction between public-private space as locality of carework is blurred among family caregivers and paid careworkers. However, nurses approach the locality as a workplace/hospital room. It is observed that they adopt medical discourse by emphasizing using techniques when mentioning bodily care of elderly. Among family caregivers and paid careworkers, infantilization of the elderly are common in talking about bodily duties like bathing and cleaning. The content of carework duties depends on the cared's health and disability and can change over time. Among the unpaid family caregivers, there is tendency to be reluctance to talk about the body, aged body, and carework.

## Contact and Cooperation between Informal and Formal Caregivers of Frail Older Adults

**Marianne Jacobs**, VU University, Amsterdam | [m.t.jacobs@vu.nl](mailto:m.t.jacobs@vu.nl)

**Marjolein I. Broese van Groenou**, VU University, Amsterdam | [m.i.broesevangroenou@vu.nl](mailto:m.i.broesevangroenou@vu.nl)

**Peter Groenewegen**, VU University, Amsterdam | [p.groenewegen@vu.nl](mailto:p.groenewegen@vu.nl)

**Aim:** To describe and explain contact and cooperation between informal and formal caregivers in frail older adults' care networks by involving older adult, care relation and care network characteristics. Quality of care experienced by the older adult is considered as a result of contact and cooperation between different types of caregivers. **Methods:** 74 community dwelling older adults with both informal and formal care are included. The older adults identified the caregivers who helped them with five different types of tasks. For each identified caregiver information is collected concerning relation (family/neighbor/organization), care intensity, contact with the other identified caregivers and judgment on the cooperation between different types of caregivers. **Results:** The older adults identified on average 3,0 informal and 5,8 formal caregivers. In 70% of the 525 potential

relations no contact existed between informal and formal caregivers. There was more often contact when care networks were smaller, informal caregivers were more intensely involved and formal caregivers performed more types of tasks. Friction between informal and formal caregivers seemed to be related to a lack of timely and accurate communication. Older adults gave a higher mark to the received care when there was more contact in the network and when they experienced good cooperation. **Discussion:** Smaller teams and less task differentiation for the formal caregivers could lead to more contact and cooperation between informal and formal caregivers. A central dyad consisting of an informal and formal caregiver could be needed to enhance cooperation, especially when older adults are not capable themselves to coordinate the care provision.

## **‘I Care as if she Was my Grandmother’ – Filipino Nurses Coping with Deskilling, Discrimination and Ethnic Hierarchies in Finnish Elderly Care**

Lena Näre, University of Helsinki | [lena.nare@helsinki.fi](mailto:lena.nare@helsinki.fi)

European societies are facing the crucial question of who will provide care for the ageing populations in the future. In many European countries the answer has been migrant worker force, and Finland has recently started to follow suit. Since 2007, private companies have been recruiting registered nurses from the Philippines to work as practical nurses in Finnish elderly care homes. The recruitment is based on a postcolonial logic according to which the Philippines is perceived an endless source of labour force for the needs of ageing Finnish society. This paper analyses how the Filipino nurses cope with the deskilling

inherent to the nurse recruitment, with the everyday discrimination and ethnic hierarchies they encounter in the work places, and significantly, how they find dignity in their everyday work (Stacey 2005). A common strategy is to create a ‘moral hierarchy reversal’ according to which Filipino nurses are better nurses because they care as if the elderly residents were their own grandparents, while the Finnish nurses care for money. The age-old discourse of care as ‘labour of love’ is then given new meanings in the global hierarchies of care work.

## **06RN01 - Health, Mortality and Quality of Life in Older Age**

Chair(s): Sara Arber (Surrey)

### **Fourteen Year Changes in Successful Aging and Subjective Well-Being**

Marja J Aartsen, VU-University, Amsterdam | [m.j.aartsen@vu.nl](mailto:m.j.aartsen@vu.nl)

Jessica Fagerström, Abo Akademi University | [jefagers@gmail.com](mailto:jefagers@gmail.com)

**Objective:** To estimate trajectories (1992 – 2006) of domains of functioning rated by older adults as being important for successful aging; to examine if demographic variables account for individual differences in trajectories; and study if changes in the different domains are related to change in general well-being. **Method:** Using data from The Longitudinal Aging Study Amsterdam (n= 1257) latent change models for domains of successful aging were estimated. Each trajectory was regressed on demographic variables to examine if these explained individual differences. Parallel growth models were fitted to determine associations between changes in successful aging domains and change in general well-being. **Results:** On average

general well-being was stable over time, whereas there was a decline in all other domains of successful aging. There were individual differences in all domains. Demographic variables explained some of the differences in the level of successful aging, but rate of change was less well predicted. Changes in successful aging domains were correlated to change in general well-being. **Discussion:** Subjective and objective aspects of successful aging are correlated over time, however many domains only modestly. A developmental and lay-based perspective is fruitful ground for researchers interested in better understanding the elusive and much debated concept of successful aging.

## Engaging in Active Retirement Associations in Ireland: Contribution to Well-Being of Participants and to Society

Aine Ni Leime, National University of Ireland, Galway | [aine.nileime@nuigalway.ie](mailto:aine.nileime@nuigalway.ie)

Aoife Callan, National University of Ireland, Galway | [aoife.callan@nuigalway.ie](mailto:aoife.callan@nuigalway.ie)

Caroline Nolan, National University of Ireland, Galway | [aroline.nolan@nuigalway.ie](mailto:aroline.nolan@nuigalway.ie)

Ronan Healy, National University of Ireland, Galway | [ronan.healy@nuigalway.ie](mailto:ronan.healy@nuigalway.ie)

It is increasingly recognised by international policy organisations that non-governmental organisations that promote older people's participation in society may play an important role in enhancing their physical and mental well-being. Research indicates that volunteering and participating in older people's organisations enhances the well-being of older people and their level of social engagement. However, there remains a relative lack of research which explores the impact of such participation on individuals' quality-of-life and contribution to society. This paper discusses the findings of a multi-method research study conducted with a non-governmental organisation in Ireland, Active Retirement Ireland (ARI). It assesses the impact of volunteering and participation in ARI on the well-being of older volunteers and participants. ARI is a national organisation with

23,000 members that encourages the involvement of older people in a wide variety of activities – including social, physical, and arts activities. The mixed methods study involves a questionnaire sent to 541 chairpersons and 341 members to assess the level and impact of involvement for volunteers and members; five focus groups and 30 interviews were conducted with older participants. The latter allow for an exploration of the processes by which participants are impacted and identifies barriers to membership. Comparisons are made between outcomes for ARA members and the wider population of older people in Ireland. Key elements that may lead to a healthier ageing are identified and volunteering time is costed. Quantitative findings contribute to informing national policy on healthy ageing.

## Health Promoting Long-Term Care – Results from a Pilot Project in Residential Aged Care Settings in Vienna, Austria

Karl Krajic, Ludwig Boltzmann Society, Vienna | [karl.krajic@lbihpr.lbg.ac.at](mailto:karl.krajic@lbihpr.lbg.ac.at)

Martin Cichocki, Ludwig Boltzmann Society, Vienna | [martin.cichocki@lbihpr.lbg.ac.at](mailto:martin.cichocki@lbihpr.lbg.ac.at)

Viktoria Quehenberger, University of Vienna | [v.quehenberger@gmx.at](mailto:v.quehenberger@gmx.at)

Research indicates that many organisations offering residential aged care have difficulties providing a setting that enables good quality of life – for residents, staff and other stakeholders like residents' relatives. Sociology has contributed to our understanding of residential aged care as a problematic institution with theoretical figures like Goffman's "Total Institution" as well as with qualitative and quantitative empirical research.

But research also indicates that there are wide variations in the way tasks are interpreted, services are delivered and in the outcomes achieved. A Viennese research institute has developed specifications for the health promoting settings approach in residential aged care. Building upon work of the International Health Promoting Hospitals and Health Care Network of WHO, problem analyses and reform concepts for aged care

and two expert studies (Austria and Germany), a two-year pilot project was conducted 1/2011 – 03/2013. “Health has no age” involved three units (300 residents each) of a large provider in Vienna, investigating the potential of settings-oriented health promotion. Building upon a needs assessment (residents, staff, relatives), a strategy development has been initiated. Issues were identified, an agenda was set, several health promoting interventions were

planned and some carried out. A specific intervention targeting residents for the promotion of mobility was set up as a randomized controlled trial including 300 participants. The paper will report results and experiences, describing progress as well as delays and discuss from a sociological perspective what can be learned about potentials and contradictions of a health promoting settings approach in this context.

## **The Raising of Life Expectancy in Southern Europe and the Importance of Older Ages: A Cross-Sectional Comparison between Portugal, Spain and Italy.**

Filipe Ribeiro, University of Évora | [flipjribeiro@hotmail.com](mailto:flipjribeiro@hotmail.com)

Maria F.F. Mendes, University of Évora | [mmendes@uevora.pt](mailto:mmendes@uevora.pt)

It is well known that the increase in human longevity is only possible due to significant improvements in health and consequent reductions in mortality levels. This improvement can be explained by two main phases, firstly were the huge reductions in mortality at younger ages, secondly and more recent (second half of the last century), were the reductions in mortality at older ages, i.e., specifically after age 65. Now the high levels of mortality of the past are being experienced later in life. Nevertheless, these reductions are not following the same rhythm of decrease across different causes of death, from which circulatory system diseases and neoplasms are assuming the most important role, countries, ages, or even sexes. All these

mortality improvements and consequently increase in human longevity have massive consequences in population ageing, but it's true that we are reaching older ages in better physiological conditions. Once that mortality reduction is consequence of better health, it is our goal to analyze the impact of these improvements across the south of Europe, more specifically in Portugal, Spain and Italy, trying to understand what contrasts between those countries and as well what possibly connects them. We also intend to understand the contribution of the different causes of death in what concerns to the increase in the average length of life for each country, identifying specially at older ages, which ones stand out.

## **07RN01 - Social Support**

Chair(s): Pirjo Nikander (Tampere)

### **Development of Social Relationships and Informal Support Following Widowhood**

Daniela Klaus, German Centre of Gerontology | [daniela.klaus@dza.de](mailto:daniela.klaus@dza.de)

Widowhood is fairly common in later life, especially among women. Losing the spouse

not only demands for coping with bereavement. It is also harmful since usually the main

contributor of companionship and informal support drops out of the social network. So far, research was mainly concerned with the consequences of widowhood for health. But little is known about the social adaptation process following the event of widowhood. Due to the high relevance of supportive relationships for the wellbeing, this study aimed to investigate the development of close social relationships and informal support following widowhood. Longitudinal data of the German Ageing Survey (DEAS) were applied (1996-2011). A sub-sample of 4.452 married respondents aged between 40 and 85 years in their baseline wave was selected. Around six percent of them experienced the event of widowhood during the period under

observation. Panel regressions produced three main findings: First, an increase of the number of close relationships beyond the spousal relationship and of the extent of received support following widowhood was found. Second, the increase is, however, of temporary nature: About two years after becoming widowed the size of relationships and support started to decrease. Third, even after controlling for a number of potential predictors education-specific rates of increase are uncovered. The findings suggest that the deceased spouse's substitution is limited in time and is dependent on the educational background. Social integration in particular is at stake for the low educated and in the long run.

## **What are Weak Ties Good For? The Role of Neighbours and Acquaintances in Older Germans Social Support Networks**

Julia Hahmann, University of Vechta | [julia.hahmann@uni-vechta.de](mailto:julia.hahmann@uni-vechta.de)

Research on social support networks highlights the necessity and relevance of strong relationships, for example among family members and close friends, for everyday contentment and its (positive) influence on well being and health. Weak ties were rarely studied. Even worse, already the measurement instruments focus on strong ties: exchange-based name generating instruments in social network analysis refer frequently to situations that most likely result in the description of inner circles of social networks. In consequence, the importance of weak ties will be underestimated. For that reason, qualitative studies are needed to identify the importance of these relationships. Valid measurement instruments for quantitative studies may be developed based on such qualitative research. This paper seeks to sharpen the perspective on

neighbours, acquaintances, and co-workers and their role in everyday life of older adults. 37 interviews with older men and women aged 52 to 81 and living in the area of Aachen (Germany) were analysed to understand the link between relationship types on the one hand and social support networks on the other hand. For some types weak ties are important support-givers regarding social companionship or specific kinds of instrumental support, e.g. a ride to the doctor. Other types actually replace close friends by weak ties due to a high spatial mobility. The types and including information (hierarchy of social roles, subjective definition of chosen vs. given ties, life course events) allow for a deeper understanding of the variance in social support networks and show that some life course events result in rather powerful "weak" ties.

## Social Networks, and the Strength of Weak Ties in Providing Informal Support and Care to Older People : a Survey and Theoretical Analysis

Anne E. Rogers, University of Southampton | [a.e.rogers@soton.ac.uk](mailto:a.e.rogers@soton.ac.uk)

Ivaylo Vassilev, University of Manchester | [ivaylo.vassilev@manchester.ac.uk](mailto:ivaylo.vassilev@manchester.ac.uk)

Helen Brooks, University of Manchester | [helen.brooks@manchester.ac.uk](mailto:helen.brooks@manchester.ac.uk)

Anne Kennedy, University of Southampton | [a.kennedy@soton.ac.uk](mailto:a.kennedy@soton.ac.uk)

Much has been written about the work of social networks associated with health well being Yet relatively little is known about the role weak ties play in the context of providing informal care and support compared to professionally delivered care for older people. We conducted a mixed-methods study exploring the role of strong and weak ties in the different types of work associated with chronic illness management of people aged mainly 65 years of age and above. This involved a quantitative questionnaire with a nested qualitative section which was conducted by researchers in face to face interviews. The main perceived difference between weak ties and other relationship types was evident in descriptions of the more 'unconditional' support provided and the idea of reciprocity within relationships. Notions of burden, guilt and of feeling unable to reciprocate adequately within human

relationships were not as apparent in weak tie compared to strong tie descriptions of relationships and the absence of this burden was highly valued. Weak ties were most implicated in emotional work (ranked only behind partner/spouses and other close family) but also in practical work (security and protection, body work) and to a lesser extent biographical work. Weak ties also appeared to have a positive mediation effect on social interactions. This mediation of social relationships was not limited to close personal relationships, but also extended to relationships with acquaintances and the local community as well as providing opportunities for their owners to forge new relationships. The results suggest that weak ties have the potential to usefully be included in discussions about formal and informal support associated with a chronic illne

## Volunteering Activities from and for Elderly Migrants in Germany

Claudia Vogel, German Centre of Gerontology (DZA) | [claudia.vogel@dza.de](mailto:claudia.vogel@dza.de)

Julia Simonson, German Centre of Gerontology (DZA) | [julia.simonson@dza.de](mailto:julia.simonson@dza.de)

Volunteering is part of successful ageing of individuals and societies. On the societal level, elderly volunteers provide e.g. services for the elderly which could not be financed neither by the welfare state nor the economy. On the individual level, volunteering is expected to be beneficial for both, volunteers and recipients of support provided by volunteers and volunteer organisations. This should hold true for the population in general, that is for migrants and non-migrants likewise. However, migrants seem to be less likely to participate in

voluntary activities than autochthonous citizens, although volunteering is found to correlate with integration and well-being throughout the life-course and in old age. In Germany, the share of migrants entering retirement increases steadily. On the basis of the German Survey on Volunteering, conducted as telephone survey in 1999, 2004 and 2009, we compare the patterns of participation among elderly migrants and non-migrants in Germany. Findings indicate that indeed, the overall participation rate among older

migrants in 2009 is still somewhat lower than average. However, this is true only for activities in traditional clubs and organisations, but not for activities organised by projects and neighbourhood initiatives. In addition, elderly migrants more often volunteer to support

other migrants directly. Measures to increase participation rates in volunteering therefore should take into account the high potential of the voluntary activities provided from elderly migrants for all and for the migrant population in particular.

## 08RN01 - Norms, Values and Images in the Field of Ageing (1)

Chair(s): Jenni Spännäri (Helsinki)

### Intertwined Notions of Older People and the Nation/State as Community

Magnus Nilsson, Karlstad University | [magnus.nilsson@kau.se](mailto:magnus.nilsson@kau.se)

During the parliamentary elections in 2010, the far right party the Sweden Democrats aired a campaign film in which a white older woman with a walker tried to race a veiled Muslim woman running with a pram. The white older woman was quickly outrun and the Muslim woman won. The metaphor of the race was used to articulate a conflict between the welfare of ethnically Swedish older people and immigrants. How come it is possible, and even deemed gainful, to use older people in far right claims making in this way? What notion of "older people" and their relation to the

"nation/state" does the campaign film rest on? What is the relation between the Sweden Democrats use of the category and mainstream ways of understanding and representing the category? This paper investigates the different ways that the category "older people" are used as a rhetorical tool in political claims making. Specifically, the focus is on how notions of older people and the nation/state as an imagined community are intertwined in the public sphere.

### Media Representations of Age: No Country for Old Men

Daria Krivonos, Centre for Youth Studies, Higher School of Economics, St. Petersburg | [daria.krivonos@gmail.com](mailto:daria.krivonos@gmail.com)

The present paper analyzes construction of age in Russian television media, focusing on age groups that are problematized on TV and contexts that frame these groups. Construction of knowledge about age(ing) takes place in media through labeling certain age groups as problematic: ageing people are marginalized through the discourse of the "burden" for working people as well as exclusion from the masquerade of youth images in visual culture. Despite the spread of new media, television and a ritualized practice of watching it still

remain one of the main sites of cultural production. 56 hours of prime-time audio-visual material were used as empirical material for the study. The analysis showed that the dominant line of age construction is the opposition between youth and adulthood as active agents and childhood and elderly population as dependent and care requiring. Body becomes the central mean to transmit the meanings in audio-visual messages. Visual representations are saturated with the images of "ageless" bodies through the

advertisements of age-defending cosmetic and pharmacological products. Narratives produced in media flows depict ageing through the loss of independent adult status that causes objectification of older people. Images of ageing are also gendered. A woman in age is represented as a care-giving “grandmother” deprived of the body capital while men are

depicted more through the material capital like in the advertisements of banks, for example. Despite the growing number of ageing people as well as theories on liberalization of ageing, cultural representations still reconstruct the culture of youthfulness creating exclusively the space of frailty and dependency for old people.

## Nonagenarians' Views about the Status of Older People in Society

Kirsi T. Lumme-Sandt, University of Tampere | [kirsi.lumme-sandt@uta.fi](mailto:kirsi.lumme-sandt@uta.fi)

Public discourses have the power to shape societal understandings of old age as well as the identity of older people themselves. This presentation focuses on nonagenarians' views about the status of older people in society. The data consist of life story interviews with 45 community-dwelling nonagenarians in Finland. Many of the interviewees had difficulty forming an opinion on the question of the status and appreciation of older people in society: this was something they rarely had thought about. This may be interpreted as an indication that the issue was not a problem for them. The treatment and appreciation of older people were discussed in varied contexts: social and health care, being visited by children and younger people's manners. Roughly half of the respondents answered by reference to their

own experiences, most of which were positive. The other half answered the question in more general terms and described older people as 'the other', frail and as in need of care. The 90-year-old respondents themselves did not seem to belong to that group. They referred to public debate and based their negative opinions on newspaper and TV coverage. Our understanding of the world around is largely shaped by public discourses, and even at age 90 opinions about the status of older people in society may be influenced by headlines emphasizing the poor state of elderly care. The respondents were pleased to be in the position to continue to live in their own homes rather than have to depend on municipal care services, even though they personally had no negative experiences.

## "Young Pensioners" in Poland. The New Images and the Old Social-Cultural Practices Related to Taking Retirement

Lukasz Krzyzowski, AGH University of Science and Technology, Cracow | [lkrzyzowsk@gmail.com](mailto:lkrzyzowsk@gmail.com)

Wojciech Kowalik, AGH University of Science and Technology, Cracow | [wojtekkowalik@tlen.pl](mailto:wojtekkowalik@tlen.pl)

Recent works on the new pension law in Poland provoked a moral panic and sparked discussions about the role of older people in society and a family. In the Internet and press debate the main emphasis is put on the consequences of an aging society from the perspective of the challenges of the social policy. In this discourse the extension of a work

time would reduce the social costs of demographic changes. Parallel, we can see scratched image of a pensioner departing from stereotypical roles and cultural patterns associated with this social category. For now, the role of the elderly is still very important at the level of a family life. Biographical analysis of seniors show their commitment to a family

and a large activity in field of a care of their grandchildren. In this area is revealed a divergence of discourses at the macro- and micro-social levels. While in the press discourse the rationality resulting due to the lack of institutional forms of support to seniors means a longer work and capital accumulation in an old age, we consider rationality in categories of helping their adult children to care for their grandchildren. The researched elderly count on “repay” and a help from their adult children in a case of their potential health

and financial difficulties. In this paper are showed the differences in the perception of older people at different levels of the organization of a social life. We will also present one of the retirement strategy in Poland, which is the strategy of caring for their grandchildren in the context of a broader discussion on changes in the labour market. The paper is based on both quantitative data as well as the qualitative ones which come from the field studies conducted in 2012.

## 09RN01 - Senior Markets and Consumerism in Older Age

Chair(s): Nele Tanschus (Vechta)

### Clothing, Embodiment and the Cultural Turn

Julia Twigg, University of Kent | [j.m.twigg@kent.ac.uk](mailto:j.m.twigg@kent.ac.uk)

The paper explores the role of consumption in the constitution of age, focussing on clothing and dress. In doing so it engages with the broader significance of the Cultural Turn for the study of ageing. Clothes intersect with key issues in gerontology, in particular ones relating to the body and its cultural expression. Clothes, for example, are part of how social difference is made manifest. Though we are accustomed to this in relation to forms of social difference like class and gender, it applies to age also. Exploring the ways clothes

are age ordered allows us to interrogate age as a form of identity and a social category. It also allows us to examine arguments about change, particularly though debates on the reconstitution of ageing and the potential role of consumption culture in this. The paper draws on an ESRC funded empirical study that explored the views and experiences of older women and clothing retailers, published in 2013 as *Fashion and Age: Dress, the Body and Later Life*.

### Consumption in Retirement: Implications for Environmental Sustainability

Susan H Venn, University of Surrey | [s.venn@surrey.ac.uk](mailto:s.venn@surrey.ac.uk)

Kate Burningham, University of Surrey | [K.Burningham@surrey.ac.uk](mailto:K.Burningham@surrey.ac.uk)

Kate Burningham, University of Surrey | [K.Burningham@surrey.ac.uk](mailto:K.Burningham@surrey.ac.uk)

We are repeatedly reminded of the challenges of a global ageing population, with forecasts of failing pension plans, cultural instability and

heavy burdens on health and social care. We are also reminded that climate change is one of the most challenging issues we face today

with calls for everyone to adopt more 'sustainable lifestyles'. Rarely, however, do the implications of these two challenges intersect, unless to portray older people as vulnerable and at risk of extreme weather conditions on the one hand, or as 'greedy geezers' engaging in unsustainable levels of consumption to the detriment of younger generations on the other. In this paper we seek to contribute to the debates on the implications of an ageing population on the environment by assessing the validity of the rhetoric accompanying the consumption patterns of retiring 'baby boomers' through an understanding of the reality of their everyday grocery shopping and

cooking practices. In-depth interviews with 40 men and women in four locations in the UK were conducted at three points in time, one prior to retirement, one following retirement and a final interview eight months later (n=120 interviews). We suggest that retirees' grocery shopping and cooking practices were governed by three factors (a) increased access to time and loosening of daytime structure and routine (b) the reification of thrift as a virtue, and (c) the influence of caring roles and identities on consumption choices. Throughout we will reflect on the implications of these factors in terms of environmental sustainability.

## From Home to Shop: Logistic Equipment of the Elderly in an Urban Environment

Helene Brembeck, University of Gothenburg | [helene.brembeck@cfk.gu.se](mailto:helene.brembeck@cfk.gu.se)

Lalanne Michele, CERTOP | [lalanne@univ-tlse2.fr](mailto:lalanne@univ-tlse2.fr)

This paper introduces a neglected type of everyday mobility; what we call consumer logistics; the movement of purchases by the consumer from store to home. It presents an ethnographic study focusing how consumer logistics is affected by life phase, specified as "what role does container technologies play in doing-being old". When getting older, physical strength eventually declines. Spine and joints object and you cannot go on carrying as much as you used to. Balance, sight and hearing are impaired. Performing routine activities of food supply in the urban city-center gradually becomes more difficult. In fact, consumption activities, which are often daily, confront seniors with a double challenge: on the one hand, the management of the body, the containers (bags, shopping carts) and the

goods and on the other hand the management of this assembly and the technical mobility devices (public transportation, walkways, sites' accessibility). All of the seniors taking part in this study used various innovative tricks to compensate for the body's increasing weaknesses. A shoulder bag or a backpack was not only a practical carrier tool, but also a necessary relief for shoulders and arms that are no longer able to carry as much as before. The wheeler (caddie) was not just a practical relief for the body but could also act as a support for those who easily get dizzy and need to pause and have something to lean on for a while. More over walking in the street keeps you in touch with a broader network of relationships.

## Visual Representations of Care Work on the Websites of Polish Recruitment Agencies Targeting the German Elderly Care Market

Anna M. Kordasiewicz, University of Warsaw | [anna.kordasiewicz@gmail.com](mailto:anna.kordasiewicz@gmail.com)

There has been much debate about how to define the relationship between a care worker

and her/his employer or the person taken care of. It has been argued that the preferred

definition by workers themselves is one that centres on work (Anderson 2000). In contrast, “fictive kinship” appears to be the employers’ almost universal strategy, which is usually portrayed in the literature as an exploitative practice (Anderson 2000, Constable 2003, Lan 2006, McDowell 2006, Romero 1992 and Parreñas 2001). One may argue that the “work” definition is of a modern kind, while the “family” definition refers to a pre-modern social order. Recruitment agencies are recent modern institutions active on the domestic and care labour market and are a sign of the “modernization process” within this sector. The question is, to which definitions do these agencies make reference through their websites? Is it a modern “work” definition or rather a traditional “family” frame? Do they

support workers’ independence or do they rather strengthen the ideology of the family? Drawing on a piece of Polish-German Image-E research project (fieldwork and website analysis 2010-2011, independent website re-analysis 2013), this paper looks at the visual representations of care work on the websites of Polish agencies targeting the German elderly care market. The thesis of the paper is that, even though recruitment agencies are a modern labour market instrument, currently the prevalent visual representations of care work on their websites paradoxically support the traditional familial ideology rather than the professional frame. The agencies are leaning towards the employers’ interpretations and therefore align themselves with them rather than with the workers.

## 10RN01 - Biography, the Life-Course and Older Age (1)

Chair(s): Albert Banerjee (Toronto)

### Explaining and Predicting Loneliness amongst Age Groups in Europe

Keming Yang, University of Durham | [keming.yang@durham.ac.uk](mailto:keming.yang@durham.ac.uk)

Loneliness is a cause or a trigger of many mental and physical illnesses. Researchers of social gerontology, including authors of this paper, have long demonstrated the national and age variations of the prevalence of loneliness. However, publications that explicitly map out these variations and analyse them rigorously across a large number of nations remain rare. In this paper, I first of all describe such variations by using the data collected in the European Social Survey (Round 3 in 2006 and Round 5 in 2010). Then I try to answer the question why the ‘risk factors’ (or explanatory variables) found in the current studies could (or could not) explain and predict

loneliness. Further, as the prevalence of loneliness varies across nations, I explore some nation-level factors that may contribute to the explanation and prediction of loneliness. The major part of the analyses will answer two questions: (1) Do the commonly identified ‘risk factors’ explain ‘frequent loneliness’ (most, almost all and all the time in the past week) equally across nations?; (2) For each nation, do the same set of ‘risk factors’ hold the same predicting power over time from 2006 to 2010? Finally, I discuss the implications of the findings for academic research and policymakers.

## Older Adults' Lifelong Embodied Experiences of Leisure Time Aquatic Physical Activity in the United Kingdom

Adam B. Evans, University of Lincoln | [adevans@lincoln.ac.uk](mailto:adevans@lincoln.ac.uk)

Mike Sleaf, University of Hull | [Msleaf@hull.ac.uk](mailto:Msleaf@hull.ac.uk)

Aquatic physical activity has considerable benefits for older adults. However, participation rates remain low in the UK. Recognition of the importance of embodied and narrative elements of ageing has increased in recent times. Old age is considered a life stage interdependent with other, earlier life stages, rather than as a distinct period. This study used a figurational perspective to investigate older adults changing perceptions and embodied experiences of aquatic activity throughout their life courses. Perceptions were contextualized by completion of a literature review relating to the development of recreational aquatic activity in the UK. Participants were cognizant of changes in provision and envisaged purpose of aquatic activity during their lifetimes. Previous embodied experiences of aquatic activity contoured present perceptions and helped participants' rationalize their experiences in

the present context. Descriptions of positive early experiences emphasized the social and spatial context of aquatic activity. Also, negative experiences were recounted in which the olfactory and haptic elements of embodiment were described. Participants were able to recount detailed experiences of poor pool hygiene and threatening experiences of learning to swim during early experiences. The importance of support from family members in the pool environment was also outlined. The significance of lifelong experiences is recognized in relation to figurational principles, including the interweaving of long-term socialization and short-term, magnified moments and their effects on habitus development. The implications for physical activity provision in relation to the longitudinal development of older adults' perceptions are notable.

## "Will People Call me 'Grandpa', too?" – Understanding the Intersections of LGB Ageing and Childless/Childfree Ageing

Gerardo Zamora, (1) Universidad  
[g.zamora.monge@gmail.com](mailto:g.zamora.monge@gmail.com)

Publica de Navarra; (2) ETORBIZI |

Both voluntary and involuntary childlessness are increasing phenomena in Europe and other regions of the world. Currently, most LGBT older individuals aged 65 and older have no children. Childless/childfree and LGBT older individuals face particular challenges and live unique ageing processes. In fact, research has found commonalities and intersections between LGB ageing and childless/childfree ageing. In this paper, I use waves 1, 2 and 3 of the Survey of Health, Ageing and Retirement in Europe (SHARE) to build a frame to understand the situation and conditions of childless

individuals aged 50 and older in Europe. Then, I use this frame to explore discourses on ageing as a childless/childfree individual that emerge from 12 in-depth interviews with self-identified gay men aged 50 and older. Both LGB and childless/childfree individuals confront the heteronormative expectations of ageing, which are deeply linked to reproduction. I argue that childlessness is as pervasive as sexual identity (or behaviour) is with regards to the self and biography of individuals. This study can contribute to construct heteronormative assumptions when researching ageing and

inform policies to better approach and integrate diversity as a driver in policy-making.

## Tracing the Early Life Origins of Social Isolation and Loneliness in Later Life

**Mark McGovern**, Harvard University | [markemcgovern@gmail.com](mailto:markemcgovern@gmail.com)

**Sarah E Gibney**, University College, Dublin | [gibneyse@gmail.com](mailto:gibneyse@gmail.com)

**Erika Sabbath**, Harvard University | [esabbath@hsph.harvard.edu](mailto:esabbath@hsph.harvard.edu)

**Orla Doyle**, University College, Dublin | [orla.doyle@ucd.ie](mailto:orla.doyle@ucd.ie)

There is an established body of research in social epidemiology which links both health and emotional wellbeing to social contact and engagement. However, there is surprisingly little evidence on how differences in social engagement arise. It is not known, for example, whether existing social gradients in the prevalence of loneliness mirror social and economic gradients in childhood socio-economic status and health. This paper merges the existing, but separate, literatures on the lasting impact of early life conditions and social engagement. We use data from SHARE (the Survey of Health, Aging and

Retirement in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining contemporaneous information with retrospective life histories allows us to examine the life cycle determinants of social isolation in old age. We show that there is a strong association between childhood socio-economic status and loneliness, social engagement, and widowhood. We discuss the mechanisms through which these effects operate, with particular reference to assortative mating.

## 11RN01 - General Aspects of Ageing (1)

Chair(s): Claudia Vogel (Berlin)

### Design for All as the Response to the Challenges of Aging Society

**Grzegorz Gawron**, University of Silesia, Katowice | [ggawron77@interia.pl](mailto:ggawron77@interia.pl)

The aging process is great and unheard of in the past, challenge for governments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life. Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create friendly

environment for the elderly: social solutions conducive to maintaining an active lifestyle and innovative projects allowing for broad independent. The answer to this can be the concept of Design for All (DfA). According to the Stockholm Declaration, ratified in 2004, the aim for DfA is to create equal opportunities for all people to participate in all areas of life. Promoting the idea is therefore to adapt the environment to the needs of every members of the society. To achieve that objective, architecture around us, everyday objects,

services, culture and information – everything that is produced by the people and for the people – must be available and accessible for every person. The proposed speech will be a presentation of the idea of DfA as a response to the needs of an aging societies. The theoretical

analysis will be supplemented with the results of empirical research, which was carried out among about 500 people at the age of "55 +" representing the selected cities from Silesia Region in Poland.

## Population Ageing in a Life-Course Perspective: Developing a Conceptual Framework

Kathrin Komp, Umea University | [kathrin.komp@yahoo.com](mailto:kathrin.komp@yahoo.com)

Stina Johansson, Umea University | [stina.johansson@socw.umu.se](mailto:stina.johansson@socw.umu.se)

Population ageing is a global trend. It contests individual life plans, family arrangements, market structures, and the financial basis of pension schemes. Consequently, there is broad interest in understanding its root causes and effects. This presentation utilizes the life-course perspective to gain a more concise impression of population ageing. The life-course perspective suggests that individuals' experiences at an early age can influence decisions and behaviour at a later age. Thus, historical events and personal experiences in the past already set the course for today's demographic change. Moreover, the results of today's intervention in demographic change lie years or even decades into the future. Critical perspectives on the life-course stress the

variation in individuals' experiences and developments. They portend that general statements about live-courses oversimplify. Instead of a general statement, we need to adopt a differentiated view that accounts for life-course inequalities. This presentation introduces a conceptual framework for applying the life-course perspective on population ageing. First, it combines insight from demography and life-course research to develop this framework. Then, it explores which role social inequalities play in this framework. Subsequently, it explains how the social context modifies the framework. Finally, it discusses the scientific and practical implications of the insight gained.

## Organizational Commitment of Elderly Care Nurses

Carolyn Sachse, University of Vechta | [carolin.sachse@uni-vechta.de](mailto:carolin.sachse@uni-vechta.de)

The demographic trend in Europe and particularly in Germany results in challenges for the society. The consequence of extended life expectancy is an increase in the demand for elderly care. This demand cannot be met due to a lack of trained elderly care nurses (Afentakis/Maier 2010). Consequently these changes cause a competition for qualified personnel and bring the issue of organizational commitment into focus. The basic concept of commitment (Allen/Meyer 1990) distinguishes three components: affective, continuance and

normative commitment. These components are not mutually exclusive but rather concomitant. Presently, many homes for the elderly try to improve the work-life balance and job satisfaction of their employees. Nevertheless, it is questionable if these activities suit the employees' preferences and benefit the organizational commitment. So far, no specific study has been published. This paper looks at the influencing variables on Allen/Meyers organizational commitment model in the elderly care sector. The data

collection is being done in six nursing homes. Two interview groups will provide further insights: Firstly, nursing home managers will give background information about the human resources management of the organization. Secondly, problem-centred interviews with the elderly care nurses will focus on commitment variables from their point of view. These

perceptions will then be compared to the results of the first group. It is expected to identify groups with different antecedents based on the individual effects e.g. age, gender, working life and personal circumstances. These will then help to revise the current organizational commitment model.

## **"These Caregivers are Worth of Gold!" - Everyday Experiences of Project Care from the Perspective of Care-Receiver**

Iiris Lehto, University of Eastern Finland | [iiris.lehto@uef.fi](mailto:iiris.lehto@uef.fi)

The Finnish welfare state has been known for its friendliness towards care. During the last few decades the exercised neoliberal policy and the economic slowdowns has affected the public (formal) care sector in a crucial way. The contents of the municipal home care services provided for the older people have been pruned back to minimum. Tasks such as cleaning, cooking and assisting in outdoor recreation are no longer part of the provided formal care. One way to organize the needed care is to do it via state funded third sector projects. In my doctoral thesis in the making, I use the notion of "project care." The practiced care is based on short-term planning. I am interested in the everyday experiences of the care-receivers receiving this kind of semi-formal project care. I will open up the mundane realities the care-receivers encounters. What kind of caring

practices and habits do these encounters generate? What kind of pattern does the project care offer for the on-going crisis of care? My empirical data consists of interviews conducted in the homes of the care-receivers while the caregivers were performing their tasks. The sphere of influence of the project at hand is in Eastern-Finland, in a sparsely populated area whose population is growing grey. The care-receivers are older people in a situation in which they do not have sufficient amount of informal care available and their economic situation does not enable them to buy the needed care from the market sector providers. The caregivers employed by wage support are mostly middle-aged persons with no or little educational or working background of care work.

## **12RN01 - Ageing and Technology (1)**

Chair(s): Harald Künemund (Vechta)

### **Memory and Media: the Construction of a Generational Identity**

Denise Regina Stacheski, Pontifícia Universidade Católica do Paraná | [denisereginaastacheski@gmail.com](mailto:denisereginaastacheski@gmail.com)

Celiana Azevedo, Universidade Nova de Lisboa - FCSH | [celianaazevedo@hotmail.com](mailto:celianaazevedo@hotmail.com)

Corsten [1999] develops his comment on Mannheim by saying that the members of a

generation share not only a common background of experiences, but above all they share the consciousness that also the other members of the same generation share the same background. In this process, an element has special importance: the memory. The objective of this research is to discuss memory, media and generation. More specifically, how this relationship can influence in the construction of a generational identity (Aroldi, 2011). We tried to answer the following questions: how can people use the media as tool of construction of their collective identity? In which way can cultural and economic

differences among people from a same cohort interfere in the concept of generational belong (Aroldi, 2011)? This empiric work is based on a report collected in 2012 of six people born between 1940 and 1952. The methodology used was focus group (Kitzinger, 1995), an efficient way of inducing the process of "remembering", an essential way to analyze the concepts of generation unit and memory. As a result, we verified that it is unquestionable that the media assumes a relevant role inside this social process, where historical memories and the social communications are narrowly linked.

## **Facebook Generation 45+. How Social Network Sites Can Connect Generations.**

**Bernadette Kneidinger**, University of Bamberg | [bernadette.kneidinger@uni-bamberg.de](mailto:bernadette.kneidinger@uni-bamberg.de)

Ageing Societies, globalization of social interactions, changed family structures and revolution of communication media... these keywords describe some of the main changing factors of modern societies that influence contacts between generations. Less children but longer life expectations lead to more contacts of (grandgrand-)parents with less (grandgrand-)children who often live in different cities, countries or even different continents. Social Network Sites (SNS) like Facebook become an important communication tool for such (inter-)national interactions even between family members. A huge number of studies about usage motives and habits of SNS young generations already exist, but findings about the significance of SNS for intergenerational contacts respectively the usage motives of older generations are quite rare. Thereby, this paper should discuss

the question how Facebook users over 45 years use the social network site for maintaining social contacts with younger generations. Qualitative interviews with 36 Facebook users over 45 years reveal the main motives for SNS usage of this age group and how they experience the network as interaction platform between the generations. The qualitative analysis of interviews underlines the potential of Facebook as platform for intergenerational contacts because nearly all interviewees report online contacts to younger family members or acquaintances. A quite high number of the interviewed persons describe a feeling of getting a closer insight in the daily lives of their younger family members when using Facebook. The study should give a first impression about the significance of computer-mediated communication for intergenerational interactions in globalized societies.

## The Reminiscence Stick and Change of Caring Culture

**Satu Pekkarinen**, Lappeenranta University of Technology | [satu.pekkarinen@lut.fi](mailto:satu.pekkarinen@lut.fi)

**Antti O Karisto**, University of Helsinki | [antti.karisto@helsinki.fi](mailto:antti.karisto@helsinki.fi)

**Helinä Melkas**, Lappeenranta University of Technology | [helina.melkas@lut.fi](mailto:helina.melkas@lut.fi)

**Päivi Kuosmanen**, University of Helsinki | [paivi.kuosmanen@helsinki.fi](mailto:paivi.kuosmanen@helsinki.fi)

Use of technology may replace human contacts in elderly care. The focus of our study, the memory and reminiscence stick (mStick), is, however, developed to enrich and support human interaction. The purpose of this study is to analyse the role of the mStick in the elderly care practices. The mStick is a biographical memory store where personal documents, like family photographs, texts, audio and video clips, are stored. The contents are displayed on a computer, television screen or a digital photo frame, or can be developed further to, e.g., written and illustrated biographies. When developed, the mStick was supposed to have effects on, e.g., an older person's empowerment, identity work as well as intergenerational communication and care work. Qualitative data were collected for this

study in 2010-2012 during the piloting phase of the mStick. Participatory observation, open interviews, and focus groups were used. Qualitative content analysis was conducted. The results showed that the mStick helps care personnel in getting a broader picture of the background and preferences of an elderly customer, and it will help to meet the customer as a whole human being, not just a patient. It facilitates communication and adaptation to the new environment of institutional living. Despite and/or due to its simplicity, the mStick has a great potential as a useful tool in elderly care work. It may well renew the caring culture towards recognizing the "face" (Emmanuel Levinas) and uniqueness of another human being.

## Do Assistive Technologies Undermine Family Solidarity?

**Anja Garlipp**, University of Vechta | [Anja.Garlipp@uni-vechta.de](mailto:Anja.Garlipp@uni-vechta.de)

Assistive technology (AT) is supposed to support independent aging by reducing difficulties with daily activities. Despite these benefits, elderly express objections to AT: One of the major fears mentioned is that social contacts – help from family members as well as contacts to a physician – could be reduced and replaced. The research question of the paper relates to the discussion, whether a generous welfare state causes a decline in family help or voluntary activity. Many authors argue that public expenses strengthens and disburden families, invigorate resources and help to increase the social cohesion by enabling a more independent life or facilitating other forms of private support (Künemund & Rein 1999). Has AT comparable effects on

family solidarity? Cross-sectional studies show that the use of simple AT, such as walking sticks and eating utensils, result in reductions of informal care (e.g. Agree et al. 2005; Allen et al. 2001). Assuming that social support is driven by motives such as reciprocity and affection, people using such simple devices are less likely to receive informal care indeed. However, if user-friendly AT are valid home care resources that enable independence and autonomy, other dimensions of social support, such as emotional and cognitive encouragement (Diewald 1991) could be reinforced, otherwise burdensome relations could be relieved. Long-term studies, which take into account these non-instrumental dimensions, are missing. It also remains to be

discussed, whether AT increases social inequalities: Especially people with low income

could be excluded.

## 13RN01 - Work and Retirement (1)

Chair(s): Jeja-Pekka Roos (Helsinki)

### Who Wants to Work Longer – and Why? Comparing Support and Readiness for Work beyond Retirement Age in European Countries

Dirk Hofäcker, University of Mannheim | [dirk.hofaecker@mzes.uni-mannheim.de](mailto:dirk.hofaecker@mzes.uni-mannheim.de)

Against the background of foreseeable ageing of the population as a whole and national labour forces in particular, many governments in Europe have started to introduce a bundle of different policies to stimulate longer working lives, often summarised under the term 'active ageing'. Among these measures, reforms of pension systems and measures aiming to increase incentives of work up to or even beyond retirement age have played a major role. This paper seeks to explore in how far such reforms have actually been able to generate sufficient public approval, and how this support varies both inter- as well as intranationally. Considering both the 'abstract' approval for the opportunity to work beyond retirement age as well as the 'concrete' individual readiness to do so, the paper distinguishes three 'grades' of support for such

measures: (i) those supporting continued work both at the abstract and the concrete level, (ii) those generally in favour of work beyond retirement but not considering this an individual option and (iii) those uniformly rejecting it. In a first step, the paper will descriptively explore cross-national differences in the distribution of these three types across European countries and their possible institutional determinants. Using regression analysis, the paper subsequently will explore which individual-level factors determine the assignment to any of these three support groups and whether the influence of such micro-level determinants differs across countries. Empirically, the paper will draw back to most recent data from the Special Eurobarometer on 'Active Ageing' (Special EB 378), fielded in late-2011.

### Increasing Retirement Age in Germany: Who Reaches the Retirement Age for an Old Age Pension?

Tatjana C. Mika, German Federal Pension Insurance | [Tatjana.Mika@hotmail.de](mailto:Tatjana.Mika@hotmail.de)

Michael Stegmann, German Federal Pension Insurance | [michael.stegmann@drv-bund.de](mailto:michael.stegmann@drv-bund.de)

An ongoing welfare state reform in Germany gradually increases legal retirement age to 67. Germany is one of the European countries which increased their retirement age in the years from 2000 to 2012 and introduced deductions for those who use early retirement

schemes. However, the end of work in the life course and legal retirement age is often bridged with in-stitutional arrangements including partial retirement, unemployment with and without income replacement and sickness pay. Meanwhile the retirement age

for old age pensions is increasing, pensions for reduced earnings capacity are on the rise. Long term unemployment and low earnings have been a major problem in Germany from 1995 to 2007. Until 2011 insured persons therefore preferred the early retirement option even though the deductions reduced pension benefits severely. Beside pensions for reduced earnings capacity have ever lower benefits, because unemployment and precarity end often in disability. The paper presents briefly the legal framework of retirement age reform. We analyse then the retirement behaviour in

the last 12 years with data from the pension fund records. For this goal we carry out survival analysis with longitudinal and cross-sectional data, which allow us to compare the life courses of those who retired with those older workers who still participate in the labour market. The most important focus of the analysis are life-courses which have been interrupted by unemployment over the age of 50 and the subsequent career in terms of the kind of employment and the income gained from this employment.

## Internal and External Employability of Older Workers - Contributions of the Establishments

Anita Tisch, Institute for Employment Research, Nuremberg | [anita.tisch@iab.de](mailto:anita.tisch@iab.de)

Triggered by the European Employment Strategy, the promotion of employability moved into the focus of social policy actors in almost all European nation states. Employability and employment security replaced the ideal of job security as a new employment policy model. Employability is especially promoted in the context of ageing workforces. Currently, older workers are only inadequately integrated in the labour market. In Germany, as in most European countries, older individuals struggle to find employment after a job-loss. Moreover, older workers are often released to different forms of early retirement. In order to counteract the trend of early retirement, the retirement age is gradually raised in Germany. Additionally, policy initiatives to promote employability and employment opportunities for older individuals have been introduced. While the increase of the retirement age holds

employees to account for their employability, many policy initiatives also hold employers responsible to invest in their employee's employability. This article raises the question, which types of establishment invest in their employee's employability. Therefore, two types of 'employabilities' are distinguished: internal employability (the ability to stay employed with the current employer) and external employability (defined as the ability to change between employers). By the use of linked employer-employee-data it is firstly examined in which types of companies older individuals stay employed until retirement age, hence which companies promote internal employability. A second analysis concentrates on external employability and examines which types of employers enable their older employees to find new employment.

## Actual and Preferred Ages of Retirement in Europe

Martin Kohli, European University Institute | [martin.kohli@eui.eu](mailto:martin.kohli@eui.eu)

Nadia Steiber, Wirtschafts Universität, Wien | [nadia.steiber@wu.ac.at](mailto:nadia.steiber@wu.ac.at)

This study is concerned with preferences for earlier or later retirement in Europe. It differs

from the dominant literature that focuses on the financial incentive structures of pension

systems to explain retirement behavior (supply-side explanations) as it investigates both monetary and non-monetary determinants, and accounts for demand-side explanations as well (lack of employment opportunities for older workers). Using data from a special module in Round 5 of the European Social Survey for individuals who retired during the period 1995-2011, we assess a multitude of factors that may shape individuals' preferred age of retirement and that may lead to a

mismatch between preferences and behavior. Concerning the latter, we distinguish instances in which retirement occurs earlier than preferred (involuntary retirement) from instances in which retirement occurs later than preferred (involuntary work). We focus on two questions: How do earlier experiences in the life course in the work and family domain affect retirement preferences and behavior and how do they affect the match between the two?

### Meta-Narratives in Complex Therapy Management Research: a Systematic Review

Claudio Coletta, University of Trento | [claudio.coletta@unitn.it](mailto:claudio.coletta@unitn.it)

Francesco Miele, FBK - Fondazione Bruno Kessler, Trento | [francesco.miele1@gmail.com](mailto:francesco.miele1@gmail.com)

Attila Bruni, University of Trento | [attila.bruni@unitn.it](mailto:attila.bruni@unitn.it)

Enrico M. Piras, FBK - Fondazione Bruno Kessler, Trento | [piras@fbk.eu](mailto:piras@fbk.eu)

Alberto Zanutto, University of Trento | [alberto.zanutto@unitn.it](mailto:alberto.zanutto@unitn.it)

Complex therapy management, extensively debated in medical literature, provides an interesting observation point for social scientists to put under scrutiny relevant social practices: care; the use of medical and technological devices; compliance and frailty; everyday life organization of elderly patients. This work, through the use of a meta-narrative approach (Greenhalgh et al. 2009), provides an account of the stratification of debates and discourses around the theme of complex medication schemes, emphasizing the ways in which they enact a peculiar view of homecare

technologies, chronic diseases, elderly patients and, of course, complex therapy management in itself. Contributions have been gathered and analyzed through a systematic review based on queries on database-indexed literature and "snowballing" references research based on peer knowledge, for a total of 50 scientific works. References Greenhalgh, T. et al. (2009) Tensions and Paradoxes in Electronic Patient Record Research: A Systematic Literature Review Using the Meta-narrative Method, in "Milbank Quarterly", 87(4), pp.729-788.

## Technology Acceptance in Old Age and its Determinants

**Nele M. Tanschus**, University of Vechta | [nele-marie.tanschus@uni-vechta.de](mailto:nele-marie.tanschus@uni-vechta.de)

**Harald Kuenemund**, Institute for Gerontology - University of Vechta | [harald.kuenemund@uni-vechta.de](mailto:harald.kuenemund@uni-vechta.de)

It is often assumed that the acceptance of technical devices is decreasing with increasing age. But many other aspects could be relevant: composition effects when comparing age groups (e.g., experience with technical devices or gender), its complex usage or fears of becoming dependent or socially isolated have an impact on whether an old person is likely to use a technological device or not. In this paper, we additionally take different types of AAL-technology into account. The analysis is based on the GAL-Survey (n=2.032) which is representative for the state of Lower Saxony, Germany. Within the survey four AAL-scenarios were introduced (a memory assistant, a training monitoring device, an activity measurement and a fall prevention and

detection device). The acceptance of those hypothetical devices were analysed controlling for variables such as age, sex, education, household income, subjective wellbeing, health impairment, risk of falling, living arrangement, existence/number of children, place of living (rural/urban) and experiences with technology. Bivariate and multinomial logistic regressions were applied. The results show that the assumption that technology acceptance declines with increasing age is too simple: Different technological devices are appealing to older people with a certain socioeconomic background and need. Consequently, future technology development should consider these life worlds of older people.

## Why Do Nurses Not Like Computers?

**Anne inga Hilsen**, Fafo Institute for Labour and Social Research, Oslo | [aih@fafo.no](mailto:aih@fafo.no)

There seems to be a widespread belief that older workers and technology is a difficult match. How much empirical support do such beliefs have? Older workers (e.g. up to 70 years) have been introduced to Information and Communication Technology (ICT) gradually as it was implemented in work life and have probably used ICT for at least 20 years. This means that even the oldest of them should be fairly familiar with this technology by now. Have the time come to confront negative assumptions about ageing and technology? Is it possible to use digital spaces for sharing and gathering of data in a project involving older workers? We wanted to test this in an evaluation of an active ageing project in a large Norwegian hospital. What would happen if we

invited the older workers (defined as 55+) to discuss our questions and share their experiences in a digital space generated for this use on the intranet of the hospital? Throughout the evaluation many steps were taken to entice the older workers to use this created digital space, called Network 55+, without success. Only sparingly and after massive encouragement did the older workers; nurses, nurses' assistants, doctors and other hospital personnel, use Network 55+. This paper will explore how we can understand the resistance to using the digital space, and see how some of the answers may be closer related to characteristics of the health professions than to the age of the older workers.

## Telecare, Wellbeing and Family Care: Findings from AKTIVE Project.

Emanuela Bianchera, University of Oxford | [emanuela.bianchera@ageing.ox.ac.uk](mailto:emanuela.bianchera@ageing.ox.ac.uk)

Kate Hamblin, University of Oxford | [kate.hamblin@ageing.ox.ac.uk](mailto:kate.hamblin@ageing.ox.ac.uk)

This paper presents initial findings from the project AKTIVE (Advancing Knowledge of Telecare for Independence and Vitality in later life), aimed at examining telecare use in older people with susceptibility to falls and mobility problems. The study was carried out in 60 households over two locations in England, Leeds and Oxford, through the use of the mixed method ethnographic approach 'Everyday Living Analysis'. Findings explore the extent to which telecare can improve the quality of life of

older individuals, sustain their independence and enable family caregivers to continue their care alongside with work and other roles. We discuss opportunities and challenges linked to the introduction of technology in the households of vulnerable older people, the impact on informal care arrangements, age-related barriers to technology use and suggestions for more senior-friendly provision of technology, in terms of services, design and information.

## 15RN01 - Norms, Values, and Images in the Field of Ageing (2)

Chair(s): Elena Sommer (Bremen)

### Beyond Stereotypes: the Multifaceted Nature of Postmodern Elders

Stefano Poli, Università degli Studi di Genova | [stefano.poli@unige.it](mailto:stefano.poli@unige.it)

The progressive demographic ageing is interesting all European countries and is one of the priorities of the social policies agenda (Eurostat, 2012). Nevertheless, the desirable proposals in terms of active ageing issues are constrained by the heterogeneous conditions of elderly people, often interested by deep inequalities and social frailty (Brandolini, Saraceno and Schizzerotto, 2009). At the same time, the promotion of active ageing and the consequent results in terms of successful ageing differentials are strongly influenced by the cultural dimensions (Birren and Schroots, 1996), interesting the deep heterogeneity of ageing processes. Nevertheless, the exploration of such multiform complexity is still limited by homogenizing representations focused on subjective disengagement often practiced by the elders or on consequences of structural rolelessness (Pugliese, 2011),

reproducing the sense of non-productivity and marginalization according to an obsolete industrial model of the life cycle (Cesareo, 2009). In this regard, the paper aims to highlight the deep versatility of old age in contemporary society through the results of a quanti-qualitative research conducted in Genoa, one of the Italian towns with the higher ageing index representing a European demographic case for its peculiar ageing population dynamics (Poli, 2012). By identifying multiple ageing profiles obtained by values' systems, socioeconomic conditions and different lifestyles of elderly people, this contribute highlights the need to rethink their role in contemporary society, enlarging their horizons of capabilities and opportunities and overcoming the latent homogenizing stereotypes through the promotion of an effective path of active citizenship.

## Meaning and Ageing: Norms, Values and Images

Ricca Edmondson, National University of Ireland, Galway | [Ricca.Edmondson@nuigalway.ie](mailto:Ricca.Edmondson@nuigalway.ie)

This paper examines some of what follows from the fact that gerontology is – necessarily, it argues – a multidisciplinary field. It briefly examines two models of interdisciplinarity that might apply here, a curtailed model, which it rejects, and a more demanding model. It gives reasons for supporting the latter, arguing that it is richer and more robust, less inclined to make do with ‘black box’ models of the human person. It then shows that this more demanding model has the additional advantage of pointing to issues that need to be addressed in gerontology, even though in practice they are often neglected: not least, the question of meaning in later life and what norms, values and images are involved. The paper shows that in past gerontological work a variety of approaches to such issues have been explored, exhibiting some of them in order to indicate the range of gerontological work on meaning. It

contrasts work in the US by Erikson, Elder and Gubrium with explorations in Scandinavia by Tornstam, and in the UK by Thompson et al., Featherstone and Hepworth and others. Do authors such as these all mean the same thing by ‘meaning’, and what implications does their work have for gerontological methodology? The paper focuses here on a contrast between work by Tornstam, which approaches issues concerning meaning in a direct way, and work by Thompson, which takes an approach that is methodologically less direct. It argues that each of these approaches has significant advantages, showing how they both relate to the ‘demanding’ model of interdisciplinarity it has identified at the beginning. Even so, they need to be complemented by a range of more adventurous methods that can help to take this topic further.

## On the Possibilities of “Feeling Young” as a Aenior with Extensive Physical impairments

Annika Taghizadeh Larsson, Linköping University | [annika.t.larsson@liu.se](mailto:annika.t.larsson@liu.se)

Based on a qualitative interview study with Swedish women and men between the ages 56-72 who have been living with chronic illnesses and extensive physical impairments for a long period, the object of this presentation is to contribute to the discussion about the relationship between health and function and the possibilities of “feeling young” or “not old”. The presentation is primarily based on the interview subjects’ responses to the question: “Do you experience yourself as being younger or older than your chronological age” and to the conversation on “feel age” that

followed thereafter. The interviewees’ way of describing their subjective age illustrates that an interpretation of one’s self as relatively young or “not old” may draw on a variety of images of aging. Indeed, in contrast to writings of scholars in the ageing field that emphasize the centrality of good health to be able to “feel young”, the study at hand indicates that those with a medically-defined chronic illness or physical impairment may experience age in a number of ways, without this necessarily involving their diagnosis or impairment.

## Situations when Age and Ageing Turn into Experiences

Maria K Sjölund, Mid Sweden University | [joenssonmaria3@hotmail.com](mailto:joenssonmaria3@hotmail.com)

We are and we become human beings in the social contexts we are part of, and in a society where age is used to make distinctions between people, it is important to explore how people experience age and ageing. In this study analytical attention has been put on experiences of situations in which the meanings of age and ageing were individually negotiated. The study was based on two open-ended questions asking people aged 65- and 75-years old to describe situations in which they felt “especially young” and “especially old”, respectively. Here, the possibility of relating to both kinds of experiences was to be considered by the respondents. The analysis revealed four kinds of situations: 1) activities, 2) relations, 3) special social arenas and 4)

certain casual explanations, often embodied or materialized. However, the analysis also revealed that the same kind of situations that gave rise to experiences of feeling “especially young” could also give rise to experiences of feeling “especially old”. Experiences of situations when feeling “especially young” never included explicit problems, poor relationships, frail bodies or frustration, but were often filled with feelings of happiness, good relationships and healthy strong bodies. That was not the case in situations where the respondents had felt “especially old”. The results say something about how age and ageing are being valued and socially negotiated as meaningful.

## 16RN01 - Biography, the Life-Course and Older Age (2)

Chair(s): Julia Hahmann (Vechta)

### The Long Shadow of Religious Socialization: Christian Convictions from Youth until Late Midlife

Heiner Meulemann, University of Cologne | [meulemann@wiso.uni-koeln.de](mailto:meulemann@wiso.uni-koeln.de)

Klaus Birkelbach, Universität Duisburg-Essen | [klaus.birkelbach@uni-due.de](mailto:klaus.birkelbach@uni-due.de)

Christian convictions are investigated as to their causes, changes and changes of causes during the life-course. As for causes during youth, a Christian socialization and good intergenerational relations in the family should have a positive impact – socialization and intergenerational relationship hypotheses. As for causes during the life-course, personal attachments should have a positive, and success a negative impact – self-transcendence hypothesis; and experiences of illness and death should have a positive impact – crisis hypothesis. As for changes, a monotone increase of Christian convictions

with age is expected – ageing hypothesis. As for changes of impacts, hypotheses for each cause are proposed. The sample consists of 1301 former German high school students, first interviewed in 1969 at the age of 16, and re-interviewed at the ages of 30, 43, and 56. The socialization hypothesis is confirmed according to most of its indicators, the generation, self-transcendence, and crisis hypotheses only according to some of their indicators. Contrary to the ageing hypothesis, Christian convictions grow only up to age 43 and remain constant afterwards. Hypotheses on changes of impacts are not confirmed.

## Not Very Old People but Very Old Women and Men – Missing Gender in Longevity Research

Marja Jylhä, University of Tampere | [marja.jylha@uta.fi](mailto:marja.jylha@uta.fi)

Kirsi T. Lumme-Sandt, University of Tampere | [kirsi.lumme-sandt@uta.fi](mailto:kirsi.lumme-sandt@uta.fi)

Sex is one of the most frequently used variables in aging research, yet very few studies seriously investigate or theorize the meaning of gender in very old age. In social policy and policy programs, gender is virtually non-existent. Gender studies, for their part, very rarely discuss old age. However, population studies show that not only do women constitute an overwhelming majority among the oldest-old, but also living conditions, health and social life differ between the genders. In this presentation we use data from the Vitality 90+ Study to illustrate the existence of radical gender differences in the lives of very old people and to problematize

gender neutral discourses of old age. We will also analyze the combined effects of gender and social class on stratification and inequality in old age. Vitality 90+ is a population based research program focusing on inhabitants aged 90 years or over in the city of Tampere, Finland. Data include both surveys with the whole age group, irrespective of health and place of residence in several years from 1995 to 2010, and qualitative narrative life story interviews with nonagenarians in 1995 and 2012. Finally, we suggest that new conceptual and theoretical tools are needed to better capture the gendered nature of increasing longevity.

## Life Course Pathways to Later Life Wellbeing: a Comparative Study of the Role of Socio-Economic Position in England and the U.S.

Bram Vanhoutte, University of Manchester | [jonathan.rodd@manchester.ac.uk](mailto:jonathan.rodd@manchester.ac.uk)

James Nazroo, University of Manchester | [james.nazroo@manchester.ac.uk](mailto:james.nazroo@manchester.ac.uk)

Alan Marshall, University of Manchester | [alan.marshall@manchester.ac.uk](mailto:alan.marshall@manchester.ac.uk)

A main paradox in comparative social epidemiology is that subjective wellbeing in the U.S. tends to be higher than in England in later life, although physical health is worse by all measures (Banks, Marmot, Oldfield, & Smith, 2006; Zivin et al., 2010). One proposed mechanism, the differential distribution of education and wealth in both countries, is at the core of this paper and will be extensively tested. Multiple measures of wellbeing, such as depressive symptoms (Radloff, 1977), satisfaction with life (Diener, 1984), and more eudemonic approaches to wellbeing such as CASP (Hyde, Wiggins, Higgs, & Blane, 2003) and psychological wellbeing (Ryff & Keyes, 1995), will be considered. Using a growth curve approach that investigates not only differences

between people, but also within people over time, we will investigate to what extent life course approaches to socio-economic position, such as accumulation, social mobility or latent period, explain baseline differences and rates of change in wellbeing in later life. This analysis will be conducted using multiple waves (2002-2012) of two sister studies of ageing, the U.S. Health and Retirement Study (HRS) and the English Longitudinal Study of Ageing (ELSA). Both panel studies have a large, representative sample (N~20000 for HRS and N~10000 for ELSA) of the community residing population aged 50 or more, and contain comparable information on a wide array of life circumstances, among which gender, marital status, health, and both current and childhood

socio-economic circumstances will be the most important for this analysis.

## **Do ut des? Intergenerational Reciprocity: an Analysis of Contacts-for-Money Exchange in Europe**

**Marco Tosi**, University of Trento | [marco.tosi@unitn.it](mailto:marco.tosi@unitn.it)

**Adriano Cataldo**, University of Trento | [acataldo@live.it](mailto:acataldo@live.it)

As a consequence of unprecedented demographic changes, generations share a long period of their lives together and have increasing commitments to support one another through various forms of assistance. Scholars have analyzed intergenerational transfers of money and time to understand not only how resources are distributed among family members, but also to better comprehend social policies and social inequality in ageing societies. This paper proposes to investigate the exchange of social and economic support between parents and their adult children. One ideal-type of transfer motivation are proposed: simultaneous exchange of time-for-money and in particular intergenerational contacts in exchange of money. Child-parent contacts are viewed as emotional support that children give to their

parents and/or as a proxy of the quality of parent-child relationship. Even if the benefits of social contact are mutual, parents tend to value time spent together and will be motivated to financially reward. Using SHARE data (wave 1 and 2) the reciprocal patterns of financial transfers are scrutinized in three intergenerational transfer regimes. In Nordic countries reciprocity may be more diffused because social contacts are more valued for its scarcity. On the contrary, in Southern countries where the intergenerational bonds are strong, parent-child contacts may be less "repaid"; while Continental countries fall somewhere in-between. Moreover, this paper suggests that the exchange of contacts for money is better interpreted by social norms and quality of child-parent relationship rather than a model of rational behavior.

## **17RN01 - International Comparison**

Chair(s): Julia Simonson (Berlin)

### **Years Lived and Years Left: why the Contemporary Population Ageing Debate is Mistaken. The Case of Scotland.**

**John MacInnes**, University of Edinburgh | [jmaciuk56@gmail.com](mailto:jmaciuk56@gmail.com)

**Jeroen Spijker**, University of Edinburgh | [jjaspijker@yahoo.es](mailto:jjaspijker@yahoo.es)

Using results from Scotland based on linked census, vital registration and health data, we question the assumption that population ageing will lead to worsening real dependency ratios. We argue that the population ageing debate has concentrated only one side of

ageing: the increase in the proportion of older people (in terms of years lived) within the population, and has ignored the other side: the increase in remaining life expectancy at any given age (years left). There are good reasons for thinking that much of the social change

associated with population ageing is correlated more strongly the the latter than the former. We also show that for many populations, including that of Scotland, it is possible to get 'older' and 'younger' at the same time. If this is the case, then much of the 'debate' about population ageing starts to look like part of a

wider project to restrict the ambitions of the welfare state on the grounds that it will not be sustainable in its present form in the future. Our results suggests that population ageing does not pose the kind of fiscal challenges often associated with it.

## **Replacement Rates and Pension Adjustment – a Strange Mistake with Consequences for Future Poverty and Inequality**

**Harald Kuenemund**, Institute for Gerontology - University of Vechta | [harald.kuenemund@uni-vechta.de](mailto:harald.kuenemund@uni-vechta.de)

A very common instrument to assess and compare pension systems over time or between countries is the replacement rate. This indicator is widely used in the discussion about restructuring old age pension systems. But until now, no generally accepted definition or measurement procedure exists. Even worse, the longitudinal dimension is completely missing in the measurement, and in the discussion as well: Calculating, for example, a .gap between income from work and income from pensions at the time of retirement, and compensating the gap with private pensions, is the most frequently suggested strategy. to cope with pension retrenchments. It is well-known that this increases social inequalities. However, while "generational contract" type of statutory pension systems are usually linked to

earnings or prices, private pensions are not necessarily reflecting inflation or changing standards of living. In consequence, with time passing by, private pensions may be less able to guarantee a certain standard of living, although need most likely increases. Surprisingly, this argument seems to be completely overlooked. The paper tries to provide empirical evidence from Germany, based on SOEP data. It becomes evident that the central aims of old age pension systems, the avoidance of poverty and the maintenance of living standards and quality of life in old age, are not gauranteed anymore. The reforms introduced leave behind more insecurity than stability, the opposite of what has been argued in the political arena.

## **Commensuration and Policy Comparison: how the Use of Standardized Indicators Affects the Rankings of Pension Systems**

**Gert Verschraegen**, University of Antwerp | [gert.verschraegen@ua.ac.be](mailto:gert.verschraegen@ua.ac.be)

**Hans Peeters**, University of Leuven | [hans.peeters@soc.kuleuven.be](mailto:hans.peeters@soc.kuleuven.be)

This paper analyses the process of commensuration in the field of pension policy. It looks at the consequences of reducing disparate and variable characteristics of pension systems to a limited set of standardised policy indicators. Although techniques of scoring complex systems through common indicators are applied today

in fields as diverse as scientific research, human resources management and international development, this article is the first to examine the process of commensuration in the field of pensions. The empirical analysis looks at three cases where international institutions use standardised pension indicators to score and rank the

performance of national pension systems. The first case examines the use of replacement rates in international benchmarking of pension systems. We then focus on how rankings diverge considerably depending upon which function of the pension system is under assessment. Finally, we discuss how the public-private mix of a pension system affects

the ranking of pension adequacy due to the way in which second and third pillar pensions are measured. The cases illustrate some of the problems associated with scoring and ranking the outcomes of unique and complex pension systems by means of internationally standardised indicators.

## **Social Class, Age and Identity in Later Life: a Comparative Analysis**

Ian R Jones, Cardiff University | [JonesIR4@cardiff.ac.uk](mailto:JonesIR4@cardiff.ac.uk)

Martin Hyde, Stockholm University | [martin.hyde@stressforskning.su.se](mailto:martin.hyde@stressforskning.su.se)

This paper will present a comparative analysis of social class identity and age identity in later life in the context of social change. First, the paper will address gerontological approaches to class and later life alongside key theoretical approaches to identity and social change. Second, the paper will consider the methodological and data issues associated with cross-national research and review evidence, at national and cross-national levels, for a relationship between class identity and age identity. Third, the paper will present an analysis of (i) global comparative data from The International Social Survey Programme (ISSP) and (ii) changes in identity over time using the UK Citizenship Survey. Findings from the international comparisons indicate that age

and class identities operate independently of each other suggesting, from a relational sociology, viewpoint that other forms of identity and identification need to be examined. There is some evidence (in Europe at least) of a relationship between GDP and class identity lending some support to Inglehart's post materialist thesis but there is no evidence of a generational effect. Analysis of UK data suggests higher levels of class and age identity among this sample of retirees raising both methodological questions and the possibility of greater variation within samples. The paper will conclude by discussing the salience of class and age identities at national and international scales.

### **Life Courses and Social Security in Later Life of the Cohorts 1936-1965 – Are the German Baby Boomers Winners or Losers?**

Andreas Motel-Klingebiel, German Centre of Gerontology (DZA) | [andreas.motel-klingebiel@dza.de](mailto:andreas.motel-klingebiel@dza.de)

Julia Simonson, German Centre of Gerontology (DZA) | [julia.simonson@dza.de](mailto:julia.simonson@dza.de)

This paper addresses life courses of three German birth cohorts as well as their current

and future outcomes in later life: the German war cohort 1936-45, the post-war cohorts of 1946-55 and the German baby boomer cohort 1956-65. Focusing on the German baby boomers and their altered life courses, resources and expectations, it is asked whether they – or relevant parts of them – are winners or losers of the ongoing economic changes and welfare state reforms. In a social policy perspective it is asked what societal, especially welfare state policies are necessary to deal with inter- and intra-cohort inequalities and inequity deriving from that? To examine this question we analyze longitudinal life course data, which combines information from survey and administrative data (namely the German Socio-Economic Panel and the Sample

of Active Pension Accounts), and has been prepared within the joint research project 'Life Course, Ageing and Well-Being (LAW)'. Life courses of the baby boomers, now in their middle age, are projected until they reach age 67. Results show more heterogeneous life courses and an ongoing decline in pension incomes with increases in intra-cohort inequality among the German baby boomers in the time to come. German baby boomers will probably be economically disadvantaged on average in future old age. Rising inequalities pose a challenge for welfare state policies. However, this comes along with a greater degree of self-government over life courses and living arrangements which may positively affect their quality of life.

## Intergenerational Transfers in an Ageing Society

Thomas E Emery, University of Edinburgh | [temery86@gmail.com](mailto:temery86@gmail.com)

The study of intergenerational transfers has thus far been primarily concerned with the study of behaviour at the micro level with only a few notable exceptions (Lee, 1980). This is despite the persistently discussed wider implications of transfers for society as a whole. This paper attempts to examine the social implications of intergenerational transfers by using the European Unions Statistics on Income and Living Conditions and data from the Survey for Health, Ageing and Retirement in Europe. First, the paper examines whether intergenerational transfers significantly affect the income distribution within societies by comparing various indicators of inequality before and after private transfers have been made. To gauge the relative impact of such transfers, these results are compared with the distribution of income before and after public

transfers. The results reveal that despite persistent research asserting that transfers are an engine of inequalities, intergenerational transfers have very little redistributive impact. Second, this paper examines whether transfer receipts will be effected by the changing age structure of the population. By combining data from SHARE and the UN populations division, the analysis demonstrates that any increase in transfer behaviour will be mild and short lived with a long run decline in total transfers. This undermines the assertion that informal, private, financial transfers will offset the upward, formal, public transfers which are set to increase in the coming decades. Overall the findings of this paper raise questions about the relevance of intergenerational transfer research for the study of the welfare state in ageing societies.

## The Impact of an Ageing Society on Crime in Germany

**Michael A. Hanslmaier**, Criminological Research Institute of Lower Saxony | [michael.hanslmaier@kfn.de](mailto:michael.hanslmaier@kfn.de)

**Dirk Baier**, Criminological Research Institute of Lower Saxony | [dirk.baier@kfn.de](mailto:dirk.baier@kfn.de)

Germany has experienced an ageing of its population over the last 15 years. From 1995 to 2010 the share of the population 60 years and older grew from 20.7% up to 25.9% whereas the share of people younger than 21 fell from 22.6% to 19.9% in the year 2010. In the same period the number of registered offences dropped from 6.7 million to 5.9 million. Having in mind the criminological fact that older people are much less criminal than younger people (e.g. Gottfredson&Hirschi 1983), the question is addressed to what extent the change in the population's age structure affected the crime trends in the past 15 years. The demographic change, however, shows a

regionally different pattern. For example the Eastern Länder are more affected than the Western Länder and also within the Länder there are regional imbalances. Therefore we analyze county level data from four different Länder, this allows to take into account the disparities between and within them. The statistical analyzes are based on pooled time series of the counties. Separate models including economic and social covariates are estimated for different types of crime (violent crime, theft, vandalism). The analyses reveal that demography played only a limited role in explaining past crime trends other factors have to be considered, too.

## Functional Solidarity between Generations in European Welfare States

**Ronny König**, University of Zurich | [koenig@soziologie.uzh.ch](mailto:koenig@soziologie.uzh.ch)

**Bettina Isengard**, University of Zurich | [isengard@soziologie.uzh.ch](mailto:isengard@soziologie.uzh.ch)

**Marc Szydlik**, University of Zurich | [szydlik@soziologie.uzh.ch](mailto:szydlik@soziologie.uzh.ch)

Intergenerational transfers of money, time and space are important manifestations of functional solidarity. Especially in times of societal crises and the withdrawal of the welfare state, intergenerational support is an important characteristic of parent-child relationships. Previous research reveals substantial differences in the prevalence of functional transfers to adult children, raising the question of connections between private and public intergenerational solidarity, between family support and welfare states. Although single types of solidarity have been analysed intensively, a joint analysis of money, time and space transfers is essential in order to find out whether different forms of functional solidarity are substitutes or complements. Apart from individual and family characteristics, especially institutional factors

are important determinants for understanding support levels in different welfare state regimes. Using data from the Survey of Health, Ageing and Retirement in Europe (2004-2012) 18 countries will be analyzed to investigate the impact of micro-, meso- and especially macro-structural factors. Multilevel estimates indicate that parents in familialistic and low-level service countries such as Poland, Italy and Spain, predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden, parents rather provide time and monetary support. Moreover, our results reveal that the provision of living space substitutes time and money transfers. The latter, however, do complement each other: children who receive time support from their

parents often get monetary help as well.

## 19RN01 - Intergenerational Relations (2)

Chair(s): Marja Aartsen (Amsterdam)

### Who is in the Stepfamily? Change in Stepparents' Family Boundaries between 1992-2009

Bianca Suanet, VU University, Amsterdam | [b.a.suanet@vu.nl](mailto:b.a.suanet@vu.nl)

Guided by trends of increased prevalence and social acceptance of stepfamilies, we argue that stepparents' are more likely to include stepchildren in their personal network in recent times. Data are from observations by two studies, i.e. Living Arrangements and Social Networks of Older Adults, and Longitudinal Aging Study Amsterdam in 1992-2009 of 247 Dutch stepparents aged 54-91 years. Results revealed that in 1992 63% of the stepparents had stepchildren in their personal network, and this percentage increased to 85%

in 2009. The network membership of stepchildren is less likely for stepparents from living-apart-together partnerships. Stepmothers less often included stepchildren in their personal network than stepfathers. Both effects may be understood in terms of family commitment. Stepfamily boundaries have become more 'permeable' over time, suggesting that there is an increased potential for support exchange and caregiving within stepfamilies.

### Who Are my Family Members? The Pluralization of Family Configurations and Social Capital in Old Age.

Myriam Girardin, University of Geneva | [myriam.girardin@unige.ch](mailto:myriam.girardin@unige.ch)

This research addresses the issue of family diversity and its consequences for social capital available in old age. Bonding and bridging social capitals are two main kinds of social capital that are made available by family configurations. We hypothesize that bonding social capital is more likely to be developed in elderly family configurations based on children and grandchildren. On the opposite, elderly family configurations based on distant kin or friends considered as significant family members would better provide bridging social capital. A subsample of persons from the VLV-study (Vivre / Leben / Vivere), a large

representative survey addressing the life and health conditions of individuals 65 and above living in Switzerland (N=4200) was collected. Using cluster analysis, we identified 6 family configurations: «Son and his family» (8%), «Siblings» (15%), «Procreation's family» (40%), «Kinship» (8%), «Daughter and her family» (11%), and «Sparse» (18%). These clusters unequally produce bonding and bridging social capital. These results stress the diversity of families in old age and its consequences for the provision and the receipt of support by the elderly.

## The Grandparents of Divorce: what Children Have to Say about it?

Anne Carolina Ramos, Federal University of Rio Grande do Sul | [annecarolina.ramos@gmail.com](mailto:annecarolina.ramos@gmail.com)

In childhood, relations between grandparents and grandchildren are heavily determined by the middle generation. It is usually the children's parents who make it possible to build a bridge between these two non-adjacent generations, which may involve a strong preference for the mother's side of the family, increasing distance or even complete breakdown in intergenerational contact, especially when families break up and are reconstituted. When parent's divorce, family relations may be greatly impacted: not only do parents and children need to learn to be a long-distance family, but grandparents and grandchildren also need to come up with new ways of interacting. This study examines the impact of divorce on the intergenerational relationships, analyzing how the relations between grandparents and grandchildren happen in nuclear, single parents and

reconstituted families from the perspective of 36 Brazilian children aged between seven and ten years. In their reports, children tell us about the importance of the ties created by the middle generation in intergenerational interaction and show us that the divorce of their parents can lead to significant consequences in the quality and intensity of contact with their grandparents. While, on the one hand, these ties tend to strengthen among the members of the side of the family that has children's custody, they tend to weaken on the side that does not. In some cases, the lack of contact with grandparents can make children not regard them as such, which shows that it is not enough for the grandparents to consider themselves to be grandparents. This refreshes and gives new perspectives to contemporary studies of intergenerational relations.

## 20RN01 - Ageing and the Family

### Are Czech Grandparents Confronted with Role Overload?

Marcela Petrová Kafková, Masaryk University, Brno | [kfkv@seznam.cz](mailto:kfkv@seznam.cz)

Lucie Vidovičová, Masaryk University, Brno | [11638@mail.muni.cz](mailto:11638@mail.muni.cz)

Due to the benefits of active ageing, older people are regarded not only as those in need, but also as a resource, as those who provide, contribute and give. Their contribution is being recognised on different levels: as workers, as active members of the community, as a pivotal part of intergenerational solidarity. Being a working grandparent caring for a grandchild or/and a spouse or parents can be challenging. However, very little attention has been paid to how these different roles overlap and how

convergence or conflict between them is perceived and experienced by ageing people themselves. In Czech society under socialism, young families were heavily dependent on their parents; the parents' instrumental and financial support was considerable. Older generation not only provided a place to live for young families, but especially older women were heavily involved in grandchildren care. The last decades have witnessed considerable erosion of this path dependency. At the same

time the retirement age has been increased and the period of economic activity has been prolonged. Our contribution, which makes use of SHARE data, focuses on the issue of potential role overload among Czech older people. We concentrated on the intensity of care which grandparents provide to their

grandchildren. We analysed the frequency of contact and the kind of help provided. This information is analysed in connection with the grandparents' economic activity, how far they live from their grandchildren, and their feelings of being overloaded.

## **Grandparental Child Care and Emotional Closeness between Parents and Grandparents**

**Mirkka J.E. Danielsbacka**, University of Helsinki | [mirkka.danielsbacka@helsinki.fi](mailto:mirkka.danielsbacka@helsinki.fi)

**Antti O. Tanskanen**, University of Helsinki | [antti.tanskanen@helsinki.fi](mailto:antti.tanskanen@helsinki.fi)

It is well known that in modern societies different types of grandparents “invest” differentially in their grandchildren. Maternal grandmothers usually invest the most, following maternal grandfathers, paternal grandmothers, and finally paternal grandfathers who invest the least. Evolutionary researchers have argued that the reason for biased grandparental investment is based on the paternity uncertainty. Paternity uncertainty means that a woman can be sure that the child she gives birth is her own but a man can never be as sure that the child really is his. In grandparenting this means that only the maternal grandmother has no relationship uncertainty, since she is certain that her daughter and her daughter's children are genetically related to her. Maternal grandfathers and paternal grandmothers have one kinship link with paternity uncertainty,

while the paternal grandfather has two. Proximate mechanisms affecting the biased grandparental investment remain unclear. It has been suggested that parents can shape the nature of the grandparent–grandchild relationship because they act as intermediaries between the grandparents' and grandchildren's generations. Especially mothers may act as gate-keepers between a grandchild and different grandparent types. Here we study with the Generational Transmissions in Finland survey the proximate effect of the mother-grandparent relationship measured by emotional closeness on the biased grandparental investment measured by grandparental child care. The study shows that mothers' emotional closeness towards a grandparent has an effect on child care provided by a grandparent.

## **No Country for Old Men? Italian Families Facing the Challenges of an Ageing Society**

**Stefania G. Meda**, Università Cattolica di Milano | [stefania.meda@unicatt.it](mailto:stefania.meda@unicatt.it)

The paper illustrates the Italian case with regard to aging and the living conditions of the elderly according to a family relational perspective. The paper explains what it means to frame the aging phenomenon in a family perspective and what “advantages” this approach brings to the sociological

interpretation of a phenomenon of such a great social significance and complexity, the consequences of which may lead to problem scenarios. Data from official sources on aging in Italy today are presented and interpreted from the perspective of family relationships and relational morphogenesis. A number of

crucial issues connected with ageing population in Italy will be discussed (intergenerational support; the "sandwich generationers"; caretaking and family-work balance; family friendly best practices of intergenerational aid put in place by State, private or third sector organizations) and compared in an international perspective. The aim is therefore to provide an innovative key to understanding the phenomenon of aging in

Italy in its complexity, show its interrelatedness with family and intergenerational issues and give an accurate representation of the changes the family and society at large are undergoing today, with the ultimate goal of fielding forms of support to intergenerational relationships which are crucial for social capital development and social cohesion.

## Successful Ageing and Marital Biography in Europe

Sarah E Gibney, University College, Dublin | [gibneyse@gmail.com](mailto:gibneyse@gmail.com)

This study is nested in a growing body of research focusing on the marital biography in order to better understand the long established relationship between marriage, health and well-being across the life course. The relationship between two aspects of the marital biography (timing of first marriage and transitions) and a bio-psycho-social model of successful ageing is investigated. Data is from wave two of the Survey of Health, Ageing and Retirement in Europe and SHARELIFE (retrospective life history wave). A measure of lifetime marital status capturing episodes of union formation and dissolution/widowhood an indicator of normative age of first marriage are constructed. Multivariate logistic regression is employed to determine the extent to which each aspect of marital biography predicts successful ageing. Standard demographic and socio-economic variables

(age, gender education, employment, financial circumstance, region) are controlled for in addition to self-reported childhood health as a measure of health selection. Older age at first marriage (35 years or older) significantly lowers the odds of successful ageing. A protective effect of stable marriage is observed, increasing the odds of successful ageing compared with multiple dissolutions and never being married. Favourable economic circumstances increase the odds of successful ageing and reflect resource-pooling among the ever and currently married categories. Excellent childhood health increases the odds of successful ageing but there is no evidence of health selection. A North-South gradient in successful ageing in Europe is evident, reflecting well-established gradients in psychological well-being, quality of life and the nature of social and family life.

### Post-Retirement Employment in Germany - Trends, Factors and Self Reported Reasons Explaining Work beyond Retirement Age

Heribert Engstler, German Centre of Gerontology | [heribert.engstler@dzg.de](mailto:heribert.engstler@dzg.de)

Laura Romeu Gordo, German Centre of Gerontology | [laura.romeu-gordo@dzg.de](mailto:laura.romeu-gordo@dzg.de)

The demographical change and the subsequent financial sustainability problems of the public pension systems have motivated the debate about prolonging working lives. On one side, legal retirement age has been postponed in Germany which implies longer employment biographies until official retirement. On the other hand, the declining pensions have also motivated the discussion whether more people will need to work beyond retirement in order to complement their pensions. Although this is an argument which has been often used in the public debate, few empirical evidence exists about the factors and reasons explaining post-retirement employment in Germany. In the present paper we first investigate trends in pre- and post-retirement employment of individuals aged 60 or older for the period 1996-2011 with Data from the German Ageing Survey (DEAS). Next, the factors influencing the probability of working beyond retirement

are investigated using a probabilistic model. Concretely, we investigate the role of demographic factors, employment biographic factors, regional and financial factors in determining employment after retirement. Last, we investigate self reported reasons to work beyond retirement. Our results show that both pre- and post-retirement employment of individuals aged 60 and older have increased during the period 1996-2011. Regarding the factors which explain post-retirement employment we find that although financial factors are important in determining employment participation, other factors like household context or employment biographic factors play an important role. Last, the analysis of the self reported reasons for employment reveal that financial necessity is not the main reason to work beyond retirement.

### The Transition to Retirement in Switzerland: A Life Course Study about the Timing of Retirement

Ignacio A Madero Cabib, Université de Lausanne | [ignacio.maderocabib@unil.ch](mailto:ignacio.maderocabib@unil.ch)

Jacques-Antoine Gauthier, Université de Lausanne | [Jacques-Antoine.Gauthier@unil.ch](mailto:Jacques-Antoine.Gauthier@unil.ch)

Jean-Marie Le Goff, Université de Lausanne | [Jean-Marie.LeGoff@unil.ch](mailto:Jean-Marie.LeGoff@unil.ch)

A substantial body of life course research has considered occupational trajectories in Switzerland, focusing either on early or middle adulthood careers. However, the issue of the transition to retirement in this country is receiving increasing attention for several reasons: the emergence of declining birth

rates associated with an aging population, a high proportion of active old workers, and continuous changes in the financial and legal frames of the retirement. Moving forward on this topic, the present article aims to offer new insights on the dynamics of the transition to retirement in Switzerland (centered on ages

between 50 and 70 years), evaluating the timing of retirement (early, "on-time", and late retirement) through a life course schema. By using longitudinal methods, such as Optimal Matching Models and Event History Models, we concentrate on two life course notions: the standardization and the heterogeneity of the transition to retirement among individuals.

Data comes mainly from the Survey of Health, Aging and Retirement in Europe (SHARELIFE). Preliminary results evidence a widespread influence of some positional and systemic factors (such as presence of marriage and children, gender, age cohort, and job quality), as well as past labour and cohabitation trajectories on the timing of retirement.

## Work After Retirement

J. P. P. Roos, University of Helsinki | [jiipee.roos@gmail.com](mailto:jiipee.roos@gmail.com)

The baby boomers have now begun to retire in Europe. In countries like Finland, most of the baby boomers (i.e. those born between 1945-1950) have already retired, whereas in countries with a broader definition (last baby boomer cohort was born around 1960) they are still in the process. The difference between previous pensioner generations is that the Baby boomers are increasingly healthier, with almost undiminished ability to work. The question is, what will they do? In most countries, there are no restrictions concerning work when retired. (will check rules in different countries!) In some professions the demand for work is so high that the retirees are in constant demand (e.g. nurses, doctors). In most public policy discussions about pensions it is assumed that the retirees will do nothing after retirement (except consume, and even this is not really taken into account).

There are now many research results showing that the baby boomers are quite active in helping their children and grandchildren. The drastic change in the health situation of the new pensioners (whose life expectation is also increasing more quickly than expected) should reflect soon in the employment situation also. In the paper I will look into the situation in Finland using Generational transfers (Gentrans) survey data and other statistics, with some supporting European data from Share. The main questions are related to the extent of the phenomenon, to the expected changes and what it means for both public pension policy and employment. The retirees can be expected to accept work for lower pay, less security, shorter hours (normally retirees are not interested in fulltime work), i.e. they are an ideal workforce in the flexicurity society.

## Elderly and Social Media: Bridging the Gap of eMarginality through Social Media

Beneito-Montagut Roser, Universitat Oberta de Catalunya | [r.beneito-montagut@aston.ac.uk](mailto:r.beneito-montagut@aston.ac.uk)

This paper aims to enquire the extent to which older people use the social media, to communicate with others and keep interpersonal relationships. Western urbanization and modernization have led to the breakdown of traditional social orders and even undermined the mechanisms that traditionally support and protect older people. The percentage of older people living alone varies in European countries from 50% in

Denmark to less than 20% in south Europe. In these countries the family structure is changing and this percentage is greater than ever and increasingly growing. Besides, a high number of the older people who live alone felt loneliness at some point. ICTs, and social media in particular, play an essential role in supporting daily life in society. They are used, inter alia, to stay in touch with family and friends, and even to extend our social

networks. In this sense, one of the moderators of marginality in the information society is interpersonal relationships. This paper offers a theoretical framework and a methodological proposal to study how social media can improve the well-being of older people. It summarises research findings on social media and elderly and proposes an approach based on the sociology of emotions. Specifically it

serves as a framework for a research project enquiring how Catalan elderly uses social media for interpersonal relationships. Eventually, it leads to the development of a strategy to promote older people's social web engagement which, in addition to fostering e-Inclusion for this excluded group, can help to avoid one of the major problems of this population: loneliness and isolation.

## 22RN01 - General Aspects of Ageing (2)

Chair(s): Gražina Rapolienė (Vilnius)

### Expectations and Plans of Academicians After Retirement in Turkey

Ayşe Canatan, Gazi University | [canatan@gazi.edu.tr](mailto:canatan@gazi.edu.tr)

**Introduction :** In modern times retirement became an important stage in human life. In 20th. century people enrolled social security system, after they work at least 25 years, they have a right for retirement. How do people accommodate retirement days after the long working years? What do they think about their salary decrease? Some jobs suitable to put a stop, such as official, public servant, but for academicians is not easy to put a stop working, they continue to work after retirement (if they want) can study outside of university. In this research it was asked the questions about what are their retirement plans and what do they think about retirement. It is important to know their plans to prepare new areas for them. In our country (Turkey) scientists and academicians are valuable for our development. **Method:** the sample of the

research was composed to women and men academicians working and newly retired (for one year). Sample size is 162 ( 92 men and 70 women) and sampling format is purposive sampling. Data analysing is made by SPSS 21.0 . The first hypothesis of this research is women retirees can easily accommodate than men to retirement stage. The second one is men are more willing to work than women after retirement. **Results:** these two hypothesis of research are corrected. While women accommodate to retirement more easily than men, after retirement men are more willing to work . **Conclusion:** Retirement is one of the most important stages, coming at transition to old age. In this era, in our country the number of retired people and elderly people are rapidly increasing. Government must prepare new organizations to new retired people.

## Changes of Socio-Economic Status over the Life-Course in Population Ageing Poland

Jolanta Perek-Bialas, Jagiellonian University, Cracow | [jperek@sgh.waw.pl](mailto:jperek@sgh.waw.pl)

Konrad Turek, Jagiellonian University, Cracow | [kon.turek@gmail.com](mailto:kon.turek@gmail.com)

Justyna Stypinska, Freie Universität, Berlin | [Justyna.stypinska@fu-berlin.de](mailto:Justyna.stypinska@fu-berlin.de)

The paper discusses how social inequalities, measured with socio-economic status (SES), accumulate over the life-course in Poland, a post-socialist country with an ageing population. Socio-economic status describes the position a person occupies within society on grounds of wealth, educational level and occupational prestige. Theory of cumulative advantages and disadvantages (CAD) assumes that life-courses differ with SES and social inequalities accumulate over the life-course. System transition in Poland resulted in changes of socio-economic structure and increasing of inequalities. At the same time demographic changes (decrease of fertility rate, increase of life expectancy and migration) accelerated the process of population ageing that will turn Poland into one of the oldest European societies within next decades. The

analysis show the impact of transition on SES and life-course, as well as impact of population ageing on CAD in a life-course. During transition of socio-political system Poland experienced changes of occupational structure, hierarchy of prestige, salaries and carrier path, as well as increase of the role of education and competencies and development of free labour market. It changed the mechanisms of structuration: some factors influencing SES gained more meaning, some were devalued. This is observed in various alterations of typical life-course cycles and life-trajectories of Polish population. The results explain also the increase of inter-generational inequalities and the difficulties that older generations experience in the post-transition labour market.

## Volunteering and Social Integration in Older Age – Finnish Retirement Migrants in Spain

Jenni Spännäri, University of Helsinki | [jenni.spannari@helsinki.fi](mailto:jenni.spannari@helsinki.fi)

Henrietta Grönlund, University of Helsinki | [henrietta.gronlund@helsinki.fi](mailto:henrietta.gronlund@helsinki.fi)

Volunteering is an arena that can be used in negotiating identities and life paths. This reflexive style and use of volunteering has not, however, been thoroughly researched in the context of older adults. This paper examines both collective and reflexive styles of volunteering amongst the community of Finnish retirement migrants in Costa del Sol, Spain. The focus is especially in volunteer work

within religious communities and organizations. The central findings are, that volunteering is an important arena for social integration and with age and personal development the focus of volunteering can move from behavioral to cognitive social integration, as well as from collective to reflexive volunteering.

## 23RN01 - Care (2)

Chair(s): Marianne Jacobs (Amsterdam)

### Beyond Regulation: A Study of Relational Accountability in Long-Term Residential Care for Older Persons.

Albert Banerjee, York University | [balbertb@yorku.ca](mailto:balbertb@yorku.ca)

Dee Taylor, Fraser Health Residential Care & Assisted Living, Surrey | [Deanne.Taylor@fraserhealth.ca](mailto:Deanne.Taylor@fraserhealth.ca)

Anita Walh, Fraser Health Residential Care & Assisted Living, Surrey | [Anita.Wahl@fraserhealth.ca](mailto:Anita.Wahl@fraserhealth.ca)

Against the backdrop of increasing regulation of the long-term residential care sector for older persons, this paper considers a promising practice that engages workers in ensuring quality care and enhancing workplace safety. This programme is innovative in a number of ways. First, unlike top down forms of accountability, this practice recognizes direct careworkers are important sources of knowledge and engages them in decision-making and modeling solutions. Second, rather than adopting a punitive approach to accountability, this process strives to level, at least temporarily, workplace hierarchies and

empower workers. Third, unlike regulation, the program does not adopt a reductive optic, focusing on specific problem areas. Rather the process is grounded in the assumption that quality of care, working conditions, and worker safety are inter-related and contextually dependent. Drawing on Joyce Fletcher's work on gender, power and relational practice, we theorise this programme as a means of instituting a form of relational accountability within a publicly owned and operated residential care systems. We conclude by noting some of conditions that make this programme possible and desirable.

### Social Security of the Transnational Family. Poles in Iceland and Austria and their Old Parents in Poland

Lukasz Krzyzowski, AGH University of Science and Technology, Cracow | [lkrzyzowsk@gmail.com](mailto:lkrzyzowsk@gmail.com)

One of the broadly discussed issues, in particular in societies of poor infrastructure of formal care of dependent people, is the effect of the ageing process on the efficiency of informal care of the elderly by family members, friends, neighbors and local communities. The complex situation of the care of the elderly resulting from dropping fertility is further complicated when the emigration rate is high in a given country. This is the situation of contemporary Poland. In order to avoid thinking in terms of moral panics

concerning the abandoning of old people, mostly parents, by the emigrants, without granting them adequate support, it is helpful to look at the care as a socially constructed system of socio-cultural practices, in many cases operating successfully, but also, nearly always, leading to various tensions and ambivalent attitudes and practices of people concerned. It will be shown that this ambivalence is visible particularly well in cases of migrating women, in Polish culture particularly responsible for care. My main

thesis is that culturally determined necessity of the personal realization of children's obligations to care of older parents are modified but do not disappear. What becomes necessary is new types of social practices. The ways the care strategies are realized by

migrants creates transnational social security system. For the sake of this article, I shall use the quantitative and qualitative data collected during my own field research in Iceland (2010-2011) in Austria (2011) and Poland (2010-2011).

## Caring Practices in the Daily Lives of Informal Care

Liina Sointu, University of Tampere | [liina.sointu@uta.fi](mailto:liina.sointu@uta.fi)

As European societies are rapidly ageing, the importance of informal care increases. This is further enhanced by elder care policies centered on the goal of ageing at home. The discourses organizing our understanding of care and ageing perceive home as a place of autonomy, rest and independence. What seems to be missing is the recognition of the complex intertwining of relationality, work and vulnerability related to informal care. By focusing on the daily lives of those elderly who give care to their spouses at home, the paper sets out to challenge the discourses on care and ageing to more fully recognize care and its specificities. The data consists of 24 interviews with 14 different participants. The interviews were carried out so that daily lives at home and everyday surroundings were reflected upon as

much detailed and nuanced as possible. To support this, different elicitation techniques (such as photo elicitation) were used. The analysis focuses on identifying and naming caring practices. These practices are understood as consisting of mundane and embodied acts embedded in the relations of everyday life. The concept of caring practice brings together relationality and concrete acts necessary in caring, thus contributing to conceptualizations of care. Identifying and naming caring practices make them visible, thus challenging the discourses on care and ageing at home, as well as providing us with better understanding on what kind of support and why is required to ensure the well-being of elderly informal carers.

## Evaluating Home Care in Slovenia: Approaches and Instruments

Mateja Nagode, Social Protection Institute of the Republic of Slovenia | [mateja.nagode@guest.arnes.si](mailto:mateja.nagode@guest.arnes.si)

Home care is a substantial component of long-term care, which is nowadays an important issue, both at national and international level. It is expected that a larger share of the population will become dependent on long-term care in the future and for that reason it is important to systematically regulate and develop the field of long-term care. Home care, which is the fundamental social care service provided at the home of the individual plays an important role concerning the process of deinstitutionalisation. It is the most wide-

spread community-based service, but unfortunately, according to the planned scope (3 % of people 65+) its development in Slovenia is still significantly slow. This area requires more systematic, comprehensive and planned research all significant aspects of its functions need particular attention – system (macro level), provider (mezzo level) and user (micro level). Preliminary data and findings of the first systematic evaluation of all three levels (macro, mezzo and micro) of home care in Slovenia will be presented and discussed.

## 24RN01 - Care (3)

Chair(s): Marjolein Broese van Groenou (Amsterdam)

### Formal Care about the Incompetent Elderly with Mental Disorder

Lubica Juríčková, Palacký University, Olomouc | [lubica.jurickova@upol.cz](mailto:lubica.jurickova@upol.cz)

Jiří Vévoda, Palacký University, Olomouc | [jiri.vevoda@upol.cz](mailto:jiri.vevoda@upol.cz)

Kateřina Ivanová, Palacký University, Olomouc | [katerina.ivanova@upol.cz](mailto:katerina.ivanova@upol.cz)

Jaroslav Filka, Palacký University Olomouc | [jaroslav.filka@upol.cz](mailto:jaroslav.filka@upol.cz)

In ageing societies, questions of participation of elderly people in social life and the possibilities of a self-determined life in old age are of high importance. The state increasingly is confronted with the task of protecting personal rights of older and incompetent elderly (i. e. persons over 60 years of age). These are people who have been deprived of legal capacity by district courts because of mental disorders and who have been appointed by private or public guardian. Evaluation of formal care about the incompetent elderly with mental disorder is enforced by increasing number of incompetent elderly and changing

demographic structure of society. In the Czech Republic there are not any official statistics by which it would be possible to describe this formal care. That is the reason why the project was implemented in selected regions in the Czech Republic in 2009–2012. The study sample of the survey comprised 307 court records concerning living incompetent elderly (out of 1,092 records). The court records were examined by the content analysis method and the results were socio-demographic and epidemiological data about the incompetent elderly and their guardians which will be presented in an article.

### Freedom of Choice in Public Eldercare – for whom? Care Worker Perspectives on the Challenges of Care and Care Work in Sweden

Katarina E. Andersson, Umeå University | [katarina.andersson@socw.umu.se](mailto:katarina.andersson@socw.umu.se)

Public eldercare is one of the largest and the most rapidly changing welfare institutions in Sweden, but also one of the least prestigious. Since the early 1990s, the structural conditions to provide for the older citizens are continuously changing in Sweden and new forms of organisations, mainly influenced by New Public Management (NPM) are major trends of transformation today. Individual rights and freedom of choice is emphasized within public eldercare. The goals and outcomes of free choice are however vague but presented as beneficial for all; decreased cost for the municipalities, better working conditions for the staff, increased quality and

influence of care for the older people. Qualitative interviews with care workers were analysed with analytical attention to their experiences of changes and conditions for care and care work. The analysis reveals that the care workers were confronted by restrictions in time but still they took on individual responsibility for the older people. Facing a vulnerable person in need for care always involves relational aspects in the actual care setting, but this does not make care an individual responsibility. The political goals to improve quality of care and to strengthen the older citizens rights and at the same time be more effective, appears to be rather

contradictive according to the care workers experiences. However, in the way that free choice operates with rationalisation and

economizing of care, the care workers did not have any choice, other than to care for the elders in the best possible way.

## **Social Networks and Wellbeing in Retired, Unemployed and Employed Portuguese Older Adults**

**Rita Borges Neves**, University of Minho | [ritaborgesneves@gmail.com](mailto:ritaborgesneves@gmail.com)

**Daniela M. Craveiro**, University of Minho | [dcraveiro@ics.uminho.pt](mailto:dcraveiro@ics.uminho.pt)

**Sara Gabriela Silva**, University of Minho | [saragabriela.silva@gmail.com](mailto:saragabriela.silva@gmail.com)

**Alice Delerue Matos**, University of Minho | [alice.delerue2@gmail.com](mailto:alice.delerue2@gmail.com)

In western societies paid work is assumed as a key adulthood role that grants status, and may enable social contact and a sense of collective purpose. Labour market status has therefore important implications for social networks. Social relationships may affect health outcomes. However its effects are either positive or negative according to sociodemographic characteristics, context and the measurement of social interaction. Responsive social networks may reduce the risk of mortality and benefit mental health. This proposal aims to study the associations between social network characteristics and health-related wellbeing among 50 plus Portuguese men while comparing different labour market status, namely retirement, unemployment and employment. Wellbeing

will be measured by mental health and self-perceived health status. Data retrieved from the fourth wave of SHARE survey was used. The analysis is based on a set of logistic regression models where social network variables are regressed against health-related wellbeing indicators in subsamples of retirees, unemployed and employed individuals. Results indicated that the relation between social networks and ill-being changes depending on the labour market status. Beyond contributing to the empirical corpus on the relation between social networks and health, the current study will deepen interpretations regarding the associations between exclusion from the labour market and dependence between social network and health.

## **Processes of Exploitation Versus an Increase of Autonomy: Case of Polish Female Workers in German Housholdes**

**Agnieszka Satola**, Frankfurt Institute of Social Research | [satola@em.uni-frankfurt.de](mailto:satola@em.uni-frankfurt.de)

This paper focuses specific aspects of Polish female domestic and care workers' biographies in Germany and their social process structures, which could be considered as typical for the migration group doing this kind of work. In Germany, Polish women are still wanted as 'unqualified', cheap helpers, who are needed to practice household work, but, in reality, they perform very demanding and complex work in caring for elderly people.

Polish women are irregularly employed in German households, rotating between their home country and the country of employment every few weeks. The specifics of this work consist of difficult physical tasks with low pay, which is practiced for months (and often years). In the paper I will present two different sides of the lives of such people and work situations in Germany: on the one hand, it is clear that dependency, humiliation and

exploitation in the workplace, expropriation of identity, different risks, evoked by the fact of migration and individual biographies, cause unbearable suffering. But in spite of those suffering experiences, labour migration also stimulates the women's processes of deep going reflection which have extensive

biographical consequences because of the new experiences, the change of perspective and the distance from their home country. Accordingly, we can assume that mainly two biographical processes are dominant and converge: the process of suffering, and in addition the increase of autonomy.

## 25RN01 - Care (4)

Chair(s): Susan Venn (Surrey)

### Documentation in Need Assessment within Elderly Care: Does Migrant Background Have any Impact on how Older People are Described in Case Files?

Anna Olaison, Linköping University | [anna.olaison@liu.se](mailto:anna.olaison@liu.se)

Sandra Torres, Uppsala University | [sandra.torres@soc.uu.se](mailto:sandra.torres@soc.uu.se)

Emilia Forssell, Ersta Sköndal University College | [emilia.forssell@esh.se](mailto:emilia.forssell@esh.se)

This presentation departs from the ongoing debate on the role that documentation plays in the clientization of people within social work and the need for documentation studies about welfare services. It is based on a study of documentation within the context of need assessment practice in elderly care. The aim is to shed light on how older people's needs are described in the case files that are used in this practice within the context of Swedish elderly care. The data is comprised of 202 case files (101 described cases with older people that have migrant backgrounds and 101 with people born in Sweden). The presentation will address

the differences found: case files involving older people with migrant backgrounds differ namely from those involving older people born in Sweden. The former were described in a more comprehensive way as far as health status and social networks are concerned. The results suggest that documentation in need assessment practice builds on categorization that is guided by assumptions about who migrants are and what their needs may be. As such, the presentation will contribute to the debate on institutional categorization and raises questions about how ethnic 'Otherness' influences case documentation.

### Comparing Inequalities in Health and Access to Caregivers among Older Women and Men in Brazil and the UK

Sara Arber, University of Surrey | [S.Arber@surrey.ac.uk](mailto:S.Arber@surrey.ac.uk)

Yeda Duarte, University of Sao Paulo | [yedaenf@usp.br](mailto:yedaenf@usp.br)

Khim Horton, University of Surrey | [K.Horton@surrey.ac.uk](mailto:K.Horton@surrey.ac.uk)

Brazil and other Latin American countries are experiencing unprecedented population

ageing, but little research has examined inequalities in health or access to family

caregivers among older people. The paper presents comparative cross-national research on Brazil and the UK, based on secondary analysis of large-scale surveys. It focuses on the impact of gender, marital status and socio-economic inequalities in health and caregiving support in these two contrasting societies. First, the paper provides a conceptual analysis of challenges in measuring socio-economic status (SES) among older men and women in Brazil for comparative analysis with the UK. It contrasts alternative ways of measuring SES - based on the older person's own characteristics (past employment, class, current income) and on household characteristics (income, assets, class of Head of Household). How gender, marital status and living arrangements impact on ways of

measuring SES among older people in Brazil and the UK are highlighted. Second, the paper analyses large-scale datasets from Brazil and the UK to compare socio-economic inequalities in elders' health and access to family caregivers, focusing particularly on the intersections between gender and SES inequalities. We compare data for people over age 65 from the UK 'Understanding Society' survey and the Brazilian Survey of Health, Wellbeing and Aging (SABE) - a longitudinal and multiple cohort survey. The paper demonstrates greater socio-economic inequalities in health among older adults in Brazil than the UK, and shows how gender and SES are differentially linked to health and access to family caregivers in the two societies.

## **Queering Care in Later Life: Insights from the Lived Experiences and Intimacies of Older Lesbian, Gay and Bisexual (LGB) People**

**Andrew D. King**, University of Surrey | [andrew.king@surrey.ac.uk](mailto:andrew.king@surrey.ac.uk)

This paper discusses the complex relationship between ageing, intimacy and informal care drawing on insights from debates in the sociology of sexuality. The paper begins with a brief discussion of the literature related to transformations in intimate personal relationships, the place of sexual minorities in this debate and particularly the significance of care therein. Subsequently, it considers what studies about older lesbian, gay and/or

bisexual adults can tell us about later life and explain both how and why we need to 'queer' care. The paper then draws on an account of the life experiences of two older gay men to illustrate this complexity of informal care before drawing some general conclusions, pointing to issues academics, policy makers and service providers, amongst others, may wish to consider.

## **Use of Coercion in Nursing Homes - Experiences of Patients and Relatives**

**Elisabeth Gjerberg**, University of Oslo | [elisabeth.gjerberg@medisin.uio.no](mailto:elisabeth.gjerberg@medisin.uio.no)

**Lillian Lillemoen**, University of Oslo | [lillian.lillemoen@medisin.uio.no](mailto:lillian.lillemoen@medisin.uio.no)

**Background and aims:** In Norway as in many Western countries, studies have demonstrated extensive use of coercion in nursing homes, especially towards patients suffering from dementia who need frequent help in the activities of daily living. Earlier studies have demonstrated that the use of coercion

represents ethical challenges to the staff. However, we have limited knowledge of the experiences and views of nursing home patients and relatives on the use of coercion; is the use of coercion acceptable in some situations, and how can using coercion be avoided when the patient resists necessary

care and treatment? **Methods:** The data are based on qualitative interviews with 38 patients living in six nursing homes. In addition, we carried out seven focus group interviews with 60 relatives of patients with cognitive impairments at the same nursing homes. The interviews were based on an interview guide aimed at gaining more knowledge on what kinds of ethical challenges patients and relatives experience in nursing homes. **Results:** The study revealed that more than half of the patients and the majority of the relatives expressed positive attitudes to the

use of coercion, provided it was about extremely important medication or to take care of the patient's hygiene. Both patients and relatives emphasised the importance of using time and creativity, to coax and persuade before using overt coercion. Some of the attitudes expressed, challenge common ideals about the importance of patient autonomy and dignity. **Conclusions:** The majority of nursing home patients and relatives expressed positive attitudes to the use of coercion in specific situations, while at the same time emphasizing the need to try alternative, strategies first.

## RN01 - Poster Session

### How Are Effects of Retirement Transitions and Employment Durations on Old-Age Pensions Changing in Germany?

Julia Simonson, German Centre of Gerontology (DZA) | [julia.simonson@dza.de](mailto:julia.simonson@dza.de)

Laura Romeu Gordo, German Centre of Gerontology | [laura.romeu-gordo@dza.de](mailto:laura.romeu-gordo@dza.de)

An ongoing welfare state reform in Germany gradually increases legal retirement age to 67. Additionally, in the last years opportunities for early retirement has been narrowed. These developments evoke the question, how far employees are able to prolong their working lives and arrange their transitions to retirement without serious consequences for their old age incomes. Using panel data from the German Ageing Survey (DEAS) by means of regression analyses we examine how types of retirement transitions as well as duration of employment affect old-age pensions and how these effects have changed from 1996 to 2011. Over the observed period the effective

retirement age has increased by one year and more people retire directly from employment than from other states like unemployment. However, for people who do not directly change to retirement the distance between end of working life and commencement of pension has increased. Furthermore, both a direct transition to retirement and longer durations of employment positively affect old-age pensions. These effects have not changed over time. As a consequence, people who are not able to adapt to increasing retirement age get lower old-age incomes due to deductions of pensions. Therefore, welfare policy has to spend special attention to these groups.

## Intergenerational Exchange between Adult Children and Parents in Migrant Families from the Former Soviet Union in Germany

Elena Sommer, University of Bremen | [esommer@bigsss-bremen.de](mailto:esommer@bigsss-bremen.de)

Claudia Vogel, German Centre for Gerontology (DZA) | [claudia.vogel@uni-vechta.de](mailto:claudia.vogel@uni-vechta.de)

Elma Laguna, University of Vechta | [elma.laguna@uni-vechta.de](mailto:elma.laguna@uni-vechta.de)

Family is considered to be an important source of support for elderly people. Migration often leads to spatial separation of family members and can have an impact on intergenerational relationships. Whereas the possibility to exchange instrumental help (e.g. practical assistance with housework or personal care) between family members is influenced by geographic proximity, financial support depends primarily on the resources of the givers and the needs of the recipients. Our project analyses representative data on intergenerational support in migrant families from the former Soviet Union (FSU) which often migrated to Germany with family members of several generations. This led to a relatively low spatial distance between children and parents and enabled favorable conditions for the exchange of instrumental help. Quantitative

data analysis of the living arrangements and intergenerational support in FSU migrant families indicates that the engagement in exchange of instrumental help, indeed, decreases with increasing geographic distance. As regards to financial support, parents who live in Germany behave similarly to the native population, such that they are more often the givers of financial support to the younger generation, while parents who live abroad are in most cases, the receivers of financial support. Offering financial help to parents living outside Germany could be interpreted as compensation for limited instrumental help hindered by distance in order to be able to fulfill filial obligations. We would, however, interpret these findings as a result of different welfare systems with different levels of provision for old age.

## Inequality in good health: evidences from SHARE survey

Daniela M. Craveiro, University of Minho | [dcraveiro@ics.uminho.pt](mailto:dcraveiro@ics.uminho.pt)

As the population ages the concern about health in the later phase of life is increasing which highlights the importance of the study of social determinants of health in the older population. Inspired by the approach of Dupre and George (2010) about 'Exceptional Health', a critical analysis about the differential variability introduced by non material social determinants of health – which protective effect is often emphasized in the political discourses about (active) aging – is proposed by comparing the profiles generated by these dimensions in older adults with good health of opposing socioeconomic status (high SES vs low SES). Profiles are defined by multiple correspondence analysis using data from the

fourth wave of SHARE survey of four European countries with distinct welfare characteristics (Denmark, Germany, Portugal and Hungary). Preliminary results indicate that very little variability is found in lower SES groups in terms of non material determinants of health, especially in terms of health behaviors. More diverse profiles are identified in higher SES groups. Variations of these results are found between countries with different welfare regimes. By considering individuals traditionally ignored in social sciences (low SES individuals with good health) the approach permitted to find evidences that critically deconstruct dispersed ideas about health and (active)ageing and to connect the variability

degree in lower SES groups with macrosocial dimensions.

## **Lifetime Childlessness, Depressive Mood and Quality of Life among Older Europeans**

Sarah E Gibney, University College, Dublin | [gibneyse@gmail.com](mailto:gibneyse@gmail.com)

Lifetime childlessness is increasing in Europe. Adult children play an important role in their ageing parents' lives; acting as bridges to social support and monitoring health behaviour. This role has been enshrined at various institutional levels, from the family to the welfare state. Empirical evidence for the relationship between childlessness on psychological wellbeing is mixed and depends on the wellbeing measures employed, the life course stage under examination, and differing societal contexts. Few studies investigate health selection effects; health-related predictors of childlessness may mediate the relationship between childlessness and wellbeing and/or influence wellbeing directly. This study investigates the relationship between lifetime childlessness and psychological wellbeing; depressive mood and quality of life. Data is from wave two of the Survey of Health, Ageing and Retirement in

Europe and SHARELIFE (retrospective life history wave). Region-specific Ordinary Least Squares (OLS) regression is performed to determine the extent to which childlessness predicts psychological wellbeing, controlling for demographic and socio-economic characteristics and health. Interactions between childlessness and childhood health indicate the role of health selection in this relationship. Childlessness significantly increases depressive mood in Northern Europe only, conditional on marital status; widowhood and never being married in particular. There is no evidence that health selection mediates the relationship between childlessness and psychological wellbeing. However, marital status does consistently mediate this relationship and is therefore the context through which this relationship should be further considered.

## **The Meanings of a Sense of Community in Senior Cohousing Community**

Outi Jolanki, University of Jyväskylä | [outi.jolanki@jyu.fi](mailto:outi.jolanki@jyu.fi)

Anni Vilkkö, National Institute for Health and Welfare | [anni.vilkkö@thl.fi](mailto:anni.vilkkö@thl.fi)

The study looks at the Finnish senior cohousing unit and the meanings given to a sense of community in the everyday life of the community. The study is part of the 'MOVAGE Moving in Old Age: Transitions in Housing and Care' research project conducted at the University of Jyväskylä, Finland. Data come from group discussions conducted November 2012. The topics discussed were the participants' reasons to move to a cohousing unit and everyday life of the community. The theoretical background to the study comes from 'housing pathways' framework (Clapham

2005), which emphasizes the subjective meanings of living environment and moving, and moving decisions as part of the life history. Data was analyzed with discourse and narrative analysis. The discussants mentioned several reasons for moving to a cohousing unit. However, a sense of community was a central reason. A sense of community referred to a predefined abstract ideal, but also to the practices of everyday life and emotional commitment which were developed over the years. In practice a sense of community meant planning and participating in the activities,

doing maintenance work together, mutual emotional and practical support, and awareness of the social contacts and help available. However, the level of emotional and practical commitment to the community varied

causing occasional friction between residents. The senior cohousing community which is designed, funded and run by its residents exemplifies and supports residents' agency, and offers one option for senior housing.

## **Economic Cycle, Post-Soviet Transition and Voluntary and Involuntary Retirement in Estonia**

**Ave Roots**, University of Tartu | [ave.roots@ut.ee](mailto:ave.roots@ut.ee)

The situation of people during their late career on the labour market depends very much on the role of welfare state. In Estonia, where the state takes minimal role, the people on the labour market depend very much on the economic cycle. In this situation some groups are especially influenced. One of these groups is people in their late career and close to retirement. Estonia is one of the 2 countries (the other is UK) in Europe, where people continue working after official retirement age, but men in Estonia work much longer than in UK after passing retirement age (Romans 2007:3). Compared to other European countries, the pension replacement rate is relatively low, 41 % (Current 2006), and it is a great incentive to continue working passed

retirement age (Ainsaar 2011). During last 20 years Estonia has experienced 2 economic booms and recessions. This is perfect opportunity to study how the economic cycle influences the process of retiring. European social survey data reveals, that only last economic boom 2005-2007 differs from all the other years. Previous boom 1995-1997 is actually not different from the following recession in 1998 and 1999 in terms of retirement. Only during the last boom people could choose, whether they wanted to retire or not, during 90s one's own wish in that matter was not significant in predicting actual behaviour, which shows that during 90s Estonia was still struggling with post-soviet transition.

## **Digital Poland of Equal Opportunities. The Example of Seniors Learning Digital technologies.**

**Agnieszka Szymanska**, Adam Mickiewicz University, Poznan | [agnieszka\\_szymanska@vp.pl](mailto:agnieszka_szymanska@vp.pl)

There are about 13 million people in Poland that are over their 50s. 10 million Polish elders have never used the Internet. The social, political and economic effects are known: seniors are not only excluded from the digital world but from many other aspects of social life. This is why the project "Digital Poland of Equal Opportunities" has been started. Almost 3.000 volunteers supported by experts and financial grants worked with elders in their local communities to teach them how to use computers and how to access the Internet and make their lives easier and more fulfilled.

Almost a year after the project started we can see first results. The aim of the project was not only to teach seniors how to work with digital technologies but also to activate them socially. In my presentation I am going to talk shortly about the project. I will also present seniors and volunteers opinions about the project. I will introduce how their collaboration and working with digital technologies was progressing. I think both sites have a lot of interesting things to say. Volunteers can present methods that were most suitable for teaching seniors digital technologies. Seniors would talk about

increasing quality of their lives. Does anything changed from the time they learnt how to use a computer and the Internet? Maybe some household duties got easier? Or maybe they have a better contact with family or friends

abroad? Or maybe they have developed their hobbies or met somebody interesting during the computer courses? Answering these questions will give us the chance for the initial evaluation of the project.

## RN02 - Sociology of the Arts

### 02\_b02JS07 - Artistic Practices and Economic Constraints

Chair(s): Anna Lisa Tota (Università degli Studi Roma Tre), Graciela Trajtemberg (The Academic College of Tel Aviv-Jaffo)

#### Negotiating the Field of Artistic Production

Janet Chan, University of New South Wales | [J.Chan@unsw.edu.au](mailto:J.Chan@unsw.edu.au)

Creative artists operate in a field of cultural production (Bourdieu 1969) which consists of a 'domain' of knowledge and a network of cultural actors (Feldman, Ciskszentmihalyi and Garder 1994). This paper draws on a study of fine art students and practitioners in Australia to examine how artists negotiate the field of

artistic production in developing their work. It reinforces the usefulness of a context-dependent concept of creativity and discusses the variety of strategies adopted by students and practitioners to maintain their creative practice.

#### Creativity Denied. On the Inconsistent Attribution of Creativity in the Artistic Field

Ivonne Kuesters, Technical University of Dortmund | [ivonne.kuesters@tu-dortmund.de](mailto:ivonne.kuesters@tu-dortmund.de)

It is the common perception that those actors in the artistic field who deal with finances are not seen as creative. Even if one person does both, art and business, they have to tread carefully in order to not to lose their general air of artistry. Like for example the designer and entrepreneur Paul Smith who, when quizzed on his allegiance, stated that he is consecutively "wearing the hat of a businessman and wearing the hat of an artist". But the idea that a businessman in the artistic field might be creative while doing business with art seems utterly impossible. This presentation will challenge this view by means of a comparison of empirical data on two kinds of working processes in the artistic field: on one hand, the drafting, organising and

financing of a concert season by music managers of orchestras and music festivals (documented in semi-structured research interviews and on program material) and, on the other hand, the creation of two abstract paintings by the artist Gerd Richter (documented in a film by Corinna Belz). This comparative analysis will establish that both types of processes match each other closely. In a further, explanatory step the presentation will then refer to the theory of social differentiation in order to show that it is exactly the inherent creativity of their practices in combination with the depiction of businessmen and managers in the arts as uncreative that is conveniently employed in favour of an economic regulation of artistic organisations.

## Beyond Arab Springs. Art, Public and Policy in a New Cultural Context.

Valerio Zanardi, University of Barcelona | [valerio\\_zanardi@yahoo.es](mailto:valerio_zanardi@yahoo.es)

Festivals, and especially theatre festivals, embody the place where different subjects, cultures, institutions and organizations build and constitute meanings, interpretations, values, whilst in their different artistic programmes the traditional consistence and autonomy of artistic fields melts. So, within anthropological or economic perspectives, festivals can conventionally be seen as cultural texts, or normatively assessed as the result of processes of economic investment or political governance. It is also possible to read festivals as thick and opaque proceedings of more or less collaborative negotiations between different subjects, different logics, and different gauges, which can be differently played, described and used in the public

sphere. What happens when we use these kind of interpretations in totally different context as in post-revolution Tunisia? I carried out an ethnography in the context of Dream City, a festival of arts Placed in Tunis and Sfax in Tunisia and in the context of the cultural capital 2013: Marseille. In this paper, I will show through evidencies of the fieldwork (fotos, videos etc) some relevant elements of my ethnography, in order to discuss some differences both in the abstract principles and in the use of the instruments, of cultural policy, to show the actuality of the evergreen concept of generation in relation to publics, and to illustrate the changes of the festival are shaped by several (and changing) aspects related to public sphere.

## Suspended Creativity: Social Practice and Process of Institutionalization in the Youthful Artistic Experience

Marco Carniani, Istituto per la Cultura e la Storia di Impresa, Terni | [marco.carniani@gmail.com](mailto:marco.carniani@gmail.com)

Rosa Rinaldi, Università degli Studi di Perugia | [rori74@libero.it](mailto:rori74@libero.it)

The paper is based on a research carried out during the last 2 years on young theatre players working within the performing arts, both at professional level and amateur level. The study was divided into 3 phases. Firstly, a questionnaire handed out to 140 people; then, 20 interviews conducted with a select group having different degrees of engagement within the artistic field; lastly, we applied collective hermeneutics (Zoll,1997), thanks to which researchers and a group of young actors and cultural event organizers produced a common reflection on social practices and embedded representations in youthful experience in the performing arts. We examined the subjects' profiles, the organizations and the context, bringing to light aspects such as the positive value attributed to self-organization and the importance of institutional recognition. Taken

as a whole, the activities carried out by the young people supports the idea that creativity, using a Melucci's concept (1994), "is not a product" but rather a form of widespread and latent experience, mainly used to cope with a biographically founded feeling of uneasiness as well as to declare a need for authenticity. In fact, performing arts play a twofold role: as an object and as a context, supplying the artistic practice with the connotation of a form of "symbolic mediation" (Crespi,1984). Hence, the experience in the performative arts becomes a field for young people to discover their own authentic selves; however, the institutionalization process and the slow inclusion in the artistic market prevent – paradoxically – the surfacing of a common recognition of their experience. Our paper aims to provide a description of this phenomenon

and of its socio-economic implications.

## **a02RN02 - Visual Arts: Ranking, Branding, Valuation**

Chair(s): Hans Abbing

### **The Superstars of Contemporary Art: A Sociological Analysis of the Rankings of the Most Recognized Visual Artists**

Alain Ph. Quemine, Université Paris-8 | [aquemin@univ-paris8.fr](mailto:aquemin@univ-paris8.fr)

Although art historians tend to consider that contemporary art emerged just after the end of the Second World War, curators generally agree that it appeared in 1969 with the seminal show "When Attitudes Become Forms". Exactly at the same time, a German economic journalist with strong concern for contemporary art created a ranking, the *Kunstkompass*, in order to try and objectivate the visibility and success of the top 100 contemporary artists in the world. Since 1970, this ranking has been published nearly yearly which makes it possible to observe and analyze the transformations of the instrument and those of its results. In this presentation, we will explain how the *Kunstkompass* is built and what its analysis over more than 40 years can tell us about the transformations of the

contemporary art world in terms of gender, age or nationality of artists. We will also compare its results with other rankings such as the ones produced by Artfacts and Artnet to analyze if the difference in methodologies produces different results. Then we will compare the characteristics of artists with those of the experts who are supposed to "create" the superstars of contemporary art by analyzing the characteristics of the members of the "informal academy" that appear in the Power 100, another indicator that has been published for 11 years now. We will thus test the bourdieusian hypothesis of homology between the social characteristics of the judges and those of the artists who are "elected" as prominent ones.

### **Artist as a Brand. Example of Polish Contemporary Art World.**

Agnieszka Szymanska, Adam Mickiewicz University, Poznan | [agnieszka\\_szymanska@vp.pl](mailto:agnieszka_szymanska@vp.pl)

Brand and branding are not only marketer's issue. Actually - they have never been. For centuries, if somebody wants to be successful he or she has to create a brand. Or become one. Branding is the phenomena that began in the art world long time before marketers and businessman did their research. Nowadays we can easily say that there is a few leading brands in the art world: Damien Hirst, Jeff Koons, Andy Warhol, Charles Saatchi, MOMA or Tate. For me the most interesting issue is the

process of branding in the Polish contemporary art world. Leading brands mentioned above were created in countries leading in 'art industry' like USA and England and now are recognizable all around the world. But the situation is different in countries like Poland where art world structures aren't completely established. Giving the background of art branding in Poland by showing the cultural institutions strategies I would like to focus on 'human-brands'. Do the artists (young

and well-known) consider themselves as brands? Is 'marketing-approach' useful and popular among them? What are the strategies used in promoting Polish artists around the world? Are these strategies effective? What forms of collaboration need to be established

to achieve success? In my presentation I am going answer these questions by presenting results of my research among Polish artists to show their aspirations, ways of creating their careers and their awareness of the mechanisms ruling the art world and branding.

## **Are we All Connoisseurs Now? The Changing Landscape of Art Expertise in the Digital Age**

**Payal Arora**, Erasmus University, Rotterdam | [payal\\_arora04@yahoo.com](mailto:payal_arora04@yahoo.com)

**Filip Vermeylen**, Erasmus University, Rotterdam | [vermeylen@eshcc.eur.nl](mailto:vermeylen@eshcc.eur.nl)

There is a popular perception that the digital revolution has sounded the death knell of traditional art connoisseurs who are increasingly being replaced by amateur experts such as bloggers and casual online commentators (Keen, 2007). This development is seen as part of a larger shift within an art world that is under pressure to communicate and treat the public as active consumers rather than passive recipients (Marty, 2007). Traditional intermediaries such as museums are being compelled to become more accessible and engaging with their audiences through new media platforms. The Net as a medium of easy access, with its populist, audience-expanding interactivity allows for new actors and exchanges to emerge through its "participatory culture" (Jenkins, 2006).

However, others believe that is precisely in this environment marked by a plethora of voices and its confusion on art quality that there is an increased need for trusted, trained gatekeepers with firm institutional linkages to museums, auction houses and other vested institutions (Arora and Vermeylen, 2012). In this paper, we expand/shift our focus to gauge the impact of the Internet in shaping decisions on art value and whether the traditional role of institution as expert and the public as amateur has been reconstituted through new media. We conduct extensive content analysis of the top art museum blogs, websites and twitter feed to gauge the range of actors at play and the nature of these cultural spaces to address the impact of new media platforms on the traditional hierarchies within the art world.

## **Guilty of Critique: Neoliberal Strategies of Market Censorship and Silencing Art**

**Ulla Karttunen**, University of Eastern Finland | [ukarttun@student.uef.fi](mailto:ukarttun@student.uef.fi)

The neoliberal regime is governed by the narrative of success, also in the art world. The quality of art is valued by prices in market; cultural projects repeat liturgies of innovation and competition. Managers advice artists to productise social criticism into luxury products, in the name of tamed critique. Censorship, or exclusion of critique, is believed to be a bypassed issue in contemporary western society. Liberal democracies have, historically, developed by struggling against

ecclesiastical and state censorship, as Sue Curry Jansen notices. Capitalism, in its contemporary state of permanent revolution, not only tolerates critique, but also absorbs and exploits it, as Boltanski and Chiapello have pointed. Going through recent cases of market censorship in visual arts, from censored works to art on trial, shows a paradoxical situation. The background philosophy and motivation in market censorship is the concept of freedom. Market criticism can yet be interpreted as a

new form of blasphemy, where insulting neoliberal tactics must be punished. In recent political censorship cases, Ai Weiwei and Pussy Riot, Chinese or Russian media spoke about crime or vandalism, when foreigners took the cases as political power's attempt to protect from criticism. In the same way market censorship should be studied against the

regime. Market as a ruling hegemony is more fluid and diffuse, compared with state or church as primary censors, but it can be unbelievably powerful because of its rhizomatic connections with other factors, from political power to marketized media and justice.

## Another One Bites the Dust?! Threats and Opportunities of Digitization in the Dutch Record Industry

Amber Geurts, Erasmus University, Rotterdam | [geurts.amber88@gmail.com](mailto:geurts.amber88@gmail.com)

Digital information and communication technologies have changed and facilitated the cultural sector enormously. By and large, the high potential of digitization brings optimistic expectations regarding information, engagement and productivity increases in the realm of culture, and specifically the record industry. However, like in any time of fast technological change, record companies are increasingly struggling to keep up with the changing demands and structures in their sector. The threats of digitization to the traditional working methods in the sector become increasingly evident and the traditional cultural leaders do not necessarily have to be the most competitive regarding digital innovation. This is why academic research increasingly points out alternative business strategies to make record companies sustainable in the digital era: digitization does

not only pose threats, it also brings opportunities for record companies. However, the topic of how and why record companies use these new digital possibilities to find new ways towards profitability is still understudied. This contemporary study digs into this research gap by conducting a quantitative analysis of the use of digital innovations on the websites of Dutch record companies and using this data to find out how possible differences can be explained. The results of this research challenge the doom and gloom of academics on the future of record companies in a digital era. Findings indicate that different types of record companies (age, genre, competitiveness), use digital innovations differently. Therefore, record companies are already implementing new digital possibilities, but still a lot more can be gained.

## b02RN02 - Artistic Practices and Classification

Chair(s): Laura Verdi

### Sociality of Inspiration

Gerhard Panzer, Technical University, Dresden | [gerhard.panzer@tu-dresden.de](mailto:gerhard.panzer@tu-dresden.de)

Inspiration indicates the first moment of the artistic process when artists start their

creative work. It is often identified with a divine influence or referring to muses. In each case it

tends to simplify the beginning, because it covers a process itself. Inspiration is situated on the edge of the art worlds, to the extent that it is often outside of the sociological focus. In the concept of the creative process inspiration marked a blank space excluded from the rationality in the concepts of creativity. However, inspiration named a central dynamic factor for any creative activity. In addition we could see a central force governing creative process. In wanting to understand the dynamic of artistic production beyond its utilization, its control by economic values, by attention, through the mediation, we are forced to look at

this fundamental drive of the artistic production. This way we can get an impression of the processes of articulation guided by inspiration. In my paper I will decode the experiences covered by the metaphors of inspiration. Then I investigate artistic conceptions of inspiration primarily from poetics in order to analyse the experiences behind from a sociological perspective. I further examine the inspiration in selected concepts of the creative process to discuss the presumption that the inspiration becomes that part of the creativity which will at least be intensified and domesticated.

## Arts and Crafts: Everyday Life at the Opera

Federico Boni, Università degli Studi di Milano | [federico.boni@unimi.it](mailto:federico.boni@unimi.it)

Oscar Ricci, Università degli Studi di Milano Bicocca | [oscar.ricci@unimib.it](mailto:oscar.ricci@unimib.it)

The paper aims to explore the world of opera through a fieldwork conducted in a famous Northern Italy's Opera House. Through an ethnographic account of the work of the singers, the chorus, the extras, the dancers, the stagehands and the musicians, the paper takes the reader on stage and behind the scenes to investigate the collective social action that goes into the realization of two operas, Puccini's "Turandot" and Verdi's "Macbeth". The authors try to illustrate how

artistic concepts are translated into the routine work of the rehearsals within the theatre's environment, and how people involved in the production negotiate meanings and actions in their interactions to create the actual performances. Through an empirical analysis of the everyday collective work and the social organization involved in the production, the paper calls for an "arts and crafts sociology", analyzing cultural phenomena not only as given texts but also as social actions.

## The Art of the Other. The Paradox of Universality in Western Conceptions of 'Japanese Art' (1860-1940)

Willem Schinkel, Erasmus University, Rotterdam | [schinkel@fsw.eur.nl](mailto:schinkel@fsw.eur.nl)

The era of the rise of modernism involved the emergence of art as an autonomous and universal category. This paper argues that, given the universal claims of the category of art, it saw an expansion to Asia in general and Japan in particular. This expansion, shaped through various orientalist categories of 'Asian' or 'Japanese' similarity and commonality as juxtaposed to 'the west', helped to provide plausibility for modernist conceptions of art. It

universalized the category of art by giving it a global meaning both in spatial and in temporal terms. At the same time, this universalization meant that cultural hierarchies informed by western hegemony were threatened. This paper looks at the ways influential western observers of Japanese art between 1860 and 1940 dealt with this by contributing to the simultaneous universalization of the category of art and the particularization of the concept

of 'Japanese art'. This 'paradox of universality' involved a differentiation between on the one hand particular, local, traditional and most often historical realizations of what was nonetheless a universal category of art, and on the other hand its truly modern and advanced contemporaneous realizations of universality. At the height of the modernizing movements in

the west, Japan proved to be the site of an 'exemplary expansion' of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as an autonomous and potentially universal yet practically bounded category.

## **Aestheticization and Digitalization of Political Activism. A Case Study of the Cluj-based Collective Mindbomb**

**Mara Ratiu**, University of Art and Design, Cluj-Napoca | [ratiu.mara@yahoo.com](mailto:ratiu.mara@yahoo.com)

**Bogdan Iacob**, University of Art and Design, Cluj-Napoca | [iacob\\_uad@yahoo.com](mailto:iacob_uad@yahoo.com)

Critical attitudes towards controversial contemporary issues could also take the form of political activism or of political art. The Cluj-based collective Mindbomb is a hybrid critical voice, combining political art and activism. Initiated in 2002 following the model of the San Francisco Print Collective, it reunites professionals from the creative industries that refuse to reveal their individual identity. Mindbomb has conducted a series of public actions in the city of Cluj-Napoca, but also in various other cities in Romania, on issues such as democratization of the public space, aesthetics of the public space, corruption practices of the political class, as well as ecological matters related to the cyanide extraction of gold in the Apuseni Mountains. If the first series of actions consisted in the production of visually poignant posters illegally scattered all over the city, the last actions took

place mostly – and legally – in the digital world, on social networks such as Facebook. The aim of this paper proposal is to analyze the process of aestheticization and digitalization of political activism practices of the Mindbomb collective understood as means of improving the effectiveness of their critical public actions. Also, the aim is to identify the consequences of this process in relation to the very nature of political activism. If actions like those described above are quite frequent in the Western world, in Romania such actions are rather singular. Accordingly, another aim is to assess the impact of the Mindbomb critical actions among the geographical (local) community as well as among the digital (global) one. Last but not least, the thin line between political activism and political art will be investigated.

## **c02RN02 - Perspectives on Arts Markets**

Chair(s): Sari Karttunen

### **Painting and Money: Discourses on Paid Art Exhibitions in France around 1800**

**Arpita Mitra**, Jawaharlal Nehru University | [arpitamitra31@gmail.com](mailto:arpitamitra31@gmail.com)

Art is generally understood to be invested with certain normative values, one of which is its

alleged disinterestedness. The notion of art as a disinterested pursuit (which also stands challenged now) has a chequered history through about four centuries in parts of the Occidental world. Disinterestedness is of many kinds, like political, ideological, moral, material. With respect to the last kind, the reality of making a living out of art, on the one hand, and the discourse of the material disinterestedness of art, on the other, reveal the tension in the fact of the same activity being perceived as a “disinterested” pursuit as well as being one through which revenue is to be generated. The objective of the present paper is to examine critically the aforementioned tension through a case-study form early nineteenth-century France – the controversy regarding paid art exhibitions in

Paris around 1800, which resulted in a public debate that continued in the press for about three months. Since the seventeenth century onwards in France, the process of discursive dissociation of painting from its mercantile and manual aspects, and the increasing intellectualisation, de-materialisation and individualisation of the vocation of painting, came to project art as a materially “disinterested” pursuit. However, the crisis of post-Revolutionary society, with its implications for art patronage led French painters to experiment along the lines of artistic entrepreneurship. The present paper seeks to analyse the digits of their discourse and those of the sharp response it evoked in critics and public at large pivoted on the notion of art and money making odd couples.

## Starving for Art-Tension Beyond Borders

Kristin Bothur, Universität Bremen | [kbothur@zes.uni-bremen.de](mailto:kbothur@zes.uni-bremen.de)

Is the image of the starving artist of Spitzweg’s “The Poor Poet” (1839) based on a myth or does this conception match reality? In order to analyze this conception we gain to answer the following research questions: How is the socio-economic situation of artists characterized? How do artists actually perceive the art market and its development? Which market and coping strategies do they develop to improve their market position and social status? We conducted qualitative interviews with musicians living in Germany as previous research projects have shown, that these questions cannot be answered only by an analysis of official statistics (e.g. Census, Eurostat, OECD). Furthermore, the assumed ambivalence of perceptions and the diversity of coping and market strategies are not represented in existing surveys. The findings demonstrate artists’ transition into exceptional

flexible and creative entrepreneurs who may serve as prototypes for future employees. According to official statistics and previous empirical works particularly self-employed artists face a precarious economic and social situation: high rates of unemployment, underemployment, multiple jobholding, low basic incomes, unpredictable and discontinuous engagements and old-age poverty. Furthermore, the challenging art market keeps changing due to technological improvements, a rapid growth of the creative sector, an increasing number of freelancers as well as a higher labor mobility. As functional, territorial and market borders become even blurrier and as state policies cannot absorb all risks, this has consequences for the production, promotion and distribution of art pieces and therefore for the artists’ working situation.

## Notes on the Exploitation of Artists

Hans Abbing, University of Amsterdam / Erasmus University, Rotterdam | [hansabbing@gmail.com](mailto:hansabbing@gmail.com)

In the paper I argue that at present the exploitation of artists differs structurally from that of other workers in post-Fordist capitalism. The exploitation of artists is largely an inner art world affair: it is foremost an art elite that profits from low incomes in the arts. I explain why it is attractive for art world people to associate the low incomes in the art with increasing precarity in general. I list correspondences and differences in the situation of artists and other knowledge workers. Next, I present a social explanation of

low incomes in the art, which does not apply to other workers, and I show who benefit most. I also demonstrate that due to an ethos of "everything for art" a wild west economy exists in the arts. Often non-profits treat artists worse than for profits. An everything-for-art turns into an-everything-goes. Moreover, the strife for art which is as autonomous as possible works against individual artists. I finish with some suggestions for ways to combat the exploitation of poor artists.

## d02RN02 - Networks and Structures of Production

Chair(s): Gerhard Panzer

### Networks of Art Production in Times of Change

Andrea Gallelli, University of Torino | [andrea.gallelli@unito.it](mailto:andrea.gallelli@unito.it)

In the Italian model of artistic and cultural production, the government has always supported the creation, distribution and development of artistic goods and activities. Arts, because of their intrinsic merit value, are often excluded by marketplace rules and competition among producers. For these reasons, concrete artistic production processes are qualified by the high dependence on exogenous resources, both public and private. For example, Italian lyric theaters are private foundations supported by public budget, and regions play important normative and financial roles in supporting artistic and cultural production. In recent years financial crisis has reduced the capacity of these subjects to transfer resources to weaker and non-autonomous sectors of the economy. How do single organizations of artistic production react to these kinds of difficulties?

Sociological literature has always underlined the role of networks in the market's defining mechanisms. Combining the new economic sociology approach and the production of culture perspective, an analysis of relational dimension of theater production is proposed. The tendencies in recent years of live cultural entertainment are analyzed, focusing especially on professional theater in Piedmont, Italy. Differences among regional systems of cultural production and consumption are pointed out. The main purpose of the work is to look for an association between configurations of productive networks, single organizations' performances and global properties of theater supply such as the reduction of exogenous support. Research methods involve network analysis based on secondary data of a population of Piedmontese professional theaters.

## From Culture Industries to Factories of Culture: New Models of Artistic Production in Contemporary Society.

Francesca Ieracitano, Lumsa University of Rome | [f.ieracitano@lumsa.it](mailto:f.ieracitano@lumsa.it)

The systems of artistic production have always had to adapt to the social and cultural transformations. They began to respond to the current crisis with innovative solutions that involve the cultural offerings, the patterns of production and the organisational structures. We are thus witnessing a change of the course that challenges old ideas, like the Hirsch model, and concepts such as culture industry and art worlds to make room for new complex organizations that are configured and better suited to be defined as factories of culture. This paper aims to clarifying the need for a conceptual redefinition starting from a theoretical framework based on the comparison of the thoughts of the authors (Crane, Hesmondhalgh, Peterson, Becker, Adorno, Horkeimer) who examined the systems of artistic production. The paper

argues that the factories of culture have been able to enter the market without triggering any forms of competitiveness towards the cultural and leisure needs already met by the culture industries and the traditional art institutions. These new entities were able to create synergies with the previous establishment. They also filled an unexplored market share, introducing new consumption patterns that led to a new demand. To support this hypothesis it will be presented case studies about the Parco della Musica Auditorium, the MACRO, and the MAXXI in Rome, the Guggenheim Museum in Bilbao, and the Pompidou Centre in Paris in order to examine the structure, the organization, and the relationships adopted by these new models of artistic production with the customers.

## The Committee for Foreign art Exhibitions – Advisors of the Young Federal Republic of Germany

Franziska Völz, University of Dresden | [Franziska.Voelz@tu-dresden.de](mailto:Franziska.Voelz@tu-dresden.de)

My topic is part of a still running research project named "Social birth of the 'Westkunst'. Networks of the visual arts in West Germany 1945-64" in charge of Prof. Dr. Rehberg, Department of Sociology, University of Dresden. Whereas in Eastern Germany after World War II artistic production has been pushed by the state into social realism, western Germany's art production was characterized through a struggle between objective and abstract tendencies. The latter gained the definite predominance until the End of the Fifties and was conceived as symbol of liberality and subjectiveness. The international art exhibition documenta is supposed to have been playing an important role boosting those non-objective tendencies. By combining

sociological and historical perspectives the project tries to reconstruct the social ties of leading exhibition organisers and the related actors and institutions in account of this process of promotion. Field theory and the theory and analysis of institutional mechanisms by Rehberg constitute the base for relational network analyses. Also politics have been suspected of encouraging avant-garde artists in order to represent the young Federal Republic of Germany as a modern and free society. But in the background specific members of the art world functioned as advisors. I want to investigate the case of the "committee for foreign art exhibitions". Founded in 1953 it mainly consisted of leading art museum directors in Germany deciding

about who should represent Germany in the sphere of the arts.

## The Comparison of Industrial Clusters in the Traditional Crafts Sector

Yuko Oki, Kyoto Sangyo University | [oki@cc.kyoto-su.ac.jp](mailto:oki@cc.kyoto-su.ac.jp)

In this paper, the attributes for a number of different industrial clusters including Jingdezhen (porcelain), Arita (porcelain), Nishijin (kimono), and Cremona (violin) will be analyzed and compared. Industrial clusters are commonly observed in the traditional craft sector. The individual agents making up clusters interact loosely and have a high degree of autonomy, yet clusters have coherence as a whole. Within clusters there is a division of labor, and thus an appropriate division of roles. This is not based simply on a division of work processes, but rather involves a fundamental bifurcation between producers who coordinate the manufacturing process as whole, and actual creators who make the products. Producers are not only responsible for product planning but also assume much of the risk. Product planning requires extensive

knowledge of customer needs, and typically the producer takes charge of sales as well. Artisans in traditional industries generally do not assume the risk of their production. The producers take on high risk for which they receive a high return, while the creators shoulder relatively little risk for which they receive a low return. In the traditional industries, the producers are often local wholesalers and the creators are artisans. Though clusters will vary somewhat depending on the nature of the products they produce, the behavior of agents making up clusters is guided not so much by economic considerations (profit maximization), but rather by the reputation and esteem with which members are held within the cluster community.

## e02RN02 - Literature and its Field

Chair(s): Nina Zahner

### What is the Capital of Frankfurt? Indian Publishing at the Frankfurt Book Fair 2012

Roanna Gonsalves, University of New South Wales | [roannag@gmail.com](mailto:roannag@gmail.com)

The Frankfurt Book Fair is the world's oldest, largest and most prestigious book fair. It is a literary space, a practiced place, where the Bourdieusian interest in disinterest in economic capital is at its lowest, and the creative labour of the writer is turned into a commodity bought and sold in a marketplace. Using data gathered from in-depth interviews and participant observation, this paper examines the Frankfurt Book Fair, with a

particular focus on the practices of Indian publishers within the space of the fair in 2012. It suggests that the differentiated, fluid, smooth space of the literary field enables multiple enunciations of Indian publishing at the fair. It examines the ways in which value is attached to particular books at the fair, and the ways in which various forms of capital are valued, mobilized and exchanged.

## Great Expectations & Literary Field: Intermediaries and Sub-Fields Enabled by Publishers in their Search for Debutantauthors

Luca Pareschi, University of Bologna | [luca.pareschi@unibo.it](mailto:luca.pareschi@unibo.it)

This paper follows a previous one, accepted at 2012 RN Sociology of the Arts' conference. In the previous we described the production stage of Italian Literary Field (Bourdieu 1991) where agents exists, more peculiar and numerous than expected. We found that symbolic and material production are highly dependent on the action of few very idiosyncratic intermediaries that enable book publishing process beyond publisher's planning. They are more than cultural intermediaries and gate-keepers. We focused on the process that permits to wannabe authors to enter the literary field and have their first manuscript published. Here we follow that stream and show how different sub-fields are enabled by publishers in their search for new manuscripts and authors. Publishers rely on different intermediaries depending on what they are searching for. Through a content analysis we

show what big, medium and small publishers search for (e.g: focus on literary quality vs marketability; search for a strong plot or for a idiosyncratic writing; importance of publisher's taste;...). Then we show which part of publishers' network of social and professional contacts within the literary field is enabled depending of the nature of the search. We thus relate different kinds of intermediaries and different output of the search. The paper is part of a wider phd thesis, conducted in a two-stage design, based on qualitative semi-structured in-depth interviews. We discovered the channels through which manuscripts reach publishers, and went back to study and interview intermediaries involved. 13 different publishers were studied. Overall number of interview (editors and other agents of the field) is 64.

## Patterns of Change in the Dutch Literary Field 1980-2009

Thomas Franssen, University of Amsterdam | [t.p.franssen@uva.nl](mailto:t.p.franssen@uva.nl)

The structure of cultural fields is one of the major research areas in the sociology of art. Bourdieu's work on the French literary field laid bare the oppositions between cultural and economic capital as well as established and avant-garde actors that structure the field. However, empirical work in this tradition is often preoccupied with organizational traits of, mainly literary, publishing houses and to a lesser extent with the books they produce and with the popular or commercial side of the field. Also, most studies do not trace changes in the structure of the literary field over a period of time. In this paper I want to add new insights to this tradition by taking a slightly different approach. I focus on the books that are published themselves, on the literary as well as the popular side of the field and

attempt to trace changes in the structure of the literary field over time. I do this through a multiple correspondence analysis of the Dutch literary field based on book-level data. I collected data on all fiction and poetry books published in the Netherlands between 1980 and 2009, including attributes such as genre, original language, price and size. This data makes it possible to analyze not only the organizational structure of the literary field, by focusing on publishing houses, but also the cultural structure of the literary field through an analysis of the relationship between different genres and languages. Moreover, the extended period of time allows for an analysis of change in the structure of the Dutch literary field.

## 03\_b02JS07 - Artistic Practices and the Public Sphere

Chair(s): Rudi Laermans Rudi (KU Leuven)

### Militant Aesthetics and Popular Creative Praxes

Cédric Masse, University of Lisbon | [masse.cedric@gmail.com](mailto:masse.cedric@gmail.com)

Esthetical values and art under different modalities occupy a core place in the militant praxis. Theatrical performances, mises-en-scènes, dancing, music, songs, paintings, sculptures and so on appear during public demonstrations or when activists appropriate and reshape through them the public space and urban territories. Beyond appearances, illusion and *illusio* (the play), there exists an artistic truth, which is intimately related to the cognitive praxis insofar as it participates in the production of knowledge made by the activists. Urban territories occupied and transformed through their arts by social movements are converted into public spheres, places wherein epistemic discourses, communicative reason and ideal speech situations (Habermas) take shape. There, through their interactions, people come to publicly, rationally and critically discuss about issues concerning the

public realm; they use their reason for political matters and change. In other words, within the polis and outside the private sphere, the political life occurs in the agora. Activists therefore put forward a veritable militant and popular aesthetics that entails that their cognitive praxis is realised to a large extent through artistic creations and expressions, through dynamic, creative and intellectual interactions among militants and between militants and other actors such as opponents. These are the aspects I am going to explore in my paper from the current Portuguese situation. However, following one of the fundamental Durkheimian methodological precepts, it will also be comparative; in a diachronic way by referring to several historical instances and in a synchronic fashion by considering different geographical contexts, notably Spain.

### Social Frames of Urban Cultural Creativity: A Sociological Analysis of Cultural Clusters in Barcelona

Matías I. Zarlenga, University of Barcelona | [matiaszarlenga@ub.edu](mailto:matiaszarlenga@ub.edu)

Arturo Rodriguez Morato, University of Barcelona | [rodriguez.morato@ub.edu](mailto:rodriguez.morato@ub.edu)

The analysis of the territorial dynamics of culture, particularly its tendency to form clusters, has become a study area that draws the attention of various social science disciplines. This kind of analysis has steadily grown in importance over the last twenty years alongside the increasing interest in creative industries and cultural institutions as factors in socio-economic development and urban regeneration. Most of today's literature on the subject takes cultural clusters as a single type and focuses on aspects linked to their urban

planning or economic impact. However, there is a growing awareness of the importance of the social dimension of cultural clusters. This paper aims to differentiate between various cultural clusters in the city of Barcelona by constructing models or types of cluster taking into account the predominant interaction dynamics and the type of social ties generated between the cultural agents participating in these groupings. Following these criteria we distinguish three types of cultural cluster according to whether a bureaucratic,

associative or community dynamic predominates. These social dynamics enable

us to understand the success or failure of a cluster policy.

## **Cultivating Urban Ecologies – Transforming Public Spaces Through Public Art: A Case Study of Creative Practice in Art Education**

**Kerry A. Thomas**, University of New South Wales, Sydney | [k.thomas@unsw.edu.au](mailto:k.thomas@unsw.edu.au)

**Karen M. Profilio**, North Sydney Girls High School | [karen.profilio@det.nsw.edu.au](mailto:karen.profilio@det.nsw.edu.au)

This paper extends the popular conception of creative practice by reporting on Cultivating Urban Ecologies, a case study of how five visual arts teachers and their students in secondary schools in Sydney, Australia contributed to transforming spaces in small-scale ecological public art projects around school communities. The investigation was theoretically framed by Pierre Bourdieu's concepts of 'habitus' as 'a feel for the game' and 'symbolic capital' and funded by a faculty research grant from the College of Fine Arts, University of New South Wales, Sydney. It took its lead from two key artworld precedents: Nicholas Bourriaud's Relational Aesthetics including his concept of 'social interstice' or non-economic trading exchanges that arise as 'inter-human commerce' and forms of choreographed creative practice; and the current Curating Cities project (Bennett 2010), funded by an

Australian Research Council Grant that augments the City of Sydney's 2030 Vision for a Sustainable Sydney. In this paper we describe how collective purposes were built; highlight examples of performances and the artefacts of practices, including temporal interventions, the use of GPS tracking devices and stories from local history; and consider efforts to raise awareness about how public art can contribute to the care of public spaces while enhancing social relations. We examine the motives of those involved including the potential threat of denting the teachers' reputations and how the provocation of this study challenged conventional artmaking constraints that underlie curriculum and classroom actions. The presentation includes digital documentation of these events including the teachers' and students' art interventions in and around Sydney.

## **The Integrative Power of Non-Representationalism in Creativity-Based City Projects: The Role of Creative Collaborations in Fostering Local Identity and 'Local Capital' among Europe's Immigrants and Ethnic Minorities.**

**Joseph M. Costanzo**, George Mason University | [imgnjoe@aol.com](mailto:imgnjoe@aol.com)

European scholarship has begun paying greater attention to the social and economic nature and impact of creative expressions in urban spaces (Delhay, 2008; Küchler, Kürti and Elkadi, 2011; Salzbrunn, 2007; Selberg, 2006; Spangler, 2007). Furthermore, borrowing the term from Bramadat (2001), the literature concerning immigrants and ethnic minorities and creative art forms focus on expressions of local 'ethno-cultural' groups (allochtoon or

not). Such spectacles are expressions that, for a brief moment, recall and re-present traditional notions of foreignness in their dress, music, cuisine and so forth as reminders of the way things were (or are perceived still to be) in a distant homeland. My interest here is in the non-ethnically representational spectacle. In other words, events that, instead of re-presenting a history of a people, culture or place, are born out of

the people and culture in place today– a (temporary) contemporary expression of local diversity. Here, as in Brussels' Zinneke Parade, the emphasis is on creating and presenting (not re-presenting) the local. I suggest that immigrants and ethnic minorities and their art are not merely re-presenting their migration histories, but also are part of the ongoing local discourse, influencing identities and expressions not as 'immigrant artists' (read:

artists of immigrant origin who create 'immigrant art'), but as artists full stop. Such creative spaces and interactions may serve as a place without a priori (assigned) social and economic personal value, valuing individual abilities and interests, creating collaboration through tension and discussion, allowing human error and generating social, psychological and economic benefits for those involved.

## a03RN02 - People's Activities in Different Fields of Arts

Chair(s): Ana Gonçalves

### Bringing the Banjo Back to Life: Prosumerism in the Field of Folk Music

Janna Michael, Erasmus University, Rotterdam | [michael@eshcc.eur.nl](mailto:michael@eshcc.eur.nl)

Niels van Poecke, Erasmus University, Rotterdam | [vanpoecke@eshcc.eur.nl](mailto:vanpoecke@eshcc.eur.nl)

Much of the discussion on convergence culture and prosumerism has been framed as 'the public re-emergence of grassroots creativity' (Jenkins 2006: 136). The Internet enables its users to change, recirculate and annotate commercial media content, which has been celebrated as the basis for the rise of online participatory cultures. These participatory cultures are often framed as the folk cultures of the digital age because they link to ideas of gift economies and operate without distinction between producing and consuming of media content. In this paper we look into the relevance of convergence culture in a different habitat. We show that the prosumer is not only active in new media, but can also be found in small-scale participatory cultures offline. On the basis of a historical analysis of folk music culture and interview data from members of the scene, this study investigates the re-

emergence of folk music culture in the so-called 'hipster', 'indie' or 'folkster' networks. These networks strongly build on do-it-yourself ideology and can likewise be linked to the idea of a barter or gift economy. Similar to their online counterparts, the offline prosumers contribute to their field by making their music, recording it or work on promoting it. The recent growth of the influence of folk music in the music industries and the spread of crafts shops furthermore seem to indicate that these developments are not only part of wider social changes. We suggest that the broad-based appreciation of independent folk music (culture) is based on a nostalgic longing for the authentic. This form of authenticity seems to consist mainly of romantic ideas and shaping objects with one's own hands without entirely dismissing consumer culture.

## Processes of Interactivity and Interaction with and around Cooperative Technologies in Museums

Kalja K. Kanellopoulos, Technische Universität, Chemnitz | [kalja.kanellopoulos@phil.tu-chemnitz.de](mailto:kalja.kanellopoulos@phil.tu-chemnitz.de)

New computer technologies have vastly influenced our lives in a multitude of domains and also reached museums and the cultural heritage sector. During the past decades many digital technologies have been constructed for and deployed in exhibitions. The purposes of these technologies differ broadly from those designed to enhance working and management processes; rather they focus on putting the visitor experience as a priority. Strongly connected to this visitor experience is the interactivity with technical artifacts as well as the social interaction with others. However, actual processes of interactivity and interaction that arise with and around these technologies in exhibitions have remained largely unexplored. In this contribution, which is based on my current research for my doctoral dissertation, I explore patterns of interactivity,

interaction and communication with and around collaborative technologies in museums. How do processes like that arise out of the situation? What characterizes them and how are they intertwined and connected with each other? Which impact do elements of play and narration have on what is going on? To cope with these research questions I triangulate ethnography with situational analysis, the latter being the further development of grounded theory and therefore a specific inductive style of qualitative data acquisition and analysis. This methodological approach takes the situation as the fundamental unit of inquiry and puts heterogeneity into focus. It allows the researcher to include human as well as non-human entities and enables the generation of theory from very different types of data.

## Music and Children. Good Efforts for Good Results

Laura Verdi, University of Padua | [laura.verdi@unipd.it](mailto:laura.verdi@unipd.it)

Mariselda Tassarolo, University of Padua | [mariselda.tassarolo@unipd.it](mailto:mariselda.tassarolo@unipd.it)

Three different interventions in three Italian primary schools try to document the results of musical education on children. The research aims to monitor and study the effects of the introduction of innovative educational activities. The sample includes a total of 385 pupils of the Italian primary school (5-11 years). The data were collected through questionnaires containing questions with direct reference to music. The cross-sectional method provides a selected sample from three schools different by location and features: • the first is already part of a network, has structured learning paths and well-defined objectives; • the second is not part of any network; • the third has never joined any music initiative and has a high percentage of immigrant children. The

intervention in the first school has minor significance in relation to the other two, where training courses held by the major musical institutions of the territory have been organized and monitored through documented participant observation on the field. The most effective and innovative actions have to be focused on the teachers, who first need to be trained in teaching music. The innovation suggests to increase synergies between institutions and music schools in primary education to create and strengthen music networks and socialization processes. Innovative educational activities consist of structured learning paths whose contents are defined by experts from such institutions working daily in research and training, from

which the children indirectly receive the inputs.

## **b03RN02 - Addressing the Audience: Participation and Interactions**

Chair(s): Predrag Cveticanin

### **Multiple Selves: Identity Formation of Theatre Companies under Broad Logics**

Özge Can, Yasar University | [ozge.can@yasar.edu.tr](mailto:ozge.can@yasar.edu.tr)

In this empirical study, I seek to understand how field-level meaning systems can inspire the formation of organizational identities; particularly hybrid ones, in an art domain. Making specific claims to the available identity categories in an art space, organizations can construct distinct identities and this is largely prone to change in accordance with the transformations of institutional logics at the field level. Stimulated by competing forces throughout the field's history, institutional logics provide art organizations cultural elements and meaning ingredients to choose from so that they can construct "who they are" and decide whether they will integrate multiple selves as opposed to assuming a pure and uniform identity. In order to explore this connection between institutional forces and organizational identity, and how an art field

configures and evolves based on pure/ hybrid identities, I used longitudinal archival data entailing the titles and attributes of the plays staged by all active professional theatre companies in Turkey between 1923 and 1999. Performing cluster analysis to discover diverse identity categories in the Turkish theatre field and calculating the degree of multiplicity of claims made to these categories by theatre companies, I outlined the course of identity formation and the extent of hybridization. Descriptive findings support the proposed connection between institutional transformations and organizational identity building, indicating a dynamic art structure composed of remarkably diverse identities throughout the history of the field where the intensity and content of hybrid organizational identities significantly differ across time.

### **The Means and Impact of Cultural Mediation on Contemporary Dance**

Patrick PGT Germain-Thomas, Novancia Business School, Paris | [pgermain@novancia.fr](mailto:pgermain@novancia.fr)

Since the 70s, the recognition of contemporary dance by public authorities has entailed a considerable blossoming of this discipline in France. Despite this growth, the distribution of shows often proves difficult. Companies struggle to find sufficient openings to stage their performances and theatres and festivals have reached a ceiling in the possibilities of enlarging the public. The dynamic of global development of the activity has maintained a constant gap between the number of performances created annually and the

openings offered by the venue network. We find the same gap between the artistic propositions and the mass audiences' expectations. Venue managers themselves flounder, facing the accelerating rate of artistic innovation, and they seek the means enabling them to make their scheduling choices better. This contribution lies on a field study within the professional dance world, answering the following objectives: - understanding the particularities of the policies used by distribution channels in developing dance

audiences; - analyzing, through four case studies, the different types of cultural mediation tools used to promote the dance shows; understanding the objective or expectations of all parties concerned (distributors, artists, public and administrations involved) and their appreciation concerning the means used (performances, conferences, training and

workshops, for instance). The study implies the carrying out of in-depth interviews with the professionals involved, at the same time as the data-gathering on the structures studied. The purpose is to favor a sharing of experiences and update the conditions for success of the policies of enlarging the contemporary dance public.

## Do Festivals Affect the Quality of Life in Latvia?

**Agnese Hermane**, Latvian Academy of Culture | [agnese.hermane@lka.edu.lv](mailto:agnese.hermane@lka.edu.lv)

The impact of the arts on the overall quality of people's lives is one of the most understudied and possibly the most underrated issue in the field of social indicators research (Michalos 2005). It is assumed that culture positively affects quality of life however there is small number of research or empirical data that approve the impact of culture on quality of life (Galloway 2007). Although part of researchers consider that culture is collective phenomena and quickly tends to become supra-personal and anonymous (Kroeber 1952), some researchers oppose that culture affects each of us individually and subjectively in intangible and hard-to-measure ways (Holden and Baltà 2012). Since culture can only manifest itself through the individual it must be measured at an individual level (Straub, Loch, Evaristo 2002). There is a precondition if we

want to talk about culture and quality of life – it should be accessible and participatory. According to Hawkes, passive consumption is insufficient; to have impact on quality of life active participation is a precondition (Hawkes 2001). In the framework of this research the assumption is made that festivals improve quality of life, because they care about accessibility and promote active participation more actively than regular cultural events or institutions. The assumption will be tested by the use of content analysis. The study will examine mission statements and goals of all art festivals in Latvia and explore the statements on access and participation. The next step would be to analyse the implementation of statements and collection of audience data.

## 04\_b02JS07 - Artistic Practices - New Creativities

Chair(s): Michael Hutter (Wissenschaftszentrum, Berlin)

### Generating Common Ground through Art Practices

**Rita Kéri**, University of Pécs | [keririta@yahoo.com](mailto:keririta@yahoo.com)

**Kata Soós**, Freelance artist | [sooskata@gmail.com](mailto:sooskata@gmail.com)

The authors of the paper lead joint creative activities in small groups. Our research

practices represent the perspectives of the visual arts, cultural anthropology and

communication science. We initiate participatory practices where we incorporate the results of previous research in a continuously developed methodology. The methodology reflects, among other things, on whether and how the dynamics and dimensions of individual creativity can manifest through communicative processes in art activities, through principles of connecting and structuring experience. The events we initiate involve actors of diverse sociocultural

backgrounds. We build strongly on presence and joint experience. Rather than building common identities, we break down the complexity of experience, and rely on its richness in the joint process to build signs (by art practices) which derive their meanings from the perceptions and processes that the participants engage in. In these joint platforms, then, new forms of common ground can evolve, and individuals can mobilise their private or cultural experiences in innovative ways.

## Instant Composers: Modelling and Theorising the Improvising Ensemble

Allan J Sutherland, Kyushu University of Nursing and Social Welfare | [allan.kyushu.ns.ac.jp@gmail.com](mailto:allan.kyushu.ns.ac.jp@gmail.com)

The improvising music, jazz ensemble, and improvisation are often considered to afford a social model for attaining, a) harmonious social coordination within social groups working in heterogeneously dissimilar social contexts, and, b) to stimulate and achieve higher capacities for problem solving, bringing creative, innovative transformation of social and/or technical practices. Some social theorists consider improvisation bridges the gap between constraining social structures and social action exercised by motivated, reflexive and innovative individuals. Bourdieu theorises that the structured, structuring habitus generates both routine reproductive practices and regulated improvised responses to social disjuncture leading to innovative social transformation of structural relations. Becker investigates how unacquainted individual jazz musicians can form instantly

coordinated groups and improvise successful public performances, reproducing the jazz artworld. What is often lacking is a detailed account of how improvisation is made possible, and can lead to creative solutions. This paper discusses modelling the constitution and internal dynamics of improvising ensembles as symbiotic ensembles, with low, almost horizontal, levels of hierarchy whereby authority is widely dispersed among synergistic members, rather than determined as the prime capacity of their leaders. Synergistic members are consequently expected to be proactive, to bring a rich studied and practised depth of pertinent knowledge, and skills, musical materials, refined through a personal biographical trajectory such that each member's contribution is distinctive and mutually stimulating.

## What's new: Music or Technics?

Nancy W Hanrahan, George Mason University | [nhanraha@gmu.edu](mailto:nhanraha@gmu.edu)

It is by now a common perception that very little is new in popular music. Retro styles, re-packaging, re-union concerts, re-mixes, are by most accounts the predominant forms of musical presentation. Yet, the incredible diversity of music online and the relative ease

of access to it might suggest a very different outcome, as the resources available to musicians for artistic innovation seem virtually limitless. How should this phenomenon be explained? In a recent book, Simon Reynolds suggests that the vast digital archive of music

actually hampers innovation, as “nothing seems to wither and die”. Where in the past, lps would be dropped from record company catalogs as styles developed, now the past stays with us. This has significantly changed the orientation of musicians to musical materials: they become curators and archivists rather than pioneers and innovators. In this paper, I consider two additional factors that contribute to the current state of affairs: the collapse of professional music criticism, and the fascination with technics. These situate the problem of innovation somewhat differently, in

the transformation of the discursive contexts in which the new can be articulated. The problem is not simply that musicians are enthralled with the past. The new or innovative has to be recognized and articulated as such, and that has become increasingly difficult in the new media environment. As professional music criticism has declined, it has been replaced with more purely quantitative forms of evaluation that favor the familiar over the new, and with a discourse of technics that privileges technological mastery over aesthetic innovation.

## **The New Spirit of Artistic Critique: a Sociological Analysis of ‘Critical’ Artists in New York and Berlin**

**Martin G. Fuller**, University of Cambridge | [mf406@cam.ac.uk](mailto:mf406@cam.ac.uk)

Boltanski and Chiapello’s (2005) analysis of the ‘artistic’ critique describes capitalism’s ability to withstand assaults through processes of adaptation and metamorphosis. In this paper I argue that a similar analysis can be made of contemporary visual art’s capacity to adapt and morph to critiques, particularly those generated from within by artists. Drawing from eighty interviews conducted with artists in Berlin and New York, I present an analysis of artists’ accounts of their critical-reflexive orientation to the interrelated symbolic and economic markets of art. These ‘critical’ artists are knowingly entangled in these markets, and engage in critiques whilst acknowledging their own complicity. Strangely, the sites of commercialization such as the art gallery or art fair are not treated as contradictory to their criticality, but the economic, social and

aesthetic-philosophical conditions under which their careers exist, and even flourish, are critically evaluated, often within the content of their artworks. This analysis of ‘critical’ artists is not merely descriptive, but also moves towards a clearer understanding of the logic and functioning of art worlds. By drawing upon an actor-centred analysis of art, as advocated by the so-called ‘new’ sociology of art, and interpreting the actors’ descriptions and navigations of the systemic and structural characteristics of art, we move beyond the false dichotomy between canonical and new approaches to arts sociology. The role of artistic critique has turned upon its own conditions, providing a compelling empirical case that elucidates some of the hidden corners of contemporary art and suggests meaningful modes of sociological exploration.

## a04RN02 - Reflections on Artists

Chair(s): Dan Ratiu

### “Artists” Today. Professionalism and Visibility in Italy

Paolo Parra Saiani, Università di Genova | [paolo.parra.saiani@unige.it](mailto:paolo.parra.saiani@unige.it)

«Why do people think artists are special? It's just another job», said Andy Warhol. One of the main goals of this study was to refuse the “romantic” view of the artist as an individual genius working alone, and to restore the complexity of the ‘Art words’ (Becker 1982). We choose to focus not on famous artists, but on the people who participated at three different editions of Premio Terna, a contest organized by the Italian Terna Foundation, in line with the broad definition by Unesco International Art Association: «‘Artist’ is taken to mean any person who creates, or gives creative expression to, or re-creates works of art; who considers his/her artistic creation to

be an essential part of his/her life; who contributes to the development of art culture; and who asks to be recognised as an artist, whether he/she is bound by any relations of employment or association» (Unesco 1980/2007: 562). In this paper I will present the main results from the on line survey by which more than 2.000 interviews were recollect to produce an understanding of the complexity of the cooperative networks through art happens in Italy, focusing on artists education, their work, visibility, sociability, market relations, and territorial roots. The research is actually concluded; a collective work edited by Francesco Casetti has been published in 2012.

### Artists' Vision on their Role in Futur Society - Towards Applied Uses of Artistic Competence

Sari R. O. Karttunen, The Finnish Foundation for Cultural Policy Research (Cupore) | [sari.karttunen@cupore.fi](mailto:sari.karttunen@cupore.fi)

Due to increased training opportunities and young people's interest in creative trades, Finland has witnessed an overflow of visual artists. In the current economic and ideological situation, the chances for more grants for artists are slim. Cultural policies are moreover expected to show societal effectiveness. Hence new job opportunities are sought after in applied areas. Artists work as hospital clowns or co-operate with social workers in suburbs. In businesses, they carry out occupational health activities and facilitate innovation projects. The government programme also promises to promote public art schemes. In the presentation, I will explore how artists themselves perceive the emerging opportunities. Are they thrilled by the chances

of widening the application of their competence, combined with the prospect of improving incomes, or do they criticize cultural policies for instrumentalisation? Are they willing to yield in their artistic integrity? Do they count applied projects as artistic work? Do they find themselves fit for such areas? I will also discuss the question of gender: are female artists drawn, or pushed, towards the social and health care sector, while men aim at businesses? The presentation draws upon a study pertaining to the occupational role and skill requirements of visual artists in future society. It was commissioned by the Finnish National Board of Education, and was carried out by the Foundation for Cultural Policy Research and the Institute of Occupational

Health. The study relies mainly on a questionnaire on art graduates from polytechnics between 2011 and 2010. Also the

method of future workshops was used, and art world informants and educational planning experts were interviewed.

## **“Gendered Stereotypes in Artistic Creation and Recognition”**

**Marie Buscatto**, Université Paris 1 Panthéon Sorbonne - Cnrs | [marie.buscatto@univ-paris1.fr](mailto:marie.buscatto@univ-paris1.fr)

International scholars have recently explored ways contemporary female artists find it more difficult than their male colleagues to get access, to remain and to be recognized as legitimate artists while all legal barriers have disappeared and equality between the sexes is considered as a priority (Buscatto, 2010). While several processes provoke such differences, gendered stereotypes appear as a key feature in explaining them. My objective would be to discuss how “feminine” stereotypes participate in producing and legitimating gendered inequalities among professional artists, as well as ways they are trans-gressed by women who get then recognized and accepted as “real” artists. Which “feminine” stereotypes - related to maternity, seduction, passivity, dependence or weakness - do limit women’s ability to create and get recognized as artists? How do they succeed, here and there, in overcoming

such stereotypes creatively? If accepted, this talk would be based on our current work on gender in arts (Buscatto, 2007, 2010; Buscatto and Leontsini, 2011a&b) as well as several empirical studies recently led by international scholars, including ours, on dance, circus, music, literature, cinema, television, or visual arts. Buscatto “Women in Artistic Professions. An Emblematic Paradigm for Gender Studies”, *Social cohesion and Development Journal*, 2 (1), 2007, 69-77. Buscatto “Professional music in light of gender: toward a sociological understanding”, spécial issue “Women and Music”, *Labrys*, 18, 2010. Buscatto, Leontsini (ed.) “La reconnaissance artistique à l’épreuve des stéréotypes de genre”, *Sociologie de l’art*, OPuS 18, 2011a and “Les pratiques artistiques au prisme des stéréotypes de genre”, *Sociologie de l’art*, OP. 17, 2011b.

## **Whose Art Now? Norbert Elias’s Sociology of Artistic Production Revisited**

**Marta Bucholc**, University of Warsaw | [bucholcm@is.uw.edu.pl](mailto:bucholcm@is.uw.edu.pl)

Norbert Elias’s in his writings on art and artistic professions consistently maintained that in the development of artistic professions two distinct phases are present: “craftmen’s art” and “artist’s art”. Among the many features distinguishing them the “outsourcing of taste” seems of utmost importance. A craftsman works to satisfy somebody else’s taste and relies for social and economic effect of his or her activity on the correspondence between his or her product and the taste of target group, which has a definite set of

expectations based on extensive experience of art consuming. An artist is driven by own taste and his or her success depends on convincing the target groups that what is offered to them is a worthwhile merchandise. The recipients typically have limited experience of art consuming, as the centre of their interests lies in other fields. As a result, they rely for guidance on the opinion of a new class of esthetic specialists, to whom taste dictatorship is outsourced. Thereby, autonomy and alienation work as a flywheel and the result is

modern art as we used to know it. Elias's reflection does not go further than bourgeois societies of 19th and early 20th century. However, in late capitalism, mediatization and globalization contribute to functioning of art markets and artistists, providing new channels

for esthetic dictatorship and expertise. The resulting developments force us to inquire whether Elias's category of modern 'artists's art' is still applicable and whose art are we facing now, when both craftsmen and artists are gone.

## **b04RN02 - Art Schools, Vocation and Recongnition/Consecration**

Chair(s): Alain Quemin

### **Faculty of Fine Arts at the Provinces in Turkey**

Reyhan Varli-Gork, Cankiri Karatekin University | [reyhanvgork@gmail.com](mailto:reyhanvgork@gmail.com)

Zerrin Arslan, Mustafa Kemal Univesity, Hatay | [azerrin@gmail.com](mailto:azerrin@gmail.com)

Yuksel Sahin, Akdeniz University, Antalya | [sahin.yuksel2@gmail.com](mailto:sahin.yuksel2@gmail.com)

Viewing art as a field in Bourdieuan terms, this study aims to determine the collective habitus of artists graduating from selected Faculties of Fine Arts (FoFAs) in three cities; and, if possible, to determine the institutional habitus and its effect on artists' individual habitus. The three FoFAs explored are located in three different Turkish provinces– Çankırı (Çankırı Karatekin University), Antakya (Mustafa Kemal University) and Antalya (Akdeniz University). Selected due to region-based differences including varying degrees of development, these FoFAs founded around the 2000s are younger than those in the metropolitan Istanbul, Ankara and Izmir, which were founded following the establishment of the Turkish Republic in the early 20th century, or during the Ottoman period in Istanbul. Relatively far from the cultural centralization

in metropolitan cities, these FoFAs and an exploration of their institutional habitus[es], may help illuminate how provincial sub-fields of art are linked to the field of art in the cultural centers, thereby illuminating the provincial aspects in artistic vocational education. This exploratory-descriptive study utilizes a questionnaire with open-ended questions encouraging self-narratives from soon-to-be graduates at the faculties as well as random, structured in-depth interviews of academic staff and department heads (from departments such as graphic design, sculpture, and fashion), as habitus differs among students and staff. Identifying the effect of the artists' collective habitus at each faculty is conducive to determining the institutional habitus of each school.

### **Art as a Vocation: Considering Internal Motivations and External Conditions of Emerging Self-Employed Visual Artists**

Nina Dimitriadi, Faculty of Arts, University of Brighton | [dr.ninadimitriadi@gmail.com](mailto:dr.ninadimitriadi@gmail.com)

Dr. Nina Dimitriadi shares insights gleaned during eleven years of research in which she

combined both practice-based and qualitative research methods to investigate the conditions

experienced by emerging European and international artists while they were establishing their practices. Dimitriadi identifies widespread adverse conditions that affect both the artist's production and their personal lives. These conditions derive from factors such as the lack of an appropriate method of evaluating the artist's 'discipline', a lack of a commonly recognised reward system for the artist's works, the dubious evaluation mechanisms surrounding the production and distribution of artworks employed by art institutions, the gradual disappearance of competent art criticism, as well as the many risks involved in investing time and money in an enterprise in which there are no guarantees

of returns. However, Dimitriadi's survey demonstrates that most artists pursue their work as a lifestyle in ways very similar to those of professional scientists, politicians and members of the clergy, described by sociologist Max Weber as an 'inner vocation', even though the external conditions artists face are demonstrably different. Dimitriadi suggests that this 'disconnect' between adverse professional conditions faced by the artist and their inner calling to pursue a career may not only affect the quality of the art they produce but also impacts how the professional status of the artist is perceived within society, and subsequently how this may further undermine the artist's status as a professional.

## The Legitimation of Street Art/Artists through Sneaker Designs

Yuniya Kawamura, Fashion Institute of Technology/State Univ of NY |  
[yuniya\\_kawamura@fitnyc.edu](mailto:yuniya_kawamura@fitnyc.edu)

It is a known fact among art industry professionals that there is a clear divide between high art and street art because the former is legal and is part of the art establishment while the latter prides itself in its illegal and anti-mainstream elements based on their anti-social values and norms. Street artists trespass into other people's private properties and draw or paint on the walls of the buildings without any permission. Moreover, high art never takes utilitarian components into account since art does not have to be practical or functional. In principle, street artists who design or paint on sneakers are not artists. However, as the boundary between the two types of creative work becomes increasingly blurry, street artists' works are now displayed in famous museums and art

galleries around the world. At the same time, many of the tattoo and graffiti artists are hired to design special edition sneakers by major sneaker manufacturers, such as Nike and Adidas. Collaborations with the mainstream companies earn the street artists a great deal of respect and status rather than hostility which is an ironical and unintended consequence since the youths are fascinated by the sense of rebellion and thus look up to street artists who are not afraid to break social rules. The surface of a sneaker has officially become a canvass. This paper makes an attempt to explain the legitimation and the social process of making something that was never considered as art into legitimate art through sneaker painting and designing and also the status elevation of street artists.

## **“The Couturier Took a Leap forward to the 21st Century. Gone Were History and Costume”: Boundary-Creation in High-Fashion through Chronopolitics (1950-2010)**

Aurélië Van de Peer, Ghent University | [Aurelie.vandepeer@ugent.be](mailto:Aurelie.vandepeer@ugent.be)

Since its inception in the late 14th century, fashion has referenced its own history. Yet several scholars have noted that in the later 20th century designers increasingly borrowed from bygone and not-so-far gone aesthetic styles. Not only thus was this historical referential design practice more widespread than ever before, by the late 20th century fashion likewise staged a decreased distance between the out-of-date and the up-to-date. Consequently, if its realm of historicity is indeed the present or contemporary, to speak with François Hartog (2002), we could argue that at the turn-of-the-century fashion's *présentisme* found itself on shaky ground. Fashion journalists, however, sought to protect their object of criticism. Through a critical discourse analysis of 1289 fashion reviews, published in The New York Times and The International Herald Tribune between 1949 and

2010, the present article reveals that by the late 20th century journalists created new boundaries of fashion through infusing with evaluative symbolism a notion that had been in their descriptive repertoire from the very beginning: 'costume'. From the 1980s onwards journalists sought to regulate discursively a distinction between fashion and non-fashion through rejecting styles that exclusively recycled fashion history, i.e. 'costume'. The temporal distance between fashion and non-fashion barely merited journalists' attention in earlier decades, however. Through an analysis of journalists' chronopolitics of the late 20th century that depicted particular 'costume' practices as 'allochronisms' (Fabian, 2002), this article answers to Cluley's (2012) call to study the language use of cultural producers in the boundary creations of 'art worlds'.

## **05\_02JS07 - Artistic Practices and the Process of Creativity**

Chair(s): Thomas Eberle Thomas (Universität Sankt Gallen)

### **Patterns of Creativity in Dance and Music: How Interactions Shape Creativity**

Dafne Muntanyola, Autonomous University of Barcelona | [dafne.muntanyola@uab.cat](mailto:dafne.muntanyola@uab.cat)

Dance is a discipline of artistic creation which includes a key duality. Its social dimension, also called relational, starts with a group of people dancing; and its technical dimension includes the production of new steps and moves. The richness of dance comes from the need to work with an individual body, which is not transferable, with its emotions, skills and physicality. But the body of the dancer belongs to plural context, crossed by artistic and social traditions, which locate the artists in a given

field. We analyze the interactive patterns of a British dance company through a video-aided ethnographic work, which included observation and interviewing. Six cameras were used to record the 2 months rehearsal process. At the end of each day, the choreographer and four dancers were selected and interviewed. We considered the choreographer as well as the dancers experts in their domains, with superior knowledge about their activity. As preliminary results, the creative decisions involved in

dance rehearsals of a new choreography and differ for the dancers and the choreographer. There is a shared awareness of the emotional implication of music. Such implication cause certain type of communication conflict that relates to difficulties in memorizing new moves for the dancers, and in lack of feedback from

the choreographer's point of view. Thus, creative decisions are shaped by environmental elements such as the music and the studio space. Creativity in dance seems to be empirically observable, and thus embodied and distributed.

## **Emergent Creative Style: Semantic and Communication Networks in Artistic Communities.**

**Nikita Basov**, St. Petersburg State University | [n.basov@spbu.ru](mailto:n.basov@spbu.ru)

**Alexandra Nenko**, National Research University Higher School of Economics | [al.nenko@gmail.com](mailto:al.nenko@gmail.com)

The influence of social structures on creative style is an attractive research subject. This is particularly the case when we focus attention not on individual creative styles, but on creative styles of artistic communities – groups of artists involved in intensive and expressive interaction with each other. Unique creative styles of different artistic communities develop in constant (re-)interpretation of the essence of art, discussions on the themes and formats for artworks, continuous interaction and representation of artworks in the city space. These processes are, no doubt, conditioned by knowledge and communication structures of artistic communities. We question to what extent and how creative styles depend on particular properties of such structures studying four diverse artistic communities located in St Petersburg (Russia). Semantic networks of the communities are mapped

using transcripts of dialogues between the artists and of semi-structured interviews with the artists, as well as their textual works (articles in papers and magazines, poetry, novels, etc.), and posts in social media. Communication networks are mapped through network surveys run in each of the communities. Then we calculate quantitative measures of semantic and communication networks, such as density, centralization, average tie strength, etc. and identify positions of particular nodes in the networks. Further, we analyze the relations between the two types of networks of each artistic community. Finally, throughout comparative qualitative analysis across artistic communities we attempt to trace the complex impact on different features of creative styles made by semantic and communication networks properties.

## **Improvisation as a Creative Collaboration**

**Lara Frisch**, Bauhaus University, Weimar | [larafrisch1@gmail.com](mailto:larafrisch1@gmail.com)

In this presentation I would like to investigate the various ways in which improvisation confronts change, difference and environmental adaptation within the realm of creative collaboration. Improvisation will therefore be considered as a creative practice, which involves people working together with

the tools available to them, in the arenas that are open to them. In my PhD, I focus on the verbal communication within the practice of improvised music. This means that I study the communication of musicians before and after they improvise. The main field research takes place in Berlin, where since the early 1990's, a

vibrant community of improvisers has developed. Although many levels of communication exist within improvised music, I will only focus on the verbal one by attempting to answer the following questions: What place does change hold in the process of improvisation? How are differences

negotiated? What does adapting to one's environment involve in the making of improvised music? Improvisation in such a context is not just music, but a social phenomenon, involving the creation of constructive and unexpected co-creative relations through dialogue and action.

## **Choreography “from Start to Finish”. A Collective, (inter)Corporeal, Everyday Work**

**Chiara Bassetti**, Italian National Council of Researches - CNR, Rome | [chiara.bassetti@loa.istc.cnr.it](mailto:chiara.bassetti@loa.istc.cnr.it)

I consider the process of choreographic creation – from the improvisation of short sequences to the overall structure of a dance theatrical performance – and focus on the ways in which the artwork changes and continues to change during such a collective and negotiative, situated and emergent, everyday and mundane process. Data comes from my ethnographic research on the world of dance, and include interviews, fieldnotes and video-recordings. The choreographic creative process circularly runs from improvisation to modification through repetition and co-occurent evaluation. Improvisational moments emerge amid more compositional and reflexive ones, and the other way round. Yet everything happens during performing – that is, in action. The action of knowing bodies. Sequences of movements and bodily-kin(aesth)etic configurations for single dancing

bodies are usually created on the basis of improvisation, by the choreographer (alone or with an assistant) and/or by the dancers. Yet, mostly, there is a group of co-dancers, and this allows second level configurations of dancing bodies: co-dancers are visually, spatially and often bodily in relation with one each other and the surrounding space, and this is prominent among the meaning-making practices of choreographic creation. These dimensions of choreography strongly demand collective work – even simply for the ongoing evaluation of the artwork, not to mention its (pragmatically and/or aesthetically regarded as necessary) modifications. Through rehearsals, indeed, the choreographic artwork progressively takes shape via practical adjustments, aesthetic choices, problem-solving and so on. I shall analyse in more detail this collective, negotiative process of art creation

## **a05RN02 - Economic Perspectives and Gatekeeping Processes**

Chair(s): Ellen Loots

### **Institutionalized Canon: Cultural Economics of the Visual Arts in Israel 1998-2011**

**Tally Katz-Gerro**, University of Haifa | [tkatz@soc.haifa.ac.il](mailto:tkatz@soc.haifa.ac.il)

**Tamar Yogev**, University of Haifa | [tyogev@univ.haifa.ac.il](mailto:tyogev@univ.haifa.ac.il)

The research proposed seeks to document and analyze recent developments in the artistic

canon in Israel, during the years 1998-2011. Museums are significant social institutions, being major repositories of cultural and educational values and major visitor attractions. Museums are also major recipients of public money, therefore significant questions arise as to the way public money shapes an artistic canon and influences the production and consumption of art. Limiting the research to museums that received financial support from the government, we analyze the features of art presented in museums as indicative of the artistic canon. We focus on the following

dimensions in the analysis of the works of art: local vs. international artists, traditional art vs. avant-garde art, and among Israeli artists – those of Western origin (Ashkenazi) vs. those of Eastern origin (Mizrachi). Further, we look at the ways in which artistic canon is shaped by the cultural economics of art institutions, for example diversity in funding sources, geographic location, and volume of activity. We employ a unique source of data, drawn from reports which systematically cover dozens of qualitative and quantitative parameters pertaining to the characteristics of museums in the period under study.

## **Gatekeepers in the Arts World : the Case of French Non-Profit Art Organisations Involved in the Promotion of Turkish Visual Arts**

Francesca Setzu, University of Paris 8 CRESPPA GTM | [f.setzu@yahoo.fr](mailto:f.setzu@yahoo.fr)

According to Howard Samuel Becker, art works are not only the result of an individual's performance but the product of collective action between different actors (suppliers, creators, gatekeepers and consumers) who together formed the art system. Gatekeeper decide which artist will enter the art world and which artist will not enter. Their choices are made on the basis of a mix of different reasons (aesthetic, commercial, originality in the art work). They work in a cooperative concurrency to build up an artistic reputation and they operate in a global social and economic system. My research focalize the attention on the activity of a specific category of gatekeepers, French non profit contemporary

art organisations involved in the promotion of Turkish visual arts. They support the production and the presentation of artistic activity, through a challenging and experimental programme of artist's residencies, exhibitions and publications, they create a dynamic relationship between distant cultures and countries. My paper will explore why French non profit contemporary art organisations decide to promote Turkish visual arts. It will investigate how their activity differs from the activity of museum institutions and from the activity of commercial galleries, and it will examine their position in contemporary art system.

## **Live the Scene! Pop Rock Music Festivals as Renewed Platforms for Economic and Creative Development in Northern Portugal**

Paula M. G. Tavares, University of Porto | [mariadeguerra@gmail.com](mailto:mariadeguerra@gmail.com)

Teresa Sá Marques, University of Porto | [teresasamarques@gmail.com](mailto:teresasamarques@gmail.com)

Ana Farinha, University of Porto | [ana.catarina.farinha@gmail.com](mailto:ana.catarina.farinha@gmail.com)

The proliferation of pop rock music festivals in the last decade in Portugal has allowed for the

identification of some dimensions of social change in the culture and leisure markets of

the Portuguese society. These festivals are characterized by flexibility, intensity and impact: flexibility because of the diversified presentation of musical projects and activities in a limited amount of time; intensity because of the number of activities that occur in the festival venue; and an impact that can be measured at an internal level (in the event itself), at a local level (in the municipality and city where they occur) and in the scheduling and occurrence of similar events. Therefore, the endogenous repercussions that may happen in the reinforcement of innovative activities of musical production, dissemination of new projects, the enlargement of audiences at an inter-municipal, regional, national or even international level, are fundamental

aspects of strategic evaluation of these events. At an exogenous level, they may affect the communities' local economy and their permeability to the exterior, and in the development of formative programs or even in the structures of reception of artists and equipment rental. Thus, pop rock manifestations are increasingly mobilizing the interest of consolidated and emergent tourist fluxes which are particularly important since traditional musical manifestations such as fado and folklore are traditional strong touristic attractions. In this framework we will analyse the Paredes de Coura and Optimus Primavera Sound Festivals as temporary autonomous zones and opportunities for social and musical experimentation.

## b05RN02 - Theatres

Chair(s): Victoria Alexander

### Who Tells Fortunes to Theatre Companies: The State, Experts or Peers?

Ellen Loots, University of Antwerp | [ellen.loots@ua.ac.be](mailto:ellen.loots@ua.ac.be)

Several reasons for enabling art organizations to develop a cultural offering have been expounded (Frey, 2008). National governments recognize the importance to support artistic production. They foresee and ex ante evaluation system to assess the eligibility of arts organizations for support, that in Belgium and the Netherlands has become taken-for-granted, yet is increasingly subject to critique. We elicit the implications of a peer-panelled evaluation system. Our multi-staged mixed method approach includes content analysis and statistical testing. Additionally to quantifying their content, we bring out extra meaning of these panel evaluations from the perspective of its authors, which has been labeled 'a critical hermeneutic approach' (Bryman, 2008). More specific we scope upon logic within texts, which is signaled by 'metalinguistic markers of argumentation' that

express semantic relations between main clauses. These have been referred to as 'logical connectives' (Hyland, 1998). We find that not all the state's proposed criteria are being applied by the panelists: artistic dimensions are prevalent, social functions show no impact on the final evaluation. Some latent criteria materialized during our analysis: whether or not an organization has a future vision, is in constant development, and its whereabouts are significant. We find the assessors to invoke trust, typically exposed in processes where rational evaluations tend to come short, and to unambiguously use it as a decisive factor. Further, the panels appear giving voice to an economizing government, in composing a divers yet complementary landscape of theatre supply. We discuss implications for theatre producers for who state sustenance is a prerequisite.

## **'Pendiente de Voto': A Spanish Play in Mexico, the European Crisis through a Latinamerican Perspective.**

**Said A. Soberanes**, Universidad Veracruzana | [said.soberanes@gmail.com](mailto:said.soberanes@gmail.com)

The economic and politic crises that impacts the Spanish society since the beginning of this decade, has created strong critics against the representative political system amongst some Spanish performative artists; Such is the case of "Pendiente de Voto", a participative play from the spanish director Roger Bernat (2012), that highlights the difficulties of a parliamentary goverment ruled by an outsourced, non correlated system. Developed during the Spanish presidential transition, this performance asks for the public participation as a Parliament and, through a technical dispositive (a mechanism to see and to enunciate), let them express their opinion and discuss it with their peers; by slowly taking their capacity to vote, until they can't vote at

all, the performance encourage the creation of a scale community and simulates a political crisis. According to the audience theory developed by Stuart Hall, this can be understood as the encoding context, now we are studying the knowledge's frameworks and production's relations in which this discourse was decoded at the May 6 presentation at Mexico City. Setting the community crisis beyond its own boundries; How, this reflection about the political crisis, influence and changes through the Mexican community's perspective? Does the Latinamerican perspective counts? Could we talk about a common human sense of political crisis, besides it's obvious contextual diferences?

## **Conflict and Cooperation among Theater Companies: Acting as an Artistic Social Movement in Brazil**

**Ana Carolina Andrada**, Universidade de São Paulo | [caandrada@gmail.com](mailto:caandrada@gmail.com)

The paper explores conflict and cooperation among theater companies based on a Brazilian major city. As one of the few cities in the country to financially support performing arts groups that seek to develop their art through continued research work, the municipality of São Paulo subsidize 30 companies each year for work projects that may last less than two years. This cultural policy guarantees some stability to the groups, but it does not allow them to work as state theater companies, since each group has to apply for new grants every time a project comes to an end. The policy was

proposed by the theater companies' movement and approved as a law ten years ago. Although being part of the same social movement, those groups compete for the policy resources and also for the political and artistic perspectives of the movement. Organized under a single cooperative workers association, those artists have to deal with their unequal views on political and artistic issues in order to act together as an artistic social movement, especially regarding contends with the different levels of government.

## 06\_b02JS07 - Artistic Creativity Outside the World of Arts

Chair(s): David Inglis (University of Exeter)

### Creativity and Innovation in (Arts) Organizations

Xavier Castañer, Université de Lausanne | [xavier.castaner@unil.ch](mailto:xavier.castaner@unil.ch)

There is much interest in innovation and creativity in the arts sector, as in the non-profit and for-profit worlds in general. Organizations in most sectors are expected to be creative, i.e. to generate new products and better satisfy their customers. Several actors have proposed that organizations across sectors could draw from the creativity and innovation of the arts sector. This paper tries to elucidate the extent to which the arts sector is creative and innovative and whether an analogical transfer regarding creativity and innovation from arts organizations to organizations with other purposes is warranted. Creativity has long been the hallmark of (individual) creators in the cultural sphere, such as composers, painters, photographers, sculptors and writers. Each of their work is a creation. However,

whether a new work is innovative is a different matter. A new work can be part of a well-known genre or style, part of a tradition. Or it can be innovative in that it departs from existing genres in a significant way. For most art organizations, the creative process takes place outside the organization or has occurred in the past (such as in museums which can exhibit pieces from different museums). Dance companies might be an exception. Further, imitating others – adopting practices from others – can be innovative for the focal organization if it is the first time it engages in such endeavor. In contrast, the organizational literature on creativity has mostly focused on creativity in organizations as the generation of novel and useful ideas (e.g. Amabile, 1988).

### Metaphorical Constructions in Play; Implications for Agency

Lise Kjølørød, University of Oslo | [lise.kjolsrod@sosgeo.uio.no](mailto:lise.kjolsrod@sosgeo.uio.no)

Human beings are in need of art in order to bear the severe reality they have made for themselves, contends the young Nietzsche: Art provides a legitimate paradigm for unconscious activity, or rather a specific instance of it; it educates us to play games with ourselves and become noble; it teaches us to distance ourselves from our own evaluations. Some emerge with 'formidable seriousness', others reach states of 'perfection and beauty', yet others apply 'ironic distance' (Kofman, [1972] 1993: 18-32). This article demonstrates how contemporary men and women create artistic metaphors in their leisure and thus

appraise audiences—including the self—of what is in their real world minds. Collectors, backpackers, long-distance sailors and numerous other participants in long-lasting, dynamic activities are able to charge their leisure with significant images. By transferring selected aspects of life into representations in play, these aspects can be made emotionally and cognitively comprehensible. Moreover, metaphorical constructions in play can enhance an actor's real world interests and powers by augmenting credible alternatives to conventional or dominating models.

## Making the Invisible Visible – Assessment of Creativity

Felix Albrecht, Karlsruhe Institute of Technology | [felix.albrecht@kit.edu](mailto:felix.albrecht@kit.edu)

Michaela Pfadenhauer, Karlsruhe Institute of Technology | [pfadenhauer@kit.edu](mailto:pfadenhauer@kit.edu)

In contemporary discussions, 'creativity' appears ubiquitously in diverse contexts. Beside arts, psychology, educational-, and management sciences created different concepts of and different perspectives on creativity. Creativity is described as individual characteristic, as competence, as a group- or network phenomenon, as an organizational (manageable) feature of productivity, or as structural property of regions or cities. We interpret this development as a result of the ongoing cultural change which became most obvious in the increasing demand for evaluations and indicators for, among others, competences and creativity. We identified creativity as a versatile subject in different context, which is not clearly defined, but however used as a key-concept for (organisational as well as individual) development. To examine the assessment and hence communicative construction of

creativity, we conducted an explorative research project at the Institute of Production Engineering at the Karlsruhe Institute of Technology. We observed small teams of students who had to construct independently an engine in a setting which was conceptualized to test the student's abilities in five categories, including their creative potential. To assess these so-called "competences", the instructors had a short assessment guideline (two criteria for creativity: different solutions and novel combinations). In fact, they used ad hoc-heuristics and argumentations to detect and moreover construct the students' 'creativity'. Against the common view on creativity as an individual achievement or characteristic, we consider creativity as an interactive performance in which situations' specific qualities takes part in a commonly underrated way.

## Bringing Art Back to the Creative Field– When 'Theoretical Themed' Art Exhibitions Performed as Experiments

Chia-ling Lai, The National Taiwan Normal University | [lai\\_chialing@yahoo.co.uk](mailto:lai_chialing@yahoo.co.uk)

Current researches on creativity extend the scope into areas of consumption-oriented fashion and popular art as well as aesthetics of everyday designs, however have pushed traditional 'art' into unattractive backgrounds. Actually, 'high culture' gradually loses its symbolic dominance with creative appeals as Bourdieu's field theory assumes, embodied in museum exhibitions' crisis and concerts' greying phenomenon. This paper aims to reconsider the new roles of art in the creative field, by examining the new attempts of art exhibitions. This research draws on new museum theories applying Actor Network Theory at reconceptualising exhibitions as experimental fields (Basu and Macdonald,

2007); and it furthermore analyses the current 'theoretical themed exhibitions' curated by emergent curators with theoretical attempts performed as significant auteurs as film directors (Heinich and Pollak, 1996). It argues that these new exhibition attempts– drawing critical theoretical concepts diagnosing emergent social issues, reinventing aesthetic experimental design strategies of de-differentiation and cultural convergence in engaging public and producing affect– booster creativity for art exhibitions within competitive creative fields. Taking examples of Documenta 13, Latour's 'Making things public', Virilio's 'Unknown quantity', MOMA's 'Rising current', Bourdieu's 'Algeria 1960' and Taipei Biennale

2012, this research analyzes the social condition and affect of 'theoretical themed exhibition'. It argues for the new art creativity which focuses less on the exchangeable

cultural economy than on the 'critical creation' resulted from blurred division of sub-field of cultural production under the new 'experimentally' experiential economy.

## **a06RN02 - Cultural Planning, Participation and Funding Issues**

Chair(s): Tasos Zembylas

### **Artists' Participation in a Cultural Planning Process in a Mid-Sized City in the U.S.**

Sung ryun Rim, Florida State University | [chuncheon@gmail.com](mailto:chuncheon@gmail.com)

Community cultural planning involves a public-private process intended to promote arts and culture for economic and social development purposes. Today, the increased importance of creative industries and tourism has led many U.S. cities and regions to employ an analytical and cooperative process in creating distinctive cultural development plans. Artists can play a vital role in such cultural planning, from collaboration with non-artist groups, such as policymakers, arts administrators, and the general public, to implementation. The United Nations Educational, Scientific, and Cultural Organization (UNESCO) has encouraged the engagement of artists in cultural policy-making. In fact, many scholars have strongly encouraged artists' participation and maturation in the cultural policy community in

order to create an effective cultural policy system. However, some important issues related to the participation of artists in the cultural policy arena have been marginalized, ignored, and infrequently studied. Based on interviews, surveys, participant observation and document analysis, this study explores artists' perceptions and experiences in order to evaluate the role they played in a particular cultural planning process in a mid-sized city in the United States: Chattanooga, Tennessee. The purpose of this paper is to give voice to the perspectives of artists involved in cultural planning, particularly in regard to their role and participation in the planning process, and to provide knowledge that may inform the work of stakeholders involved in future cultural planning and cultural policy-making.

### **Funding the Arts: Revelation or Strangulation?**

Naomi Oosterman, Erasmus University, Rotterdam | [naomi.oosterman@live.nl](mailto:naomi.oosterman@live.nl)

There is a lot of debate about how environmental pressures influence an organisations outcome (Powell & DiMaggio, 1991; Meyer & Scott, 1992). Most of this research doesn't take in account the fact that when environments do influence organisations, the effects should be visible in the organisational outcomes (Alexander, 1996).

The general research question for this paper is: "How does cultural policy affect decision making by museum professionals" This research focuses on the specific environmental pressures in the art gallery world of Rotterdam. In the Netherlands, most art galleries rely on large, external donors. Furthermore, art exhibitions that are on

display within these art galleries rest upon different types of funding. These can consist of governmental funding, crowd funding, individual philanthropists or patrons or corporations. You can state that there lies a clear connection between an external force, such as a funder; and the organizational outcome of the art gallery, namely: the exhibition. Such a theory raises questions on the amount of influence such external funders have on museum exhibits. In this research I focus solely on cultural policy as the external

environment that influences art exhibitions. Due to the recent cutbacks on the arts with governmental funding, the largest cutbacks ever made in Dutch history, questions arose if galleries still maintain an autonomous state when funding changes. In general, the expectation is that curators will change their exhibition contents in order to preserve governmental funding. This research is currently under review and will be completed in June, 2013.

## Arts Policy and Arts Consumption – Evidence from the U.S.

**Tal Feder**, University of Haifa | [talfeder@soc.haifa.ac.il](mailto:talfeder@soc.haifa.ac.il)

The paper studies the associations between arts funding and arts consumption. It builds on the case study of arts funding in the United States in order to explore the way arts funding is correlated with patterns of arts attendance and participation. The paper asks the questions: 1) To what extent and for which groups in American society is cultural consumption correlated with arts funding? Is this correlation different for different sources of arts funding? How can this correlation be explained? 2) Does arts funding influence individual cultural consumption? Do context variables of local arts funding have an effect on individual cultural consumption? Does

controlling for these variables change the estimated effects of the “classic” consumption predictors? The study is based on a repeated survey of arts consumption and participation in the United States (SPPA) and on data on arts funding by American State Art Agencies (SAA), the National Endowment for Arts (NEA), and private funding. The paper employs panel data analysis in order to study how changes in patterns of arts consumption are linked to changes in public funding of arts and culture. The results put to test some of the main justifications for allocating public subsidies for the arts that appear in the literature about cultural policy – those of equity and access.

## New Technologies in Arts Philanthropy: The Rise of Social Media and Online Art Giving

**Victoria D Alexander**, University of Surrey | [v.alexander@surrey.ac.uk](mailto:v.alexander@surrey.ac.uk)

The rise of the internet has changed not only the way individuals experience and interact with the arts, but also the amount of information that is disseminated and accessible on behalf of specific art causes. This paper maps out the various forms of online giving made possible by the internet, and other forms of social media such as Facebook and twitter. I examine the ways that established

arts organisations use the internet and social media to raise their public profile and to provide information to potential donors on the benefits of membership, volunteering or sponsorship. Notably, I also look at new innovative ways of supporting the arts, for instance, crowd-sourcing of funds for cultural production.

## b06RN02 - Cultural Policy and Political Struggles

Chair(s): Maaria Linko

### Cultural Tendencies in Democratic Societies

Ozan Günel, Istanbul University | [ozzygunel@gmail.com](mailto:ozzygunel@gmail.com)

Culture is a strong communication force for authority. At authoritarian societies culture can be controlled by monopolistic organization such as "Ministry of Public Enlightenment and Propaganda". But it is difficult at democratic societies to control all cultural movements. But when it combined with the other aspects of nowadays democratic system like capitalism and globalization, culture (mainstream culture) itself create a tendency to not impose a dissidence between society and especially the general public view. This general public view can be varied between different states regarding on their democratic progress. For example under Obama administration American popular culture turned from its dissident stance which can be seen during

Bush administration. Of course American popular culture can never describe as dissident but during Iraq War more contrary voice was heard by this culture. At Obama's America "Argo" is the strongest candidate for Academy Awards and "Homeland" won Golden Globe. Both works tell courage and sacrifice of CIA operatives to protect their states. To sum up, in four years the same people who mislead, lie, protect only the interest of companies turn into heroes willing to do ultimate sacrifice just to protect innocents according to American popular culture. In Turkey, since the re-rise of conservative Islamic policy, we can see a lot of work which inspires from Ottoman Empire and its "glorious history". This work tries to show this tendencies and their background.

### Pussy Riot – Artistic Performances as Means of Political Protest

Robert Schäfer, Otto-von-Guericke-Universität, Magdeburg | [robert.schaefer@ovgu.de](mailto:robert.schaefer@ovgu.de)

Marija Stanisavljevic, Otto-von-Guericke-Universität, Magdeburg | [marija.stanisavljevic@ovgu.de](mailto:marija.stanisavljevic@ovgu.de)

No recent artistic practice has drawn so much mass-media-attention and provoked more heated debates as the famous "punk prayer" of the Russian band Pussy Riot, performed in February 2012. Immediately, the case has become an object of projection for an endless amount of various socio-political discussions about the freedom of artistic expression, the interdependencies between political, juridical and religious powers, suppression of women, social responsibility of arts, dictatorship and democracy, engagement and solidarity, tradition and modernity – to list only a few examples. This flood of very different reactions to the performance in the Christ-Saviour-

Cathedral in Moscow has led to the effect that the artwork itself almost disappeared in the background. To work against this process, our presentation will focus on the video clip, Pussy Riot has released after their appearance in the church. Our main questions are: What is it that makes this performance politically so relevant? Under what conditions an artistic practice can be received as subversive action or political protest and why? What are the aesthetic characteristics, which made possible the strong impact of this piece and why and how could it cause so much irritations in the other sub-systems of society?

## Cultural Intervention as a Cultural Policy in Russia: Opportunities and Restrictions

Nataliya Velikaya, Russian State University for the Humanities | [natalivelikaya@gmail.com](mailto:natalivelikaya@gmail.com)

Presentation is devoted to the new cultural policy in some Russian regions where culture is considered as the main resource for region developing. That is new approach in Russia because during 3 last decades culture financed last of all and considered as non important area for investing. The main idea is to describe some strategies called up to overcome existing inequality in access to cultural values in Russian provinces. Since cultural sector is excluded from the innovation area in strategic plans of local and regional development, financing is not stable and not well organized in general. Paper observes some results of cultural intervention policy in regions including establishment of new cultural organizations, new jobs, arrangement of conditions for active cultural values consumption and public opinion

about new forms of cultural activity in the context of the developing in Russia one of the main world cultural trends (as actual art). We analyze a dynamic of cultural activity of inhabitants, media role of culture, and role culture as a factor of city development. The social and economical consequences of projects were analyzed as well. As a data base of the paper we use results of interviewing experts from five regions of Russia (2010, 2012) and content analysis of federal and regional mass media. We also take case studies of Perm (projects of Museum of Contemporary Arts) and Kaluga region (Open Air Architecture Festivals) since it was Perm and Kaluga where the policy of cultural intervention had been more successful.

## c06RN02 - Cultural Policies and the Public

Chair(s): Victoria Alexander

### Public-Oriented Strategies between Ideals and Reality: the Case of MP2013 -Marseille Provence European Capital of Culture.

Gloria Romanello, University of Barcelona | [gromanello@ub.edu](mailto:gromanello@ub.edu)

Marseille Provence European Cultural Capital 2013 (MP2013) is an event which ambitiously intends to take part actively to the long-term changes that the city is going to experience. In this perspective, the role of audiences is considered to be fundamental. At this time of changing, when governmental institutions are rethinking the role of culture, and coherently with the premises of the European Cultural Capital programme, it would be useful to highlight the public-oriented cultural policy, especially from the point of view of the professionals of cultural sector involved in the

event. In this paper, we will present results from an exploratory survey administered to a large number of professionals which are operating in the organizational machine of MP2013. With the aim of evaluating the actions of MP2013, we will try to answer some core questions: which are the issues of public oriented cultural policies in this extraordinary context? With what degree of intensity the strategies on audiences should be conceived into cultural programming? In which way should they be purposeful in the development of MP2013? The results provide details about

the different approaches towards cultural audiences and their purpose in the process of institutional mediation and participation of arts. This research is part of a bigger collective and multidisciplinary research project which is still going on; it deals to answer some major

questions about cultural audiences, cultural participation, analysis of the impact of the arts in the original context of MP2013 (<http://mp2013publicspratiques.wordpress.com/>).

## **“Our Angel”: An Investigation into how the Public Interpret and Associate Meaning with an Iconic Art form Using a Case Study of the Angel of the North, Gateshead**

**Maeve Blackman**, Durham University | [f.m.blackman@durham.ac.uk](mailto:f.m.blackman@durham.ac.uk)

This paper discusses a recent piece of research on public art and well-being. The research uses a case study of the Angel of the North sculpture in Gateshead, England. Public art has received a lot of attention in recent decades as a way of enhancing public space and, it is claimed, improving quality of life. However, an important question is whether this happens, for whom and how. Public art is not usually situated in conventional art sites, such as galleries, but instead in outdoor public spaces, making it – arguably – a socially inclusive rather than exclusive art form. The ‘public’ in public art should therefore be crucial in understanding its impact, but there has been very little research to investigate the experience of public art from the public’s

perspective, especially that combines quantitative and qualitative evidence. The ‘public’ in public art can also be read two ways, passive or active. This research reveals that the impact of public art in people’s everyday lives and life events is more complex, with the art ‘acting’ in people lives in a range of different ways. There are also significant differences depending on factors such as age and social deprivation. This paper presents evidence from a survey, focus groups and observations to explore who is the audience for public art and, perhaps more importantly, how does this audience engage as well as interpret, interact and associate meaning with art placed in the public sphere.

## **We Don't Need any Guggenheim Museums here - A Struggle between the City Image Builders and the Art World or between Nationalism and Globalism?**

**Maaria Linko**, University of Helsinki | [maaria.linko@helsinki.fi](mailto:maaria.linko@helsinki.fi)

The foundation of impressive flagship buildings for different cultural institutions in European capitals and other large cities has been seen as an important tool for reasserting the reputation of these cities. Also the city management of Helsinki has chosen this strategy for ensuring its success in the future. In January 2012, The Guggenheim Foundation and the Helsinki city management announced plans to set up a new Guggenheim museum in Helsinki at the seafront. This paper studies the

public debate and even the fierce criticism stimulated by the Guggenheim report which led to the rejection of the plan. This debate is analyzed within the framework of current discussion in the sociology of the arts and urban studies on the culture-led development of cities but also in the framework of current political social and economic developments in Europe, such as the current nationalistic ideology and the economic turmoil. The research problem centers round the process

how the idea of the Guggenheim museum was introduced to the public and why the project failed. Theoretically and methodologically, this study is inspired by Luc Boltanski's and Lauren Thévenot's theory on justification (1991) and especially by a methodological application of the theory constructed by Eeva Luhtakallio and Tuomas Ylä-Anttila (2011). The research data consists of media publicity on the Guggenheim

plan the emphasis being on the largest newspaper and in social media. The Guggenheim Helsinki process is an interesting case demonstrating the debate between different actors on the directions of the cultural development of an European capital and the ways in which the national art world reacts to international influence and to competition in global age.

## Cultural Policy in Hard Times: the Restructuring of the Field of Music Education in Italy

Clementina Casula, Università di Cagliari | [clcasula@unica.it](mailto:clcasula@unica.it)

A positive look to the on-going crisis of the world's most developed economies may observe that it thrusts governments to clearly identify, for their respective societies, the priority sectors either to be protected from the cuts of austerity measures and/or where to strategically invest to launch a recovery process. In Italy, until now, priorities have certainly not entailed the cultural sector (broadly defined as including research, education, arts and cultural heritage), where cuts have further reduced the already limited state funds ("You can't eat culture!", explained former Minister of the Economy and Finance). The paper considers a cultural field particularly mistreated in Italy, that of music, focussing on the important changes occurring in music education. In the case of public education, at the end of the 1990s a reform revolutionises the rules organizing since 1918

Conservatories of Music, forcing them into the logic, timing and structure of a renewed University system (shifting the "outsider" status of Conservatory students and teachers from fully to tacitly deviant). Nearly ten years later, another reform introduces music and dance lyceums within the secondary school system. Meanwhile, private education sees a growing demand of families for non-formal and non-vocational music education and training. While the analysis of official legislation and statistics sets the institutional context where those changes take place, a qualitative case study investigates in depth how music teachers and students use their personal assets (economic, cultural, social, erotic capital resources) to change their educational and professional paths and identities in front of changes occurred in the field.

## 07\_b02JS07 - Artistic Practices and the Conditions of Creativity

Chair(s): Hubert Knoblauch (Technische Universität Berlin)

### Underground Careers in Lisbon do-it-yourself Music Scenes

Rui Telmo Gomes, Observatório das Atividades Culturais, Lisboa | [ruigomes.oficina@gmail.com](mailto:ruigomes.oficina@gmail.com)

In recent years, new popular music acts have made themselves known in Portugal through their self-producing strategies (publishing with their own small labels and promoting shows on their own). Cooperation networks (Howard Becker) within local musical scenes (Andy Bennett) engage young musicians, amateur and professional gatekeepers and strongly supporting even if small audiences. Those networks - referred to as the underground scene - combine conviviality, artistic production and ritual performance. The collective creative work (Paul Wills) implied in underground music-making is of course a powerful expression of everyday aesthetics in youth cultures contexts. Another key aspect to be addressed in this paper is the balance between identity practices and professional

aspirations. On the one hand, authenticity is a recurrent issue among underground musicians and drives them to make music meaningful to their peers. On the other hand, young musicians find themselves in a liminal (Victor Turner) stage in their lives trying to translate their creative output into a way of living. Drawing on extensive fieldwork conducted throughout the 2000s decade in the metropolitan area of Lisbon, I will consider musical pathways (Ruth Finnegan) and leisure careers (J.MacDonald & T.Shildrick) resulting from the underground experience. Most common "career profiles" are discussed, ranging from musician to music agent/promoter, but also including a different kind of profile such as community arts practitioner and social worker.

### Routine and Creative Practice. A Study of Arts and Crafts

Anne Jourdain, Université de Picardie Jules Verne, Amiens | [anne.jourdain@gmail.com](mailto:anne.jourdain@gmail.com)

Based on 92 interviews with artist-craftsmen (cabinetmakers, ceramists, glassblowers, weavers...) and about 15 observations in workshops, our analysis of artist-craftsmen's production work leads to reassess the role of routine into creative practice. In the vein of existing sociological works which emphasize the social dimension of creativity (H. Becker, 1982; M. Buscatto, 2008; A. Strauss, 1994), our study of arts and crafts breaks with the common conception of creativity as a non-routine activity. Such an aim is favoured by the fact that artist-craftsmen do not deny the technical aspects of their production work, contrary to artists from "major art" worlds (R. Moulin, 1983). As a matter of fact, artist-

craftsmen insist on their numerous routines which have been incorporated through years of practice and which contribute to their technical skills. Not only do these routines enhance the possibilities of innovation which must be technically realisable, but they also foster creativity through "intuitive leaps" (R. Sennett, 2008). Our presentation's first part therefore lays the emphasis on the dynamic aspect of routine, which has long been ignored (M. Breviglieri, 2006). Of course, routines also impose limits to creativity and that is especially why the different objects produced by a same artist-craftsman or a same arts and crafts company look similar. Our second part thus focuses on the links between routines and

production styles. Routines are finally seen as frames for creative practice, which contribute

to the emergence of production styles.

## **Social and/or Artistic Challenges in Creating a Learning Environment for Performing Art Students into an Institution for Elderly People - Experiences and Examples.**

**Helka-Maria Kinnunen**, Metropolia University of Applied Sciences, Helsinki | [helka-maria.kinnunen@metropolia.fi](mailto:helka-maria.kinnunen@metropolia.fi)

**Pieta Koskenniemi**, Metropolia University of Applied Sciences, Helsinki |

PARTNERS IN CO-OPERATION Kustaankartano Institution for Elderly People and the Department of Performing Arts in the Metropolia University of Applied Sciences in Helsinki, Finland, with Leiras-Takeda Medicine Company. The Department of Performing Arts focuses on applied theatre studies. The curriculum emphasizes on learning by doing / learning in social context. THE CASE In 2013 there are one million retired people in Finland - that is one 5th of the whole population. People live longer - who will do all the work in the country? Who will take care of the old? And what makes life good during one's late years? What has art to do with meaningful life? Public discussion argues about the consequences for the society, and one of the issues is, how the well-being of the old will be provided. Many of

the retired are healthy and independent, but many of them have disabilities that make them dependent of special care. The Dept. of Performing Arts created a learning environment into an institution for elderly people to inquire the problem of humanely dignified senescence. How to strengthen significant every-day-life in old people s' nursery homes? And how to apply artistic practices for this purpose? PEDAGOGICAL AIM The pedagogical aim for the project is to create and adapt collaborative methods in practice. This interactive performance with the inhabitants in Kustaankartano creates a practice-as-research process which uses a variety of artistic and ethnographic means of inquiry.

## **Artistic Practice and the Studio**

**Christian Morgner**, University of Lucerne | [christian.morgner@unilu.ch](mailto:christian.morgner@unilu.ch)

There are a great number of books with titles such as 'Inside the artist's studio' or 'Artists in their studios'. However, these books are mostly collections of interviews and pictures and are not systematic studies of the artist and his or her studio. They do not address the question of how the studio is embedded in an artist's actual practice, or how the artist's actions turn a space into a studio, or how these two processes interact to reinforce one another. This presentation will pay attention to the studio and artistic practice, seeing the studio as being more than just a workplace

where items are made, books are written or music created. As the artist Wolfgang Tillmanns said, 'The studio is not only a place for making, but even more so a place for looking, holding, viewing, hanging, thinking about pictures and ideas. And rolling out, assembling, rejecting, archiving, and the downtimes in between.' This presentation will focus on these other 'products', such as artistic identity, the studio as a frame or border within which the artist can create a world of his own, the regulation of interactions with other artists, and the construction of the studio as laboratory

in which expressive practice can flourish. These observations are based on ethnographic research on artists living and working in Dakar, London, New York and Beijing. The author has spent several months in these locations, has shadowed the artists in their studios, and

documented these places through pictures as well as conducting in-depth interviews with the artists. The analysis of the resulting material provides a systematic account of how the studio considerably shapes the creative practice of an artist.

## Patterns of Creativity in Dance and Music: How Interactions Shape Creativity

**Simone Belli**, Universidad Carlos III de Madrid | [simone.belli@uc3m.es](mailto:simone.belli@uc3m.es)

**Dafne Muntanyola**, Autonomous University of Barcelona | [dafne.muntanyola@uab.cat](mailto:dafne.muntanyola@uab.cat)

Dance is a discipline of artistic creation which includes a key duality: its social dimension, also called relational, that starts with a group of people dancing, and its technical dimension, which includes the production of new steps and moves. The richness of dance comes from the need to work with an individual body, which is not transferable, with its emotions, skills and physicality. But the body of the dancer belongs to plural context, crossed by artistic and social traditions, which locate the artists in a given field. We address the interactive patterns of a British dance company through a video-aided ethnographic work, which included observation and interviewing. Six cameras were used to record the 2 months rehearsal process. At the end of each day, the choreographer and four dancers were selected and interviewed. We

considered the choreographer as well as the dancers experts in their domains, with superior knowledge about their activity. As results, the creative decisions involved in dance rehearsals of a new choreography differ for the dancers and the choreographer, and have necessarily a communicative basis. Creative decisions are shaped by environmental elements such as the music and the studio space. There is shared awareness of the emotional implication of music. Such implications cause certain type of communication conflict that relates to difficulties in memorizing new moves for the dancers, and in lack of feedback from the choreographer's point of view. Creativity in dance seems to be empirically observable, and thus embodied and distributed.

## a07RN02 - Arts in Public Space and its Social Effects

Chair(s): Sacha Kagan

### This is What Democracy Looks Like: Social Art as a Vehicle of Public Participation

**Katarzyna Niziolek**, University of Bialystok | [katarzyna.niziolek@gmail.com](mailto:katarzyna.niziolek@gmail.com)

When the notion of cultural democracy is shifting from accessibility to creative practices, art in the hands of the people becomes something more than a means of cultural expression. It turns into an alternative mode of

public participation. From Bread and Puppet parades, to Augusto Boal's legislative theatre, to Reclaim the Streets movement, arts practitioners around the world have attempted to turn their trade into a bottom-up political

activity. Lately it has also been gaining extensive attention in Poland. In spite of the weaknesses of the country civil society, a growing number of Polish organizations and activists are looking for innovative means to affect the decisions of the local governments and the state policies. The qualitative research on social art (defined as participatory artistic activity aimed at public benefit) that was conveyed in Poland between 2010 and 2012 provides evidence that aside from necessarily institutionalized consultation and advocacy procedures (both still underdeveloped and marginalized in the political process), one of

the possible means of a more spontaneous public participation is art. The proposed paper is an attempt to enumerate and describe the possibilities produced by social art in the area of public participation as they are seen and used by the arts practitioners in Poland. The analysis of typical functions of artistic engagement in the public sphere (such as: articulation of group opinions and demands, directing media attention to social problems, or empowering the otherwise excluded) allows to at least partly answer the question whether it is possible for art to bring social change.

## **Towards an Approach to Network Based Cooperation**

Rita Kéri, University of Pécs | [keririta@yahoo.com](mailto:keririta@yahoo.com)

In an interdisciplinary approach, the paraphernalia of identity can be treated as coordination tools, reference points for decisions about cooperation or deserting in a social context. In its explanations of stereotypes, norms, morale or ethnic traits, evolutionary psychology treats them as adaptations that increase the likelihood of successful cooperation. From the point of view of my argument, this is important because these explanations anchor the points of reference for cooperative decisions to a well defined group. In an alternative treatment, typical in game theory, cooperative decisions are tested in another fixed framework: a set of well defined rules consensual among the participants. In my own research, I take an approach that draws on ethnographic observation and participatory methods, and focus on the communicative aspects of cooperative situations in small groups that can

be defined as multicultural in that no consensual norms or rules exist, and group boundaries or conditions of participation are fuzzy. I have developed a set of aspects for characterising the communicative dimension of such situations, in close connection to the emerging crises and possibilities of cooperation. In my present field I plan multicultural workshops aiming at establishing loose, network based community between participants with diverse cultural backgrounds. Using methods of ethnographic exploration, mediation practice and fine art, I focus on how, by reflecting on the communicative aspects and on structuring content and creating connectivity, an open-ended set of tools can be established that foster the creation of loose community – some potential for cooperation that is not necessarily linked to creating joint identity.

## **City Performance - Messages and Pictures in the Walls of the Streets**

Cláudia G.M. Madeira, New University of Lisbon | [madeira.claudia@gmail.com](mailto:madeira.claudia@gmail.com)

The walls of the streets in the city of Lisbon are full of political messages and pictures, the result of common citizens' individual

manifestos or of collective declarations (political propaganda or that of the trade unions or new movements). These messages

are often multiplied in other messages that virtually reconstruct the city in internet blogs or mobile phone messages. The gaze of the common citizen or the researcher cannot remain indifferent to the performance in the city, which, every day, is transformed and, with

this performance, transforms those who live there. In this paper, through the photographic records of these images and messages, I intend to analyse what insights they allow us gain into emotions and memories.

## Arts in Action for Management Development

Ian D. Sutherland, IEDC-Bled School of Management | [ian.sutherland@iedc.si](mailto:ian.sutherland@iedc.si)

Jasna Jelinek, VELUX Hrvatska d.o.o., Zagreb | [jasna.jelinek@gmail.com](mailto:jasna.jelinek@gmail.com)

Taking an arts in action perspective, this study leverages empirical data from arts-based learning interventions in management education, to explore the relation of the arts in improving management and leadership capacities in professional practice and organizational life. The recent global economic crisis lit a fire under existing discussions and debates within the fields of management and organizational behavior around: a) the implications of traditional business and management education in current crises b) what can be done differently to more responsibly educate managers and leaders across public and private sector organizations. An intriguing response has been putting the arts (from plastic to performative) into action to develop more responsible, creative and globally aware management professionals. While the field is still largely experimental and

lacks cohesion, arguments revolve around an affordances perspective of the arts and artists to contribute to developing: more aesthetically aware managers (sensitive to the felt-sensory aspects of organizational life), managers more experienced in creative processes to find new approaches to systemic problems, and managers more viscerally aware of the implications of these systemic problems. Using empirical data (participant observation, questionnaires and interviews) on the experiences of Executive MBA students in arts-based learning interventions, this paper draws on the "in action" perspective, particularly the concept of affordances, to explore if and how the arts impact management and leadership development. As such it contributes to sociological perspectives on the engagement of the arts in social life more broadly.

## b07RN02 - Arts and Social Change

Chair(s): Sacha Kagan

### Emotional Cues in American Popular Music

Christian von Scheve, Freie Universitaet, Berlin | [scheve@zedat.fu-berlin.de](mailto:scheve@zedat.fu-berlin.de)

Some musical characteristics are cues to happiness (fast tempo, major mode), others are cues to sadness (slow tempo, minor mode). Listening to music with inconsistent cues leads

to mixed feelings, or simultaneous happy and sad responding. I report results of a study that examined whether emotional cues in American popular music have changed over time. The

sample comprised over 1,000 Top 40 recordings from 25 years spanning five decades. Over the years, popular recordings became longer in duration and the proportion of female artists increased. In line with the principal hypotheses, there was also an increase in the use of minor mode and a

decrease in average tempo, confirming that popular music became more sad-sounding over time. Decreases in tempo were also more pronounced for songs in major than in minor mode, highlighting a progressive increase of mixed emotional cues in popular music.

## Music as a Cradle of Identities: the Case of Armenian Music

Zeynep Baykal, Middle East Technical University | [zbaykal83@gmail.com](mailto:zbaykal83@gmail.com)

As an area of intersection, conflict, compromise, interference and integration of different groups and cultures, music is worth to be analyzed to search for the reflections of the social on the music and music on the social. Production, meaning making, representation processes of music is crucial while dealing with its relation with the social. This framework is useful to analyze the relationship of Armenian music with the Armenian identity in Turkey. The roots of the multi-layered, hybrid, ethno-religious characteristics of Armenian identity in Turkey may be found in various types of Armenian music such as; Armenian Church music, Armenian art music Armenian folk music. In

this regard, this paper tries to investigate the relationship of music and identity of Armenians in Turkey by taking into consideration Armenian modernization history and Armenian music which followed a parallel pattern. The dichotomies of traditional/ modern, authentic / universal, the transfer of cultural traits, the survival of memories by means of music and the usage of some local instruments are some of the basic points which will be dealt within the paper. Together with the historical data's and some analyses of the lyrics of songs, the data of the author's master thesis, from the fieldwork about Armenian identity construction process will also be used.

## The Social Function of Music in a Bilingual Context: the Case of Alto Adige-Südtirol

Ilaria Riccioni, Free University of Bozen | [iriccioni@unibz.it](mailto:iriccioni@unibz.it)

This paper origins from a field research coordinated by a sociologist and a musicologist: our perspective is to collect data with the qualitative method in order to answer two main questions: is it possible to trace in traditional songs the system of values of a given community? Is music a factor of potential cohesion and cultural commitment in a bicultural and bilingual country such as Alto Adige? Is music the vehicle towards a progressive commonly shared culture and sensibility towards leaving together or is it used as a identity-chained element? How do young people overcome belonging issues

through music, if they do overcome it? According to Barenboim and Said in *Parallel and Paradoxes*, music is, as well as other culture issues, the evidence of our state of mind in relation to the otherness. On another note, can we define the level of potential cohesion of differences by observing the cultural behaviour of a population and the choices of its cultural institutions? In our research we are approaching the data in order to answer such questions, and have one more point of view on the multiple realities, cultures and languages which are living together in Alto Adige.

## c07RN02 - Aesthetic experience and sense-making

Chair(s): Ian Sutherland

### Art Museum Visitors: Strategies for Sharing their Experience

Elena Pérez-Rubiales, Universitat Autònoma de Barcelona | [elena.perez@cerhum.es](mailto:elena.perez@cerhum.es)

The museum experience has been traditionally researched by prioritizing the study of an event, the visit itself, assuming the preponderance of the museum space and time in the study of the experience. In consequence, studies oppose the personal experience of visitors who attend alone to that of visitors who attend accompanied. In this research, however, we study the social dimension of the museum experience holistically, interpreting what happens before, during and after the museum visit. Our investigation is framed in the interpretive/constructivist paradigm and adopts the theoretical perspective of symbolic interactionism. Data were collected from 21 in-depth interviews conducted with Spanish visitors to art museums, transcribed verbatim and analysed with the aid of qualitative data analysis software. The analysis suggests that

visiting museums alone or with others is not a universal category but a strategy that the individual chooses according to his/her personal biography and social restrictions. We observe that the social and personal experiences are not mutually exclusive, as suggested previously, but may occur at different times and places, also simultaneously, depending on the visitor's biography and the visit strategy. These findings suggest that considering going alone or with others as universal categories may produce interpretations that are biased, since they do not consider how the experience extends beyond the visit to include the pre-visit and post-visit periods. As a result we can conclude that the space-time contexts of the experience are interrelated and should not be researched in isolation.

### The Cultural Repertoires of Aesthetic Experience

Samuel Coavoux, École Normale Supérieure de Lyon | [samuel.coavoux@gmail.com](mailto:samuel.coavoux@gmail.com)

This paper explores the ordinary normative expectations about aesthetic experience and its weight on the actual museum visitor experience. Most attempts at defining aesthetic experience have focused on expert perspectives: either the philosopher's, or the art professionals' experience (Csikszentmihalyi & Robinson, *The Art of Seeing*, 1990). While Bourdieu often criticized this "scholastic bias", his work focused on the social variations of taste rather than the cultural repertoires of art experience. We rely on various empirical material collected during an ethnography of a regional French fine arts museum, primarily observations and interviews with visitor, as well as a quantitative textual analysis of the

comments left on exhibitions guestbook (lexicometry and hierarchical clustering), to describe those repertoires and their uses. The paper first describes the dimensions of art experience put forward in the general public, especially the balance between the analytic and the aesthetic values of a painting or an exhibition. It then shows that the ordinary representation of art experience rests on contradictory expectations, since one should at the same time have "the innocent glaze of a child" and sufficient background information on the art work and the artist in order to correctly experience an object. Those two cultural repertoires coexist (Swidler, *Talk of Love*, 2003) and are alternatively used by the

same persons. Finally, it examines the results of this contradiction on the self-representation of museum visitors, and especially the often-heard idea that one lacks the necessary skills

to truly appreciate an artwork. The "artistic competence" is as much an unreachable cultural horizon as an actual ability.

## **The Situated Production of Meanings in Art: an Ethnography of Social Relations at Interactive Art Exhibitions in Moscow**

**Nail Farkhatdinov**, University of Aberdeen | [farkhatdinov@gmail.com](mailto:farkhatdinov@gmail.com)

The paper challenges the conventional understanding of aesthetic taste as being shaped by social structure. Taste is usually described in sociology as a generative disposition that enables automatic production of perceptive practices. By following an alternative understanding of perception in terms of action, this study empirically shows that perception is not as smooth and automatic as implicitly presumed in mainstream studies of art consumption. The paper explores visitors' experiences of art, by drawing upon ethnographic observations carried out at exhibitions in Moscow in 2011. The detailed analysis of spectators' behaviours at exhibitions reveals that the performances of habitual actions are problematic as an artwork brings forms of uncertainty into actions. I specifically focus on interactive installations, considering that these artworks reveal the

problematic nature of experience, because they prescribe particular behavioural patterns. To explain these behaviours, I employ Antoine Hennion's account of taste as a performative and reflexive activity. I also follow Alfred Gell's anthropological theory of art as a 'technology of enchantment' in order to shed further light on my empirical data. I argue that at exhibitions spectators are involved in numerous situated interactions in which they aim to disclose prescribed actions and thus attempt to reduce the uncertainties caused by encounters with artworks. These processes shape the social relations between spectators, and bring meanings into actions. Based on the empirical observations, I construct a framework for the understanding of tastes which embraces these meaning-making processes – the very processes ignored by conventional sociologies of art perception.

## **The Performativity of Fandom**

**Dominik Porczyński**, University of Rzeszów | [dporczynski@gmail.com](mailto:dporczynski@gmail.com)

Speculative fiction fandom is an informal community of people devoted to all kinds of fantasy, horror or science fiction. It is the aggregation of more or less defined, crisscrossing groups and individuals involved into consumption and production of culture texts. Fandom's characteristics allows to define it as a neo-tribe and as such it also demonstrates traits of an aesthetic community. Its aesthetic qualities manifest especially during conventions - few days meetings on which dozens of fans have possibility to encounter their friends but also their favourite

writers, actors, to take part into discussions, presentations and games. The starting point to this study is the question: what makes adult people to suspend a normal life for a whole weekend, put on a fantasy character costumes and roam between lecture halls. This carnivalesque activity will be analysed from the interpretive and performative standpoint. Constructive grounded theory, Victor Turner's conceptions of *communitas* and Jeffrey Alexander's social performance theory was applied in order to understand this phenomenon. The analysis is based on data

collected during the last two years on conventions and other meetings. The gathered

data include observations, interviews and visual materials.

## **d07RN02 - Various Music Genres**

Chair(s): Isabelle Darmon

### **Misses & Sisters “Rock[in’] with[out] Balls”: Women Rock Music DJs in Portugal**

Rita Grácio, University of Exeter | [rsga201@exeter.ac.uk](mailto:rsga201@exeter.ac.uk)

DJ sets are privileged places to observe “music-in-action” (DeNora, 2011), since it is a real-time performance that emerges from “the pull of music” (Hennion & Gommart, 1999: 227), but also from the pull of other things and people, that emerge from a network of heterogeneous human and non-humans elements (the DJ, the audience, turntables, headphones, clothes, moods, alcohol, bodies, etc). DJ sets are sites for both music production and consumption – “produsage” – for recorded and live music (the “personal” collection of DJs recorded music, played live),

and therefore, a site of rock music meaning-making in a specific social and material space, in a specific time. Despite of a growing literature on club and cultures, dance cultures and hip-hop DJs, not much has been written on the uses of rock music in DJ sets. This paper explores the affordances of rock music in the context of DJ sets, being rock music “produced” (Bruns, 2008) by women in Portugal. Based on ethnographic principles, this paper shows how these women DJs use rock music as a resource for gender performances and social agency.

### **Confirming, Inversing, Crossing and Blurring. Ethnic Boundaries in Austria’s Music Scenes**

Andreas Gebesmair, St. Poelten University of Applied Sciences | [andreas.gebesmair@fhstp.ac.at](mailto:andreas.gebesmair@fhstp.ac.at)

Recent research on immigrant’s musical practices in Austria has revealed different forms of using ethnicity as a symbolic marker. Picking up Andreas Wimmer’s seminal taxonomy of boundary making strategies (Wimmer 2008) these different forms of musical positioning are called confirming, inversing, crossing and blurring of ethnic boundaries. While working class youth cultures often insist on ethnic differences, traditional, alternative and highbrow music scenes try to transform boundaries between cultures. What is striking in all these cases, is that symbolic and social boundaries do not always change

simultaneously. While symbolic forms are reevaluated or lose their significance as ethnic markers, social boundaries often persist. Although their music is widely appreciated across ethnic boundaries many immigrant musicians face still barriers in production networks and the audiences remain separated. Therefore it is necessary to analyze boundary making strategies on the symbolic as well as on the social level (vgl. Lamont & Molnár 2002). Using material from two different research projects on immigrant music production in Austria the paper focuses on the interaction and asynchrony of symbolic and

social boundary making. There are not just “ethnicities without groups”, as Roger Brubaker has coined it, but also persisting

group boundaries despite of vanishing ethnic markers.

## Familial Transmission and Musical Familiarisation Among Fado Practitioners in Lisbon

Ana Gonçalves, University of Lisbon | [ana.goncalves@ics.ul.pt](mailto:ana.goncalves@ics.ul.pt)

Recently consecrated as World Intangible Heritage by UNESCO, Fado is appreciated every evening in a myriad of Fado houses, typical restaurants and wineries, especially in the old Lisbon. In particular, this paper proposes the dismantling of the Dionysian adventure of Fado in Lisbon based upon the oral accounts in which this highlighted cultural marker of the city emerges as an integral part of family histories and personal stories. Within this framework, we examine the socio-sentimental bonds that direct(ed) individuals to Fado while also taking into consideration the passionate logic that leads/led them to pursue the Fado experience, closely bound up with the forming of their own identities and the urban

environment as the (re)productive context of the range of potential daily experiences, without ever overlooking the training of the body and the refining of the senses necessary to enabling the performance of Fado. Hence, rather than attempting to explain the causes, the main objective is to instead describe and understand these processes from within, reviving the complex involvement of the subjective experience, compromised with their circumstances and socio-historical possibilities, the intentional investment, the emotional fulfilment and the sensorial refinement that drives long term commitments to Fado.

### What Changes in Social Imagery and Art Production with Crisis

Anabela Da Conceição Pereira, ISCTE, IUL, University Institute of Lisbon | [belacp@gmail.com](mailto:belacp@gmail.com)

Arts perceptions and creation in times of crisis affect the cognitive and social effects of the arts. The budgets and organizational difficulties in making the arts public; the choice of the mediums registering crisis; artist's positions facing predicaments and the social perceptions of images currently are changing social and aesthetic imagery. In this paper I will verify in what terms is crisis changing the face of artistic production as the aesthetic disjuncture of contemporary art signify more

than matters of style and point to much deeper processes of cultural and social disenchantment. Crisis explores the capacity of artists to confront it, and to question the symbolic function of art and the role of creation during this critical moment of metaphorical entrenchment. The question lies in society and its values. Art will only ever reflect and react to the culture around it. All over time art has been inspired by religion, political or ideological statements. Rather today the

obsession is finance and consumerism. In auctions, dominant galleries and circuits, experts dictate its value and not always thriving quality. Thus as the Renaissance was a reaction to the stifling medieval society, and vanguards to the oppressive moralizing of the bourgeois, new creative movements nowadays can be generated merely by reactions to these

contemporary cultural norms, as mediators are losing space in legitimation. Is there a new conviction politics, good for artistic creativity? Not just in art, but in literature and film is the radicalism of the times good for a cultural rebirth or is it restraining cognitive creative processes? I will use a visual and new media documentary analysis to confirm these points.

## Surviving the Crisis in the Italian Cultural Sector

Sara Bonini Baraldi, Bologna University | [sara.boninibaraldi@unibo.it](mailto:sara.boninibaraldi@unibo.it)

The arts and culture in Italy has been in crisis for many years. Shortage of funds, lack of managerial skills, nepotism, absence of private partners and low levels of quality and innovation are just some of the topics that have been under discussion long before the recent economic crisis led to further deterioration of the status quo. The paper addresses these issues from a radically new perspective: that of young culture professionals. It draws from a book edited by the author in which she invited 19 Italian artists, scholars and cultural organizers between twenty-five and forty - a generation often left on the margins of the official debate - to express what they considered relevant and useful to say in this time of crisis, both from critical and proactive points of view. What emerges is the existence

of a sector that already has within it the seeds of its own change, both at the level of thought and of practice. Beginning from the inexorable removal of boundaries between artistic genres and the opening of new creative horizons and areas of expression, the perspective of these young culture professionals engage with the creative use of new technologies in artistic and organizational development, and a new entrepreneurial culture at both the individual and organizational levels. This is a new approach to the cultural sector that many contributors to the book not only hope for, but put into practice in the first person. In the paper, the author reflects on these experiences, outlining common characteristics and, at the same time, the diversity of the possible responses to the crisis.

## Cinema and the Representation of Social Inequalities in Recent Brazil

Ana Amelia da Silva, Catholic University of São Paulo /University of São Paulo - USP | [anamelia@uol.com.br](mailto:anamelia@uol.com.br)

Since the 90's, Brazilian films have been saturated by images that condensed the naturalization of its abyssal inequality, poverty, violence and injustices. By relying in its aestheticized images and the spectacular effects of these issues, they point out to a dualistic moral key that raises the empathy with violence and resentment practices. Our presentation elects some essay-films that deal with the reconfiguration of social classes and inequalities, commanded by recent Brazil's

economic boom. As immersed in its historicity (Benjamin and Brecht), they forge the dialectical mediation between form and social reality, confronting the simplified and ambivalent vision that points for the emergence of "a new middle class", precisely occulting a class ascension through consumerism and low budget occupations. Our attention is placed on *Neighboring Sounds* (2012), prizewinning film in many international festivals (including Rotterdam's FIPRESCI). Its

singularity relays on its aesthetical form (images, sound, realism and imaginary) combined with the (re)actualization forms of social, political and cultural relations with its historical roots on oligarchy and patriarchal practices of a colonial past. Although taken at a upper-middle-class neighborhood of one of biggest city of northeast Brazil (Recife), the film overpass the regional and national level,

and constructs figurations on crucial social themes: the insidious and latent violence (symbolic and real), vertical social relations; fear, individualism, violence and resentment. Through its aesthetical form, it opens for a reflexive social thought on the enigmas that surround the potential of cinema (and art) for the representation of class experience.

## The Ethics of the Profane in the Urban Monuments

Ekaterina Lytkina, Higher School of Economics, Moscow | [ekaterina.lytkina@gmail.com](mailto:ekaterina.lytkina@gmail.com)

The project dwells with the question of the esthetic of the urban monuments which is deprived of commemorative, ideological or political function in the society. Such monuments can be hardly interpreted with the traditional terms of urban sociology such as "typical-unique" after Benjamin. They can't be viewed as typical esthetic objects and are hardly involved in any traditional historic contexts (Eyerman 2006). Such art includes wider forms such as amateur, applied, and decorative arts, while the conceptualization of art is much broader as Dewey's notion of "art as experience" (Foreman-Wernet and Dervin 2011). Communication with arts involves wide categories of participation, and can be amateur or professional, active or passive, individual or collective, continuous or episodic, public or private (Jackson and Herranz 2002). One of the

most suitable categories for depicting such art is that of profane (Kurakin 2011) as they are connected with triviality, commonplace practices and deprived from the institution and personality of the author. Such art seeks to cause new cognitive effects within the audience. The general feature of these monuments is breaking the barriers between the art and popular culture (Witkin 2006). To a great extend it is laughter that causes lamination between the profane and the sacred (Giesen 2011). The new aesthetics of the profane art will be studied at the example of new monuments in Russia which have appeared in a great number after the collapse of the Soviet union. Attention will be paid to perception of the new aesthetics in the public discourse.

## a09RN02 - Design and Fashion

Chair(s): Arturo Rodríguez Morató

### The Industrial Designer at a Crossroad: an Educated Carpenter or a Social Agent?

Jonathan Ventura, Royal College of Art | [jonathan.ventura@mail.huji.ac.il](mailto:jonathan.ventura@mail.huji.ac.il)

Industrial designers have influenced our daily lives since the apex of the industrial revolution.

From the laptop we work with, through the car we drive in, to the bottle of water we drink

from, designers affect our every mundane action. During the 20th century designers gained socio-cultural status alongside artists and architects. During the second part of the 20th century, artists strengthened their status by becoming self-oriented brands, creating never-ending demand for designed consumer products. However, recent global and local changes will change the way designers work, as well as the way customers think of their share of material objects. Political changes throughout the globe suggest a movement towards national segregation and glocality in

general. Economic changes (such as Occupy Wall-Street, for example) suggest that consumers will not pay outrageous sums for designed objects. Lastly, ecological changes call for modest and environmentally conscious objects. As a result, the contemporary designer must not concentrate on creating beautifully crafted objects for the upper percentile of society, but rather to recreate a strong, ethically conscious bond with his social surrounding and rise not as an educated carpenter, but rather as a social agent.

## C. Wright Mills on Design and Designers

A. Javier Trevino, Wheaton College | [jtrevino@wheatonma.edu](mailto:jtrevino@wheatonma.edu)

C. Wright Mills repeatedly assumed two main roles throughout his life: those of designer and craftsman. Indeed, design and craftsmanship influenced, substantively and stylistically, most everything he did. Mills's implementation of design and craftsmanship extended to a number of areas including writing books and building houses, but also to motorcycle mechanics, photography, and furniture making. After consideration of Mills's biography and philosophy in the context of design, style, and craftsmanship, two talks that he delivered in Aspen and Toronto, in 1958 and 1959 respectively, are examined. In both cases he addressed his remarks, specifically, to designers, city planners, artists, and architects. This paper considers the following questions: Do Mills's comments at the Aspen and Toronto conferences constitute, as he

intended, an attempt at "theorizing" for designers and other members of the creative professions? Can we find in Mills an explicit or implicit, coherent or undeveloped sociology of art, of architecture; an urban sociology or a sociology of design? To date, there does not yet exist a fully developed sociology of design, or in the case of the sociology of professions, a systematic analysis of designers and other practitioners of the applied arts. This paper will also show that Mills— through his biographical exemplification as designer and craftsman, as well as through his writings on power and the cultural apparatus— has had a crucial influence on the sociological study of design and designers; indeed, on designers themselves and on their understanding of design culture.

## The Bedside Book : a Sociology of Reading and Identity

Clara Levy, Université de Lorraine | [clara.levy@univ-lorraine.fr](mailto:clara.levy@univ-lorraine.fr)

Alain Ph. Quemain, Université Paris-8 | [aquemain@univ-paris8.fr](mailto:aquemain@univ-paris8.fr)

This presentation will analyze the results of a qualitative survey based on more than 100 interviews with readers who have a bedside book in France. The sample was constructed in

order to diversify its composition in terms of gender, age, level of education and residence and we will analyze how these factors influence the choice of a bedside book and the

characteristics of both the books and authors being elected. We will try and show the important part played by identity and identification processes in the choice of bedside books. The identification modes of the readers to one of the different aspects of the books can be related to very different characteristics of their favorite books (characters, theme, story, location of the story...) which would often seem far less significant to other readers of the same books. Beyond the most common affinities (in terms of social class – for example, the most selective or elitist texts are chosen by the upper classes and popular novels are chosen by the working classes – or in terms of gender

– love stories for young women, “heroic fantasy” for young men – the identity components that are at stake in the election process of a bedside book can be related to very diverse spheres : for instance, family identity (some readers chose as their bedside book a book that used to be the very favorite one of a deceased relative), or professional identity (professors of literature who decided to specialize in their very favorite author) which gives birth to groups of “devotees” who are overinformed on the life and work of their favorite author), or ethnic and cultural identity, or even not the identity of the persons themselves but the identity that they would have loved to have.

## Capturing Beauty in 150 Codes: a Quantitative Content Analysis of Dutch and Italian Fashion Images

Elise C. van der Laan, University of Amsterdam | [e.c.vanderlaan@uva.nl](mailto:e.c.vanderlaan@uva.nl)

Giselinde M. Kuipers, University of Amsterdam | [g.m.m.kuipers@uva.nl](mailto:g.m.m.kuipers@uva.nl)

The visual representations of men and women have been popular research topics for different disciplines ranging from psychology to communication and gender studies. We extend recent understanding of modes of portrayal by offering a sociological analysis of the way male and female models are represented. We have conducted a large scale quantitative content analysis of fashion images from 1980 to 2011, selected from high fashion and mainstream magazines in six European countries. Instead of focusing on stereotype (gendered) representation, body shape or race only we have devised a codebook covering an extensive

range of dimensions of portrayal. Thus, our codebook allows us to scrutinize the way men and women are represented by comparing their colour of hair but also the photographic style of the image, the type of setting, the pose, clothing items, beauty type, facial shape, size of nose, ears, chin and cheeks; to name but a few of our 100+ codes. In this study we present the first results of our analysis of Dutch and Italian fashion images, moreover we present our codebook as a new way of researching images in a systematic, reliable way on a scale that has not been done before.

## b09RN02 - Using Fields Theory

Chair(s): Dagmar Danko

### Cultural Maps of Western Balkan Societies

**Predrag M. Cveticanin**, Educons University, Novi Sad | [pcveticanin@gmail.com](mailto:pcveticanin@gmail.com)

**Jasmina Nedeljkovic**, Faculty of Legal and Business Studies "dr Lazar Vrkatic", Novi Sad | [jasmina.nedeljkovic@gmail.com](mailto:jasmina.nedeljkovic@gmail.com)

In our paper, based on data from the study "Resistance to Socio-Economic Changes in Western Balkan Societies", we have reconstructed, using Multiple Correspondence Analysis (MCA), the cultural maps of these societies. This is one of the first large regional studies since the 1980s. It is carried out by the Centre for Empirical Cultural Studies of South-East Europe together with partners in Bosnia and Herzegovina, Macedonia and Kosovo. Once part of a single state, these societies are now in a phase where they are similar enough, yet different enough to allow a comparative analysis which can yield very significant sociological insights. Survey is being realized on a sample of 4000 respondents (1200 each in Serbia and Bosnia and Herzegovina and 800 each in Macedonia and Kosovo) and, among

others, it incorporates a battery of questions relating to the cultural practices of these societies. We have reconstructed the field of cultural practices of these societies on the basis of data on respondents' cultural needs, cultural habits, tastes, knowledge about culture and possession of cultural goods. As supplementary variables, socio-demographic variables were projected on the maps (education, income, gender, age, place of permanent residence), their interrelatedness was explored. Of particular interest is that the study included questions from the World Values Survey and European Values Survey, which have made it possible for us to analyze as well the relations between respondents' cultural practices and their value systems.

### Pierre Bourdieu's Conception of Art Reception – an Empirical Investigation

**Nina T. Zahner**, University of Leipzig | [zahner@uni-leipzig.de](mailto:zahner@uni-leipzig.de)

Audiences of contemporary art exhibitions are very elite in terms of education. The well-known explanation for this phenomenon – that the ability to view an object as a work of contemporary art depends on the possession of a highly sophisticated form of specific aesthetic capital – does not convince. It draws on the findings of Pierre Bourdieu's famous museum studies from the 1960s and thus on the rules of an art field where the idea of autonomous art was very prominent. I argue that in the highly differentiated art field of today this notion of autonomous art reception is only one position within a vast plurality of art

conceptions. Under these conditions an adequate reception of works of contemporary art cannot be explained by looking at the sheer volume of art specific cultural capital. Instead one has to take a closer look at the conception of the aesthetic disposition put forward by Bourdieu in his later work. Here he emphasizes that different ways of art socialization influence the modes of art reception. Bourdieu points out here that especially when it comes to contemporary art it is not the sheer volume of aesthetic capital acquired that is crucial for approaching an art work adequately but foremost a specific

socialized mode of engaging with the work. As plausible as this conception is, it is truly theoretical in character. The paper confronts it with empirical findings from a qualitative research project on the reception of art where a number of qualitative interviews with visitors

of art exhibitions were conducted. Our findings show some aspects that go along with Bourdieu's conception of an aesthetic disposition and others that call for a differentiation of his conception.

## **Sociological Criticism of Aesthetic Hierarchism and its Consequences for Art Theory and Art Criticism**

**Pavel Zahradka**, Palacký University, Olomouc | [pavel.zahradka@upmedia.cz](mailto:pavel.zahradka@upmedia.cz)

In my presentation I will first deal with the question whether the distinction between high and popular art can be convincingly defended. My goal is to point out the basic reasons why the distinction is untenable on aesthetic grounds. Arguments in favor of this kind of aesthetic hierarchism are either empirically inconclusive and have been criticized by means of counterexamples, or critics – inspired by the findings of cultural sociology (Pierre Bourdieu) and cultural history (Lawrence Levine) – have revealed their normative basis. If the distinction between high and popular art cannot be defend on the basis of aesthetic criteria, there must, nevertheless, be some explanation of why we use this distinction. For sociologists, the answer to this question must be found in the realm of relational properties that belong to works of art on the basis of their relationship to the social context in which they

occur. Therefore, what follows will be an explanation of the social function of this distinction in Western society. The second part of the conference paper will discuss the recent attempt by the American aesthetician Noël Carroll to rehabilitate the notion of popular art (in his redefinition Carroll uses the term mass art) independently of the hierarchical dichotomy between high and popular art. The conceptual distinction between difficulty and easy accessibility – which Carroll considers as one of the defining criteria of mass art – will be discussed from the sociological perspective. The last part of the text is devoted to a brief consideration of the implications and the new challenges that emerge from the discussion about the legitimacy of the distinction between high and popular art for art criticism and art theory.

## **c09RN02 - Theoretical Perspectives**

Chair(s): Andreas Gebesmair

### **Music as a Resource for (Local) Critique: the Reception of Anglo-American Pop-Rock in 1970s Italy**

**Simone Varriale**, University of Warwick | [simone.varriale@gmail.com](mailto:simone.varriale@gmail.com)

Music sociology has successfully argued for the autonomy of music from social structures, showing that music's affect and meaning are a

'co-production' of actors engaging with music's material and cultural properties (De Nora 2000, Hennion 2008). However, while opening

new avenues for empirical research, such a position has paid less attention to the impact of different social spaces on the emergence of music's meaning. Also, while the autonomy of music has been emphasised, the properties of social actors engaging with it have been overlooked. Drawing on a three-year doctoral research, this paper will present a case study about the ways Italian music journalists evaluated American and British pop-rock between 1973 and 1977. More specifically, it will explore the influence of two social spaces on the practices of journalists: namely their position within a diversified 'field' (Bourdieu 1993) of popular music journalism, and their position within the Italian national space. On

one hand, it will be showed that the institutional affiliation of journalists shaped their evaluative strategies. On the other hand, the paper will show that critics mobilised the national space as a 'frame of reference' to define both the meanings of music, and popular music journalism as a broader social critique to Italian cultural, economic and political institutions. The project is based on archival research and employs music magazines as primary data. It combines field theory with discourse and content analysis, providing both a social history of the music press, and a thick description of journalists' evaluations.

## **'New' Perspectives on Music and the Social, Re-Engaging with Max Weber**

Isabelle Darmon, University of Manchester | [Isabelle.Darmon@manchester.ac.uk](mailto:Isabelle.Darmon@manchester.ac.uk)

Can there be an interrogation on 'music and the social', from the social sciences, that does not completely absorb and subsume music into the social? Can this be done without conversely falling into neo-Romantic idealisation of the internal structure of art works? These questions have always been structuring questions for the social and cultural sciences although they have re-emerged particularly vigorously in music sociology over the last two decades. Weber's study of music and the arts had grappled with such questions in ways which could prove fruitful for our questioning today, had it not been relegated (in the English-speaking world) as a case study in the theory of the rationalisation of the West. My aim in this paper is to briefly present an overview of

Weber's key piece in this corpus (his unfinished and untitled music study) and to start bringing out the way in which his dynamic approach to music as a cultural domain can illuminate some of these contemporary interrogations. I will particularly focus on Weber's analysis of the structuring character of the tension between competing directions of organisation of the sound material: by showing how composers, performers, instrument manufacturers, art recipients and the instruments themselves had to grapple with such tension, the paper argues that Weber was able to give an account of the inward connection to an art sphere and its structuring effects, whilst also bringing social, economic and technological factors to bear.

## **Recipient's Attitudes and the Process of Reception of Art**

Przemyslaw Kisiel, Cracow University of Economics | [kisielp@uek.krakow.pl](mailto:kisielp@uek.krakow.pl)

The problem of analysis of social determinants of participation in artistic culture is now often taken up, but usually it is considered in conjunction with the macro-social factors, which form the general context for a various

acts of participation in art (e.g. position in the social structure, cultural and social capital, social and economic status or gender, age, education etc.). Undoubtedly, these factors play a very important role. However the reception of

art, regarded as a social process is shaped not only by contextual conditions, but also and equally, situational. Therefore, it is so important, to look closer at the factors, directly linked to acts of participation. Among these factors a very important, as indicated by the study of author, is the mode of defining recipient's attitude toward the work of art by the recipient at the moment of creation the relationship with the work. If we describe this attitude using two dimensions (emotional engagement versus neutrality, focus on individual versus social experience), it

becomes visible that depending on it, the way the reception of art is changing. The presentation's aim is the illustration, basing on example of paintings, the impact of recipient's attitudes on the result of reception process. Of course, the choice of fine arts does not mean that recipient's attitudes has reference only to this area of artistic culture. On the contrary, it has rather a universal character, but undoubtedly paintings are a convenient form of exemplification illustration, as relatively easy to show.

## **d09RN02 - Artistic Critique**

Chair(s): Mara Ratiu

### **Crisis, Critique and Change in Contemporary Art - The Sociological Implications of "Art as Catalyst"**

**Dagmar Danko**, Albert-Ludwigs-Universität, Freiburg | [dagmardanko@yahoo.de](mailto:dagmardanko@yahoo.de)

Raising the question of art's position within society and politics – as the call for papers of the RN2 does – usually implies that art takes a stance in an active way, whether it 'commits' to contemporary issues or 'keeps a distance'. But do artworks really make statements at all? Do they not rather call for statements, initiate them, provoke them? The idea of art as communication is well known to sociology (Habermas, Luhmann), which is why I want to focus on a similar concept by the German art historian Angeli Janhsen. Janhsen proposes to understand some of contemporary art as

catalyst (Neue Kunst als Katalysator, 2012). By this, she intends to discard pre-fabricated interpretations as well as the search for a specific, implied meaning of the artwork while confronting art. Instead, she advocates for the viewer/recipient to take into account his or her thoughts and questions induced by the work of art. She regards these thoughts and questions as the artwork's point, and not as its extension or side-effect only. In my presentation, I want to show the sociological implications of the idea of 'art as catalyst', especially in relation to contemporary political art.

### **Toward an Ecological Critique in Art? On Art Criticism in Times of Ecological Crisis**

**Sacha J Kagan**, Leuphana University, Lüneburg | [kagan@uni.leuphana.de](mailto:kagan@uni.leuphana.de)

Following-up on the analysis of the practice of ecological art (presented at the ESA Arts conference Vienna 2012 – exploring what is

specific about the practices of ecological artists, when compared to other forms of artistic practices), the focus of this paper now

lies on the question of the (non-)existence and potential emergence of a practice of art criticism which has (or would have) the ability to meet the specific challenge of eco-art, as an art practice with transformed quality conventions. More specifically, the challenge of integrating an ecological critique in art criticism will be discussed, looking at how some art critics and art historians deal with this issue when confronted with ecological art practices. Further related questions stem out

from this focus. What roles does an ecological (or in other words, an eco-literate) critique (whether practiced by art critics, by artists or by other social agents) play within the networks and 'circles of recognition' of ecological art? Which responsibilities are/may be bestowed upon such an ecological critique, regarding the process of legitimation and recognition of eco-art practices within wider art worlds (and other social worlds)?

## Artistic Critique on Capitalism: Recent Controversies about 'Critique' and 'Crisis'

Dan E. Ratiu, Babes-Bolyai University, Cluj | [daneugen.ratiu@gmail.com](mailto:daneugen.ratiu@gmail.com)

In *The New Spirit of Capitalism* (1999/2005), Boltanski and Chiapello have examined the ideology on which the third-form of 'globalized' capitalism rests and, subsequently, the relationships between two types of critique -artistic and social- on capitalism and its dynamic. Their 'model of change' claims that critique is a catalyst in transforming the spirit of capitalism and, in certain conditions, capitalism itself. Another conclusion at that time was that the real crisis is not that of capitalism but of the critique on capitalism, hence the call to its necessary redeployment. What is the actual meaning of these theses and their relevance today, after the global (financial) crisis? What did 'critique' and 'crisis' entail, afterwards? What role do artists really play in the social change? Drawing on subsequent interventions on these issues by Boltanski and others as well as on notions of

critique, governmentality and self-production supported by Foucault, this paper approaches the critique on capitalism as a theoretical and practical problem, focusing on recent controversies about these issues. Which are the conditions of possibility for contemporary art to exercise a genuine critique of capitalist order? How to exercise critique in its practical sense, that is challenging the present on the basis of the diagnosis of 'what we are', that Foucault has also defined as 'critical attitude' or 'the art of not being governed quite so much'? The main aim of this paper is that in answering these questions to disclose the paradoxical consequences prompted by artistic critique on capitalism, in terms of norms of excellence, labor market and life-styles, those of artists as well as other (creative) people engaged in capitalist order.

## Critique on Capitalism in Capitalist Society

Erkki Tapio Sevänen, UNiversity of Eastern Finland | [erkki.sevanen@uef.fi](mailto:erkki.sevanen@uef.fi)

Since the late 1990s, a critique on capitalism has been an important theme in Finnish literature and theater. Unlike the old-fashioned critique on capitalism, this new critique is not bound to a socialist perspective, nor does it usually stand for a working class mentality. Instead, it is longing for the era of the

expansive welfare state and it represents contemporary capitalism as technical-rational, but substantially irrational system that undermines social relationships, exploit human and natural resources and causes existential crises in individuals' life. This situation raises certain questions. What is, in

capitalism, the role and function of a critique whose object is capitalism? Why and to what extent does this society permit a critique that is directed against this society itself? Luc Boltanski and Éve Chiapello hold that critique is mainly functional from the standpoint of capitalism: capitalism needs critique, because critique informs it about the dangers threatening it, and it is just through critique that capitalism changes its ways of legitimizing itself and sometimes also its ways of operating. Certain features in the above-

mentioned new critique might, indeed, contribute a social transformation in which neo-liberal capitalism changes its legitimizing methods or neo-liberal capitalism transforms into a more regulated version of capitalism after the current recession. Yet, this is not the whole story. Even neo-liberal capitalism has not tolerated all kinds of critique, for it has practiced market censorship by means of which it has rather systematically excluded certain views from publicity.

## RN03 - Biographical Perspectives on European Societies

### 01RN03 - European identities

Chair(s): Dirk Schubotz

#### Intermarriage between Europeans: Identification and Lifestyles

Julia H. Schroedter, University of Zurich | [schroedter@soziologie.uzh.ch](mailto:schroedter@soziologie.uzh.ch)

Emanuela Chiapparini, University of Zurich | [chiapparini@soziologie.uzh.ch](mailto:chiapparini@soziologie.uzh.ch)

Intermarriage is known as one of the strongest indicators of social integration of migrants into host societies. Moreover, partners contribute to how individuals identify and perceive themselves. The effect on identification might be even more apparent in partnerships where both partners grew up in different countries. In our analyses, we focus on intermarriages between Europeans of different descent in Switzerland. We concentrate on the largest Swiss city where more than 30% of the population are foreigners and many international companies have their headquarters. We make use of a recent representative survey of bi-national couples in Zurich (EUMARR) to learn more about their identifications, their (transnational) networks and how they spend their leisure time. In in-depth interviews with 24 of the survey respondents we deepen our understanding of these topics. The interviews are semi-

structured, including biographical and narratives elements. Interviewees are individuals in partnerships where one partner is Swiss and the other is non-Swiss European as well as in partnerships where both partners are foreigners from different European countries. Their identifications, experiences and lifestyles are also compared to those of Swiss in mono-national partnerships. The interviewees are selected by a targeted sample to represent the different groups of (bi-national) partnerships and to allow stressing commonalities and differences between them in respect to identification patterns, social networks and leisure-related activities. First results indicate that a European partner does contribute to an enhanced European orientation of Swiss persons through international networks, greater mobility and higher educational attainment.

#### The Building of European Identity

Arianna Montanari, University Sapienza of Rome | [arianna.montanari@uniroma1.it](mailto:arianna.montanari@uniroma1.it)

The paper will investigate if the building of a European identity is already underway, noting that identity-building processes rest on a common set of processes, issuing in: - symbol systems; - collective rituals, ceremonies, public holidays, etc.; - behavioural codes of conduct and values inspired by mythical

societies of forefathers (as inspired by historical accounts), providing a template for a future society. European Union is merely an expanded economic bloc built on entrenched autonomies, or is a new collective identity emerging? With reference to common symbols, Europe boasts all the apparel of

identity, namely it has a flag, anthem, motto and currency. At the same time there are signs indicating a strengthening of the common identity. As of 1985 Europe has also celebrated the May 9 anniversary, and other types of European events are starting to take hold from the bottom up. White Night art festivals, or Museum Nights for example. The latter events seek to establish a common identity by leveraging Europe's culture and heritage, its monuments and museums, and by seeking to

inform the broader public of Europe's track record in the areas of arts, humanities and science. As previously noted, national identities draw on a historical past, on former models for society and on behavioural models underlying the latter. A research into leading European personalities both historical and contemporary, carried out in some European countries offers similar answers and image of ideal European society.

## European Identity in Times of Crisis: an In-Depth Analysis of Estonia, Italy and the Netherlands

Jeroen Moes, European University Institute, Florence | [jeroen.moes@eui.eu](mailto:jeroen.moes@eui.eu)

This project examines the notion of European identity. It especially goes into the idea that there is a 'European gap' in terms of identification and geographical/social frame of reference. This implies that within societies there is a severe social division between the typically higher educated, younger, transnationally oriented 'Europeans' and the often polar opposite 'nationals', while both of these groups may inversely be very similar to their counterparts across European societies. The EU has been quite successful in tying identifications with 'Europe' to itself in a variation of the traditional notion of a 'civic' identity instead of the rather vague 'cultural' notion of 'Europe' that arguably preceded it. If this is the case, then what happens to that European identity in times of crisis, now that the institutional shell of European integration

appears to be faltering, at least for the time being? Unsurprisingly, therefore, there has been renewed interest recently in the social dimension of European integration. Europe today appears to stumble from one 'crisis' to the next. Political solutions for these crises often point in the direction of 'more Europe', even though levels of euroscepticism among the electorate appear to be rising rather than declining, which reinforces an already present 'European gap' within societies. This paper presents an analysis of in-depth interviews conducted during the past couple of 'crisis years' in Estonia (where in the same period the Euro currency was introduced), Italy (a member of the 'PIIGS' group), and the Netherlands (where solidarity towards the rest of Europe has been much debated).

## 02RN03 - Biographical Competence

Chair(s): Wolfram Fischer

### Biographical Competence – Individual and Collective Aspects of Resourcefulness

Kaja Kazmierska, University of Lodz | [kajakaz@uni.lodz.pl](mailto:kajakaz@uni.lodz.pl)

In times of crisis, the concept of resilience and resourcefulness seem to be quite often used when describing how individuals deal with hardships of everyday life. In my presentation I would like to focus on both personal and collective (socio-cultural) sources for strategies of resilience and resourcefulness

which appear in autobiographical narratives about life experiences. I will also show how various social and historical contexts modify interpretations of situations in this respect e.g. how different generational perspectives shape definitions of situations and reconstructions of meanings.

### The European Union - an Exclusive Club? Self-Concept and European Identity in Times of the Crisis

Elisabeth Donat, University of Salzburg | [elisabeth.donat@sbg.ac.at](mailto:elisabeth.donat@sbg.ac.at)

Wolfgang Aschauer, University of Salzburg | [wolfgang.aschauer@sbg.ac.at](mailto:wolfgang.aschauer@sbg.ac.at)

The solidarity between and within the member states of the European Union seems to decrease constantly since an on-going financial and economic crisis has affected the EU. The paper discusses feelings of deprivation among Austrian citizens by 20 narrative interviews combined with a photo elicit part conducted in 2012. By analysing the self-concept with biographies, we learn more about ways to deal with changes in general and the crisis as a contemporary phenomenon in specific. These semantic strategies come to the fore again in the photo-elicited part, showing interesting relationships between self-concept and European identity: in times of the crisis, the European Union is seen as an exclusive club which helps to strengthen the personal identity by devaluating other countries as outgroups (e.g. including new member states). Sympathy for demonstrations

in other countries such as Greece or Spain is mainly argued around materialistic attitudes: all citizens should get the chance for upward mobility. On the other side the interview partners express no sympathy for post-materialist values (e.g. the joie de vivre of Southern European citizens) and postmodern lifestyles (such as transnational migration efforts). In general, it seems that a new form of European identity emerges which is built around national pride of belonging to an exclusive club of "successful states". One of the main driving force of this phenomenon is the perception of an enemy "outside" which has to be combated (e.g. Muslim countries or China). Therefore, this new type of identification seems to be accompanied by efforts for assimilation and rising ethnocentrism and intolerance.

## Performing Sustainable Selves - Negotiating Changes in Everyday Lives

Miia Toivo, University of Tampere | [miia.toivo@uta.fi](mailto:miia.toivo@uta.fi)

The debate on environmental crisis contains demands for societal change. Societies have an urgent need to change to become more sustainable. Solving complex environmental problems presupposes changes in the private sphere, too, and for example mitigating the climate change requires increasing energy efficiency in housing and a transformation of eating practices. This paper explores how citizens narrate themselves in relation to the demands for change to make their everyday lives environmentally sound. The data consist of 79 written diaries and autobiographies on the environmental theme sent to the writing competition 'The Climate Change and the Environment in My Life' organised by the Finnish Literature Society. The data is analysed by paying attention to the narrated emotions

and social relations which are read as negotiations of the requirement to change one's everyday life. The findings so far suggest that the demands for change are negotiated from the point of view of personal memories, life histories and expectations for the future in ways that take into account personal evaluations of the chances to transform one's own everyday routines. The analysis shows that the moral-ethical self is constituted in situated meaning making and that there are different possibilities to perform sustainable selves. The study brings out the differences in the cultural expectations of sustainability. On the one hand sustainability is narrated to be a permanent character of the self and on the other it is attached to continuous processes of becoming a sustainable self.

## Biography, Agency and Crisis in Latvia's Countryside

Baiba Bela, University of Latvia | [baiba.bela-krumina@lu.lv](mailto:baiba.bela-krumina@lu.lv)

Latvia is one of the poorest EU countries, where people live in crisis regime from 2008. While political elite loudly speaks about recovery, major part of population still do not feel recovery of their household budgets or local labor market. Paper explores the

biographical life choices of individual's during time of crisis in Latvia's countryside and discuss the "biographical competence" not only as self-understanding in light of memory and perception of future, but also as resource of agency and decision making at the present.

## 03JS07 - Biographical Approach to the Studies of Culture

Chair(s): David Inglis & Lyudmila Nurse

### What Makes an Art 'European'? Artistic and Biographical Expressions of European Identities

Lyudmila A Nurse, Oxford XXI | [lyudmilanurse@oxford-xxi.org](mailto:lyudmilanurse@oxford-xxi.org)

Johanna Suo, Innovation Culture Europe, London | [johanna@ice-eu.net](mailto:johanna@ice-eu.net)

The paper examines the complexity of biographical and artistic expressions of European identities through works and biographies of modern European artists and biographical perspectives of ordinary citizens as they complement artistic expressions, in the form of video-recorded biographical narratives. It is based on the experience and findings from the project 'United States of Europe' (USE) - a travelling exhibition, platform for communication, identity revelations and of intercultural dialogue. USE presents a partnership between artists and biographical researchers in use of artistic means to reveal European meanings of art and people. Designed primarily as an artistic project, USE

consists of three main components that have been presented in European public spaces and museums since 2011: artistic interpretations of European Identity through multimedia, cyber culture, video and other installations; biographical study of ordinary Europeans and performing artists. The third component is an interactive laboratory where artistic and biographical materials interact; this multimedia installation synthesizes artistic expressions and biographical narratives in visual format thus creating multi-dimensional visualized European biographies. The paper analyses the interactive relationship between artistic works and visual biographical narratives.

## Arts Based Biographical Methods and 'The Space Between Us'

Maggie O'Neill, Durham University | [maggie.o'neill@durham.ac.uk](mailto:maggie.o'neill@durham.ac.uk)

The paper engages with advances/developments in biographical sociology specifically arts based research and is concerned with visualising and performing biographies as multi-sensory ways of knowing. Specifically, it discusses arts based research undertaken with migrant women in the UK and a performance based upon ethnographic

research with women asylum seekers and travellers called 'The Space Between Us.' The play was written and performed by Open Clasp Theatre in March 2013. The paper goes on to situate this work within a broader trajectory of ethno-drama, biographical and participatory research.

## From Rejection to Thriving: Stories of Children from Aberlour Orphanage

David Divine, Durham University | [david.divine@durham.ac.uk](mailto:david.divine@durham.ac.uk)

Being a resident as a child in an Orphanage for a significant period of time, is a life defining event. Low expectations and poor outcomes are anticipated from policy makers, researchers and legislators, in terms of education, emotional and mental health well-being, preparedness for life after care, and being at the receiving end of social care support services, and the criminal justice system (Duncalf, 2010; Kendrick, 2012). The presentation contests these dominant narratives, drawing upon PhD research using (auto) biographical, ethnographic and case study approaches, combined with visual

methodology, photos, cine-film, poems, written testimonies, documents, and stories both written and oral. Aberlour Orphanage operated in the Highlands of Scotland (UK) between 1875 and 1967, and housed 500 children at any one time at its zenith (Abrams 1998). Biographical interviews were conducted with 23 former child residents, aged between 51 and 82, and 9 key staff and service providers, aged in their seventies, eighties and nineties. Arising from the research, is the critical role which sensory, visual and poetic approaches offer to biographical sociology, and attest to the pivotal role which the biographical

imagination, to give voice to the unheard and forgotten, the poor, destitute, 'voiceless' and 'voteless', who without it, would never be acknowledged as having existed. Their stories, testimonies, reflections, honed out of

'interpretive space and meaning' (Dominelli, 2013), 'biographical competence' (Bruner 2003), fill a gap in the literature and provide insights for policy and practice.

## **Autobiography in Historical Sociology. The Polemic on Intellectual and Political Autobiographies of One Generation of Spanish Intellectuals between Dictatorship and Democracy, 1975-1982.**

Héctor Romero, University of Murcia | [hromero@um.es](mailto:hromero@um.es)

This paper aims to think on the possibilities of memoirs and autobiographical literature as a source for historical sociology. I analyze the polemic of the intellectual/political autobiographies produced by one generation of Spanish intellectuals during the transition to

democracy years [1975-1982]. In these memoirs they review their situation during the Spanish Civil War, the postwar years and their relation with General Franco's regime, with some of them were collaborators.

## **03RN03 - Biographical Methods and their uses in Policy and Practice**

Chair(s): Lyudmila Nurse

### **Process of Self-Transformation within the European Voluntary Service: a Methodological Proposal**

Caterina Rizzo, Università Cattolica del Sacro Cuore, Milano | [caterina.rizzo@unicatt.it](mailto:caterina.rizzo@unicatt.it)

This paper investigates young people's biographical experiences during their participation in the European Voluntary Service: a project encompassed in the more extensive "Youth in Action Programme". This project contributes to the goals of EU Youth Strategy by providing opportunities for young people to be mobile and to participate across the EU. The aim of the work is to analyze whether their experiences can be interpreted not only as a way to benefit from European youth policy but also as signs of a new way to live Europe. More in detail, this research studies the European Voluntary Service like a field where it is possible to observe new forms of belonging and new practices. In a field

mainly dominated by quantitative studies, the specificity of this research is the biographical approach, which allows to enhance the understanding of the relevance and the impact of the European experiences on biographies and identities of young people. In particular, by a number of biographical interviews to young volunteers it has been possible to discover how different belongings go together with different attitudes and representations of Europe, towards a global openness. The research describes these attachments and the practices of European volunteers by documenting the process of shaping of new identities, relationships, solidarities and self-transformation within this meaningful context.

## Realist Biography and European Policy: The Issue of Validity

Jeffrey D Turk, KU Leuven | [jeff.turk@soc.kuleuven.be](mailto:jeff.turk@soc.kuleuven.be)

This paper broadens discussion on the issue of validity that was brought up in the recent book: *Realist Biography and European Policy* (Mrozowski & Turk, eds., Forthcoming, Leuven University Press). Under a general realist framework, social scientists construct accounts/models (Bhaskar's transitive objects of science) of phenomena (the intransitive objects of science). Following Maxwell's (2012) *Realist Approach for Qualitative Research*, the relationship between the account and the phenomenon is the validity of the account. Furthermore, drawing on Searle's (2010, *Making the Social World*: 17-18) distinction between objective and subjective ontology of physical and social phenomena, respectively, our view of validity is that it is a gauge of the epistemic objectivity of our results in relation to the ontologically subjective social

phenomena we study. In other words, the intentionality-dependent nature of the phenomenon limits the outcome to epistemically valid statements about the ontologically subjective world. We thus require an epistemically objective methodology that has purchase in the ontologically subjective world under study, which is the purpose of realist biography. Rather than leave it to the reader to judge the validity of the reported results, it is the responsibility of social scientists to provide an honest assessment of the validity of their own work, which then aids readers in weighing the conclusions as well as providing a basis for comparison to the results of other research, particularly where there are conflicting accounts of the same phenomenon. This also has clear consequences for policies and practices, as will be explained in the paper.

## Biographical Research in the Area of Poverty and Social Exclusion

Agnieszka Golczyńska-Grondas, University of Lodz | [agrondas@uni.lodz.pl](mailto:agrondas@uni.lodz.pl)

Małgorzata Potoczna, University of Lodz | [matmalmar@poczta.onet.pl](mailto:matmalmar@poczta.onet.pl)

Since early 1990s sociologists from University of Lodz have been conducting biographical and narrative interviews with individuals and families living on the margins of "mainstream society". The presentation contains the information about the biographical method application in the Polish research on poverty and social exclusion and remarks about their results and benefits for the development of sociological knowledge and social policy practice. The data obtained within the framework of biographical method allow the multifaceted analysis regarding: individual and collective dimensions of social exclusion, traits, aspects and reality of social worlds of

"the neighbourhoods of relegation", their inhabitants life histories and life strategies, family systems and structures, individual and collective identities, social roles, etc. Biographical interviews reflect also the activities taken by state, self-governmental and non-governmental institutions and their importance and consequences for biographers' everyday functioning and their life course. The mutual cooperation between scientists and practitioners is of greatest importance in averting and solving ongoing social problems, but at the same time the question about prospects, conditionings and barriers for this cooperation arises.

## Biographical Methods and Participation Research – Changes in Political Participation of People with Chronic Diseases during the Life Course?

Julia Kümper, University of Applied Science, Osnabrueck | [julia.kuemper@gmail.com](mailto:julia.kuemper@gmail.com)

Political participation research focuses on quantitative analysis of election behaviour in combination with socioeconomic factors (Wagner 2013; Kornelius/Roth 2004). All Studies are not including chronic disease or disabilities in their analysis (Engels 2004). Only Shur, Kruse and Adya (Shur, Adya 2012; Shur, Kruse 2000) analyse relations between disabilities and election behaviour. However it is important to understand how chronic diseases influence political participation of people, even more so as chronic illness in Germany is increasing (Statistisches Bundesamt 2013). To cope with a chronic condition therefore has an substantial impact on the individual life (Schaeffer et al. 2009). The results of the study "Identifying the political

participation of people with chronic diseases during the life course" points out, that it also affects the political participation. The aim was to figure out an ideal type of political participation of people with chronic diseases during their life course by means of narrative interviews. The method of narrative interviewing allowed the interviewee to explain when, why and how their political participation changed. To reach a generalization the interviewees showed a bright range of different chronic diseases. This approach leads to the the construction of an ideal type which is subordinated in two sub-types. In addition to presenting the results of this study the method of narrative interview in context of participation research is analysed.

## Qualitative Longitudinal and Biographical Methods and their Value to Policy Making for Young People

Hannah King, Durham University | [hannah.king@durham.ac.uk](mailto:hannah.king@durham.ac.uk)

Research tracking young people's lives alongside changes in policy has predominantly been quantitative in nature. The increasing interest in qualitative longitudinal methods, along with the 'biographical turn' taking place in social research, has presented opportunities for exploring the lived experiences of young people and understanding the real impact of policy on their biographies. This paper engages with the developments in qualitative longitudinal and biographic methods to focus upon the changing experiences of young

people. It draws upon empirical research with educationally excluded young people at two voluntary sector educational projects in England and Wales over the last 5 years. Through understanding their experiences both through and across time, we can map the impact of youth policy within its social and structural context. In turn, this provides valuable lessons for informing future policy development, especially in a time of crisis when today's young people are at risk of becoming a lost generation.

## 04RN03 - Biographies of Work, Organisations and New Social Movements

Chair(s): Maggie O'Neill , Durham University

### "If I Would Live my Life Again...": Reconceptualization of the Past in the Time of Crisis

Elisabeth Schilling, University for Applied Administrative Studies, Bremen | [elisabeth.schilling@gmail.com](mailto:elisabeth.schilling@gmail.com)

This presentation should reflect the results of the empirical study on employees of the public administration in a German city. The study focused on interviewees, who were in the age of 41-52 and who interrupted their professional career. Despite their secure jobs the interviewees showed a clear tendency to spill over of uncertainty feelings: they reflected much about the crisis in the sense of the global social threat as well as in the sense of personal failures and mistakes. The

experience of crisis was personalized. In the context of their biographical work the interviewees tried to reconceptualise the own past biography into a coherent story in order to explain the origin of the crisis and in the hope to avoid the future hazards. The "unlived lives" (Fischer) were drafted in order to cope with the responsibility for the personalized crisis. In the planned presentation the dimensions of the biographical competence should be conceptualized.

### Memorizing the Post-Socialist Transformation and Changing Professional Roles in a Privatized Polish factory

Karolina Mikolajewska, Kozminski University / University of Warsaw | [k.mikolajewska@is.uw.edu.pl](mailto:k.mikolajewska@is.uw.edu.pl)

The proposed speech is based on an analysis of biographical narratives of Polish managers of E. Wedel factory in Warsaw, a very well-known confectionery producer. This firm was one of the first to participate in the privatization program introduced as an element of the liberalization of the Polish economy in the early 1990's and was sold to PepsiCo Ltd. The main question, which sets the scope of the analysis is how the socialist managers (to some extent are co-authors of the changes, who worked in the factory in the privatization period) describe them from today's perspective? What meanings to the new capitalist institutions do they ascribe today – how do they legitimize or delegitimize it? I am particularly interested in finding out how the managers reconstruct the process of manufacturing consent over capitalism (Burawoy 1979) in their narratives in

hindsight and how they reconstruct their professional identity in the changed economic environment. I refer to neoinstitutional perspective by attempting to trace isomorphic processes (DiMaggio, Powell 1983) as occurring in the discourse as a tool to describe the influences upon transforming the professional identity of the managers. In this attempt I also follow the critique of isomorphism formulated by B. Czarniawska (1997). This procedure entails in observing conflicting trends in every dimension of the isomorphic processes – for instance, coercive isomorphism – in which power is most overt – is not to be separated from creative avoidance activities. For instance, it seems that the new rules imposed by the foreign investor (thus, a mechanism of coercion) were transformed into the promise for professionalization, mediated

by the discourse of self-development, catching up

## Biographical Analysis for Understanding Agency and Structuration. A case of a Tenants' Movement Activist

Karol Haratyk, University of Warsaw | [karolharatyk@gmail.com](mailto:karolharatyk@gmail.com)

The paper presents a case study of the biography of a participant in tenants' movement in Poland. The aim of the paper is to evaluate the popular categories in biographical analysis proposed by Schutze (biographical action scheme, the trajectory of suffering, institutional expectation pattern and metamorphosis) to describe and explain the structuration process. Additionally, the possible way to overcome the theoretical problems of the categories of agency and structuration in biographical analysis will be proposed. A housing problem had become for Mary an obstacle to develop a biography according to 'normal' pattern according to her. Nevertheless, the biographical trajectory of suffering caused the involvement of Mary in creating two tenants' organizations. This activity can be treated as an attempt to find new institutional pattern in the situation of lack

of the old ones; as the case of the structuration process. Moreover, the involvement in tenants' movement have caused her involvement in politics. At present, she is a district councilor. However, her activity cannot be fully described with the category of the biographical action scheme, since she claims that her involvement in the social movement and in politics is caused by chance and by necessity, not by her biographical plan nor by a desire for the action in public sphere. Her activity cannot be fully described with the category of institutional pattern neither, since her pattern is created by her (among others) within her tenants' organizations. This case of the process of structuration cannot be fully described by the above-mentioned categories. Their reformulation is needed for understanding the agency and the structuration.

## Biographical Purposes to Join Political Critique in Poland

Ina Alber, Herder Institute for Historical Research on East Central Europe - Institute of the Leibniz Association | [ina.alber@herder-institut.de](mailto:ina.alber@herder-institut.de)

'We want a different Europe'. These words were part of an open letter in 2003 by members of Political Critique (Polish: Krytyka Polityczna) - Poland's largest left-wing circle of intellectuals and activists. They do not only engage in questions of how Europe should be shaped but have also been one of the main civil society actors in Poland during the last decade of crisis and change in times of transformation. Political Critique perceives itself as the most significant left-wing intellectual group and organisation formed by 'engaged intelligentsia'. They participate in the fields of culture, education and science, especially by publishing journals and books. But a

flourishing organisation like this one needs people at the very grass roots to realise all these activities. In my analysis the discursive element of 'engaged intelligentsia' plays an important role in motivating people to join Political Critique. In my paper I would like to discuss the different biographical trajectories of persons engaged within Political Critique. These activists are part of my PhD research sample of civil society activists in Poland, with whom I conducted biographical-narrative interviews between 2008 and 2010. I want to show the biographical purposes that led to their engagement focussing especially on the interdependency of biographically established

patterns of acting and interpretation and the discursive construction of the new social

movement Political Critique.

### Feature Films and Tv Series as a Source for Creating a Collective Memory about World War II

Maciej Mysliwiec, AGH University of Science and Technology, Krakow | [Maciej.Mysliwiec@agh.edu.pl](mailto:Maciej.Mysliwiec@agh.edu.pl)

The contemporary world is dominated by the visual data. This kind of transmission becomes much more important than verbal and the written word. Especially to younger generations, who read less books and who's education is focused on visual forms. Today social sciences have to admit that visual data is very important factor for creating society's and personal identity, collective representations and collective memory as it is presented in Emile Durkheim's and Maurice Halbwachs theories. It is Important that the visual data does not mean only the documentary sources (photograph or movies) but also the feature films and TV series which become much more popular data (as internet streaming makes it more accessible). The analysis of the feature film or TV series is bringing a lot of information because sociologists may analyze its content

with methods of sociology of everyday life. Obviously, analysis needs to provide also a historical background, but researcher has to remember that the reality of feature film is just a creation which may not be rooted in facts. Also, according to source's popularity he may expect that influence of this source on individual and collective memory will be bigger than another sources. In the paper the Author will provide an analysis of the reality of polish few feature films presenting time of WW2. This analysis will be confronted with examples of other sources of collective memory like books, documentary films and teaching program. After that this comparison will be confronted to respondent opinions to analyze – which of them have more influence on the content of individual memory which may lead to creating a collective memory.

### Comparison of Soviet and Nato Military Obituaries in Afghan War

Elena Rozhdestvenskaya, National Research University Higher School of Economics, Moscow | [erzhdestvenskaya@hse.ru](mailto:erzhdestvenskaya@hse.ru)

The abstract focuses on the discourse analysis of 117 Soviet military obituaries during the war in Afghanistan 1979–1989. Military obituary tells of a broken soldier's life in such a way to make sense of individual and collective sacrifice, legitimize the loss to the public, instrumentalize this meaning for the present.

Most obituaries with officially documented death have an invariant structure resembling an institutional biography. This cliché can be completed with 1) a few scenes, which individualize the personality of soldier, and 2) the ethical and attribution of meaning, 3) the memories of commanders, friends, and 4) a

small variety of forms of sacralization and perpetuation. Our analysis of these segments of the narrative discourse obituary reveals the repertoire of ethical standards, which are based on institutionalized public memory. The death of the deceased soldier makes sense in the context of self-sacrifice for the sake of his comrades. If we compare Russian and NATO (through research of E.King) military obituaries, we discover the change in the

perception of the victims. In today's scenario, the NATO soldiers began obituary personalities and, therefore, the collective charisma of corporate victims was privatized. But the common feature of both English and Russian military obituaries will, in our opinion, an impossible task to justify the war, as well as the institutional needs and emotionally charged public pathetic memory of the dead for the relation to the present.

## **Analysing Collective Memory within Biographical Narratives: The Case of the 1980 Military Coup D'etat in Turkey**

Elifcan Karacan, Siegen University | [elifcan.karacan@gmail.com](mailto:elifcan.karacan@gmail.com)

Memory of the 1980 Turkish military coup d'etat is multiple and divided not because of the perspectives towards past among opposite political groups, but also many of the revolutionaries had to leave the country and became exiles in (mostly) European countries. This presentation aims to discuss the findings of my PhD research which is done by combining biographical narrative method and participant observation both in Turkey and in Germany. From a comparative perspective I try to understand how exiles reconstruct the past of the military coup after being forced to live in

Germany over thirty years, and how memory is effected by the change of social frameworks including space and time. In addition, in this presentation I aim to argue the method used for analyses of the biographies, namely the biographical case reconstruction method as developed by Gabriele Rosenthal (1993), in relation to understand the dynamic process of collective memory through individual biographies. Main focus will be the problem of analysing the interrelation between the past as it is experienced and biographies as they are narrated in the present.

## **Civil War and Evacuation in the Biographical Memory of Greek Repatriates from Poland**

Ewa Nowicka-Rusek, University of Warsaw | [ewanowickarusek@gmail.com](mailto:ewanowickarusek@gmail.com)

The paper aims to present empirical material collected during my fieldwork in Greece in 2004, 2005 and 2006. I found three generational types of the narratives, different types of life stories among people who (or whose families) were engaged in communist guerilla warfare in 1946-1949 in the civil war in Greece. After collapse of communist army, partizans, their families and often people totally not connected with the war were evacuated by the communist authorities to various eastern block countries. They were able to return to their homeland

only after 1974. Their life histories seem to be unknown and rarely analysed, so I treat my paper both as the purely academic and engaged anthropological activity. My presentation is based on the field research I conducted between 2004-2008 among Greek repatriates on the territory of Greece. The topic of my presentation is analysis of the memory of civil war in the biographical narrations about the civil war and successive events Analysis of war and postwar biographical stories lead me to following conclusions: 1) The content of life

histories described by older and younger generation of Greek repatriates is very similar, there is no radical difference between them that we could expect; 2) In consequence I have

come to more general conclusion: there is strong connection between type of social ties in a society and the way of intergenerational memory.

## Individual Horizons of Time and Memory and the Question of Global Change Perceptions

**Dietmar Rost**, Institute for Advanced Study in the Humanities (KWI), Essen | [dietmar.rost@kwi-nrw.de](mailto:dietmar.rost@kwi-nrw.de)

Emerging in the context of growing human impacts on natural bases of human life, the concept of sustainable development implies capacities to perceive manifest and potential changes in environment and human-nature-relations. Such capacities of change perception may be analyzed on their collective (e.g. in the field of science or politics) or on their individual level. Following the latter path, when focusing on individual consciousness and on potentials or limitations of individual change perception, one has to deal with an interesting set of questions regarding linkages of time perception, memory and biography. Individual change perception, my paper argues based on the sociology of knowledge tradition, is a step of individual reflection in which at least two states of a phenomenon that both are linked with different points in time get envisioned

together. This way, individual change perception is a perception of time that requires memory acts. Of particular interest in context of sustainability questions are the time horizons of change perceptions: Do individuals remember states of particular phenomena which are distant enough to perceive any change (e.g. the decline in fish stocks)? To what extent does their biographical experience or their individual life span set limits to perceptions of problematic long-term changes? The sustainability approach also suggests reflections on a prospective memory which envisions potential moments in the future that are affected by current and past human action. Here again, the span of biographical life seems to function as an important, however, not absolute limitation to horizons of individual change perception.

### Gendered Boundaries and Biographic (in)Competence: The Case of American Women Living in Italy and Greece

**Irina Isaakyan**, European University Institute, Florence | [Irina.Isaakyan@EUI.eu](mailto:Irina.Isaakyan@EUI.eu)

The themes of self-reinvention and boundary maintenance are frequently discussed in studies of migration and post-modern identity (Bauman 2002; Brubaker 2005). Although mobility of US-nationals to Europe is rapidly

increasing (Wennersten 2008), little is known about how American expatriates re-invent themselves and “biographically” respond to challenges of the global crisis. In fact, US women often settle in Italy and Greece under

the “wife” category and eventually find themselves unwelcome and marginalized. In what ways do they re-connect their transnational biographies and in what ways does their biographic competence work in emigration, especially in the crisis-affected region of Southern Europe and especially in situations of their denied access to high skilled employment? Through the method of narrative-biographic interview, 15 US-national women who live in Italy and Greece as spouses of Italian and Greek men were interviewed with the purpose to understand their biographic reconstruction. The paper stresses the gendered nature of their identity work, which develops as

a response to their “kitchen-sink” isolation and growing frustration, and points to a new para-national identity of “being an American woman in Italy/Greece”. As a particular kind of biographic incompetence, their re-gendered boundary maintenance is manifested in their encounters with their in-laws as well as in the functioning of their rapidly expanding expatriate networks. This paper is part of a larger, EC-sponsored project FEMIDE (Integration Female Migrants from Developed Countries in Southern Europe), conducted under the auspices of the Marie Curie Fellowship.

## **Memories from a Regime. Moral Careers and Practices of Survival of Romanian Women Living in Italy**

**Cristina Calvi**, University of Eastern Piedmont | [cristina.calvi@sp.unipmn.it](mailto:cristina.calvi@sp.unipmn.it)

This paper intends to present the results of an empirical study on the reconstruction of the moral career (Goffman 2001) of women who have lived the experience of the Ceaușescu’s romanian regime and now live in Piedmont. Using the theoretical perspective of the life course and qualitative research techniques, in particular the biographical focused interview (Saraceno 1986b), 30 romanian women (age 40-50) were interviewed. The research, based on the assumption that the ideology of gender promoted by the regime (female worker/female parent) has shaped and “marked” the life of women who have experienced it personally, and it continues to influence them even during their “new” life in Italy, uses the biographical approach in order to emerge on the one hand critical events, turning points that have marked the lives of the these women, and, on the other hand, the

coping strategies implemented by the latter in order to highlight how this ideology “proposes” itself as a structuring element on the entire biography of women, even in a context of reference other than Romanian. The research points out the ability to adapt of women facing the biographical fractures that have marked their job career and their family career. Just these two dictatorship’s pillars - the family circle and the workplace (the latter closely related to the Ceaușescu’s “cult of work”) - remain, even in Italy, on the one hand the privileged field within women give proof of the “art of managing” (coping capacity), and on the other hand careers signed by biographical fractures that are shaping the course of the moral careers of these women. In particular, the analysis of the empirical material has allowed to identify some models of moral career’s path.

## Threats to Identity, Coping and Agency: Life-Stories of Portuguese Immigrants in Switzerland

Ana Barbeiro, University of Lausanne | [Ana.Barbeiro@unil.ch](mailto:Ana.Barbeiro@unil.ch)

Dario Spini, University of Lausanne | [Dario.Spini@unil.ch](mailto:Dario.Spini@unil.ch)

Immigrating to a new country entails complex transformations on how people live and see themselves and the others. These transformations can entail experiences of threat to the identities of individuals, interfering with the identity principles of self-worth, continuity and distinctiveness. Social actors can deploy different coping dynamics in order to face these threats (Breakwell, 1986, 2000). This research addresses the dynamics of threat and coping involved in the life-course of Portuguese immigrants in Switzerland. Twenty life stories have been collected through in-depth interviews and calendars. The analysis of interviews shows that immigration policies model the experiences of threat. For example, self-esteem was threatened by the fact that, during the 80s, workers were only

allowed to stay in Switzerland for working, denying them the right to have a family life. Coping with this type of threat typically involved avoidance to thinking about the experiences and focusing on the goal of obtaining a residence permit at the end of four consecutive work permits. There is also a wide variability on the ways individuals experience and deal with threats to identity. This variability is featured by the past stories of individuals and by their projects for the future. The retrospective characteristics of the life story interview put in evidence the fluidity of identity. Reconstructing the own life-story is identity work in itself. In other words, the meaning making process of telling a life-story is also an inherent process of identity, of agency and, thus, of biographical competence.

## Biography in Turbulent Time

Miriam Sticchi, University of Salento | [miriam.sticchi@unisalento.it](mailto:miriam.sticchi@unisalento.it)

Present-day crisis of society influences, in a up-bottom effect, everyday experience and everyday life of social actors who are compelled to adopt biographical strategy of adaptation of. Stability of the biographical and work perspective, once crystallized in concepts such as identity, subject, individual, now give way to a generalized uncertainty and instability that becomes vulnerability, understood as a condition of life in which the ability for the subject of self-determination is constantly threatened by crises of various kinds, which involve not only the relation between the actor and his environment, but also his inner world and his capability of autonomously and consistently create his own identity. The identity, which once was the project of a lifetime, is now

transformed into an attribute of the moment, and it is assembled and disassembled intermittently and always new. Individuals are therefore forced to try to reconstruct the space-time coordinates of the experience and, very often, the best way to do that is to tell their history. This is a complicated process since the choice of the factual content, the character attributed to their history, the moments they recall, are the results of a complex reconstruction, in which the temporal dimension takes a central role. The aim of this work is to investigate, starting from the qualitative analysis of life-stories of people living in the very south of Italy (Salento), how the above-mentioned fragmentation of biographical aspects managed by individuals

and how they are able to tell the story of their life experiences, regardless the fact it may

appear devoid of continuity and coherence.

## 07RN03 - Biography, Time and Memory 2

Chair(s): Kaja Kazmierska

### National Identity in Biographical Narratives: Generations, Experiences, Discourses

Brigita Zepa, University of Latvia | [Brigita.Zepa@lu.lv](mailto:Brigita.Zepa@lu.lv)

Inese Supule, University of Latvia | [inese@biss.soc.lv](mailto:inese@biss.soc.lv)

Evija Kļave, University of Latvia | [evija.klave@biss.soc.lv](mailto:evija.klave@biss.soc.lv)

Our paper is devoted to the problem of construction of national identity in biographical interviews, and particularly to the question - how memories of historical changes intersect with narratives of national identity among Latvians and Latvian Russians in Latvia. Our empirical base is 21 in-depth biographical interviews, which enables us to understand the changing experiences and interpretations of 20th century history both of Latvians and

Russian minority in Latvia. We look on this issue from the perspective of three generations and different regional affiliations. In our understanding of national identity we draw upon the perspective of social constructionism, according to which national identity is a form of social identity, which is based on the discursive reproduction of categorization and socially constructed notions of common origin and shared culture.

### Life Made Public. Biography as Voice in Public Discourse.

Torino

Autobiographical materials are a great source for research of processes of building of ethnic / national identity of individuals and cultural memory of societies. In my paper, I want to draw attention to the usefulness of biographies written with the intention to present their to a wider audience for this kind of analysis. Publishing of history of own life has become very popular now. In this kind of biographical texts, which I will define as biographies made public, we are dealing with particular reconstruction of autobiographical memory, when author merges the events and phenomena occurring for his life with the events of the history states, nations, ethnic

groups and so-called "Great History". On analysis of two cases, I want to show two ways of referring own fate in the past to the history of the nation. First case, a life story of a German film director (Gerburg Rohde-Dahl) shows the effort of re-building own national identity and the courage to critical cleaning it from the collective cliches. In the second case, biographical story told by a Polish writer (J.M. Rymkiewicz) is an example of building own identification with radically affirmative version of the national history. The analysis of two autobiographical texts as "contrast-comparative" cases makes that description of the relationship between individual identity and

cultural memory is much more complex and much more complete.

## **The Meaning of "Gender" Derived from Social Reminiscences of East German Female Politicians Based on the Reconstruction of their Life Stories**

Cornelia Hippmann, University of Dortmund | [cornelia.hippmann@tu-dortmund.de](mailto:cornelia.hippmann@tu-dortmund.de)

This contribution is based on the results of my PhD thesis, "East German women in politics. A qualitative analysis", which has been done at the Otto-von-Guericke University of Magdeburg at the Department of Sociology, under the supervision of Prof. Dr. Fritz Schütze. My research project aimed to reconstruct the processes of social and individual mind-making of East German politicians from the biographical perspective. There was a special focus on the "gender" view and the importance of the collapse of the former GDR for the life-stories of these women. That is why the autobiographical-narrative interview (Schütze 1983) was chosen as the main method of the discourse. The aim was to reconstruct the significance the time of change in the biographies of women in politics. I initialized my study on the subjective perceptions and

actions of the political characters because it opened the opportunity to describe their interactions, to explore their social memories, biographical experiences in the time of the collapse of the GDR. The study confirmed that "the time of change" had a crucial influence on the social memories of East German women in politics, especially in cooperation with other categories, such as "gender". The study has also clarified that "feminine" and "masculine" are no experiences, but constructions dependent on especially historical and social circumstances. In addition, I would like to demonstrate, how gender and gender differences are constructed in the biography of women in the time of the collapse of the former GDR, in politics after the reunion in Germany and derive consequences of their social memories.

## **Biographical Memory of Communism in Poland. Seduced "Votaries", "Awakened", and Oppositionists and their Struggle with the Past**

Katarzyna M. Waniek, University of Lodz | [k.m.waniek@gmail.com](mailto:k.m.waniek@gmail.com)

This paper discusses initial findings based on autobiographical narrative interviews with people who were adults or young adults in the Communist Era in Poland. An attempt is made to explore: (1) how ordinary people (intellectuals, professionals, craftsmen, workers, farmers) remember and present the past (everyday experiences and historical events) in their biographical renderings and (2) how their presentations are influenced by the on-going (usually very much simplifying and disapproving) debate over the meaning and influence of state socialism and communist ideology. Considering socio-biographical conditions under which informants enter adult

(and professional) life very intriguing ways of coping with the past may be described. In this light it is interesting to analyse how people construct contrasts sets which demonstrate differences between their life experiences and biographical orientations before 1989 and after. Interestingly enough, there are (1) informants who enter the communistic era in Poland with hope and true belief in the communist ideology, become seduced and as if "charmed" by the new reality and better chances of development (opportunity structures) and either see the light and abandon the wrong worldview ("awakened") or hold to their belief in spite of invalidating

evidences ("votaries") – nowadays claiming that they were embroiled in the system only instrumentally and/ or there were no ways of getting out of it. There are also people (2) who enter the communistic era being with fear of

illusory ideas and fight against communist regime (oppositionists) - this brings about different biographical consequences and results in different biographical memory

## 08RN03 - Biographical Perspectives on European Societies

Chair(s): Hannah King (Durham University)

### Unification of Biographies in Russian (Drug) Policy

Alexandra Dmitrieva, St. Petersburg State University | [alexandra.dmitrieva.uni@gmail.com](mailto:alexandra.dmitrieva.uni@gmail.com)

It's not already a secret that society seeks to be an «individualized», every citizens construct their own biographies by themselves and every story differs from the other story. The role of government and its institutions become particularly interesting in these processes, especially if we have in mind Russian government, which is personalized and anonymous at the same time. We are not always able to understand what is really going on: were decisions made under the law or by the will of one man. Pussy riot case became one of the brightest example of such kind of "management", when we were observing how the trial and public debate has been reduced to discussion of the biographies and to developing of this conflict not between legal system and the offenders, but between concrete people with specific stories and concrete person at the

head of the state Collective biographies representations are developing in similar way – individual biographies uniting in complicated tangle of new forms of solidarity and differentiated lifestyles. However the state here create and uses various forms of these solidarities and lifestyles unification, uniting incompatible things under a single name. For example, the drugs consumption space at all its levels seeking like others to fragmentation and internal differentiation, "processed" by the state and converted into unified form. And in this "uniform" are not only small impersonal social forms, but also major ethnic groups, political oppositionists and others. Thus the government deliberately stops/crush complex biographical trajectories by its actions, turning them to a dead-end category of addicts or drug dealers.

### Time Planning in the Times of Crisis

Elisabeth Schilling, University for Applied Administrative Studies, Bremen | [elisabeth.schilling@gmail.com](mailto:elisabeth.schilling@gmail.com)

The empirical study, which should be introduced in the planned presentation explored interrelations between time, memory and biographical future concepts of job migrants in particular. The uncertainty and multioptionality of their life situation are regarded as symptomatic for today's society.

The past experiences of social and financial collapses are stronger present in the memory of the migrants. They re-conceptualize their past as a forthcoming crisis. From this memory they conclude that they are forced to experience unpredictability and impossibility to plan more strongly than other members of

society. Therefore the description of their biographical future time concepts points out the upcoming general changes. The study showed that migrants develop specific strategies of planning, time investment, time sparing and handling of time scarcity. These are strategies of minimizing (e.g. "I don't plan at all") or sophistication (e.g. "I must plan my

future carefully, but I am always ready to change my plan"). The study revealed which factors (social status, job situation, age, experience abroad) influence the choice of strategy and suggests possibilities of handling the uncertain future for other members of society as well.

## **The Last Soviet Generation: Biographies of the Lost**

Mikhail Anipkin, Volgograd State University | [manipkin@hotmail.com](mailto:manipkin@hotmail.com)

The break-up of the Soviet Union in late 1991-early 1992 affected the lives of the whole generation born in the late 1960s and early 1970s. This generation consists of the young people who left secondary school and entered the universities under the USSR, but on completion of their degrees found themselves in a completely different country. This generation is identified in my work as 'the Last Soviet Generation.' It may be described as a transit generation, the biographical study of which is important for a better understanding of social-identity change after the collapse of the Soviet Union. These social upheavals, which are still unfinished, are best investigated through the medium of individual biographies. The only serious research on the subject so far has been done by Alexei Yurchak (2006) in his book, *Everything was forever, until it was no more: the last Soviet generation*. Although an

excellent anthropological study of the late Soviet time, this book focuses on the older generation, whose careers successfully started in the late USSR and then naturally transferred to the 'Post-Soviet' stage. In my research, by contrast, I am focusing on the younger generation. I argue that this last Soviet generation, aged now between, say, 37 and 43 years old, is distinguished by the following characteristics. First, from the demographical viewpoint, it may be regarded as a 'lost generation' in the sense that its proportion is the lowest among the other sectors of the population in active employment. Second, it has an ambiguous social identity, having lost a previous Soviet identity without gaining a new identity in the present Russia. Third, this generation is not active in the political life of contemporary Russia.

## **Outside, at the Door – the Civil-Military Crisis of the Bundeswehr Mission in Afghanistan and its Reputation in the old and New Media**

Dinah Schardt, Ruprecht-Karls-University, Heidelberg | [Dinah.Schardt@soziologie.uni-heidelberg.de](mailto:Dinah.Schardt@soziologie.uni-heidelberg.de)

The presentation illustrates preliminary results of a qualitative discourse analysis based on Grounded Theory (e.g. Glaser/Strauss 1994) which focuses on civil crises and crises of the civil in terms of the ISAF mission in Afghanistan and its reputation in the mass media. Actual starting point is an ongoing discourse about a "friendly indifference"

(Köhler 2008) in German society towards the German Bundeswehr and its missions. This rather intrinsic aspect for the Bundeswehr and respective members of defence policy is barely noticed in the civil public itself. The contradiction between the soldiers' self-perception as a special "citizen in uniform" and the external one by the public as a "job like any

else" (Collmer/Kümmel 2005) refers to an ethical and scientific discourse about the increase of a so-called "civil-military incompatibility" since the beginning of Germany's involvement in global military missions out of area since the 1990s. Therefore, the claim of a lack of prestige in the civil public shows itself in soldiers' critics of the press and in ambitious advances to arouse attention to the incidents and problems in Afghanistan. A growing amount of autobiographical narratives by soldiers in all

kinds of mass media since 2009 is eager to show an alternative and authentic view of the war and how it affects the personal life of soldiers. The presentation compares autobiographical literature with new forms of expression in the social media regarding their topics, semantics and their impact as an attempt from bottom up to interest an alternative and dispersed civil public through (classic) forms of entertainment and new digital communication.

## Social Careers of Ex-Drug Abusers after the Turning Point of the Therapeutic Process

**Susana Henriques**, Centro de Investigação e Estudos de Sociologia, Lisboa | [susana\\_alexandra\\_henriques@discte.pt](mailto:susana_alexandra_henriques@discte.pt)

**Pedro Candeias**, Centro de Investigação e Estudos de Sociologia, Lisbon | [pedromecandeias@gmail.com](mailto:pedromecandeias@gmail.com)

Drug consumption and dependence is a phenomenon cuts across every society, both in time and in space (Escotado, 2004). One of the particularities of this phenomenon in contemporary Western societies is the possibility of quitting these consumptions resorting to formal assistance, from among a plurality of them, therapeutic communities. Therapeutic communities have their origin in the UK, dating back to the 40s of last century, and became popular in the U.S. since the mid '50s. Current therapeutic communities result from development of informal self-help groups created by former drug abusers who have been incorporating in its staff experts like doctors, psychologists, psychiatrists, etc. (Leon, 2000). In a perspective of life course theory the

passage of a drug abuser through a therapeutic community can be understood as a turning point, i.e., a specific events or milestones that substantially change the direction and / or slope of the trajectory of an individual's life (Elder Jr., Johnson, & Cronsoe, 2002). With this communication is intended to present data from a research project in which we studied the social trajectories of ex-drug abusers after treatment in a therapeutic community. Based on interviews with former users of a therapeutic community aims to present some of their careers (residential, family, employment, educational and use drugs) that the respondents played out since the end of treatment.

## RN04 - Sociology of Children and Childhood

### 01RN04 - Theoretical issues in the Sociology of Childhood

Chair(s): Nigel Thomas (University of Central Lancashire)

#### Using Honneth's Theory of Recognition to Understand Childhood and Intergenerationality

Nigel P. Thomas, University of Central Lancashire | [npthomas@uclan.ac.uk](mailto:npthomas@uclan.ac.uk)

This paper develops ideas first put forward in a paper to the RN04 mid-term symposium in Jyväskylä in June 2012, in relation to the usefulness of Honneth's theory of social life as a 'struggle for recognition' for our understanding of the place of childhood in wider society, and the place of actual children in intergenerational relationships. That paper argued that Honneth's theory offers more than other theories of recognition for two reasons: its location in the tradition of critical theory means that it has both analytical and ethical content; and its articulation in terms of three 'modes' of recognition gives it a subtlety that is particularly fruitful as a way of thinking about

the complexities of intergenerational relations. Because it is primarily a relational theory, it potentially offers a framework for understanding children's place in contemporary society. This new paper will test the application of this theoretical model by exploring how it can help us to think about the recognition and misrecognition of children (understood in terms of the three domains of love and care, rights and respect, esteem and solidarity) in different social locations and at different levels: for example, the family, the school, the public domain, in social and economic policy, and in cultural formations.

#### Promoting Trusting Commitments in Educational Interactions: the Challenge of Institutional Distrust

Federico Farini, University of Modena and Reggio Emilia | [federico.farini@unimore.it](mailto:federico.farini@unimore.it)

According to Tilly, there are two main sources of trust in education: 1) expertise (educators must be trusted for their competence); 2) trust based on categorical inequalities. Education creates, through selective events, categorical inequalities: children are categorized and those categorical inequalities enhance the stability of educational relationships. In education, durable categorical distinctions make easier to knowing who to trust and who to exclude: inequality among individual performances is a structure of social

relationships. Thus, institutional trust and distrust are consequences of the operations through which education reproduces itself. The problems of institutional distrust are known, in terms of alienation, marginalization (including bullying), educational failures. For that reason, a concern for education has become to place side by side to trust based on categorical inequality a form of trust which could be able to sustain children's involvement in the system. Since the 1980s, some approaches in sociology of childhood have suggested that

educators may promote children's trusting commitment by facilitating interpersonal relationships with them, supporting their agency; children should trust adults who show sensitivity towards their personal expressions. Thus, it is important to understand if facilitation of personal expressions can create trust, through an analysis of interactions

highlighting the types of actions which can promote trust. We present the analysis of video-recorded interactions in the context of anti-bullying activities in four Genoa primary schools, examining the cues for the social construction of trusting commitments that are made evident in the organization of interactions

## **The Role of Trust in Contemporary Intergenerational Relationships: What Kind of Trust? What Kind of Child?**

Jo Moran-Ellis, University of Surrey | [J.Moran-Ellis@surrey.ac.uk](mailto:J.Moran-Ellis@surrey.ac.uk)

Heinz Suenker, Wuppertal University | [suenker@uni-wuppertal.de](mailto:suenker@uni-wuppertal.de)

Debates about the meaning of trust have paid little attention to how children are positioned within relations of trust. At the same time trust, where adults are the trusting party and children are the trusted objects, is a necessary ingredient in the enacting of children's participatory rights. However, initial theoretical analysis of intergenerational trust reveals something of a conundrum: inter-personal trust between adults and children is relevant for children's participation in adult managed situations but it is not located in the mutuality which Gambetta (1988) identifies as core to this form of trust, and the institutional trust which underpins children's participation is characterised by protections for adults in the form of limiting the power of the child as a participant-decision maker rather than

protections for the less powerful party – the child. Noting this conundrum, this paper considers what kind of trust is mobilised by adults in relation to children and what that means for how we understand trust itself as a currency between generations in late Capitalism. We argue that in some very specific ways, the mobilisation of trust by adults is close in form to what Parsons conceived of as trust and that the negative confidence that adults have in knowing 'children' as universal subjects with shared characteristics of immaturity underpins an adult withholding of the Luhmannian form of trust. This has considerable negative consequences both for children as participative citizens and for the power relations between adults and children.

## **Between «Nature" and «Customs", Childhood in the Age of the Enlightenment in France**

Pascale Garnier, University Paris 13 | [pascale.garnierx@free.fr](mailto:pascale.garnierx@free.fr)

The Enlightenment occupies a central place in the understanding of the western modernity, especially as the "reign of the criticism " (Koselleck, 1988). The objective of my proposal is to show the importance of this critical work in the field of the practices towards children and representations of childhood. My object of analysis is constituted by numerous criticisms

relating to the traditional manners of teaching children to walk, in particular the use of artifacts ("appareils") such as trolleys and selvages, but also baby wrap and head rolls. The methodology is based on the reconstruction of the space of discursive productions on this matter and the way such space integrates its context (Garnier, 1995). We

intend to emphasize the radicalism of the critics, distinguishing them from previous criticisms (Ariès, 1960) and to show how they lean on two different conceptions of the idea of "nature". The first one is inscribed in a scientific perspective; the second one belongs to a political philosophy. By joining the "sociology of critique" (Boltanski and Thevenot, 2006), the historical research emphasizes discontinuities and points out the construction of categories of thought concerning childhood,

which are generally accepted even to this day. References ARIES P. (1962) Centuries of Childhood. A Social History of Family Life. New York, Vintage. BOLTANSKI L., THEVENOT L. ## 02RN04 - Generational and Peer Relations in Children's Everyday Lives

Chair(s): Ana Vergara (Faculty of Psychology - Diego Portales University)

### Childhood and Adulthood in Children's Eyes. A Discursive Study among Different Socio Economic Sectors in Santiago, Chile

Ana Vergara, Diego Portales University, Santiago | [ana.vergara@udp.cl](mailto:ana.vergara@udp.cl)

Mónica Peña, Diego Portales University, Santiago | [monica.pena@udp.cl](mailto:monica.pena@udp.cl)

Paulina Chávez, Diego Portales University, Santiago | [paulina.chavez@udp.cl](mailto:paulina.chavez@udp.cl)

Enrique Vergara, Diego Portales University, Santiago | [enrique.vergara@udp.cl](mailto:enrique.vergara@udp.cl)

This communication describes the preliminary results of a qualitative study (2010-2013), based on undirected group interviews and the perspective of critical discourse analysis, which explores the discourses on childhood and adulthood of 10- and 11-year-old boys and girls from four socio economic sectors in Santiago, Chile (upper middle-income, middle income, poverty and extreme poverty). Among the findings, children from the four socio economic sectors display a complex and relational notion of childhood: it is about acting as a 'child' (basically to play and mischief-making) who needs the adult world to generate the conditions that make that possible. Simultaneously, children perceive themselves as overwhelmed and subjected to excessive demands by grown-ups. In addition, adulthood

is clearly marked by loss of pleasure, play, diversion, authenticity, imagination and freedom, while 'gaining' in overload and exhaustion, economic pressures, work, domestic and parental obligations, weariness and physical deterioration. The communication offers some interpretations about these findings, in which the intense processes of neoliberalization of Chilean society are taken into account, as well as the context of contemporary telecommunications and the growing institutionalization and over-schooling of children's daily life in Western societies. It also presents some gender and class nuances in children's discourses, which have to do with the emphasis placed on certain points and fundamentally with the contexts of interaction and the emotional tone of the discourse.

## Social vs Economic Exchange: is there a Place for Market Relations between Parents and Children?

**Alina Alina Pishnyak**, National Research University Higher School of Economics | [a.pishniak@socpol.ru](mailto:a.pishniak@socpol.ru)

**Natalia Khalina**, National research university Higher School of Economics | [nhalina@hse.ru](mailto:nhalina@hse.ru)

Economic interactions inside the household between children and parents are not quite obvious. How these relationships could be qualified and do they really exist in form of economic exchange? The main interest of this paper is how relationships between parents and their children about allowance or some material compensation are arranged and in what form it exists. Drawing on ideas of P. Blau's exchange theory we would argue that this parent-child exchange is never a truly social exchange, it always contains some elements of economic exchange. Moreover these specific relationships could be seen as contractual relationships due to its repeating and regular character. It is necessary to explore the way of coming to this arrangement: is contract suggested by adult or originated by kid? In practice children may initiate a

negotiation or even dictate the conditions to parents. Another aim of this paper is to find out categories of activity and types of rewarding which are negotiated by parties. Obviously money is not the only form of compensation: one can meet such a reward as ice-cream or iPad purchase, family visit to the cinema, etc. In addition influence of peers and personal experience in these specific economic households arrangements would be discussed since most of the parents were socialized in different socio-economic conditions. How those reward practices arise: can they be adopted from social surroundings or transferred by parents from their own childhood experience? The empirical data for the study were collected from the series of 30 in-depth interviews (15 pair mother-child in age of 10-14 years) in Moscow.

## Does Parental Example Matter in Money Attitudes and Behaviours? A Study among Italian Preadolescents

**Lorenzo Todesco**, University of Torino | [lorenzo.todesco@unito.it](mailto:lorenzo.todesco@unito.it)

**Emanuela Rinaldi**, Università degli Studi di Udine | [emanuela.rinaldi@uniud.it](mailto:emanuela.rinaldi@uniud.it)

Intergenerational transmission with regard to attitudes and behaviours has been an important focus in sociology. Two main theoretical frameworks shed light on the mechanisms through which family socialization works, namely social learning theory (Bandura 1977) and symbolic interactionism (Mead 1934; Blumer 1966). Whereas social learning focuses on the imitation of available role models through observational learning, symbolic interactionism points at the role of expectations by agents of socialisation (e.g., parents), and at the internalization of these expectations by children. These theoretical

frameworks come to a conclusion that parental influence is particularly strong in some specific areas, e.g., gender role attitudes (Sarrels 2002) and parenting beliefs (Simons et al. 1992). Recently, scholars have shown an increasing interest in the intergenerational transmission of money attitudes and behaviours, also because of the economic crisis (see, e.g., Webley & Nyus 2012). However, in Italy sociological research have paid little attention to this topic. This study contributes to fill this gap by analysing intergenerational consistency (parents-children) in three relevant dimensions of money attitudes and behaviours,

i.e., materialism, saving behaviour and investment attitude. The survey used here consisted of a self-completion questionnaire administered to a sample of 1,635 students aged 12-14 years living in Northern Italy. Several linear and logistic regression models

were tested in the empirical analysis, run separately for boys and girls. The findings give full support to the intergenerational transmission hypothesis, revealing an impact of parental attitudes and behaviours in almost all the dimensions analysed here

## **a02RN04 - Generational and Peer Relations in Children's Everyday Lives (2)**

Chair(s): Mari Vuorisalo (Department of Education - Univeristy of Jyväskylä)

### **Early Childhood Education as a Social Field: A Bourdieusian Analysis**

**Mari Vuorisalo**, Univeristy of Jyväskylä | [mari.vuorisalo@jyu.fi](mailto:mari.vuorisalo@jyu.fi)

Children's everyday practice in day-care centre is both structured and structuring, and also linked to the dynamics of broader fields of power and their structures. By adopting Bourdieu's set of relationally linked concepts the paper aims to give an insight into the interaction in day-care. A consistently relational analysis opens up a critical ways to interpret early childhood education and care. In Bourdieu's work field is the central organizing concepts (Bourdieu & Wacquant 1992, 94), and the key to understanding and explaining the observable practice in any field. The daily practice of early childhood settings is understood and explained by locating the agents in this field and by investigating the structure of relations that both differentiate and connect them, and the "game" taking place in the field. Two subfields within a local setting

are distinguished: one constituted of children and their interrelations, and the other one of children in relations with adult staff in the day-care setting. In their daily intersections their different logics of action are seen to interrelate, resulting in differential positioning of the children and (re)production of inequalities between them. This exploration of the field dynamics in one day-care setting is based on extensive ethnographic fieldwork in Finnish day-care centre. This paper is based on a forthcoming book chapter in which the interactions on the micro-level are embedded in the larger educational field on a local level, which in turn is embedded in the national and even global educational field. In the presentation the main focus will be on the analysis of a day-care group as a social field.

## Sociometric Popularity in School Context

**Vera Titkova**, National Research University Higher School of Economics – St. Petersburg | [tvera.v@gmail.com](mailto:tvera.v@gmail.com)

**Daniel Alexandrov**, Higher School of Economics, St. Petersburg | [alexandrov.daniel@gmail.com](mailto:alexandrov.daniel@gmail.com)

**Valeria Ivaniushina**, National Research University Higher School of Economics – St. Petersburg | [v.ivaniushina@gmail.com](mailto:v.ivaniushina@gmail.com)

Peer popularity and acceptance plays central role in adolescent socialization, integration into school life, and formation of attitudes. In particular, peer relations have essential but controversial role in the development of pro-school and anti-school attitudes, and thus determining (in part) academic success or failure in school. Our research is focused on the relation between academic context, students' academic achievement and her/his popularity. We surveyed 98 schools of Saint Petersburg (5058 students in 270 classes) eliciting social networks of friendship for each class. Attitudes towards school were measured by 9-items study involvement scale (Van Houtte 2006). Multi-level hierarchical modeling (HLM 7) has been used for data analysis. We hypothesized that in classes with high level of academic motivation individual academic success is positively related to popularity

among peers while in classes with low level academic motivation the relation between popularity and academic success is negative. We also assumed that effect is gender-specific: stronger for girls and weaker for boys. Results show that for the girls good grades are positively related to popularity regardless of class academic context. For the boys relations between academic achievement and popularity depends on academic context: in classes with low level of academic motivation good grades are negatively related to popularity, while in classes with high level of academic motivation the relation is positive. We have also found different effects of school and class context: academic motivation of class is more important than motivation of school. Potential context's mechanism of school and class will be discussed.

## Gender Construction and Conflict Management at School: Analyzing Peer Communications and Mediator-Children Interactions

**Elisa Rossi**, University of Modena and Reggio Emilia | [elisa.rossi@unimore.it](mailto:elisa.rossi@unimore.it)

Gender is a social construction, taking place in communication: in social interaction people are doing, or undoing, gender differences and stereotypes. However, as Conversation Analysis shows, gender relevance in interaction must be demonstrated in the participants' orientation. Combining gender studies, childhood studies, and dialogue and mediation studies, with a theory of social systems as communication systems, this contribution examines how children invoke, negotiate and orient to gender in discussion

and in dispute, and how an adult manages the interaction and the ongoing conflict. Data used are drawn from my own research on mediation in schools, which concerned video-recorded activities conducted by an adult who had the task to promote children's social participation and reflection about cultural and gender differences, and to manage the emerging conflicts through dialogue. Data were transcribed according to a simplified version of the system developed by conversation analysts. The analysis of the turn-by-turn sequencing

and organization of talk permits us to investigate: (a) mediator's actions in promoting, or inhibiting, children's agency with regard to peer relationships and gender; (b) the interactional production and relevance of children's talk, revealing their competence in meanings construction and participation in gender socialization; (c) the practices children employ to accomplish gender and to make it

relevant, like for instance gendered identity/membership categories and stereotyped/normative depictions; (d) mediator's actions in doing/undoing gender differences and stereotypes, and in promoting or inhibiting respectful gender relationships; (e) children's deviating or aligning contributions.

## **Playgrounds in a Transition Period: A Case Study from Bulgaria.**

**Turkan Firinci**, Gazi University | [turkanfirinci@gmail.com](mailto:turkanfirinci@gmail.com)

The transition from Communism is visible in numbers of artifacts of Bulgarians' daily urban culture. Transformation of the cities is an ongoing process which can be observed also in children's spaces, especially for the playgrounds. A new phenomenon, an obligatory collective renewal of playgrounds emerged due to a new Ordinance that Bulgarian Government lately introduced. Understanding the historical importance of the moment this paper is focusing on ideological dualism of playgrounds and is aiming to reveal a cross-generational difference between parents' and children's perspectives on playgrounds in Bulgaria, where children still play in both communistic and modern playground equipment. Starting

from the viewpoint of young children as competent meaning makers and explorers of their own environment, a special research design is developed by adopting a Mosaic approach in order to bring together a range of methods for listening to young children's opinion on existing playground models. The findings provide an evidence that both children and their parents welcome a modern design playground in Bulgaria due to their better functionality. However, children's and their parents' motives defer in their perspectives while also communistic playground design is praised in terms of its functional dominance on socialization.

## **03RN04 - Children, Childhood and Culture**

Chair(s): Joana C. Louçã (Department of Education University of Minho and University of Warwick)

## **World Makers: Styles of Knowledge from Childhood to Adolescence**

**Antonietta Migliore**, Università di Torino | [antonietta.migliore@unito.it](mailto:antonietta.migliore@unito.it)

The empirical evidence is sourced from a long-term study that started in 2005 where the same group of children, made up of one class from a privileged area of Turin and one from socially disadvantaged area, were interviewed four times. This paper will address how the styles of

knowledge evident in daily life differ for child to child, who are now adolescents. These trends will be addressed both over time and relative to the crisis of civilisation (Elias, 1939). The interviews allow us to explore the various ways in which they represent ourselves and ways in

which they generate a sense of the world, as well as a ways of interacting with the world. This analysis will be done paying attention to the children's "agency". In fact this perspective will be at the intersection (see James, Jenks, Prout, 1998) of the children's "agency" with the "particular" (micro-level) children's every day

life. The focus is also on how children reproduce and reinterpret adult cultures (Corsaro, 2010) through the *métier d'enfant* (Sirota, 1993). According the adopted perspective, the differences between individuals not necessarily should be considered social inequalities.

## The Body and the Process of Learning

Joana C. Louçã, University of Minho / University of Warwick | [joana.c.louc@gmail.com](mailto:joana.c.louc@gmail.com)

Children are active agents in the process of their socialisation, so has Child Sociology been defending for the past decades. However, in most Portuguese traditional schools, children's body is mostly given a passive role in the process of learning, despite growing reports on the relationship between learning and movement from neurologists, sociologists, psychologists and artists. Hence, from an active posture of the body, how does learning take place? This work is a multidisciplinary case study connecting Sociology of the Body, Sociology of Childhood, Sociology of Education and Art Education. The case study was performed with a dance association in Lisbon, specifically, around two of its projects with children done in Mouraria, an historical and very multicultural neighbourhood. The first one, "the body in the kindergarten", was done

with a group of 20 1-3 year olds, and the second, "the body at school", was done with 15 4th graders. In both, it is investigated the way movement influences learning, and the processes used by the institutions to dominate it. In the primary school, the project proposes classes in which the curricular contents were studied from an active perspective of the children, who moved in order to learn. "The body in the kindergarten" has weekly sessions, in which the dancers accompany the babies' movements, supporting them to develop new movement vocabulary. In both cases, the children are participant, co-designers, of the projects. The data was collected through a triangulation of descriptions and video or audio recorded episodes, interview and artefact analysis, and analysis of statistical data.

## Agency in a "Collectivistic" Society

Doris Bühler-Niederberger, University of Wuppertal | [buehler@uni-wuppertal.de](mailto:buehler@uni-wuppertal.de)

Jessica Schwittek, University of Wuppertal | [j.schwittek@uni-wuppertal.de](mailto:j.schwittek@uni-wuppertal.de)

This paper focuses on preschool children in Kyrgyzstan, a poor country of the former Soviet union. What are children's views on the relational order in this transition society, and what is their contribution to the reproduction or challenging of this order? We use and elaborate the theoretical concepts of 'agency' and of 'collectivism-individualism' to develop

age appropriate research instruments and to interpret children's views. Data was collected in a mixed-method field study. The presented results show children's agency in a tight hierarchical structure, revealing both: complicity and self assertion, occasionally resulting in opposition.

## The Ontologies of Child Culture

**Anna Sparrman**, Linköping University | [anna.sparrman@liu.se](mailto:anna.sparrman@liu.se)

**David Cardell**, Linköping University | [david.cardell@liu.se](mailto:david.cardell@liu.se)

**Anne-Li Lindgren**, Linköping University | [anne-li.lindgren@liu.se](mailto:anne-li.lindgren@liu.se)

**Tobias Samuelsson**, Linköping university | [tobias.samuelsson@liu.se](mailto:tobias.samuelsson@liu.se)

This paper explores the ontologies of child culture by examining how “figurations of the child” is enacted in a variety of child-oriented leisure/ cultural settings. Specifically, the study considers five different settings: an amusement park, a theme park, a science centre, and two children’s museums. Even though these places generally do not fall into the same genre of child culture we treat them symmetrically. We focus on how the institutions enact the figure of the child, and how the child is enacted by children and adults visiting the different settings, and what that tells us about child culture today. Each practice (institutions, children and adults) activates different entities in the process of configuring the child ‘user’ of these settings. For example, in children’s museums, the figurations of the child is enacted through

relations between the museum’s educational ideas, the design/materiality of exhibitions, entrance fees, light, sound, and the visitors’ (children, parents) use of the place, and organization of their visits. Within each setting different figurations of the child are brought into being. More than just differing perspectives on (or interpretations of) the child (singular), our findings show that multiple different figures of the child are enacted both within and across the practices. The paper asks what are the consequences of this multiplicity? Which figures of the child need to be accepted for the institutions to work? What happens when competing figurations of the child are enacted? How multiple is the ontology of child culture and how much is repeated across the settings? What does this say about the politics of child culture?

## 04RN04 - Political Economies of Children and Childhood

Chair(s): David J Oswell (Department of Sociology Goldsmiths, University of London)

### Childhood as Debt, Indebted Children: For a Political Economy of Children in Conditions of European Economic Crisis

**David J Oswell**, Goldsmiths, University of London | [d.oswell@gold.ac.uk](mailto:d.oswell@gold.ac.uk)

It is unfortunately now a commonplace that European debt, especially in some countries more than others, has led to various ‘austerity measures’ a facet of which has been the vast privatisation of previously held state infrastructures and services. It is striking that, although there has been public discussion about the impact of this crisis on the young (in terms, for example, of personal costs of

education, the lack of employment, and the seemingly unresolvable problem of pensions), there has been little analysis of the issue with regard to childhood. This paper considers this issue in the context of the work of the brilliant sociologist of childhood Jens Qvortrup, inasmuch as his work provides an understanding of childhood as a generational and temporally ordered universal feature of

socio-economic structure, but also inasmuch as his analysis locates contemporary childhoods within a structurally fragile bifurcation of production and reproduction and familial and social generational relationalities (Qvortrup 2004, 2009 and 2012; see also Folbre 1994 and 2008). But Qvortrup's analysis though is critically understood in terms of both the contemporary formation of European economic crisis and social theoretical analysis of that

present. Not least, the work of the Italian social theorist Maurizio Lazzarato on debt and 'indebted man' (2011) will be used as a way of guiding that critical discussion and through which a sense of children as a collective political subjectivity might be given more of a presence in the discussion. My intention is to consider the issue in the context of a general theory of children's economic capacities and positionings.

## Childhood and the Economic Crisis in Portugal

**Manuel Jacinto Sarmiento**, University of Minho | [sarmiento@ie.uminho.pt](mailto:sarmiento@ie.uminho.pt)

**Natália Fernandes**, University of Minho | [natfs@ie.uminho.pt](mailto:natfs@ie.uminho.pt)

**Gabriela Trevisan**, University of Minho | [gabriela.trevisan@gmail.com](mailto:gabriela.trevisan@gmail.com)

Sociology of childhood has been, in the last decades, building knowledge on childhood and sustaining the idea of childhood as a generational group with several specificities inside the societal structure. In these reflections it is important to understand how childhood is constructed and experienced, but also to consider the impacts of political economic conditions on children's lives and in childhood in general considering the policies that affect them. As Prout argues '... there are vast disparities in the social and economic conditions of children's (and adults') lives around the globe and these are a consequence of the workings of the global economy' (2005: 17-18). The consequences that arose from this 'global economy' have been significant in the Portuguese children's lives and we believe it is

fundamental to reflect about the ongoing structuring of childhood through this global culture/ideology and the concrete implications that they have in children's lives conditions. The aim of this paper is to reflect about the ways in which economic crisis affecting Portuguese population in general has been affecting children in particular. We will focus on two dimensions: first we will focus on general data about the ongoing policies that have been reducing social rights, increasing poverty rates and threatening basic rights such as educational and health rights, trying to show their impact on children's lives. Second we will discuss some data collected with children in order to try to characterize from their points of view the meanings and impacts of the crisis in their lives.

## Turning away from the Public Sector in Children's Out-of-Home Care: Social Work Practices

**Cath Larkins**, University of Central Lancashire | [CLarkins@uclan.ac.uk](mailto:CLarkins@uclan.ac.uk)

**Nicky Stanley**, University of Central Lancashire | [NStanley@uclan.ac.uk](mailto:NStanley@uclan.ac.uk)

This paper reports on the evaluation of an English pilot which moved statutory social work support for children and young people in out-of-home care from the public sector to

social work practices (SWPs) in the private or independent sector. This experiment was, in part, inspired by the premise that workers with a sense of ownership and direction in a flatter

decision making structure would improve the quality of service received by children. While most SWPs were perceived to be accessible and user-friendly organisations, children's accounts showed no differences between pilots and control sites in terms of the quality of their relationships with workers or workers' accessibility and responsiveness. Perceptions of SWP staff's decision-making were mixed. SWP staff morale was generally found to be high, reflecting an emphasis on staff supervision. However, this was offset by slightly higher job insecurity reflecting the precariousness of employment in the independent sector. Staff retention varied between SWPs; although children and young

people in the pilots were more likely to retain their key worker than those in control sites, they experienced disruption when moving in and out of SWPs. SWPs did not achieve financial independence from local government commissioners with only one assuming full responsibility for managing the placement budget. The study highlighted the value of time spent in building relationships and shows the interdependence of public and private sectors. As small organisations, most of the SWPs succeeded in offering an accessible and personalised service, and public services should consider reorganising to achieve similar outcomes.

## 05RN04 - Discourses and Social Constructions of Childhood

Chair(s): Maarit Alasuutari (Department of Education - University of Jyväskylä)

### Children and Childhood: social representations from future teachers

**Gabriela Trevisan**, University of Minho | [gabriela.trevisan@gmail.com](mailto:gabriela.trevisan@gmail.com)

**Natália Fernandes**, University of Minho | [natfs@ie.uminho.pt](mailto:natfs@ie.uminho.pt)

**Catarina Tomás**, Instituto Politécnico de Lisboa | [ctomas@eselx.ipl.pt](mailto:ctomas@eselx.ipl.pt)

**Emília Vilarinho**, Universidade do Minho | [evilarinho@ie.uminho.pt](mailto:evilarinho@ie.uminho.pt)

**Manuela Duarte Rosa**, Instituto Politécnico de Lisboa | [manueladr@eselx.ipl.pt](mailto:manueladr@eselx.ipl.pt)

**Irene Cortesão**, Escola Superior de Educação de Paula Frassinetti | [irenecortesao@esepf.pt](mailto:irenecortesao@esepf.pt)

The ways through which we think and learn how to think about children and childhood have important consequences in how relationships and practices are built with them. Teacher's training is an interesting field to analyze and confront future teacher's preconceptions about children and childhood in order to develop future practices that are more respectful with children. Schools are currently oriented towards market guidelines and modernization trends in order to reach a highly organized order with homogeneous goals. Visible trends can be seen in early childhood schooling and children's limitation to their *métier de élevé*. The Sociology of Childhood

has been debating these premises by arguing the need of rethinking school as an effective space of citizenships as well a place of affirmation for the dimensions of the *métier d'enfant*. When the sociology of childhood defends the idea of children as social actors with rights helps us to think about the preliminary results of a research developed with students attending bachelor's and master degrees in basic education, in order (i) to characterize their images about children and childhood; (ii) to understanding how in two Colleges of Higher Education (public and private) and in a public university in Portugal are training future children's teachers in what

concerns their knowledge about children and childhood; and, (iii) to (re) rethink the curriculum through the introduction or development of non-hegemonic images of

childhood, in order to improve children's rights in educational institutions and in society in general

## Documentality and Childhood

Maarit Alasuutari, University of Jyväskylä | [maarit.alasuutari@jyu.fi](mailto:maarit.alasuutari@jyu.fi)

Documentality refers to the idea that documents are constitutive of social life. They are seen as actors that produce social facts. The concept relates also to the Foucauldian thinking about governance and governmentality. In welfare services and education, the interest in different kinds of client/child documentation seems to be increasing. The idea of documentality implies that the documentation practices can not be

considered just as "neutral" tools, for example, to voice the child or collect information for the child's benefit. Instead, they construct their object- child and childhood - and position it within specific power relations. The paper considers the application of the concept of documentality in research on childhood by presenting examples from empirical studies in early childhood education.

## Laboratories of Childhood. Observation and Documentation in Historical Perspective

Florian Esser, University of Hildesheim | [florian.esser@uni-hildesheim.de](mailto:florian.esser@uni-hildesheim.de)

The observation of children and the documentation of their development recently became a crucial research topic, what is mainly due to their rising importance in the field of ECEC. But historically these practices may be traced back at least until the end of the 18th century, when bourgeois fathers started to observe their own children in every day life and noted the results in diaries that were supposed to reveal the 'nature' of child development. Within the next two hundred years the practices of observation and documentation spread from the family to school, medicine, youth welfare and, now, ECEC. The practices changed within these differing contexts but also themselves contributed to shaping the emerging institutions of childhood, they were deployed in. That is why the history of the practices of

observation and documentation is always a history of the institutions of childhood and vice versa. Following Science and Technology Studies (STS) the paper states that those institutions worked as laboratories of childhood in which certain children were made up by observing and documenting their development. I will 'follow' historically the institutions of the family, the school and ECEC in order to show, how these practices were adopted and how they changed by fulfilling different purposes in differing contexts and times. The historical analysis of the observation and documentation of children may also show how development became a key feature of modern childhood by getting visible, measurable and rateable in an 'empirical' sense.

## Drawing the "Early Childhood Education and Care - Child"? - Examining Learning Stories as an Inscription and Construction Device

**Gesine Nebe**, Martin Luther Universität Halle, Wittenberg | [gesine.nebe@paedagogik.uni-halle.de](mailto:gesine.nebe@paedagogik.uni-halle.de)

**Sandra Koch**, Martin Luther Universität Halle Wittenberg | [sandra.koch@paedagogik.uni-halle.de](mailto:sandra.koch@paedagogik.uni-halle.de)

Following the implementation of early childhood curricula the continuous and concerted observation and documentation of what children do got highly relevant in the field of ECEC in Germany. In the curricula observing and documenting are referred to as "the most important tool (...) for pedagogues", as the "basis for any purposeful education" and as the "pedagogues' main task as well as an indispensable instrument when aiming to promote and chaperone children's 'Bildung'". The phenomenon we would like to shed some light on is the obliged task to document children's activities resp. learning in childcare centres. We will be focussing on one of the methods of observation and documentation, which have been developed and widely implemented, that is: on "Learning Stories"/Bildungs-und Lerngeschichten.

Drawing on some examples we are going to question how knowledge about the child is being produced, translated and transformed in the process of writing a learning story. In doing so we wish to bring documentation into focus as a practice of 'constituting the child' and of 'child staging'. Drawing on Bruno Latour we perceive any of those documents as 'inscriptions' and, consequently, we perceive observation and documentation methods in ECEC as what can be called the inscription devices of the 'child of early childhood education and care'. The key question we will discuss is: (how) does the (obliged) production of documents about the child and hence the obligation "to leave traces" (Ferraris/Davies, 2012) possibly influence early childhood education?

## Social Risks or Investments in the Future? An Analysis of the Parliamentary Debate on (Poor) Families with Children in Finland

**Mikael Nygård**, Åbo Akademi University | [mikael.nygard@abo.fi](mailto:mikael.nygard@abo.fi)

**Janne Autto**, University of Lapland | [janne.autto@ulapland.fi](mailto:janne.autto@ulapland.fi)

As a member of the Nordic welfare model, Finland has been acknowledged internationally for its encompassing and empowering family policies. During the last decade, however, concerns for the overall well-being and economic situation of families with children have received an increasingly prominent position within the Finnish political debate. Allegedly, high and persistent levels of unemployment as well as systematic cutbacks in family-policy benefits have undermined the economic security of many families, notably single-parent and multi-child families.

Internationally, the debate on vulnerable families and children has taken two major traits; either they have been constructed as risks or they have been seen as object for human capital investments. Whilst the former have advocated 'workfare' measures that seek to activate parents and promote a 'here-and-now' redistribution, the latter has focussed on policy measures that seek to enhance the future human capital of children, and hence to promote a life-cycle redistribution. Our research explores the ways that (poor) families with children have been portrayed in the

Finnish political discourse during 2010s by analysing three parliamentary interpellation debates on the situation of families with children. More specifically, the aim is to assess whether families with children have been constructed mainly as risks or investment targets, and to scrutinise what kinds of policy

recommendations that have been presented on the basis of these constructions. We argue that families with children were largely seen as risk elements in need of quick and targeted poverty alleviation although the results also show a consolidation of investment ideas.

## **a05RN04 - Discourses and Social Construction of Childhood (2)**

Chair(s): Randi D. Nilsen (Norwegian Centre for Child Research NTNU)

### **Dirty Pretty Lines: The Construction of Feminine among Girls of a Public School in Recife, Pernambuco, Brazil**

Paula N. Cisneiros, Universidade Federal de Pernambuco | [paulanc@gmail.com](mailto:paulanc@gmail.com)

This work intends to analyze the construction of the idea of the feminine in the imaginary of girls between nine and twelve years old from a public school in Recife, Pernambuco, northeast of Brazil. Through essays made for a contest at school to celebrate the International Women's Day (March 8th), it was possible to obtain records of the thoughts the girls had. They were also being observed by the researcher on their everyday lives at school. A clear repetition of the social dynamics of Brazilian popular classes has been observed, such as thoughts essentially imported from sexist practices that led to an objectification of the female body and the establishment of a place for the woman,

reproduced and interpreted by the girls through their speeches. The choice of analyzing female essays is justified by the reflexivity, once the girls will become women in a few years. The matter was enlightened by specific literature about childhood, Brazilian families, family violence and feminist theories, aiming to obtain a better reading of the construction of the infant thought. Reiterating the idea there is a path to be followed by the social sciences about/with children, the proposed discussion emerges to highlight the perspective of the children about the cultural phenomena, based on the idea that they are also culture producers.

### **Parent and Professional Encounters in Norway: Healthy and Proper Children?**

Randi D. Nilsen, Norwegian University of Science and Technology | [Randi.Nilsen@svt.ntnu.no](mailto:Randi.Nilsen@svt.ntnu.no)

Karianne Franck, Norwegian University of Science and Technology | [kariannefranck@hotmail.com](mailto:kariannefranck@hotmail.com)

Terese Wilhelmsen, Norwegian University of Science and Technology | [terese\\_wilhelmsen@hotmail.com](mailto:terese_wilhelmsen@hotmail.com)

Professionals play a major role in monitoring and identifying children's development and conduct. In policy and practice of day-care

centers (Kindergartens) one can observe a heightening of such practices. This relies on some implicit normativities of what a child

should do and become. Children are increasingly constructed as at risk and childhood viewed as a phase of investment. Further, parents are positioned in various ways in relation to promotion of their child's health and development. We will explore experiences of both parents and professionals and enlighten encounters between them. We focus on how surveillance and monitoring of children's minds and bodies involve parents and experiences of surveillance and informal evaluations. Framed by health discourses this can be observed e.g. in food and meal practices as well as talk about possible social behavior disorders. Diverse understandings of normality and diversity are at stake. We will present an

analysis in which we explore the sketched topic by using qualitative data from two adjunct studies within the project Children with (dis)ability. Practices and values in Norwegian day-care centers: Fieldwork and interviews with staff-members and interviews with parents. We ascribe to central hallmarks within Sociology of childhood, such as the necessity of viewing children as socially constructed in diverse ways. This asks for parent's voices as children and childhood are generationally constructed, and additionally power relations between adults in different positions are at play. Further, we emphasize the importance of contextualizing and doing critical analysis.

## **Longing, Love or Attachment: How the Use of Psychological Terminology can Strengthen the Position as Adult Carer for Foster Children**

Ida C. N. Hammen, University of Roskilde, RUC | [hammen@ruc.dk](mailto:hammen@ruc.dk)

The dominant research perspective on foster children is based in psychology and psychological universal measures of children's development. Although some psychological sub-disciplines have taken another stand (for example the constructionists) the perspective of Developmental Psychology is still the dominant denominator, not only in research on children-at-risk, but also as a 'folk-science'. Psychological terms have become a part of a general 'lingo' used by most foster parents and professionals when they describe different situations in their everyday lives with and around foster children. My interview data show how foster parents describe a number of considerations and feelings (big as small) through psychological terminology. For example, a foster parent explains 'how the 'development of the foster child went to a stand-still' (when he was describing a difficult

separation from a foster child that was removed from him to another foster family). Or foster parents use the phrase 'attachment' to explain why it is good or not good for a specific child to stay or not stay in the foster home ('he had developed attachment to us', 'she had not developed attachment to us'). The biological parents, on the other hand, do not use many psychological phrases. They talk emotionally – how they long for the child, how they want the child to stay and how they love the child. Through the use of psychological phrasing the foster parents strengthen their position as professionals and they demonstrate that they can manage their feelings in an adult and professional way. The parents' use of an emotional language enhances, on the other hand, the risk of them being seen as emotional labile and not in control, while around their children.

## **"Dumb Bodies" and "Informing Bodies": Children's Skills in Therapeutic Relation**

Anna Rosa Favretto, University of Eastern Piedmont | [favretto@asie.it](mailto:favretto@asie.it)

Francesca Zaltron, University of Eastern Piedmont | [francesca.zaltron@asie.it](mailto:francesca.zaltron@asie.it)

The issue of the relation between childhood, health and care practices has been mainly investigated focussing more on the child as a "body" on which we are acting and we are taking care of, rather than as a person who owns and negotiates his/her own skills by actively participating in the co-construction of the meaning and practices affecting health, the disease management and the therapeutic relation with the subjects involved in these interactive contexts. This research – carried out in 2012 in two Piedmontese territories with qualitative instruments and involving boys and girls, their parents, their teachers and pediatricians – was focussed on the skills that children use during their daily life in relation to the definition and management of their

wellness/sickness and health / disease. What do children "feel" they know? What skills do they feel they can bear? And what are the attitudes and behaviours of adults concerning these skills of theirs? Research has made it clear that children can provide information, in a socially competent way, about their own and others' health and disease. However, in the therapeutic relation as well as in family and school care relations, children seem to be regarded by adults as mere "dumb bodies" to be disclosed, or through intermediate gradation, as "subjects to listen to", recognized as potentially active and capable not so much of contributing their point of view, as in consideration of the adaptability and compliance ability.

## **06RN04 - Children as Victims, Witnesses and Perpetrators of Crime and Violence**

Chair(s): Jackie Turton (Department of Sociology - University of Essex)

### **Cobwebs, Clusters, Circles of Trust... Can Group-Related Factors Help Prevent Bullying?**

Agata Komendant-Brodowska, Warsaw University | [agatakom@gmail.com](mailto:agatakom@gmail.com)

The aim of the presentation is to analyse group-factors related to bullying, with the use of models from the scope of rational choice theory (RCT). I analyse social mechanisms that enable the problem to develop in classroom environment. Bullying, a specific type of school violence, is a group phenomenon that involves bullies, victims and the bystanders. Bullies act proactively, their behaviour is planned, "cold-blooded" and aimed at building social status in the group. The suffering of the victims is not their main goal – bullies seek approval from

their peer group and they often get it. Bystanders often support the bully and rarely defend the victim, and in majority they remain passive. Factors that influence bystanders' decisions include direct relations to the bully and the victim and conformity to the norms, presented by the majority or within a subgroup. I analyse how conformity in social networks can help bullies achieve their goal. I use game-theoretical approach and treat schoolchildren as rational actors, maximising their utility functions. The process is modelled as a

sequential game played by structurally embedded players. I use computer simulations to show how group factors, both structural (e.g. network density) and non-structural (e.g. conformity) influence the development of the problem. Results show that certain network characteristics may prevent the problem, while

other make the classroom “vulnerable”. Analyses may be applied to improve prevention programmes. Examples of prevention programmes that target the structure of relations in the classroom will be presented as an illustration.

## Victims or Villains: Modern Perceptions of Children

Jackie Turton, University of Essex | [turtje@essex.ac.uk](mailto:turtje@essex.ac.uk)

Jamie Bulger was a young two-year-old when murdered in Liverpool England by two ten-year-old boys in 1993. Feelings still run high and twenty years after the crime the media is revisiting the events. Early this year Jimmy Saville was ‘outed’ by the media as a prolific paedophile. The child victims had been silenced by his powerful position. Arguably the problems of understanding the death of Jamie

Bulger and the Jimmy Saville case reinforce the dilemmas we have when listening, hearing and understanding children as victims, or indeed as offenders. This paper will use these high profile examples to review some of the media contribution to public perceptions of children and childhood. It will also consider the implications of this media implosion for children who have been victims of abuse.

## Agency and Abuse

Florian Esser, University of Hildesheim | [florian.esser@uni-hildesheim.de](mailto:florian.esser@uni-hildesheim.de)

Agency is one of the core concepts of the (new) childhood studies. It became a general claim to acknowledge the active contribution of children to their social worlds. But agency analytically seems to come to an end when children become victims of violence. In this case competing notions of childhood as a time of innocence often prevail. They put emphasis on children’s vulnerability, weakness and neediness of protection. This is especially true when sexual abuse is addressed as an issue. The paper challenges such notions of children as passive victims by suggesting an agency perspective on violence like it already works as a framework for the author’s recent empirical research on sexual abuse of children in child care and child and youth work. The approach is

about agency related to those who experience sexual violence and have to cope with it, but also related to children as potential perpetrators in peer violence. Thus an agency perspective is able to question the image of children as passive objects of adults’ power. But adopted to the field of (sexual) violence, questions of power and powerlessness may not be disregarded and have to be addressed respective the generational order and peer cultures. For this purpose agency may not simply be taken as a given human property. In line with relational social theory like it was elaborated by Stephan Fuchs, Harrison White and others the paper pleads for an approach that addresses agency as an effect of social relations.

## Where is the Child in Child Maltreatment? Professional Proceedings beyond Victims

Lars Alberth, University of Wuppertal | [alberth@uni-wuppertal.de](mailto:alberth@uni-wuppertal.de)

Doris Bühler-Niederberger, University of Wuppertal | [buehler@uni-wuppertal.de](mailto:buehler@uni-wuppertal.de)

Steffen Eisentraut, University of Wuppertal | [eisentraut@uni-wuppertal.de](mailto:eisentraut@uni-wuppertal.de)

The paper presents data of a recently finished research project on professional interventions in cases of (suspected) child maltreatment and neglect (funded by the German Research Foundation/DFG). More than hundred case centred interviews with responsible professionals (social workers, physicians, psychologists, midwives) as well as participant observations at case conferences in child protection services were conducted in five communities (cities and rural districts) in Germany. We assembled a data set, consisting

of 93 cases of suspected child maltreatment which were delineated at length. The overall aim was to reconstruct the professional triage processes in cases of children younger than six years old. We focussed on the professional knowledge drafted, the proposed measures, the actual decisions made and the importance of the child in this process. Our results show that children are generally excluded from child protection proceedings and their concrete voices are ignored. Therefore the rules and ways of this exclusion are analysed.

## b06RN04 - Children as Victims, Witnesses and Representations of Crime and Violence (3)

Chair(s): Agata Komendant-Brodowska (Institute of Sociology Warsaw University)

### Child Sexual Abuse and Child Protection Law

Ayça Demir Gürdal, Bülent Ecevit University, Zonguldak | [gurdalayca@gmail.com](mailto:gurdalayca@gmail.com)

The actors implementing the Child Protection Law No.5395, which came into force in 2005, are the adults such as psychologists, social workers, prosecutors, judges and forensic experts in Turkey. The research contains the views of the law as the basis of these actors. Law, who need protection or the protection of children driven to crime, aimed at guaranteeing the rights and well-being regulates the principles and procedures. It is aimed to determine the status of the law whether taking into consideration the rights and the efficacy of children based upon the problems faced by law enforcement officers, including their views on the process of the law.

Within the framework of the Law on Child Protection, sexually abused children are based on the respective applications in this research. It is discussed to whether take care of the benefits and rights of children who are sexually abused adequately within the scope of law enforcement officers. The research is realized on the basis of interviews with officials who work in Family Courts and Provincial Directorate of Family and Social Policies in Zonguldak Province (West Blacksea), in which the cases of child sexual abuse are very common in Turkey and about a rapid increase in cases observed on the last 10 years.

## Downward Spiral? Bullying, Rejection and Social Capital in the Classroom.

Agata Komendant-Brodowska, Warsaw University | [agatakom@gmail.com](mailto:agatakom@gmail.com)

The aim of the presentation is to analyse relational features of victimised children and their school environment, in scope of the results of a study carried in 2011. Bullying is a specific type of school violence. Bullies act proactively, their behaviour is planned and "cold-blooded". The suffering of the victims is not their main goal – they seek approval from their peer group and they often get it. Bullies can be treated as rational actors, they choose their victim in such a manner that allows them to minimise risks: of being defeated by the victim him/herself, of peer intervention and of intervention of an adult. The results of a survey carried in 2011 (representative sample of Polish students, aged 10-19, n=3169) are analysed from this perspective. An indicator of victimisation was constructed on the basis of

questions about experiencing different types of violence, taking in account the frequency of these acts. Bullied children are not only less popular and feel more rejected by their peers than other children but also they can rarely count on the support of their parents, other family members, teachers and adults in general. In other words, bullies thrive where social capital fails. As various studies show, when the process of bullying continues, victims become more rejected by their peers. So, they seem to be on a downward spiral, heading for social isolation and depression. The results of the study indicate that creating more supportive environment can make it much more difficult for a potential bully to find his target.

## Positive Peer Relations and Delinquency among Adolescents

Halime Unal, Yildirim Beyazıt University Faculty of Human and Society, Ankara | [unalhalime@hotmail.com](mailto:unalhalime@hotmail.com)

Existing research on delinquency has pointed out the peer influence. Numerous studies have emphasized the relationship between adolescents and delinquent peers. However, the significance of non-delinquent peers in the life of adolescents has been neglected or forgotten. It is important to keep in mind that peer relations have not only encouraged the delinquent involvement but also protected against delinquency. In this paper, I argue that positive peer relationships have played as a possible protective factor for adolescents against delinquency. Positive peer relations may afford adolescent more opportunities for the confirming behavior and the mitigation of negative delinquent peer influences. At the

same time, non-delinquent peers are more likely to transform the negative messages about deviant behaviors to adolescents. To test the influence of positive peer association on delinquency, the data have been collected from a total of 3742 students from 11 high schools in Izmir which were drawn through stratified cluster sampling techniques. The mean age of the sample has been 16.8 year and the percentage of male students has been 52. Self-report instruments used in previous studies have been mainly adapted to measure peer relations and various delinquent involvements. Due to censored nature of dependent variable (delinquent behaviors), Tobit regression techniques have been used.

## **"And so I Search for my Lost Life. Where did it go?" – Sexuality, Abuse and Violence in Children's Homes 1950-1980. A New Political Discourse.**

Andrea Christine Smioski, University of Vienna | [andrea.smioski@wisdom.at](mailto:andrea.smioski@wisdom.at)

Only in recent years it has become possible to address the crimes that have been committed in the name of education and welfare in state-run children's homes, taking custody of neglected children from deprived or lone-mother families from 1950 until 1980. Sexual abuse, violent punishment and psychological degradation served as instruments of total education (Goffman). Contrary to the official purpose of Home education, people have been weakened and broken for life. For the first time, former victims talk about their childhood in these homes now. They tell of imprisonment, censorship, prohibition of contact with their families, physical pain, sexual and sexualised violence, psychological injuries and death fears, coercion to hard labour, etc. Many lost self-esteem and confidence; they are still

plagued by loneliness, depression and suicidal thoughts. Because their parents couldn't, professional educators should take over their education. But one out of two educators had no formal training. And academic and professional staff? Lawyers and psychologists of the youth welfare service, psychiatrists, curative educators, judges, Home directors, social workers and care takers supplied the Homes with children, without seriously pursuing the rumours of violence. This paper presents the results of a biographical interview project, run from 2010 until 2012. The pact of silence about the violence in children's homes shall be broken. The unspoken urges the story. It is painful to hear, but there is no way around it.

## **Different Faces of Turkish Juvenile Justice System**

Halime Unal, Yıldırım Beyazıt University Faculty of Human and Society, Ankara | [unalhalime@hotmail.com](mailto:unalhalime@hotmail.com)

In Turkey, Child Protection Law which was accepted in 2005 has required major changes in the juvenile justice system. The purpose of the new justice system is to emphasize rehabilitation rather than punishment. However, there is a confliction between the purpose and the practice. Juveniles have been punished in three different courts. First type is the juvenile court focusing on the less serious offences. Second one is the juvenile aggravated criminal court focusing on serious crimes. Finally, juvenile offenders are transferred to adult criminal court for specific offenses. Juvenile court has relied on offender-based evaluative criteria and pursued to rehabilitation. However, juvenile offenders who

are punished in juvenile aggravated criminal court and adult criminal court are under the risk of getting prison sentence. Because of these different courts, various questions come to mind. Has the justice system itself created inequality among the juvenile offenders by labeling some of them as serious criminals against whom society must be protected? Why do some of the offenders deserve to be protected then the others? Is the juvenile court full-filling its rehabilitation prophecy? Therefore, the aim of this paper is to explore the Turkish juvenile justice system. Namely, the goal here is to answer these kinds of questions related to justice system in order to understand the new policy changes.

## 07RN04 - Children and New Social Media

Chair(s): Vebjørng Tingstad (Norwegian Centre for Child Research - Norwegian University of Science and Technology)

### The Social Impact of New Media: Children's Exposure to Risky Online Activities

Ionela-Maria Răcățău, Babes-Bolyai University, Cluj-Napoca | [ionela\\_racatau@yahoo.com](mailto:ionela_racatau@yahoo.com)

New media tend to have new audiences, generally made out of youngsters whose way of connecting with each other has altered significantly over the last years. As internet use is attractive to more and younger children, there is an increasing need for research dealing with the positive, as well as the negative experiences that young users are encountering, and with their ways of coping with these experiences. Even though children nowadays are very skilled in using new technologies, especially the internet, and are perceived as being highly creative and innovative in terms of communication and education, when it comes to risks they are considered to be very vulnerable to the harmful

contents and contacts provided by the Internet. This study aims to offer some descriptive insights of the Internet use and its impact on children. Moreover, using a cross-national database, this paper tries to identify the extent to which children encounter multiple types of online risks. It also explores whether the psychological difficulties, the parental mediation and the digital skills influence the range and type of online risks that young users face. Next to information regarding the use of Internet and how fast it enters into children's daily lives, the findings lead to a new perspective related to the negative experiences that characterize children's online activities.

### Exploring and Theorizing Children's Online Helplines

Vebjørng Tingstad, Norwegian University of Science and Technology | [vebjorg.tingstad@svt.ntnu.no](mailto:vebjorg.tingstad@svt.ntnu.no)

Exploring and Theorizing Children's Online Helplines Giving advice and talking with children online seem to escalate in great numbers across various countries. In Norway, The Red Cross, for instance, reports that children, to an increasing degree, have moved from telephone calls to online devices in order to talk with people and receive support for various worries and problem they may have. This paper aims to present a study in Norway, where one specific helpline is evaluated from the perspectives of children themselves. Questions that are asked are related to how children experience the counselors and support they receive when they have taken the

first step to start communicating online with people that work voluntarily in an NGO organisation. What kinds of questions are posed? What do the counselors reply and in what ways are they constructing their authority as counselors? How are children positioning themselves and how are they positioned with agency, participation and responsibility in these kinds of 'talk'? Children's help lines are supposed to give insights into a broad range of social and cultural dimensions of modern societies, from which it will be possible to elaborate and discuss 'up-to-date' empirical material and develop theoretical contributions to the social study of children and childhood.

## Gender Divides in Children's Internet Use

Ana Nunes de Almeida, University of Lisbon | [ana@ics.ul.pt](mailto:ana@ics.ul.pt)

Ana Delicado, University of Lisbon | [ana.delicado@ics.ul.pt](mailto:ana.delicado@ics.ul.pt)

Nuno Almeida Alves, Lisbon University Institute | [nalmeidaalves@iscite.pt](mailto:nalmeidaalves@iscite.pt)

Diana Carvalho, University of Lisbon | [diana.carvalho@ics.ul.pt](mailto:diana.carvalho@ics.ul.pt)

Children's access and appropriation of internet is an impressive feature of contemporary societies. New media and childhood conditions come together in particular arrangements which contribute to blur traditional and sharp frontiers between "virtual" and "real" world, "private" and "public" space, "instrumental" and "expressive" roles. However, this intense, universal process is not simply a one size fits-all formula: traditional social divides introduce diversity and heterogeneity that undermines essentialist or deterministic views both of technology and childhood. Gender is one of the crucial variables at stake when discussing digital diversity, so the one selected to structure our presentation. How do children, girls and boys, perceive gender differences in the modalities of internet use at home? How are these differences reflected in their daily practices and routines in front of the screen?

How do they shape and differentiate their "digital playgrounds"? These questions inspire our approach, based on an undergoing research project at the Institute of Social Sciences at the University of Lisbon (funded by Fundação Gulbenkian). Giving voice to children, data was collected in three distinct methodological stages: a quantitative and extensive approach, with a survey of 3049 children; a qualitative and comprehensive approach, comprising 158 interviews; an in-depth, ethnographic-oriented approach, including observation, collection of visual material of their domestic settings (photos), favourite activities on the internet (print screens) and focus group discussions. Gender diversity on children's engagements with the internet is addressed based on the data collected through these distinct methodological instruments

## 08RN04 - Children and Migration

Chair(s): Loyal Wiltgren (Department of Thematic Studies - Linköping University)

### Preparing Refugee Children for Resettlement- A Study about Children's Cultural Orientation Programs in Kenya and Sudan.

Mehk Muftee, Linköping University | [mehk.muftee@liu.se](mailto:mehk.muftee@liu.se)

The current study is based on Cultural Orientation Programs (COP's) that were held in Sudan and Kenya in 2011. COP's are held by the Swedish Migration Board, for refugees who are going through a resettlement process. These refugees have been granted Swedish permanent residence and are about to move to Sweden. In 2011, two programs were held in

Kenya and Sudan for Eritrean and Somali refugees. The study is based on participant observations of the special children's programs that were video recorded. The material for this study is based on, conversations between the children and Swedish COP representatives, pictures and movies that were shown to the children during

the programs and the more informal conversations held with the children during the observations. The central aims have been to explore, in what ways, the aims of the COP's are realized, during the actual programs. A second aim has been to look at how and what notions of Sweden are being manifested? What kind of future childhood is being depicted for these refugee children, who have never been to Sweden? The study takes on a critical perspective, and makes use of discourse analysis, in order to explore what kinds of

notions of the nation state Sweden are being highlighted within the context of COP, and how the children are being prepared for their journey ahead. The study shows how the notion of a happy, comfortable childhood is depicted. However, there also seem to be other topics such as multiculturalism, religion etc. that are depicted in more ambivalent ways. It thus explores the ambivalence of presenting a nation state and its culture on one hand, while also wishing to welcome the children, by presenting Sweden as an open society.

## Creating Ethnic Identity Through Verbal Duels

Layal Wiltgren, Linköping University | [layal.wiltgren@liu.se](mailto:layal.wiltgren@liu.se)

This presentation focuses on how children with minority ethnic backgrounds use their own and other's ethnicities in verbal duels during their everyday interactions. The tendencies are to praise one's own ethnic background while challenging the social standing of other's ethnicities. When challenged, the ideal is to stand up for yourself and your ethnic background by returning a measure of verbal abuse. The implicit rule is to be unyieldingly proud of one's background, and taking umbrage is considered immature. Though teachers react negatively, the children frequently engage in these mutual challenges. The verbal duels often carry an undertone of humor and the goal is to elicit a reaction, entertain and put a dollop of color into an

otherwise gray school day. While the verbal duels can create friction amongst the children, it also contributes to group cohesion by showing that everyone has a background that is worth standing up for and being proud of. The duels must be understood from a larger social perspective where ethnic minority affiliations seldom carry privileges. Thus the verbal duels prepare children for the receptions they're likely to receive in a society which consider them to be deviant from the norm. This paper will bring up aspects of children's agency, negotiations and strategies in relation to ethnicity in everyday situations. The empiric material is based on a yearlong, ethnographic fieldwork at a junior high school in a multi-ethnic area in Sweden.

## The Discursive Constructions of Cultural Identity. The Perspective of Migrant Children.

Sara Amadasi, University of Padua | [samadasi@yahoo.it](mailto:samadasi@yahoo.it)

In the last years, the issue of the inclusion of a high number of migrant students in Italian schools has become a relevant concern for institutions and childhood studies. The fact that some of these students keep ties with their origin countries through familiar language, or temporal return experiences to their family's origin country, has constituted a challenge for

Italian schools. Studies concerning children and migration have however privileged the issue of second-generation's integration in multicultural societies (Baraldi, 2010), rarely focusing on children's voices and the relationships they maintain with their parents' countries. On the other side, works that focus on migrant children's cultural adjustment, as

well as dominant discourses inside schools, construct migrant children as subjects stuck amongst cultures, forced to choose a cultural identity to adhere to. This perspective emerges from a reified and essentialised idea of culture as well as identity. Recently the topic of children as “shifting actors” – able to move not only between different geographical areas but also amongst different social roles associated with childhood in particular places (Zeitlyn, Mand 2012) – draws the attention of some academic studies. Using the perspective of

culture and identity as discursive constructions, this work aims to investigate, how children living place polygamies (Beck 1999), due to experiences of temporary return to their parents' countries, construct the idea of cultural belonging, what discursive constructions concerning their cultural identities they produce in the interaction, and how they position themselves in their narratives on their experiences of mobility between different countries.

## **a08RN04 - Children and Migration (2)**

### **The Child and Everyday Life in Asylum Centres**

Ullamaija Seppälä, University of Helsinki | [ullamaija.seppala@helsinki.fi](mailto:ullamaija.seppala@helsinki.fi)

Approximately 3000 asylum seekers enter Finland annually. Asylum centres provide these individuals with necessary basic services for the duration of the asylum process. Many of the incomers are children and families. Residing in asylum centres is always temporary. This “temporariness”, however, constitutes a rather long period of time particularly in children’s lives. Therefore, it is not insignificant, how a child experiences this period of time and what form his or her life takes during the time. In my presentation I will discuss my research on children in asylum centres. Using ethnographic research method, I have gathered material in two different asylum centres between March and August 2012. I have observed children and discussed

with them as well as interviewed their families and employees. My primary material consists of field journals and interviews. The analysis stems from Dorothy Smith’s (2005) institutional ethnography. I aim to convey the conditions of everyday experiences that are created in the social interactions of everyday life, in everyday speech and actions as well as in institutional relations. I will discuss preliminary findings that relate to children’s everyday life. The themes I will discuss include the borders of everyday life and “normal” functions. The daily schedule of asylum centres creates certain predetermined frameworks in children’s lives. This is the “normal” everyday life that I aim to bring to attention.

### **Value/ing Children Differently? Migrant Children in Schools**

Dympna Devine, University College, Dublin | [dympna.devine@ucd.ie](mailto:dympna.devine@ucd.ie)

In this paper I frame the tensions between structure and agency in children’s everyday lives in terms of dilemmas around ‘value’ and

the ‘valuing’ of children and childhood(s) in schools. Drawing on Foucauldian analyses of power as both productive and capillary like, I

argue that schools are a central arena in the exercise of power encouraging children to 'act' upon themselves in particular ways. In neo-liberal contexts, such processes of subjectification become aligned with the concept of corporate citizens – value and worth derived from the capacity to produce, excel, self regulate as well as consume in an ever expanding marketplace. But we also need to be aware of the the dialectical inter-play between structure and agency in shaping actions and reactions in social contexts (Giddens 1984, Bourdieu 1990). I think then of schools as social spaces that comprise spheres of action.

These spheres of action for children involve negotiating tensions around 'governance', mis/recognition, in/visibility that are mediated by often contradictory discourses over the (added) value of children (and different groups of children) as well as the valuing of children and childhood in and of itself, in the wider society. The paper uses the exemplar of migrant children. It explores their valuing as well as perceptions of their 'added value' in the context of the increasing synoptic visibility of migrant children in global policy discourses and the often contradictory implementation of policies in local practice, especially in schools.

## Social Orphanhood in Latvia

Ilze Trapenciene, University of Latvia | [ilze.trapenciene@lza.lv](mailto:ilze.trapenciene@lza.lv)

The paper discusses the social orphanhood in Latvia during the last decade. Social orphan is a child of living parent but living separately from the parents. Social orphanhood is a term related to "diverse childhood" in terms of role of parental care and socialization of children. The author differentiates two subtypes of social orphanhood: first type is defined as long term residential care due to deprivation of parental rights (in orphanages and crises centres); the second type (Euro orphans) is related to long term geographical separation of children from parents who are economical migrants and have left their children behind. The author discusses similarities and differences between two subtypes of social orphanhood and

socialization of children in both subtypes of orphanhood. Burdie (1977) term of "symbolic violence" is discussed in relation with social orphanhood and upbringing of children, producing "systems of durable, transposable dispositions", structured functions predisposed to function as structuring structures, through which adolescents perceive and understand the social world, and which they acquire through experience and explicit socialization during childhood and adolescence. Paper is based on an ethnographical study of upbringing in residential care and "digital upbringing" in case of children left behind. Author identifies the "diverse childhood" in case of social orphanhood.

## 09RN04 - Child Poverty and Children's Work

Chair(s): Griet Roets (Department of Social Welfare Studies - Ghent University)

### Fall in and Fall Out of Poverty: an Empirical Analysis

Amélia Bastos, Technical University of Lisbon | [abastos@iseg.utl.pt](mailto:abastos@iseg.utl.pt)

This paper uses data from the Statistics on Income and Living Conditions to analyse child

poverty dynamics. Our aim is to investigate children's poverty trajectories. We analyse how

different sociodemographic and economic factors impact child poverty movements. The results obtained claim for social intervention, especially for children living in rural areas,

included in large families or with parents with low education levels and with non-qualified occupations.

## Routes Out of Poverty: Key Strategies of Children and Parents

Griet Roets, Ghent University | [Griet.Roets@UGent.be](mailto:Griet.Roets@UGent.be)

Tineke Schiettecat, Ghent University | [tineke.schiettecat@ugent.be](mailto:tineke.schiettecat@ugent.be)

Internationally, child poverty is a persistent social, multi-dimensional and intergenerational problem and constitutes an important subject of social work research. Social work research on child poverty mainly focuses on a children's rights perspective and the life world and agency of children. We argue that it is essential to problematize this dominant focus on the welfare rights of children in poverty situations if this implies a lack of attention for the welfare rights and agency of their parents. In order to identify the key mechanisms for families (consisting of both parents and children) to realize their

mobility out of poverty, we discuss insights of a current research project that aims to identify the diversity of strategies that are developed by parents and children to realize their mobility out of poverty, addressing key mechanisms throughout intergenerational dimensions of time. The research focuses on longitudinal aspects to gain more insight in transitions and key mechanisms, related to both material and immaterial aspects of poverty, in the retrospectively documented perspectives and strategies of both parents and children, that might vary in interesting ways.

## The Consequences of Child Poverty on Early Cognitive Development in a Dynamic Perspective

Oliver Klein, University of Mannheim | [Oliver.Klein@mzes.uni-mannheim.de](mailto:Oliver.Klein@mzes.uni-mannheim.de)

Stefanie Heyne, University of Mannheim | [sheyne@mzes.uni-mannheim.de](mailto:sheyne@mzes.uni-mannheim.de)

In recent years, rising child poverty is of growing concern in the public and political debate in Germany. It is argued that poverty during childhood is especially problematic since growing up poor gives children the worst starting conditions for a good development and successful live as an adult. Although some studies show a relationship between living conditions during childhood and later outcomes in life, it is not clear how this relationship works. This paper analyses the effects of childhood poverty on children's cognitive and language development and investigates under which circumstances a bad financial situation becomes problematic for the cognitive abilities of young children.

Specifically, we will focus on differential effects of poverty depending on its duration as well as its intensity. We will analyze whether only long spells of poverty matter or whether a short poverty experience also affects children's cognitive abilities negatively. Furthermore, we will analyze whether there is a specific threshold (e.g. the poverty line of 60 percent of the median income) leading to negative effects or whether there is a rather linear effect of low income on child development. For our analysis, we will use data from the German project "Preschool education and educational careers among migrant children". The dataset comprises approximately 1200 German and immigrant families with children aged 3 to 4

years. These families were followed up for 4 consecutive years, which gives us the opportunity to analyze the impact of poverty on the development of children during their

preschool years. The data structure allows us to use panel estimators to analyze the effect of poverty on cognitive outcomes in a dynamic perspective.

## **a09RN04 - Child Poverty and Children's Work (2)**

Chair(s): Fernanda Müller (School of Education - University of Brasília)

### **Care Home Children's Perspectives on their Families in Brazil**

Fernanda Müller, University of Brasília | [fernanda.muller@gmail.com](mailto:fernanda.muller@gmail.com)

Brazilian public homes are intended for children of up to 18 years of age who have been abused, neglected, placed at risk, or abandoned by their parents. This study considered as participants six children from public children's homes located in a city of Sao Paulo metropolitan area, Brazil, who still maintain contact with their biological families, and it investigates their views of the latter. An ethnographic approach was utilised in conjunction with photographs, video recordings, drawings and conversations. The collection of data took place in care homes over a period of 12 months. The research carried out demonstrates that deprived children develop alternative family dynamics, which are different from generally accepted practice. Although these dynamics are considered as risky by public authorities, the

children are nevertheless hopeful of returning to their family homes at some point in the future. While it is obviously not acceptable for children to live in extreme poverty, precarious and dangerous conditions, it is clear that current social policies in this area have failed, since the blame for these problems has simply been attributed to the parents. It is hoped that this research will help to shed light on an area which has received little attention to date, whilst countering negative ideas concerning general attitudes to the care of deprived children. The study also aims to contribute to the consolidation of studies of children's welfare in Brazil as a whole. It sets out results which aim to inform Brazilian public policies in order to guarantee improved standards in care homes, as well as increased support for families.

### **No Longer Willing or Able to Be Dependent: Children's Agency and Migration to the Streets of Accra**

Phillip A Mizen, University of Warwick | [P.A.Mizen@warwick.ac.uk](mailto:P.A.Mizen@warwick.ac.uk)

Yaw Ofosu-Kusi, University of Education, Winneba | [yawofosukusi@yahoo.co.uk](mailto:yawofosukusi@yahoo.co.uk)

This paper considers the agency of children moving to the streets of Accra, Ghana's capital city. A much used but largely unexamined concept, agency is nevertheless commonly deployed in childhood studies as a means to stress the capacity of children to choose to do

things. In the literature on street and working children, and a cognate area of study concerned with children's independent migration, this has involved accounts of children's agency made meaningful by reference to theories of rational choice or to

the normative force of childhood. It is our argument that both approaches leave unanswered important questions and to counter these omissions we draw upon the arguments of social realists and, in particular, the stress they place on vulnerability as the basis for human agency. We develop this argument further by reference to our research with street children. By drawing upon the children's accounts of departing their households and heading for Accra's streets, it is our contention that these children do frame

their departures as matters of individual choice and self-determination, and that in doing so they speak of a considerable capacity for action. Nevertheless, a deeper reading of their testimonies also points to the children's understandings of their own vulnerability. By examining what we see as their inability to be dependent upon family and kin, we stress the importance of the children's perceptions of their vulnerability, frailty and need as the basis for a fuller understanding of their agency in leaving their households.

## **Children's Voices: A Qualitative Study of Childhood Poverty in Turkey**

**Didem Gürses**, Yıldız Technical University | [didem.gurses@gmail.com](mailto:didem.gurses@gmail.com)

Turkey has been undergoing a process of fundamental economic, social and cultural transformations since 1980s. As a result of the neoliberal policies and the impact of financial crises, the 'segregation' and the 'polarisation' among the social segments of society have increased after the 1990s. 'New poverty' which is permanent and more visible especially in the cities, has come about. Being the most vulnerable group in society, children have been deeply affected by these developments. This paper is based on an ongoing research project which examines how children experience and perceive poverty in Istanbul, the metropolis of

Turkey. Adopting a child-centred approach the project aims to assess how children live poverty in their homes, in their schools and in their neighbourhoods. The project uses focus group discussions and in-depth interviews and tries to evaluate the material, social and emotional impacts that poverty creates on children. As the research project aims to make the voices of children 'heard', based on this research, the paper will be a first hand resource about children's perceptions about childhood poverty that currently exists in contemporary Turkey.

## **10RN04 - Children's Rights, Citizenship and Participation**

Chair(s): Daniel Stoecklin (Children's Rights Unit - University Institute Kurt Bösch)

### **"They Talk it all, it's all Mouth, and then they don't do it": Practices of Children and Young People's Participation in Australia, Germany and England**

**Ana Beaumont**, Macquarie University | [ana.beaumont@mq.edu.au](mailto:ana.beaumont@mq.edu.au)

There is a growing sense of frustration amongst children and young people who are experiencing social injustices and unresponsive political decision-making

processes. Most recently, we have witnessed the young Indignados in Spain and rioting in areas of England. As researchers attempting to understand the issues faced by children and

young people, we increasingly recognise the importance of dialogue. By engaging with children and young people's lived experiences, we can shed new light on their participation both with and within adult structures and practices. To this end, this paper describes findings from an international comparative study of children and young people participating as youth councillors. Youth councils represent the most common type of children's formal participation in local governance. The findings reveal both similarities and differences across the countries. For example, although youth councils are similarly organised, different cultural understandings of childhood and children's participation result in distinctive

practices and outcomes. Participants discussed their experiences of engaging with adults, as well as the meanings they ascribe to representative and substantive features of political participation. Furthermore, the study explores the various tactics youth councillors adopt in their struggle for recognition with adults. This study contributes to a growing interest in understanding children's experiences of participation, as well as exploring cross-cultural narratives and practices. Background: This bilingual PhD study is qualitative in design and uses a focus group methodology to interview youth councillors (aged 11-20) about their experiences and views on children's participation in lo

## **Pictures of Childhood – Agency and Categorization of Minors in Child Welfare**

**Timo Ackermann**, University of Hildesheim | [ackermann.timo@gmail.com](mailto:ackermann.timo@gmail.com)

**Pierrine Robin**, Université Paris Est Créteil | [pierrinerobin@yahoo.fr](mailto:pierrinerobin@yahoo.fr)

In analyzing ten records of child protection services ("Jugendamt") we were interested in the following three questions: (1.) How are children categorized? How can minors act and participate in processes of child protection decision making? (3.) How are categorizations related with constructions and possible forms of agency? We suggest following these three questions in our contribution. First we are going to discuss typical constellations of categorization. Such categorizations are used by social workers to describe the case and the minor actors. We want to demonstrate, that and how social workers are constructing children as (A) unknowns, (B) as objects of care (C) as victims of accidents or violence – and (D) as disturbing or discomforting actors. These constellations of categorization are developed using theoretical concepts of childhood and child abuse, but also through reconstruction of

research materials. Secondly our analysis shows how social workers are constructing agency for minors in documentary work. We are illustrating that social workers are mainly focusing on adult's worlds, perspectives and interests. Social Workers seem to act as collectors of information: They are sampling „objective“ information and try to relate them – similar to processes of court decision making, an metaphor social workers use themselves for their work. They are interested in positions of parents and other adults from related institutions. But they tend to forget children's perspectives. In this constellation it is difficult for minors to ensure, that their interests are seen in processes of decision making, concerning their own lives. In these processes, specific forms of interventions are needed (and also partially used) to enable par

## Children's Participation in Organized Leisure. Evolving Capacities or Evolving Agency ?

Daniel Stoecklin, University Institute Kurt Bösch, Sion | [daniel.stoecklin@iukb.ch](mailto:daniel.stoecklin@iukb.ch)

The link between children's rights and agency is not simple. Interviews with children involved in organized leisure activities in Switzerland and in France show that they barely use the narrative of children's rights to reflect about their participation in these projects. These empirical results stem from the use of a systemic and heuristic model of action (Stoecklin, 2012) reducing the bias of social desirability of responses. Observations made with this method show that children's active use of their rights depend on their evolving capacities (Lansdown, 2010) but also on their experience of interactions that are themselves rights-based. This suggests that agency is not possessed by individuals but is relational (Oswell, 2012) and therefore calls for a shift from measuring the levels of participation of individual children in specific projects to understanding the arrangements that make

agency fluctuate. The concept of evolving agency, to be observed in the long run, could shed light on non-linear evolutions, progressions and regressions, in children's participation to social life in general. The author explores notions and approaches useful to understand the dynamics of children's agency. Notions like recognition (Thomas, 2012) and interpretive reproduction (Corsaro, 2011) are conducive to understand how children's rights, as individual entitlements, are actually converted into capability sets (Biggeri et al., 2011). The paper invites to a theoretical integration acknowledging that the process of social transformation is being driven neither by collective forces nor by individual choices, but by the evolving dialogue among actors reflexively making sense of reality.

## Going To School To Develop Our Country: Ethiopian Schoolchildren's National Identities, Commitments and Obligations

Lydia E. Marshall, University of Warwick | [L.r.marshall@warwick.ac.uk](mailto:L.r.marshall@warwick.ac.uk)

This paper draws upon research exploring why children in Hawassa, Ethiopia attend primary school. Using ethnographic and participative methods, the research sought to go beyond not only orthodox human capital accounts of education, but also the "new paradigm" in childhood studies. Based on my research into decision-making, experiences and understandings of education and constraints on children's agency within the school system, I argue that the latter paradigm can overstate children's agency. This paper examines one feature of the findings arising from focus group discussions, individual interviews and child conferencing. Many children expressed that

they went to school to "help their country" or to "develop Ethiopia", by which they meant that their education would benefit Ethiopia by fostering both economic and political progress, and enhancing the nation's global reputation. This paper explores the notions of national identity, participation and citizenship that these children linked to their school careers. In doing this, I draw on the work of Sharon Stephens and others on children's national identities. I also revisit classic sociological studies of education as an institution of socialization, where children's choices and expectations are managed, and a generation of capable workers and obedient citizens cultivated.

## a10RN04 - Children's Rights, Citizenship and Participation (2)

Chair(s): Michele Poretti (Children's Rights Unit - University Institute Kurt Bösch IUKB)

### Reflections on a Children's Rights (from below) Based Methodology for Exploring the Impact of Poverty on Disabled Children.

**Cath larkins**, University of Central Lancashire | [CLarkins@uclan.ac.uk](mailto:CLarkins@uclan.ac.uk)

**Nigel Thomas**, University of Central Lancashire | [npthomas@uclan.ac.uk](mailto:npthomas@uclan.ac.uk)

**Bernie Carter**, University of Central Lancashire | [BCarter@uclan.ac.uk](mailto:BCarter@uclan.ac.uk)

**Dawn Judd**, University of Central Lancashire | [DBJudd@uclan.ac.uk](mailto:DBJudd@uclan.ac.uk)

**Jane Lloyd**, University of Central Lancashire | [JLloyd@uclan.ac.uk](mailto:JLloyd@uclan.ac.uk)

**Nicola Farrelly**, University of Central Lancashire | [NJFarrelly@uclan.ac.uk](mailto:NJFarrelly@uclan.ac.uk)

This paper reflects on a methodology developed to apply a Children's Rights Based to Approach (CRBA) to exploring the impact of poverty on the rights of disabled children. The study was conducted across three locations in England and involved 75 children and young people aged 5 to 24. Addressing the challenge of ensuring both inclusion and opportunities for children to influence the direction of the research, the project included three stages of fieldwork. Expert groups of children and young people with significant learning and communication difficulties or health care needs provided initial information about their lives through draw/ write, collage and video tour activities. A steering group of disabled young people reflected on the meaning of rights in their own lives using peer video interviewing and explored the stories and

pictures generated by members of the experts groups, to guide them in developing a questionnaire for interviews and focus group schedule. Disabled children and young people meeting in youth club settings participated in consultation groups and others undertook interviews with their family members. The expert and steering group, together with an adult advisory group identified key rights as a framework for analysis. The steering group then analysed the stories from the research using this framework and wrote a summary report. Key strategies for ensuring effective data generation included flexible methods and one-to-one support as needed. The paper reflects on the strengths and weaknesses of this participatory model for defining children's rights from below and the challenges posed to standard CRBA.

### On Children's Rights: Constructing Capabilities in the Interaction.

**Claudio Baraldi**, University of Modena and Reggio Emilia | [claudio.baraldi@unimore.it](mailto:claudio.baraldi@unimore.it)

**Vittorio Iervese**, University of Modena and Reggio Emilia | [vittorio.iervese@unimore.it](mailto:vittorio.iervese@unimore.it)

This paper explores some conditions in which children's rights of expression can be transformed in capabilities (choosing) and functionings (acting). This transformation is made possible through children's active participation in social relations. The

transformation may be observed in two ways. On the one hand, following Conversation Analysis, children's actions can project their interlocutors' subsequent actions in the interaction. On the other hand, following structuration theory, children's actions can

change the structures of social relations. The Capability Approach asserts that the child's ability to convert resources and commodities into capabilities and "functionings" depends on individual and social conversion factors. In this presentation, we provide empirical evidences that an important conversion factor can be produced in adult-children interactions, which break the common hierarchical relationships. For this purpose, we present data on interactions in educational settings, showing in

which ways (1) adults' actions can promote opportunities for children's expression and (2) children can exploit this opportunity, projecting adults' subsequent actions and changing the structure of social relations with them. We aim to highlight empirical evidences of children's capabilities and functionings, one the one hand, and interactional facilitation of active participation as a powerful social conversion factor, on the other.

## Studying Children's Rights in a Pluralist World: Difference, Normativity and the Role of Critique

Michele Poretti, University Institute Kurt Bösch (IUKB) | [michele.poretti@iukb.ch](mailto:michele.poretti@iukb.ch)

In recent years, calls for critically scrutinizing children's rights have been increasingly insistent. By unveiling the underlying norms and representations that shape children's rights practices, critique would admittedly contribute to children's empowerment. However, while critical social science may shed useful light on relations of domination, it often fails to acknowledge its own normativity, it runs the risk of hastily interpreting field data through ready-made conceptual frameworks and it frequently fails to give due weight to the actors' capacity for critique. If critique is to foster children's emancipation, what roles should it play in the emerging sub-field of children's rights studies? Building on the experience of a recent interdisciplinary research project that studied international child rights advocacy, the paper engages with

the tensions and dilemmas surrounding the role of critique in the study of children's rights. The research project, which aimed to take seriously the multiple meanings given to children's rights, refused to locate the researcher in an external, supposedly objective and inherently critical perspective. It also did away with implicit or explicit hierarchies between disciplines. Adopting a pragmatic approach, it followed the actors' arguments as closely as possible, purposefully tracing controversies and critique. Openness to difference, in terms of meanings, norms, practices or disciplines, exposed the research to constant critique. It however enhanced the researchers' awareness of their own normativity and led to the emergence of a solid research design and to findings which resonate with the practitioners' own dilemmas.

## Hesitating at the Door: Critical Case Study Research with Young People Examining the Realisation of Youth Sexual and Reproductive Health Rights in Varying Cultural Contexts

Vicky Johnson, University of Brighton | [V.Johnson2@brighton.ac.uk](mailto:V.Johnson2@brighton.ac.uk)

Critical research, situated within a participatory paradigm, examined how cultural and political context contribute to realising youth sexual and reproductive health rights

(SRHRs) in Nepal, Kenya, Benin and Nicaragua. Key research questions focused on: how change happens from the perspective of young women and men? And how strategies,

including education, services and advocacy were successful (or not), and for whom in varying cultural contexts? During a two-week period in each location, young peer educators identified key issues, conducted qualitative participatory research using photos with peers and community members to develop critical stories of change, and after supported analysis presented their findings and recommendations to local decision-makers. This youth-led research, analysed alongside interviews carried out by the research lead and local facilitator, was undertaken for Panos London and International Planned Parenthood Federation (IPPF). Barriers to progress in realising young people's SRHRs were attitudes and behaviour of adults within local

communities, especially those uneducated and living remotely in deprived rural areas. Cultural and religious beliefs countered progress in sexuality education and messages about safe sexual practices. Globally, the research is informing models of youth programming, building on IPPF's 'triangle approach', including youth friendly services, advocacy and comprehensive sexuality education, with youth participation, gender and partnership as cross cutting. Inductive theorising has suggested a complimentary socio-ecological model placing young people at the centre, with attention to safe participatory spaces, intergenerational dynamics and increased understanding of context.

## 11RN04 - Methodological Issues in Researching Children's Lives

Chair(s): Harriet Strandell (Department of Social Research - University of Helsinki)

### Statistical Description of Nurseries in Brazil (2007/2011)

Fernanda Müller, University of Brasília | [fernanda.muller@gmail.com](mailto:fernanda.muller@gmail.com)

Cíntia M A Antônio, University of Brasília | [cintialmeida1207@gmail.com](mailto:cintialmeida1207@gmail.com)

In Brazil, nurseries and pre-schools comprise the first level of basic education. Nurseries are attended by children of up to 3 years of age, while pre-schools cater for children aged from 4 to 5 years. This paper will analyse data concerning Brazilian children of up to 3 years of age who attended nurseries in urban and rural areas of 27 states, and in both public and private institutions, in 2007 and 2011. It will use the statistical method for analysing data set out in the Census of Schools (Inep, 2007, 2011), the National Research by Residential Sample (PNAD) (2007, 2011), and the Population Census (2010). Nurseries are the fastest-growing level of education in Brazil, particularly in urban areas, but to a lesser extent in rural areas. According to the 2011 Census of Schools 12.8% of children up to the age of 3 years attend official nurseries, while

data provided by the Population Census show that 16,3% of children among zero and 3 years old attend all kinds of early childhood education, including informal ones. Statistical analysis also shows that, the higher the per capita family income, the greater the individual child's chance of attending one of these institutions. 49% of Brazilian children up to age 3 are classified as white, and 18% of these attend nurseries; 4.5% are classified as black, and the attendance rate is 18.9% of these; 44.9% are classified as being of mixed race, and the attendance rate is only 14.2% of these. This paper will demonstrate the need to increase the number of places available in public nurseries, especially in view of the fact that the percentage of children attending such institutions is low, and particularly when they come from low-income families.

## Negotiating Institutional Identities in Interviews with Children

Harriet Strandell, University of Helsinki | [harriet.strandell@helsinki.fi](mailto:harriet.strandell@helsinki.fi)

How do children understand themselves as members of an institution and how do they build their institutional identities? These questions are addressed in a study of young (7-8 year old) school children in different types of after-school centres in Helsinki, Finland. Interviews with the children have been conducted as part of a large ethnographic study. Identity refers to the child's self, understood as something that is both based in the child's experiences from the social world and constructed in the situation. The self is at the same time both narratively constructed and actually lived (Holstein, J. and J. Gubrium: *The Self We Live By*). The paper discusses the research interview as situated social interaction, in which both interviewer and interviewee are active producers of knowledge.

The interview functions as an arena for identity work. The knowledge produced in the interview is seen as referring on one hand to the interaction in the situation, on the other hand to social realities outside the interview. Children shift between different positions in their identity work. Different types of constructing situated identities in the interviews are identified: shifting between different 'voices' when negotiating the social order of the centre, constructing oneself as the 'competent child' by skilful use of knowledge about rules and routines, and the 'naughty boy' who seems to fail to fit in. Finally, making fun of the whole interview situation can be read as an effort to gain control or communicate uncertainty and inconvenience about the situation.

## Studying Child Culture – Producing Realities

Tobias Samuelsson, Linköping university | [tobias.samuelsson@liu.se](mailto:tobias.samuelsson@liu.se)

David Cardell, Linköping University | [david.cardell@liu.se](mailto:david.cardell@liu.se)

Anna Sparrman, Linköping University | [anna.sparrman@liu.se](mailto:anna.sparrman@liu.se)

Anne-Li Lindgren, Linköping University | [anne-li.lindgren@liu.se](mailto:anne-li.lindgren@liu.se)

Traditionally in research (society) focus is on outcomes depicting aspects of research objects "out there". The data collection process where researchers struggle, fail and in the end often prevail is seldom seen as of interest, and is thus often only described very briefly as a coherent narrative in a method section. The process in which the researcher negotiates and gets access to a field, make his/her entry and the way field relations are developed does however produce crucial knowledge to be used to both dissect and give a fuller picture of the topic as such under study. Tales from the data collection phase could thus provide far more than scientific dilemmas and anecdotes. That is, methodological choices and the way researchers approach a field "produce the

reality they understand" (Law 2004: 5). Using an STS-approach this paper focuses on methods productivity when researching culture for and by children, and the question is what do the used methods tell us about the topic of child culture? Focus is on the "realities" produced through the methods across four different cultural settings for children (amusement parks, theme parks, Science centres and children's museums). The paper explores how child culture is produced by a research group's different methodological choices and data collection approach. The paper highlights the interaction between different agents and materiality during a research process and the need of taking these enactment processes into account when trying

to understand child culture.

## Development of Scales for the Prediction of Cultural Participation of Elementary School Children

Piia af Ursin, University of Turku | [pkafur@utu.fi](mailto:pkafur@utu.fi)

Cultural participation is a human right that also applies to children (UN Convention on the Rights of the Child, 1989). Furthermore, participation may promote children's psychosocial development (Offord et al., 1998) and, as a part of children's cultural capital, determine the educational success (e.g. Jaeger, 2011). Despite the various positive effects of cultural participation, there is only little known about the participation of the children in general, as well as about motives for it (Kröner, Schwanzer & Dickhäuser, 2009). In particular for elementary school children and especially for those with migrational background, the absence of research instruments is an essential reason for it. The

present study has multiple goals: It firstly aims at identifying the reasons for and against cultural participation of the elementary school children, secondly at developing a reliable and valid questionnaire that enables quantitative assessment of the factors explaining cultural participation, and thirdly to examine the cultural participation of the elementary school children in Germany as well as in Finland. The process presented above is an important prerequisite of future research on interventions towards increasing cultural participation of the children. This paper presents the development of the scales for the prediction of cultural participation of the children.

### Why Participatory Youth Research Matters? Exploring Lifeworld Orientation as a Frame of Reference

Dries Cardoen, Ghent University | [dries.cardoen@ugent.be](mailto:dries.cardoen@ugent.be)

Rudi Roose, Ghent University | [rudi.roose@ugent.be](mailto:rudi.roose@ugent.be)

Griet Roets, Ghent University | [Griet.Roets@UGent.be](mailto:Griet.Roets@UGent.be)

Maria De Bie, Ghent University | [maria.debie@ugent.be](mailto:maria.debie@ugent.be)

Attempts to involve children and young people as co-researchers within the research process, increasingly draw the attention of childhood and youth researchers across a wide range of disciplines. Based on a review of the existing body of participatory youth research, this article argues that the choice to include young people as co-researchers within the research

design is dominantly justified by referring to the beneficiary outcomes this approach may hold for all parties involved, i.e. (1) the adult researcher, as it increases the accessibility of certain hard to reach youth groups, raises the quality of the research questions, data and interpretations and allows them to gain insight in the life world of young people; (2) the young

researchers, as they acquire knowledge and skills necessary to integrate socially as adult citizens within society; (3) young people, as the participatory research approach gives them a voice of their own and allows them to influence the agenda of policy makers, starting from their everyday experiences; (4) practitioners and/or policy makers, as the life world knowledge participatory research produces, enables them to develop more effective and

socially accepted solutions to youth problems. Arguing that these outcome focused approaches employ a very restrictive understanding of 'lifeworld', we explore the interpretive paradigm of lifeworld orientation, rooted within theories of social pedagogy, as theoretical frame of reference to further develop and theorize participatory youth research.

## **Deviation as Maldevelopment or a Potential Resource: Methodology and Findings from Three Creative Workshops**

**Signe Fjordside**, Roskilde University | [sifj@ruc.dk](mailto:sifj@ruc.dk)

**Hanne Warming**, Roskilde University | [hannew@ruc.dk](mailto:hannew@ruc.dk)

Neglected children often develop in a way which deviates from the norm of 'normal development'. They can develop specific competencies, such as higher levels of accountability, reflexivity and the ability to read other people's needs and intentions, as well as disorders such as anxiety, loneliness and self-hatred. However, it is extremely rare that the special characteristics, that these children have developed, is recognized as competencies and supported as a resource. Instead, they are seen as symptoms of 'maldevelopment'. This makes these qualities and competencies something to be compensated and countered, before the child can develop 'healthy', that is normally. Observation of the above outlined problem makes the starting point of a project

with the title 'deviation as a 'potential resource – a visionary approach to social work with children. In the first phase of the project, three creative workshops: one with children; one with adults who as children were regarded as deviating; and one with social workers, is carried out. The purpose is exploration and development of ideas about how to do things differently: how the view and practices in regard to neglected children's deviation can be turned upside down from maldevelopment and compensation towards recognition and empowerment. In the presentation, we - beyond explaining the methodology of the creative workshop, including the epistemological rationales for choosing this approach - report on the findings.

## **Researching Lived Experience among Young People in Detention Homes: an Experience-Centred Approach to Narrative**

**Zulmir Becevic**, Linköping University | [zulmir.becevic@liu.se](mailto:zulmir.becevic@liu.se)

In the Swedish context the notion of young people in detention homes has for long been associated with various societal as well as individual problems; psychological-, family- and addiction problems to name a few. As a result, this particular category of adolescents is often understood and described as being

"deviant" per se, in research as well as in public discourse. This is due to the fact that most of the research within this field focuses on mapping and investigating underlying factors (criminality, segregation, poverty, dysfunctional childhood) that are characteristic for this group of young people, omitting the

subjective meaning of the lived experience these young people give to their existence. Aiming at understanding the lived experience as it is expressed through life narratives, this paper puts forward a methodological approach that primarily focuses on the voices and perspectives of the subjects themselves. The methodology is grounded in a constructivist theoretical framework drawing on the works of Jerome Bruner and Paul Ricoeur and their ideas about the intertwined concepts of (lived) experience, narrative and narrative identity.

This approach also rests on the assumption that experience is created in (and becomes a part of) consciousness when people process events from the lived life. Experience is understood as a personal phenomenon that is characterized by subjectivity and change, expressed through the mode of narration. The methodological approach will be further explicated through a presentation of "narratives of experience" that were collected through life story interviews with institutionalized adolescents.

## **Children's Rights Based Approach in Ethics Concerning Research with Children Victim of Violence and in Adoption**

**Donata Bianchi**, Istituto degli Innocenti of Florence | [bianchi@istitutodeglinnocenti.it](mailto:bianchi@istitutodeglinnocenti.it)

**Lucia Fagnini**, Istituto degli Innocenti of Florence | [fagnini@istitutodeglinnocenti.it](mailto:fagnini@istitutodeglinnocenti.it)

Ethical issues in research with children and young people have seen a significant growth in interest over recent years, in response to developments in child research, ethics, children's rights (Alderson and Morrow, 2011; Hill, 2005). The view of childhood has changed over time due to the recognition of the children as autonomous subjects, competent, capable of contributing to decision-making concerning their own lives. This has led to increased recognition of the importance of listening to children's voices and experiences. Emphasis on children rights to participation and expression of their views is recognized in the United Nations Convention on the Rights of the Child (art. 12). Critical reflections on these issues suggest to readdress power imbalances and to facilitate understanding and representation of children's views using participatory methods, assuming reflexivity as

key factor and involving children throughout all the process, as co-researchers. The presentation will discuss the methodological implication of a child rights perspective in the framework of two recent studies: an epidemiological study on child abuse and neglect in the Balkan Region (Becan project) and a survey on adolescents adopted through international adoption in Italy. The presentation will discuss the limits and potential of the double perspective of children's rights and research ethics, conceived as an ongoing process of questioning, acting and reflecting, rather than straightforward application of general rules of conduct (Gallagher, 2009), considering five key ethical issues: informed consent, protection of the child, privacy and confidentiality, feedback and compensation of children participants.

### Encounters with the Minor: Children's Letters as an Assemblage of Minoritarian Writing

Ulla-Maija Salo, University of Helsinki | [ulla-maija.salo@helsinki.fi](mailto:ulla-maija.salo@helsinki.fi)

Letter-writing is a social practice and the writing of a letter is embedded in a particular social, cultural and political situation. Also, as one of the earliest forms of writing, a wide range of other literary forms have their roots in letters and their porous boundaries mean that letters are versatile and diverse. These characteristics make a letter an appealing form for children to turn their thoughts into words. This paper, following the DeleuzeGuattarian (1988) ideas of the minoritarian as a potential, creative and created becoming, attempts to trace the methodological forces of minoritarian writing that which a minority constructs within a major language; the variations said to be confined to

'poets, children and lunatics'. François Lyotard's (1992) attempts to engage in minoritarian writing are well-known. In his book *Postmodern Explained for Children*, the author composes letters in a minor style and cites a series of letters written in the context of exchanges between him and friends; that is, encounters between children. Sustaining the double sense of intimacy and fragmentation that emanates from letter writing, Lyotard strived for the explanation of the postmodern. The endeavour I am engaged with comprises the letters that children have written to the President of Finland and in which the young letter writers recurrently take a position of the 'becoming minor' within the major.

### Doing Research with Children: the Importance of Visual Methods

Anne Carolina Ramos, Federal University of Rio Grande do Sul | [annecarolina.ramos@gmail.com](mailto:annecarolina.ramos@gmail.com)

In the last two decades we have seen a growing concern and a resultant increase in the number of researchers who have been interested in knowing the life and the day-to-day of children from their own perspectives. However, accessing the social worlds of boys and girls is not an easy task, since adults and children have distinct ways of getting to know, experimenting with and acting on the world. This study is a result of my thoughts and experiences as a researcher in the field of childhood studies, and aims to analyze how visual methods can help children to participate effectively in research. Drawings, cartographies, images and photographs are

visual languages that express ways of interpreting the world, representing a communicative act that stimulates the emotions, imagination, memory and powers of observation of children. In this study, these artefacts are used to analyze children's family and intergenerational relationships, marked by divorces, ruptures and remarriages of parents and grandparents, themes often delicate and complex to solely be investigated orally. One should pay attention to the fact that, whereas some children express themselves better by talking, others prefer to draw, cut, paint, or write, and a broader range of intervention strategies can help them with this process. In

this sense, the visual methods also enable the researcher to have a greater access to children's social worlds, which can give new

dimensions to familiar and intergenerational studies, often only centralized on adults' point-of-view.

### Children's Autonomy in Urban Spaces: A Research in Turin

Tiziana Folchi, University of Torino | [tiziana.folchi@unito.it](mailto:tiziana.folchi@unito.it)

The aim of the paper is to empirically test whether, despite an increasing focus of policies to the support of children's autonomy, a decrease in spaces of responsibility is awarded to children. They seem to, have instead increasingly limited decisional power, a restricted use of public spaces, fewer "unsupervised" relationships within peer groups, dependency on adults and mandate to adults in their courses of action. The hypothesis testing of an increasing risk of dependence of children from adults' control is based on a research focused on the Turin metropolitan area carried out at the University of Turin. The research to which we refer in this paper is part of a national project Prin composed by four local units: University of Bologna, Milan, Padova and Turin. The analysis pointed the different ways in which autonomy/dependence ratio, referred to the

children's space management, is declined by adults, either in domestic or in public spaces. Variations are considered depending on children's gender and age, family social condition and type of neighbourhood of residence (degree of social deprivation, exposure to social and urban policies, presence of the third sector, etc.). Primary data analysis has been carried out, observing children's everyday practices between ages of 9 and 12 years: We compared children sampled: from two different primary schools, located in two different neighbourhoods and characterized by a different class composition. 46 in-depth interviews were carried out to the children son's/daughter's school grade and their parents contacted through the selected school. Four focus groups, involving teachers of the two different schools have been undertaken.

## Deconstruction of the Omnipotent Adult Agent: Contributions to Mainstream Sociology from the Sociology of Childhood

Hanne Warming, Roskilde University | [hannew@ruc.dk](mailto:hannew@ruc.dk)

That, childhood is not only a life phase but also a societal feature, is a basic claim from the new social studies of childhood. Nevertheless, childhood research: its methods and findings remain being regarded as an 'exotic' and 'periphery' field of sociology. This presentation challenges the periphery position of childhood research, arguing that its methods and findings are also of significant relevance for mainstream sociology. The starting point is observation and deconstruction of the generational order dichotomous social construction of the child – adult relation, which position children as un-mature, incompetent, irresponsible, irrational etc., while adults as their contrast as omnipotent agents: mature, competent, responsible and always rational.

Though this construction assigns power to adults at the expense of children, it also sets the norm for what can be expected from adults, be it as parents, welfare professionals, employees, citizens or research informants. Drawing on examples from research in different fields, I show how these norms constitute key axis for discrimination, exclusion and social pathological processes. Finally, I argue that methodological lessons from research with children and research on children's participation (about the need for drawing on a range of methods to meet differences in competences and preferences of communication and participation) can serve an inclusive agenda in various (adult) institutions.

## The Changes of the 'Self' in the Context of Plural Socialization Processes

Miriam Böttner, Wuppertal University | [boettner@uni-wuppertal.de](mailto:boettner@uni-wuppertal.de)

Stefanie Morgenroth, Wuppertal University | [morgenroth@uni-wuppertal.de](mailto:morgenroth@uni-wuppertal.de)

Aytüre Türkyilmaz, Wuppertal University | [tuerkyil@uni-wuppertal.de](mailto:tuerkyil@uni-wuppertal.de)

Miriam Böttner, Stefanie Morgenroth, Aytüre Türkyilmaz ( [m.boettner@uni-wuppertal.de](mailto:m.boettner@uni-wuppertal.de), [morgenroth@uni-wuppertal.de](mailto:morgenroth@uni-wuppertal.de), [tuerkyil@uni-wuppertal.de](mailto:tuerkyil@uni-wuppertal.de) ) The changes of the 'self' in the context of plural socialization processes As many student international assessment studies have pointed out, social background can be seen as central factor for academic success (Coleman et al., 1996, Deutsches PISA-Konsortium, 2001, Ehmke et al., 2005). In order to analyze unequal educational opportunities in the context of plural socialization processes in families and institutions there is a need to consider different practices of socialization and children as agents (Bühler-Niederberger, 2011). From a perspective that considers children as social

agents we analyze how socialization- and learning environments are designed by and have an influence on children's self-orientation and autonomous learning. This puts different dimensions of the 'self' into the center of attention. Quantitative as well as qualitative data from the project "SEBI – Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environments of Primary School Children", which has received funding from the Federal Ministry of Education and Research (BMBF) are the basis for this analysis. The quantitative sample includes 1074 primary school children from Wuppertal (Germany) and the surrounding area. The qualitative data is collected in an out-of-school learning environment and in families. First

observations indicated a positional and a motivational dimension of a self. To what extent those are related to unequal educational

opportunities such as family and school arrangements.

## **Of Fish, Children and Climbing the Ladders: An Outline of Children's Social and Civic Participation in Poland**

**Maja Brzozowska-Brywczyńska**, Adam Mickiewicz University, Poznan | [bbmaja@gmail.com](mailto:bbmaja@gmail.com)

There is a Polish saying that roughly translates to: children should be seen and not heard, and it involves the equivalence of fish and children on that matter. Participatory and civic rights of children in Poland rely heavily on this commonsense "allocation" of children in public sphere and social life. Their right to be heard and taken seriously is officially limited (Polish state's declaration regarding CRC articles 12-16) as it should be exercised with respect for parental authority, in accordance with Polish customs and traditions regarding the place of the child within and outside the family. These traditions are very often based upon objectification of children and make the progress towards respecting children's rights even more difficult. Ironically enough, it was a

Polish-Jewish educator and devoted proponent of children's participation and citizenship, Janusz Korczak, whose teachings inspired drafting of the Convention of the Rights of the Child. 2012 was declared the Year of Janusz Korczak in Poland, with the motto: "there are no children, just people". The year's impressive agenda of conferences, seminars, and projects provides a convenient starting point for an analysis of how is the notion of children's participation present and how it is understood in Polish public discourse, social practice and everyday imagination. I would like to provide such an analysis. My intention is to draw a map of children's participation theory and practice set in the specific context of Polish (political) culture, a rather non-participatory one.

## **14\_04JS28JS30 - Facets of Participation in Childhood and Youth: Exploring Sport Participation (1)**

Chair(s): Leena Haanpää (University of Turku), Aurelie Mary (University of Tampere), Tom Cockburn (University of Bradford)

## **Selected factors Related to Participation in Sport and Physical Activities among Secondary School Students in the Island of Tobago**

**Anand Rampersad**, University of the West Indies | [pastiche6@yahoo.com](mailto:pastiche6@yahoo.com)

This exploratory paper examines the relationship between selected social variables and participation in sport and physical activities among secondary school students on the island of Tobago, in the Caribbean. Participation in sport and physical activities involve engagement at school, organized clubs

and recreational settings. The research explores the relationship between participation in sport and physical activities as it relates to Social and Economic Status (SES), engagement in extra-curricular activities, school encouragement and parental education. The study draws on an analysis of quantitative data

of 116 secondary school students from four (4) schools in Tobago between the ages of 11-15 years. Using a number of statistical tests such as Spearman's rank correlation, the data shows that there are no positive relationships between school encouragement, SES, parental education and participation in sport and physical activities. Additionally, there is no statistically inverse relationship between engagement in extra-curricular activities and participation in sport and physical activities.

The findings of the study calls for a deeper understanding of the meaning and prioritising of sport and physical activities in a small developing society. In so doing, recommendations are offered for future research as well as policy planning in order to make meaningful interventions in the lives of adolescents in terms of their health and socio-cultural well being. Keywords: Participation; Sport; Small Developing Society

## **Non-Disabled Secondary School Children's Lived Experiences of a Wheelchair Basketball Programme Delivered in the East of England.**

**Adam B. Evans**, University of Lincoln | [adevans@lincoln.ac.uk](mailto:adevans@lincoln.ac.uk)

**Lindsay J. Brown**, University of Lincoln | [Lbrown@lincoln.ac.uk](mailto:Lbrown@lincoln.ac.uk)

**Jonathan Bright**, University of Lincoln | [jonobright86@googlemail.com](mailto:jonobright86@googlemail.com)

Frequently an unquestioned belief is held in UK schools in the value of 'normalised' ability in physical education. Consequently inclusion of disabled students can be problematical. Negative perceptions of disability are rarely challenged. This study investigated the embodied experiences of 50 non-disabled secondary school pupils during a programme designed to introduce disability sport to non-disabled schoolchildren entitled 'The Wheelchair Sports Project.' Wheelchair Basketball sessions were delivered by coaches during physical education for a 12 week period. 50 pupils aged between 10 and 12 years took part. Non-participant observations were completed during the intervention and guided group interviews were completed with 40 participants pre and post project. Bourdieu's theoretical framework was utilized during data analysis. The impact of the project on pupils'

perceptions of physical disability was investigated. Prior to the project, pupils emphasized the 'otherness' of disabled bodies and described disability sport as inferior and not 'real.' Observations highlighted how pupils' experienced physical challenges adapting to wheelchair basketball. Pupils struggled to control wheelchairs and frequently diverged from acceptable behaviour by using their lower limbs to 'cheat.' Post-programme interviews demonstrated pupils' perceptions of physical disability altered due to their embodied experiences. Pupils described high physical demands of wheelchair basketball and began to focus upon similarities between themselves and physically disabled individuals. However, no reference was made to mental or psychological disability, emphasizing the specificity of the effects of pupils' embodied experiences on their habitus'.

## **Conforming or Countering Femininities? Secondary School Sport**

**Majella McSharry**, Dublin City University | [majella.mcsharry@dcu.ie](mailto:majella.mcsharry@dcu.ie)

This paper is based on research conducted in a range of Irish second level schools selected because of their reputations for success in

rugby and Gaelic games. Sport is frequently seen as a source of hope and cohesion, strengthening community belonging among

participants and supporters. However this research examines how school sport can be alienating and infuriating when it serves to reinforce gender inequalities, while giving the illusion of 'natural' gender practices. In Ireland, whatever the team sport, it is predominantly men's leagues and competitions that attract most media support and public interest, so physical team sports are largely gender specific and male orientated. This dominance is often nurtured and perpetuated in secondary schools whose reputations depend on the success of boys' teams. This research investigates the experience of girls attending these schools. It is framed against

the backdrop of varying studies that document high levels of sport 'drop out' amongst teenage girls (Kelleher et al, 2003) or lack of participation in diverse activities (McPhail, Collier and O'Sullivan, 2009). This paper explores the range of co-curricular sporting activities available to girls and suggests that equality of choice can serve to highlight rather than reduce gender dissonance. This paper examines how ultimately the girls' quests for equality and recognition within school sport can leave them balancing a fine line between conforming and countering discourses of gender performativity.

## 15\_04JS28JS30 - Facets of Participation in Childhood and Youth: Exploring Sport Participation (2)

### Sports Participation, Family Habitus and Gender : a Case Study of Sporty Girls and Non Sporty Boys

Christine Mennesson, University of Toulouse | [christine.mennesson@univ-tlse3.fr](mailto:christine.mennesson@univ-tlse3.fr)

Numerous works highlight the role of the socioeconomic status of families in children's participation in sports (White and Pledge, 2007; White and McTeer, 2012). Other authors studied the modes of family socialization which favor this process. The family culture so appears as a central element in the construction of the childrens' sports tastes (Wheeler, 2012 ; Dagkas and Quarmby, 2012). In particular, the place occupied by sport in the family style of life plays an important role (Macdonald and al. , 2004). More generally, it is possible to identify a family habitus (Tomanovic, 2004; Weininger and Lareau, 2009), who organizes children's engagement in leisure and physical activity. However, the

sports participation of childrens also varies according to their sex. If sports participation seems more valued for the boys, and allows them to occupy a favored place in their group of peers (Eder and Kinney, 1995), the atypical sports investments are less negatively judged for the girls (Messner, 2005; Mennesson, 2007). This communication discusses the interest of an analysis in term of family habitus to analyze the atypical gender uses of sport of certain children. It bases on a qualitative survey led with about twenty children's families, and presents in great detail the cases of two girls practising sport in a intensive way, and of two boys who doesn't like sport.

## The Sport and Physical Activity Drop Out Phenomenon – Concepts, Methodological Issues and Directions for Future Research

Matti Hakamäki, LIKES Research Center, Jyväskylä | [matti.hakamaki@likes.fi](mailto:matti.hakamaki@likes.fi)

There is a consensus regarding dropout from organized sport in general; however, the phenomenon is seldom investigated in detail. Beginning, changing and withdrawing from a specific sport can be measured using the license data of sports federations in countries where such information is available in a suitable format. The basic feature is that although children will drop out of sports at any age, starting a new one becomes more difficult as they get older. The declining amount of physical activity is a parallel but slightly different issue; the decline starts earlier. According to currently available data, the level of objectively measured physical activity starts to decline after children reach the age of seven. Organized sport is only a small fraction of the total volume of physical activity. From the health behaviour perspective, the organization mode of physical activity is

important because it affects the probability of an active lifestyle in the future. Amounts of physical activity are traditionally measured using questionnaires; currently, the data is also objectively gathered with accelerometers. The research method affects the results; the interpretation of associations between socioeconomic factors and physical activity is influenced by the chosen method of data collection. Sport-related behaviour can be understood as a consumption style; to some extent, this behaviour is dependent on available resources. On the other hand, several aspects of consumption are more immaterial, and some features can be adapted to circumstances where only scarce funding is available. The consumption styles may be independent of participating self in sport in the form of physical activity.

## The Phenomenon of Drop Outs Sports among Teenagers. A Case Study in Italy

Barbara Mazza, University of Sapienza, Rome | [barbara.mazza@uniroma1.it](mailto:barbara.mazza@uniroma1.it)

Between 14 and 18 years there has been, in Italy, the highest rate of abandonment of sport and amounted to over 20% (Istat 2010). What are the factors that have the greatest impact on this choice? To investigate the reasons, ORSA (Regional Observatory sports Abruzzo) on behalf of CONI Abruzzo has conducted in 2012, a research involving nearly 10,000 high school students (equivalent to 20% of the student population of the region), distributed by type of school attended, gender, age, province of residence, to ensure the representativeness of the sample. The survey examined by administering a semi-structured questionnaire and the construction of four focus groups (one in each province of the region), motivation, socio-cultural, lifestyle and eating habits, relationship with individual

sports, relationship dynamics and patterns of cultural consumption. The reflection emerged is part of the debate, for some time, has suffered as a national and international level. The aims to understand the reasons that lead to inactivity and neglect, but also to identify possible actions to intervene in order to help contain the phenomenon of drop outs. The results have been demonstrated fully in line with the national data and made it possible to provide a detailed and multifaceted condition and habits of young people of Abruzzo, in addition to interesting ideas that come from the way they conceive of the sport and their requests to the sporting world, aimed at dialogue and make it more challenging approach to physical and motor activities.

### Children and the Federal Definitions of Sports Activities in France

Pascale Garnier, University Paris 13 | [pascale.garnierx@free.fr](mailto:pascale.garnierx@free.fr)

Sports practices must be understood as the relationship between two phenomena: on the one hand a "demand" of practices; on the other hand an "offer" of practices (Bourdieu, 1980). In particular, the participation of children and young people in sports organizations can be explained by various factors such as time allocation, but also by the social definitions of sports practices according to age groups. These aspects, in the French context, constitute the object of my proposal, insisting on a tension between recreational and competitive definitions of sports. The objective is to show an increasing emphasis on the selective and competitive dimensions of organized sport compared to the dimensions of leisure and play. In order to analyze this general process and its variations according to different sports, I study the development of five

sports activities within the framework of national federations: basketball, gymnastics, horse-riding, tennis, swimming (Garnier, 2005, 2006). The aim of my communication is to contribute to denaturalize the classifications of age, which are particularly powerful in this domain of physical activities. ### Urban Youngsters and Organised Sports. Relations between Socio-Demographic Characteristics and Drop Out.

Tineke Van de Walle, Ghent University | [Tineke.VandeWalle@UGent.be](mailto:Tineke.VandeWalle@UGent.be)

Lieve Bradt, Ghent University | [lieve.bradt@ugent.be](mailto:lieve.bradt@ugent.be)

eva de coninck, Ghent University | [e.deconinck@ugent.be](mailto:e.deconinck@ugent.be)

Participation in organized leisure activities is believed to bring substantial developmental benefits for young people. Participation in organized sports in particular has not only been associated with general developmental benefits, but also with better health in young people. As a consequence, there is a growing interest in the non-participation and drop out of young people in organized sports. While

research data are available on the socio-demographic characteristics of 'non-participants' and on young people's main reasons for dropping out, few studies have focused on relations between youth drop out and socio-demographic characteristics. In our presentation we will present findings based on multilevel data from a school survey conducted by the Youth Research Platform, a Flemish

Policy Research Centre, in secondary schools in the two biggest cities of the Flemish region of Belgium. The sample includes 3.867 young people, aged between 12 and 18 years old and from diverse socio-demographic backgrounds (half of the respondents come from ethnic minority families and over 10% of the respondents reported financial strain in their family). All respondents had to report on their former and current participation in organized

sports and other leisure time activities. Multilevel logistic regressions uncover compound relations between drop out, age, gender, ethnicity and socio-economic status. Our findings suggest that different explanations for youth drop out in sports are to be found in different sections of the population, notwithstanding possible invariance in self-reported reasons.

## **Ethnic Minority Youth and the Access to Participation in Organised Sports: Danish Case: The Intervention Playground**

Annette K. Michelsen la Cour, University of Southern Denmark | [amlacour@sam.sdu.dk](mailto:amlacour@sam.sdu.dk)

From 2010-2012 an intervention named Playground offered sporting activities during vacation periods in 6 disadvantaged areas in Denmark. The Ministry of Culture was behind the funding and the intervention was organised by the Danish sporting umbrella organisation DGI and carried out by local sports clubs. The political aim was to reduce crime and political radicalisation through meaningful organised activities, though the aim of the local sports clubs was to attract new members among the children and young people between the age of 5 to 16. The political expectation was, that a variety of sporting activities offered ranging from football across cricket to capoeira, belly dancing and fencing would present an important alternative to doing nothing or engaging in criminal activities during vacation periods. The intervention was evaluated and the findings showed that the aim

of reducing "trouble" was met through the activities and it was believed that the activities could prevent gang-like constellations from recruiting new members. The activities were well attended by children up to the age of 14 years and approved by both children and parents after a period of introduction, but the participants did to a very little extent enrol as members. The sports clubs though did not gain a lot of new members, but became known in the areas. The findings also showed that participation in organised sports is limited for both financial, social and cultural reasons and that the knowledge of the civil society based sports clubs in Denmark is at hand but not at use. There's a substantial underrepresentation of ethnic members and the findings showed that means of transportation and parental resources are scarce among the families in the areas.

## **Learning to Associate: The Facilitators and Obstacles to BME Children and Young People's 'Participation' in Sports Associations.**

Tom Cockburn, University of Bradford | [t.d.cockburn@bradford.ac.uk](mailto:t.d.cockburn@bradford.ac.uk)

This research explores the work of Black and Minority Ethnic (BME) children's and young people's association through the lens of sports associations. The research: a) Illuminates how BME young people's social identities are

produced and negotiated in families and in private and in public spaces/places; ii) Understands how such learnt patterns of association in the informal sphere develop into more formal associations; iii) Sports

participation is a key element in supporting BME children to negotiate the interface between 'informal' and 'public' association. We adopt an intensive case study approach

utilising semi-structured interviews, PLA techniques of network mapping (Chambers, 2009).

**Türküler Erdost**, The Ministry of Family and Social Policies | [terdost@aile.gov.tr](mailto:terdost@aile.gov.tr)

There are approximately 29.000.000 people living under the age of 19 and this number is 31.5 % of the whole population in Turkey. 14.000 of these children are under protection of the State. This reality makes the policies for children more critical when we consider these numbers. In recent decade, proactive policies have been developed especially in the field of

protective and preventive injunctions of child care services in Turkey. In this research, the regulations which are published by The Ministry of Family and Social Policies General Directorate of Child Services, that is in charge of all children in Turkey, have been investigated. Besides, the historical progress of child care services has been analyzed by

documentary analysis technique. This research also involves other institutions deal with child care services in Turkey. In recent years, the focus of child care services has been moved towards protective and preventive approach in the world. In this research policies and systems in different countries have been inquired and the applicability of these systems to Turkey has been analyzed. The compliance of the service model already in practice with protective and preventive policies for child care services has been studied. At the same time

the current technological infrastructures of the data based decision support systems have been analyzed by considering the importance of personal information security. Within the scope of this research the ecological system perspective of Bronfenbrenner which approaches child holistically is used to define the systems around the child. As a result of this research a road map is provided in order to be used in protective and preventive services with a strong infrastructure.

## Adolescents in the Internet-Environment: Communication and Reading

Alexandra Gubanova, Russian State Children's Library | [alexandra.gubanova@gmail.com](mailto:alexandra.gubanova@gmail.com)

Our survey showed Internet intensifies cognitive activity of students: 92% of teens reading various information on the Internet (43% of them - read a lot, 49% - read a little). Reading preferences of boys and girls on the Internet almost entirely correspond to reading preferences in literature – they read materials on topics they are particularly interested. We correlated questions about communication places on the Internet of adolescents and the ways how they're reading books from the Internet. The results showed: adolescents who prefer to communicate in social networks, mostly read e-books on a computer screen (88%), on their mobile phones (93%) and print out books from the Internet (91%). Teens that actively interact on the forums prefer audiobooks (50%) or use a mobile phone to

read (37%). Students who prefer to communicate via instant messengers (ICQ, Skype) use special devices for reading books (e-books, iPad) (24%). Adolescents, who prefer to communicate in the internet community, as a rule prefer to read on the mobile phone (24%) and print books (20%). The survey found out that, in general, teens who like reading and who read a lot, chatting on the Internet much less often than those who read for studies or reading for relax and fun. Among those who do not like to read and consider this activity boring, the same number of those who communicate on the Internet and those who did not communicate. Those who cannot imagine life without books practically don't interact on the Internet.

## How Does Praetorian Militarization Affect Children's Life Chances?

Steve Carlton-Ford, University of Cincinnati | [carlto1@uc.edu](mailto:carlto1@uc.edu)

Militarization can create conditions that worsen the life chances of people around the world. Theorists maintain that praetorian militarization (i.e., either direct or indirect control of the government by the military) creates particularly adverse conditions (e.g., Andreski 1968) for the general population, a view that that has, however, rarely been

examined. In contrast, theories of militarization typically stress that increasing social militarization (i.e., the size of armies) improves life chances, resulting in lower child and infant mortality, while holding that economic militarization (i.e., military spending) generally has little impact over and above that of social militarization (e.g., Bullock and Firebaugh

1990). New research shows, however, that praetorian militarization harms life chances, pushing food security down (Scanlan and Jenkins 2001) and child mortality up (e.g., Bowman 1996; Carlton-Ford 2011). Similarly, armed conflict pushes food production down and child mortality up (e.g., Carlton-Ford & Boop, 2010), with increasing military participation in conjunction with internationalized internal conflict (i.e., complex civil wars) being particularly harmful (e.g.,

Carlton-Ford 2010, 2011). This paper will help establish the process through which praetorian militarization has its effect on child mortality, using a dataset that combines information on: national economy, social militarization, economic militarization, praetorian militarization, child mortality, the type of government, the quality of governance, armed conflict, food and nutrition, and other relevant indicators from countries with populations over 200,000.

## Does Gender Make a Difference? Parents Mediation Strategies of Children Internet Use across Europe

Kairi Talves, University of Tartu | [kairi.talves@ut.ee](mailto:kairi.talves@ut.ee)

The internet has become major part in people's lives. Especially, it influences children and adolescents who are eager to use internet on different platforms, but often lack social skills and experiences to cope with negative consequences that may enforce on the internet. For parents children's growing interest to internet means double trouble: firstly, most of the parents are from the generation, who did not grow up in internet boost period, secondly, they have to cope with internetization of their children's lives as well as provide guidance for them about safe use of the internet. The aim of the following study is to analyse parents mediation of children internet use in gender perspective. Do parents use different strategies for boys and girls? According to EU Kids Online survey in 2010,

where European children between 9-16 and their parents were studied, parents use five types of different mediation strategies, which can be grouped as active mediation of use, active mediation of safety, restrictions, monitoring and technical solutions. Parents use „active“ strategies (both of use and safety) more often on girls compared to boys and „passive“ strategies (restrictions, monitoring and technical solutions) more extensively on boys compared to girls. Similarly, the analyses show a tendency of countries with later internet saturation (time when reached to the level of 50 per cent internet use in the country) having less gender differences and countries with earlier saturation having more gender differences in parental mediation.

## Reading of Children and Adolescents: Comparative Analysis

Elena Kolosova, Russian State Children's Library | [the\\_shmiga@mail.ru](mailto:the_shmiga@mail.ru)

We examined change issues of reading motivation, age and gender reading of girls and boys, their genre and thematic preferences and repertoire of reading. Survey of primary school children showed that they, firstly recognize the instrumental function of reading, using it as a means to train and hone the necessary intellectual skills and quality, a tool that helps

to be smart, educated, develop memory, imagination. And one-third prefer reading for fun, for pleasure, to learn what is good, friendship, etc. The situation with the home library for children of all ages from 1 to 8 grade is similar. 58% of families with children or do not have books, or have a very small home library. The average size of home library is at

1/3 of the adolescents surveyed. Only 10% of adolescents have a fairly large home library. Children and adolescents use different sources of getting books, preferring to the most available and suitable for their age. Teens gradually cease to focus on the tastes and preferences of the older generation, as opposed to younger children, and prefer to share information about books with their peers and friends. It should be noted that the motivation for reading of children older and younger age groups vary widely and strongly

affects the place of reading in the life of the modern child. In age of 7 -11 the leading motive of reading is primarily an interest in reading, and such of indicators as the title of the book, as well as illustrations are important when choosing a book. In age of 12-15 the motive of "interesting" is overlapped by the motivation of doing school tasks. Thus, the model of the modern teenager reading becomes more similar to the model of the adult reader.

## **The Protection of Child's Right to Health as a Matter of Being Heard**

**Stefania Fucci**, University of Eastern Piedmont | [stefania.fucci@sp.unipmn.it](mailto:stefania.fucci@sp.unipmn.it)

The right to health represents a fundamental right recognized at the international level in the Universal Declaration of Human Rights, and a subjective right recognized at the national level in Italian Constitution (art.32) dueing to all citizens regardless of their personal and social characteristics, including age. This means that children, like adults, must be given the power to exercise their own right to health protection. In the same way, can be read the 1989 Convention on the Rights of the Child which recognizes to child, considered as a subject under the age of eighteen years, a series of subjective rights including the right to health. This paper intends to present a theoretical reflection on the protection of the right to health, in particular on child's right to be heard in health choices. Being heard may be understood in two different ways: as a first

step within an accompanying path towards the self-determination of the child; or as a simple transmission of information which operates from the bottom upwards, a sharing of perspectives of the child with the reference adult, without the latter being bound to take them into account when making choices. So, it is clear that while self-determination is based on the assumption that the child is able to choose with respect to his/her own actions, to assume the responsibilities related to such choices, being heard implies the being recognized the right to express their views on matters which concern them directly. Within the doctor-patient relation, which is therefore the role of the child, considering that the options are placed along a continuum having at one end a completely passive role, and at the other an active part of the child?

## **Representations of the Religious Diversity among Children of a Public School in Recife, Pernambuco, Brazil**

**Paula N. Cisneiros**, Universidade Federal de Pernambuco | [paulanc@gmail.com](mailto:paulanc@gmail.com)

Immersed in a syncretic cultural logic, Brazil has traces from the Portuguese catholic colonization that still cohabits with a daily life based on catholic values made invisible and naturalized by the society through religious holidays and other practices (Almeida, 2007).

There are many discussions on the matters of laity and catholic influence on the society and politics, but research with children has been appraised by social scientists worldwide only recently and still needs contributions, especially in this area. This article discusses

how children from the basic education of a public school in Recife - Pernambuco, northeast of Brazil, represent this macro phenomenon inside the school environment. Aiming to focus on children and highlight their

speeches, the goal was to discover how these children experience the religious diversity and recognize the category "religion" as part of their lives.

## RN05 - Sociology of Consumption

### a01RN05 - PhD Session

Chair(s): Tally Katz-Gerro (University of Haifa)

#### New Consumer Cooperatives in Poland: a Path to a Democratized Economy or a Means of Social Distinction?

Aleksandra Bilewicz, University of Warsaw | [ambilewicz@gmail.com](mailto:ambilewicz@gmail.com)

The aim of this presentation is to analyze the social background of the new consumer cooperative movement in Poland and its chances to form a lasting alternative model of food consumption. In 2010 an informal group social activists in Warsaw decided to create a small consumer cooperative the aim of which was to purchase fruit and vegetables directly from local farmers. During the subsequent years cooperatives in several other Polish cities emerged: in Łódź, Gdańsk, Lublin, Kraków and others. Cooperative activists aim to restore direct contact between food producers and consumers and to establish an egalitarian community easy to replicate elsewhere. The grassroots character of the new consumer cooperatives is typical for "new cooperativism" as described by Vieta (2010). But after three years of activity, the

cooperatives failed to attract a large amount of members despite a large interest from the media. They constitute quite closed groups of young and educated middle class activists. Nevertheless the interviews with cooperative members that I conducted show that not only building a distinctive group identity motivates people to be active in cooperatives: the will to regain control over vital parts of their daily existence is another important motivation. This desire reminds of Polanyi's concept of social change presented in the essay "Class interest and social change" (1968) in which he states that economic interest is not the only factor in building social movements against the free market system; In the case of cooperatives, the need of efficacy and finding reliability in a small community in precarious times seems to be more important.

#### Ethnographic Research on Veganism

Alessandro Fiori, Università degli studi di Urbino "Carlo Bo" | [alessandrofiori@me.com](mailto:alessandrofiori@me.com)

This study is based on an ethnographic analysis of the Vegan phenomenon in Italy. The Vegans do not eat food that has animal origin (meat, fish and dairy products), do not wear clothes of animal origin (leather, fur, wool, silk, etc.), and avoid as much as possible to buy industrial products tested on animals because they damage the environment. In order to support this lifestyle, many of them do activism and self-handlers. The first aim is to study and

understand the significance that Vegans attribute to reality, observing through their production practices, rituals and use of goods. This practices are connected by a strong internal consistency, producing in three ways a series of significances that are considered as a value. In fact, these practices of consumption represent themselves a value, that's closely related to a deep respect for the animal world and nature. These practices are fundamental

to give order to the experience, through a complex system of classifications. Production and consumption practices implemented by Vegans are connected to hidden meanings, exteriorized through the selfproduction, the kitchen, the exchange, clothing and reusing, further stabilized by a sort of ritual constructed and repeated over time: public demonstrations. The time and energy invested in the realization of these practices, typical of the Prosumer (Toffler A., 1980), are not to be interpreted as practical and economical efficiency, but more in the direction of efficient symbolic production. These practices are fundamental to order experiences, through a complex system of classification (Douglas M., 1979). This classification is able to define relationships and the boundaries of the community. Elaborating on the learning phase,

it can also be noted that practices of consumption define the subdivisions inside the same group. In fact, the group presents a structure and it is subdivided in a typical way: the members of the group have the possibility to set out on a journey, which can change their status and reputation in the group. On the basis of the research carried out, I divided the group into segments, based on lifestyle and consumption practices implemented. Next, I put these figures in the path that an individual usually takes to become a Vegan and grow within the community. In conclusion, consumption activities, i.e. as a social activity giving significance, allow Vegans to sustain their own identity and vision of the world, letting them find a coherent and stable answer in time.

## Clothes, Self Presentation and Feelings: (How) Does Class Matter?

Irmak Karademir Hazir, Middle East Technical University |  
[irmak.karademir@postgrad.manchester.ac.uk](mailto:irmak.karademir@postgrad.manchester.ac.uk)

In this paper, drawing on Johanna Entwistle's conceptualization of dress as embodied practice, I explore how women from different class locations experience their dressed bodies in everyday life. 'Dressed body' conceptualization proposes that clothes (and tastes in clothes) influence how we feel in our bodies because they generate feelings such as self-confidence, embarrassment and comfort. Analysis of such feelings can provide insights into the power dynamics embedded in social interactions and into the symbolic power of particular embodiment styles. As such, they can reveal very subtle processes in which class privilege manifests and reproduces itself through seemingly mundane consumption practices. My analysis draws on 43 in-depth interviews I have conducted as part of a larger project on embodiment of class in Turkey. For this paper, I teased out the parts where interviewees reflected on how they felt as they

presented their 'dressed body' in particular social occasions. First of all, regardless of the volumes of capital they hold, the majority of my interviewees presume that appearances do have a value and thus enhance or limit opportunities. I also found out that certain emotional experiences are more common among culturally cultivated interviewees, whilst others only pertain to those who have restricted access to cultural and economic resources. The emotions I have uncovered also demonstrate that the (aesthetic) categorizations the 'dominant' make are internalized by those who suffer from such hierarchies most. In that sense, my analysis of feelings reveals how certain bodily representations are fixed to particular class positions in Turkey and provides empirical evidence to the workings of appearance-based symbolic violence.

## Identifying Musical Taste and Distaste Groups in Austria, England, Israel, and Serbia: Are There Evidence of Cultural Omnivourism?

Adrian Leguina, University of Manchester | [adrian.leguinaruzzi@postgrad.manchester.ac.uk](mailto:adrian.leguinaruzzi@postgrad.manchester.ac.uk)

In the early 90s, Richard Peterson and colleagues in America, showed how musical taste may be defined as the opposition between high social status groups, who simultaneously prefer high and lowbrow music (omnivores), and lower status groups, who like one or few (univores). During the last two decades, this theoretical perspective influenced a vast body of research that recognized in the omnivore thesis an explanation of how contemporary societies are culturally stratified. Quantitative cultural research has been focused on detecting omnivore and univore differentiation. Meanwhile, fundamental questions remain unanswered: the importance of the method to define whether a person is a musical univore or omnivore, the meaning of this distinction, and the importance of context in cross national research. Therefore, from a theoretical and empirical perspective, this research offers a critical review of these issues and demonstrates how quantitative research

should operationalize the concept of omnivourism. A unique cross national approach, using comparable data from Austria, England, Israel, and Serbia, a MIMIC latent class analysis shows that patterns of musical preferences vary from contemporary urban, local production, intellectual to omnivore orientation. However, omnivores do not cross all cultural boundaries neither do they display strong opinions on all cultural practices. Moreover, broader tastes reflect higher social position only in England, and not so in other European countries. In summary, this research questions the existence of a unified meaning to cultural omnivourism, challenging the global applicability of the concept as a form of social distinction. Consequently, omnivourism may reflect multiple axes of social distinction that is heavily dependent on local context, or what Bourdieu coined the national canon of culture.

## b01RN05 - Consumption of Food 1 (Practices)

Chair(s): Lotte Holm (University of Copenhagen)

### Implicit Competence and Responsibility in Everyday Practices of Sustainable Food Choices

Rachel Reckinger, University of Luxembourg | [rachel.reckinger@uni.lu](mailto:rachel.reckinger@uni.lu)

This paper analyses everyday appropriations of 'responsible' eating habits – seen as a set of plural ways of how people put into practice plural ideas of sustainability. In order not to pre-empt normative or socially desirable results, but to find out if the motor for 'responsible' consumption is driven by personal, social, ecological, geopolitical or political motivations, the notion of

sustainability is not addressed directly in my empirical surveys. It is rather characterised, in a first stage, by quantitative indicators of possible sustainability in the food domain. These indicators are related either to the consumed foods themselves such as organic, fair trade, regional, seasonal, etc. or to the individual practices, namely the array of places where people procure different food stuffs –

commercial ones and non-commercial ones (common, own garden, exchange barter, etc.). This survey (N = 3000), situated in Luxembourg and the surrounding Greater Region, is completed, in a second stage, by 50 qualitative, semi-directive interviews, which provide in-depth insights into the meanings of, and values behind, those indicators. What is of interest here are the everyday priorities, criteria, appropriations and strategies of consumption, as well as the justifications of this consumption

in a perspective of regional/spatial identification. This approach not only shows which aspects of the polysemic idea of sustainability are relevant to people's preoccupations (shaped by their everyday constraints and, in turn, shaping selective purchases), but uncovers to what extent people are reflexive in their 'responsible' food choices and in which ways, as well as for which reasons, people engage in the political domain of food issues.

## **Curry, Fish Pudding and Halal Pizza: a Qualitative Study of Food Acculturation among Immigrant Families in Oslo**

**Laura M.E. Terragni**, Oslo and Akershus University College of Applied Science (HiOA) | [laura.terragni@hioa.no](mailto:laura.terragni@hioa.no)

**Gun M Roos**, SIFO -National Institute for Consumer Research | [gun.roos@sifo.no](mailto:gun.roos@sifo.no)

**Annhild Mosdøl**, Oslo and Akershus University College of Applied Science (HiOA) | [annhild.mosdol@hioa.no](mailto:annhild.mosdol@hioa.no)

The aim of this paper is to investigate food acculturation among immigrant families living in Oslo, with a particular focus on everyday food consumption. The study -conducted in Oslo from July 2010 to February 2012- has a qualitative research design and is based on data gathered through qualitative individual interviews, focus group interviews and participants' photos of meals and eating events. The participants were women who have migrated from Asian, African and Arabic countries as adults. Findings indicated that migrant families had a wide array of opportunities for managing everyday food consumption. Food items and meal formats from the country of origin, the host country, and globalized food were combined in various

ways depending on type of meals or eating events, social occasions, where the meals were consumed and with whom. However, opportunities were also limited due to lack of familiarity and trust in food. This study of food consumption among immigrant families indicates that food acculturation is a multidimensional process; flexible and dynamic. The findings highlight the need to reconsider current models of food acculturation in order to reach a deeper understanding of food habits after migration. The case of food consumption can also shed light on other important aspects related to consumption patterns in multicultural societies.

## Why Food Practices Do Not Match Discourses? Some Insights from Ethnographic Research on Food Consumption and Sustainability

Sophie Dubuisson-Quellier, Sciences Po, Paris | [s.dubuisson@cso.cnrs.fr](mailto:s.dubuisson@cso.cnrs.fr)

Marie Plessz, National Institute for Agricultural Research, Paris | [Marie.plessz@ivry.aliss.fr](mailto:Marie.plessz@ivry.aliss.fr)

Ana Perrin-Heredia, Sciences Po, Paris | [a.perrinheredia@cso.cnrs.fr](mailto:a.perrinheredia@cso.cnrs.fr)

Séverine Gojard, National Institute for Agricultural Research, Paris | [Severine.gojard@ivry.aliss.fr](mailto:Severine.gojard@ivry.aliss.fr)

The study of food consumption practices has regularly been coming up against the gap between what actors say and what they actually do. This is especially problematic when studying sustainability issues. The theory of practices has provided interesting insights by considering that practices include a system of rules and meanings that connect saying and doing activities, without completely elucidate the clue. We will provide some insights on this issue. We have been carrying out an ethnographic research based on repeated interviews about food practices with 18 French households. We also took pictures of the fridge, kitchen, shelves and cupboards to discuss the gap between discourses and practices. The theory of practices' framework we adopted drove us to pay large attention to the role of norms, social relations and

materials. Our results show that social actors build what we call a "core of norms" which constitutes their main landmarks to set their food practices. But these sets of legitimate practices face ordinary constraints (time, budget, coordination) that actors have to deal with. For some, such a gap is a non-event, and their discourses focus on their "legitimate practices", even though most of the time they do differently. Others, unsatisfied with such a gap, tend to overstate their "illegitimate practices". As a result, the gap between practices and discourses provides information about how actors deal with the gap between their practices and the norms they would like to adopt. This suggests that the causes and reasons why people adopt some norms and why they change their practices (e.g. towards more sustainability) may be different.

## c01RN05 - Consumption Fashions

Chair(s): Olga Kravets (Faculty of Business Administration - Bilkent University, Turkey)

### Consuming the Ottoman Past: Multiple Representations and Popular Culture

Murat Ergin, Koc University | [muergin@ku.edu.tr](mailto:muergin@ku.edu.tr)

Yagmur Karakaya, University of Minnesota | [karak014@umn.edu](mailto:karak014@umn.edu)

Contemporary Turkish society is saturated with nostalgia for its Ottoman past. Ottoman-themed consumption items, ranging from TV series to T-shirts, from jewelry replicas to books, are more popular than ever. The rising interest in and redefinition of Turkey's Ottoman

past, called "Ottomania" by western media, has significant implications for the transformation of popular culture, consumption patterns, and lifestyles. At first sight, Ottomania signals a commercialization and reinterpretation of Turkey's past. However, the rising interest in

the Ottoman past also indicates crucial changes taking place in the formerly inseparable fields of popular culture and modernization. Based on data derived from 25 in-depth interviews and media analysis, this paper argues that Ottomania marks the end of modernization as a central trope in popular cultural debates. Accordingly, while popular culture historically was a contentious domain indicative of struggles and debates around modernization, and while anxieties surrounding modernization led to a broad spectrum of state intervention in popular culture, diminishing only in the 1990s, Ottomania is the first major popular cultural

stream that has gone beyond considerations and debates around modernization and successfully resisted state control. The interviews revealed diverse representations of the Ottomans as the epitome of tolerance, the defenders of Islam, the ancestors of Turks, or a burden on secularism. Concerns with modernity was conspicuously absent in these responses. As the dichotomy between official and popular culture narrowed, there emerges a multitude of perspectives that evaluate popular culture in terms of conceptions of proper history instead of proper modernity.

## The Ironic versus the Sincere? Bonding and Distancing with Ironic Consumption

**Janna Michael**, Erasmus University, Rotterdam | [michael@eshcc.eur.nl](mailto:michael@eshcc.eur.nl)

**Pauwke Berkers**, Erasmus University, Rotterdam | [berkers@eshcc.eur.nl](mailto:berkers@eshcc.eur.nl)

**Julia Peters**, Erasmus University, Rotterdam | [peters@eshcc.eur.nl](mailto:peters@eshcc.eur.nl)

**Koen van Eijck**, Erasmus University, Rotterdam | [vaneijck@eshcc.eur.nl](mailto:vaneijck@eshcc.eur.nl)

**Lotte van der Jagt**, Erasmus University, Rotterdam | [vanderjagt@eshcc.eur.nl](mailto:vanderjagt@eshcc.eur.nl)

In order to understand status differences in cultural consumption, a range of recent studies calls for a shift of attention from 'what' is being consumed towards the 'how' cultural commodities are being appropriated. This study takes a closer look at how different social groups attach meaning to karaoke performances. Participant observations and in depth interviews with karaoke participants help us to understand the distinctive ways of appropriating this cultural form. Karaoke serves as an interesting example as it brings together different social groups which meet in the same physical space and spend their evenings 'together'. While karaoke is a

'serious' game for those who try to develop and show their singing talent, it serves as a 'funny' evening entertainment for others who approach karaoke with irony. On the one hand, ironic appropriation is inclusive, as it bonds the people that read karaoke performances ironically. Its function vis-à-vis the serious participants may be dual: it allows the ironic participants to engage with popular culture, but at the same time their ironic stance ensures that they do not fully identify with this cultural form. Irony brings popular culture within reach, but also emphasizes distance towards 'trivial' popular culture and its 'serious' consumers.

## **A Tale of Little Pink Bricks: How the Genderization of Products Changed the Contemporary Toy Market Entangling even the Prestigious and Well-Regarded LEGO Brand. A Case Study on Pinkification.**

**Renato L Roda**, University of Torino | [renato.roda@unito.it](mailto:renato.roda@unito.it)

**Ester Cois**, University of Cagliari | [ester.cois@unica.it](mailto:ester.cois@unica.it)

The last few years have seen the occurrence of two important trends of change in the global market of toys. On one hand, the toys mainly addressed to female consumers have been object of an always more invasive phenomenon of what the critics have defined “pinkification”, that is a massive thrust of homologation of products to a strictly limited set of aesthetical and socio-cultural gender clichés. On the other hand, a stern reaction to the dominant genderization of the toy market has grown beyond the limits of equal opportunity activists and has conquered the attention of generalist media in many Western countries. In this paper, we will focus on one of the most debated and publicized cases of harsh collision between the gender specific marketing strategies of a toy company and the instances of more gender neutral toys promoted by the

anti-pinkification groups: the largely broadcasted introduction in the global toy trade by the well-known Danish toy company LEGO of a newly developed, deeply genderized collection of toy building sets conceived for a female only target market. Many parents concerned by the effects on their daughters of almost complete gender-segregated toy market perceived as an unbearable scandal that even a glorious brand as LEGO, respected by at least 3 generations of former-young builders for its creative and broad-minded approach to toymaking, has fallen prey of these unequal marketing strategies. We will analyze in detail the characteristics of these new products, even through an accurate comparison between the new girl-only sets and the traditional ones, to verify if all the many complaints expressed by the critics are true.

## **a02RN05 - Changing Consumption Behaviours and Practices**

Chair(s): Margit Keller (Institute of Journalism and Communication - University of Tartu, Estonia)

### **Habit and Change in Contemporary Capitalism: Comparative Evidence about Eating**

**Isabelle Darmon**, University of Manchester | [Isabelle.Darmon@manchester.ac.uk](mailto:Isabelle.Darmon@manchester.ac.uk)

**Alan Warde**, University of Manchester | [alan.warde@manchester.ac.uk](mailto:alan.warde@manchester.ac.uk)

The current crises of capitalism may opportunely remind us that capitalism thrives not only on the rational but rather on a constant mutual feed between the rational and the irrational, as Max Weber had pointed out. Food and eating have probably become an

exacerbated site for these dynamics today, as shown for example by Julie Guthman in her exploration of the reasons for the current fixation on obesity, even though the rationalisation of eating practices far antedates modern capitalism. Within such a perspective,

it is important to re-examine (irrational?) habit and (rational?) change and their status in the contemporary capitalist dynamics of food. In this paper we propose to start doing this drawing on from a two-year empirical and comparative project on change in eating habits in France and Britain, included in a wider programme of research on “sustainable practices”, in which we examined habit and change in different configurations – life changes, changes in the local food shopping environment, and targeted change through weight-loss diets. We interrogate the meaning

and status of habit and change in these different configurations with the help of mainly two contrasted understandings of the notion in Max Weber: habit as shaped by customs and conventions; and habit as unintended consequence of rationalisation. On that basis we seek to provide a renewed understanding of the dual role of habit as cushion of capitalist rationalisation processes and as innocuous vestige of traditional forms of life. We draw tentative implications regarding the resources required for food-related political action and change.

## Consequences of Normative Contestation of Food Consumption in Everyday Life

Bente Halkier, Roskilde University | [bha@ruc.dk](mailto:bha@ruc.dk)

In food policies (Loeber et al, 2011), mediated communication is used to frame ordinary food consumers as individually responsible for helping to solve collective problems by way of changing their food habits. This way, otherwise unnoticed routines become potentially questioned and negotiated among consumers, and ordinary food consumption become normatively contested. The question is which potential consequences these mediatized contestation processes have for everyday agency? Theoretically the paper is based on a practice theoretical approach to consumption and media use (Keller & Halkier, 2013). Empirically, the paper presents three types of consequences of normative contestation of food in everyday life: Do-ability, empowerment and governmentality. These types are based on

a comparison of four qualitative studies of contested food handling in daily life (Halkier, 2010). The potential implications for everyday agency (Jacobsen & Dulsrud, 2007) are discussed. Halkier, B. (2010). Consumption challenged. Food in medialised everyday lives. Farnham, Ashgate. Jacobsen, E. and A. Dulsrud (2007). Will consumers save the world? The framing of political consumerism, *Journal of Agricultural and Environmental Ethics*, 20, 469-82. Keller, M. & B. Halkier (2013). Consumers and media discourse: Social interaction in a practice theoretical approach to contested consumption activities, *Marketing Theory* (revise and resubmit) Loeber, A. M. Hajer & L. Levidow (2011). Agro-food crises: Institutional and discursive changes in the food scares area. *Science as Culture*, 20, 147-55.

## Behavior Change Communication, Food Events and Consumption in Everyday Life

Søren Esben Hansen, Roskilde University | [esben@ruc.dk](mailto:esben@ruc.dk)

In public health campaigns and public debate about food quality and nutrition, traditional behavior change communication (Livingstone, 2004) has been used to influence citizenry and consumption (Livingstone & Lunt, 2007). The producers of these mediated messages are manifold and range from public organizations

to media institutions and retail chains. With the development of a digital and mobile media landscape, where the distinction between content producers and users becomes blurred (van Dijck, 2009), there is a need to investigate the current use of behavior change communication and alternative campaign

formats such as food events. This paper draws on theoretical discussions of food consumption and media uses within Practice Theory (Halkier, 2010). Empirically, the paper presents results from ethnographic fieldwork on four food events at Roskilde Festival, 2012. Long home-interviews with families, both prior to and following the events, unfold the many existing behavior change communication sources that are available to the families and how the events are used as discursive repertoires for possible change. Implications for future behavior change communication are

discussed. Halkier, B. (2010). Consumption challenged. Food in medialised everyday lives, Ashgate. Livingstone, S. (2004). What is media literacy? *Intermedia*, 32 (3). pp. 18-20. Livingstone, S and P. Lunt (2007). Representing Citizens and Consumers in Media and Communications Regulation, *The ANNALS of the American Academy of Political and Social Science* 2007; 611; 51. van Dijck, J (2009). Users like you? Theorizing agency in user-generated content, *Media Culture Society* 2009; 31; 41.

## Enclosed Cultures: Vegetable Gardens and Potential Changes in Consumer Culture

Roberta Bartoletti, University of Urbino Carlo Bo | [roberta.bartoletti@uniurb.it](mailto:roberta.bartoletti@uniurb.it)

The paper intends to observe the crisis and potential changes in consumer culture in enclosed spaces such as vegetable gardens, on the basis of an ethnographic research in a municipal allotment area in the town of Bologna (Italy). Vegetable gardens were traditionally devoted to a subsistence economy and a more safe life for working classes, but after the world war 2 they became spaces of leisure of a more wide array of social groups. The recent economic crisis is accompanied by a resurgence in food self-production in gardens, but reasons of engagement in urban cultivation are also cultural, social and civic-political rather than just economical. I will focus on 3 items that can be connected to

changes in conventional consumer culture: environmental sustainability, gift culture and consumer sociability. Thanks also to the joining of new generations of gardeners, are gardens places of cultivation of sustainability (in term of care for biodiversity, biological cultivation, ecc.)? The traditional "generosity of gardeners" can be an example of a different consumption culture (free exchanges of products and skills)? How are intertwined individual and collective orientations in garden, the private and the public? Asking these research questions we intend to understand if and how today vegetable gardens can be depicted as places of cultivation of changes in consumer culture.

## b02RN05 - Consumption of Food 2 (Diet)

Chair(s): Paddy Dolan (Dublin Institute of Technology)

### Food Consumption, Health and Family Life

Marie Plessz, INRA | [marie.plessz@divry.inra.fr](mailto:marie.plessz@divry.inra.fr)

Le Pape Marie-Clémence, CNRS/Université Lyon 2 | [mc\\_lepape@yahoo.fr](mailto:mc_lepape@yahoo.fr)

Food consumption is both a matter of domestic economy and organisation and of maintaining family relationships. Recent public health policies have stressed yet one more dimension, since food practices have become infused with exhortations to follow nutritional rules such as the “Five a day” programmes. How do households take up these missions? How do they prioritize them? Is it possible to identify material conditions (including access to the market and the products), household, individual or life course characteristics that impact how health is defined and included in domestic food practices? This communication will provide preliminary results on these questions. The research is based on in-depth

interviews about food consumption habits and norms with members of the highest strata of the working class in rural and urban settings in France. We selected interviewees who had at least one child under 10 years old and conducted interviews with them and their kins (spouse, parents, siblings). We did not prompt questions about health during the interview; instead we examined how health and bodily issues sprang up in the discourse. This allows us to compare the role and place of health in food experiences, across people who are linked by kinship and generational ties, but may differ by their gender, their family situation, their birth-cohort and their employment position and history.

### Consumers and Fat: Attitudes towards the Light, Heavy, and Hidden

Nina Kahma, National Consumer Research Centre, Helsinki | [nina.kahma@ncrc.fi](mailto:nina.kahma@ncrc.fi)

Piia Jallinoja, National Consumer Research Centre, Helsinki | [piia.jallinoja@ncrc.fi](mailto:piia.jallinoja@ncrc.fi)

Satu Helakorpi, National Institute for Health and Welfare | [satu.helakorpi@thl.fi](mailto:satu.helakorpi@thl.fi)

Fat has become the central nutrient to healthy eating. What kind of food is good for you is much discussed in the public debate at the same time as eating in restaurants has increased. In recent decades the variety of fat products, foodstuffs and semi-finished products has grown immensely in the market. Nutritional fat comes into our plates in two forms: obvious and hidden. The hard saturated fats are present in whole milk and dairy products like cheese and cream, and also in foods such as mayonnaise, French fries, hamburgers, cakes, and pastries and pies. The

paper analyses nationwide cross-sectional quantitative data collected in the Health Behaviour and Health among the Finnish Adult Population monitoring survey in 2012. The survey collects information on eating habits such as food choices and the type of fat used in cooking and on bread. The questionnaire also includes a variety of questions about the respondents' background such as weight, height, and socio-economic background. The aim of the paper is to map out the way in which social inequalities can be seen in the consumption of fats from the viewpoint of

lifestyles. We explore through quantitative methods how choices of foods containing fat are linked to choices in obvious fat in different population subgroups. We mirror the results to public discussion on nutritional fats and the

level of peoples' knowledge about fats. We will also discuss the role of expert knowledge as opposed to the lay knowledge affecting the choices of fats and fatty foods.

## Do Food Safety Concerns Foster Vegetarian and Vegan Lifestyles?

Ariela Mortara, IULM University, Milan | [ariela.mortara@iulm.it](mailto:ariela.mortara@iulm.it)

In the past years issues related to the safety of food have become relevant in private and public discourses. Thanks to such events like the mad cow disease alarm, the avian flu and more generally the pollution of environment and waters, consumers are more and more concerned about what they eat and drink. Such concerns have contributed to the spreading of biological food, have forced retailers to provide the traceability of food, and have generally affected food related consumption practices, leading to the consumption of more healthy and "safe" food. The general concern regarding the assumption of healthy food is even more important for parents wanting to

provide safe food for their children and therefore looking for alternatives diets like vegetarian and vegan. The aim of the paper is to investigate the relationship between food concerns and vegetarian and vegan lifestyles as it emerges from the online dialogs among the so called techno mums, in order to verify the hypothesis that the diffusion of vegetarian and even vegan diets among them is due, not only to ethical reason, but also to concern for health. The applied methodology will be a netnographic research on blogs and forums in order to monitor the online conversations of this group of consumers which seem to be very influencing.

## c02RN05 - Consumption and Taste 1

Chair(s): Henk Roose (Department of Sociology - Ghent University)

### Constructing Legitimacy for Cultural Omnivores: Wine Magazines and the Case of Diminishing Contrasts and Increasing Varieties.

Jennifer Smith Maguire, University of Leicester | [jbs7@le.ac.uk](mailto:jbs7@le.ac.uk)

In the study of contemporary taste patterns, there has been a lack of attention to the cultural milieu in which omnivorous tastes and practices are formed, and in particular how media representations codify new canons of cultural legitimacy. The paper addresses this gap in our knowledge of how new patterns of 'good taste' are defined at a collective level, through an analysis of media aimed explicitly at cultural omnivores. An analysis of

advertising and editorial content from a sample of 2008 and 2010 issues of the two leading wine magazines (Decanter and Wine Spectator) identified similarities and differences between the representations of Old World- and especially French- wines, and New World (e.g. Australian, American) wines. The analysis focused on representations of a wine's origin- e.g. where a wine was made, how it was made, by whom and when- which

were coded for four frames of legitimacy: genuineness, heritage, transparency and external validation. The findings suggest that wine magazines circulate at least two logics of 'good taste': contrasts in legitimacy between Old and New World have diminished, meaning that legitimate wine is increasingly diverse in its origins; and, the category of the legitimate

is stratified through an increasing variety of terms of evaluation, including an established notion of terroir and more inclusive notions of provenance. The discussion interprets these findings in light of the democratization and globalization of the wine field, and the struggle to maintain social distinction through more elaborate codes of taste.

## **The Consistency and Inconsistency of Taste across Cultural Fields: Finland and the UK Compared**

Semi Purhonen, University of Helsinki | [semi.purhonen@helsinki.fi](mailto:semi.purhonen@helsinki.fi)

The idea of distinct and identifiable lifestyles that characterize different social groups implies that people should have, at least to a certain degree, meaningfully consistent taste preferences across different areas of life, or, cultural fields. For instance, those who like a certain type of music (e.g. classical or rock) are assumed to like also literature of the similar kind (e.g. poetry or who-dunnits), and so on. If the criterion regarding the "similarity" is connected with the degree of cultural legitimacy, we could thus identify lifestyles representing different levels of legitimacy (and call them, e.g., "highbrow", "lowbrow", etc.). Pierre Bourdieu's theory of taste is a well-known and elaborate example of this type of reasoning, emphasizing the role of coherent, class-related habitus as a mechanism – the "unifying principle" – behind the structural homology between tastes manifested in

different fields. Recently, however, Bernard Lahire has criticized Bourdieu's view of coherent habitus and consistent tastes by focusing on intra-individual plurality and inconsistency ("dissonance") of taste dispositions. Lahire has also shown, using data from France, that consistent taste profiles are much rarer – almost non-existent – than different types of mixed tastes combining varying levels of legitimacy. This paper considers the dispute between Bourdieu and Lahire and empirically addresses the question of consistency of cultural taste across several fields using comparable and representative data from Finland and the UK. The analysis is based on a variety of variables measuring taste and cultural participation in fields of music, literature, the visual arts, cinema, television and other leisure time activities.

## **The Discrepancy between Taste and Behaviour in Film Consumption**

Sebastian Weingartner, University of Zurich | [weingartner@soziologie.uzh.ch](mailto:weingartner@soziologie.uzh.ch)

Cultural stratification research is mainly concerned with the way cultural taste and cultural consumption are related to social position indicators like education, income, or age. At the same time, taste and consumption behaviour are often treated as interchangeable measures of some sort of latent cultural competence or disposition, i.e. cultural capital. However, such equalization conflicts with

relevant sociological and social psychological theory which argues that mental phenomena and overt behaviour are not necessarily equivalent and that the former usually antecede the latter. Moreover, it ignores the possibility of cultural taste and actual consumption having divergent causes and effects. Therefore it seems more appropriate to analyse cultural taste and cultural

consumption behaviour separately and to conceptualize the discrepancy between these two as independent object of investigation. Drawing on recent survey data from Switzerland (conducted in February 2013), it will be explored whether such a discrepancy exists in the domain of film consumption. This is achieved by contrasting the frequency of attendance to various types of films with measures of film-specific taste. To elaborate this contrast more extensively, two modes of

film consumption are distinguished (private, public) as well as three dimensions of taste (preferences, orientations, dispositions). In conjunction with indicators of social position and origin, this allows for insights into the specific mechanisms that bring film consumption about. Additionally, the analysis gives some advice into which direction previous conceptualizations of cultural capital and lifestyle need to be refined.

## Where is Tasting? On the Situatedness of Aesthetic Appreciations of Food

Anna Mann, University of Amsterdam | [a.m.mann@uva.nl](mailto:a.m.mann@uva.nl)

In the literature on tasting that is coming out of cultural sociology and neighboring disciplines, there are three different ways of situating sensual and aesthetic appreciations on food. A first body of literature positions tasting within a geographically defined "food culture". In contrast, in a second group of studies, tasting is located within a functionally specialized "field of gastronomy". And yet again differently is a third body of literature in which taste is studied as a mechanism of social distinction organizing "society as a whole". This raises the question: Where, actually, is tasting? This presentation will answer the question and relate to the literature through a material semiotic case study (Mol 2010; Law 2004). It will explore practices of tasting food in the

Kantonsspital Chur, a hospital in the middle of Western Europe. I will mobilize field notes from ethnographic observations of perceptions of flavors, appreciations of meals and other mundane, day-to-day activities that happened in the hospital between 2009 and 2011 when I did fieldwork there. The field notes will show how the activities that happen before, after and at the same time as eating affect tasting and, in relation to the above mentioned literature, argue that tasting is situated. Through the situatedness of aesthetic appreciations of food the presentation will, thus, contribute to an understanding of the place of taste and tasting both, in mundane practices and sociological theory.

## 03\_05JS28 - The Commercialization of Sport and Fitness (1)

Chair(s): Fabio Lo Verde (University of Palermo)

### Exploring Sport and Physical Activity through Consumption and Self-Image

Miia Grénman, University of Turku | [miia.grenman@utu.fi](mailto:miia.grenman@utu.fi)

Terhi-Anna Wilska, University of Jyväskylä | [terhi-anna.wilska@jyu.fi](mailto:terhi-anna.wilska@jyu.fi)

Drawing on the discussion on commercialization of physical culture, the

purpose of this study is to examine how perceptions of consumption and self-image

affect engaging in sport and physical activity. Sportive activities are prominent both in media and consumer culture, and they play an important role in individuals' everyday life as everyone is surrounded by the social world of physical culture, its meanings and signals. Sportive activities are practiced in numerous ways and due to various reasons. Also the fundamental aim seems to have changed; they have become commodities of the leisure industry. Broadening the scope of sportive activities with a cultural perspective and analyzing them as a culturally constructed area of life, this study takes a quantitative approach to examining engagement in sport and physical activity. The data consists of a National Student Health Survey (n=4403) conducted in Finland in 2012. Principal

Component analysis with Promax rotation resulted in seven parallel perceptions of consumption and self-image: 1) Happiness and life satisfaction, 2) Media and fashion, 3) Physical activity and healthy lifestyle, 4) Sustainability, 5) Material beauty and aesthetics, 6) Individualism, and 7) Technology and quality. Physical activity and healthy lifestyle seemed to have a stronger correlation with Happiness and life satisfaction than with Media and fashion. Component scores were then analyzed with ANOVA and statistically significant differences in socio-demographics were found. Preliminary results indicate that the features of Happiness and life satisfaction, Media and fashion, and Physical activity and healthy lifestyle scored higher values among younger respondents and females.

## Exercise Dependence and Eating Disorders in Fitness Centers

**Zsuzsa Menczel**, Semmelweis University, Budapest | [menczel.zsuzsa@gmail.com](mailto:menczel.zsuzsa@gmail.com)

**Eszter Kovacs**, Semmelweis University, Budapest | [kovacs.eszter@emk.sote.hu](mailto:kovacs.eszter@emk.sote.hu)

**Istvan Vingender**, Semmelweis University, Budapest | [vingenderi@se-etk.hu](mailto:vingenderi@se-etk.hu)

**Zsolt Demetrovics**, Eötvös Loránd University, Budapest | [demetrovics@t-online.hu](mailto:demetrovics@t-online.hu)

Exercise dependence (ED) is an extreme commitment to sports. ED was identified as behavioral addiction and first recognized as disease by Glasser in 1976. Previous studies have found that ED has strong relationship to eating disorders (EAT) that consist of addictive features, such as obsessive thoughts on body image and eating or compulsive behaviors. The objective of the present paper is to explore the prevalence of ED and EAT, and to reveal their relationship in a sample of fitness center users. Questionnaire survey was conducted in 32 fitness centers in Budapest, in 2010 (N=1732, 58.6% females, Mean age: 31.7 years of age). ED was measured by ED-Scale 21 items by Hausenblas and Symons Downs 2002; and EAT was investigated by SCOFF by Morgan et al. 1999. 2.2% of the respondents showed ED, 69.3% belonged to the risk group, while EAT was detected in 17.3%. Four groups were

distinguished based on presence of ED and EAT: 1) control group (80.8%), 2) EAT group (15.5%), 3) ED group (1.8%), and 4) EAT & ED group (1.8%). Women were overrepresented in all groups ( $p < .001$ ). In terms of sport attendance, we found that EAT group and ED group does sports about 6-10 times per week, and EAT & ED group 4 times weekly, that is significantly higher ( $p < .001$ ) compared to the controls. Observing the type of sport, difference was indicated in doing cardio type of moving or body building ( $p < .01$ ). The findings showed that the prevalence of ED and EAT is much higher among fitness center users than in normal population. This result might point out a strong link between the two symptoms. Further research is needed to investigate these phenomena separately and to gain deeper understanding of how fitness centers can contribute to improved health

## Sport Activities and Health in Tourism – the Case Peurunka in Central Finland

Hanna Vehmas, University of Jyväskylä | [hanna.m.vehmas@jyu.fi](mailto:hanna.m.vehmas@jyu.fi)

Arja Piirainen, University of Jyväskylä | [arja.piirainen@jyu.fi](mailto:arja.piirainen@jyu.fi)

Pertti Matilainen, University of Jyväskylä | [pertti.matilainen@jyu.fi](mailto:pertti.matilainen@jyu.fi)

Sport and health activities comprise significant niche markets of contemporary leisure. Global trends together with the growing impact of leisure in constructing people's life styles and identities have increased the demand for sport and health products also in tourism. Trendiness of active and healthy life style offers possibilities for tourism enterprises. On the other hand, hard competition for customers in economically and structurally unsteady environments sets challenges for the profitability of the tourism activities. The aim of this study is to examine the significance of sport and health related services as reasons for travel in Finland. Theoretical framework derives from a multidisciplinary approach with starting points from sport sociology, health sciences and business economics. The study

was conducted as a case study in the Rehabilitation Centre & Spa Hotel Peurunka in Central Finland. The data (n=755) was collected by using an ethno-survey sampling of the customers of Peurunka. The results indicate that Peurunka's customers are divided into three (3) basic segments according to their reasons and experiences for travel. Rehabilitation and health; sport and leisure and maintaining good abilities maintenance at work were the main reasons for visiting Peurunka. Peurunka offers an interesting case study for sociological analysis. Originally built in 1974 for the rehabilitation of the Finnish war veterans the resort illustrates the changes and challenges of tourism and leisure in postindustrial Finland.

## a03RN05 - Sustainable Consumption 1

Chair(s): Isabel Silva Cruz (Institute of Sociology - University of Porto)

### Pathways to Sustainable and Ethical Food Consumption. Results from Backcasting Workshops in Hungary and Norway

Anita Borch, National Institute for Consumer Research (SIFO) | [anita.borch@sifo.no](mailto:anita.borch@sifo.no)

Eivind Stø, National Institute for Consumer Research, Oslo | [eivind.sto@sifo.no](mailto:eivind.sto@sifo.no)

Gunnar Vittersø, National Institute for Consumer Research, Oslo | [gunnar.vitterso@sifo.no](mailto:gunnar.vitterso@sifo.no)

Andrea Farsang, Central European University | [farsanga@ceu.hu](mailto:farsanga@ceu.hu)

Alan Watt, Central European University | [watta@ceu.hu](mailto:watta@ceu.hu)

The European food- and agricultural systems are facing important challenges in order to reduce negative environmental impacts and develop a more equitable distribution of food. On a European political level, there is a

growing recognition that these challenges require qualitative changes in the food- and agricultural policy. In this paper, by way of comparing results from backcasting workshops in Hungary and Norway, we discuss

different possible pathways regarding such transitions to a more ethical and sustainable food sector. One aim of the European FP7 project CRISP (CReating Innovative Sustainability Pathways) was to create visions of future sustainable societies and suggesting possible pathways to reach these visions. In this paper, we compare the outcome of backcasting workshops in Hungary and Norway on the topic of food discussed in relation to the vision called One Ethical World. During the spring 2013 workshops in the two countries were conducted with experts as well as lay people. Main research questions asked in the

workshops were the following: How do we reach the goals outlined in the visions? What needs to be changed and modified in the current system, and what new ideas and measures do we need to support and encourage in order to transform society in a more sustainable direction? The comparison between Hungary and Norway shows that the countries differ regarding climate and socio-economic conditions, thus, both contrasts and similarities between the two countries may give valuable inputs to the discussion of transition pathways to a future sustainable food sector in Europe.

## **Household Metabolism and Social Practices. A Model for Assessing and Changing Household Consumption**

**Dario Padovan**, University of Torino | [dario.padovan@unito.it](mailto:dario.padovan@unito.it)

In the recent years, the evaluation of environmental sustainability of consumption practices is getting a central role in European researches. Several analytical tools and methodologies are proposed in order to quantify the environmental burden of production and consumption. Such models can be very precise and efficient in the evaluation of energy consumption, emissions and land use, but most of the times, they are unsuitable to catch the social dimension of the investigation. Thus, many of them are unsuitable to investigate at the level of consumption practices. In this presentation I focus on Household Metabolism, a model that

links social and environmental performances in order to perform a systemic investigation of the impact of consumption. Yet, housing metabolism implies not only quantitative aspects of consumption and the merging of different methods of analysis. It engenders some redefinitions of sociology of consumption such as the discovering of the environmental aspects of consumption itself, the implication of household models in order to identify specific environmental impacts, and the significance of social practices as the principal activator of societal metabolism and the key driver for future changes in consumption behaviour.

## **The Transition of Social Practices of Consumption – Capturing the Diffusion and Reproduction of Social Innovations in the Field of Sustainable Consumption**

**Melanie Jaeger-Erben**, Technische Universität, Berlin | [jaeger@ztg.tu-berlin.de](mailto:jaeger@ztg.tu-berlin.de)

**Jana Rückert-John**, Institute for Social Innovation (ISInova), Berlin | [jana.rueckert-john@isinova.org](mailto:jana.rueckert-john@isinova.org)

**Martina Schäfer**, Technische Universität, Berlin | [schaefer@ztg.tu-berlin.de](mailto:schaefer@ztg.tu-berlin.de)

**René John**, Institute for Social Innovation (ISInova), Berlin | [rene.john@isinova.org](mailto:rene.john@isinova.org)

Scientists as well as policy makers emphasize the impact social innovations can have on

changing carbon intensive and non-sustainable consumption patterns towards more sustainable practices. Social innovations can be defined as novel practices that deviate from established certainties and routines. They represent solutions for societal problems and have far-reaching structural implications for society. While most research concentrates on the diffusion of social innovations in society as a whole (e.g. transformation of values or institutions), little is still known about how alternative social practices 'recruit' new carriers among consumers and become a part of everyday routines. Going out from the assumption that a transformation towards more sustainable consumption only is possible if alternative practices are feasible in the context of everyday life, it seems vital to find

ways of conceptualizing the diffusion and reproduction of social innovations on the level of consumption routines. This contribution presents such a conceptual frame combining theoretical assumptions about the process of social innovation with practice theory and concepts of the conduct of everyday life. Taking the example of new forms of collaborative consumption (like swapping and sharing), a concept for the process of social innovation will be described in three different stages: (1) the problematisation and disruption of established practices, (2) the emergence and experimental application of alternatives and (3) the re-establishment of altered setting in terms of their continuous reproduction in everyday routines, highlighting aspects of their feasibility and applicability.

## **New Forms of Sustainability. Ecovillages and Self-Sufficient Food Production**

Alice Brombin, University of Padova | [alice.brombin@gmail.com](mailto:alice.brombin@gmail.com)

In modern society, there are several social movements that try to get control of the cultural resources that are in contrast to the tendency of large-scale standardized food production. These ethical and political aspects of consumption gain a high symbolic value. The research aims to analyze the self-sufficient food production practices of some Italian ecovillages advancing the hypothesis that these practices play a key role in the articulation of a new politico-aesthetics characterized by the shift from a rhetoric focused on quality to an alternative view, in which pleasure becomes essential in the pursuit of personal satisfaction and in the construction of taste, following a process of re-naturalization of the individual and the environment. Ecovillages are intentional and experimental communities inspired by

ecological values that have as common goal the achievement of food and energy self-sufficiency. The environmental ecology is pursued primarily with alternative farming methods, such as permaculture and organic or biodynamic farming practices. These local communities are able to build networks in the territories that lead to a rational and pragmatic action, both in relation to the way of eating and the use of products, and by interacting with related networks, such as GAS groups of joint purchasing. The data comes from the author's ongoing PhD research in the social sciences started in 2012, and which is expected to be completed in 2014. Qualitative methodology is utilized, involving collecting oral narratives from people involved in alternative practices of food production and consumption.

## **b03RN05 - Consumption of Food 6 (Drivers)**

Chair(s): Taru Lindblom (Economic Sociology - University of Turku, Finland)

### **A Case Study of Consumption amongst Readers of Food Magazines: Consuming Magazines, Food and the Cultural Value of 'Thrift'**

Jennifer M. Cole, University of Leicester | [jmc56@le.ac.uk](mailto:jmc56@le.ac.uk)

This paper is based on my PhD research that uses food magazines as a lens to study the cultural production and consumption of value; specifically the value of thrift. The research applies a circuit of culture approach which draws upon cultural economy theory to study the production-text-consumer relationship through a textual analysis of food magazines BBC Good Food and Delicious, interviews with cultural intermediaries, and interviews with consumers. This paper focuses on the data collected from interviews with consumers of the two food magazines (n=26). These interviews highlight the ways in which the readers of food magazines negotiate with messages of thrift through the food magazines, and how this influences their own cultural understanding of the value of thrift. A number of narratives around thrift are considered in terms of personal and social understanding by

the participants: the notion of saving, of when thrift was necessary and ways in which thrifty practices were carried out. The role that habitus plays in the way individuals understand these values is also explored. However, any discussion centred on food magazines also involves a discussion about other acts of consumption. Firstly, the consumption of the magazine; both the purchase of the magazine itself and the ways in which the magazine is read and used. And secondly, about the consumption of food; including shopping habits, cooking, the act of eating and the socio-cultural aspects to these processes. These practices are sometimes at odds with some of the thrifty values that consumers identify with and the ways in which consumers negotiate this is interesting and allows for differences in material practice and cultural value to be examined.

### **Developments in the Advertising of Guinness: An Eliasian Explanation.**

John Connolly, Dublin City University | [john.connolly@dcu.ie](mailto:john.connolly@dcu.ie)

Paddy Dolan, Dublin Institute of Technology | [paddy.dolan@dit.ie](mailto:paddy.dolan@dit.ie)

Different theoretical frames and approaches have sought to explain the function and role of advertising in the development of commodity culture. A particularly dominant theme portrays advertising as one of the central drivers of commodity culture. Here, proponents of advertising are attributed with seemingly unparalleled agency and intentionality in connection with its development and in commodity culture's seemingly all pervasive expansion. In this paper we illustrate how advertising developed

and expanded within a commercial enterprise despite initial opposition, ambivalence and even hostility from some of its bourgeoisie owners towards the practice – the very social class sometimes identified with advertising's origins and advance. Furthermore, while it involved intentional planning, and an increasingly calculative orientation, on the part diverse functionaries we illustrate how the development of advertising was largely 'unplanned'. Following an Eliasian approach we reconstruct and explain how the shifting

interdependencies at different, yet interconnected, levels of social integration led to the development and, interrelated with this, an advance in the functional import of advertising within one of the most commercially successful enterprises of the European brewing industry – Arthur Guinness & Sons. Specifically, we detail how the development of advertising was impelled by a

series of processes that increasingly interlocked; a widening and intensification of competitive commercial interdependencies; developments in the British class structure; and by a changing consumer habitus in several different nation-states. As such, it involved a transformation of both social and personality structure.

## Are Food Bloggers a New Kind of Influencers?

Sidonie Naulin, Université Paris-Sorbonne | [sidonie.naulin@gmail.com](mailto:sidonie.naulin@gmail.com)

Food blogs appeared at the beginning of the 2000s to offer a new form of mediation in the food area. The technological context (development of the Internet as a tool of expression), the growing popularity of food in the media and the effects of the crisis (promotion of “do it yourself”, search for free items and for personal social links) have participated in the success of food blogs. Almost ten years after, it is questionable whether food blogs have changed food prescription. My study is based on interviews (N=15) and on a survey (N=1387) that I conducted among French food bloggers. I compare their activity and influence with that of food journalists who mainly work in “traditional” media (N=41). The success of food bloggers is linked with the properties of their medium. Web 2.0 allows the conjunction

between a personal relationship of the consumer with the blogger (as with a friend or a parent) and simultaneously a large circulation of information (like in traditional media). It gives birth to a new form of influence situated between that of personal networks and that of experts. If food bloggers feel like “amateurs” and do not have the impression to compete with journalists, they however share some features (such as the broadcasting of information to large audience) with media professionals. This closeness is reinforced by the fact that a minority (around 12%) of influent food bloggers is requested by brands to advise their products as journalists are. Thus, a convergence seems to appear between bloggers and journalists. This convergence tends to challenge the specificity of food bloggers' influence.

## Changes in the Norwegian Consumers' Attitudes towards Organic Food. A Comparison of Survey Data from Year 2000 and 2012/13

Gunnar Vittersø, National Institute for Consumer Research, Oslo | [gunnar.vitterso@sifo.no](mailto:gunnar.vitterso@sifo.no)

Torvald Tangeland, National Institute for Consumer Research, Oslo | [torvald.tangeland@sifo.no](mailto:torvald.tangeland@sifo.no)

Norwegian authorities have introduced policy targets implying that 15 percent of domestic production and consumption of food should consist of organic products within 2020. This ambitious goal is not exclusive to Norway, but many European countries have similar

objectives for organic food. The development has to date been slow and targets will not be reached if the current growth rate continues. Accordingly, there is reason to question why the growth is not greater considering the increased political focus. Explanations can be

found both on the supply and demand side. The paper focuses on the demand side and discusses changes in consumer attitudes to organic food. Based on consumer surveys the paper compares data on consumers' perceptions of organic food in the period 2000 - 2012/13. Data show that consumers feel that the information and the availability of organic food have improved, but that they were less likely to see the benefits of buying these products. The results are surprising because in the period between 2000 and the present date both the agricultural authorities and the market actors have taken a number of initiatives to improve information and

knowledge about organic food among consumers. The findings also correlates poorly with the theories of ecological modernization that emphasizes that "greening of markets" will contribute to change production and consumption in a more sustainable direction. The paper concludes that an exclusive focus on the consumer side is not sufficient to explain the lack of interest in organic food among consumers. To understand the negative trends in support for organic foods identified in this study, further research must involve the general environmental and agricultural policy context that organic food is a part of.

## c03RN05 - Markets of consumption

Chair(s): Michael Jonas (Institute of Advanced Studies, Austria)

### The Role of Place in the Construction of Alternative Market Relations: The Case of Small-Scale Champagne Producers

Jennifer Smith Maguire, University of Leicester | [jbs7@le.ac.uk](mailto:jbs7@le.ac.uk)

Steve Charters, Reims Management School | [stephen.charters@reims-ms.fr](mailto:stephen.charters@reims-ms.fr)

The paper utilizes the example of champagne to examine the emergence of alternative definitions of the market and market relations. Within the well-established market for champagne— which is dominated by large scale producer brands— there is an emerging and influential niche market for small-scale, grower, natural and biodynamic champagnes. Working from a cultural economy perspective that regards markets as the outcomes of lived, material practices, the research is concerned with how this alternative champagne market is accomplished by various actors who operate with negotiated definitions of their products, consumers and competition. The research involved interviews with 12 smaller-scale

producers of champagne, and six further intermediaries specializing in such products. In particular, the analysis focuses on the role of place (e.g. geographic specificity, terroir, regionality) as an organizing device through which respondents could articulate definitions of the product, and of what it means to be in the market— including their perceptions of competition, success and the desirability of limited growth. Findings highlight the dominance of a discourse of authenticity, for the product as well as the producers. The discussion interprets these findings with regard to the potential for the development of more sustainable markets via the affective passions of particular market actors.

## The Creation of Consumption Practices: Framing Contests among Multiple Firms across Multiple Industries

Satoko Suzuki, Kyoto University | [suzuki@gsm.kyoto-u.ac.jp](mailto:suzuki@gsm.kyoto-u.ac.jp)

Drawing on social movement research on framing, this paper develops a model of framing contests at the social level (between multiple firms across multiple industries) to elucidate how cognitive frames influence the creation of consumption practices. This paper is based on Goffman's (1974/1986) frame theory. By using the content analysis of firm advertisements and press releases, the author examines the ways firms construct the frames and influence consumers to adopt the consumption practice. Frames are the means by which consumers make sense of new consumption practice and rely on to decide its adoption. The findings are two-folds. First, predominant frames within an industry are constructed through the imitative behavior of firms. Where the specific frame about the consumption practice is successful in mobilizing consumers, the firms imitate and

use the same frame in their advertisements. Through such imitative behaviors, the frame becomes predominant frame of the industry. Second, the collective action frames are constructed through the framing contests among multiple industries. Where predominant frame is congruent, it becomes the collective action frame that prevails in the society. Collective action frame inspires and legitimates the new consumption practice. Where predominant frame about the consumption practice is not congruent, the firms engage in framing practices to make their frame resonate with consumers and to mobilize actions. The findings contribute to a theoretical understanding of the creation of consumption practices and the social dynamics among multiple firms across multiple industries.

## Cultural Tensions between Communal Ideas and Market Logics: A Case of Classic MINI Brand Community in Japan

Mitsutoshi Otake, Meiji Gakuin University | [mitsutoshi.otake@gmail.com](mailto:mitsutoshi.otake@gmail.com)

In this study, I focus on consumption practices in a brand community (Muñiz and O' Guinn 2001) and examine the social construction of brand meanings. Through my 8 months fieldwork in the Classic MINI brand community, I found that owners construct different meanings from what marketers may have intended. In order to explore an emergence phenomenon, I focused on the research tradition that emphasizes the empirical aspect of consumption and used mainly ethnographic approach. In recent years, among the research tradition as Consumer Culture Theory, consumption is considered as not purchase decision but behavior which involves a subjective experience of products and assignment of meanings (Arnould and

Thompson 2005). That is, consumers imbue a product with a subjective meaning. Furthermore, brand is not considered as object that stimulates attitude and behavior of consumer but object that is assigned symbolic meaning to (Sherry 2005). The key research question is that why do owners construct different meanings from what marketers may have intended? This question is related with social construction of reality (Berger and Luckmann 1966). There are two major findings. First, owners co-create meanings for MINI by three interrelated practices: customizing products, differentiating from other brands and owners, and building a social bond. Second, there are cultural tensions between communal ideas and market logics. Owners belonging to a

grassroots community (Classic MINI) feel hatred toward a brand management of BMW

MINI and authorized dealers despite attachment to MINI brand.

## Manufacturing a “Captation” Device: Advertising Work and the Pursuit for the Hidden Strings Tying Goods and Consumers.

Tomas Ariztia, Universidad Diego Portales, Santiago | [tomas.ariztia@udp.cl](mailto:tomas.ariztia@udp.cl)

Based on 50 interviews and ethnographic fieldwork in advertising agencies in Santiago de Chile, this article explores the different practices, knowledge and devices mobilized on the design of marketing campaigns. Complementing recent scholarship exploring marketing as related to the production of captation devices working in market encounters, this article proposes to trace back and explore the process of manufacturing such devices in the practical work of advertising agencies. Particularly, this article focuses on one specific operation, namely, the production of “hypotheses of attachments” between goods and consumers. Relying on a pragmatic sociology it identifies two competing regimes of valuation as central in such production.

First, social sciences and market research knowledge proposing “true descriptions” about consumers and potential attachments to goods. Second, the deployment of emotions and affects and the pursuit of an “unique” and creative attachment. By presenting these two repertoires as two different modes of connecting goods and consumers, this article complements recent research focused on market attachments, reflecting upon the central role of affects in the production of marketing devices. And, more generally, It suggests that producing and mobilizing potential connections between goods and consumers is a critical but practical accomplishment at the centre of advertising work.

## 04\_05JS28 - The Commercialization of Sport and Fitness (2)

Chair(s): Roberta Sassatelli (University of Milan)

### Zumba - a Pleasant Duty?

Dorota Zofia Olko, University of Warsaw | [dorota.olko@gmail.com](mailto:dorota.olko@gmail.com)

Images of perfect body promoted in media and popular culture push individuals into disciplining themselves by dieting regimes and physical exercises. Magazines and websites are full of tips how to get a slim and healthy body. But chase after an ideal body not only is connected to desire of being attractive and matching the beauty standards. The body is also seen as the visible indicator of the self. New middle class, with its obsession about self-discipline, is the main client of dieticians,

coaches and fitness clubs. Consciously shaped body is a sign of specific features, skills and abilities, therefore it is permanently “under construction”. However, as some theorists indicate (Bellah 1976) permanent self-control and medicalization of life change it into survival, deprive it of taste and make personal fulfillment impossible. Sport is rather a duty than a fun – what was spontaneous and pleasant in the past, now is institutionalized. Such practices must have a bitter taste of a

medicine. Members of middle class know it, but on the other side, they permanently try to run away from any determinations and constraint. How to reconcile these tendencies? The answer are emerging new forms of fitness, which are promoting as effective ones, but also pleasant and full of fun. One of such forms is zumba – Colombian dance fitness program created in 90s. Since then Zumba Fitness, a

private company, has transformed into a rapidly growing fitness empire with heavyweight investor backing. This presentation's aim is to answer how it was possible. Basing on qualitative research the author will try to analyse how the guidelines of zumba respond to cultural changes and make this sport a commercial success.

## Body, Sport and Advertising: the Social Image of "Bio Brand"

Ivo Stefano Germano, University of Molise | [ivostefano.germano@unimol.it](mailto:ivostefano.germano@unimol.it)

Giovanna Russo, University of Bologna | [giovanna.russo6@unibo.it](mailto:giovanna.russo6@unibo.it)

This paper analyzes the role of relationship between body and sport in the advertising. In the fieldwork of communication, mass media and digital media, the body is one of the "passepartout" for the global brands not only in the sport wear or fashion system. The hypothesis of this paper is the following one: "the most communicative strategies are those which know to present your message according to the cultural dominant image of the sporting body. In the post-modern society, the sport facing a new environment by aesthetical social paradigm. In order to develop our hypothesis, we will use a multidimensional perspective based on works of a newest scientific literature, regarding to a central dimension structure of storytelling: the "bio-brand". Indeed, "bio-brand" is the visual and

pragmatical metamorphosis that involves mind, heart, brain and body of a consumer-performer, who not only does limit a simple relationship with the brand, but also produces and invents the brand. Methodologically, our proposal will be divided into a double analysis-observation: - co-production when a consumer-performer is interested in narrative dimension; - co-invention when a consumer-performer becomes a player or a communication referee. The hypothesis of research for this qualitative analysis is the following one: "The "bio-brand" that better represent the body image as an object modelling by aesthetical social paradigm it's also the same that better shows the activities of the contemporary advertising models.

## Anywhere, Anytime: Smartphone Apps, 'Mobile Privatization', and the Commodified Sporting Body

Brad Millington, University of Bath | [b.millington@bath.ac.uk](mailto:b.millington@bath.ac.uk)

This presentation examines a significant development in media culture: the promotion of health and fitness through Smartphone apps, or application software. Apps have flourished in recent years, and in so doing have ushered in a trend towards mobile service procurement on task-specific online platforms. Health and fitness-themed apps have received

considerable attention from consumers and news media alike, yet despite past interest from scholars in technologically-enhanced forms of sport participation, they have thus far escaped academic attention. Drawing from an in-depth study of a selection of prominent health and fitness-themed apps, the presentation specifically highlights the unique

ways in which these products 'treat' the sporting body. Study results first stress the emphasis apps place on self-improvement, as they enable activities like exercise tracking en route to achieving health and fitness goals. Following Williams' (1974) notion of 'mobile privatization', apps furthermore allow connections with the 'outside world' – whether with like-minded consumers, social media networks, or marketing firms interested in consumer data. In both cases, app makers stress the inherent portability of their products

by emphasizing that these services are available 'anywhere, anytime'. Having outlined these findings, the presentation turns to reflections on the implications of these new devices. While recognizing the possibility for consumer 'empowerment', it is argued that apps ultimately represent a new age in the history of commodifying the sporting body. Namely, by generating customized data from daily health and fitness activities, apps create potential revenue streams in ways that transcend even past fitness technologies.

## **From Trainers to Personal Coach. Commercialism and Professionalism at Work in Fitness Realm.**

Valerio Zanardi, University of Barcelona | [valerio\\_zanardi@yahoo.es](mailto:valerio_zanardi@yahoo.es)

This paper, based on an extensive ethnographical observation, and on a conspicuous number of depth interviews, firstly sets out to explore ambivalences and contradictions between professionalism and commercialism in the changing practises of the trainers in the fitness gyms. Since the fitness boom, gym trainers have been the depositary of the state of the art of the knowledge on bodily manipulation, basing their own expertise (and quest for professionalism) through the practical use of an heterogeneous set of abstract knowledges in assessing fitness practitioners, controlling the correct use of machines, acting as public relation officers. All these services were usually included in their working routines and offered to everybody. In last years, their occupational practices, their engagement and their professional strategies, have increasingly changed, turning themselves

into a sort of self-entrepreneurs figures, aimed at 1) Counselling (and selling) vis a vis assessments to trainees, 2) Turning trainees into loyal customers, 3) Competing between themselves to attain the more customers (clients) as possible. In such a scenario, the ambivalence between the normative logic of professionalism and commercialism raise ethical and sociological issue. Secondly, the paper adopt some theoretical suggestions from the six-facet model of Richard Peterson, to underline causes and structural (legal, organizative and occupational) pre-conditions of the changing attitude of the physical fitness instructors. Finally the paper endeavours to grasp implications and consequences of the reshaping of the trainers activities, in relation to the transformations of trainees practices, perception and consumption of fitness culture.

## a04RN05 - Cultural Participation

Chair(s): Terhi-Anna Wilska (University of Jyväskylä)

### High Culture Consumption, Creative Industries Invention and Reproduction of Cultural Capital in the Russian Society: Does Bourdieu Work?

**Maria Safonova**, National Research University Higher School of Economics | [msafonova@eu.spb.ru](mailto:msafonova@eu.spb.ru)

**Mikhail Sokolov**, European University, St. Petersburg | [msokolov@eu.spb.ru](mailto:msokolov@eu.spb.ru)

Context specificity of sociological theorizing is often alleged, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu's ideas on cultural production and consumption were lucky in this respect. Due to their centrality for the late XX century sociology of high culture, and general feeling that they have specifically French flavor, their applicability have been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low tastes find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu's concept to the Russian context. We specifically evaluate one aspect of this notion which, to our knowledge, has not been addressed before:

direct connection between intensity of high culture consumption, awareness, and taste. Special section of the questionnaire is focused on arts consumption offered by newly-established creative industries (private museums, art-centers, galleries etc.). Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu's work, but in largely the same vein, produce results much better fitting with his theorizing. We will conclude with discussion of possible solutions of this puzzle.

### Re-assessing Cultural Capital

**Alan Warde**, University of Manchester | [alan.warde@manchester.ac.uk](mailto:alan.warde@manchester.ac.uk)

In this paper I seek to assess the value of recent applications of the concept of cultural capital to the study of consumption. Probably the most widely used of Bourdieu's key concepts, it has been deployed increasingly frequently in different contexts and for different purposes. Pursuing the hypothesis that it is more readily applicable to some practices than others, its various current definitions and modes of operationalisation will be subjected to critical evaluation. The

argument will be developed in relation to two domains of study. First, I will review recent empirical studies of cultural consumption, especially in relation to issues of cultural omnivorousness and social distinction. Second, I will consider analyses of eating, regarding which some new empirical evidence from a study of food habits in the UK will be introduced. I will conclude by considering the wider theoretical implications of my review.

## Disparity in Cultural Capital Valuation: Recognition of Top Art Collectors Internationally, 1990 to 2011

Laura EA Braden, Erasmus University, Rotterdam | [Braden@eshcc.eur.nl](mailto:Braden@eshcc.eur.nl)

This research considers an often overlooked aspect of cultural capital, not its acquirement or possession, but rather its reception and recognition by important others. Cultural capital's "potential capacity to produce profits" (Bourdieu, 1986) of status are dependent on its valuation and exchange. Yet, as much sociological and economic literature has demonstrated, exchange value is often unequal dependent on who offers the capital. To determine cultural capital's differential valuation, I examine a population of those culturally wealthy: the world's top art collectors as selected by the prominent art magazine ARTnews between 1990 and 2011. Members of this population already possess a great deal of cultural capital (enough to be named a top international art collector); however, as ARTnews' selection of top collectors emerges every year, certain

collectors remain, while others are removed. Using regression analysis to determine factors for both removal and endurance among a population of 578 unique collectors over a 22 year period, this research finds evidence that recognition is mediated by the gender and nationality of the collector. Given these findings, I argue that cultural capital does not give immediate access to distinction, but rather is passed through social filters that apply the same restrictions to the valuation and exchange of all currency, be it cultural knowledge or economic tender. Overall, this work seeks to better understand the mechanism that links cultural capital to rewards of prestige, while broadening the study of cultural capital theory by drawing on work from the economic and globalization literatures.

## Ways of Preferring: Contrasting the 'What' and the 'How' of Cultural Participation

Stijn Daenekindt, Ghent University | [stijn.daenekindt@ugent.be](mailto:stijn.daenekindt@ugent.be)

Henk Roose, Ghent University | [henk.roose@ugent.be](mailto:henk.roose@ugent.be)

The social patterning of cultural preferences and practices is routinely explained by Bourdieu's notion of cultural capital. Especially highbrow arts participation is considered a manifestation of cultural capital, a means of maximizing life chances and opportunities. However, a number of authors have challenged the idea that 'high' cultural goods have the monopoly of ensuring positions of social dominance. Research shows for example, that contemporary elites express omnivorous taste patterns, a finding that challenges 'traditional' cultural hierarchies and the idea of the distinguishing force of highbrow culture. Yet, other authors argue that the apparent change in manifested preferences obscures the persistence of cultural hierarchies within

genres/cultural categories or that cultural capital is not so much about what is consumed but about how culture is appropriated. We want to contrast the 'what' and the 'how' of cultural participation and study how both forms of cultural appropriation are socially embedded. We use data from an audience survey in two art museums in Flanders (n=1,448) and contrast manifested preferences towards artefacts of various artists– e.g. (dis)liking Warhol, Duchamp, etc.– with how people contemplate works of art. These ways of preferring art are measured by means of items reflecting the expectations people have when being confronted with art and the criteria they use to assess works of art. Analyses reveal differentiation in ways of preferring between

individuals who like the same artists– between aesthetic dispositions and manifested preferences. Moreover, both the ‘what’ and

‘how’ of cultural participation are socially structured. Theoretical implications are discussed.

## **b04RN05 - Consumption and Taste 2**

Chair(s): Mari Niva (National Consumer Research Centre , Finland)

### **Nice and Simple, at my Place”. Dinner Parties, Hospitality and Cultural Identities among Italian Middle-Class Families**

**Roberta Sassatelli**, University of Milan | [roberta.sassatelli@unimi.it](mailto:roberta.sassatelli@unimi.it)

**Federica Davolio**, University of Milan | [federica.davolio@gmail.com](mailto:federica.davolio@gmail.com)

This paper addresses the role of the home as key place in the constitution of meaningful spaces of consumption and the role of consumer rituals in the stabilization of cultural identities and social relationships. It looks at how middle-class families manage hospitality (and in particular party-giving) and how this informs both their construction of the home spatiality, and their wider food consumption behavior. Deploying an ethnographic strategy, we look at how Italian middle-class families frame their dinner party choices in terms of form (spatiality, dinner table, manners) and content (ingredients, recipes). We consider how their dinner party narratives relate to the management of a particular sociability code, which in turn is related to the performance of a family cultural identity reinforcing a particular social positioning. The paper then looks at how the dinner party style translates into visions of

the morality of consumption. We look at how the middle-class families studied bestow value to food and define its “quality”. Territory is contrasted with notions of globalization; likewise reference to sustainability is contrasted with corporate interests. Still, much negotiation happens along these dualities, so that their boundaries are continually re-constituted against what is deemed “realistic”. Boundary negotiation emerges in a third dimension of valuation, namely ethnicity: the negotiation of multiculturalism happens on the backdrop of a ethnic re-evaluation of the “traditional”. The paper ends considering how aestheticization, encoded through such negotiations, is played out and its varieties deployed to seal a particular dinner-party family style implicitly working as social positioning.

### **The Taste Landscape of Young Urban Adults in Finland**

**Taru S Lindblom**, University of Turku | [taru.lindblom@utu.fi](mailto:taru.lindblom@utu.fi)

**Pekka Mustonen**, City of Helsinki Urban Facts | [pekka.mustonen@hel.fi](mailto:pekka.mustonen@hel.fi)

How do city dwellers live, what do they do, are they happy there? Are their days filled with endless opportunities to shop and eat out? How do they spend their leisure, would they rather

live some place else? This paper presents preliminary results on a fresh dataset collected early 2013 in Helsinki, Finland. However similar they seem to be, the young

adults living in the most urban setting Finland has to provide, the variety of lifestyles, tastes and perceptions is great. The data was collected as a postal survey among 25-44 year old residents of the inner city. The themes on the questionnaire included attitudes towards dwelling and the everyday life of young families. Also, consumption, eating out and

leisure attitudes and preferences were examined. This paper sheds light on the many faces of urban lifestyle today in a big city. The results are discussed with respect to perspectives on cosmopolitan sociology and sociology of taste, as well as on so called (harried) leisure class and creative class.

## Consuming the City: Consumption and Urban Dynamics in Poland

**Marta Klekotko**, Jagiellonian University, Cracow | [marta.klekotko@uj.edu.pl](mailto:marta.klekotko@uj.edu.pl)

**Mateusz Magierowski**, Jagiellonian University, Cracow | [mateusz.magierowski@gmail.com](mailto:mateusz.magierowski@gmail.com)

The aim of the paper is to analyze the impact of consumption on urban development in Poland. The main argument is that consumption takes on various cultural forms which shape urban space and determine its dynamics. The paper is based on the concept of urban scenes. Scenes are spaces devoted to cultural consumption. Each scene provides different forms of cultural consumption, which are meaningful, reflect different values and enable fulfilment of different needs of different actors. Every scene can be described by specific combination of symbolic and cultural values which underlie consumption practices. The analysis of urban scenes is based on a complex analytical model, which consists of three general dimensions and fifteen sub-dimensions. The three general dimensions are defined as: theatricality, authenticity and legitimacy. All human activities, including

consumption, are accompanied by their motives, which constitute dimension of legitimacy. Each acting individual is driven by their identity and willingness to self-realization which are described by "authenticity". The consumption might be described as theatricality too: consuming, individuals play different roles. These three cultural dimensions (motives, identities and roles) determine character of scene. Definite scene is a combination of urban amenities, cultural consumption practices and people characterized by class, job, age, etc., engaged in different activities and representing different values. The paper identifies scenes existing in Polish cities and explain how consumption practices shape urban space in Poland. It provides as well some counterpoints and discusses limits of consumption-driven urban development in Poland.

## c04RN05 - Ethical and Political Consumption 1

Chair(s): Pål Strandbakken (National Institute for Consumer Research (SIFO), Norway)

### Reexamining the "Ethical Choosing Self": Ordinary Consumption and the Ethics of Care in Chile and Brazil.

**Tomas Ariztia**, Universidad Diego Portales, Santiago | [tomas.ariztia@udp.cl](mailto:tomas.ariztia@udp.cl)

Based on evidence from an international research on ethical consumption discourses

and practices in Chile and Brazil, this paper advances an understanding of ethical consumption as embedded in ordinary practices of consumption. In the first part, the paper draws from practice theory approach (Shove) to critically examine prevalent approaches that conceptualize ethical consumption as a particular form of ethics based on individual choice. Against this backdrop, the paper argues that ethical consumption is embedded in ordinary ethical practices which are not normally the outcome of such individual choices but relate to -often collective- ordinary consumption practices. The second part presents the evidence from qualitative group interviews with Chilean and

Brazilian consumers to argue that ordinary consumption discourses are linked to a particular ethics of "care for the others". This point is illustrated by describing discourses of lower middle classes in Chile and Brazil in which ethics is being construed in relation to the practical accomplishment of everyday life routines of household reproduction and family health and therefore related to issues about quality, durability and price. The paper concludes by informing the theoretical discussion with the empirical findings. It argues that focusing on ordinary consumption practice might be a useful way to balance northern literature bias on to figure of the ethical consumer as a chosen self.

## Political Consumerism Among Young People

**Mariona Ferrer-Fons**, Pompeu Fabra University, Barcelona | [mariona.ferrer@upf.edu](mailto:mariona.ferrer@upf.edu)

The study of political consumerism (boycott and buycotts for ethical, political and environmental causes) has been increasing in social sciences in recent years. The growing attention is related to the fact that is being used more and more by the citizens of contemporary societies. Some authors have found empirical evidence that young people are more prone to be engaged in this type of behaviour. However, age differences in this type of activism might be also related to contextual differences. Different political contexts, markets and the roles of actors who mobilise to a critical consumption might affect these patterns of behaviour in different societies. Hence, the effect of age in being

active in ethical and political motivated consumption might vary. In order to analyse the propensity of doing political consumption among young people, and its individual-determinants, the paper will use survey data of young people collected in the framework of the European FP7 project MYPLACE (Memory, Youth, Political Legacy and Civic Engagement, FP7) from different countries at a first stage. Second, through the analysis of in-depth interviews to young people in some specific locations, and always in the framework of MYPLACE project, it will explore the motivations and propensity of using this type of activity, depending on the types of activism and citizens.

## About the Enactment of the Fairtrade-Market in Vienna

**Michael Jonas**, Institute for Advanced Studies, Vienna | [jonas@ihs.ac.at](mailto:jonas@ihs.ac.at)

Since the current discussion about the extent and manifestation of a financial crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are

currently undergoing a fundamental transformation where moral values and commitments are considered as constitutive of economic operations. But whether this culturalisation of the economy must be understood as based on a moralisation of

markets (Stehr) or rather is the result of an economic colonisation of morals (Habermas) is neither theoretically nor empirically verified. The planned contribution is based on these considerations: on the basis of a praxeologic research approach it asks how and in relation to which practices is the so-called „fairtrade“ market enacted and, in doing so, moves in a

tension between a moralisation of markets and the economic colonisation of morals. Considering these questions with reference to empirical research in a fairtrade district in Vienna, it is planned to focus primarily on the constitutive practices and settings in which the fairtrade market is enacted.

## **a05RN05 - Cultural Stratification**

Chair(s): Irmak Karademir Hazir (Department of Sociology - Middle East Technical University)

### **Trend in Cultural Participation in the Netherlands**

Ineke Nagel, VU University, Amsterdam | [f.a.nagel@vu.nl](mailto:f.a.nagel@vu.nl)

Is high culture losing ground as a status good? This paper studies trends in cultural participation in the Netherlands. Following DiMaggio and Mukhtar (2004) and Van Eijck and Knulst (2005) the paper examines whether there is a downward trend in cultural participation, and whether this trend is strongest among the higher educated who are traditionally the more active cultural consumers. The paper also explores whether trends differ between classical high culture (theater, cabaret, ballet, classical music / opera, museum, gallery) and popular culture

(cinema, pop concert, cinema). The data consist of eight waves of cross-sectional representative household data from the Netherlands that are collected by the Dutch Social and Cultural Planning Office every four years from 1979 until 2007. We use the data of 68,000 respondents who are between 25 and 70 years of age, and who reported on their cultural participation. By putting together these data files it is possible to disentangle the effects of birth cohort (1909-1982) and age (25-70) or period (1979-2007), and their interactions with education.

### **Cultural Consumption in Europe: Participation, Attitudes, and Barriers**

Tally Katz-Gerro, University of Haifa | [tkatz@soc.haifa.ac.il](mailto:tkatz@soc.haifa.ac.il)

Arthur Alderson, Indiana University | [aralders@indiana.edu](mailto:aralders@indiana.edu)

Research in the field of cultural consumption has mainly been interested in the distribution and configuration of patterns of cultural participation and tastes, in the way these patterns are hierarchized in society, and in the way they are associated with major social cleavages. The majority of these studies focused on single countries, mostly from West Europe or North America, and only a few

present a cross-national comparative perspective. The proposed paper presents a cross-national analysis of participation in a variety of cultural activities, perceived barriers to such participation such as lack of money/information/interest, and attitudes toward cultural participation. We use the most recent comprehensive data-set on cultural consumption, Eurobarometer 2007, which

includes information from 29 European countries. We discuss three main themes. First, we test the claim that in more affluent societies larger proportions of the population participate in a broad range of cultural activities, compared with less affluent societies. Second, we analyze the extent to which different types of barriers and attitudes shape patterns of cultural participation in different countries. Third, we ask to what extent individual differences in cultural

participation are due to individual characteristics or country characteristics. Results indicate that overall there are large proportions of non-participants; that western and northern European countries share patterns of participation and barriers that differ from southern and eastern European countries; and that about a third of the variation in participation is between countries and the rest is within countries.

## **Culture and Occupational Experiences. The Gendered Effect of Authority Positions in the Workplace on Cultural Participation Patterns**

**Mart Willekens**, Ghent University | [Mart.Willekens@UGent.be](mailto:Mart.Willekens@UGent.be)

**John Lievens**, Ghent University | [John.Lievens@UGent.be](mailto:John.Lievens@UGent.be)

Cultural participation research finds a consistent gender difference for participation in “highbrow” cultural activities. According to Randall Collins, this gender gap can be attributed to differences in male and female occupational experiences. He suggests that women will develop preferences for highbrow culture (a) because they are employed in the cultural sector more often and (b) because they have to perform frontstage labor more often when they are employed in an order taking position. Both men and women in an authority position have to perform frontstage labor so he does not expect any gender differences here. We test these hypotheses with data from the cultural participation survey in Flanders of 2003, using a zero-inflated negative binomial model with interaction terms. We conclude

that the theoretical model of Collins is not capable of explaining the gender difference in highbrow cultural participation. The gender gap remains when we control for having a job in the cultural sector. We also do not find a gender difference for order taking positions, while we do find a strong gender difference among persons in an order giving position, with women participating less. We do find a positive effect of an order giving position on male cultural participation, but this effect disappears after controlling for cultural participation patterns of the partner. We have to conclude that occupational experiences do have a differential influence on cultural participation patterns of men and women, but not in line with the expectations of Randall Collins.

## **Rising Cultural Consumers and Diminishing Opportunities**

**Kerry L McCall Magan**, City University | [Kerry.McCall@qiadt.ie](mailto:Kerry.McCall@qiadt.ie)

Increased cultural participation has led to higher levels of consumption within, and across, art forms. The resulting emphasis uncovered is a qualitative shift from singular elite, ‘univore’ participation in exclusive highbrow art forms towards a middle class

breadth of ‘omnivorous’ appropriation of legitimate cultural forms (Peterson and Kern 1996). This qualitative shift has been specifically linked to those with higher educational achievements (Jaeger and Katz Gerro, 2008). More people around the world

are completing forms of tertiary education than ever before, with on average across OECD countries, half of today's young adults now entering universities or other institutions offering similar qualifications. In Ireland, the number of students is set to increase by more than 25 per cent in the period to 2026 (Irish Times, 2012). And while scholars note that consumptive patterns in the arts is highest amongst the educated and that concurrently, education and not income, is a better predictor of behaviour patterns in relation to consumption patterns of the arts. This consideration of the rising numbers of

potential cultural consumers stands in stark contrast to the falling funds for culture and as a knock on effect, less cultural organizations 'delivering' culture. The Arts Council of Ireland's own grant-in-aid has been reduced by 25 percent over the five years from 2008 to 2012. This has stark implications for cultural policy and for associative funding. This paper will seek to address this shifting fulcrum where the number of individuals with potential competencies to access culture is growing while funds for culture continue to fall. The approach to this piece of research has involved a combination of desk work, face

## **b05RN05 - Consumption of Food 3 (Countries)**

Chair(s): Keijo Rahkonen (University of Helsinki, Finland)

### **Snacking in UK Eating Patterns**

Luke S Yates, University of Manchester | [luke.s.yates@manchester.ac.uk](mailto:luke.s.yates@manchester.ac.uk)

Alan Warde, University of Manchester | [alan.warde@manchester.ac.uk](mailto:alan.warde@manchester.ac.uk)

The sociology of food and eating seems driven by themes about crises in the established order. Commentators diagnose deterioration in the nutritional value of foodstuffs, the norms of commensality, standards of taste, cooking skills, the sanctity of the family meal, and the regularity of meals. One phenomenon at the centre of this nexus of crises is the prevalence of so-called 'snacking'. Yet despite a host of theoretical claims about, and some empirical findings assessing, dynamics of informalisation, individualisation and de-institutionalisation in eating patterns, empirical research on snacks and snacking are scarce. Prior analysis of eating patterns and time use suggests that snacks reflect difficulties in scheduling and synchronising eating events, and compared to meals are shorter, more spontaneous, informal, anomic and less

nutritious episodes, eaten outside the home. These hypotheses are tested using new UK survey data in the form of a time diary, recording what was eaten, where, when and with whom, for one weekday and one weekend day in September 2012 (N=2784). Results show where snacks fit into wider patterns of eating in terms of scheduling, durations and sociability, and how they compare to the structure and contents of other eating events. While findings confirm snacks to be shorter eating episodes with smaller and structurally distinct contents to meals, snacking appears nonetheless remarkably scheduled and apparently synchronised. This suggests a distinct role and set of meanings for snacks in UK eating patterns, and in trends of change, than has previously been supposed.

## Eating Practices in Everyday Life in St. Petersburg

Elena Ganskau, SIAR | [ganskau\\_elena@mail.ru](mailto:ganskau_elena@mail.ru)

Vera Minina, SIAR | [vera.n.minina@gmail.com](mailto:vera.n.minina@gmail.com)

The analysis of eating practices is the core element for understanding and explaining different aspects of social relations in food consumption (Berg et al. 2005; Ganskau 2006). The aim of our study is a comparative analysis of eating practices and food attitudes in Russia and Nordic countries. The data is based on face-to-face interviews with approximately 800 people representing different age and social groups from St. Petersburg area. The idea is to describe and interpret current patterns and attitudes and then compare them with our previous research data (2000) and the results of the survey conducted by a group of Nordic sociologists (Food in Nordic everyday life: A comparative survey of change and stability in eating patterns). By following research methodology of the Nordic project we investigate eating events from the point of

content, structure, time and place. The part of Attitudes relates to healthy eating, "proper meals", cooking, and gastronomic experiments. However, the questionnaire has been adapted to the Russian context. The comparative analysis includes factor analysis and typological analytical approaches and identifies similarities and differences in constructing concepts of "eating event" and "proper meals", organizing and shaping everyday food consumption, food attitudes and experiences. Berg, L., Kjærnes, U., Ganskau, E., Minina, V., Voltchkova, L., Halkier, B. & Holm, L. (2005) Trust in Food Safety in Russia, Denmark and Norway. *European Societies*, vol. 7, no. 1, pp. 103-130. ## Change and Stability in the Daily Patterns of Eating the four Nordic Countries

Jukka Gronow, University of Helsinki | [Jukka.Gronow@helsinki.fi](mailto:Jukka.Gronow@helsinki.fi)

Thomas Bøker Lund, University of Copenhagen | [tblu@foi.ku.dk](mailto:tblu@foi.ku.dk)

Daily eating events are both important coordinators of social life and, on their part, reflect changes in other institutional arrangements in a society. Regular, socially shared eating hours are a necessary precondition for the sociability of eating often regarded as a cornerstone of a well-integrated society as opposed to disorganized 'grazing'. Changes in both the number of daily eating events and in their timing are therefore important indicators of social and cultural change. The two representative surveys conducted in 1997 and 2012 in the four Nordic countries, Denmark, Finland, Norway and Sweden create a unique opportunity to answer systematically such questions. The questionnaire covered one whole day of eating (24 hours) in all the four countries. Analyzing

its results we can study 1) the existence and stability of specific national patterns of eating, 2) the existence and stability of various patterns of eating in different social groups and, finally, 3) whether some general and systematic changes, e.g. decreasing or increasing amounts of daily eating events or their more or less even spreading over the day, can be identified among the populations of all these four countries. As our preliminary findings show, even if some interesting changes were discovered, as expected, no dramatic changes have taken place during the last fifteen years in the basic national patterns of eating. However, a closer look at the various patterns within each country - which partly cross over the national borders - produced more interesting results.

## a06JS05JS13 - Family, Consumption and Markets

Chair(s): Bente Halkier (University of Roskilde, Denmark)

### Consumer Revolution Interrupted: Household Innovations and the Shift from Ages of Custom to Ages of Fashion in Poland

Joanna Zalewska, The Maria Grzegorzewska Academy of Special Education | [joanna.marta.zalewska@gmail.com](mailto:joanna.marta.zalewska@gmail.com)

Consumer revolution is a term applied when studying the emergence of consumer society in western countries. The paper analyses some aspects of the course of consumer revolution in Poland, drawing upon the ethnographic data from the life course research conducted among the representatives of the generation born in 1918-1942 living in Warsaw. The paper argues that consumer revolution took place in People's Poland after the Second World War due to increasing mobility, urbanisation, industrialisation, money economy development, access to education and mass media, despite the lack of a free market in the socialist state. The agents of the consumer revolution in daily life of the studied generation were innovations in household appliances which facilitated the formation of meta-habits such as flexibility and openness to outside

influences. Due to meta-habits, fashion became the chief mechanism regulating consumption. The changes were accompanied by new social practices allowing the individual to supersede the family as the unit organising consumption; changing bonds within families - from instrumental relations to symbolic exchange; and disappearance of pre-war customs. Collectively this may be interpreted as a transition from the ages of custom to the ages of fashion. However, these changes were inhibited by the growing indolence of the socialist state. For this reason, family co-operation remained important for the organisation of consumption and the traditional division of duties within the family was preserved to some degree. Consumer revolution burst out again only after the transformation of 1989.

### Doing Parenthood through Children's (Consumer) Culture

David Cardell, Linköping University | [david.cardell@liu.se](mailto:david.cardell@liu.se)

Anna Sparrman, Linköping University | [anna.sparrman@liu.se](mailto:anna.sparrman@liu.se)

Anne-Li Lindgren, Linköping University | [anne-li.lindgren@liu.se](mailto:anne-li.lindgren@liu.se)

Tobias Samuelsson, Linköping university | [tobias.samuelsson@liu.se](mailto:tobias.samuelsson@liu.se)

Presence and involvement is regularly portrayed as a positive "fact" of western parenthood, suggesting that parents ought to be, as well as are, there for children. Ideologically this is reflected in research which takes the nuclear family for granted. In research of amusement- and theme park visits it is suggested that parents engage in activities with their children without friction or

challenges. Consequently individuals are associated with each-other via assumptions about the firmness of social relationships. This paper, on the contrary, provides evidence of a multiplicity of parenthoods through ethnographic studies of strategies and activities in amusement-, theme parks, and children's museums, in Sweden and the U.S. We show that "doing" parenthood entangles

decision-making about absence, involvement with and distance to children in relation to how children's activities challenge adults, corporate management, and, materialities during visits to cultural institutions. By focusing on parenthood in settings that are for children and families we conclude that involvement is a negotiable and complex matter. "Doing" parenthood relate both to the absence and presence of children as well as the influence of culture and consumption. It

suggests that parenthood – in general – ought to be conceptualized through a frame of multiplicity rather than as part of stable relationships of a homogenous and imagined Family. Our empirical analysis lead us to suggest that there is no given "leash" between parents and children, as implied in previous research, but relations are worked out in time and space, which suggests that parenthood is about tricky social dynamics, negotiations and related to various materialities and settings.

## **Doing Gender through Cookingpractices. Social Change in a Comparative Perspective.**

**Lotte Holm**, University of Copenhagen | [loho@foi.ku.dk](mailto:loho@foi.ku.dk)

**Marianne P Ekström**, University of Gothenburg | [Marianne.p-e@telia.com](mailto:Marianne.p-e@telia.com)

**Sara Hach**, University of Copenhagen | [hach@foi.ku.dk](mailto:hach@foi.ku.dk)

In Europe, the gender division of labor has shifted within households. Time-use studies in many countries document that over the last decades the time men spend on household tasks increases while the time women use decreases. The question is whether household tasks are becoming less gendered or, whether new ways of doing gender have emerged? The preparation of meals is a core activity in households, an important medium for producing and reproducing families and often described as central to female identity. Food preparation and cooking are typically seen as examples of routine tasks which are on-going, and nondiscretionary tasks typically done by women, as opposed to intermittent tasks which are more flexible, done only occasionally and typically by men. However, cooking has increasingly become an arena for creative leisure activity, supported by an

overwhelmingly growing mass of media hype about gastronomy and cooking, increasingly framing this as a masculine arena. Has this led to changes in the every-day gender division of labor related to cooking and preparation of meals? Based on data from two surveys conducted in four Nordic countries in 1997 (N=4823) and in 2012 (N=8248) we ask: How has the gendering of cooking changed over the last 15 years? Is cooking as ordinary routine obligation increasingly taken care of by men or do men only cook for special occasions? Is male cooking motivated primarily by interest in cooking or by obligation and has this changed over time? Finally, we ask whether the socio-demographic profile of male cooks has changed over the last 15 years. The analysis is inspired by practice theory and gender performance theory.

## Conspicuous Gifts and Catholic Rite de Passage in Poland.

Wojciech Poteć, Warsaw University of Life Science SGGW | [polecw@gmail.com](mailto:polecw@gmail.com)

In this paper, I focus on the ethnography of the gifts and consumption accompanying the catholic rites de passage such as child baptism, "First Holy Communion" and wedding. I examine the cultural patterns pushing the family of the child to give luxurious gifts with the special attention of the role (and obligations) of the godmother and godfather of the child. The institution of the godparents is still important in the Polish society although it loses its traditional, religious meaning and nowadays the role of the godparents is rather to take care of the consumption of the child (by supplying expensive gifts) and not of the religious education of the child. I try to show how the patterns of that kind of consumption

are rooted in the Polish society: how they adapt to the different economic situations and how they adapt to the external pressure, even the pressure of the catholic priests. On the other hand, I try to show how those customs exert pressure on the economic behavior of the persons involved in the family obligations and the pressure emerging of the role of the godmother or godfather. The empirical data of the paper are: 1) participatory observation, 2) interviews with parents, god parents and catholic priests and 3) analysis of the video recordings of parties given by parents on the day of their child's baptism, first holy communion and wedding.

## a06RN05 - Structural Conditions of Consumption

Chair(s): Eivind Stø, National Institute of Consumer Research (SIFO), Norway

## Daily Mobility of the Affluent Finns

Riikka S. Aro, University of Jyväskylä | [riikka.aro@jyu.fi](mailto:riikka.aro@jyu.fi)

Living ordinary lives and performing ordinary tasks, such as shopping, working and taking care of social relations usually require moving about. This entails contemplating on the possible (and impossible) measures and making consumption decisions regarding transportation modes and vehicles, and using them in practice. By analysing interviews of well-to-do (high income and education) Finnish men and women this paper investigates the perceived need, significance, and use of private car and other motor vehicles, public transportation and bicycle. Furthermore, their occurrence (ownership and availability) is examined. In this study, people are perceived

as being entangled in a complex socio-technical ordering of daily life, but also as status seekers, identity builders, and rational decision makers notwithstanding the extensive tradition of understanding consumption mainly as an individual concern. This paper pursues to better understand the complexity of ordinary life of the affluent. With regard to sustainability efforts, investigating the everyday mobility of the relatively well-to-do people is of particular interest. It has been proposed that those with higher education and higher income, and consequently with high social, cultural and economic capital, are prone to show greater interest in ecological concerns than those with

lower education and income.

## Consumer Politics and the Potential Success of NEPI's

**Marthe H. Austgulen**, National institute for Consumer Research, Oslo | [marthe.h.austgulen@sifo.no](mailto:marthe.h.austgulen@sifo.no)

Consumers have been given increased responsibility for global environmental challenges through the use of the so-called "new" environmental policy instruments (NEPIs) like eco-labels. NEPIs rely mainly on moral suasion by providing consumers with information about the environmental impact of certain products and services (Jordan et al 2004). The success of eco-labels has been explained as a function of numerous variables, including the degree of consumer's environmental awareness and their awareness of the relevant eco-labels. Nevertheless, the differences in regulatory approaches to consumer protection and thus differences across regulatory regimes has not to date been used as a predictor for consumer attitudes towards NEPIs like eco-labels. By using environmental problems caused by the production and consumption of textiles as an

example, I show that there are significant national differences between Norwegian, French and German respondent's attitudes towards the role and responsibility of the consumers, the industry and the government. It is argued in this paper that this variation, and thus the potential for success for eco-labels, is likely due to the different history of consumer and producer organization, and in the end the regulation of consumption in the three countries studied. The factors have influenced the consumers in the countries studied differently with regard to their conception of the consumer's responsibility and their attitudes towards eco-labels. Therefore, efforts to solve environmental problems, like the ones caused by the production and consumption of textiles, should consider regime differences regarding the role of the consumers.

## Consumption Patterns of the Consumption Poor –Britain and Finland in 2001 and 2006

**Terhi-Anna Wilska**, University of Jyväskylä | [terhi-anna.wilska@jyu.fi](mailto:terhi-anna.wilska@jyu.fi)

**Robert Hagfors**, Social Insurance Institution of Finland -Kela | [robert.hagfors@kela.fi](mailto:robert.hagfors@kela.fi)

**Olli Kangas**, Social Insurance Institution of Finland -Kela | [olli.kangas@kela.fi](mailto:olli.kangas@kela.fi)

Measurement of poverty is usually based on low income. However, income only tells about a person's or a household's potential command over resources, not about actual consumption. There is little empirical research on the consumption of the poor. Moreover, in those studies income has usually been used as an indicator for poverty. In this paper we focus on the consumption of poor households in Britain and Finland between 2001 and 2006, using low consumption as an indicator for poverty. The research questions are: 1) Who

are the consumption poor in the two countries? 2) What is the structure of consumption among consumption poor households and how it has changed? In this study, we derive data from Finnish Household expenditure surveys (2001 N = 5,495 and 2006 N = 4,007) and UK Expenditure and Food Survey (2001 N = 7,473, 2006 N = 6,645). Our results show that in Finland consumption poverty was most common among pensioners and single providers in both 2001 and 2006. In Britain, the poorest households were the same in 2001, but

more typically 2-parent families with school age children in 2006. The consumption structure of the poor was different in Finland and Britain. In Finland, the overwhelmingly greatest share of the expenditure was spent on housing and food in both years. In Britain,

particularly the share of housing costs was much smaller. In Britain, the poor spent relatively more on transport and leisure (culture, restaurants, etc.) than the poor in Finland in both years.

## **Merging Domestic and Public Practices: Estonians' Experience with Euro on the Background of Economic Crisis.**

**Margit Keller**, University of Tartu | [margit.keller@ut.ee](mailto:margit.keller@ut.ee)

**Triin Vihalemm**, University of Tartu | [triin.vihalemm@ut.ee](mailto:triin.vihalemm@ut.ee)

The paper introduces an empirical case study that traces operation, change and interaction of actors' discursive and practical consciousness (Giddens, 1984) in a situation, when previously existing external structures organizing practices, are changing significantly. The present study examines Estonians' experiences of transition to the euro in 2011. We draw on in-depth interviews with Estonian pensioners and lower-middle-income specialists (January 2011); a shopping and expenses diary and repeated interviews (June 2012). Our analysis showed that on the everyday practical level people have re-skilled to use the euro and position themselves as becoming competent practitioners. Yet ideological dispositions - mainly general scepticism and doubt - regarding Estonia's transition to the euro as a political and

economic project prevail. By June 2012 the civic alienation and economic pessimism had deepened. This leads us to hybrids of everyday money-related practices and citizenship practices emerging on the borderline of domestic and public. We seek to conceptualize, how ideological resistance to the euro-project (also against the background of Estonia's Soviet experience of parallel ideological worlds of the official and the private and informal) is or is not associated with the lived everyday practices? Are there transfers or "leakages" from the general ideological realm to the personal and practical and how do these happen? How does this contribute to studying restructuration in Giddens' sense? The paper seeks to discuss these issues and methodological challenges met during the

## **b06RN05 - Consumption of Food 4 (Social Class)**

Chair(s): Mónica Truninger (Institute of Social Sciences - University of Lisbon)

### **Marking Class Boundaries through Food Consumption: “I’m in Budget Mode, that’s how I Was Raised”**

**Brenda L. Beagan**, Dalhousie University, Halifax | [bbeagan@dal.ca](mailto:bbeagan@dal.ca)

**Elaine Power**, Queens University | [power@queensu.ca](mailto:power@queensu.ca)

**Gwen E. Chapman**, University of British Columbia | [gwen.chapman@ubc.ca](mailto:gwen.chapman@ubc.ca)

In our qualitative study with 105 families across Canada, we have used interview and photo elicitation data to document the ways people employ particular cultural repertoires of ethical eating and cosmopolitan eating to signify social class status. At the same time, dominant discourses of healthy eating appear to cross class boundaries, though forms of engagement may differ in accordance with available material resources. In this paper we focus on 16 families in which we categorize at least one parent as having experienced a significant upward or downward class trajectory. Using Bourdieu’s (1984) notions of habitus and hysteresis, we explore how class of origin does and does not shape the food practices, values and beliefs of adults whose trajectory has taken them away from the class circumstances they grew up with. In other

words, we explore the micro-level impact of economic downturn or emergence into the middle class, with a focus on orientation to food as shaped by degree of distance from necessity. At the same time, we examine how food practices operate to maintain and reproduce social inequalities, through their use in marking moral and symbolic boundaries (Lamont 1992, 2000). We explore the use of ‘healthy eating’, and particular modes of ethical eating and cosmopolitan eating, to distance from or affiliate with the food practices of earlier or current class locations. Lastly, we highlight the virtue of frugality as a distinctive moral boundary marker employed by those who have lived close to necessity. Food consumption practices are powerful symbolic means through which to mark symbolic class boundaries.

### **Communities of Taste and The Economy of Quality. The case of DegustiBo.**

**Roberta Sassatelli**, University of Milan | [roberta.sassatelli@unimi.it](mailto:roberta.sassatelli@unimi.it)

**Elisa A.G. Arfini**, Istituto Carlo Cattaneo Research Foundation | [elisa.arfini@gmail.com](mailto:elisa.arfini@gmail.com)

This paper addresses a growing phenomenon in contemporary markets, the aestheticization of traditional foods and the use of territorialization as a brand-value for the promotion of products and commerce as well as for political legitimization at the grass-root level. The culturalisation of economy is studied here through a focus on the role that political institutions may have in promoting quality chains. In particular, our case study is the

quality brand “DegustiBo”, promoted by the Province of Bologna, Italy. This initiative was developed to help local shops and restaurants find a source of common identity in the local territory. Through document analysis, questionnaires, interviews and focus groups, we consider how branding has been supported, realized, and responded to, and we explore the main limits which such initiative appears to have for each actor involved. In particular, we

inquired actors' strategies for defining, judging, and creating quality. The quality brand "DegustiBo" operates according to a strong disciplinary model based on a basket of selected local products and technical policies for their production, processing and presentation. We underline the productive effect of such disciplinary power: it does not merely sanction but rather constructs a cultural script for production and consumption

that mobilizes various regimes of justification. Our results point out how a fragile balance between traditional values and professionalization is maintained by producers and perceived by consumers. We thus stress the multivocal nature of similar aestheticization processes, trying to capture their contested nature and the varieties of interests, benefits and shortcomings which they carry forward.

## **Recent Trends in Attitudes towards GM Food in Europe. A Comparison Between General and Specific Attitude Objects**

**Laura Nistor**, Sapientia - Hungarian University of Transylvania | [la.nistor@gmail.com](mailto:la.nistor@gmail.com)

The analysis is built on the 2010 data of the Special Eurobarometer on biotechnology and explores Europeans' attitudes towards genetic modification of food products. The novelty of the approach is that it considers the attitude object on three levels: attitudes towards genetically modified food in general, attitudes towards the specific modification of apple species by gene transfers from other species (transgenics) or from same species (cisgenics). Descriptive statistics shows that the public is the least tolerant towards generally taken GM foods, while transgenic and especially cisgenic techniques are more tolerated. The results of the ordinal logistic regression analysis re-

confirmed a number of previous findings of the literature in relation to the role of several independent variables in shaping respondents' attitudes towards genetic modification of food products. Among others, the validity of both the knowledge and trust deficit hypotheses was assessed and confirmed. In spite of many significant predictor variables, the explanatory power of the regression models is extremely weak, a finding which suggests that there must be other factors outside those included in the models which are involved in differentiating respondents' in terms of their pro-GM food attitudes.

## **a07RN05 - Problematic Forms of Consumption**

Chair(s): Jukka Gronow (Department of Social Research - University of Helsinki)

### **Consumer Capabilities - Problems of Action in the Case of Illegal Consumption**

**Paul Eisewicht**, Karlsruhe Institute of Technology | [paul.eisewicht@kit.edu](mailto:paul.eisewicht@kit.edu)

Understanding consumption form the perspective as a problem of action for the agent opens the view to the many problems and their solution by consumers in everyday life. Here the focus of analysis lies on the

capable consumer and his actions in identifying needs, gathering information, deciding between offers, buying goods, using and finally disposing them. The research questions are therefore a) what constitutes the experience of

the capable consumer and what knowledge guides his action and b) for what kinds of subjective problems, what kinds of actions provide a solution. From the perspective of consuming as a process of overcoming obstacles, illegalized consumption constitutes specific conditions for the agent. In contrast to other forms of criminal activity (like e.g. fraud), illegal consumption is based on a shared definition of the situation by the participants. One party wants to buy something (although as cheap as possible) and the other party wants to sell goods (although as high-priced as possible). One can differentiate between different kinds of illegalized consumption: the

illegal consumption of legal goods (e.g. in the case of so-called 'legal-highs') on the one hand and the consumption of illegal goods on the other hand. Furthermore we can reconstruct the meaningful actions of consumers and providers in their efforts to buy/sell consumer goods. On the example of so-called 'rouge pharmacies' that illegally sell pharmaceuticals the talk discusses the following aspects of illegal consumption: a) the handling of problems by consumers throughout the process of consumption, b) the role of 'new media' for illegal consumption, c) the role of trust in the relation between provider and consumer.

## **And that is Exactly where the Fun Ends! Finnish, French and German GPs' Understanding of the Border between Recreational Gambling and Problem Gambling.**

Michael Egerer, University of Helsinki | [michael.egerer@helsinki.fi](mailto:michael.egerer@helsinki.fi)

Problem gambling is normally identified by the harm it causes and diagnosed by criteria copied from the substance dependence field. Both strategies, however, are problematic since a) the harms caused by excessive gambling are consequences and not characteristics of the problem and b) using indicators of dependence for problem gambling is only weakly scientifically supported. This study, instead, analyses what distinguishes recreational from problem gambling by looking at the corruption of the defining factors of play (Caillois, 1958). A stimulated focus group method (Reception Analytical Group Interview) RAGI was applied to seven groups of Finnish, seven groups of French and three groups of German general practitioners. The interviews were thematically coded and complemented by a semiotic analysis. The biggest discussion topic of

indicating problem gambling is lost voluntariness and the lost or hollow fun of gambling. French and German GPs show a more similar conceptualisation of the problem than Finnish in relating the lost voluntariness towards an outside force, whereas Finnish GPs discuss the issue more in terms of an internal struggle. Problem gambling is not necessarily described as without moments of fun, but the joy is then discussed as empty. The results imply that the perception of corruption of game characteristics is culturally shaped, but nevertheless, turning the sight towards the game itself, as an indicator of problem gambling opens up a more accurate assessment than concentrating on the consequences alone and can be a valuable additional assessment tool in brief interventions.

## Finding Different Gambler Profiles Based on the Money and Time Spent on Gambling Activities

Maria Heiskanen, University of Helsinki | [maria.heiskanen@helsinki.fi](mailto:maria.heiskanen@helsinki.fi)

Arho Toikka, University of Helsinki | [arho.toikka@helsinki.fi](mailto:arho.toikka@helsinki.fi)

Opportunities for gambling have been expanding during the last few decades, and especially the proliferation of online gambling has been vast. Different forms of gambling vary from buying a scratch card to attending a poker tournament, and gamblers are a heterogeneous group. Research on gambling has broadened and branched into different fields, including the research of problem gambling and non-problematic gambling. Gambling addiction may lead to serious financial and social problems, but for most of the people, gambling is a harmless hobby. In this presentation, we will explore the gambling habits of Finnish people and develop novel methods and visualizations for understanding gambling profiles. In previous researches, subtyping of gamblers has focused on

pathological gamblers and the mental characteristics of them. Here, we will explain the different amounts of spent money or time by socio-economic variables and problem gambling indicators, for example. Who are the people who use a lot of time and money on gambling? What kinds of gamblers spend a lot of time but not that much money – or less time and a lot of money? We will use the survey data “Finnish gambling 2011” (N = 4484), collected in 2011 in Finland. The survey contains questions on gambling behaviour, and also problem gambling indicators and background information of the respondents. We use information visualization techniques with cluster analysis and regression methods to draw a novel picture of gambling (and associated problems) in Finland.

## b07RN05 - Children, Consumption and Nature

Chair(s): Annemette Nielsen (Institute for Food and Resource Economics - University of Copenhagen)

### Hearing Children's Voices: Exploring the Mediation of Children's Social Milieus within Contemporary Consumer Culture

Kevina Cody, Dublin Institute of Technology | [kevina.cody@dit.ie](mailto:kevina.cody@dit.ie)

Within the realm of children's consumer culture theorists, Martens et al (2004: p161) contend that 'relatively little is known about how children engage in practices of consumption or what the significance of this is to their everyday lives and broader issues of social organization.' Similar attestations of empirical dearth appear in the articulations of child sociologists who argue that despite their prevalence in other theoretical domains,

children within sociology have been regarded very much as a 'muted group, i.e. unperceived or elusive' (Hardman, 2001: p502). At a macro level, Cook (2008: p220) contends that 'children and childhood remain absent from or marginalized in a good deal of extant writing on consumption and consumer culture'. This paper aims to respond to the call for theoretical and empirical insight into the lived experiences of young people as they mediate

the shifting milieus of their social lives specifically through engagement with a myriad consumption practices. In an attempt to align with the evolving theoretical foundations of qualitative consumer research with children as well as offer empirical support to the advancements of Bannister and Booth (2005) which called for more 'child-centric' consumer research, a crystallization approach to research design was adopted. This multi-

layered approach to data collection addresses the need, as articulated by Morrow and Richards (1996: p96) to 'move away from the narrow focus of socialization and child development' towards a research approach that prioritizes children's own experiences of their lives as children immersed inextricably in consumer culture; thereby reconsidering the richness of children's voices.

## **"Mobility-Things" and Consumer Logistics among Families**

**Niklas L. M. Hansson**, University of Gothenburg | [niklas.hansson@cfk.gu.se](mailto:niklas.hansson@cfk.gu.se)

The aim of this paper is to present an understanding of consumers on the move with recent purchases, i.e. moving consumers doing consumer logistics, as it is negotiated in the performance of a variety of material objects or "mobility-things" as I call them: containers (bags, carriers, baby strollers) and means of mobility (bikes, cars, buses, trams). On shopping trips away from home, consumers depend on various "mobility-things" to assist in their journeys. Among families with small children the stroller is one of the most important. Objects are co-constitutive of moving consumers in urban space and people often extend their body range, carrying capacities, mobility skills and ability to move across distance through enrolling devices.

They use them for planning the route of consumption and the number and volume of goods to purchase. In turn, devices also play a role in the embodiment and experience of being a consumer on the move. The results points towards the important role of mobility-things in patterns of consumption and adds a hitherto neglected supplement to our understanding of consumption, markets and consumer culture. In this paper I focus on how artifacts play a role in the arrangement of consumption practices among families with small children in Gothenburg, Sweden. I use qualitative ethnographic data obtained through in-depth interviews, videos and "go-along observations" together with families as they shop.

## **Collecting and Collected Experience: Children, Families and the Activity of Rockpooling**

**Lydia D. Martens**, Keele University | [l.d.martens@keele.ac.uk](mailto:l.d.martens@keele.ac.uk)

This paper presents an analysis of insights from the British Academy project Children, Collecting Experience, and the Natural Environment. The work builds on my interest in the meanings of the generational categories of 'child' and 'adult', in intergenerational relations and learning, and in consumption (Martens 2005; Martens 2010; Martens et al 2004). It merges these with my growing interest in methodologies for tapping into the

non-representational and more-than-human dimensions of practice and experience (Anderson & Harrison 2010; Ingold 2000; Nimmo 2011; Woodyer 2008). In this project, I thus shift my focus from consumption as the study of the purchase and use (or otherwise) of commodities and objects towards the notion of collecting experience, which is especially useful for exploring the phenomenological and discursive dimensions of 'performance',

'embodied experience' and 'experience accounting'. Focusing on the here-and-now of collecting experience provides a way into studying the embodied and multi-sensory presence, intervention, pleasures and discomforts of 'being' outside. A focus on collected experience helps to connect the past with the present, in terms of how it feeds into the phenomenological reality of the here-and-now, its role and place in the narration of

memories of 'my family' and 'my childhood', and in the formation of habits over time. Such a binary focus is useful for getting at the sedimentation of the emotional qualities of family life and the formation of an ethics of the more-than-human. The argument will be illustrated with observations from fieldwork with children and families in the activity of rockpooling.

## Children's Embodied Knowledge: Tasting Animals, Fruit and Vegetables

Mónica Truninger, University of Lisbon | [monica.truninger@ics.ul.pt](mailto:monica.truninger@ics.ul.pt)

Ana Horta, University of Lisbon | [ana.horta@ics.ul.pt](mailto:ana.horta@ics.ul.pt)

José Teixeira, University of Lisbon | [jose.teixeira@ics.ul.pt](mailto:jose.teixeira@ics.ul.pt)

This paper examines the effects of public policies on healthy eating in the subjectivities of children around animals and plants. Four focus groups with children from primary and secondary schools in urban and suburban Lisbon were run. Herein, a game of tasting and identifying fruits and vegetables, followed by a game with several miniature animals took place. Drawing on this empirical material, it was possible to identify significant socioeconomic differences on how children represent discursively food (plants and animals). However, feelings, emotions and the senses also play a key role in food articulation. Embodied knowledge operates every time children mobilize the senses in micro-operations with less familiar animals and plants. Such embodied knowledge is a key element of the interaction between children, food and taste. Food memories, experiences

and social relations are also brought in as means of decoding and/or clarifying the uses of animals and plants. It was concluded that children's bodies convey experiences that lead to acceptance or resistance of particular food tastes through its incorporation and shared collective discussion in the focus groups. Tasting and knowing plants and animals are the outcome of an event where material and social interactions take place in practice (Hennion, 2007). Thus, embodied food politics (Carolan, 2011) should be given more attention by public policymakers when attempting to change children's eating habits. This paper is part of a research project entitled 'Between the School and the Family: children's food knowledge and practices' funded by the Portuguese Foundation for Science and Technology (PTDC/CS-SOC/111214/2009).

## c07RN05 - Consumption and the body

Chair(s): Nina Kahma (National Consumer Research Centre, Finland)

### Shopping as Techniques of the Body

**Arne Dulsrud**, National institute for Consumer Research, Oslo | [arne.dulsrud@sifo.no](mailto:arne.dulsrud@sifo.no)

**Eivind Jacobsen**, National Institute for Consumer Research, Oslo | [eivind.jacobsen@sifo.no](mailto:eivind.jacobsen@sifo.no)

**Silje Skuland**, National institute for Consumer Research, Oslo | [silje.skuland@sifo.no](mailto:silje.skuland@sifo.no)

Lately cognitive psychology has gained considerable ground in studies of consumer behaviour, marketing and public policy. Looking at the development of the supermarket as a physical design, we focus on this tradition's neglected focus on bodily regulations for understanding consumer behaviour. Modern supermarkets are considered to be the key arenas of the sovereign and empowered consumer - in the mentioned literature focused on the notion of choice. Yet, despite this freedom, purchasing patterns seems to be fairly predictable over time. Inspired by Foucault's general thesis that the emergence of individual freedom coincides with new techniques of discipline, this paper explores consumer routines as an outcome of governance structures embedded in modern retail marketing techniques. We argue that the transition from traditional outlets to self-

service retailing represented an original loss of social control over the consumer substituted for by retailers by new selling techniques relying on the regulation of consumer's bodies. This became reflected in the overall store design and its interiors and a whole new set of marketing methods. We introduce the term embodiment of consumer choice to describe how shopping in modern supermarkets hinges on various "techniques of the body", to use Marcel Mauss' term. By relying on a study of in-store marketing in Norwegian retailing, these promotional activities are examined as techniques framing the normalizing of purchasing behaviour. We conclude by saying that power and discipline of the body are underestimated as explanations of the formation of shopping behaviour and consumer routines.

### "I Need a Tool for Realising how Much I Eat". Women Slimming with an Online Weight Loss Service

**Mari Niva**, National Consumer Research Centre, Helsinki | [mari.niva@ncrc.fi](mailto:mari.niva@ncrc.fi)

The past few decades have witnessed an increasing concern for overweight and a proliferation of slimming guides, tv programmes, support groups and personal trainers, and more recently, slimming services in the Internet. In Finland, commercial online slimming services (e.g., [www.keventajat.fi](http://www.keventajat.fi) and [www.kiloklubi.fi](http://www.kiloklubi.fi)) offer dieting advice based on personal profiles, food and exercise diaries, expert articles, recipes, discussion forums and

blogs. Inspired by practice theory, this paper analyses what kind of a social practice of slimming the services promote, whether and how the services transform the slimming careers of their users and how the users negotiate the encounters between 'online slimming' and other pursuits of everyday life. The paper is based on an analysis of expert advice and peer support provided by the services as well as personal interviews

(varying in length between 1 and 2.5 hours) conducted in November–December 2012 with 20 Finnish users of the services. The interviewees were 21–66-year-old, relatively well-educated women with weight-loss targets between 4 and 40 kg. The preliminary findings suggest that slimming with online services is overwhelmingly characterised by the daily use of a particular tool, the food diary. With its immediate feedback on energy intake and

nutrition, the diary acts for the users as a technique of self-control and a device for learning the skill of slimming ‘sensibly’, without crash diets. Even though providing both expert advice and peer support, the services promote an individualised and calculative form of losing weight. The interviewed women shared a vision of being able to stop slimming by ‘internalising normal eating’ with the help of the services.

## **“Moisturized Men”: Grooming as a Competence in the Neoliberal Marketplace**

**Olga Kravets**, Bilkent University | [olga@bilkent.edu.tr](mailto:olga@bilkent.edu.tr)

**Alev Kuruoglu**, Bilkent University | [alev.kuruoglu@gmail.com](mailto:alev.kuruoglu@gmail.com)

Male skincare is a swiftly growing market in an otherwise mature personal care industry. Rise in male grooming is commonly associated with the influence of global media and marketing, and is taken as an evidence of a masculine identity instability, which in turn might pose a challenge to conventional, normative gender divides. This study examines men’s active involvement in grooming within a broader political economic context and locates the changes in gendered practices within neoliberal economic restructuring and global flows of consumerism. Drawing on a comprehensive survey of men’s fashion and beauty media, and ethnographic interviews with young men in Turkey, we find that grooming is ostensibly framed and narrated as a competence that renders men marketable and competitive in a corporate work environment, thereby allowing them to fulfill

their traditional obligations as breadwinners. By devoting hours to self-care, men effectively embody the logic of a neoliberal self-producing subject, with values of self-making, competition, and self-responsibility at its core. Framing male grooming as a competence sets it apart from similar female practices, and represents a departure from a hedonistic ethos of a “metrosexual” ideal proselytized by popular culture. Thus, rather than recasting masculinity and gender divides, men’s devotion to skincare sustains conventional gender fault lines. We show that while the uptake of grooming is indeed prompted and normalized by the current aesthetic codes of representing men in popular culture, “well-dressed and moisturized” men emerge as a part of a larger response to the demands and opportunities of neoliberal capitalism.

## **The Role of Perceived and Idealized Bodies in the Market Value of Amazonian Aphrodisiacs in Peru**

**Andrea Urrutia Gómez**, Pontificia Universidad Católica del Perú | [andreacarolina221@gmail.com](mailto:andreacarolina221@gmail.com)

This research studies both the visuals used in the marketing of aphrodisiac liquors and the bodily effects produced by them. These drinks are made in the lowlands of Peru, specifically

in the province of Chanchamayo, and they are distributed regionally and to the city of Lima. Participant observation and interviews with the producers of the liquors were conducted in

Chanchamayo, as well as with the traders, sellers and consumers in liquor stores, shops, markets and bars. Amazonian and indigenous women in these products are shown as an object of desire, in opposition to consumers which are thought as heterosexual male subjects. The stereotype concerning geographical origin and femininity is inscribed within a national imaginary resistant to change, thus signs of differentiation like aphrodisiacs are consistent with both a demonstration of power above the Other and a fetishistic desire for them: it refuses to concede uniqueness to sexual or racialized “objects”. Ethnic

stereotypes are an essential part of the specific market value of aphrodisiacs liquors, whose male audience is conceived as ethnically homogeneous but socially heterogeneous. Therefore, aphrodisiacs are involved in the construction of Peruvian masculinities and the development of its performances. The aphrodisiac value is part of shared national idiosyncrasies, whose social demonstrations in Lima and in Chanchamayo translate into tourism services, commerce, as well as discourses and attitudes towards female and male sexuality from the Amazonian region.

## **a08RN05 - Consumption inequalities and exclusions**

Chair(s): Semi Purhonen (Department of Social Research - University of Helsinki)

### **Does Food Insecurity Lead to More Unhealthy Eating Habits in the Nordic Welfare States?**

Thomas Bøker Lund, University of Copenhagen | [tblu@foi.ku.dk](mailto:tblu@foi.ku.dk)

Lotte Holm, University of Copenhagen | [loho@foi.ku.dk](mailto:loho@foi.ku.dk)

Unni Kjærnes, National institute for Consumer Research, Oslo | [unni.kjarnes@sifo.no](mailto:unni.kjarnes@sifo.no)

The Nordic social democratic welfare states are often emphasized as exemplary with regard to equality of opportunity. Despite this effort these countries also experience persistent inequality in health. One cause of this inequality stems from socially stratified eating habits where unhealthy eating in the long run can lead to a number of non-infectious diseases. The question is whether this health inequality stems from economic constraints in households leading to food insecurity, i.e. limited or uncertain access to healthy food? Or, whether in Nordic welfare countries with apparent low poverty levels, it is cultural orientations such as health and food values or education that explain the unhealthy eating habits. Using questionnaire data

collected in 2012 in Denmark, Finland, Norway, Sweden (N=8248) the link between food insecurity and healthy eating in the Nordic countries is examined. Firstly, the extent of food insecurity is outlined and it is explored whether it is especially prevalent in any societal groups (low household income, single parents etc). Secondly, it is examined whether food insecurity has an effect on degree of healthy eating. If this is the case the competing hypothesis is tested, namely that the food insecure eats less healthily not because of the insecurity, but because of health and food values that are not in tune with healthy eating. We discuss the results by highlighting similarities and differences between the countries.

## How do Danes Handle Food Budget Constraints?

Annemette Nielsen, University of Copenhagen | [anmn@ifro.ku.dk](mailto:anmn@ifro.ku.dk)

Current changes in world economy and in global environmental balances increase the likelihood that in the near future, not only low income population groups in Western and non-western societies, but people across different income groups will experience increased constraints on their food budgets. In a recent representative study in Denmark, 10% stated that they often "have been forced to buy cheaper food to pay for other things", while further 33% stated that this sometimes is the case (unpublished data). In view of national and international policies aimed at strengthening public health and environmentally sustainable consumption, it is important to follow changes in food consumption patterns due to experienced food budget restraints. The conference paper will present data and provide preliminary analyses from the study Food in Turbulent Times (FiTT), which was initiated in

June 2012. Data from a qualitative study will be presented and discussed. Here 35 Danes from different household types and with different economic and educational profiles were interviewed. All had experienced recent constraints on their food budget. This study investigates coping strategies in terms of shopping, cooking and eating food. Further, it aims at understanding how coping strategies are linked to people's general well-being and social life, and to their concerns with the natural environment and their perceptions with regard to political and institutional responsibilities and action. The presentation of qualitative data will be supplied by a provisional analysis of data from a quantitative study. Here dimensions of food budget restraint and coping strategies were measured in a survey among 1600 Danish households.

## Faces of Consumption, Faces of Crisis. Social Portraits of Over-Indebted Persons

Adam Mordzon, Nicolaus Copernicus University in Torun | [am@doktorant.umk.pl](mailto:am@doktorant.umk.pl)

The economic crisis has become an issue of economists' concern. To identify its causes and consequences they focus on inappropriate practices of financial institutions. However, the late capitalism and the internal contradictions of this system, seem to claim also for an in-depth, empirical, sociological consideration. Culture of the new capitalism has inverted the assumption of the delayed gratification, it allows a person to spend money which he or she has not yet earned. One of the parameters for this phenomenon is the scale of excessive, not paid on time credit debts. In Poland the problem of excessive credit consumption (the over-indebtedness) reaches a significant size. According to the data of Biuro Informacji Kredytowej (Credit Information Office) more than 2 million Poles are in such a situation. For the sociologist it is clear that this phenomenon has its social background; social patterns of

consumption are in its roots. The aim of the presentation is an attempt to portray a specific group of consumers - victims of the credit loop; description of specific consumption patterns and strategies of economical actions, which appear after the loss of financial liquidity. The analysis refers to the theoretical perspective of the anomie, which seems useful to characterise the types of borrowers. For this purpose, specific questions are posed: Can we find some typical consumption strategies of debtors? Can we describe the types of acting of borrowers after becoming over-indebted? The presentation of original research results makes an attempt to answer these questions possible. The study is conducted using the technique of the individual in-depth interviews (IDI) on the sample of thirty over-indebted persons.

## Having Choices or not – Relationships of Affluence and Exclusion

Stephan Lorenz, University of Jena | [stephan.lorenz@uni-jena.de](mailto:stephan.lorenz@uni-jena.de)

While work is normally related to necessity and need consumption is associated with spending freely and having choices over commodities and services. Therefore, discussions of inequalities, poverty and exclusion mostly focus on income and social security that are based on wage labour. Work is thereby regarded as the key dimension and consumption is of secondary importance only. Following the interpretation of a consumption society a change of perspective is necessary. If consumption is assumed to be more important for social integration work is just relevant as a way of generating money in order to participate in consumer society. As a consequence, exclusion needs to be reflected on, too from another point of view. That is the point of spending rather than generating money, i.e.

the access to options and the chance to choose freely. The presentation begins by outlining some main aspects of contemporary affluent societies and the significance of option diversity and freedom of choice therein. Then it suggests an understanding of inequality and exclusion as a relationship of three social positions that are reformulated according to distinctions made by work-based perspectives on exclusion. These positions of chances to choose are analytically distinguished into 'being-able-to-choose', 'having-to-choose' and 'having-no-choice'. Having no choice is the analytical criterion of social exclusion. The focus of the presentation therefore is on the borderline between having choices or not. It will empirically be illustrated by the phenomenon of charitable food assistance.

## b08RN05 - Sustainable Consumption 2

Chair(s): Michael Egerer (Department of Social Research - University of Helsinki)

### Knowing Rebound Effect: Could it Lead to Changes in the Repertoire of Ecologically Oriented Actions?

Osman Arrobbio, University of Torino | [osmanarrobbio@yahoo.fr](mailto:osmanarrobbio@yahoo.fr)

The debate about the relevance and the causes of the rebound effect deriving from efficiency gains is still unsolved and it is characterized by a hard contrast among scholars. However, discourses on rebound effect are being translated and summarized in less complex ways, trespassing the borders of expert spheres. The aim of this study was to investigate what are the resulting shapes of such a transformation activity, to what extent environmentally concerned people agree with "backfire theories", and what are the most likely changes in the repertoire of ecological actions that could derive from their

acceptance. The first part of the research activity was dedicated to the content analysis of discussions and explanations about rebound effect that could be found in non-specialized texts (mainly on the web, in Italian). The second part was based on 12 semi-structured interviews with environmentally concerned young adults in Turin, where the accorded plausibility to the various mechanisms that are likely to lead to rebound effects were investigated. For what refers to micro level rebounds, price-induced mechanisms (the most commonly used) were arduously accepted as valid explanations, while the

confrontation with macro level rebounds and backfire gave birth to processes of blaming of a quite varied set of actors and institutions ranging from producers to the financial sector and the “growth society”. Differing from some of the “backfire theories”, neither efficiency

improvements in itself nor pervasive technologies are easily recognized as causes of resource use increase. A propensity for individual actions based on sufficiency emerged clearly as a possible solution for counteracting rebound effect.

## Do Consumers Become less Environmentally Responsible in Time of Economic Crisis?

Jan Urban, Charles University, Prague | [jan.urban@czp.cuni.cz](mailto:jan.urban@czp.cuni.cz)

The aim of this paper is to look as whether the role of environmental concern as a factor of environmentally responsible consumption remains stable even now in the time of economic crisis. Specifically, the paper examines data from 3 country-representative surveys (n1=1066, n2=1038, n3=1115) on purchase of environmentally friendly products and organic food in the Czech Republic conducted in 2008, 2009 and 2011. These surveys gather information about respondents,

their purchase behavior and also about their environmental motivation, particularly their concern with local and global environmental problems. Structural equation modeling is used to test a hypothesis of time-invariant effect of environmental concern on responsible purchase behavior. Our findings suggest that the effect of environmental concern on responsible purchase behavior remains stable even in times of economic crises.

## A Practice Theory Approach to Domestic Heating: Qualitative Interviews with Heat Pump Owners

Pål Strandbakken, National Institute for Consumer Research, Oslo | [pal.strandbakken@sifo.no](mailto:pal.strandbakken@sifo.no)

Nina Heidenstrøm, National Institute for Consumer Research, Oslo | [ninah@sifo.no](mailto:ninah@sifo.no)

Harald Throne-Holst, National Insitute for Consumer Research, Oslo | [harald.throne-holst@sifo.no](mailto:harald.throne-holst@sifo.no)

The aim of this paper is to analyse the potential discrepancy between the theoretical and actual energy saving of the air to air heat pump. Preliminary results indicate that consumers' wish for comfort is one of the driving forces for selecting this technology, meaning that some of the potential effect is turned into high indoor comfort. However, in a Norwegian context it is also believed to be one of the explanations for reduced energy consumption in households since the mid-1990s. To what degree has energy saving technologies contributed to a more efficient use of energy, and reduced

emissions from household consumption? This paper explores heat pump practices in Norwegian households; defined as consumers' interaction with and their stories about the technology prior to instalment and after some months of use. We have interviewed in ten households on two occasions, the first in the heating season (January- February) and the second in early summer (May-June). We utilize the concept of social practices in order to study how a technology enters into everyday life, and how new routines and habits are established and developed. The social relevance of this

type of research is related to the need for developing sustainable lifestyles in the wealthy and westernized parts of the world, and hence to reduce carbon emissions. The analysis of

domestic heating practices may be relevant in developing new and more specific policy instruments for sustainable consumption.

## **Between Growth and “Degrowth”: A Methodological Approach to Analyse Public Policies of Sustainable Consumption, in Portugal**

Isabel M F Silva Cruz, University of Porto | [imsilvacruz@gmail.com](mailto:imsilvacruz@gmail.com)

The current debate focuses between growth and “degrowth”. For many authors, economic growth does not generate prosperity or a better quality of life. The absence of justice is one of the reasons for questioning this conventional formula for achieving prosperity. Thus, it is considered urgent a development of a macro economy that is not based on a relentless growth consumption (Jackson, 2009). In this sense, the “degrowth” is a financial and ecological necessity due to failure of the model of economic success (Jackson, 2009; Martinez-Alier, 2010; Kallis, 2011) and had its origin in two factors: on the one hand, the awakening to ecological crisis, on the other, the criticism to technology and development (Meadows, 1972; Latouche, 2010). The concept of degrowth is still not

consensual. While Kallis argues that “sustainable degrowth is not only an inevitable hypothesis, but also a potent political vision that can be socially transformative” (Kallis, 2011:873), Bergh (2011) believes that the concept is ambiguous given the multiplicity of existing interpretations (GDP degrowth, consumption, working time; radical and physical degrowth) and the absence of precise indicators to measure it. In this paper we intend to explore these different theoretical proposals and examine how public policies in the area of sustainable consumption in Portugal reflect strategies that are closer to the outlook for growth or for degrowth. Thus, our methodological approach is developed around the documentary analysis (legislation) and interviews with policymakers.

## **a09RN05 - Ethical and Political Consumption 2**

Chair(s): Arne Dulsrud (National Institute for Consumer Research (SIFO), Norway)

### **The Citizen-Consumer: Creation of a Hybrid Concept? The Case of Oxfam Worldshops in Flanders, Belgium.**

Robbe Geysmans, Ghent University | [Robbe.Geysmans@UGent.be](mailto:Robbe.Geysmans@UGent.be)

Lesley Hustinx, Ghent University | [lesley.hustinx@ugent.be](mailto:lesley.hustinx@ugent.be)

Consumption has been a central concept in discussions on rising individualism and declining participation in society. In a critical reaction to the ‘decline-thesis’, different authors have elaborated the concepts of

ethical or political consumerism as new, hybrid forms of participation. More recently, attention shifted, away from the ethical consumer, to other actors involved in defining this consumer. This change of focus generates new

questions on the stated hybrid character of the ethical- or citizen-consumer; do different interests held by different actors coalesce in order to generate a 'true' citizen-consumer? Or do specific logics (citizen vs consumer) prevail? Fair trade is particularly interesting in this context, as numerous actors became involved in this market/movement. Thus, by focusing on the formation of the citizen-consumer in a fair trade-context, better insight can be gained in the stated hybridity of the concept. This paper contributes to this goal by studying the case of Oxfam Worldshops. This Flemish organization of fair trade retailers developed a new concept for their shops, as a

reaction to falling sales. Aim of our research is analyzing how the consumer is addressed by this new shop-concept, and which implications this has for the definition of the citizen-consumer. We interview the actors involved in the development of the new shop-concept to learn about their strategies, aims and evaluations. In order to understand how these strategies are translated in reality, we combine the interview materials with data from observations and customer focus groups in a new Oxfam shop. As such, a better understanding is developed of which ideas about consumers are dominant in the world of 'ethical' retailing.

## The other Side of Ethical Consumption

Jens Hälterlein, University of Potsdam | [haelterl@uni-potsdam.de](mailto:haelterl@uni-potsdam.de)

In my presentation I want to address the relation between morality and consumption in a way quite different to recent approaches to ethical or political consumption. In public and scientific discourses a moralisation of consumption is stated. However, this diagnosis is ignoring two things. On the one hand it is ignoring that consumption has been ever since the objective of politics and has experienced specific forms of moralisation. This is first and foremost a question of theoretical and empirical appropriateness. On the other hand, and I will focus on this aspect, it is ignoring the other side of the coin. If there are consumers whose choices and practices are labelled as good, responsible and reasonable, there must be consumers whose choices and practices are

labelled as bad, irresponsible and foolish. Hence, a moralisation of consumption is always producing an antagonism. Currently we are experiencing the discursive construction of an ethical consumer on one side and of a new underclass consumer ("Unterschicht" in Germany, "the chav" in GB and "white trash" in the US) on the other side. And this is not only a matter of scientific or public discourse. It is a practical knowledge of social policy, a justification for exclusion and social inequality. The theoretical background of my paper is based on the conceptual tools, methods and analytical distinctions of governmentality studies. The empirical evidence of my paper is based on a discourse analysis carried out in the course of my PhD thesis.

## Is Social Justice Applicable to any Product? - Untangling the Conditions for the Success of Private Certification

Jan-Christoph Janssen, University of Cologne | [janssen@wiso.uni-koeln.de](mailto:janssen@wiso.uni-koeln.de)

The Fairtrade certification mark gains scope and breadth through the certification of new product categories and the growth of sales with varying success across product categories. In this paper, I examine the

conditions for successful market penetration of product categories carrying the Fairtrade mark in four national settings (UK, USA, Germany and Austria). In order to explain the variation of the degree of ethical consumption between

product categories within the same ethical framework, the role of firms and social movement actors in the process of commensuration will be analyzed. This paper contributes to the literature on commensuration in analyzing successful commensuration without shedding a blind eye on unsuccessful attempts to commensurate within the same ethical framework. From the viewpoint of ethical consumption, it explains, why some categories are relevant for ethical affluent consumers while others fail to do so. I will unravel two different paths for product categories to gain relevance in the eyes of

ethical consumers in applying fsQCA. Highly differentiated product categories get attached with ethical value through the mobilizing efforts of social movements and small firms, which establish a visible niche to encounter incumbent firms in the market. In contrast, the successful launch of undifferentiated products relies heavily on the promoting efforts of large supermarket chains, which offer those products on large scale. In both cases, the product categories have to share characteristics consistent with these strategies.

## **b09RN05 - Materiality and producer-consumer interaction**

Chair(s): Kai-Uwe Hellmann (Technical University of Berlin)

### **Consumer Value and Value Co-Creation.**

Konstanty Strzyczkowski, University of Warsaw | [kstrzycz@is.uw.edu.pl](mailto:kstrzycz@is.uw.edu.pl)

So far sociological inquiry concerning the nature of consumption was confined to two critical issues. First, was the question of power relations, consumer sovereignty and the origin of consumer needs. Second, concerned the problems of identity, lifestyle, symbolic expression. Stuck between Scylla of overwhelming status game and Charybdis of an infinite absorption with the self, traditional sociological analysis was unable to identify the very essence of consumption practice which is inherently productive and as such connected with production of economic, cultural, political and social value. Advantageously the latest explorations on prosumer activities, as well as, those tackling much alike subjects as co-creation of value, co-creative labor, active consumption, collective customer commitment, customer competence cooptation, collaborative innovation, open

innovation, crowdsourcing, service-dominant logic, amateur professionalism, consumer tribes, social production, wikinomics and convergence culture etc., etc, offer a new spin for sociology of consumption. We are no longer consumers. We never quite were. We're prosumers, value co-creators, co-producers of value, active participants, resource integrators, produsers, professional amateurs, working consumers, fans and affective workers. The aim of this paper is to present what marketing theory, cultural studies and immaterial labor theory can teach us about the character of what is been produced. To do so it will try to depict different aspects of consumer co-produced value and the processes involved in value co-creation. Furthermore the paper will address the question of motives behind co-creation practices.

## The Elite Socialite. An As Seen On Screen Case Study of Online Producer-Consumer Interaction on Social Media Platforms

Romy R. Verstraeten, Erasmus University, Rotterdam | [rosely.rrv@gmail.com](mailto:rosely.rrv@gmail.com)

As social media shies away from a buzz word and is moving towards a strategic tool, more and more practitioners are trying to integrate social media into business models (Eyrich et al., 2008). It is not the question 'if' there is a relationship between social media use for business benefits, because there is (Kaplan & Haenlein, 2010). This research aimed to gain a better understanding of what signifies as best practice for businesses with regards to social media usage and strived to provide a critical reflection of this practice on the potential of social media for businesses as well as illustrate how social media platforms can leverage a specific culture of space by and for businesses. The question central to this research is about how this relationship comes together and more specifically, what the

mechanism of how this process works looks like. To gain a more in-depth insight, the online retailing business As Seen On Screen is chosen for case study analysis to answer the research question; What is successful social media usage for business? ASOS is the first European online fashion-retailer that launched an in-Facebook store and has been awarded with two Interactive Media in Retail Group awards as best international e-commerce retailer and best use of social media and received a Webby honors nomination in the category fashion. Findings revealed a strong affiliation by customers with the latent identity of ASOS which was portrayed by the business through events, organized competitions and specific user connection in social media platforms.

## What Should I Buy to be Happy? The Effect of Experiential and Material Expenditures on Subjective Well-Being

Tamás Hajdu, Research Centre for Economic and Regional Studies of the Hungarian Academy of Sciences | [hajdu.tamas@krtk.mta.hu](mailto:hajdu.tamas@krtk.mta.hu)

Gábor Hajdu, Centre for Social Sciences of the Hungarian Academy of Sciences | [hajdu@socio.mta.hu](mailto:hajdu@socio.mta.hu)

Recent researches on the relationship between material welfare and well-being deal with consumption and its effect on happiness. These papers claim that money can buy happiness if we spend it right: spending money on experiences rather than material things makes people happier. In this study we use two pooled cross-sectional surveys from Hungary to analyze whether experiential expenditures (leisure, sport, holiday) make people more satisfied than material expenditures (clothes, electronic devices). Previous studies usually used small samples of students across the US. Participants were asked to describe a material or experiential purchase and rate their

happiness with it. If the society stigmatizes materialistic people then subjects of these experiments might underrate their well-being stems from material purchases because of the social pressure. The main novelty of our paper is that we analyze representative surveys containing data collected from more than 6100 people. We can examine the effect of materialized decisions on well-being instead of imagined situations and mentally recalled purchases. We do not ask people directly how happy experiences or material objects made them, because such questions are rather unfamiliar and may entail superficial and less reliable answers. Our data on expenditures and

life satisfaction are not explicitly linked, thus our procedure can ease subjects' cognitive burden. In this way an ex post connection can be made between well-being and spending money on different kinds of purchases. We

demonstrate that experiences associate stronger with life satisfaction than material things, thus our evidences based on survey data corroborate the previous results from the psychological experiments.

## RN05 - Poster Session

to be determined

### Sustainability beyond the 'Commodity-Machine'

Selçuk Balamir, University of Amsterdam | [gandyphoebus@gmail.com](mailto:gandyphoebus@gmail.com)

Design cultures have so far been analysed in separate stages of production, mediation and consumption, or, along the circuit of the 'commodity-machine' – a unsustainable configuration vulnerable to multiple financial, social and ecological crises. Emergent design practices that bypass market mediation require a different framework, based on the production of shared value, as opposed to exchange value. I distinguish three domains of value production: the activity of designing subjects (labour), the circulation of design projects (intellect), and the making of designed objects (artefacts). Their analysis indicates three broader socio-cultural strategies: a) peer production, where design activities are pooled and redistributed by means of collaboration,

participation and amateurism; b) open source, where the networked, immaterial blueprints are distributed with open/free/public licenses; and c) digital fabrication, which enables the self-production of the means of production, tools and machines in the service of a community. To what extent do these emergent practices prefigure a new and sustainable basis for product design, and redirect the production and distribution of material artefacts towards viable, desirable and equitable configurations? What social implications are at stake, in regards to employment, consumption, self-organisation, allocation of resources, self-sufficiency and autonomy of a community?

### Between Price and Quality. Criteria of Food Choice in Romania

Laura Nistor, Sapientia - Hungarian University of Transylvania | [la.nistor@gmail.com](mailto:la.nistor@gmail.com)

The Special Eurobarometer 389 survey investigated the importance of four food-purchase criteria: quality, geographic origin and price. The presentation builds on this survey and analyzes the rank, structure and determinants of these criteria in the case of Romania and offers also some comparative insights between Romania and the European Union. The results show that in Romania there is a split between preference for price on the

one hand, and preference for the other three criteria, i.e. the quality-related criteria. In Romania, similarly to Europe, price-preferences are rooted in respondents' precarious social status in terms of their economical and educational background. Contrary to the pooled European sample, the preference for quality-related criteria in Romania is not clearly rooted in the socio-demographic backgrounds of the respondents,

suggesting that concern for food quality is rather a risk avoidance practice than a lifestyle

choice of a specific segment of the Romanian population.

## Seaside-Sport Tourism and Environmental Sustainability

Chiara Francesconi, Università degli Studi di Macerata | [chiara.francesconi@unimc.it](mailto:chiara.francesconi@unimc.it)

The proposed paper suggests a reflection on a more and more integrated relationship between seaside tourism and sport, in particular referred to a field research that has been carried out on the Adriatic Coast of Romagna, with reference to the resorts of Cervia, Milano Marittima and Pinarella. The first results have shown that, in the last few years, the role of sport in this territory as an opportunity of tourism - and tourism as an opportunity of sport - have led to the creation of businesses, services and events aiming at combining a vacation under the sign of wellness and sports, even at competitive level. Such activities, in turn, have generated incoming tourism, which has grown thanks to the strong bonds created with other sectors and services of the area. Such process seems

to be largely distinguished by a strong local identity, which has predominantly supported and encouraged the native development. On the contrary, such type of tourism has experienced, in many other areas, important foreign investments playing a determining role in the territory. Through major case studies in the area, the present research has tried to analyze which direction seaside tourism and sport will take. The first results show that this specific tourist-sport interaction process, on one side, utilizes every resource and input offered by the territory, and, on the other side, seems to depend on social balance and environmental sustainability, without which attracting and keeping tourists would become difficult or even impossible.

## The Local Community in the Time of Crisis – Migrations from Urban to Rural Areas in Poland

Anna Marzena Wrona, Polish Academy of Sciences, Warsaw | [awrona@sns.waw.pl](mailto:awrona@sns.waw.pl)

Although Poland is less mildly affected by the recent economic downturn (there was no economic recession, but only slowdown in the growth of GDP), similarly to other post-communist countries of Central Europe it is still in the midst of changes provoked by the transformation from socialism to free market economy. The transformation is not only economic, but also social. Among the outcomes of the transition are changes in the settlement patterns: suburbanization and counter urbanization. Since the beginning of the 21st century the counter urbanization intensifying trend, already apparent in the countries of Western Europe and USA, can be observed in Poland. The paper will investigate the patterns of consumption – conceptualised

as a part of lifestyles of two social categories: people migrating from rural to urban areas and their native neighbours. On the basis of in-depth interviews, affinity group interviews, as well as participant observations, there will be the question whether the crisis has any impact on the lifestyles of: 1) mostly well educated, individualistic and relatively wealthy migrants, belonging to the middle class, 2) and their neighbours representing rapidly changing environment of Polish villages – societies that preserved many traits of traditional communities, but adapting to the new circumstances of capitalistic economy and European integration. Analysing the lifestyles of these two social categories in the time of economic downturn gives an answer to the

question: does the crisis affect the way of consuming in Central European societies?

## RN06 - Critical Political Economy

### 01JS06JS08 - The Eurozone Crisis as an Opportunity: Structural Changes within the Member States of the Eurozone and the European Union

Chair(s): Laura Horn (Roskilde University), Nicholas Petropoulos (formerly of the Pedagogical Institute of Greece)

#### Disciplining Southern Europe from Outside and from Within: Italy and Spain in Comparative Perspective.

Monica Clua-Losada, Universitat Pompeu Fabra, Barcelona | [monica.clua@upf.edu](mailto:monica.clua@upf.edu)

Davide Bradanini, IMT Advanced Studies Institute, Lucca | [davidebrad@hotmail.com](mailto:davidebrad@hotmail.com)

The paper analyses the historical roots of crisis management and resistance in Italy and Spain. The two processes are compared through the lens of uneven and combined development of European capitalism. The contemporary historical development of the two largest Southern European economies - despite important differences - can be understood by a similar logic of transformismo, which has expressed itself in a form of management of class struggle characterised by a regressive fiscal system, an uneven internal development, and an underdeveloped and clientelistic welfare state. Politically, this has been reinforced by reactionary tendencies of the

ruling class combined with a logic of exclusion of working class parties and social movements. The present crisis manifests itself as an attempt both from outside and from within to intensify the neoliberal transformation of the state/society nexus while further delegitimising the redistributive function of the state. Furthermore, the crisis has enhanced the role of technocratic discourses and practices on the one hand, as well as an anti-political discourse at the level of the popular common sense, whilst deeply transforming the two political economies and further weakening the role of organised labour.

#### Erosion or Transformation of the Austrian Model in the Crisis

Roland Atzmüller, JKU, Johannes Kepler University, Linz | [roland.atzmueller@jku.at](mailto:roland.atzmueller@jku.at)

Austria fared quite well in the current crisis as it belongs to those countries in Europe with a considerable trade surplus. Nevertheless, the recent crisis and its effects on the labour market put the Austrian regime of Active Labour Market Policies (ALMP) to the test and sparked off a range of activities by the government, the social partners and the Public Employment Service (PES). Measures to secure employment (short-time work, etc) and

enhance human resources stood in the foreground policies to tackle the crisis. Furthermore, the connection of job-protecting measures with training programmes and the expansion of re- and upskilling measures were implemented to even use the crisis to support structural change. Nevertheless, the interplay between developments on the labour market in general and these strategies revealed that the Austrian ALMP-regime increasingly serves to

regulate a segmented labour market based on precarious forms of employment, which were extensively used by companies as a buffer in the crisis, through a polarised ensemble of programmes and measures. Thus, through an expanded set of activation measures and disciplinary devices provided by the PES a docile workforce is secured when the economy

takes off again. The paper will conclude with some considerations whether these developments can be interpreted as a slow erosion of the so-called Austrian model of coordinated capitalism linked to a conservative welfare model or rather a transformation towards some kind of workfarist investment state.

## Crisis as an Opportunity to Knock the State Out

**Branko Bembič**, University of Ljubljana | [Branko.Bembic@ff.uni-lj.si](mailto:Branko.Bembic@ff.uni-lj.si)

**Sašo Furlan**, Workers and Punk's University, Ljubljana | [sasofurlan@hotmail.com](mailto:sasofurlan@hotmail.com)

In the process of transition to capitalism, two elites emerged in Slovenia: the neoliberal (comprador) and the national bourgeoisie. In contrast to other transitional countries in Eastern Europe, the national bourgeoisie prevailed, but its success hinged upon political exchange between the state and the organised labour, which was in turn, due to its strong mobilisation at the outset of transition, able to influence considerably the process of building the institutional framework of the economy. The emerging neoliberal comprador elite on the other hand laid its hopes in 'exogenous shock' related to Slovenia's accession to the EU and EMU, which was expected to disrupt the established balance of power, but to no avail. The situation drastically changed with the eruption of the Eurozone crisis, which the comprador bourgeoisie immediately interpreted as an opportunity to annul the

achievements of organised labour. While austerity measures with significant cuts in welfare state and public sector were imposed to reduce the budget deficit, the liberal and right-wing coalition government relaxed the tax burden on corporations and individuals. Furthermore, although the banks in Slovenia are solvent (though in need of additional capital), a plan for bank rehabilitation involving a costly 'bad bank' was prepared; if enacted, this plan significantly add to the public debt and in turn increase the strain on the public sector and welfare state. It seems that the neoliberal comprador bourgeoisie, unable to defeat the organised labour in an open struggle, is trying to exacerbate the fiscal crisis in order to exhaust the state and make it unfit to function as a counterpart in the political exchange with the organised labour.

## 01JS06JS18 - Critical Political Economy of the Media and Communications in Times of Capitalist Crisis and Change

Chair(s): Ian Bruff (University of Manchester), Christian Fuchs (University of Westminster)

### Strategies of Perpetuation. How Economic Imaginaries Are Maintained in Public Discourse

Amelie Kutter, Lancaster University | [a.kutter@lancaster.ac.uk](mailto:a.kutter@lancaster.ac.uk)

The North-Atlantic financial crisis has challenged many taken-for granted assumptions about the functioning of economies. It raised expectations that paradigmatic or regime shift might take hold, replacing finance-oriented accumulation and neoliberalism. However, the arrangements of crisis management have, so far, perpetuated the established economic formation. The paper explores what part public crisis representations played in the restoration. It starts from the assumption that crisis narratives are crucial in reducing the disorienting complexity of encompassing economic crisis (Hay 1999, Jessop 2012) and develops a framework for the critical discourse analysis of such complexity reduction. It examines crisis narratives developed by well-reputed commentators in the German financial press during the years 2006-2010. Three

strategies of perpetuation prevail: causal stories that shift explanations of the crisis from the structural to the individual and vice-versa in a way which avoids systemic readings of crisis as well as attribution of responsibility to financial actors (blame deflection); a debate on regulatory policy re-emphasising notions of a 'strong' state while at the same time slating the 'big' engaging state (substitute debate); and the crowding-out of voices that refer to other traditions of economic thought (German model, corporatism, socio-ecological renewal) by a generalising portrayal as populist and misled (silencing). These strategies allow commentators to maintain the accustomed view of the "liberal regulator" against neo-mercantilist policies introduced by the German government and popular critique of unfair burden-sharing.

### Ideologies of Innovation: Intellectual Property Rights and Information Communications Technology

Daniel R McCarthy, University of Sussex | [dm322@sussex.ac.uk](mailto:dm322@sussex.ac.uk)

Discourses of technological innovation heavily emphasize the centrality of market pressures in driving innovation forward. Markets, in these narratives, are viewed as central to providing incentives for innovation – market-based opportunities – or for providing a necessity for innovation – market-based compulsion. These formulations occur both amongst policymakers and in the wider scholarship on innovation, including Marxist accounts of innovation (Brenner 1998, 2002; Warren 1980; Wood

2002). This article will seek to unpack these arguments through an examination of the discourses of the US Department of State and Department of Commerce in relation to innovation and information communications technology. The United States has repeatedly emphasized the centrality of market-based innovation for the successful growth and diffusion of the Internet. Relying on an ahistorical account of the growth of ICTs, and drawing upon many normative discursive

resources that resonate in liberal international society, this rhetorical strategy has served to undermine alternative approaches to innovation as outdated or misguided. The result is a set of arguments suggesting the necessity of private property rights in ICTs for innovation to take place. Pulling apart these accounts to examine their highly ideological nature, I will suggest that these formulations

obscure the central role of cooperation and the socialization of innovation for ICTs. This suggests that Marxist accounts of innovation require substantial revision. Central to these revisions is consideration of the politics of innovation, the role of the State, and the International in making innovation in information technology possible.

## Corporeality of Work in Cognitive Industries: The Quantified Man

Phoebe V Moore, Middlesex University, London | [pvm.doc@gmail.com](mailto:pvm.doc@gmail.com)

The accelerated atomisation of 'employability' (Moore 2010, 2011, 2012) is exacerbated by a new range of self-imposed post- post-Fordist self-management techniques seen in the Quantified Self movement. Softwares developed out of this movement such as sensecams, automas, memoto and such projects as the Citizen Evolutionary Process Organism (C3PO) used for lifelogging and self tracking are fully cognizant of the body in work in the virtual industries, but only as oriented around accelerated productivity and fail to acknowledge exploitative aspects of attempts

to track non-commodity value producing labour. A reliance on the binarism of the body and the mind prevents the full investigation of the ideological implications of populist management literature and reflects the reliance on Cartesian thinking in humanities and social sciences. This paper provides a reminder that new materialism, and the Corporeal Turn and the Affective Turns taken in a variety of academic disciplines have increasing relevance as management seeks to appropriate measures for creative virtual work.

## Peer Production, Communism, Rent, and Commons of knowledge

Jakob Rigi, Central European University | [rigitj@ceu.hu](mailto:rigitj@ceu.hu)

This paper deals with the contradiction between the emancipating potential of peer production, on the one hand, and the fact that some instances of peer production, though not all of them, are used by major corporations to extract rent. It argues that peer production in itself, abstracted from its capitalist environment, constitutes the germs of an advanced communist mode of production, described by Marx in the Critique of Gotha Program. On the other hand, giant companies such as IBM and Facebook contribute to peer production, because the use of peer produced commons enable them to extract rent. Therefore, under capitalism, peer production is a contradictory phenomenon: It is

simultaneously an emancipatory project, from the point of view of the hacker movement; and a rent seeking instrument, from the point of view capitalists. This contradiction can only be resolved through a social revolution that socializes all means of production. Then, peer production will become the general form of the production of goods, services, social relations, politics and culture. This contradiction has been manifested in the hacker movement in the dispute over the concepts of commons of knowledge and licenses that regulate their use. The paper argues that Richard Stallman's GPL/Copyleft license, eliminating the use of such commons for the extraction of rent, bolsters the emancipating aspect of peer

production. The so called Open Source licenses, on the other hand, help capitalists to

harness peer production for the extraction of rent.

## 01RN06 - Critique, Resistance and Change

Chair(s): Ian Bruff (University of Manchester)

### We are the 99%, Resistance Practices and Subjectivity Formation: The Occupy Movement within the UK

Elif Uzgoren, Dokuz Eylul University, Izmir | [elif.uzgoren@deu.edu.tr](mailto:elif.uzgoren@deu.edu.tr)

Maria Loreto Urbina, Trent University, Nottingham | [loreto.urbina@gmail.com](mailto:loreto.urbina@gmail.com)

Dissent to commodification, unequal distribution of income, profit mechanism and corporatism is on the rise both in the periphery and core of the world capitalist system in tandem with the global financial crisis. The occupy movement that started in Wall Street spread globally with the motto 'We are the 99%'. The way in which subjectivities and practices are gathering under this movement raises questions regarding to the role of practices within subjectivities under post structuralist discourse. Following research on identity formations that challenge the class formation analysis within social movements, the global Occupy movement constitutes a plausible case to reflect on the role of social practices in the development of interclass subjectivities within social movements. Rather than representing fixed identities, the Occupy movement gathered practices with an

understanding of resistance and protest coming from several actors. This research centres on the relationship between practices and subjectivities related to political practices of resistance. The empirical data is generated through interviews conducted in Nottingham and London in January-February 2012 with participants and supporters. What kind of a political subjectivity does the movement entail? What does occupy stand for? What kind of political strategies do they use in articulating their dissent? How are their links with trade unions and political parties – vanguardist sense? What kind of solidarity do they articulate? What kind of internationalism does the movement entail? Those are the questions that we address in order to develop a narrative highlighting how practices are building political subjectivities.

### The Eurozone Crisis as an Opportunity for an Alternative Strategy: The Protest Movements against the Labour Market Reforms in PIIGS

Ozgun Sarimehmet Duman, İpek University, Ankara | [ozgunduman@gmail.com](mailto:ozgunduman@gmail.com)

This paper aims to analyse the effects of the Eurozone crisis on the European societies. It elaborates on the remedies introduced to overcome the crisis, and particularly focuses on the implementation of the labour market

reforms. The paper intends to discuss the instruments developed by the European Union and the national governments to make the national labour markets more efficient and competitive, and hence, to eliminate the

underlying reasons of the crisis. For this purpose, it examines the labour market reform processes in the economies more intensely exposed to the Eurozone crisis, namely PIIGS - Portugal, Italy, Ireland, Greece and Spain. The paper scrutinises the intensity of the protest movements in PIIGS during the implementation of the labour market reforms in the post-2008 period. It outlines the achievements as well as the failures of these struggles. It argues that the severity of the crisis in a specific country has been in a dialectical relationship with the

timing, scope and effect of the reforms and also with the extent of the resistance movements. Within this context, the paper questions the prospects for an organised, unified and successful protest movement all over Europe. It concludes that the economic crisis has the potential to be turned into an opportunity for an organised struggle against the recovery policies and the labour market reforms, and for creating an alternative economic and political strategy.

## A Little Differently: the Reality of an Alternative Finance

**Arianna Lovera**, Ecole des Hautes Etudes en Sciences Sociales (Paris, France)/Fondazione Collegio San Carlo (Modena, Italy) | [arianna.lovera@gmail.com](mailto:arianna.lovera@gmail.com)

While making reference to ongoing debates in the fields of sociology and economics which critique capitalism and propose practically viable alternatives, I intend to describe and analyze the social organization of the activity of alternative finance, using examples from Italy and France. In particular, I will examine practices I observed in three organizations (Banca Etica and MAG6 in Italy, La Nef in France) dedicated to the construction of "another kind of finance", implying thus an aspiration for a type of finance which tries to be different from the current "speculative finance". I will analyze credit practices put in place by these organizations focusing both on the criteria adopted for loan granting, and on the difficulties these banks and financial companies face in finding a balance between solidarity principles and market constraints. Using ethnographic techniques, I was able to

observe the daily work of employees at Banca Etica, MAG6, and La Nef. I will carry out a qualitative analysis supported by data such as annual reports and the websites of these banks and cooperatives, my field notes, a few recordings of meetings, and written communication between the actors involved in these organizations, specifically emails and newsletters. Moreover, I was able to conduct in-depth interviews with employees and voluntary members. The aim of my paper is to stress the multiplicity and heterogeneity of the financial field, whose capitalist aspect is not only challenged by the various protest movements raising throughout the world but also by some banks and financial companies which strive to act in the banking sector and, at the same time, to found their activity on solidarity ethics.

## Financial Crises, Public Economy and Local Currencies.

**Maurizio Ruzzene**, Associazione per la Decrescita | [ruzzene@gmail.com](mailto:ruzzene@gmail.com)

The current financial crises involve the values of economic growth and its monetary institutions from many points of view, requiring widespread institutional changes. This presentation will mainly focus on the structural

problems that arise with financing public economies and activities geared to the "care" of human and natural resources (briefly: Public Economies and Care Activities, PE&CA). For many reasons, PE&CA cannot systematically

grow in productivity as required by the growth logic. This creates difficulties for capitalist economic growth, but also for the development of PE&CA. Interest rates, rents and profits in financing PE&CA increase the cost of their services without improving productivity and quality, indeed often making them worse. PE&CA also face the fall in opportunities for economic growth and the burden of high interest rates: they have to choose between growing indebtedness, reducing the volume of activities, or pursuing increased productivity by exploiting every available resource. These issues call for new sources of funding for

PE&CA, more appropriate for sustainable socio-economic development. I consider two main hypotheses, in line with the growing importance of environmental assets and individual labour resources, and with growing opportunities for tax evasion offered by neo-liberal institutions: a) a shift in tax burden from wages and salaries to ownership and use of environmental resources; b) the establishment of local currency as mutual credit systems, without interest, based on time units and managed electronically by local communities, which can be united in a global cooperative network.

## 02RN06 - Critical Theories of Political Economy and Crisis

Chair(s): Monica Clua-Losada (Universitet Pompeu Fabra)

### Considerations on the Relevance of Political Crisis Theories

Roland Atzmüller, JKU, Johannes Kepler University, Linz | [roland.atzmueller@jku.at](mailto:roland.atzmueller@jku.at)

The paper will try to assess the relevance of the so called political/state theoretical crisis theories [O'Connor 1987] which were developed by people like Nicos Poulantzas (2008), Claus Offe (1973) and Jürgen Habermas (1972) in the wake of the crisis of Fordism, for a deeper understanding of the current crisis of capitalism/finance dominated accumulation. These approaches, which rested on the assumption that the accumulation process had become inextricable intertwined with political and administrative activities, tried to understand the role of the state as a crucial factor in the crisis of (fordist) capitalism. This not only, because the interventionist state of Fordism tried to implement a range of measures to manage the crisis but even more so because it had appropriated at least certain

functions of the crisis. Thus, the question will be raised whether these approaches could be actualized to deepen the critical understanding of the current crisis. Due to their state theoretical fundamentals the aforementioned theories raise the question about the connection between the crisis processes and the attempts to manage them on the one hand and the transformations of the divisions of labour and relations of production as well as the reproduction of labour power through the different arms of the welfare system on the other. By focusing on the connections between the reconfigurations of the divisions of labour and welfare to manage the crisis of Fordism the paper will try to assess current dominant strategies to tackle the crisis.

## Theorizing Financialisation through Marx's Theory of Accumulation

**Emrah Karakilic**, Goldsmith, University of London | [ekarakilic@gmail.com](mailto:ekarakilic@gmail.com)

The changing landscape of capitalism has been broadly characterized by the rise of neo-liberalism, globalisation, and financialisation and their inter-relationship and co-evolution. Among others, financialisation arises as a new denotation of contemporary capitalism which in fact has come to the fore over the past decade in the wake of the financial crisis. Indeed, there is a consensus emerging from diverse literature that the Western financial crisis, which erupted so aggressively in September of 2008, rose on the back of the process of financialisation. This presentation focuses on, firstly, how financialisation is to be grasped theoretically through Marx's theory of capitalist accumulation and bases this upon

the categories of analysis offered throughout the three volumes of Capital. In that, I will associate financialisation with unprecedented accumulation of fictitious capital (interest-bearing capital) at the expense of real accumulation. The theoretical background of process of financialisation will not only reveal its relationship to the accumulation of fictitious capital but also disclose its association with the recession of the global economy and weak/removed class-struggle. Secondly, the presentation will briefly touch upon two broadly delineated phases of neo-liberalism, where the second phase will be argued to be more overtly and extensively interventionist in order to sustain the process of financialisation.

## Social Structures of Accumulation, Competition and the Crisis of Neoliberal Capitalism

**Hubert Buch-Hansen**, Copenhagen Business School | [hb.dbp@cbs.dk](mailto:hb.dbp@cbs.dk)

**Angela Wigger**, Radboud University, Nijmegen | [a.wigger@fm.ru.nl](mailto:a.wigger@fm.ru.nl)

The social structures of accumulation (SSA) approach has become established as one of the most fruitful political economy approaches for analyzing the long-term evolution of capitalism. One of the great accomplishments of SSA scholarship is that it has brought into focus the nature of economic competition in different time periods - a frequently overlooked yet important feature for understanding the crisis-ridden nature of capitalism. However, similar to other political economy literatures,

the SSA literature has paid little attention to the role played by competition in relation to the current crisis of neoliberal capitalism. Focusing on the US context in the neoliberal era (1980 to the 2008) this paper argues that the neoliberal paradigm shift in antitrust enforcement contributed to intensify competition and that excessive competition - or overcompetition - in the real economy was an important factor in bringing about the systemic crisis of neoliberal capitalism.

## The Gentle Art of Retrodution: Critical Grounded Theory as a Method for (Cultural) Political Economy Research

**Claes A Belfrage**, University of Liverpool | [c.belfrage@liv.ac.uk](mailto:c.belfrage@liv.ac.uk)

**Felix Hauf**, Goethe University Frankfurt | [hauf@soz.uni-frankfurt.de](mailto:hauf@soz.uni-frankfurt.de)

Critical analyses of crisis and change require critical methods. Cultural Political Economy (CPE) is an emerging paradigm within critical political economy aiming at analysing the interplay of material and semiotic dimensions of the evolution of “economic imaginaries” (Jessop/Sum). CPE embraces Critical Discourse Analysis (CDA) as its preferred method of operationalisation. The problem with this method, however, is that it cannot deliver the insights sought by CPE, because CDA tends to treat discourses as agentless circulations of signs and symbols, whereas CPE conceives of them as specific imaginaries of specific subjects, embedded and enacted within specific strategies, projects and practices. CDA is, thus, ill-suited to be CPE’s method of choice for analysing the “messiness” of semiosis as the social production of meaning within everyday life. This paper argues for a distinct

Critical Grounded Theory (CGT) better suited to CPE research, affording the strengths of the analytical tools of grounded theory without bracketing the critical-theoretical insights of CPE. CGT, like CPE, is rooted in critical realism and aims at simultaneously understanding the interpretive dimension of research objects and explaining underlying causal mechanisms. CGT research involves a retroductive movement between abstract and concrete, between theory and empiricism, in which the researcher’s ethnographic immersion into the field constitutes a central moment. The paper demonstrates the process of CGT research through two different research projects. The first is a study of the Decent Work discourse exemplified through a case study of Indonesia. The second is work on competing recovery projects from the Icelandic financial crash.

## 03RN06 - The Eurozone Crisis in Southern Europe

Chair(s): Johannes Jäger (Economics University of Applied Sciences - BFI Vienna)

### Policy without Politics? Domestic Agendas, Market Pressure and "Informal but Tough" Economic Conditionality in the Italian Labor Market Reform

Stefano Sacchi, University of Milan & Collegio Carlo Alberto, Torino | [stefano.sacchi@unimi.it](mailto:stefano.sacchi@unimi.it)

Matteo Jessoula, University of Milan | [matteo.jessoula@unimi.it](mailto:matteo.jessoula@unimi.it)

A lot can be learned about formally autonomous domestic policymaking in a highly integrated system such as the Eurozone from the study of recent developments in Italian labor policy and politics. The installation of a non-partisan government led by Mario Monti in late 2011, grudgingly supported by a vast majority in Parliament glued by the fear of economic catastrophe, paved the way for a wave of structural reforms, including a wide-ranging labor market reform passed in July 2012. It breaks away with a tradition of reforms at the margin, to reduce EPL for open-ended workers, a move long advocated by international organizations such as the OECD

and EU institutions, alongside the international business community. This paper aims to trace the policymaking process of the reform, reconstructing the various stages it went through, the interest-based coalitions that mobilized to support its various parts or to advocate changes, the way in which interests defeated in the negotiation stage tried, failed or succeeded to have their way in the parliamentary stage, the struggles occurring between the government and its reluctant majority, and the spillover effects from previous reforms, notably the pension reform passed in 2011. All this in the context of a new policy style by the Monti government, which

forced decisions in the shadow of hierarchy and even took unilateral action, pursuing its policy recipes under the legitimacy provided by the international actors and the sense of urgency stemming from the sovereign debt crisis. At the same time, the paper aims at providing evidence of the various facets of economic conditionality within the Eurozone, including a variant that, although not formalized in memoranda of understanding,

still banks on (financial) market discipline to bring about its effects. The Italian labor market reform makes an unparalleled venue to cast light on the role played by interest-based coalitions, economic ideas, state bureaucracies and international actors in domestic emergency policymaking, and more in general on the curbing of democratic politics in hard times.

## Performing Crisis on the European Periphery: the Case of Portugal

Jose Borges Reis, Goldsmiths, University of London | [sop01jr@gold.ac.uk](mailto:sop01jr@gold.ac.uk)

Crisis is a pervasive notion at the current historical juncture. With the unfolding of the post-2007 real-estate-bubble crisis, afterwards credit-crash crisis, lately sovereign-debt crisis, it has seemingly returned to forefront of intellectual debate. Epistemologically, the longstanding hegemony of neoclassical economics in explaining “the economy” is being challenged, not only by rival strands of heterodox economics, but by other social sciences such as sociology or anthropology. The notion of the performativity of economics, posited by social studies of finance (MacKenzie, Muniesa), raises interesting possibilities for better understanding the social genesis of crises.

This communication draws an on-going PhD research aimed at understanding how ideas of economic crisis are created (crisis-knowledge), how they shape the political-economic responses devised to counter them (crisis-politics), and what factors affect these processes (class, national identities, political identities, economic trajectories, religious traditions etc.). We will focus on the case of Portugal, presenting an initial account of how discourses of crisis are created in the public sphere, and enquiring onto how certain discourses, regardless of (and in fact against) their conformance to empirical evidence, tend to become hegemonic.

## Financialisation of the State and Public Interest: The Case of European Fiscal Compact and Greek Default in 2012

Ali R. Güngen, Ondokuz Mayıs University, Samsun | [aliriza.gungen@omu.edu.tr](mailto:aliriza.gungen@omu.edu.tr)

Nation states not only socialised the losses of the financial sector as policy responses to the 2007-2009 crisis but also strived to insulate the policy making procedures from democratic control. Financialisation of the state, in neoliberal era, is based on the identification of public interest with the interests of domestic and foreign financial capital. This process can be understood by, among other things, an analysis of debt restructuring and refurbished fiscal rules. We are passing through a period in

which the consolidation of the legal and political framework for the exchange of government debt instruments, symbolising the claims on the future revenues of the states, requires creeping authoritarianism and technocratic intervention under the banner of market rule. The paper will feed upon a political economy framework and suggest that unfettered financial markets are obstacles against further democratisation. The European Fiscal Compact and the Greek default in 2012

will be analysed for explicating that the public interest is being redefined against the background of debt crisis on the one hand and a refurbished straitjacket known as rules-based fiscal policy is imposed upon governments on the other. By refraining from

any attempt to regulate financial markets, the Eurozone governments contribute to the use of public debt as a discipline tool and the reclaiming of public interest by financial capital.

## 04RN06 - Crises and Continuities in Neoliberalism

Chair(s): Nagore Calvo Mendizabal (King's College, London)

### Crises and Continuities: Beyond or Within Neoliberalism?

Pelin Akkaya, VU University, Amsterdam | [p.akkaya@vu.nl](mailto:p.akkaya@vu.nl)

The global financial crisis of 2008 raised the urgent concern about the future of neoliberalism. The deprivation of consent within general public, as seen with the mass social movements after the crisis; and the declining legitimacy of the financial system in general have signalled the end of neoliberalism and the possibilities for change. Furthermore, the erosion of economic power of crisis-hit countries has shifted the attention to emerging market economies, which would mark the beginning of a new 'multipolar world'. However, after nearly five years from the financial crisis, the change has been limited and also not in the direction that would bring the end of the neoliberal system or the

beginning of a new world order. The regulatory initiatives taken so far and states' responses to the financial crisis imply the continuities in the neoliberal regime. Thus the research question of this paper is as follows: What makes the survival of neoliberal system and what could bring its end? The answer lies on the conceptualisation of neoliberalism as a 'social project' and as taking its roots from the long history of class formation and capital accumulation; and on the analysis of the role of state in this structure. Therefore, based on the historical materialist analysis of neoliberal (re)structuring, my final argument is that the death of neoliberal world order is unlikely in the near future.

### Escaping from the Malestrom: Crisis of the Labor Movement in Turkey during the Privatization Process

Cemil Boyraz, Istanbul Bilgi University | [cboyraz@bilgi.edu.tr](mailto:cboyraz@bilgi.edu.tr)

The crisis of the left and labor unions in Turkey with the 1980s and dilemmas in the era of reconfiguration of the state with the internationalization of capitalism and execution of neoliberal policies led to a fertile environment for nation-based alternative

formulations to get rid of the maelstrom stemming from such processes. Similar to other country cases, in Turkey not only leftist political parties and intellectuals but also workers and labor unions supported such formulations and perceived the process as

injected from abroad, rather than considering internal elements. Against such a hegemonic project, the reactions of labor unions and certain leftist organizations and intellectuals have taken the form of “defending the nation-state”. In such terms, privatizations was merely concerned as “foreignization”. As a global trend not only particular to the Turkish case, for many Marxist intellectuals and labor movement actors, such a nationalist approach could still be instrumental in the struggle against the effects of neoliberal globalization. Therefore, this paper argues, one of the most important source of the crisis within the labor

movement at all levels is that the tendencies toward capitalist crisis manifest themselves unevenly across the world economy that creates an opening for ‘nationalist’ explanations of economic downturn. Within these considerations, as part of the dissertation of the author, quantitative and qualitative results of the field research conducted in 2009-2011, with a focus on five former state economic enterprises in Turkey subjected to privatizations will be presented and sources of the crisis of the left and labor movement in global and national levels will be discussed.

## **Perverted by Language: British Political Discourses of Fairness, Opportunity and Security in the Midst of Financial Crisis**

Daniel Taylor, Roehampton University | [taylord2@roehampton.ac.uk](mailto:taylord2@roehampton.ac.uk)

This paper analyses the role of communications in recent British political discourses in order to: firstly locate language as a central device of neoliberal government; secondly, explore how characteristics of this language demonstrate strategies of neoliberal government; and thirdly, how uses of repetition and evacuation of semantic meaning in political discourses demonstrate communication strategies of neoliberalism. This occurs in an increasingly libertarian and positive-framed phraseology, which this paper analyses using speeches from David Cameron, Tony Blair, and two government reports: be it in the near schizoid-repetition of ‘pure and simple’ or ‘fairness’ by Cameron; or ‘new’ or ‘modernising’ by Blair. Communication is used to conceal radically neoliberal interventions, such as cuts to welfare, economically-motivated military operations, in a language of

fairness, security, opportunity and common-sense. This Political Class pitches itself as radical against the establishment, offering a new kind of freedom from bureaucracy, at the same time that its measures fundamentally intervene into social life. Castells describes this as the permeation of media into politics, where ‘Leadership is personalized, and image-making is power-making’. Where PR expenditure and special advisers increasingly replace the civil service, judiciary and Parliament in decision-making, what are the effects on civic society? The case of the UK is used to argue that communication has become central to managing the damage of the financial crisis, not in the traditional sense of propaganda as an aggressively biased assertion of governmental veracity, but a particular assertion and repetition of deceptively-positive terminology.

## **Failure of Deception: Governmentality and Oppression in the Face of Crisis**

Martin Steinlechner, University of Innsbruck | [martin.steinlechner@student.uibk.ac.at](mailto:martin.steinlechner@student.uibk.ac.at)

From a western perspective the early 21st century seems to indicate an increase in processes of destabilization: long time

conflicts being overlaid by the immediacy of newly disputes, zooming in on everyday lifes. In this context different protests – towards

financial markets in New York City and austerity in Athens as well as towards working conditions in Zengcheng and food prices in Delhi – can be discussed as a variety of forms, connected in their opposition to continuous attempts of re-shaping peoples lives. The impetus of these protests therefore must be interpreted as a reaction to the penetrative demolition of once coherent meanings in everyday life and the disruption of stability and validity in it's foreseen course. Or from a critical perspective: as a reaction to the destabilizing context of deception and it's further consequences towards disillusion in a fake reality. In this situation only the states' power of oppression seems to be capable of ensuring social harmony – in greece just as in china.

This focus on the states' disciplinating force in the context of a fake reality in crisis suggests a recourse on Foucaults techniques of power as well as on Adornos assumption of Kulturindustrie. Crisis then inevitably appears as a crisis of governance and any increase in technologies of oppression, as observed during protests, not only refers to the set of techniques as a totality but furthermore to their particular work mode in view of destabilization. Based on Foucauldian governmentality, the paper therefore aims to outline a conceptional approach, that focuses on the origins and effects of failing technologies from a critical perspective, decomposing the mechanics of power in the moment of crisis.

## 05RN06 - Authoritarianism and Crisis

Chair(s): Angela Wigger (Radboud University, Nijmegen)

### The Rise of Authoritarian Neoliberalism

Ian Bruff, University of Manchester | [ianbruff@gmail.com](mailto:ianbruff@gmail.com)

This article returns to Marxist commentaries during an earlier period characterized by profound contradictions and conflict – especially the writings of Nicos Poulantzas and Stuart Hall on authoritarian statism/populism in the late 1970s and 1980s – in order to make sense of the present era. I argue that we are witnessing the rise of authoritarian neoliberalism, which is rooted in the reconfiguring of the state into a less democratic entity through the use of constitutional and legal changes that seek to

insulate it from social and political conflict. This apparent strengthening of the state simultaneously entails its growing fragility, for it is becoming an increasingly direct target of a range of popular struggles, demands and discontent by way of the pressures emanating from this process. The main reference point is a notable casualty of the post-2007 crisis, European social democracy, but the implications for radical politics more broadly are also considered.

### 'Clumsy Politicians' vs. 'Intelligent Technocratic Design'? Crisis, Reform and the Meaning of Politics in Southern Europe

Sumercan Bozkurt, Middle East Technical University | [sbozkurt@metu.edu.tr](mailto:sbozkurt@metu.edu.tr)

Global financial crisis has served new opportunities for overcoming 'procrastination

on unpopular reforms' i.e. for overcoming the 'reluctance to change' in many parts of the globe. There have been marked variations in terms of how and to what extent the reforms envisaged could be implemented. Their impacts, contentions they have engendered and the ways the reform processes have been managed politically also vary considerably. Technocratic interventions have appeared as important means of policy making in changing forms and degrees in contentious fields that have been subject to reform. This paper aims to examine the relation between reform initiation and technocratic-political crisis management strategies in Greece and Italy throughout the technocratic governments established in both countries in November

2011. These two experiences are worth examining for a better understanding of the conflict ridden reform processes, as they exemplify how democratic mechanisms can directly be curtailed in the name of policy transformation during crisis. In order to provide answers to the questions of why 'emergency saviours' were required for more hasty reform and what different roles they played in terms of neoliberal reform initiation in these two countries, the paper will attempt to examine the Greek and Italian experiences in a broader historical perspective and by taking into account the theoretical debates around concepts like 'depoliticisation', 'new constitutionalism' and 'democratic deficit'.

## **How Capitalist Crises Fuel Neoliberal Migration Policies: Securitisation, Economisation, and the Deprivation of Fundamental Rights**

**Kenneth Horvath**, Karlsruhe University of Education | [horvath@ph-karlsruhe.de](mailto:horvath@ph-karlsruhe.de)

Although interest in the political economy of migration regimes has increased over the past years, we know little about how capitalist crises affect the political regulation of migration. The proposed paper enquires into how capitalist crises play an enabling role for the establishment of new forms of governing labour mobility. Based on Foucault's analysis of liberal statecraft and Jessop's strategic-relational approach, I argue that the governing of labour migration requires sophisticated political technologies. These technologies entail the differentiated deprivation of fundamental rights and are therefore neither unproblematic nor self-evident. Establishing the necessary legal categorisations along skill levels, citizenship etc. requires a complex interplay of two political rationalities that are often conceived of as contradictory: the securitisation and the economisation of

migration. Crisis periods are conducive to the securitisation of migration and often linked to corresponding policy changes. However, these changes are always mediated by industrial relations, practices of various societal actors, and strategic selectivities of the concrete state order. Most importantly, measures introduced under securitised conditions can, once established, be invested in utilitarian, economised "pro-migration" policies. I illustrate my argument using the Austrian case, comparing developments during the mid-1920s, the 1970s, and the ongoing global crisis. The paper adds to our understanding of how contradictory developments in migration regimes are structurally anchored in the political economy of capitalist nation-states. It ends by pointing to implications for effective anti-racist strategies.

## The Political Economy of Warlords's Democracy in Afghanistan

Weeda Mehran, University of Cambridge | [wm249@cam.ac.uk](mailto:wm249@cam.ac.uk)

The international actors who facilitated Afghanistan's transition from the Taliban regime gambled on the belief that warlords would give up their private interests in return for a stake in the political arena. The logic of the democratic reconstruction paradigm that has become the key mechanism for re-building post-conflict and failed states is that democracy is the best guarantee for the restoration of legitimate power and the transparent control of state resources. Democratization implies creating an "open access order" both politically and economically where social order is obtained through competition rather than only rent seeking. The democratic reconstruction paradigm is contradictory to the very nature of a 'warlord's peace' and warlord economy. Given that

warlords develop and expand their power and wealth within a limited access order, they are unlikely to relinquish their power and revenues in favour of an open access order. This research is based on 110 in-depth interviews with local political and social elites, associates of warlords, civil society organizations, government officials and local and national businessmen in five cities in Afghanistan in 2012. This paper argues that during transition to democracy, the light foot-print approach and fighting terrorism in tandem with building a democracy inevitably led to compromises with warlords that led to a problematic form of power sharing and a limited access order wherein access to valuable political and economic functions are limited to warlords as means to generate rent.

## 06RN06 - Critical Approaches to the European Union

### Towards a Critical Political Economy of European Integration – a Shorter View

Laura Horn, University of Roskilde | [lhorn@ruc.dk](mailto:lhorn@ruc.dk)

In the current context of multiple crises within the broader dynamics of European integration, heterodox or critical political economy approaches have made a crucial contribution to understanding the historical and transnational dimensions of e.g. the Eurozone crisis and uneven development within the EU, as well as the fractured nature of neoliberal hegemony and the emergence of authoritarian constitutionalism. Within the broader field of EU Studies, however, these approaches still tend to be marginalised. This is all the more apparent when looking at higher education programmes and curricula focusing on EU integration. While 'critical' perspectives might

be included in theory overviews, the actual narratives of how the political economy of the EU has come about, how it works and, most importantly, what its social purpose is, remains firmly rooted within the 'mainstream' narrative of EU integration. This paper presents a first outline of an easily accessible, introductory text on the political economy of Europe and the EU from a critical political economy outline. The objective is to present an integrated outline of several key dimensions of this political economy, with an underlying interest in tracing the developments that have lead from the (re)launch of the Single Market to the current crisis.

## Dependency, Development and Crisis in Europe

**Johannes Jäger**, University of Applied Sciences BFI, Vienna | [johannes.jaeger@fh-vie.ac.at](mailto:johannes.jaeger@fh-vie.ac.at)

**Joachim Becker**, University of Economics and Business, Vienna | [joachim.becker@wu.ac.at](mailto:joachim.becker@wu.ac.at)

**Rudy Weissenbacher**, University of Economics and Business, Vienna | [rweissen@wu.ac.at](mailto:rweissen@wu.ac.at)

Building on insights from dependency theory and based on a regulationist approach, the paper starts with an analysis of the structural causes of the crisis in Europe. A particular focus is on the dynamics of asymmetrically linked uneven processes of development which were supported by the specific configuration of the European Union in general and the Eurozone in particular. This is complemented by an analysis of the social and economic forces that drive the crisis management. Short-term perspectives of dominant financial and export-oriented fractions of German productive capital have been dominating anti-

crisis policies. It is concluded that the anti-crisis policies tend to re-install pre-crisis economic structures. A political and economically more coherent approach to a reconfiguration of European integration is still missing. As a consequence we conclude that there is a deepening of the asymmetries between the centre and the periphery in Europe. Our findings suggest that a higher degree of autonomy of peripheral European countries is crucial for their economic development. Furthermore, partial disintegration may be a potential future outcome of the crisis.

## Centralizing Power in the Lisbon Treaty Era: The Transformation of European Investment Regulation

**Bart-Jaap Verbeek**, Radboud University, Nijmegen | [j.verbeek@fm.ru.nl](mailto:j.verbeek@fm.ru.nl)

The European Union (EU) has become the main source and destination of foreign investment worldwide in the past two decades. These investments are increasingly being regulated through international investment agreements (IIAs), most notably Bilateral Investment Treaties (BITs) and investment chapters in Free Trade Agreements (FTAs). Strong investment protection providing legal certainty to European investors abroad has been perceived by the European Commission as one of the necessary conditions for enhancing the EU's competitiveness. Since the adoption of the Treaty of Lisbon in 2009, the Commission's Directorate General for Trade enjoys full and exclusive competencies to formulate and negotiate new EU investment protection treaties. Currently, a new investment

framework for future EU investment treaties is being formulated. EU investment policy, however, only materialized in the wake of the re-launch of European integration since the mid 1980s. Departing from a critical political economy perspective, the paper examines the transformation of European investment regulation and seeks to unravel the political processes that have given shape to its content, form and scope. The objective is thereby to explain the political decisions that have led to further European integration in the field of investment regulation. Importantly, the paper embeds these decisions into the broader context of transnationalized production, processes of financialization and a rapidly changing global economic order.

## 07RN06 - The Political Economy of uneven Development

Chair(s): Jose Borges Reis (Goldsmiths University of London)

### Two Sides of the Coin: a Critical Analysis of Brazilian Government Responses to the Crisis.

Thiago O. L. Matioli, Universidade de São Paulo , USP | [matiollithi@hotmail.com](mailto:matiollithi@hotmail.com)

This paper will bring reflections about the crisis in Brazil, particularly in Rio de Janeiro. It is presented in two moments. The first one brings a analysis about the reaction from Brazilian government to the crisis, basically: great interventions in infrastructure, the house program “Minha Casa, Minha Vida”, the credit and popular consumption and the growth in the rates of formal employments, but those with low qualification and earnings, this analysis is made from governments data about this policies and from a research about public policies; but the effects of this reactions must be analyzed too, as the increase in the inequalities and rent concentration (banks is breaking records in this profit year by year), the merchant face of the Federal Government interventions feed by the capital interests, and the doubts about the keeping of an economic

growth sustained, basically, by popular consumption and low income employs. The second moment, with data collected in fieldwork, ethnography and interviews, at the Complexo do Alemão, a large slum from Rio de Janeiro, the focus will be on the militarization of urban govern (or control), associated with the great sporting events (World Cup '14 and Olympic Games '16), that “pacifies” some poor territories in this city (but only those located at the heart of wealth in the city) and, in a “war” language (against drugs, or merely against the evil), turns them, this spaces, in capital expansion and urban renewal, and redevelopment, frontiers; but that's not all, this processes also brings, necessarily, the conflict, the class struggle, so that, with the fieldwork, and the data collected, this paper will try to map the resistances to these processes.

### Winners of the Crisis? Unequal Urban Development in Berlin and Ankara

Katharina Bodirsky, Middle East Technical University | [bodirsky@metu.edu.tr](mailto:bodirsky@metu.edu.tr)

This paper takes its starting point from David Harvey's (2012) theses on the role of cities both in the formation of economic-financial crises and in the contestation of the way they are politically managed. Through this lens, it looks at two sites in states that are often seen as profiting from or unaffected by the current crisis in Europe: Berlin/Germany on the one hand, and Ankara/Turkey on the other hand. In the case of Berlin, the crisis has ratcheted up existing processes of gentrification, with international speculators seeking a safe haven for their money by investing in low-income, multicultural neighborhoods of “creative”

potential, threatening displacement of existing residents. In the case of Ankara, recent years have brought a veritable construction boom of both state and private investment in housing and other city utilities, often displacing gecekondu residents, begging the question when and whom a coming crash might hit. This allows us, once more, to ask the question of who is benefiting, who is losing out in the crisis – outside the indebted European countries that have been in the focus of analyses of dispossession. The paper will examine the underlying economic and political dynamics and social effects of urban development in

these two cases, as well as the local reactions against them. It will pay particular attention to the ways in which “entitlement” to city space is framed through a language of class and culture by political elites, how this is enmeshed

in policies that seek to render place attractive to capital, and how alternative visions of [entitlement to/in] place are put forth by residents and movements in the city.

## Varieties of Crisis: Regionalism, Nationalism and the Embeddedness of the Global Financial Crisis in Spain.

Nagore Calvo Mendizabal , King's College, London | [nagore.calvo@kcl.ac.uk](mailto:nagore.calvo@kcl.ac.uk)

Ivaylo Vassilev, University of Manchester | [ivaylo.vassilev@manchester.ac.uk](mailto:ivaylo.vassilev@manchester.ac.uk)

While the financial crisis since 2007 has been truly global, it has unfolded differently across Europe and has been experienced through different types and sequences of crisis. In the case of Spain the financial crisis followed a progression that begun with the housing bubble, it was followed by the collapsed of the banking system, specifically the savings banks, and more recently, has extended to the collapse of regional authorities. . Indeed, one of the specificities of Spain is the high level of regional autonomy and the close links between building societies and local authorities. In this paper we are going to focus on Basque Country and Catalonia and will examine the inter-dependencies between the political, economic and identity processes and the diverging experiences, policy priorities, and identity

politics in the two regions of Spain. We will argue that contrary to what might have been expected given the end of ETA's political violence, the integration of its political wing into the democratic political process, and the history of confrontation between the Basque and the Spanish political elites, it would be Basque country where the experience of the economic crisis would be more likely to lead to an increase in secessionist aspirations and diverging political and economic strategies. However, and contrary to such expectations, it is Catalonia where economic crisis has also been experienced as a crisis of Spanish federalism, while both Catalonia and Basque country have been equally fervent supporters of austerity measures in Spain.

## 08RN06 - Critiquing Dominant Discourses and Ideologies

Chair(s): Amelie Kutter (University of Lancaster)

### Co-Opting the Discourse of Crisis: Re-Assessing Market Failure in Public Interest News

Justin Schlosberg, Birkbeck, University of London | [j.schlosberg@bbk.ac.uk](mailto:j.schlosberg@bbk.ac.uk)

The very notion of crisis in respect of public interest journalism has long permeated elite discourses. Its manifestation in terms of a broken business model has been well

documented across Europe, particularly in local and investigative news. Its effects in turn on news content and operational journalism have been shown to be of endemic proportions

(Davies 2008). In economic parlance, the problem amounts to market failure and in particular, the structural decline in the revenues of traditional news business models. The idea of the internet as a disruptive force has been a prominent theme in both business and academic literature over the last decade. Much of this literature draws on both the discourse of 'threat' and 'opportunity' in relation to the internet's impact on markets and industry. What these often opposing accounts share in common is a conception of the internet as wreaking havoc upon millennial capitalism, ushering in a new age of thriving

competitive markets and/or new forms of monopoly control. But we do not need to look into the annals of history to see that market failure in public interest news is not just about technology and recession. This paper will review recent research which suggests that it is at least partly, and paradoxically, the result of the marketisation of news itself. In particular, decades of unchecked concentration has left centralised news organisations unresponsive to consumer demand and less adapted to exploit new opportunities for public interest journalism.

## The Crisis of Corporate Social Responsibility – a Discursive Perspective

Nora Lohmeyer, FU Berlin | [nora.lohmeyer@fu-berlin.de](mailto:nora.lohmeyer@fu-berlin.de)

The capitalist crisis can be interpreted as a crisis of the economic logic. For many decades now, the idea of corporate social responsibility (CSR) has been discussed as one way of counteracting the negative consequences of this very logic in capitalist markets. However, looking at the historical development of this idea, it becomes apparent that over the last years discussions of CSR have increasingly adopted arguments that reinforced the very same logic it attempted to counterbalance in the first place. Instead of providing an alternative to the neo-liberalistic rationale, the idea of CSR has been coopted by it or, even worse, serves to reinforce it. As CSR stands for an idea that is constantly shaped and reformulated, a theory is called for, that can account for the constant communicative struggles that lie behind the transformation of CSR and that can shed light on its paradoxical

historic development. As a so-called post-Marxist perspective, the discourse theory of Ernesto Laclau and Chantal Mouffe provides a powerful lens for understanding the communicative strategies that over time set the market-based logic of CSR into place and led to its discursive closure. By analyzing the corporate discourse on social responsibility in Germany between 1950 and 2012 this study aims to find a possible answer to the question: How did the economic logic colonize the CSR discourse? The case of Germany seems especially interesting for this endeavor. As the country's economic history is strongly tied to concepts like the social market economy, co-determination and stakeholder orientation, the drift of the CSR discourse seems even more surprising and demonstrates the discursive power of the applied communicative strategies.

## Who Can See What we Don't See? On the Subject of the Critique of Ideology

Sebastian Bandelin, Philipps University, Marburg | [Bandelin@students.uni-marburg.de](mailto:Bandelin@students.uni-marburg.de)

Who can see what we don't see? On the subject of the critique of ideology The critique of ideology was often criticised because it seems to imply a problematic gap between the

perspective of the critical sociologist and that of the actor. On the other hand the opposing view of an interpretative understanding of critique fails to explain forms of naturalisations

and seems to be bound to a given normative consensus. The following article tries to show that the conception of the critique of ideology developed by Marx in his writings on the critique of political economy can avoid both problems insofar as this conception can be reconstructed as an instrument to explain the practical contradictions with which the actors are confronted in capitalist societies. It illuminates how the norms of equality and liberty which first seem to be realized in the practice of exchange produce by the means of this realization itself their own reversal, their transition to coercion and inequality. On the

background of this reversal it becomes clear that the previously existing norms have to be reformulated. In consequence the guiding normative criteria of critique can not be determined from the outset or in advance, they must instead be developed in this reconstruction of the existing practical contradictions. The way in which these practical contradictions are explained shows also that the structures which first seemed to be natural preconditions for the actors are in fact the product of their actions. Insofar it gives a reason and an explanation of the possibility to overcome the existing social structures.

## The Crisis as an Opportunity for Change

Aleksander Zielinski, UPD Waldau | [milosz13@gmx.ch](mailto:milosz13@gmx.ch)

The current global financial and economic crisis is probably one of the main reasons for the biggest social protest movements since the late 1960s. Using a variety of „labels“ like „the 99%“, „Occupy“ or „los Indignos“ hundreds of thousands of people all over the world have been demonstrating against the privatisation of bank losses, the rising debt and unemployment levels as well as the resulting austerity measures. The mainstream media often claim that these movements don't have any ideas as to what should be done differently. While according to some social theoreticians, e.g. Niklas Luhmann, this is not necessary because the function of a protest movement is to voice disagreement with the status quo without the obligation to voice alternatives, we want to suggest that the presentation in the mainstream media is biased and that it is indeed possible to elicit a number of demands

that these protest movements share. The aim of my talk is to present the results of a content analysis of a series of relevant publications from the last three years. The results will be organized into the following categories: what are the causes of the crisis and who profits from it; what responses are necessary in the political field and finally: how can the economical and financial system be changed to overcome the crisis. It can be expected that the results differ from the analysis of the crisis as presented in mainstream media and that at least some of the remedies might be considered utopian from the point of view of today's „common sense“. Nevertheless they should be acknowledged and integrated into the broader discourse because otherwise the functioning of our liberal pluralistic democratic system is put in question.

## RN07 - Sociology of Culture

### a01RN07 - Cultures of Crisis

Chair(s): Hubert Knoblauch (Technische Universität Berlin)

#### The Changing Landscape of the Public Intellectual

Patrick J.N. Baert, University of Cambridge | [pjnb100@cam.ac.uk](mailto:pjnb100@cam.ac.uk)

Public intellectuals tend to operate at the intersection between culture and politics. In this paper we argue that over the last couple of decades the authority and status of public intellectuals has radically altered. We argue that the traditional role of the public intellectual - as an authoritative figure able to speak about a wide range of issues without being a proper expert - is no longer feasible

partly because of the professionalisation and institutionalisation of the social sciences. However, even the notion of public intellectual as expert is no longer as tenable as it used to be, partly due to the higher education level of the larger public and the rise of the new social media. We demonstrate the emergence of a new dialogical form of public engagement and discuss its possible political consequences.

#### Accounting for the Apocalypse: Constructions of Epidemic Space through the Deployment of Risk Flows.

Joost van Loon, Catholic University of Eichstätt-Ingolstadt | [joost.vanloon@ku.de](mailto:joost.vanloon@ku.de)

Crisis culture emerges as a discourse exactly at the point where it becomes possible to add up a range of divergent issues for which no apparent solutions are immediately present-at-hand. It is this "adding up" that interests us here. What kind of currency enables this juxtaposing? In earlier work on risk, I (van Loon, 2002) deployed the concept of risk flow to explain how specific risks could induce other, previously non-related, risks and create so called "runaway events" of epidemic - if not apocalyptic - proportions. What kind of matter is the matter of concern of risk flows? What kinds of accounts are kept to constitute and keep track of such risk flows? What are these accounts enabling? One of the questions one might ask here is: To what extent the notion of crisis culture, as being accounted for via risk flows, has been infused by apocalyptic sensibilities; thus inducing a connotation with

(quasi-) religious experiences? I want to contrast the sense of a hot apocalypse of crisis culture with the cool apocalypse of resignation in relation to public discourses about epidemic space. Whereas epidemiologists are still operating with discursive modalities that constitute an acute sense of risk as a dangerous boundary of social ordering in terms of the notion of a risk society, they are facing popular cultural challenges of indifference and carelessness that seem to have embraced the resignation of the blasé society. This is not the crisis against which the heated, passionate, missionary critical-apocalyptic work of sociology (as an art of exposure and revelation) can set itself up against as an antithesis, but a crisis which this sociology has itself helped to account for and realize.

## Critique and Social Change

Michael J. Hutter, Social Science Research Center, Berlin | [michael.hutter@wzb.eu](mailto:michael.hutter@wzb.eu)

The notion of critique has gone through a remarkable transformation during the past 50 years. It still implies a valuation of social processes, based on a set of assumed principles, be they moral, aesthetic or scientific. But the process of valuation itself has come under scrutiny. The function of critique in projects of change and innovation is no longer constrained to groups of specialists,

but is shared by all the participants of the project. The paper intends to sketch the trajectory of critique from Adorno's critical theory to Boltanski's social critique, Karpik's devices of judgment and Latour's controversies. It investigates the conditions of critique in contemporary projects of innovation, within and without the commercial sphere.

## The Culture of Financial Crisis as the Systemic Abnegation of Accountability

Mark D. Jacobs, George Mason University | [mjacobs@gmu.edu](mailto:mjacobs@gmu.edu)

Financial crises are cultural crises as well. This paper will explore the system of "no-fault" that underlies the current financial crisis. Although millions of people around the globe have lost their jobs, their savings, and/or their homes— and although indeed entire nations have teetered on the brink of collapse— the nature and causes of the financial crisis remain unacknowledged. As opposed to the Great Depression of 1929, the current crisis has failed to produce a particular ritual (of the sort Durkheim claimed was necessary to restore communal solidarity in response to

catastrophes), as exemplified by the Pecora Hearings of the early 1930s in the US, which clearly exposed to the public the "web of corruption" at the heart of financial collapse. What explains the failure to appoint (much less enforce) accountability this time around? What does this say about credit, risk and the multiple senses of "rationalization" in late modernity? What are the social consequences of this "culture of crisis"? Among other methods, this inquiry will draw on media coverage and transcripts and reports of government investigations to examine these questions.

## b01RN07 - Cultures of Crisis (2)

Chair(s): Motti Regev (Open University of Israel)

## Theatres in Crisis: Reflections on Programming and Communication from Middle Size Spanish Cities

Enrique Banús, Universitat Internacional de Catalunya (UIC) | [ebanus@uic.es](mailto:ebanus@uic.es)

Alba Colombo, Universitat Oberta de Catalunya (UOC) | [acolombo@uoc.edu](mailto:acolombo@uoc.edu)

Cultural institutions generally construct, build and present their character by their

programme than by single projects or productions. Actually, throughout their

programme, institutions express their outlines and their vision of culture, selecting what it is considered essential and adequate for their audience. Nowadays, with a long term economical crisis, Spanish cultural institutions, such as theatres, are experiencing cuts in their budgets and limiting their possibilities. This paper presents a research, which relates the programme theory, strategies and facilities, with communication programme of some Spanish middle sizes city theatres, which generally have special relationships with their audiences and cities. The main contribution has to deal with the actual controversy about public theatres in crisis and their audience, relating the programme structures with theatre communication strategies. Nowadays, on Spanish middle size cities (between 150-300

thousand inhabitants), cultural institutions develop a certain specific role on the society; as social and cultural centres; as elements to identify society cultural attitudes; as well as educational centres and entertainment infrastructures. In those cities, only one theatre is offering a regular programme, so that they are decisive institutions in creating a theatre experience and in influencing via this art the culture (i.e. also the mentality) in a city. A comparison between programming strategies –based on the analysis of the documents but also on some in depth interviews- before and during the crisis will provide insights on whether the crisis is influencing the theatre landscape in terms of the look for cheaper performances but also in the content priorities.

## **The Performativity of Social-Scientific Knowledge and its Implications for a Critical Analysis of Culture**

**Timo Walter**, Institut de Hautes Etudes Internationales et du Développement | [timo.walter@graduateinstitute.ch](mailto:timo.walter@graduateinstitute.ch)

Cultural sociology has increasingly been concerned not only with the role of social-scientific knowledge in the construction of social reality, but with the socially constructed nature of such knowledge itself. Various "strong programmes" - in particular, science and technology studies - have been concerned with dissecting and disassembling the ways in which social scientific knowledge is shaped by cultural factors. Reversely, strong programmes - e.g. the social studies of finance, or the performativity of economics research programme - have been concerned with the performativity of social-scientific knowledge, and its influence in constructing social reality outside of academia. Despite the advances in both dimensions, there has been relatively little sustained methodological and epistemological reflection about the implications of this dual role of social scientific

knowledge - both sides have continued to concentrate on empirically researching only one side of the coin. Drawing on insights from sociological systems-theory, as well as the strong programme of a "cultural sociology" and problems of "indexicality" as discussed by ethnomethodology and Actor-Network Theory, this paper aims to spell out the methodological implications of the fact the dual role of social-scientific knowledge. It argues that the purpose of social scientific inquiry should not be empirical adequacy so much as generating "critically different" knowledge that enables the reconfiguration of social practice informed by scientific theory. Producing such knowledge requires much more sustained attention to the ways in which methods geared mainly towards empirical validity preclude which realities can be performed with them and which cannot.

## Transformation of traditional Russians Values in the Course of Globalization

Tatiana Kirilina, Russian State Social University | [kirilina\\_t@rambler.ru](mailto:kirilina_t@rambler.ru)

Traditional values transformation has three main phases: disintegration, bifurcation and force mobilization. The main features of the disintegration phase are doubts in values and their importance. The bifurcation phase opens different variants before the society: return to traditional values or reject them. During the third phase – the force mobilization – in social consciousness a new system of values begins to form, it is based either on traditional values or, on the contrary, on new forms and values. A similar process of traditional values transformation began in post-Soviet Russia. By the beginning of 1996 Russia had gone through the first disintegration phase. At the peak of bifurcation in 1996-1998 the social transformation was followed with active destruction of the values traditional for Russia. Today Russia is going through the phase of

forces mobilization. Is a modern Russian society able to form a system of values based on traditional values or it will go along the way of modernistic values? This question is extremely important. According to all Russia researches made by Institute of Sociology of Russian Science Academy about half of modern young respondents (47%) and every third respondent of elderly age (31%) agreed with the statement that many traditional moral norms have become obsolete. Most young people (54%), but not all of them, are sure that the main moral norms are influenced by time and are always important. Among traditional values which are respected by young Russians are; a family, friendship, love, fairness, respect to traditions, belief in God. Modernistic values are; independence, freedom-loving and enterprising.

## Economic Crisis and Market Experience: Cultures of Commerce in the Moscow Contemporary Art Galleries

Nataliya Komarova, University of Amsterdam | [n.komarova@uva.nl](mailto:n.komarova@uva.nl)

The recent economic crisis has significantly reduced art sales and prices especially at the emerging markets. Nevertheless, its impact on art market actors' agencies has not been thoroughly studied yet. Drawing on the in-depth interviews with Moscow gallerists conducted in October-January 2012-2013, this paper focuses on the effects of recession on the developing contemporary art market culture in Russia. I use Viviana Zelizer's theory to distinguish several relatively autonomous circuits of art commerce formed by the economic crisis: the pioneers of art commerce in Russia, who engaged in art market in early 1990s; the galleries, which entered the field in the first half of 2000s; and the "latecomers", who came to the market right before the economic recession and afterwards. I suggest

that the experience of market explains the diversity of understandings of the crisis and market functioning. I show that the economic crisis provokes the founders of the contemporary art market in Moscow to return to non-commercial activities typical for their early years. Additionally, in Bourdieu's terms, the crisis has become a breakdown of the existing rules established by the dominant galleries from the first circuit. Thus, it gave to the second group of galleries an opportunity to reconsider these rules and become a circuit of its own. Finally, the economic recession exists as the only "natural" context for those galleries, which entered the market during the crisis or later. So I show how the crisis forms the scope of their marketing strategies.

## Occupying Culture: New Prospects for Greek Cultural Heritage and Democracy

Despina Lalaki, New School University | [lalad335@newschool.edu](mailto:lalad335@newschool.edu)

Protests, closedowns and occupations of excavation sites, archaeological spaces and museums in the past years suggest that culture in Greece is not immune to the crisis that plagues the country. Archaeologists, guards, other employees of the Ministry of Culture, local groups and organizations fight the government over wage cuts and redundancies by disrupting one of the state's most important economic lifelines, that of tourism. In this paper I argue, however, that these forms of social mobilization do not merely constitute attempts to coerce the government in economic terms. Organized dissent at the most sacred spaces of the Greek nation's and western civilization's cultural imaginary and the manipulation of collective symbols such as that of the Acropolis, constitute symbolically subversive actions which tend to challenge established forms of

collective representation and sentiment. Picket lines, protest gatherings and occupations constitute instances of what Durkheim described as "negative rituals" which, much like taboos and prohibitions, they stress the importance of self-sacrifice prioritizing the good of the clan over individual interests. In the process these rites re-appropriate and re-define the meaning of the symbols to which they are attached and from which they draw their sanctity. I suggest that symbols of high culture are gradually transformed from sterile representations of abstract ideals about democracy, citizenship and humanism to spaces where democracy is in action, social conservatism is resisted and the government's neo-liberal project of economic exploitation is put on trial while in the process a more liberal and democratic community is constituted and empowered.

## Has Capitalism Lost its Spirit: What do Recent WVS Data Say about Work Values?

Veysel - Bozkurt, Istanbul University | [veyselbozkurt@yahoo.com](mailto:veyselbozkurt@yahoo.com)

Birol - Yeşilada, Portland State University | [yesilada@pdx.edu](mailto:yesilada@pdx.edu)

Max Weber claimed that Protestant Work Ethic was the spirit of capitalism for salvation and improved economic development in Europe. Some scholars also argued that hard work, savings, and ascetism were the "moral justification" of early industrial capitalism. During the last 40 years, sociologists, like Bell and Bauman, claimed that capitalism began to lose its puritan spirit and a new hedonist personality type emerged as the new characteristic of post-industrial/ consumer capitalism. That, in turn, begs the question

why? This paper examines social values among peoples in countries with different levels of economic development found in the World Values Survey (WVS) 2010-2011. Earlier WVS data show that work is one of the most important values (after family) held by individuals all over the world. Yet, recent data suggest that while people in countries of early phase of economic development hold high level of importance for work values, the same cannot be said for those living in post-industrial societies.

## 02\_b02JS07 - Artistic Practices and economic constraints

Chair(s): Anna Lisa Tota (Università degli Studi Roma Tre), Graciela Trajtemberg (The Academic College of Tel Aviv-Jaffo)

### Negotiating the Field of Artistic Production

Janet Chan, University of New South Wales | [J.Chan@unsw.edu.au](mailto:J.Chan@unsw.edu.au)

Creative artists operate in a field of cultural production (Bourdieu 1969) which consists of a 'domain' of knowledge and a network of cultural actors (Feldman, Ciskszentmihalyi and Garder 1994). This paper draws on a study of fine art students and practitioners in Australia to examine how artists negotiate the field of

artistic production in developing their work. It reinforces the usefulness of a context-dependent concept of creativity and discusses the variety of strategies adopted by students and practitioners to maintain their creative practice.

### Creativity Denied. On the Inconsistent Attribution of Creativity in the Artistic Field

Ivonne Kuesters, Technical University of Dortmund | [ivonne.kuesters@tu-dortmund.de](mailto:ivonne.kuesters@tu-dortmund.de)

It is the common perception that those actors in the artistic field who deal with finances are not seen as creative. Even if one person does both, art and business, they have to tread carefully in order to not to lose their general air of artistry. Like for example the designer and entrepreneur Paul Smith who, when quizzed on his allegiance, stated that he is consecutively "wearing the hat of a businessman and wearing the hat of an artist". But the idea that a businessman in the artistic field might be creative while doing business with art seems utterly impossible. This presentation will challenge this view by means of a comparison of empirical data on two kinds of working processes in the artistic field: on one hand, the drafting, organising and

financing of a concert season by music managers of orchestras and music festivals (documented in semi-structured research interviews and on program material) and, on the other hand, the creation of two abstract paintings by the artist Gerd Richter (documented in a film by Corinna Belz). This comparative analysis will establish that both types of processes match each other closely. In a further, explanatory step the presentation will then refer to the theory of social differentiation in order to show that it is exactly the inherent creativity of their practices in combination with the depiction of businessmen and managers in the arts as uncreative that is conveniently employed in favour of an economic regulation of artistic organisations.

### Beyond Arab Springs. Art, Public and Policy in a New Cultural Context.

Valerio Zanardi, University of Barcelona | [valerio\\_zanardi@yahoo.es](mailto:valerio_zanardi@yahoo.es)

Festivals, and especially theatre festivals, embody the place where different subjects, cultures, institutions and organizations build

and constitute meanings, interpretations, values, whilst in their different artistic programmes the traditional consistence and

autonomy of artistic fields melts. So, within anthropological or economic perspectives, festivals can conventionally be seen as cultural texts, or normatively assessed as the result of processes of economic investment or political governance. It is also possible to read festivals as thick and opaque proceedings of more or less collaborative negotiations between different subjects, different logics, and different gauges, which can be differently played, described and used in the public sphere. What happens when we use these kind of interpretations in totally different context as in post-revolution Tunisia? I carried out an

ethnography in the context of Dream City, a festival of arts Placed in Tunis and Sfax in Tunisia and in the context of the cultural capital 2013: Marseille. In this paper, I will show through evidencies of the fieldwork (fotos, videos etc) some relevant elements of my ethnography, in order to discuss some differences both in the abstract principles and in the use of the instruments, of cultural policy, to show the actuality of the evergreen concept of generation in relation to publics, and to illustrate the changes of the festival are shaped by several (and changing) aspects related to public sphere.

## **Suspended Creativity: Social Practice and Process of Institutionalization in the Youthful Artistic Experience**

**Marco Carniani**, Istituto per la Cultura e la Storia di Impresa, Terni | [marco.carniani@gmail.com](mailto:marco.carniani@gmail.com)

**Rosa Rinaldi**, Università degli Studi di Perugia | [rori74@libero.it](mailto:rori74@libero.it)

The paper is based on a research carried out during the last 2 years on young theatre players working within the performing arts, both at professional level and amateur level. The study was divided into 3 phases. Firstly, a questionnaire handed out to 140 people; then, 20 interviews conducted with a select group having different degrees of engagement within the artistic field; lastly, we applied collective hermeneutics (Zoll,1997), thanks to which researchers and a group of young actors and cultural event organizers produced a common reflection on social practices and embedded representations in youthful experience in the performing arts. We examined the subjects' profiles, the organizations and the context, bringing to light aspects such as the positive value attributed to self-organization and the importance of institutional recognition. Taken as a whole, the activities carried out by the

young people supports the idea that creativity, using a Melucci's concept (1994), "is not a product" but rather a form of widespread and latent experience, mainly used to cope with a biographically founded feeling of uneasiness as well as to declare a need for authenticity. In fact, performing arts play a twofold role: as an object and as a context, supplying the artistic practice with the connotation of a form of "symbolic mediation" (Crespi,1984). Hence, the experience in the performative arts becomes a field for young people to discover their own authentic selves; however, the institutionalization process and the slow inclusion in the artistic market prevent – paradoxically – the surfacing of a common recognition of their experience. Our paper aims to provide a description of this phenomenon and of its socio-economic implications.

## 02RN07 - Changing Cultures

Chair(s): Pertti Alasuutari (University of Tampere)

### Transformation of Trust Culture and Way Out of Crisis

Oxana Kozlova, University of Szczecin | [kooxana@gmail.com](mailto:kooxana@gmail.com)

The phenomenon of trust becomes more and more popular object of research. Relying on the study of the phenomenon of trust as an attribute of social activity, that was carried out at the Institute of Sociology of the University of Szczecin, we can specify not only mental characteristics of phenomenon of trust in different countries (Poland, Czech Republic, Lithuania, Russia, Ukraine), but also to raise the question about the change of the essence of trust. Inside distrust as a necessity takes shape the first of three main forms of culture of trust – low or weak. This is the forced position in the mono-vector activity (for himself) of the enterprising, risk taking businessman, based on distrust and full of readiness to let his partner down at the first opportunity. Such a “forced”, conditional trust leads to the intensive growth of material assets

of society and, at the same time, to the destabilization of both society and personality. The second form that culture of trust is taking – middle level – is the attempt to compensate the growth of mutual irresponsibility by stimulating the actions of individual as a member of the civil society - by social activism, by participation in the activity of nonprofit organizations. This type of culture of trust characterize alter-vector activity (often contradictory), leads to the emergence of “islands of trust”. At last, the third, high form of culture of trust – the culture of responsible activity – starts to take shape gradually. This form of trust is based on the deepening of the reflection of a modern man, who is ready to take part in a polyphonic social life, in a multi-vector development to find the way out of crisis.

### The Family as an Educator: Challenges and Opportunities of Society in Cultural Change

Esther E. Serok, The Hebrew University of Jerusalem | [esther.serok@mail.huji.ac.il](mailto:esther.serok@mail.huji.ac.il)

The paper presents a research study on the social psychological and educational impact of cultural diversity on the role of families as educators. Specifically, it presents the field work and findings of qualitative research involving Israeli educational settings in which innovative methods have been developed to include families from various cultures as educators in their children's educational process. These methods include for example, the facilitation of authentic dialogue between families and educators, and the incorporation of family cultures, traditions and narratives as enrichment resources within the school

curriculum. as such, a healthy partnership of this nature between the family and the educational framework which relates to the child's cultural world is advantageous not only for the child's learning process – thereby enhancing school achievement, it also preserves the family's educational leadership role and culturally assigned responsibility for strengthening their cultural identity. It enables to incorporate the families' multiple educational and cultural intelligences that have not being studied enough. Therefore, such a school-family partnership has the potential to minimize the risk of crises in the immigrant

family's traditional structure which commonly include social changes in the family structure, such as the loss of parental authority; children acting as the social bridge and translators in school etc. The study also emphasizes the fact that usually there is not enough knowledge

about the social impact of such family changes, interventions and evaluations. The paper will present study, implementation of programs, conducted in a widely diverse type of families and schools in Arab and Jewish schools

## Crisis Discourse as a Catalyst for Cultural Change

Laura Henderson, Vrije Universiteit, Amsterdam | [l.m.henderson@vu.nl](mailto:l.m.henderson@vu.nl)

This article argues that one of the most important effects crisis discourses have is their ability to call for change. This article explores legal culture as an important site of hegemonic power struggles and focuses on the role crisis can play in shifts in the hegemonic legal culture. Based on the writings of Butler, Laclau and Mouffe, this article argues that politics take place through the construction of discursive identities that struggle with each other for the hegemonic position in political life. These struggles do not only take place in public political forums but also in private or depoliticized fields, such as in courtrooms. These struggles determine the norms, values and reality of a certain polity. This article contributes to the theory of cultural change by conducting a critical discourse analysis of crisis discourse within hegemonic struggles relating to terrorism and economic downturn

in the Netherlands and the United States in the last decade and a half. Crisis discourse is defined as language and language practice with the potential of constructing the perception of events as urgent, existential threats among an audience and a language and language practice that, in turn, is constructed by the audience's use of the language. This analysis shows that crisis discourse can indeed call for a rupture of the fabric of legal culture, indicating that legal culture is a site, product and tool of hegemonic struggle and change. Moreover, this article provides evidence that crisis discourse can be a useful tool in understanding under which conditions a hegemonic shift is possible. This article sets out a future research agenda for fully understanding the implications of crisis discourse for cultural change.

## Evidence for a New Participatory Culture? The Role of the Consumer in Mediatized Business Models

Michaela Pfadenhauer, Karlsruhe Institute of Technology | [pfadenhauer@kit.edu](mailto:pfadenhauer@kit.edu)

The term 'consumer participation' brings a change in consumption culture into focus being discussed in sociology as well as in media and marketing sciences under the heading of 'politicized consumption', 'unmanageable consumer', 'participatory culture' or 'participative web'. The passive consumer is thus replaced or accompanied by an active consumer who is not content to accept and comply with the activities of the market. Instead, this type of consumer can be

interfering, engaging and rebellious and follows his or her own relevance, competencies and scope of action. Rather than reconstructing these processes from the consumer's self-conceptions, the scope of this paper refers to the conception of the consumer from the producer's point of view. From a sociology of knowledge perspective, a culture of consumer participation is given not before participating as a matter of course is seen as part of the consumer's role and when that role

is taken for granted by the producer's, too. The empirical background of this paper consists of two internet-based business models which are analyzed in the context of a research project

within the priority program Mediatized Worlds funded by the German Research Foundation (DFG).

### 03\_b02JS07 - Artistic Practices and the Public Sphere

Chair(s): Rudi Laermans Rudi (KU Leuven)

#### Social Frames of Urban Cultural Creativity: A Sociological Analysis of Cultural Clusters in Barcelona

Matías I. Zarlenga, University of Barcelona | [matiaszarlenga@ub.edu](mailto:matiaszarlenga@ub.edu)

Arturo Rodriguez Morato, University of Barcelona | [rodriguez.morato@ub.edu](mailto:rodriguez.morato@ub.edu)

The analysis of the territorial dynamics of culture, particularly its tendency to form clusters, has become a study area that draws the attention of various social science disciplines. This kind of analysis has steadily grown in importance over the last twenty years alongside the increasing interest in creative industries and cultural institutions as factors in socio-economic development and urban regeneration. Most of today's literature on the subject takes cultural clusters as a single type and focuses on aspects linked to their urban planning or economic impact. However, there is a growing awareness of the importance of

the social dimension of cultural clusters. This paper aims to differentiate between various cultural clusters in the city of Barcelona by constructing models or types of cluster taking into account the predominant interaction dynamics and the type of social ties generated between the cultural agents participating in these groupings. Following these criteria we distinguish three types of cultural cluster according to whether a bureaucratic, associative or community dynamic predominates. These social dynamics enable us to understand the success or failure of a cluster policy.

#### Cultivating Urban Ecologies – Transforming Public Spaces Through Public Art: A Case Study of Creative Practice in Art Education

Kerry A. Thomas, University of New South Wales, Sydney | [k.thomas@unsw.edu.au](mailto:k.thomas@unsw.edu.au)

Karen M. Profilio, North Sydney Girls High School | [karen.profilio@det.nsw.edu.au](mailto:karen.profilio@det.nsw.edu.au)

This paper extends the popular conception of creative practice by reporting on Cultivating Urban Ecologies, a case study of how five visual arts teachers and their students in secondary schools in Sydney, Australia contributed to transforming spaces in small-scale ecological public art projects around school communities. The investigation was theoretically framed by

Pierre Bourdieu's concepts of 'habitus' as 'a feel for the game' and 'symbolic capital' and funded by a faculty research grant from the College of Fine Arts, University of New South Wales, Sydney. It took its lead from two key artworld precedents: Nicholas Bourriaud's Relational Aesthetics including his concept of 'social interstice' or non-economic trading

exchanges that arise as 'inter-human commerce' and forms of choreographed creative practice; and the current Curating Cities project (Bennett 2010), funded by an Australian Research Council Grant that augments the City of Sydney's 2030 Vision for a Sustainable Sydney. In this paper we describe how collective purposes were built; highlight examples of performances and the artefacts of practices, including temporal interventions, the use of GPS tracking devices and stories from local history; and consider efforts to raise

awareness about how public art can contribute to the care of public spaces while enhancing social relations. We examine the motives of those involved including the potential threat of denting the teachers' reputations and how the provocation of this study challenged conventional artmaking constraints that underlie curriculum and classroom actions. The presentation includes digital documentation of these events including the teachers' and students' art interventions in and around Sydney.

## **The Integrative Power of Non-Representationalism in Creativity-Based City Projects: The Role of Creative Collaborations in Fostering Local Identity and 'Local Capital' among Europe's Immigrants and Ethnic Minorities.**

**Joseph M. Costanzo**, George Mason University | [imgnjoe@aol.com](mailto:imgnjoe@aol.com)

European scholarship has begun paying greater attention to the social and economic nature and impact of creative expressions in urban spaces (Delhay, 2008; Küchler, Kürti and Elkadi, 2011; Salzbrunn, 2007; Selberg, 2006; Spangler, 2007). Furthermore, borrowing the term from Bramadat (2001), the literature concerning immigrants and ethnic minorities and creative art forms focus on expressions of local 'ethno-cultural' groups (allochtoon or not). Such spectacles are expressions that, for a brief moment, recall and re-present traditional notions of foreignness in their dress, music, cuisine and so forth as reminders of the way things were (or are perceived still to be) in a distant homeland. My interest here is in the non-ethnically representational spectacle. In other words, events that, instead of re-presenting a history of a people, culture or place, are born out of

the people and culture in place today— a (temporary) contemporary expression of local diversity. Here, as in Brussels' Zinneke Parade, the emphasis is on creating and presenting (not re-presenting) the local. I suggest that immigrants and ethnic minorities and their art are not merely re-presenting their migration histories, but also are part of the ongoing local discourse, influencing identities and expressions not as 'immigrant artists' (read: artists of immigrant origin who create 'immigrant art'), but as artists full stop. Such creative spaces and interactions may serve as a place without a priori (assigned) social and economic personal value, valuing individual abilities and interests, creating collaboration through tension and discussion, allowing human error and generating social, psychological and economic benefits for those involved.

## **Militant Aesthetics and Popular Creative Praxes**

**Cédric Masse**, University of Lisbon | [masse.cedric@gmail.com](mailto:masse.cedric@gmail.com)

Esthetical values and art under different modalities occupy a core place in the militant

praxis. Theatrical performances, mises-en-scènes, dancing, music, songs, paintings,

sculptures and so on appear during public demonstrations or when activists appropriate and reshape through them the public space and urban territories. Beyond appearances, illusion and *illusio* (the play), there exists an artistic truth, which is intimately related to the cognitive praxis insofar as it participates in the production of knowledge made by the activists. Urban territories occupied and transformed through their arts by social movements are converted into public spheres, places wherein epistemic discourses, communicative reason and ideal speech situations (Habermas) take shape. There, through their interactions, people come to publicly, rationally and critically discuss about issues concerning the public realm; they use their reason for political matters and change. In other words, within the

polis and outside the private sphere, the political life occurs in the agora. Activists therefore put forward a veritable militant and popular aesthetics that entails that their cognitive praxis is realised to a large extent through artistic creations and expressions, through dynamic, creative and intellectual interactions among militants and between militants and other actors such as opponents. These are the aspects I am going to explore in my paper from the current Portuguese situation. However, following one of the fundamental Durkheimian methodological precepts, it will also be comparative; in a diachronic way by referring to several historical instances and in a synchronic fashion by considering different geographical contexts, notably Spain.

## 03JS07 - Biographical Approach to the Studies of Culture

Chair(s): David Inglis, Lyudmila Nurse

### What Makes an Art 'European'? Artistic and Biographical Expressions of European Identities

Lyudmila A Nurse, Oxford XXI | [lyudmilanurse@oxford-xxi.org](mailto:lyudmilanurse@oxford-xxi.org)

Johanna Suo, Innovation Culture Europe, London | [johanna@ice-eu.net](mailto:johanna@ice-eu.net)

The paper examines the complexity of biographical and artistic expressions of European identities through works and biographies of modern European artists and biographical perspectives of ordinary citizens as they complement artistic expressions, in the form of video-recorded biographical narratives. It is based on the experience and findings from the project 'United States of Europe' (USE) - a travelling exhibition, platform for communication, identity revelations and of intercultural dialogue. USE presents a partnership between artists and biographical researchers in use of artistic means to reveal European meanings of art and people. Designed primarily as an artistic project, USE

consists of three main components that have been presented in European public spaces and museums since 2011: artistic interpretations of European Identity through multimedia, cyber culture, video and other installations; biographical study of ordinary Europeans and performing artists. The third component is an interactive laboratory where artistic and biographical materials interact; this multimedia installation synthesizes artistic expressions and biographical narratives in visual format thus creating multi-dimensional visualized European biographies. The paper analyses the interactive relationship between artistic works and visual biographical narratives.

## Autobiography in Historical Sociology. The Polemic on Intellectual and Political Autobiographies of One Generation of Spanish Intellectuals between Dictatorship and Democracy, 1975-1982.

Héctor Romero, University of Murcia | [hromero@um.es](mailto:hromero@um.es)

This paper aims to think on the possibilities of memoirs and autobiographical literature as a source for historical sociology. I analyze the polemic of the intellectual/political autobiographies produced by one generation of Spanish intellectuals during the transition to

democracy years [1975-1982]. In these memoirs they review their situation during the Spanish Civil War, the postwar years and their relation with General Franco's regime, with some of them were collaborators.

## Arts Based Biographical Methods and 'The Space Between Us'

Maggie O'Neill, Durham University | [maggie.o'neill@durham.ac.uk](mailto:maggie.o'neill@durham.ac.uk)

The paper engages with advances/developments in biographical sociology specifically arts based research and is concerned with visualising and performing biographies as multi-sensory ways of knowing. Specifically, it discusses arts based research undertaken with migrant women in the UK and a performance based upon ethnographic

research with women asylum seekers and travellers called 'The Space Between Us.' The play was written and performed by Open Clasp Theatre in March 2013. The paper goes on to situate this work within a broader trajectory of ethno-drama, biographical and participatory research.

## From Rejection to Thriving: Stories of Children from Aberlour Orphanage

David Divine, Durham University | [david.divine@durham.ac.uk](mailto:david.divine@durham.ac.uk)

Being a resident as a child in an Orphanage for a significant period of time, is a life defining event. Low expectations and poor outcomes are anticipated from policy makers, researchers and legislators, in terms of education, emotional and mental health well-being, preparedness for life after care, and being at the receiving end of social care support services, and the criminal justice system (Duncalf, 2010; Kendrick, 2012). The presentation contests these dominant narratives, drawing upon PhD research using (auto) biographical, ethnographic and case study approaches, combined with visual methodology, photos, cine- film, poems, written testimonies, documents, and stories both written and oral. Aberlour Orphanage

operated in the Highlands of Scotland (UK) between 1875 and 1967, and housed 500 children at any one time at its zenith (Abrams 1998). Biographical interviews were conducted with 23 former child residents, aged between 51 and 82, and 9 key staff and service providers, aged in their seventies, eighties and nineties. Arising from the research, is the critical role which sensory, visual and poetic approaches offer to biographical sociology, and attest to the pivotal role which the biographical imagination, to give voice to the unheard and forgotten, the poor, destitute, 'voiceless' and 'voteless', who without it, would never be acknowledged as having existed. Their stories, testimonies, reflections, honed out of 'interpretive space and meaning' (Dominelli,

2013), 'biographical competence' (Bruner 2003), fill a gap in the literature and provide insights for policy and practice.

**Laura Gemini**, Università degli Studi di Urbino Carlo Bo | [laura.gemini@uniurb.it](mailto:laura.gemini@uniurb.it)

**Manolo Farci**, Università degli Studi di Urbino Carlo Bo | [manolo.farci@uniurb.it](mailto:manolo.farci@uniurb.it)

According to some of the most qualified critical theories of risk society (Luhmann, Beck, Giddens), the modern concept of risk is an exclusive product of the human activities, totally unrelated to any natural occurrence. Nevertheless, nowadays, during the environmental disasters, we are witnessing the emergence of a particular attraction to an idea of fatalism that inevitably belongs to the overwhelming events of the nature. This explains why the catastrophe is an experience that leads to many practices of symbolic reinterpretation. Now, one of the social spaces in which finding these practices of reinterpretation are the users' images of the natural disasters shared on SNSs. The paper

presents the results of a qualitative research conducted on a sample of 4257 images uploaded on Twitter during the earthquake that happened in northern Italy May 20, 2012. On the basis of this analysis, a taxonomy of images is built to confirm the hypothesis of the work: that is, during catastrophic events, the image has not just a function of refero, i.e showing the drama, nor exclusively of religio, i.e building social bonds. The images shared through SNSs, instead, aim at giving a symbolic meaning to catastrophe, turning the dramatic experience into an evidence of our vulnerability to the arrogance of human civilization and an opportunity to establish new rituals of socialization and collective regeneration.

### **“No Human Being is Illegal”: Meaning-making in Online Social Movements**

**B. Nadya Jaworsky**, Masaryk University, Brno | [jaworsky@fss.muni.cz](mailto:jaworsky@fss.muni.cz)

“No Human Being is Illegal” is a common refrain among immigrants' rights activists. It works to counter the increasingly pervasive depiction of migrants– especially the unauthorized– as dangerous, unwelcome Others and communicates a message of equality, dignity and respect for all. And such

concepts are often conveyed by portraying immigrants as simply part of the general categories of human beings: workers, family members, and contributors to their local communities. Increasingly, such portrayals are finding their way into the online mobilizations of those that advocate for immigrants' rights.

Yet we know little about the meaning-making process behind these symbols of inclusion. What are the ways in which cyberactivists call upon and deploy particular collective representations to symbolically incorporate immigrants into the social fabric and frame and construct claims for social and political acceptance? What are the discursive strategies they employ in response to the growing incidence of physical and symbolic violence against immigrants? Utilizing a cultural

sociological perspective, I examine the ways in which immigrants' rights activists mobilize over the Internet. I employ a dual methodology. First, I perform a hermeneutical analysis of website content – both textual and visual. I then interview activist webmasters to explore their motivations, goals and strategies. The ultimate goal is to contribute to building a cultural sociological understanding of meaning-making in online social movements.

## Digitalization and the Crisis of Cultural Criticism: Between Algorithms and Content Curation

Jonathan Roberge, INRS | [jonathan.roberge@ucs.inrs.ca](mailto:jonathan.roberge@ucs.inrs.ca)

The rise of Web 2.0 and the digitalization of meaningful artefacts have created the impression that we now live in a culture where everything is accessible at any time. But how exactly do we find in this virtual ocean what we do not know that we do not know? While this new online culture appears open and undetermined, two significant filtering logics are at play. The first of these relates to the growing use of recommendation algorithms by search engines and platforms such as Amazon, Google, and Netflix. Yet, as algorithms become ever more accurate in predicting and hence isolating customers' preferences, their social impact begins to be questioned: how are they influencing choice, and with what economic and political ramifications? Are they not, despite their internal justification, in fact limiting cultural access and thus creating what

Pariser calls a "filter bubble"? Recently, these concerns have led to a second filtering logic, revolving around content curation, which alleges that methods of manual selection and sharing of the "best of the web" offer a valid alternative to, if not a cure for, the rise of algorithmic culture. Although such curation, from blogs and sites like Pinterest.com, is a significant trend, it too begins to be questioned, particularly regarding its connection with marketing and tracking applications that use web analytics. In the end, while these filtering logics are in some ways two sides of the same coin, it is argued that they represent an important new site of contestation in the field of cultural criticism. The implications of this struggle are ambiguous, i.e. it certainly does not signify the death of criticism as such, but rather a new phase in its eternal crisis.

## Social media- The Production and Diffusion of New Regimes of Signification

Greti-Iulia Ivana, Universitat Oberta de Catalunya | [igreti\\_iulia@uoc.edu](mailto:igreti_iulia@uoc.edu)

Natàlia Cantó-Milà, Open University of Catalonia | [ncantom@uoc.edu](mailto:ncantom@uoc.edu)

When trying to understand the increasingly popular phenomenon of social media, I believe the most eloquent starting point is Baudrillard's (1983) statement: "Today, everything is cultural". This is a proclamation

of the triumph of signifying culture, in a society that is increasingly saturated with signs and messages. Production, consumption and possession of goods are all invested with a symbolic dimension that has come not only to

cohabit with the instrumental or emotional dimensions, but has come to prevail upon them in what the configuration of power is concerned. This process has been accompanied by what Featherstone (2007) describes as the growth in the power potential of symbol producers together with the demonopolization of the power from old hierarchies of significance. In this context, perhaps the most explicit arena for the game of producing, appropriating or displaying symbolic capital is Facebook. My reasons for making this claim are: 1) the time frame for self expression as compared to face to face interactions, which allows for a more reflexive approach to the meanings behind each

utterance 2) the fragmentation of communication in well delimited ideas, which diminishes the possibility for diffuse or unclear attributions of significance, 3) the activities generally revolve around choice of lifestyle, taste, affiliation to groups or currents of opinion., which are all bearers of meaning par excellence. Thus, based on the information gathered from individual semi-structured interviews with users, the current paper is aiming to shed light into the problem of the discursive rearticulation of power at the micro level by looking at the way significance is produced, negotiated and accepted on Facebook.

## **b03RN07 - Cultured Spaces**

Chair(s): Mark Jacobs (George Mason University)

### **Jewish Topographies in South Indian Space**

Dr. Shlava Weil, Hebrew University, Jerusalem | [shalva.weil@mail.huji.ac.il](mailto:shalva.weil@mail.huji.ac.il)

The paper aims at relocating Jewish space by moving it beyond European and American cityscapes to encompass wider Jewish and Indian geographical horizons. The Jews of Cochin have lived for centuries on the Malabar coast in south India in different spatial communities in Ernakulam, Parur, Mala, Chennamangalam and Cochin itself. They lived in harmony with their Hindu, Muslim and Christian neighbours, never suffering from antisemitism. The Jewish communities revolved around synagogues surrounded by compounds, which incorporated sacred and cultured space. Within these topographies, liturgy was enacted and ethnicity maintained. Outside the synagogue compounds, specific

Jewish topographies delineated cultured space. The summer resort of Alwaye (or Aluva), the holiday home to the Cochin (or Kochi) Jews of south India, is an example of a hitherto unexplored Jewish location. In this holiday space, social divisions influenced by caste-like perceptions of society between Paradesi ("White"), Malabar ("Black") and "Meshurarim" (manumitted slaves), were replicated from quotidian life. Today, as the Cochin Jews are becoming extinct, Jewish topographies are being replaced by other cultural spaces: synagogues are giving way to museums, Jew Town has become a Kashmiri antique market, and a cemetery has been paved over as a football ground.

## **“Living Site” as a “Cultural Quarter”: a Discussion of a Policy Formulation**

Mirko Petric, University of Zadar | [mpetric@unizd.hr](mailto:mpetric@unizd.hr)

The paper is a discussion of the applicability of the various concepts used in the culturally-led regeneration programs to a cultured space that recent UNESCO policies designate as a “living site”. The historical complex of the city of Split with the Palace of Diocletian, a rather early inscription on the World Heritage List (1979), was already at the start commended for its quality of preserving the continuity of urban life on the heritage site since late antiquity to the present date. At the same time, the larger city within which the UNESCO-protected complex is located has undergone several waves of urban decay in the socialist and postsocialist periods. The historical core itself is currently exposed to the pressures caused by touristification and real estate speculation, resulting in its losing the qualities that secured it the qualities of a “living site”. The paper

discusses the formulation of urban cultural policy that could best help preserve the qualities of the site and synchronize it with the needs of the local population of the wider city in attempts of urban and cultural regeneration. The discussed concepts include that of the “cultural quarter”, “cultural district”, “cultural space”, “cultural neighborhood”, “cultural scene”, and “city of art”. These concepts and their connotations are discussed within a wider discussion of the “creative city”, “planning or educational city” and “cultural scenes” approach outlined by Navarro and Clark as dominant in the cultural agendas of European city mayors. An adaptation of the concept of “cultural quarter” and a mixture of “educational” and “cultural scenes” approaches is highlighted as arguably the most appropriate for the location.

## **Travelling in Cultured Spaces: a Research-Action for the Project of Slow Itineraries within an Italian Regional Park**

Rita Salvatore, University of Teramo | [rsalvatore@unite.it](mailto:rsalvatore@unite.it)

If we look at it from the tourists’ perspective, slow tourism may represent a new form of cultural tourism, through which travellers can grasp the culture and the heritage of a place in a deeper way than in mainstream tourism. In this sense, it can be considered as a vocational tourism, able to enlighten those territorial specificities that cannot be experienced elsewhere. At the same time, if we reverse the perspective from the host communities, these emerging needs expressed by the tourist demand, could be translated into a possible way out from the crisis of rural economic systems and thus turned into the search for

innovative forms of preservation and enhancement of local cultures. By the application of a methodology based on action research some formal and informal meetings with local stakeholders have been conducted in the Velino-Sirente regional park (Abruzzo, Italy), also through the use of the Open space technology, aiming at supporting the participative project of some eco-tourist itineraries. The action research has eventually become part of a process of local development and collective learning aspiring to uncover the social valuing for the natural environments and to preserve cultural heritage.

## Urban Scenes: Cultured Spaces in Polish Cities and Their Impact on Urban Dynamics

Marta Klekotko, Jagiellonian University, Cracow | [marta.klekotko@uj.edu.pl](mailto:marta.klekotko@uj.edu.pl)

Mateusz Magierowski, Jagiellonian University, Cracow | [mateusz.magierowski@gmail.com](mailto:mateusz.magierowski@gmail.com)

The aim of the paper is to analyze mechanisms of rise of cultured spaces in Polish cities. The paper is focused on cultural consumption practices which are assumed to be a driving force of creation of cultured urban spaces. The argument is that consumption takes on various cultural forms which shape urban space and determine its dynamics. The paper is based on the concept of urban scenes. Scenes are spaces devoted to cultural consumption. Each scene provides different forms of cultural consumption, which are meaningful, reflect different values and enable fulfilment of different needs of different actors. Every scene can be described by specific combination of symbolic and cultural values which underlie consumption practices. The analysis of urban scenes is based on a complex analytical model, which consists of three general dimensions and fifteen sub-dimensions. The three general

dimensions are defined as: theatricality, authenticity and legitimacy. All human activities, including consumption, are accompanied by their motives, which constitute dimension of legitimacy. Each acting individual is driven by their identity and willingness to self-realization which are described by "authenticity". The consumption might be described as theatricality too: consuming, individuals play different roles. These three cultural dimensions (motives, identities and roles) determine character of scene. The paper identifies scenes existing in Polish cities and discusses cultural dimensions of urban dynamics. It provides as well some counterpoints and discusses limits of development of cultured spaces in Poland. Moreover, it attempts to analyze impact of cultured spaces on urban development in Poland.

## 04\_b02JS07 - Artistic Practices - New Creativities

Chair(s): Michael Hutter (Wissenschaftszentrum, Berlin)

### The New Spirit of Artistic Critique: a Sociological Analysis of 'Critical' Artists in New York and Berlin

Martin G. Fuller, University of Cambridge | [mf406@cam.ac.uk](mailto:mf406@cam.ac.uk)

Boltanski and Chiapello's (2005) analysis of the 'artistic' critique describes capitalism's ability to withstand assaults through processes of adaptation and metamorphosis. In this paper I argue that a similar analysis can be made of contemporary visual art's capacity to adapt and morph to critiques, particularly those generated from within by artists. Drawing from eighty interviews conducted with artists in

Berlin and New York, I present an analysis of artists' accounts of their critical-reflexive orientation to the interrelated symbolic and economic markets of art. These 'critical' artists are knowingly entangled in these markets, and engage in critiques whilst acknowledging their own complicity. Strangely, the sites of commercialization such as the art gallery or art fair are not treated as contradictory to their

criticality, but the economic, social and aesthetic-philosophical conditions under which their careers exist, and even flourish, are critically evaluated, often within the content of their artworks. This analysis of 'critical' artists is not merely descriptive, but also moves towards a clearer understanding of the logic and functioning of art worlds. By drawing upon an actor-centred analysis of art, as advocated by the so-called 'new' sociology of art, and

interpreting the actors' descriptions and navigations of the systemic and structural characteristics of art, we move beyond the false dichotomy between canonical and new approaches to arts sociology. The role of artistic critique has turned upon its own conditions, providing a compelling empirical case that elucidates some of the hidden corners of contemporary art and suggests meaningful modes of sociological exploration.

## Instant Composers: Modelling and Theorising the Improvising Ensemble

Allan J Sutherland, Kyushu University of Nursing and Social Welfare |  
[allan.kyushu.ns.ac.jp@gmail.com](mailto:allan.kyushu.ns.ac.jp@gmail.com)

The improvising music, jazz ensemble, and improvisation are often considered to afford a social model for attaining, a) harmonious social coordination within social groups working in heterogeneously dissimilar social contexts, and, b) to stimulate and achieve higher capacities for problem solving, bringing creative, innovative transformation of social and/or technical practices. Some social theorists consider improvisation bridges the gap between constraining social structures and social action exercised by motivated, reflexive and innovative individuals. Bourdieu theorises that the structured, structuring habitus generates both routine reproductive practices and regulated improvised responses to social disjuncture leading to innovative social transformation of structural relations. Becker investigates how unacquainted individual jazz musicians can form instantly

coordinated groups and improvise successful public performances, reproducing the jazz artworld. What is often lacking is a detailed account of how improvisation is made possible, and can lead to creative solutions. This paper discusses modelling the constitution and internal dynamics of improvising ensembles as symbiotic ensembles, with low, almost horizontal, levels of hierarchy whereby authority is widely dispersed among synergistic members, rather than determined as the prime capacity of their leaders. Synergistic members are consequently expected to be proactive, to bring a rich studied and practised depth of pertinent knowledge, and skills, musical materials, refined through a personal biographical trajectory such that each member's contribution is distinctive and mutually stimulating.

## Generating Common Ground through Art Practices

Rita Kéri, University of Pécs | [keririta@yahoo.com](mailto:keririta@yahoo.com)

Kata Soós, Freelance artist | [sooskata@gmail.com](mailto:sooskata@gmail.com)

The authors of the paper lead joint creative activities in small groups. Our research practices represent the perspectives of the visual arts, cultural anthropology and communication science. We initiate

participatory practices where we incorporate the results of previous research in a continuously developed methodology. The methodology reflects, among other things, on whether and how the dynamics and dimensions

of individual creativity can manifest through communicative processes in art activities, through principles of connecting and structuring experience. The events we initiate involve actors of diverse sociocultural backgrounds. We build strongly on presence and joint experience. Rather than building common identities, we break down the

complexity of experience, and rely on its richness in the joint process to build signs (by art practices) which derive their meanings from the perceptions and processes that the participants engage in. In these joint platforms, then, new forms of common ground can evolve, and individuals can mobilise their private or cultural experiences in innovative ways.

## What's new: Music or Technics?

Nancy W Hanrahan, George Mason University | [nhanraha@gmu.edu](mailto:nhanraha@gmu.edu)

It is by now a common perception that very little is new in popular music. Retro styles, re-packaging, re-union concerts, re-mixes, are by most accounts the predominant forms of musical presentation. Yet, the incredible diversity of music online and the relative ease of access to it might suggest a very different outcome, as the resources available to musicians for artistic innovation seem virtually limitless. How should this phenomenon be explained? In a recent book, Simon Reynolds suggests that the vast digital archive of music actually hampers innovation, as “nothing seems to wither and die”. Where in the past, lps would be dropped from record company catalogs as styles developed, now the past stays with us. This has significantly changed the orientation of musicians to musical materials: they become curators and archivists

rather than pioneers and innovators. In this paper, I consider two additional factors that contribute to the current state of affairs: the collapse of professional music criticism, and the fascination with technics. These situate the problem of innovation somewhat differently, in the transformation of the discursive contexts in which the new can be articulated. The problem is not simply that musicians are enthralled with the past. The new or innovative has to be recognized and articulated as such, and that has become increasingly difficult in the new media environment. As professional music criticism has declined, it has been replaced with more purely quantitative forms of evaluation that favor the familiar over the new, and with a discourse of technics that privileges technological mastery over aesthetic innovation.

## a04RN07 - Communication, Media and Culture (2)

Chair(s): Joos van Loon (Katholische Universität, Eichstätt)

### Social media- The Production and Diffusion of New Regimes of Signification

Greti-Iulia Ivana, Universitat Oberta de Catalunya | [igreti\\_iulia@uoc.edu](mailto:igreti_iulia@uoc.edu)

When trying to understand the increasingly popular phenomenon of social media, I believe the most eloquent starting point is Baudrillard's (1983) statement: "Today, everything is cultural". This is a proclamation of the triumph of signifying culture, in a society that is increasingly saturated with signs and messages. Production, consumption and possession of goods are all invested with a symbolic dimension that has come not only to cohabit with the instrumental or emotional dimensions, but has come to prevail upon them in what the configuration of power is concerned. This process has been accompanied by what Featherstone (2007) describes as the growth in the power potential of symbol producers together with the demonopolization of the power from old hierarchies of significance. In this context, perhaps the most explicit arena for the game of producing, appropriating or displaying

symbolic capital is Facebook. My reasons for making this claim are: 1) the time frame for self expression as compared to face to face interactions, which allows for a more reflexive approach to the meanings behind each utterance 2) the fragmentation of communication in well delimited ideas, which diminishes the possibility for diffuse or unclear attributions of significance, 3) the activities generally revolve around choice of lifestyle, taste, affiliation to groups or currents of opinion., which are all bearers of meaning par excellence. Thus, based on the information gathered from individual semi-structured interviews with users, the current paper is aiming to shed light into the problem of the discursive rearticulation of power at the micro level by looking at the way significance is produced, negotiated and accepted on Facebook.

### Forms of Symbolic Violence in the Web

Elena Gremigni, Pisa University | [elena.grem@tin.it](mailto:elena.grem@tin.it)

The general optimism about Web potentialities should not conceal the existence of some problems concerning the relationship between democracy and ICTs. Within the cyberspace there is an exploitation of information produced by connected individuals: they often appear so deeply integrated into this market in the roles of producers, distributors and consumers of symbolic forms that they seem transformed into commodities, taking the "Schaufenster-Qualität der Dinge" (Simmel

1896). This research uses the "clue paradigm" (Ginzburg 1979) to identify some "traces" (Benjamin 1940) of Web tendency towards closure through "filter bubbles" (Pariser 2011): e.g. in market oriented indexing processes by search engines, but also in the increasingly larger use of apps, and in "mass" adhesion to popular social networks. The purpose of this paper is to highlight the forms of hidden persuasion and exploitation that limit users' freedom even when there isn't any explicit

censorship in the cyberspace. "Doxic" acceptance of Web contents, structures and tools in fact precludes some kinds of knowledge and some different models of participation, with significant consequences in the social construction of reality process. In

conclusion, we can extend to cyberspace what Pierre Bourdieu stated about hidden persuasion: "de toutes les formes de 'persuasion clandestine', la plus implacable est celle qui est exercée tout simplement par l'ordre des choses" (Bourdieu 1992).

## The State of Digital Social Media in Germany

Jan-Felix Schrape, Universität Stuttgart | [felix.schrape@sowi.uni-stuttgart.de](mailto:felix.schrape@sowi.uni-stuttgart.de)

Since several years, the Web serves as a projection screen for varied visions of a more transparent and integrative public sphere and a less dominant role of mass media in the social construction of reality. In light of those expectations, this presentation aims to scrutinize the relations between social media and mass media and observes the preferences of German onliners as well as the content quality of participatory media (e.g. blogs, Twitter, Facebook) between 2005 and 2013. The investigations lead to the impression that compared with the United States, the German

blogosphere is less politicized and social media as agenda-setters or research tools have limited influence on German journalists. Moreover, only a small number of blogs attract a 'mass' audience. So far (regarding Germany), there is hardly any evidence that traditional mass media are up to lose their role as a key cognitive system of modern society, especially in decision-making processes relating to the society as a whole. Vice versa, social media and mass media seem to be situated on complementary levels of publicness.

## Prosumers in the Time of Crises - Characteristics of Participant in Online Mass Collaboration Projects on an Example of Amateur Fansubbing Community

Bartosz Mika, University of Gdansk | [bartosz.mika@ug.edu.pl](mailto:bartosz.mika@ug.edu.pl)

Availability of cultural content provided by modern means of communication is enormous. In developing countries the internet becomes the main tool to bridge the gap in cultural transmission. It is particularly important in (post)transition countries, as well as in the time of crises. Also, facilitates active participation in the global cultural exchange, as today's customers increasingly act as a prosumer. They not only receive the cultural content but also participate in its development and modification. However, for many consumers in Poland and other countries in the (semi)periphery of world system, the language is the main barrier to mainstream cultural consumption. Most of the content of culture available on the internet – i.e. video content – is unintelligible for the Polish

audience. Therefore, translation of dialogues becomes essential aspect of the cultural participation, and essential aspect of prounsumption of culture. The proposed paper considers the internet community that responded to this need, i.e., amateur fansubbers. They create specific online mass collaboration projects whose characteristics will be analyzed on the base of empirical evidence collected in Poland within the framework of Talcott Parsons theory of patterns of values. Internet distribution of culture is a point in the intersection of the economic sociology, sociology of culture and sociology of change. It is important because it shows how production, distribution and consumption of culture can modify society and economy, especially in the time of crises.

## Social Media As a New Resistance, Freedom and Expression Field and Youth Identity

Gonul Demez, Akdeniz University, Antalya | [gonuldemez@gmail.com](mailto:gonuldemez@gmail.com)

It is claimed that scientific and technological developments emancipate modern people. But this situation creates new lifestyles, conditions and new socialization types. New types of living, working and entertainment styles make individuals isolated. Individuals use social media to overcome this isolation. In this context, social media is accepted as a new socialization field and a new community. Thus;

individuals communicate with others who have same opinions, life styles and social classes. In this sense, social media will be discussed as a new freedom, resistance and expression field. This study tries to analyze meanings attributed to social media by young people. The study is based on the analysis of in-depth interviews with young people between the ages of 18-25.

## b04RN07 - Cultured Spaces (2)

Chair(s): Rudi Laermans (KU Leuven)

## Between Maintaining Otherness and Social-Engineering – The Streetworkbus as Social-Political Outpost

Florian Mayr, Katholische Universität Eichstätt-Ingolstadt | [florian.mayr@ku.de](mailto:florian.mayr@ku.de)

Joost van Loon, Catholic University of Eichstätt-Ingolstadt | [joost.vanloon@ku.de](mailto:joost.vanloon@ku.de)

In contrast to the concept of “Agora” as the space of the public sphere where order is created by political discourse and communicative reason, the “street” is a concrete public space situated on the border between order and disorder. This “edge of order” with its inherent potential of crisis is a focal point for communal political institutions to counteract emerging entropy and establish modes of integration. Mobile outreach youth work (streetwork) as a pedagogic profession are one example of such permanent entropy management. Doing streetwork is a low-threshold method to create permanent relations between streetworkers as social engineers and these “at-risk-youths”. In a Foucauldian sense, the establishment of Streetwork would be a classical example of disciplinary power. Through participative observation and qualitative interviews, my

research however shows a different picture in terms of the self-perception of streetworkers. Instead as an example of discipline or pastoral power, streetworkers deploy the concept of “Empowerment” as a technology of the self by which the otherness of the clients is maintained. This paper focus on a case study of the “Streetworkbus” which has been deployed in the suburbs of Munich as a means of “irritating” the space of the street by offering a social-political outpost, a mobile space placed directly in the streets where youths can “hang out”. Through a critical engagement with the work of Foucault, I propose an alternative view of streetworkers as mediators (Latour) or diplomats (Stengers), that are involved in work of conviction that leads to certain modes of imitation (Tarde) that do not add up to the preferred schemes of “social engineering”

## Cultural Analysis of a Mediterranean Post-Transitional City: the Case of Split

Mirko Petric, University of Zadar | [mpetric@unizd.hr](mailto:mpetric@unizd.hr)

Inga Tomic-Koludrovic, University of Zadar | [itomic@unizd.hr](mailto:itomic@unizd.hr)

Ivan Puzek, University of Zadar | [ivan.puzek@gmail.com](mailto:ivan.puzek@gmail.com)

This paper deals with the complexities of questionnaire design for a survey of cultural resources of the city that exemplifies in a rather drastic way the specificities of the current predicaments of cities with the tradition of the Mediterranean way of life, including an UNESCO-protected historical core, but also with large industrial and apartment block sections from the socialist period (1945-1990), as well as with urban landscapes and phenomena characteristic of post-industrial decay that took part in the post-socialist period. The paper departs from the premise that cultural analysis should avoid pre-set solutions, but should take into account the specificities of the studied case. To this end, research and questionnaire design for a survey in point were developed by means of mixture of approaches to cultural analysis that are usually employed separately. On the one

hand, values were surveyed through the lens of theories of modernization (Inglehart, Welzel, Beck), with the emphasis put on the research of expressive, postmaterialist values. On the other hand, cultural practices and tastes were surveyed in the Bourdieuan tradition. The motivation for such a hybrid approach came from a previous survey of resistance to socio-economic change in the Western Balkans (principal investigator: Predrag Cvetičanin), but evolved in the direction allowing research results to be employed with a view to formulating a multidimensional urban cultural policy, taking into account both traditional cultural policy concerns and a set of new concerns connected to the current, post-transitional attempts to reorient the available urban and human resources to creative economy and culture-led regeneration.

## Personal Social Space: Conceptual Framework for Empirical Analysis of Cultural Transition

Anu Masso, University of Tartu | [anu.mass@ut.ee](mailto:anu.mass@ut.ee)

Present paper aims to analyse the cultural transition process in Estonia from the prism of personal construction of geographical space. Paper offers a theoretical framework for empirically analysing the cultural change processes. Using the approaches of communication geography, phenomenology, and structuration approach three dimensional framefork for analysing personal social space is introduced: distanciation (accommodation of individual interactions with spatial constraints and opportunities), appropriation (territorially bounded forms of social solidarities), and domination of space (material and symbolic

resources used for achieving some control over the spatial distances). The representative survey data collected in a transition society Estonia from years 2003, 2005, 2008, and 2011 are used for explaining the relationships between these theoretical dimensions and for empirically analysing the cultural transition. The theoretical dimensions of personal social space are operationalised in empirical analysis using variables about cultural contacts, perceived cultural distances and individual resources (socio-demographic background, estimated economic wealth, knowledge and usage of languages, media using habits). The results of the analysis indicate, that the

accessibility of space of Estonian inhabitants has been increasing during the transition process. The “friction of distance” is less negotiable in inter-cultural communication within a national territory. The appropriation of space is characterised by territorial forms of

solidarities in the case of minority ethnic groups, or are based on the geographical-historical links for the ethnic majority. The domination of space indicates, that Estonian society is different

## In the Ghetto? Reflections upon Emotional Spaces.

Francis Le Maitre, University of Konstanz | [francis.le-maitre@uni-konstanz.de](mailto:francis.le-maitre@uni-konstanz.de)

Ever since the French Banlieue riots, there has been an ongoing debate about “Ghettos” and their existence in France. Till today the empirical evidence of those spaces of “radical alterity” remains undecided. My presentation will not focus on data based “hard facts” which claim to depict the various degrees of spatial exclusion that characterize those urban areas. I rather want to outline how the discursive edification of those spaces unleashes a scandal that deeply affects the entire foundation myth of the French republic. Today the department Seine Saint Denis is not only a space of material deprivation and social neglect but a highly emotional issue. The Banlieue – once the republican symbol of successful integration – became a “No-Go-Area” and thus, a social taboo. In my presentation I will show,

at first, the roots of the emotional dimension of the Banlieue. I will argue that the emotional dimension lies in the irritation of the foundation myth, i.e. liberté, fraternité and égalité. How come that every French citizen considers this proudly as taken for granted, but still the Banlieue and French citizens living there are framed as “others”? Secondly, I will illustrate that this frame of radical alterity performs a specific function, which is closely linked to the concept of the sacred: a *mysterium tremendum et fascinans*. Finally, I will illustrate how the mass media depicts the Ghetto as a sacred space with all its ambivalence: on the one hand the Ghetto as the very core of solidarity, but on the other hand as the visible evidence of social separation.

## 05\_02JS07 - Artistic Practices and the Process of Creativity

Chair(s): Thomas Eberle (Universität Sankt Gallen)

### Improvisation as a Creative Collaboration

Lara Frisch, Bauhaus University, Weimar | [larafrisch1@gmail.com](mailto:larafrisch1@gmail.com)

In this presentation I would like to investigate the various ways in which improvisation confronts change, difference and environmental adaptation within the realm of creative collaboration. Improvisation will therefore be considered as a creative practice, which involves people working together with the tools available to them, in the arenas that

are open to them. In my PhD, I focus on the verbal communication within the practice of improvised music. This means that I study the communication of musicians before and after they improvise. The main field research takes place in Berlin, where since the early 1990's, a vibrant community of improvisers has developed. Although many levels of

communication exist within improvised music, I will only focus on the verbal one by attempting to answer the following questions: What place does change hold in the process of improvisation? How are differences negotiated? What does adapting to one's

environment involve in the making of improvised music? Improvisation in such a context is not just music, but a social phenomenon, involving the creation of constructive and unexpected co-creative relations through dialogue and action.

## Patterns of Creativity in Dance and Music: How Interactions Shape Creativity

**Dafne Muntanyola**, Autonomous University of Barcelona | [dafne.muntanyola@uab.cat](mailto:dafne.muntanyola@uab.cat)

Dance is a discipline of artistic creation which includes a key duality. Its social dimension, also called relational, starts with a group of people dancing; and its technical dimension includes the production of new steps and moves. The richness of dance comes from the need to work with an individual body, which is not transferable, with its emotions, skills and physicality. But the body of the dancer belongs to plural context, crossed by artistic and social traditions, which locate the artists in a given field. We analyze the interactive patterns of a British dance company through a video-aided ethnographic work, which included observation and interviewing. Six cameras were used to record the 2 months rehearsal process. At the end of each day, the choreographer and four dancers were selected and interviewed. We

considered the choreographer as well as the dancers experts in their domains, with superior knowledge about their activity. As preliminary results, the creative decisions involved in dance rehearsals of a new choreography and differ for the dancers and the choreographer. There is a shared awareness of the emotional implication of music. Such implication cause certain type of communication conflict that relates to difficulties in memorizing new moves for the dancers, and in lack of feedback from the choreographer's point of view. Thus, creative decisions are shaped by environmental elements such as the music and the studio space. Creativity in dance seems to be empirically observable, and thus embodied and distributed.

## Emergent Creative Style: Semantic and Communication Networks in Artistic Communities.

**Nikita Basov**, St. Petersburg State University | [n.basov@spbu.ru](mailto:n.basov@spbu.ru)

**Alexandra Nenko**, National Research University Higher School of Economics | [al.nenko@gmail.com](mailto:al.nenko@gmail.com)

The influence of social structures on creative style is an attractive research subject. This is particularly the case when we focus attention not on individual creative styles, but on creative styles of artistic communities – groups of artists involved in intensive and expressive interaction with each other. Unique creative styles of different artistic communities develop in constant (re-)interpretation of the essence of art, discussions on the themes and formats for

artworks, continuous interaction and representation of artworks in the city space. These processes are, no doubt, conditioned by knowledge and communication structures of artistic communities. We question to what extent and how creative styles depend on particular properties of such structures studying four diverse artistic communities located in St Petersburg (Russia). Semantic networks of the communities are mapped

using transcripts of dialogues between the artists and of semi-structured interviews with the artists, as well as their textual works (articles in papers and magazines, poetry, novels, etc.), and posts in social media. Communication networks are mapped through network surveys run in each of the communities. Then we calculate quantitative measures of semantic and communication networks, such as density, centralization,

average tie strength, etc. and identify positions of particular nodes in the networks. Further, we analyze the relations between the two types of networks of each artistic community. Finally, throughout comparative qualitative analysis across artistic communities we attempt to trace the complex impact on different features of creative styles made by semantic and communication networks properties.

## **Choreography “from Start to Finish”. A Collective, (inter)Corporeal, Everyday Work**

**Chiara Bassetti**, Italian National Council of Researches - CNR, Rome | [chiara.bassetti@loa.istc.cnr.it](mailto:chiara.bassetti@loa.istc.cnr.it)

I consider the process of choreographic creation – from the improvisation of short sequences to the overall structure of a dance theatrical performance – and focus on the ways in which the artwork changes and continues to change during such a collective and negotiative, situated and emergent, everyday and mundane process. Data comes from my ethnographic research on the world of dance, and include interviews, fieldnotes and video-recordings. The choreographic creative process circularly runs from improvisation to modification through repetition and co-occurent evaluation. Improvisational moments emerge amid more compositional and reflexive ones, and the other way round. Yet everything happens during performing – that is, in action. The action of knowing bodies. Sequences of movements and bodily-kin(aesth)etic configurations for single dancing

bodies are usually created on the basis of improvisation, by the choreographer (alone or with an assistant) and/or by the dancers. Yet, mostly, there is a group of co-dancers, and this allows second level configurations of dancing bodies: co-dancers are visually, spatially and often bodily in relation with one each other and the surrounding space, and this is prominent among the meaning-making practices of choreographic creation. These dimensions of choreography strongly demand collective work – even simply for the ongoing evaluation of the artwork, not to mention its (pragmatically and/or aesthetically regarded as necessary) modifications. Through rehearsals, indeed, the choreographic artwork progressively takes shape via practical adjustments, aesthetic choices, problem-solving and so on. I shall analyse in more detail this collective, negotiative process of art creation

## a05RN07 - Culture and Time

Chair(s): Carmen Leccardi (Università degli Studi di Milano Bicocca)

### Extended or Contracted Present? The Concept of Crisis through the Prisms of the Sociology of Time

Marcos Gonzalez Hernando, University of Cambridge | [mjg221@cam.ac.uk](mailto:mjg221@cam.ac.uk)

This is an attempt to cast a light over the concept of crisis through a focused analysis of the sociology of time literature, with a focus on the issue of narration. Most social theorists would agree that our contemporary societies are characterised by a process of unprecedented acceleration, in terms of the speeding up of technology, knowledge and the pace of social change itself. This diagnosis has been associated with concerns over the lack of a link between the everyday experience of social actors and the changes in society at large. This often leads to a disempowering situation, where individuals become bereft ever more conspicuously of the minimum understanding of their own circumstances that would allow the generation of a narrative (Sennett). Thus, it is often argued, crises become more likely to emerge in a world that is increasingly lived from the limited

standpoint of the short-term. This is since the emergence of moments of decoupling between the expectations and the outcome of an event become more common, and the state of normality that should precede the crisis becomes murkier and harder to define (Morin). On this point, I believe a review of the literature on the sociology of time -notably Adam, Nowotny, Morin and Koselleck- can help illuminate the problem here expounded, especially linking the distinction between *chronos* and *kairos* to the acceleration of society, and putting in contact the pervasive crisis of our accounts of the present with our no less urgent need for a narrative that permits our constitution as agents. Thus, an interesting set of problems emerges, as crises allow for the emergence of socially relevant narratives while also being the ultimate threat for their survival.

### Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Giuliana Mandich, University of Cagliari | [mandich@unica.it](mailto:mandich@unica.it)

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain "with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation" (Adam 2009) the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mische 2009) is a very important task cultural sociology has to achieve to understand action and social change. The

imaginative process of projection requires what Appadurai (2004) calls "capacity to aspire" that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technologies, media, institutions). Strongly connected with the concepts of reflexivity and creativity the "capacity to aspire"

has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through

the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

## Crisis, Social Time and the Weekend

Jill Ebrey, Manchester University | [jill.ebrey@manchester.ac.uk](mailto:jill.ebrey@manchester.ac.uk)

The twentieth century in Europe produced a compromise between labour and capital which acknowledged that 'social time' could be written into working contracts associated with paid labour outside of the home. This 'social time' was epitomised in 'the weekend', a pivotal two day 'holiday' at the end of the five day (paid) working week. Saturdays and Sundays thus became understood as a 'semi autonomous' time space during which actors had more opportunity to 'live the good life', perhaps to realise desires and pleasures not available during the week, whether that be gardening or clubbing for example. (though

this experience of the weekend may well be gendered, classed, raced and aged). This paper will discuss the importance of the weekend to social well being and will ask whether the current 'crisis', with its emphasis on market solutions at all costs, puts the weekend and thus 'social time', under question? Might it also threaten our 'proper time' or 'time for ourselves' (Nowotny:1994). Do critiques of the crisis tend to overlook the importance of 'free time' and 'leisure'? If so, is it time for us to argue once more for the importance of time spent outside of various forms of work?

## The Third Axis - An Unexplored Dimension of Social Space (and its Influence on Cultural Practices)

Predrag M. Cveticanin, Educons University, Novi Sad | [pcveticanin@gmail.com](mailto:pcveticanin@gmail.com)

Mihaela Popescu, California State University, San Bernardino | [popescum@csusb.edu](mailto:popescum@csusb.edu)

Based on data from the regional study "Resistance to Socio-economic Changes in Western Balkan Societies" (national proportional sample, 1210 respondents in Serbia), this paper explores the influence of social trajectories on cultural practices. Our starting point is Bourdieu's model of social space, in which three main dimensions are the total volume of capital, the composition of capital, and the "social trajectory", understood as change in these two properties over time. Bourdieu distinguishes between social trajectory of the class (or class fraction) the agent belongs to and individual social trajectory, which shows the evolution of the volume and structure of assets the agent's family possesses over three generations. In diagrams representing social space in France

(Distinction 1984: 126 – 131) he used data on the social trajectory of classes and data on trends of their numerical growth, decrease and stability, but did not explore the opportunities offered by his own model (in particular the analysis of individual transversal mobility, i.e. the conversion of capital). In our paper, using Multiple Correspondence Analysis (MCA), we demonstrate the significance of this ignored "third axis" of social space in the analysis of social (and in particular cultural) practices. We trace the influence of geographic/urban, educational and professional trajectories of respondents' families over three generations. Our crucial innovation is the reconstruction of social space in which the respondents' habitus was primarily formed, based on the data of the economic, social and cultural capital of

respondents' parents (at the time the respondents were children).

## Temporality in Media and Dynamics of Cultural Change

Tatiana Mozhaeva, Middle East Technical University | [tatianamozhaeva@gmail.com](mailto:tatianamozhaeva@gmail.com)

The current research deals with the concepts of time and cultural change in comparative focus. Temporal discourse models are employed in order to theorize deep cultural values and their dynamics in diachronic perspective. The theoretical points of the paper are in discussion with comparative works examining cultural, semiotic and artistic representation of time (H.A. Innis, W.J.T. Mitchell, E. Gombrich, R. Poidevin etc.). Temporality, the domain of descriptive / verbal media prevails in Eastern traditions, while spatiality, the domain of depictive / visual media is considered to be more relevant in the Western culture. Lack of interest in the problems of duration in the West and its

present-mindedness is opposed to the Eastern emphasis on eternal values, continuity and consistency. The empirical research is aimed at challenging the idea of cultural globalization by comparing temporal perspectives of mass media discourse from West European and Turkish mass media in diachronic perspective. The investigation is based on a number of crucial social and political events of recent decade such as Anders Breivik's attack in Oslo in July 2011. Analyzing temporal organization of media discourse in both Western Europe and Turkey in historical perspective, the study attempts to question the concepts of cosmopolitanism and cultural change in Eastern and Western contexts.

## b05RN07 - Communication, Media and Culture (3)

Chair(s): Hubert Knoblauch (Technische Universität Berlin)

### The Mediatization of Social Movements - Critique between Personal Expression and Social Norms

Julia Wustmann, Ludwig-Maximilian-Universität, München | [Julia.Wustmann@googlemail.com](mailto:Julia.Wustmann@googlemail.com)

Paul Eisewicht, Karlsruhe Institute of Technology | [paul.eisewicht@kit.edu](mailto:paul.eisewicht@kit.edu)

In early 2013 Germany saw a 'withering storm' of protest against everyday sexism in the media (traditional mass media as well as in formats of the so-called new media). Started by a twitter user under the hash-tag '#aufschrei' there were 79000 (re-)tweets by 15000 users in the first seven days that reported on experiences with everyday sexism or commented on these subjective critiques of the reported behavior. This 'outcry' (along with two articles on sexism concerning politicians)

sparked themed talk-shows, reports etc. on all major media outlets. We argue that this case is typical for forms of critique in our times in that there was a great amount of personal reports on new media forms that were attributed to a social movement and mediated by the traditional media. This case refers to three complexes of questions: a) are there effects of mediatization that transform the form of critique (or is the media form of communication more or less irrelevant to their

content)? Furthermore what is the functional interdependence between traditional media (and professional journalists) and new media (affected citizens)? b) what is the relation between the individual reports (tweets) and the attribution to the social movement of feminism? Or can #Aufschrei be considered as a social movement? If so c) what are the consequences for the mediatization of social

movements? By the use of a sociology of knowledge approach to discourse analysis we discuss that a) the phenomenon can be explained due to a highly individualized and pluralized critique on social behavior (via new media forms) that is b) summarized and attributed by traditional media to a social movement. We discuss this as a new form in the organisation of public criticism.

## The Many Faces of Reception Studies

Samuel Coavoux, École Normale Supérieure de Lyon | [samuel.coavoux@gmail.com](mailto:samuel.coavoux@gmail.com)

Florence Eloy, École des Hautes Études en Sciences Sociales | [florence\\_elay@yahoo.fr](mailto:florence_elay@yahoo.fr)

The “reception” of cultural products (discourses, texts, artworks, etc.) is a central concern of the social sciences. It emerges from the idea that, in order to understand a message, one should not only wonder what its producer meant, but also what their public may think they meant. Cultural studies (from S. Hall to audience studies), semiotics, the sociology and anthropology of culture, as well as cultural history (esp. around R. Chartier) all called up to such an idea. However, the meaning of reception greatly varies between authors. Some equate it with “interpretation” while others insist on “appropriation” or “attachments” (A. Hennion). The idea of reception, it seems, has several birthplaces, from Konstanz to Birmingham. This paper presents the preliminary findings of an ongoing literature survey on the various uses of the

idea of reception in social sciences. We aim at showing that (a) those perspectives are very widespread, although not always under that term and (b) there is little interconnection between the various schools. Nonetheless, (c) the sociology of culture would benefit from a critical examination of the commonalities and differences between the many approaches of reception. We argue that the identification of reception to the sole “interpretation of texts” is counterproductive, as it sets aside the various uses of cultural products. Instead, we propose a multidimensionnal definition of reception that would include 1-the way people make sense of cultural products 2-the practical production of taste 3-the uses of culture in everyday life, including sociability and 4-the way people make their way through the offer of cultural products.

## The Culture of Communication in the Public Institutions: Transparency, Accountability and Sharing in Times of Crisis.

Gea Ducci, University of Urbino 'Carlo Bo | [gea.ducci@uniurb.it](mailto:gea.ducci@uniurb.it)

The way of understanding and practicing the relationship with citizens by the Public Institutions in Europe has always differed from country to country. In fact, the culture of transparency and accountability in the public sphere is connected to the different socio-cultural characteristics of the territories, the

way of understanding citizenship and practicing it, the political-institutional welfare systems and, more broadly, the criteria of management of public affairs. These differences find a common ground and a time of recomposition in the EU communication policies of the last 15 years and in the digital

revolution, but it can be argued that they tend to decline partly because of the economic crisis that "forces" each institution to deal with the demand for transparency and citizen participation, citizens who use for this purpose increasingly the Internet and social media (engagement) (Castells 2010, 2012) (Dalghren 2010). A culture of public communication as a service (Faccioli 2000) that uses more and more the network and the participative web, is

a critical tool to keep the contacts with citizens, to provide accurate information and to motivate the institutional choices, to involve local communities in the decision-making process, to listen and build a relationship of trust, directly, without intermediaries. To this regard, case studies of public local administrations have been considered, which represent important examples of the cultural change that is underway.

## 06\_b02JS07 - Artistic Creativity Outside the World of Arts

Chair(s): David Inglis (University of Exeter)

### Making the Invisible Visible – Assessment of Creativity

Felix Albrecht, Karlsruhe Institute of Technology | [felix.albrecht@kit.edu](mailto:felix.albrecht@kit.edu)

Michaela Pfadenhauer, Karlsruhe Institute of Technology | [pfadenhauer@kit.edu](mailto:pfadenhauer@kit.edu)

In contemporary discussions, 'creativity' appears ubiquitously in diverse contexts. Beside arts, psychology, educational-, and management sciences created different concepts of and different perspectives on creativity. Creativity is described as individual characteristic, as competence, as a group- or network phenomenon, as an organizational (manageable) feature of productivity, or as structural property of regions or cities. We interpret this development as a result of the ongoing cultural change which became most obvious in the increasing demand for evaluations and indicators for, among others, competences and creativity. We identified creativity as a versatile subject in different context, which is not clearly defined, but however used as a key-concept for (organisational as well as individual) development. To examine the assessment and hence communicative construction of

creativity, we conducted an explorative research project at the Institute of Production Engineering at the Karlsruhe Institute of Technology. We observed small teams of students who had to construct independently an engine in a setting which was conceptualized to test the student's abilities in five categories, including their creative potential. To assess these so-called "competences", the instructors had a short assessment guideline (two criteria for creativity: different solutions and novel combinations). In fact, they used ad hoc-heuristics and argumentations to detect and moreover construct the students' 'creativity'. Against the common view on creativity as an individual achievement or characteristic, we consider creativity as an interactive performance in which situations' specific qualities takes part in a commonly underrated way.

## Bringing Art Back to the Creative Field– When ‘Theoretical Themed’ Art Exhibitions Performed as Experiments

Chia-ling Lai, The National Taiwan Normal University | [lai\\_chialing@yahoo.co.uk](mailto:lai_chialing@yahoo.co.uk)

Current researches on creativity extend the scope into areas of consumption-oriented fashion and popular art as well as aesthetics of everyday designs, however have pushed traditional ‘art’ into unattractive backgrounds. Actually, ‘high culture’ gradually loses its symbolic dominance with creative appeals as Bourdieu’s field theory assumes, embodied in museum exhibitions’ crisis and concerts’ greying phenomenon. This paper aims to reconsider the new roles of art in the creative field, by examining the new attempts of art exhibitions. This research draws on new museum theories applying Actor Network Theory at reconceptualising exhibitions as experimental fields (Basu and Macdonald, 2007); and it furthermore analyses the current ‘theoretical themed exhibitions’ curated by emergent curators with theoretical attempts performed as significant auteurs as film

directors (Heinich and Pollak, 1996). It argues that these new exhibition attempts– drawing critical theoretical concepts diagnosing emergent social issues, reinventing aesthetic experimental design strategies of de-differentiation and cultural convergence in engaging public and producing affect– booster creativity for art exhibitions within competitive creative fields. Taking examples of Documenta 13, Latour’s ‘Making things public’, Virilio’s ‘Unknown quantity’, MOMA’s ‘Rising current’, Bourdieu’s ‘Algeria 1960’ and Taipei Biennale 2012, this research analyzes the social condition and affect of ‘theoretical themed exhibition’. It argues for the new art creativity which focuses less on the exchangeable cultural economy than on the ‘critical creation’ resulted from blurred division of sub-field of cultural production under the new ‘experimentally’ experiential economy.

## Creativity and Innovation in (Arts) Organizations

Xavier Castañer, Université de Lausanne | [xavier.castaner@unil.ch](mailto:xavier.castaner@unil.ch)

There is much interest in innovation and creativity in the arts sector, as in the non-profit and for-profit worlds in general. Organizations in most sectors are expected to be creative, i.e. to generate new products and better satisfy their customers. Several actors have proposed that organizations across sectors could draw from the creativity and innovation of the arts sector. This paper tries to elucidate the extent to which the arts sector is creative and innovative and whether an analogical transfer regarding creativity and innovation from arts organizations to organizations with other purposes is warranted. Creativity has long been the hallmark of (individual) creators in the cultural sphere, such as composers, painters, photographers, sculptors and writers. Each of their work is a creation. However,

whether a new work is innovative is a different matter. A new work can be part of a well-known genre or style, part of a tradition. Or it can be innovative in that it departs from existing genres in a significant way. For most art organizations, the creative process takes place outside the organization or has occurred in the past (such as in museums which can exhibit pieces from different museums). Dance companies might be an exception. Further, imitating others – adopting practices from others – can be innovative for the focal organization if it is the first time it engages in such endeavor. In contrast, the organizational literature on creativity has mostly focused on creativity in organizations as the generation of novel and useful ideas (e.g. Amabile, 1988).

## Metaphorical Constructions in Play; Implications for Agency

Lise Kjølørød, University of Oslo | [lise.kjolsrod@sosgeo.uio.no](mailto:lise.kjolsrod@sosgeo.uio.no)

Human beings are in need of art in order to bear the severe reality they have made for themselves, contends the young Nietzsche: Art provides a legitimate paradigm for unconscious activity, or rather a specific instance of it; it educates us to play games with ourselves and become noble; it teaches us to distance ourselves from our own evaluations. Some emerge with 'formidable seriousness', others reach states of 'perfection and beauty', yet others apply 'ironic distance' (Kofman, [1972] 1993: 18-32). This article demonstrates how contemporary men and women create artistic metaphors in their leisure and thus

appraise audiences—including the self—of what is in their real world minds. Collectors, backpackers, long-distance sailors and numerous other participants in long-lasting, dynamic activities are able to charge their leisure with significant images. By transferring selected aspects of life into representations in play, these aspects can be made emotionally and cognitively comprehensible. Moreover, metaphorical constructions in play can enhance an actor's real world interests and powers by augmenting credible alternatives to conventional or dominating models.

## a06RN07 - Creativity and Culture

Chair(s): Hubert Knoblauch (Technische Universität Berlin)

### Creativity at Work and Creative Labour: Debating the Concept of Creativity Today

Pedro A.S.C.G. Quintela, University of Coimbra | [quintela.pedro@gmail.com](mailto:quintela.pedro@gmail.com)

Over the last decade the notion of creativity has regained a large centrality and interest in academic, technical and political circles, particularly in Europe, which is largely associated with the strategic importance that is now given to "creative economy", "cultural and creative industries" and "creative class" (see, for example, the new "Creative Europe" Programme). In this context, there is growing concern about the "creative labour", a field still poorly investigated sociologically and where the macroeconomic approaches predominate, that generally aren't concerned with the deepening of the features, conditions and modalities on which it develops. This communication seeks to map and discuss some major theoretical contributions related to the "creative labour" concept - not only in the field of sociological, but also in economics,

geography, philosophy and politics. Recognizing the pertinence and actuality of this discussion, we will seek to defend the need for a more attentive sociological look at the heterogeneity of situations that comprise the "creative labour" and the diversity of organization and operation modes (as, for example, some recent investigations, carried out in UK, have demonstrated). Finally, this paper concludes by focusing on a domain that is exemplary within the creative sector - design communication -, which is (preliminary) analyzed in the light of the specificities of the Portuguese context. To this end it is proposed an analytical model that, matching micro and macro-sociological approaches, aims to capture, in their complexity, the heterogeneity and multiplicity of discourses and contexts of professional practice in this specific domain of

the so called “creative sector”.

## Action Strategies of Creative Professionals in the Context of the Development of Creative Economy

**Tana Lace**, Riga Stradins University | [Tana.Lace@rsu.lv](mailto:Tana.Lace@rsu.lv)

**Anda Lake**, Latvian Academy of Culture | [anda.lake@gmail.com](mailto:anda.lake@gmail.com)

Cultural and creative industries of Europe are increasingly considered to be promoters of creativity and economic growth. Likewise in Latvia the crisis political agenda brought to the foreground the aim to increase the economic impact of culture and creative industries that policy planners viewed as one of the instruments for economic recovery. To achieve this aim it is important that the local business and political environment is suitable for the commercialisation of the creative product (J. Newbigin), still the capability of the creative community in this environment is extremely important. In the conditions of the crisis since 2008 cases were identified that revealed that action models of creative persons generated risks for the commercialisation of the creative product, including the strengthening of corporate relations between creative persons

and businessmen. The theoretical basis for the examination were concepts of objective rationality and communicative rationality (J.Habermas) and domains of “irrational choices” (M.Zafirovski). Quantitative and qualitative methods were applied: secondary data analysis, the survey, in-depth interviews with representatives from the creative areas as well as cultural policy planners. Data reveal that objective rationality dominates in the cooperation of creative persons from various fields, with different income levels, NGOs of creative branches, businessmen and cultural policy planners and that obstacles of communicative nature dominate in this field of activity. Moreover, employment and tax payment strategies of creative persons are significantly influenced by domains of “irrational choices”.

## Cultural configurations, Creativity and Innovation

**Michael J. Hutter**, Social Science Research Center, Berlin | [michael.hutter@wzb.eu](mailto:michael.hutter@wzb.eu)

Creative dissonance and reflexive valorization are the crucial components in technical as well as in social innovations. Dissonance involves the encounter of differing cultural configurations, and valorization is driven by culturally established practices. These processes take on very different forms depending on their situatedness in space and time, and depending on the rational and

aesthetic components of their dispositifs. These theoretical postulates were exposed to a five-year research project. The emergence and establishment of new technologies, fashions, work routines and products was studied in a series of cases where multiple cultural configurations were at play. The paper reports results from these studies.

## Cultural and Creative Industries as an Antidotum for the Crisis in an Old Industrial Region? The Case of Upper Silesia

Elisabeth Anne Sekula, Academy of Fine Arts – Warsaw & University of Social Sciences and Humanities | [esekula@ibpp.pl](mailto:esekula@ibpp.pl)

The main goal of my paper is an attempt to answer the question about role of CCI's in the struggle of effects the crisis in EU in an old industrial region. Whether the social capital is strong enough to overcome these effects and answer for new challenges? Is the contemporary crisis a opportunity for building creative cities in the region traditionally associated with coal industry? The first big challenge of Silesia (industrial region in Poland) was in 1989 when the transformation procesess started. System transformation and industry restructurization seems to be the turning point for social changes in Silesia. Restructurization processes that started, were not supported by the institutional environment. Regional job agencies followed by district job agencies focused on registering the unemployed, with no activizing initiatives

oriented towards the re-inclusion to the labour market. Now during/after the crisis there is a second chance for new restructurization of the region. Restructurization open for society, based on the social creativity and new ideas for building modern region which can answer for challenges of the future. Is there possible to pass from the economy based on coal to the economy based on cultural and creative industries? Is there cooperation between three regional actors: entrepreneurs, policy makers and institutions established for creation and development of innovations and creative industries? What is role of culture industries in process of increasing social capital, feeling solidarity and justice? I will try to answer this question basing on results of research conducted in second quarter of 2012.

## Creative Photographing in the Digital Age

Thomas S. Eberle, University of St Gallen | [thomas.eberle@unisg.ch](mailto:thomas.eberle@unisg.ch)

A century ago, photographing was an activity of professional photographers and a few amateurs; since the digital revolution it has become a pervasive cultural practice. Basically, taking a photo is a creative act. A photographic gaze requires imagination, as a picture can be composed in very different ways. There are certainly different degrees of creativity discernable: some pictures are taken as quick snapshots, others are carefully composed with regard to many different aspects. Technological innovations produced a wide array of new possibilities for creating photos, not only at the moment of taking them but also later when re-working them on the computer. This paper explores creativity in the context of photographing. First, a phenomenological perspective is chosen in

order to analyze the act of making photos from a subjective perspective. Second, a sociological perspective is chosen in order to analyze some of the cultural practices of photographing. Both perspectives employ different methods: egological reflective analysis on the one hand, ethnographic research on the other. Both emphasize different aspects of the same coin. Both, however, shed different light on the very question what creativity is: from a subjective perspective creativity refers to the embodied acts of a subject and its intentionalities; from a sociological perspective creativity is embedded in social and cultural practices of communication, negotiation and judgment. Photographing that is experienced as creative on the subjective level need not necessarily be judged as creative on a societal level. Creative,

digital photographing is explored in this [possible] tension.

### **The Contribution of Media Gatekeepers in the Process of Artistic Consecration: The Case of Oriental Music in Israel**

Simona Wasserman, Open University | [simona.wasserman@gmail.com](mailto:simona.wasserman@gmail.com)

For more than a century Oriental music in Israel was considered inferior and alienated from main culture. Yet in the past two decades, this marginal repertoire has undergone a process of legitimization, which eventually consecrated it as Art Music. The cultural agents responsible for this transformation operate in major arenas: the academy, musical institutions and the media. This essay will discuss the contribution of media gate-keepers to this process of canonization. The group of media professionals consists of journalists and critics in the printed press, news editors and producers in television networks and music editors in radio stations. The models of operation they adopted cover all areas of journalism: information, in-depth commentary and critical reviews. Information: Oriental music concerts and festivals were covered in press articles and television programs and

constantly brought to public knowledge. Many events were presented in contexts of high culture. In-depth commentary: Documentaries and interviews held with Oriental musicians offered a profound understanding of their biographies, motivations, education in both Western and Oriental cultures and commitment to tradition. Critical reviews: Music critics defined Oriental music as classical, and not less worthy than Western music, and presented the musicians as virtuous artists. All these powerful agents coalesced in a joint effort to legitimize an oppressed culture. They related to Oriental music as a serious cultural field and established its position in the local canon. They attributed Oriental musicians with sophistication and enabled them to form a cultural elite. Consequently they carried a process of social change.

### **(In)determinate Forms of Communication. An Empirical Case Study on the Emotionalized Economy**

Julian Müller, Ludwig-Maximilians-University, Munich | [julian.mueller@soziologie.uni-muenchen.de](mailto:julian.mueller@soziologie.uni-muenchen.de)

Victoria von Groddeck, Ludwig-Maximilians-University, Munich | [victoria.v.groddeck@soziologie.uni-muenchen.de](mailto:victoria.v.groddeck@soziologie.uni-muenchen.de)

We want to shed light on the culture of economy, especially the interlacing of modern capitalism and emotionality. We start with an empirical observation: as much as capitalism

is intruding our emotional life, also a concurrent emotionalization of economy is observable. The borders between business and emotion seem to become more and more

indeterminate. On behalf of an empirical example about value management in business companies we can show that values like 'respect', 'sustainability', or 'responsibility' have become an integral part of economic self-descriptions and that thereby values establish indeterminate forms of communication which can be read differently at the same time. For example the value 'responsibility' might serve as a strategy for guaranteeing long-term profit as well as a form to express inner feelings about how to be treated at the workplace. Values therefore can be seen as media that make indeterminacy addressable exactly by not delivering determinacy. As one can see, we are not so much interested in economy as a macrosociological entity, but as a

communicative practice. We look upon forms of communication – by the means of an theoretical standpoint which takes 'communication' as its fundamental term and tries to combine elements of practice theory, pragmatism, and systems theory – that stabilize themselves by oscillating between indeterminacy and determinacy. Our aim is to use the case of the emotionalized culture of economy to introduce and discuss the figure of (in)determinacy as an inscription which enables empirical descriptions which do not stick to a dichotomy of process and stability, but emphasize the point that social practices unavoidably have to rely on indeterminacy to move on.

## Television in the Time of Complexity. Between Crisis and Renaissance

Mihaela Gavrilă, Sapienza University, Rome | [mihaela.gavrila@uniroma1.it](mailto:mihaela.gavrila@uniroma1.it)

Some people talk about the impendant “death” of television; others foresee a longer existence, even in altered cultural and technological landscapes. Nonetheless, the recurring word which nowadays rules over national and international discussion is, undoubtedly, crisis. This work aims to confront the television issue by getting a sense of the complexity of the fact and assuming both a historical outlook and an extensive eye on current markets. It is, indeed, well known that etymologically crisis means “the time to choose”, “to reach a decision”. This choice mainly regards the need to redefine the communication deal between italians and audiovisual language. What are the analytical features, both lexical and technological, from which is possible to start over new and revive a television good not only for celebrating the present time but also able to enact cultural and symbolic essences of

change to come? Can this moment of stasis, that is seen by some opinion leaders as a time of cultural regression, become the chance for a different placement of the media, now able to fit with the deep changes that take up the technological, social and cultural background, in which we are living today? Then, is it possible that the complexity of current tv market will become an opportunity to rethink a new pattern for a television of the crisis? Destabilized by modern times crisis and the internet typhoon, traditional cultural industries require to be re-placed. This sort of redefinition cannot except such a fundamental field, like television is. If the new television was reinterpreted according to modern times' needs, it could become part of the strategy to overcome social, cultural and even economical crisis.

## 07\_b02JS07 - Artistic Practices and the Conditions of Creativity

Chair(s): Hubert Knoblauch (Technische Universität Berlin)

### Artistic Practice and the Studio

Christian Morgner, University of Lucerne | [christian.morgner@unilu.ch](mailto:christian.morgner@unilu.ch)

There are a great number of books with titles such as 'Inside the artist's studio' or 'Artists in their studios'. However, these books are mostly collections of interviews and pictures and are not systematic studies of the artist and his or her studio. They do not address the question of how the studio is embedded in an artist's actual practice, or how the artist's actions turn a space into a studio, or how these two processes interact to reinforce one another. This presentation will pay attention to the studio and artistic practice, seeing the studio as being more than just a workplace where items are made, books are written or music created. As the artist Wolfgang Tillmanns said, 'The studio is not only a place for making, but even more so a place for looking, holding, viewing, hanging, thinking about pictures and ideas. And rolling out,

assembling, rejecting, archiving, and the downtimes in between.' This presentation will focus on these other 'products', such as artistic identity, the studio as a frame or border within which the artist can create a world of his own, the regulation of interactions with other artists, and the construction of the studio as laboratory in which expressive practice can flourish. These observations are based on ethnographic research on artists living and working in Dakar, London, New York and Beijing. The author has spent several months in these locations, has shadowed the artists in their studios, and documented these places through pictures as well as conducting in-depth interviews with the artists. The analysis of the resulting material provides a systematic account of how the studio considerably shapes the creative practice of an artist.

### Underground Careers in Lisbon do-it-yourself Music Scenes

Rui Telmo Gomes, Observatório das Atividades Culturais, Lisboa | [ruigomes.oficina@gmail.com](mailto:ruigomes.oficina@gmail.com)

In recent years, new popular music acts have made themselves known in Portugal through their self-producing strategies (publishing with their own small labels and promoting shows on their own). Cooperation networks (Howard Becker) within local musical scenes (Andy Bennett) engage young musicians, amateur and professional gatekeepers and strongly supporting even if small audiences. Those networks - referred to as the underground scene - combine conviviality, artistic production and ritual performance. The collective creative work (Paul Wills) implied in underground music-making is of course a powerful expression of everyday aesthetics in

youth cultures contexts. Another key aspect to be addressed in this paper is the balance between identity practices and professional aspirations. On the one hand, authenticity is a recurrent issue among underground musicians and drives them to make music meaningful to their peers. On the other hand, young musicians find themselves in a liminal (Victor Turner) stage in their lives trying to translate their creative output into a way of living. Drawing on extensive fieldwork conducted throughout the 2000s decade in the metropolitan area of Lisbon, I will consider musical pathways (Ruth Finnegan) and leisure careers (J.MacDonald & T.Shildrick) resulting

from the underground experience. Most common “career profiles” are discussed, ranging from musician to music

agent/promoter, but also including a different kind of profile such as community arts practitioner and social worker.

## Social and/or Artistic Challenges in Creating a Learning Environment for Performing Art Students into an Institution for Elderly People - Experiences and Examples.

**Helka-Maria Kinnunen**, Metropolia University of Applied Sciences, Helsinki | [helka-maria.kinnunen@metropolia.fi](mailto:helka-maria.kinnunen@metropolia.fi)

**Pieta Koskenniemi**, Metropolia University of Applied Sciences, Helsinki

PARTNERS IN CO-OPERATION Kustaankartano Institution for Elderly People and the Department of Performing Arts in the Metropolia University of Applied Sciences in Helsinki, Finland, with Leiras-Takeda Medicine Company. The Department of Performing Arts focuses on applied theatre studies. The curriculum emphasizes on learning by doing / learning in social context. THE CASE In 2013 there are one million retired people in Finland - that is one 5th of the whole population. People live longer – who will do all the work in the country? Who will take care of the old? And what makes life good during one’s late years? What has art to do with meaningful life? Public discussion argues about the consequences for the society, and one of the issues is, how the well-being of the old will be provided. Many of

the retired are healthy and independent, but many of them have disabilities that make them dependent of special care. The Dept. of Performing Arts created a learning environment into an institution for elderly people to inquire the problem of humanely dignified senescence. How to strengthen significant every-day-life in old people s’ nursery homes? And how to apply artistic practices for this purpose? PEDAGOGICAL AIM The pedagogical aim for the project is to create and adapt collaborative methods in practice. This interactive performance with the inhabitants in Kustaankartano creates a practice-as-research process which uses a variety of artistic and ethnographic means of inquiry.

## Patterns of Creativity in Dance and Music: How Interactions Shape Creativity

**Simone Belli**, Universidad Carlos III de Madrid | [simone.belli@uc3m.es](mailto:simone.belli@uc3m.es)

**Dafne Muntanyola**, Autonomous University of Barcelona | [dafne.muntanyola@uab.cat](mailto:dafne.muntanyola@uab.cat)

Dance is a discipline of artistic creation which includes a key duality: its social dimension, also called relational, that starts with a group of people dancing, and its technical dimension, which includes the production of new steps and moves. The richness of dance comes from the need to work with an individual body, which is not transferable, with its emotions, skills and physicality. But the body of the dancer belongs to plural context, crossed by artistic and social

traditions, which locate the artists in a given field. We address the interactive patterns of a British dance company through a video-aided ethnographic work, which included observation and interviewing. Six cameras were used to record the 2 months rehearsal process. At the end of each day, the choreographer and four dancers were selected and interviewed. We considered the choreographer as well as the dancers experts in their domains, with superior

knowledge about their activity. As results, the creative decisions involved in dance rehearsals of a new choreography differ for the dancers and the choreographer, and have necessarily a communicative basis. Creative decisions are shaped by environmental elements such as the music and the studio space. There is shared awareness of the emotional implication of

music. Such implications cause certain type of communication conflict that relates to difficulties in memorizing new moves for the dancers, and in lack of feedback from the choreographer's point of view. Creativity in dance seems to be empirically observable, and thus embodied and distributed.

## **Routine and Creative Practice. A Study of Arts and Crafts**

Anne Jourdain, Université de Picardie Jules Verne, Amiens | [anne.jourdain@gmail.com](mailto:anne.jourdain@gmail.com)

Based on 92 interviews with artist-craftsmen (cabinetmakers, ceramists, glassblowers, weavers...) and about 15 observations in workshops, our analysis of artist-craftsmen's production work leads to reassess the role of routine into creative practice. In the vein of existing sociological works which emphasize the social dimension of creativity (H. Becker, 1982; M. Buscatto, 2008; A. Strauss, 1994), our study of arts and crafts breaks with the common conception of creativity as a non-routine activity. Such an aim is favoured by the fact that artist-craftsmen do not deny the technical aspects of their production work, contrary to artists from "major art" worlds (R. Moulin, 1983). As a matter of fact, artist-craftsmen insist on their numerous routines which have been incorporated through years of

practice and which contribute to their technical skills. Not only do these routines enhance the possibilities of innovation which must be technically realisable, but they also foster creativity through "intuitive leaps" (R. Sennett, 2008). Our presentation's first part therefore lays the emphasis on the dynamic aspect of routine, which has long been ignored (M. Breviglieri, 2006). Of course, routines also impose limits to creativity and that is especially why the different objects produced by a same artist-craftsman or a same arts and crafts company look similar. Our second part thus focuses on the links between routines and production styles. Routines are finally seen as frames for creative practice, which contribute to the emergence of production styles.

## a07RN07 - Popular Culture

Chair(s): David Inglis (University of Exeter)

### Popular Music and Romanticism: The Ambiguity of Individual Selection Logics in the Flemish Alternative Mainstream Circuit

Gert Keunen, University of Leuven | [gert@briskey.be](mailto:gert@briskey.be)

Rudi Laermans, University of Leuven | [rudi.laermans@soc.kuleuven.be](mailto:rudi.laermans@soc.kuleuven.be)

Within popular music studies, it is common practice to differentiate between mainstream and underground, which fits in with P. Bourdieu's general distinction between fields of large-scale and restricted cultural production. This paper premises the existence of a third segment, i.e. alternative mainstream, which is precisely characterised by the mix of economic and symbolic rationalities. The combination of economic and artistic considerations produces within the alternative mainstream circuit a structural ambiguity. In order to map this tension, we interviewed 24 gatekeepers who occupy diverse positions within the Flemish alternative mainstream circuit (i.e. radio and concert programmers, label and booking office managers, and journalists). Our analysis of the interview material focuses on the factors that the respondents invoke when discussing the positive or negative valuation of bands or their

music in practices such as reviewing, programming or contracting. We distinguish several underlying selection logics. The most important ones are a positional logic (to act from the occupied field position), an organisational logic (economic cost-effectiveness, and also professionalism), and an individual artistic logic (to decide or to appreciate from personal taste). We start from the latter logic, which is highly romantically coloured, and subsequently demonstrate how the respondents implicitly commit themselves to a widely shared definition of legitimate musical taste. We then show how positional (or social) and organisational (or economic) considerations give the discourse of the interviewees a more ambivalent character. In our discussion we particularly focus on the ways through which they try to 'defuse' this ambiguity.

### Gatekeeping Foreign Cultural Products in Differing Contexts: A Comparative Case Analysis of Japanese Comics (Manga) Publishing in France and the US

Takeshi Matsui, Hitotsubashi University | [t.matsui@r.hit-u.ac.jp](mailto:t.matsui@r.hit-u.ac.jp)

This paper, inspired by theories of cultural production, analyzes Japanese comics (manga) publishing in France and the US. These two countries are compared because they have almost the same market size although the population of France is about one fifth of the

US. Special focus is given to the roles of local publishers in both countries as gatekeepers (Hirsch 1972) for introducing foreign cultural products. Leading manga publishers in the US have been interviewed since 2007. Five major French manga publishers were interviewed at

the Japan Expo 2012 in Paris, the largest Japanese popular culture festival in Europe. There are two major findings. First, there are strict moral codes on sexual and violent expressions frequently found in mangas in the US, while the French market is much more tolerant. US publishers have to censor mangas and establish age rating system to cope with criticism from parents and demands from public libraries. However, censorship is rare and there is no age rating system in France.

Second, most US manga readers are boys and popular titles are action-oriented such as Nartuto, a story about an adolescent ninja hero, whereas French readership includes adults as well as children. For example, Jiro Taniguchi, whose stories are contemplative and focuses on slices of life of ordinary people, won the Alph'Art of the best scenario at the Angoulême International Comics Festival. However, he is not at all popular in the US.

## Music as a Field of Social and Cultural Interaction: the Case of Arabesk

Nezihe Başak Ergin, Middle East Technical University | [nbasakergin@gmail.com](mailto:nbasakergin@gmail.com)

Zeynep Baykal, Middle East Technical University | [zbaykal83@gmail.com](mailto:zbaykal83@gmail.com)

Music is usually considered as one of the cultural elements. Even with this kind of position, the sociology of music could not acquire the value it deserves throughout the world. In Turkey, apart from recent attempts, within the framework of reflections of the social on music, the studies on music sociology stays limited and superficial. Until recently, the studies of ethnomusicology and sociology produced knowledge separately, which could not challenge the existing general knowledge so could not go further. This study aims to make a holistic analysis of the relationship between music and society while analyzing arabesk type as more-than-one of the sub-issues, as a product of popular consumption culture but across social classes including upper classes and not a mere reflection of

social class but as a field where different social dynamics interacts. Another hypothesis of the study is that arabesk, as an entity having roots in different kinds as well as an earlier history; it is not an homogeneous type including musical and cultural differences, being shaped throughout time. The study will focus on production and consumption processes of arabesk with the help of different methods varying from textual analysis to catch changes to interviews that will be made with both musicians and listeners from different classes. One of the basic question of the study is whether by means of industrialization of culture, arabesk come up as a milieu where social boundaries evaporated and cultural transitivity and slumming become much more possible or not.

## Cosmopolitan Dispositions and Social Critique: Popular Music and the Emergence of an Aesthetic Public Sphere in 1970s Italy

Simone Varriale, University of Warwick | [simone.varriale@gmail.com](mailto:simone.varriale@gmail.com)

Cultural sociologists have recently considered the relationships between civic engagement and popular culture, showing that the latter may be mobilised as a symbolic resource for political participation (Street et al. 2012), and that popular media act as an 'aesthetic public sphere' (Jacobs 2012) through which new

forms of cultural citizenship and participation are expressed. However, research on the relationships between popular culture and civic engagement remains occasional, and existing studies have not explored the contribution of globalisation to the emergence of 'local' public spheres enabling new aesthetic dispositions

(Regev 2007) and practices of engagement. This paper will present the findings of a three-year research about the Italian popular music press, and will focus on the forms of political critique supported by music magazines between the years 1973-1977. Indeed, during these years the artistic legitimization of Anglo-American popular music supported a broader social critique to Italian society. As a result, newly established magazines became sites of public debate for a relatively educated young readership questioning the practices of

cultural, political, and economic institutions, other than the dispositions and tastes of older generations. In this respect, the paper will look at the formats of critique and debate which were either supported and stigmatised by different magazines. The project is based on archival research and employs music magazines as primary data. It combines field theory (Bourdieu 1993) with discourse and content analysis, providing both a social history of the music press, and a thick description of journalists and readers' public interventions.

## So You Think You Can Grunt: Gender and Musical Careers in Online and Offline Metal Scenes

**Pauwke Berkers**, Erasmus University, Rotterdam | [berkers@eshcc.eur.nl](mailto:berkers@eshcc.eur.nl)

**Julian CF Schaap**, Erasmus University, Rotterdam | [jcf.schaap@hotmail.com](mailto:jcf.schaap@hotmail.com)

**Julia Peters**, Erasmus University, Rotterdam | [peters@eshcc.eur.nl](mailto:peters@eshcc.eur.nl)

Popular music plays an essential role in the mediated lives of adolescents. Pop music is regularly used for identity work, oftentimes situated in local and trans-local music scenes. Music scenes in general – and metal scenes in particular – are highly stratified along gender lines. First, metal music is often defined as a form of male rebellion vis-à-vis female bedroom culture. Furthermore, learning to play in a band is largely a peer-based – rather than individual – experience, shaped by existing sex-segregated friendship networks. The emergence of the Internet and online social media have led to virtual scenes, resulting in a context collapse in the traditional distinction between public (male) and private (female) scene. Furthermore, video sharing website YouTube allows women (and men) to produce metal music without needing an actual band. As such, online scenes might have

created new modes of social conduct which affect gender inequality. Examining the understudied relationship between online and offline music scenes, this paper addresses to what extent female and male musicians navigate online metal scenes differently, and how this relates to the gender dynamics in offline metal scenes. In order to answer our research question, we examine vocalists ('grunting') and instrumentalists performing extreme metal on video-sharing website YouTube. First, we conducted a quantitative and qualitative content analysis of YouTube user-comments (utterances) of males and females performing extreme metal covers. Second, the analysis of online scene-interaction is followed by life-history interviews, mapping the biographical trajectories of male and female cover performers.

## b07RN07 - Communication, Media and Culture (5)

Chair(s): Motti Regev (Open University of Israel)

### **Tweet-Celebrities and Crowd-Funded Initiatives, Crisis or Re-Birth of Journalistic Culture(s)? A Case Study from Italy**

Giovanni Boccia Artieri, University of Urbino Carlo Bo | [giovanni.bocciaartieri@uniurb.it](mailto:giovanni.bocciaartieri@uniurb.it)

Augusto Valeriani, Università di Bologna | [augusto.valeriani@unibo.it](mailto:augusto.valeriani@unibo.it)

On February 2011, Claudia Vago, a fast grown Italian “Twitter personality”, got a project to cover from the field the Occupy Wall Street movement in New York and Chicago funded by the crowd online. Her story represents an interesting case to investigate the ongoing process of re-negotiation of roles, statuses and balances of power involving the whole the Italian online information ecosystem and its highly diverse communities of inhabitants. What happened in fact was that someone without any (professional or amateurish) background in journalism, not having the authority of a popular blogger nor the credential of a leading tech-savvy figure, had developed -exclusively within the Twitter milieu- enough reputation and attention to get a journalistic project funded in few days. The emergence of actors like Claudia Vago disrupts

some of the traditional dicotomies within the online information ecosystems: journalists vs bloggers, professionals vs amateurs, tech savvies vs digital ignorants, media personalities vs common citizens, blurring borders between different “social fields” (Bordieu 1997) and cultures accepted within such fields (Hannerz 1998). Analyzing (through interviews, questionnaires and content analysis of articles, blog-posts and social media conversations) the different “readings” of Claudia Vago’s crowdfunded initiative by journalists, web professionals, activists, bloggers, simple social media users and also crowdfunders of the initiative, the article aims at discussing how all these different actors were competing over the authority and power (Hall 1978) to define legitimate roles, values, practices within the system.

### **Cultural Journalism and the Economic Crisis in Portugal**

Celiana Azevedo, Universidade Nova de Lisboa - FCSH | [celianaazevedo@hotmail.com](mailto:celianaazevedo@hotmail.com)

News are the life blood of democracy and news journalism is often seen as contributing vital resources for processes of information gathering, deliberation and action (Fenton 2010). At the same time, the traditional business model for delivering news is in crisis, with newspapers readership declining in almost every country. Besides that, Europe and, more specifically, Portugal is passing through difficult times. Since 2008, Portugal has been confronted with challenges related with the economic and social crisis. This research proposes to carve an in depth portrait

of the cultural coverage from one of the main newspaper in Portugal: Diário de Notícias. The objective is to identify and analyse the front pages containing any mention to a cultural theme, and how it was treated in the related inside pages. The empiric research analyses two different periods in the first decade of the XXI century: 2000 and 2010. The diachronic dimension of the two years analysis is related to the possibility of comparing two different contexts of Portugal or more specific, a year previously the economic and social crisis and another during the crisis. We are interested in

creating a social history (Schudson 1978) of cultural journalism, made of detailed reports of how cultural news coverage changed between 2000 and 2010 in the *Diário de Notícias*. This implies to combine the knowledge obtained through the interviews and participant observation with empirical data,

collected in the private newspapers archive, in order to quantify how the number of cultural pages, specialized supplements, human and material resources invested in cultural coverage changed over 10 years. According to Pierre Bourdieu field theory, macrostructures undermines

## Journalism and the Redefinition of Intellectual Work in Brazil

Alexandre B. Idalgo, UFSC - Universidade Federal de Santa Catarina |  
[a\\_bergamo@hotmail.com](mailto:a_bergamo@hotmail.com)

The introduction of the “Style books”, in 50s, in Brazilian journalism represented the great “dividing landmark” on the history of the profession, not only because it represented a separation from Literature, but the creation of a specific language as well. It also represented the beginning of a conflict between technical and intellectual work, which is present in the profession until this day. The imposition of a degree to practice the profession, from 1969 to 2009, intensified this conflict by creating conditions so that the non-journalists were slowly eliminated from the space of the journals and, with that, to construct a professional identity different from other professions, specially the intellectual ones. It was created a professional identity that had linguistics as its basis and that was spread by those “Style books”, placing in opposite sides not only the journalists and the writers, but

also the old and the new in the profession; the more intellectualized and the more technical. Consequently, the forms through which the new generations come in contact with the culture, language, narratives, analysis and reflections, intellectual production, critics, and also with the facts themselves, were modified. This essay’s proposal is to seek an articulation between the changes observed in journalism for the past few decades and the redefinition of intellectual work and the new forms of contact with Culture. For this research different sources were utilized: the “Style books”; testimonials from professionals; official documentation from the representative associations; thesis and other academic productions; and surveys elaborated with the objective of mapping and defining the Brazilian journalist’s profile.

## 08\_b07JS28JS34 - Sport and Religion/Spirituality

Chair(s): Stef Aupers (Erasmus University, Rotterdam), Davide Sterchele (Leeds Metropolitan University), Hubert Knoblauch (Technische Universität Berlin)

### **“If you're Jewish how Can you not Believe in God?” Sport and the Challenge of Interfaith Dialogue in the Absence of Faith**

Lucy Mayblin, University of Sheffield | [L.mayblin@sheffield.ac.uk](mailto:L.mayblin@sheffield.ac.uk)

This paper reports on research conducted as part of an FP7 project, 'LIVEDIFFERENCE', which is investigating how people live with difference in Europe, and how 'meaningful contact' is, or might be encouraged, to occur. Here, I discuss one case study, a voluntary sector interfaith sports project in a British city. The project sought to bring Jewish and Muslim young men together across religious, geographical and class based divides in order to expose them to people who are different from themselves, open dialogue, and garner mutual understanding. These goals were not automatically achieved by sport activity itself and additional work was necessary to encourage meaningful interaction. And yet, depending on the 'common ground' of faith to bring the young men together brought unforeseen challenges: many of the Jewish

young men did not believe in God, they described themselves as 'secular' or 'cultural' Jews. While this identity was acceptable in their faith community, for the young Muslims such an idea was incomprehensible. For them, believing in God was the central tenet of their imagined commonality with their Jewish counterparts. The issue came up time and again: "if you're Jewish how can you not believe in God?" This paper therefore explores themes of religious identity and the ways in which sports projects are able to facilitate dialogue between diverse groups. The necessity of a central common interest, such as religion, above and beyond the sport itself, in enabling 'meaningful contact' is discussed, as are possibilities and limits of organizational strategies aimed at enhancing participants' reflexivity.

### **Manga, Wuxia and (New) Religious Syncretisms. The Orientalization of Western Imaginary, from Osamu Tezuka to Contemporary Oriental Disciplines**

Alessandro Porrovecchio, University of the Littoral Opal Coast | [alessandro.porrovecchio@gmail.com](mailto:alessandro.porrovecchio@gmail.com)

A new interest in various forms of spirituality and "mythical orients" is emerging in some subcultures of contemporary society. Wuxia movies, mangas, sushi bars and martial arts are some significant case studies to analyze the on-going orientalization process. These phenomena have become part of many people's daily life and have affected the ways of

dress, the way of eating and other major changes, as values, ethics and morality. To explore the orientalization process, in a first step I introduce some features of the diffusion of the "mythical orients" in the Western imaginary since the sixties. In particular, I focus on some media products (for example, mangas and wuxia movies) that supposedly

played an important role in arousing interest in Other worlds. In this stage I'll refer to some media theories, in particular to Gerbner's cultivation theory and to the medial socialization effect. In a second step I focus on the imaginary embodied in some oriental disciplines. I refer to some results of a research that I'm conducting in some martial arts gyms, starting from my experience as an instructor. In that context I performed an

ethnographic research, I gathered several in-depth interviews with some masters, beginners, fighters and therapists, and I analysed the interactions within some online communities (virtual ethnography). This last method allowed me to come back to the first step, and to focus on how some features of the media imaginary are mediated through the interactions within the virtual communities.

## Embodied Spirituality in Yoga Practice

Clemens W. Eisenmann, University of Bielefeld | [Clemens.Eisenmann@uni-bielefeld.de](mailto:Clemens.Eisenmann@uni-bielefeld.de)

In the field of contemporary spirituality, bodily practices like yoga are attributed central importance for achieving specific 'personal experiences'. Thus in ethno-theory, the body mediates between spiritual experiences and knowledge of salvation, although many experiences, like the perception of chakras and energies, go explicitly beyond the physical, referring instead e.g. to the 'true self'. This leads to the central question of my presentation: What is the role of the body in the construction of spirituality? With regard to yoga, Marcel Mauss already assumed a 'socio-psycho-biological' connection between 'mystical states' and 'techniques of the body', and thereby suggested it as an intriguing case for analysis. However, looking from a sociological point of view at a group of people standing on their heads is analytically and methodologically challenging. The sociology of

spirituality has mainly focused on macro phenomena like secularisation, individualisation, or subjectivisation. Drawing on recent endeavours in practice theory and sociology of the body, I sketch an approach, which considers the actual yoga practices and the role of the body in their relation to the construction of spirituality. Based on my ethnographic fieldwork and video recordings, I will show how the body becomes relevant on various levels ranging from the 'discursive body', over bodily interactions, indication, mediation, representation, to the actual lived body experience. I will argue that by taking the lived body experience into account, practice theory needs to be complemented by phenomenological considerations, which also calls for further methodological reflection to recognize the multiple dimensions of embodiment in yoga practice.

## a08RN07 - Culture, Heritage and Memory

Chair(s): Rudi Laermans

### European Memory Politics as a World-Cultural Project: Transnational Regulation, Cosmopolitan Rhetoric, and Professional Framing

Anna Leidinger, Freie Universität Berlin | [anna.leidinger@fu-berlin.de](mailto:anna.leidinger@fu-berlin.de)

Sebastian M. Büttner, Friedrich-Alexander University, Erlangen-Nuremberg | [sebastian.buettner@soziol.phil.uni-erlangen.de](mailto:sebastian.buettner@soziol.phil.uni-erlangen.de)

Collective memory is usually conceived as a matter of national politics; a playing-field of diverse political interests and fractions heading for recognition and sovereignty over the interpretation of history. In contemporary Europe, however, a lot of effort is invested in overcoming national framings of history and establishing distinctly 'European' topoi of memory. This is the major concern of this contribution, which aims to shed light on the various efforts dedicated to create a 'European' memory culture, especially since the EU enlargement in 2004. Based on analytical premises of the so-called 'world-polity-approach' (Meyer et al.) we interpret European memory politics as a distinctive cultural project which is driven by particular political agents and embedded in particular practices of cosmopolitan professionalism. It can be observed that the cultural practice of

Holocaust memory has become a role model of contemporary transnational memory politics, and, thus, constitutes a highly generalized 'world-cultural' practice these days. In loose reference to the prototype of Holocaust memory attempts of memory politics are linked with highly specific normative concepts, such as 'tolerance', 'fighting racism', 'minority rights', 'rule of law' and so forth. This is especially true for the new attempts of 'European' memory politics. A wide range of agents, e.g. MPs of the European Parliament, but also historians and social scientists, aim at promoting distinctly 'world-cultural' narratives of memory and create transnational networks. By examining these networks, their rhetoric, and practices we intend to highlight the particular world-cultural character of memory politics in contemporary Europe and its ambivalence.

### Public Sociology and Community Heritage in the UK: A Third Stream example for Sociological Research?

Richard A Courtney, University of Leicester | [rac16@le.ac.uk](mailto:rac16@le.ac.uk)

This paper presents findings from the UK's Arts and Humanities Research Council's (AHRC) research development theme on cultural heritage. The paper uses Burawoy's notion of Public Sociology to argue that the AHRC's research agenda to engage the public in arts and humanities research presents a model of the University of Leicester's Third Stream activities. The project funded by the AHRC was a public engagement exercise

designed to stimulate co-production and co-delivery projects between the University of Leicester and a diversity of local associations interested in cultural heritage. The project culminated with a number of successful research grants awarded to local associations to explore their local cultural heritage with the University of Leicester as a partner organisation. Despite this project being largely co-ordinated in the University's College of Arts

and Humanities, the nature of the relationship created with local associations was an example of the way in which Burawoy views the civic benefits of academic endeavour. The paper argues through the use of case study material on the co-development of research themes with local associations the importance of sociological insight in the articulation of community identity through the heritage paradigm. The paper concludes by highlighting

the positive role of a sociological imagination to the empowerment of community through the articulation of heritage. In this way it presents examples from arts and humanities that can be explored in relation to sociological research. It also makes a number of recommendations on cultural policy in terms of the promotion of diversity and the management and allocation of public resources to community heritage in an age of austerity.

### **“Diaz - Don't Clean Up This Blood” Cinema and Public Knowledge of the 2001 G8 Summit in Genoa (Italy)**

Anna Lisa Tota, University Rome III | [tota@uniroma3.it](mailto:tota@uniroma3.it)

The paper focuses on the relation between cinema and representation of controversial events, especially in those cases where justice is absent and the filmic representation can be used to shape the public opinion. *Diaz*, a 2012 Italian-French-Romania film directed by Daniele Vicari, focuses on the attack of the Diaz school in Genoa by the police during the 2001 G8 summit. In that building there were protesters against the international summit on the night between 21 and 22 July 2001. It is based on the testimonies and reports from judicial processes. During the raid the police violently attacked those who were in the school, injuring 82 people out of a total of 93 arrested. 63 arrested were taken to hospital and 19 were taken to the police station of

Bolzaneto, where they were tortured. According to Amnesty International these events represent: “The most serious suspension of democratic rights in a Western country since the Second World War.” The paper analyses how the film reconstructs the event and to what extent it contributes to produce its public knowledge. The filmic text uses a very realistic representation of the violence against the victims. It is argued that this way of representing violence can have the aside effect to transform the spectator in a victim of 4th level. In a context where the violation of all democratic rights is so evident is it necessary to narrate violence in such a way?

## b08RN07 - Cultural Bodies

Chair(s): David Inglis (University of Exeter)

### 'I Have a Tattoo, Do you Have One?': The Place and the Meaning of Tattoos within the Popular Culture as a Body Modification

Cihan Ertan, Akdeniz University, Antalya | [cihanertan1@gmail.com](mailto:cihanertan1@gmail.com)

Cultural consumer goods and their appearances through body provide individuals for expressing themselves and, these also produce a symbolic text which is open to be read. Thus, body modification is a significant way for individuals in order to create actively meaning and present themselves to others. Tattoo, as a kind of body modification, has a cultural and individual meaning and it differs considerably from the other consumer goods of popular culture in many aspects. Individuals consume tattoos independently of culture industry in order to create their own variety of meaning although tattoos are being appropriated by culture industry. In this context, tattoo, as a cultural consumer good, should not be conceived only in terms of culture industry and, the individuals who consume tattoo could not also be reduced to the passive recipients of culture industry

reproducing the hegemony of the dominant class that has the power of manufacturing cultural texts. Rather, tattoo should be discussed in a dialectical manner. That is to say, just as the other popular culture texts or goods, tattoos might be creating a unique meanings such as constructing a self-identity, expressing a discontentedness, resistance, sense of belonging to both oneself and a group. Therefore, as a popular culture text, the consuming process of tattoos becomes crucial. The aim of this study is to scrutinize the role, place and meaning of tattoos for tattooed people and to illuminate the relationship between tattoos, self-identity and broader social cultural structure by locating it within the popular culture perspective. In order to do so, the findings obtained from in-depth interviews with tattooed people will be analyzed.

### Sounds, Flavors and Aesthetic Cosmopolitan Bodies

Motti Regev, The Open University of Israel | [mottire@openu.ac.il](mailto:mottire@openu.ac.il)

This paper explores aesthetic cosmopolitan bodies as a concept that depicts the corporeal dimension of cultural change. The concept is explored by considering aspects of bodily adjustments to sounds and flavors, as these are disseminated worldwide through music and food. An aesthetic cosmopolitan body articulates its sense of local identity by assimilating elements from alien cultures. An aesthetic cosmopolitan body is inscribed with

cultural dispositions and sensibilities, schemes of aesthetic perception and evaluative criteria shared by many other bodies across the world. Aesthetic cosmopolitan bodies come into being when modern individuals adjust their senses, by willfully incorporating globally circulating elements from cultures other than their own, into the experiential repertoires through which they articulate cultural locality. In the case of flavors, this happens when dishes and

practices of eating that originate in one culinary tradition are disseminated worldwide through haute cuisine or industrialized food, and consequently integrated into the food culture of many different countries. Bodies of individuals in many countries thus become accustomed to mixtures of native and alien flavors as practices of contemporary locality, rendering them aesthetic cosmopolitan bodies. In the case of music, aesthetic cosmopolitan

bodies emerge when auditory perceptual schemes of individuals all over the world become accustomed to the sounds and timbres of electric guitars and electronic music, and when local musical works based on such sounds become familiar, recognized by listeners in almost any culture as elements of their own musical identity. Proliferation of aesthetic cosmopolitan bodies thus enhances cultural proximity.

## Human Embryo – Icon of Biopolitics

Eva Slesingerova, Masaryk University, Brno | [eslesi@fss.muni.cz](mailto:eslesi@fss.muni.cz)

The paper is a sociological conceptualisation of the theme of DNA as the specific representation of the human body and definition of humanness above all. Taking advantage of interpretative and critical social theory (Rabinow, Rose, Foucault, Nelkin and Lindee, etc.), this paper examines the narrative concerning the production of knowledge within interpretation of various imaginations of DNA, genom and the embryo, mainly. The idea of healthy life, healthy embryo, like the main theme of distribution the moral, scientific or religious knowledge and agency as relevant, is critically analyses within broader area of contemporary forms of the biopower: questions of race, reproductive medicine and genomic (Rabinow, Rose 2006). Representations of diagnosis (PGD, etc.) of

human DNA, embryo, refer to the cultural imagination of genomics in connection with notions of humanness, autonomy and scientific/religious discourse clash. The core arguments are associated with analysis of the representation of the “authenticity” of the individual and social body, the DNA, the genom in the connecting with the legitimization of biopolitical borderlines identification. Interpretation and analysis are concentrated on critical reflection of powerful mythology concerning ideas of perfect reproductive strategies within perfect population search. Particular ethnographical analysis of Czech genomics and reproductive medicine field concerning the popular/emic representations of ethnic dimensions of DNA screening is concerned.

## c08RN07 - Sociology of Culture

Chair(s): Koen van Eijck (Erasmus University, Rotterdam)

### National Feeling in Structure of Mentality of Ethnos

Aimira Bolzen, Tuvan State University | [aymirabolzen@gmail.ru](mailto:aymirabolzen@gmail.ru)

Choduraa Saryg-Khaa, Tuvan State University | [schoduraad@yandex.ru](mailto:schoduraad@yandex.ru)

Now in the world ethnic process the tendency which consists in global integration of the people, preservation of ethnic identification is traced. The problem of national feeling is actual in connection with sociopolitical changes in the Russian society which studying is the major factor of forecasting of the person's behavior. National feelings take the important place in structure of mentality of ethnos, giving original coloring to any interethnic contact. National feelings are the historical phenomena; they arise as the relation, emotional reaction of people to real position and communication between them, i.e. they are determined by historical events of a life of ethnos. National feelings are shown in the economy, the policy, a public life of the nation. They play a considerable role in definition of motivation of acts, behavior and

activity of the separate representative of ethnos, an ethnos part and ethnos as a whole. National feelings are formed in the course of socialization of the individual under the influence of a number of factors: the concrete ethnic environment, and also occurring ethnocultural traditions and an ethnosocial situation. National feelings on the subject orientation are sense of advantage of the nation, feeling of likeness with it, solidarity, patriotic feelings. National feelings carry out function of regulation of mental activity of people, installation function to perceive and operate definitely. In the conditions of social, economic, political and other changes, comprehension of the ethnic roots, traditions and cultural wealth, can promote formation of new adequate mentality at represen

### The Unifying Force of Humor: on the Self-Ironic Use of Ethnic Stereotypes and the Dedramatization of Ethnicity

Henriette Frees Esholdt, Lund University | [henriette.frees\\_esholdt@soc.lu.se](mailto:henriette.frees_esholdt@soc.lu.se)

Drawing on an ethnographic fieldwork within the hotel and restaurant industry in a multi-ethnic workplace in Denmark, this paper draws attention to the informal social interaction between first-generation immigrants and native Danish co-workers. Elaborating on life oriented cultural concepts of cultural sociology based on Erving Goffman, the paper explores immigrants' use of so-called self-directed ethnic humor, as it spontaneously is played out

in everyday work life settings. Playing the role as the stereotypical immigrant (the immigrant as extremely religious, having many children, practicing polygamy etc.) with an ironic distance, immigrants engage in a playful behavior with stigma symbols, they demonstrate 'role distance' and detach themselves from exactly those negative ethnic stereotypes that are the focus of ethnic humor. This paper will argue that the self-ironic use of

ethnic stereotypes is a strategic and tactical dedramatizing 'impression management' that serves to defuse potentially dangerous aspects of the ethnic stereotypes, generate sympathy, influence outsiders toward a more appreciative and tolerant attitude towards immigrants, and

open up for other interpretations of immigrants. Furthermore, that the self-ironic use of ethnic stereotypes is a way of building relations and creating intimacy with native Danes.

## Could Europe Have Common Values?

Dagmara Beitnere-Le Galla, University of Latvia | [dbeitnere@gmail.com](mailto:dbeitnere@gmail.com)

At the very beginning sociologists realised that secularization brings risks to society and cultural life. O. Konts saw the start of a crisis resulting from the separation of church and state by the French revolution with its new values of Freedom, Fraternity and Equality. Today, as pointed out by Z. Baumanis a value transformation has taken place: now it is Freedom, Diversity and Tolerance. However, the new values do not remove risks of conflict as stress on society remains. P. Sorokina theories about cultural crises and developments rather precisely point to the problems encountered by society under the new values which have replaced the old.

Society does not function rationally, and rational methods can not solve its problems, even as new fields of conflict arise, as in virtual communications. N. Lumans points to the role of communications in controlling risks. Even when it appears futile, communications must be maintained. Looking back in European history we see that in the 10th -12th centuries a common set of values was established. The history of art bears witness to the formation of an imagined society with common values. Today's question is: Can European society can be united under one new set of values? Is a new overarching value system possible?

## Tuva in the Changing Conditions of the Current Crisis and Globalization: the Mentality and Ethno-Cultural Heritage

Nataliya Oyunovna Tovuu, Tuvan State University | [tovuu@mail.ru](mailto:tovuu@mail.ru)

At the beginning of the second decade of the XXI century one can clearly observe the collision of traditional Tuvan culture with rules and regulations of advancing global culture and the modern world order. Old issues get a new meaning: the problems of education and training, family, interfaith relations, group and individual identity regain relevance. However, the rise and completely new challenges - challenges of the globalization era: for example, the problems of multiculturalism and tolerance, requiring immediate discussion and informed decisions. Important historical, social, economic, cultural, demographic and other factors that determine the shape of Tuva today - is its unique geographical location, is

an unusual combination of climatic conditions, unique ethnic and religious composition of the population, the historical, cultural and religious identity of the peoples living in the country, the presence of many forms of political, social and economic activities, including traditional land and mineral industries. All this causes the unique mentality of the indigenous population - Tuvan. In the modern period, in our (NO Tov) empirical study found that Tuva as ethnicity in the transition to a market economy have kept their traditional ethnic values: caring for children and family-related communications, hospitality, respect for elders, tolerance and courtesy. In value orientations of education, especially among the

female population is estimated highly enough. National feelings have high estimates of love for mother nature and the national culture, country and his people. Research and social

practice of interaction of social communities in hospitality are promising areas of social development.

## 09\_b07JS34 - Cultures of Religion – Religious Cultures (1)

Chair(s): Hubert Knoblauch, Regine Herbrik (Universität Lüneburg)

### Cultures of Understanding the Other Self - Religious Dialogue as a (Small) Life-World of Intercultural Communication

Heidemarie Winkel, University of Potsdam | [hwinkel@uni-potsdam.de](mailto:hwinkel@uni-potsdam.de)

The paper introduces religious dialogue as a resource of intercultural learning processes. Empirically, it is based on a pre-study on the intercultural potential of interdenominational cooperation between globally operating churches and closely related organisations, in particular on interviews with churchwomen of the worldwide ecumene. Subject matter is the social handling of cultural difference in these intercultural contexts. The thesis is that ecumenical collaboration incorporates a long-established, action-based experience pool of turning towards the other self. It is exemplary for a theoretical approach to everyday processes of understanding the other and demonstrates how the participants of interdenominational encounters develop a life-worldly attitude to difference and otherness in these intercultural configurations. The question is how far the actors adapt and

reorient themselves to others, despite the experience of difference and otherness. This will be discussed from the perspective of interpretive sociology, following Alfred Schütz, combined with the paradigm of communicative action. The latter describes culture as processual and dynamic, based on the performance of social action. I argue that, methodologically, inter-cultural and intra-cultural communications differ only gradually from each other; both are characterized by the encounter of unrelated horizons of meaning as well as ambivalent representations of the self and the other. The paper will illustrate that women's ecumene functions as a small life-world of intercultural communication: action and thinking are developing here in a horizon of multiple realities and possibilities of meaning.

### Behind the Youthful Façade: The Church of Sweden Abroad and its Older Visitors and Volunteers

Annika Taghizadeh Larsson, Linköping University | [annika.t.larsson@liu.se](mailto:annika.t.larsson@liu.se)

Eva Jeppsson Grassman, Linköping University | [eva.jeppsson-grassman@liu.se](mailto:eva.jeppsson-grassman@liu.se)

The Swedish Church has local parishes in around 45 places abroad. Their mission is to provide community and support for Swedes

who stay in foreign countries permanently, or for long or short periods. This presentation will present and discuss results from a research

project exploring the Church of Sweden Abroad, with particular focus on migration, ageing and the last phases of life. The project consisted of a qualitative case study, a mapping of the websites of all 45 parishes abroad, and an internet-based survey of all parishes. The case study and the survey highlight the important role that older Swedes play in the parishes abroad. However, while people above the age of 65 in practice seem to

“carry” many of the parishes activities – and also seem to be “carried” by the parishes in terms of receiving support – this age category is virtually invisible in the photographs and texts on the websites. This paradox will be discussed in relation to the phenomenon of ageism and by looking at the marketing of the Church of Sweden Abroad as an expression of the youth-obsessed culture that is today so prominent in many contexts all over the world.

## Valorisation in Religious Cultural Heritage: Volunteering in the Religious Field

Giovanna Rech, University of Trento | [giovanna.rech@unitn.it](mailto:giovanna.rech@unitn.it)

In Europe, voluntary work in cultural heritage is a debated but also crucial phenomenon which involves both young and retired people. Volunteers carry out many activities related to caring and watching but also welcoming and guiding the attendance in these sites and institutions (e.g. project VOCH 2008). In Italy, a large interest for the heritage is quite recent and only dates back to the end of twentieth century even though this country owns one of the richest heritage in the world. This paper will present an original case study in North-eastern Italy, compared with similar experiences in Paris and in Europe on volunteering in Catholic Religious Heritage, in particular on guides to the catholic religious heritage specifically educated and trained by religious-oriented institutions. Voluntary work

of these lay guides who accompany tourists and pilgrims into the churches are not simply an instrument to cope with a lack of financial or human resources but also an answer to the increasing liturgical, iconographical and symbolical ignorance. On one hand, research hypothesis is that Catholic Church is less and less dealing with secularisation but with a phenomenon of heritagisation of religion (Walsh 1992; Hervieu-Léger 2011) which is weakening the centrality of Gospel announce. On the other hand, this volunteer activity is also a means of valorisation which sets religious values against lay values on the common object that is the historical and cultural heritage and its conservation and transmission.

## a09RN07 - Culture, Heritage and memory (2)

Chair(s): Anna Lisa Tota (Università degli Studi Roma Tre)

## Back to the '00s: Reliving the Past through Popular Music

Simone Driessen, Erasmus University, Rotterdam | [driessen@eshcc.eur.nl](mailto:driessen@eshcc.eur.nl)

This paper explores how twenty- and thirty year olds construct a narrative about popular music from their adolescence. Music is often considered a force in identity construction, on

both personal and collective level. Thus, it might serve as a very important resource for their ‘adulthood’ identity construction in this fast-changing world. Recent studies explored

how babyboomers (the generation growing up with popular music) deal with music, whereas youngsters' music consumption is mapped as well. However, what lacks is an account of how these 'Millennials' give meaning to music. This study therefore explores how this particular audience gives meaning to music from the '90s and the '00s. Nowadays, we can argue that 'decade' parties bring back memories of the '80s and '90s. However, these commercialized settings are aimed at reliving mediatized youth memories for a slightly older generation. The Millennials now witness the comeback of boy- and girlbands, who were major players in the

music industry from the '90s and the '00s as they hold reunion tours and concerts. Thus, their popular music is already becoming an element of nostalgia and heritage. Drawing on interviews with Millennials from 'urban' Rotterdam, this paper maps the music-related narratives of the Millennials and takes into account how they use 'musical' cultural capital from their adolescence to legitimize reliving 'authentic' experiences from their past. Music then, can symbolically fulfill a great role in creating a collective identity for a generation, who is due to the constant changing world around them, in crisis.

## **Cultural Memory and Public Space. Contemporary Discourse around Socialist-Era Architecture in Poland**

**Stella Grotowska**, University of Wrocław | [stella.grotowska@gmail.com](mailto:stella.grotowska@gmail.com)

The fascination with the past takes nowadays the form of a dispute over the memory. Material objects, such as buildings and built environments, function as memory carriers through which our image of the past is constructed. Their presence in public space is a consequence of an institutionalised process, that involves many actors, such as a government, local communities, voluntary associations, individual activists. They run a game about symbolic appropriation of social space: mechanisms of memory are both a way to forget and to recollect the past experience. The theoretical frameworks of this study come from works of Holbwachs, Kula, Nora. The purpose of this presentation is to analyse the media discourse about socialist-era architecture. The arguments about planned demolition of buildings that have been erected

between 1945 and 1989 and have high architectural value, are entering the public debate in Poland. The ongoing economic crisis seems to exacerbate the disputes. This paper starts from the assumption that the occurring transformation of public space is in line with re-evaluation of the collective memory. Hence the key themes of this analysis cover the issues of expression, representation, production and reproduction. The basic questions are following: What is the significance of socialist-era architecture and its disappearance for the attitude to the past and the present? In what way do cultural, social and political ideologies contribute to the elimination of this architecture from public space? What relations between power and space reveal in debates about built environments?

## **Tenacious Past and Controversial Reputation of Tito: Persistent Collective Memories in Times of Change**

**Tanja Vuckovic Juros**, University of Zagreb | [tanja.vuckovic.juros@gmail.com](mailto:tanja.vuckovic.juros@gmail.com)

Social upheavals are often followed by reinterpretations of the past by new political

elites. However, in opposition to "invention of tradition" framework which focuses on political

elites' instrumental reinterpretations, many collective memory scholars also emphasize factors constraining malleability of the past and the role of non-elite memory entrepreneurs. Within the latter theoretical framework, the present study examines how cultural interpretations remain persistent despite changed social conditions and different stakeholders in positions of power. This study uses textual analysis of Croatian newspapers and textbooks in post-Yugoslav period (1991-2007), complemented with interviews with two young Croatian generations, to examine persistent positive historical reputation of the late Yugoslav president Tito. As positive evaluations of Tito endured amidst generally negative reevaluations of the Croatian communist past, this case allows identifying

conditions for malleability or persistence of collective memory during times of social and cultural change. These conditions also contributed to a successful institutionalization of Tito in Croatian public discourse, which other Yugoslavia-related commemorations failed to achieve. Both the persistence of Tito's reputation and his successful post-Yugoslav institutionalization can be traced to interaction of three factors: the well-timed activities of Tito's non-elite reputational entrepreneurs, dramatic and plural character of Tito's interpretations and cultural salience of Yugoslav institutionalizations of Tito. The findings of this study illuminate the process of cultural change/persistence during times of social and institutional transformations.

## Soviet Heritage of Latvian Cultural Policy

Jānis Daugavietis, University of Latvia | [janis.daugavietis@lu.lv](mailto:janis.daugavietis@lu.lv)

In contemporary theory of cultural policy there is a popular assumption about role of arts in social development. The local cultural associations can be powerful actors in revitalization, civic engagement, community-building, etc. Cultural participation is viewed as a source of social capital, which in turn contributes to social cohesion and building better environment. The two most popular Latvian amateur arts forms are choral singing and participation in folk dance ensembles. Their popularity is a result of established national tradition - singing is regarded as one of the most important Latvian cornerstones of the nation's identity. The other factor is administration of culture which is largely inherited from the USSR without any significant structural transformations. Cultural policy is

still dominated by paternalistic model in which the state continues to undertake responsibility and control of certain professional and amateur art forms. Government is responsible for the delivery of culture and certain art activities (amateur singing and dancing are among them) to the masses. Maintaining network of cultural houses and hiring amateur collective conductors are dominant type of support. Therefore the government nourished choirs and dance ensembles do not meet requirements to be regarded as associations of free citizens. They are rather groups of amateurs in 'residential care' than active and self-organizing art or cultural communities from whose artistic practices we can hope to get additional social capital and input in local social development.

## b09RN07 - Sociology of Culture (2)

Chair(s): Pertti Alasuutari (University of Tampere)

### A Gendered Tragedy? Georg Simmel's Twofold Crisis of Culture.

Sonja Engel, Ludwig-Maximilians University, Munich | [sonjaengel@gmx.net](mailto:sonjaengel@gmx.net)

In this paper, based on my current research for my doctoral dissertation, I want to tackle the question of interdependencies between cultural and economic forms as is laid out in an early "cultural turn", performed by Georg Simmel. Simmel is an internationally recognized classic in sociology of culture because he coined the image of culture as "tragedy". As modern culture evolves, Simmel claims, subjects and objects drift apart. In his view modern culture is inherently crisis-prone – just as Marx claimed capitalism to be inherently crisis-prone. Yet there is another strand of Simmel's concept of culture which unfolds in his essays on gender, especially in *Female Culture* (1911). The phenomenon of the women's movement is the starting point for Simmel to reflect on women's position in the

complex of modern culture – a crisis within the general crisis of culture, one might say. Though Simmel's analysis tends to exclude women from modern culture, his treatment of the issue is instructive, as it makes a blind spot in Simmel's theory visible. I claim that he neglects the factor of power in both concepts. In contrast, some current critical theories conceive of gender and class (and other categories) predominantly as relations of power mediated by cultural images. Confronting Simmel's theory with (post)modern insights has a twofold outcome. Firstly, it points to some critical junctures of economy and culture; secondly, it helps to refine our theoretical "tools" in sociology of culture.

### The Contribution of "Intersectionality" to Writing and Researching Culture and Identity: The Case of Mardinian Arabs

Murat Küçük, Mardin Artuklu University | [muratku@gmail.com](mailto:muratku@gmail.com)

This paper aims to contribute discussions on how intersectionality theory could be deployed in empirical studies on culture and identity. In social sciences, theoretical and methodological critiques and suggestions on studying culture are increasing. This paper intends to reveal how intersectionality could be an alternative and critique to writing and researching culture and identity. To make this, it is needed to integrate domains of "culture" and "social" to each other. Furthermore, this study tries to integrate theoretical discussions and empirical data, which was generated in ethnographic research conducted in multi-cultural Mardin, Southeastern Turkey, between September

2010 and June 2012 for my master thesis. While discourses of "cultural diversity" and "multiculturalism" point out cultural domains of identity and difference, class and gender as intersected domains are neglected. Focusing on cultural differences restricts our understanding of complexities of society and effects of other dynamics. Therefore, this paper tries to reveal how cultural domains of identity are related with class and gender in the case of Mardinian Arabs. In this manner, it provides to catch and understand inner differences within group rather than differences between groups. Furthermore, which identity expressions are selected in

particular places and times are focused to understand more the role of identity in daily life. In doing so, it also tries to reveal how identity is historical, contextual and contingent,

rather than fixed and essentialist. Finally, intersectionality is offered as a way of understanding and analysing of complexities of culture.

## Four Kinds of Individualism: A Theoretical and Empirical Analysis on Discourses of Individualism

Kobe De Keere, Free University, Brussels (VUB) | [kobe.de.keere@vub.ac.be](mailto:kobe.de.keere@vub.ac.be)

The idea of individualism has always been a major theme within cultural sociology. However, there is little theoretical uniformity and coherence about the definition of the term. This has resulted in a conceptual proliferation creating a continuous flow of new sociological notions like self-actualization, reflexivity, strive for authenticity, post-materialism, self-realization, expressiveness, entrepreneurialism and so on. Consequently a part of cultural sociology is characterized by the repeated “discovery” of new forms of individualism. This often leads to confusion where the same concept designates different cultural discourses or different concepts are assigned to one and the same cultural phenomenon. This paper argues that different

variations in contemporary discourses of individualism can be reduced to a combination of two dimensions, namely the way in which the ‘self’ is represented and how ‘freedom and equality’ are understood. The paper tries to explain the theoretical significance of these dimensions and shows how existing classifications or ‘types’ of individualism can fit within this scheme. In the empirical part we will operationalize these dimensions on the basis of data from a survey conducted on a random sample of people in 2010 (18-75 years, N: 1967; Flanders, Belgium). Multinomial logistic regression analyzes the distribution and social embeddedness of the various combinations.

## Masculine Independency

Ewa Andersson, Mid Sweden University | [ewa.andersson@miun.se](mailto:ewa.andersson@miun.se)

The purpose of this paper is to examine how the concept of masculinity can be used to understand actors within independent record labels in Sweden. Independent actors are often described as striving for inclusion – both when it comes to the music being produced within the independent labels, and when it comes to organizing an environment that differs from the dominant structure of production within the music industry. However, studies have shown that the said inclusive environment in fact is exclusive, since this environment is affected by cultural practices that are under the influence of the same structures of power as the

mainstream music market. The typical independent actor in Sweden can be described is a man. This implies that even in the periphery of the music industry, men are in the centre and decide which music that should be distributed to an audience. This paper combines concepts of masculinity and normalization with field theory and practice, to show how these concepts can be used to understand the structure of the independent music industry in Sweden and how this structure enable, or disable, the creation of an inclusive and democratic music market.

## 10\_b07JS34 - Cultures of Religion – Religious Cultures (2)

Chair(s): Hubert Knoblauch (Technische Universität Berlin), Regine Herbrich

### Religious Individualism or Individualized Religion: A New Orientation in Modern-Day Turkish Society

Yılmaz Yıldırım, Afyon Kocatepe University | [ylmzyldrm@windowslive.com](mailto:ylmzyldrm@windowslive.com)

Religious individualism is a phenomenon that arose from the cultural crisis of modernity. In this sense, while modern individualism, immanent in enlightenment discourse, is a deliberate outcome of modernity, religious individualism is an unexpected result. Religious individualism, emphasized by P. L. Berger and N. Luckmann while researching religious pursuits in Western societies, is an element seen in the cultural change Muslim societies experienced during the modernization process; however there is not a great amount of research on this subject. The dynamic of cultural change created by Turkey's rapid and dramatic modernization process, peaking in the European Union accession period, leads to a significant crisis in both the erosion of the dominant status of the state in public life and the effect of religious

association in social life. In the current phase of modernization in Turkey, while the legitimacy of the state-centric cultural policies of an Islamist government is becoming problematic; the total effect of the institutional and binding character of Islam on individuals in social life has been facing a crisis. As a result, religious individualism, which can be regarded as a part of the cultural pluralism discourse that increased in Turkish society during the last decade, has reached a significant point especially among university youth. This study shows that both rapid socio-cultural change and reaction against the sense of conservative government that aims for a value and norm system have an effect on the increase of religious individualism among university youth in Turkey.

### Cosmopolitanism and Spiritual Consumption in Israel: A New (Jewish) Age to a New Middle-class

Dana Kaplan, Open University and Hebrew University | [danaka@openu.ac.il](mailto:danaka@openu.ac.il)

Rachel Werczberger, Tel Aviv University | [rachel.werczberger@mail.huji.ac.il](mailto:rachel.werczberger@mail.huji.ac.il)

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class determines religious affiliations and practices.

Sociologists of religion have recently pointed out that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Age option in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan, post-materialist, secular new middle class. Drawing on post-Bourdieuian cultural

sociology, we start by describing the theological and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural

capital. In line with recent work on cultural cosmopolitanization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

## **Ethno-Religious Conflict and the Meaning of Work: The Case of Jews, Muslims and Christians in Israel**

Moshe Sharabi, Yezreel Valley Academic College | [moshes@yvc.ac.il](mailto:moshes@yvc.ac.il)

There are no studies that compared work values of Jews, Muslims and Christians, in and out of Israel. This paper examines and compares, for the first time, the meaning of work among Jews, Muslims and Christians in Israel and attempts to explain the similarities and the differences among the ethno-religious groups. In 2006/7 the Meaning-of-Work (MOW) questionnaire was conducted on 898 Jews, 215 Muslims and 103 Christians working respondents. The MOW dimensions were: economic orientation, entitlement norms, obligation norms, interpersonal relations orientation, intrinsic orientation and work centrality. The findings indicate that there are significant differences in most of the MOW

dimensions between the three religion groups, but some of them were not according to the hypotheses. The MOW differences among the three ethno religious groups can be explained by the different religious work ethics, the cultural differences, the high degree of segregation, the occupational discrimination against Arabs (especially against the Muslims), as well as the regional Palestinian/Arab-Israeli conflict. Overall, the demographic factors partially explain the MOW differences. The extra-high work centrality among Arab Christians and much more so among Arab Muslims reflects a high non-actualized potential for organizations and for the Israeli economy in general.

## **Removing the Hyphen – Creating a Religious Feminist Identity without Hyphens**

Galit Yanay-Ventura, Emek-Yezreel Valley College | [gality@yvc.ac.il](mailto:gality@yvc.ac.il)

This research explores the reciprocal relations between identity, religion and gender, the essence of which lies in how ultra-orthodox women in Israel create their identity as religious feminists. Using a semi-structured interview, 44 orthodox Jewish feminist women shared how they apply the religious feminist identity they constructed to their everyday reality. Seven perceptions of religious feminism emerged from the interviews. The "rabbi", for example was the boldest of the interviewees because she believes that her interpretations are permitted in orthodoxy. She

is a biblical scholar who examines every issue of Halacha (Jewish Law) herself. The "interpreter" focused on the ability to offer a distinctly feminist interpretation to the Bible so her connection was mainly through teaching the Torah (the Pentateuch) while aspiring to promote women's prayer groups. Thus, there were many subtle shades (which I will present) that reflect unique beliefs and practices of diverse types of religious feminism. Religious feminism is a new sphere that challenges both feminist and orthodox discourse. The dialectic between feminism and religion alters both

categories and creates a new category which is neither a combination nor a collapse of the two. Therefore, based on the work of Judith Butler (1990), I suggest removing the hyphen from religious feminism. This reading is not merely a lingual or semantic change. This perception suggests reading the creation of the

new religious feminist identity as a hybrid self-production process. The wider significance of this approach is that religious feminist identity is not a "subsidiary" category of feminism or of the religion; but rather a new category of religious feminist without hyphens.

## a10RN07 - Culture, Heritage and memory 3

### Selective Amnesia: Comparative Study of Ukrainian Historical Museums.

**Alina Zubkovych**, School of Advanced Social Studies, Nova Gorica, Slovenia | [alina.zubkovych@fuds.si](mailto:alina.zubkovych@fuds.si)

At the article we compare the representations of the exhibitions dedicated to World War II, located at the National Historical Museums in Ukraine. We compare two cities (Kharkiv- Lviv). Besides, we are touching on the general descriptions the museums content in order to understand more subtle the policies of the museums, as well as to highlight the meaning-forming points of the countries' history, as it is presented today. Kharkiv (eastern Ukraine), originally Russian imperial city, was takes an active role in the construction of the communism, while Lviv (Western Ukraine) was under the protection of Austro-Hungarian Empire later Republic of Poland and after the war it became part of Ukrainian Soviet Republic. The chosen cities had a significant Jewish population, been mass-destroyed during the World War Two (Gregorovich,; Burakovskiy). Basic research method is

discourse (Jørgensen M., Phillips L. J). As the result of our research it was found out that there exists a new trend, which is used by museums: the particular focus on concept of "occupation" of the Soviet Union and related to it topic of soviet concentration camps. Despite the trend of criticism of the Soviet government, the main stands, dedicated to the war, were not seriously changed and continue to narrate a dichotomous Soviet narrative "heroic" soviet soldiers fighting against the "Nazi-German invaders". The issue of Holocaust (if it is presented) is not mentioned in cooperation with the issue of collaboration of locals. The recovery functions of data gaps are provided by alternative museums, which are financed by private sources. Lviv has difficult situation, since there is any Holocaust museum and the issue of genocide is not mentioned in sever

## The Motivations of the Creators of a Social Memory Implant. The Re/Building of the Royal Castle in Poznań (2010-2014)

Łukasz M. Skoczylas, Adam Mickiewicz University, Poznań | [luke@amu.edu.pl](mailto:luke@amu.edu.pl)

In 2010 began the re/building of the Royal Castle in Poznań, which was demolished in 1796. The process, which was initiated by the Committee for the Rebuilding of the Royal Castle arouses strong controversy. The builders of the castle are accused of falsifying history (it is not sure how the building looked like before being taken to pieces) and destroying the original remains of the old castle. However, the committee was able to reach both political and social support for the rebuilding and collect money for this aim. Due to a very long absence of the castle in the urban space and lack of any confidence when it comes to its outlook, the object which is being built can be called an implant of social

memory. An implant of memory is an object, which function is to construct a particular knowledge of the past, becoming the carrier of this knowledge through its own form – imitating forms of ancient objects, buildings etc. The speech will be devoted to the motivations of the people who take part in the re/construction process – members of the committee and people who support it, and also the officials taking part in this process. There will be presented strategies with the help of which those people explain the aim of the re/building process and their commitment into it. Conclusions will be presented on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

## Use and Reuse of Cultural Heritage

Sarah Siciliano, University of Salento | [sarah.siciliano@unisalento.it](mailto:sarah.siciliano@unisalento.it)

This poster aims to offer some cues of meant reflection on historical and the function that the cultural assets assume today in the public sphere. Our paradigm of reference will not be the history of “cultural heritage” – meant like “every object having testimony civilization value”-, but its process of induced from the reuse and accelerated continuous re - creation from the use of the mass media in the modern world. The reconstructed, given back cultural heritage, comes translate in a singular and unknown experience. The cultural property

therefore will be examined like our dress, meant like habit: in the measure in which the cultural heritage becomes our inner dress, it is our way to make experience of the truth, to mean it, to put it in scene, to communicate it. We will watch to the cultural heritage like bridge in order to strengthen the identity and the national culture against the standardization induced from the globalization. In this process, the new cultural heritage generated from its re -use becomes glocal, exceeding every possible dichotomy.

## Cultural Change in Past Remembering: the 50th Anniversary of the Berlin Wall's Construction

Barbara Grüning, University of Bologna | [babsi.gruening@gmail.com](mailto:babsi.gruening@gmail.com)

In the last years commemorative events are losing their institutional character becoming objects of interest for several social actors who aim at participating in memory decision-making processes. This transformation process arises two questions: what kind of social ties commemorative events represent or create and what kind of public memory they shape. With respect to these issues the commemoration of the 50th anniversary of the Berlin Wall's building is emblematic for the current difficulties of constructing a shared identity in Germany after 40 years of division. The empirical research has been carried out in May and August 2011 and it is based on the textual analysis of more of 15 exhibitions as well as on the participant observation of three commemorative events. To illustrate my case study I display a typology based on four types of

memory processes - ritualization, historization, marketization and routinization - related to four kinds of collective identity - nationalistic, constitutional, touristic and urban - which are materially and symbolically inscribed or performed in four kinds of memory places: traditional commemorative places, institutional meeting places, tourism places and places of everyday life. Thus, core of the analysis is the reciprocal influence among memory places, as structures of stored cultural meanings, and memory spaces, formed by interweaving commemorative with cultural and spatial practices. The aim is to show how, compared to the hegemonic way of remembering the German recent past, in this case the focus shifted from the GDR-State narrative and the cultural trauma paradigm to the frame of everyday life in both East and West Berlin.

## c10RN07 - Sociology of Culture 3

Chair(s): Mark Jacobs (George Mason University)

### Internal Goods and the Social Worlds of Music

Wendy Bottero, University of Manchester | [wendy.bottero@manchester.ac.uk](mailto:wendy.bottero@manchester.ac.uk)

Nick Crossley, University of Manchester | [nicholas.crossley@manchester.ac.uk](mailto:nicholas.crossley@manchester.ac.uk)

It is an intriguing fact about musical worlds that their participants often attach value to practices, distinctions and knowledge which often enjoy little or no value outside of them, and that, in some cases, this discrepancy is itself a source of delight for participants.

Taking in a consideration of both positional and internal goods, this presentation discusses why this might be. What is the basis of the value and pleasure that participants derive from participation in music worlds?

## Emancipation of the Individual and the Demise of Cultural Policy

Andries van den Broek, Netherlands Institute for Social Research | [a.van.den.broek@scp.nl](mailto:a.van.den.broek@scp.nl)

Emancipation or empowerment of the individual is generally considered to be among the achievements of western civilization. For culture, however, it is not all good news. On the one hand, there are little or no legal restrictions as to what artists are able to do. On the other hand, culture lost its special place of respectedness. Culture's pedestal was eroded. For citizens, culture now is just one among the many other possible leisure time pursuits. At least in The Netherlands, this has eroded the by definition somewhat paternalistic backbone of cultural policy. In the rhetoric of individualism, there is precious little that government ought to do in terms of supporting cultural supply for which there is no

demand. This rhetoric has penetrated political thinking about culture in The Netherlands across the board, be it openly (populists and liberals) or implicitly (most other parties, including main stream social-democratic party). Rather than the current financial crisis, it is this emancipation of the individual, or at least the rhetoric in that terms, that is at the heart of the current shift in cultural policy. Without challenging that rhetoric, this is not likely to change. It is as yet unclear, however, who is going to challenge that rhetoric how. The argument will be supported by references to policy documents, political party programs and survey data on how the population feels about these issues.

## Adorno's Theory of the Culture Industry as Dialectical Cultural Theory

Simo Pieniniemi, University of Tampere | [simo.pieniniemi@uta.fi](mailto:simo.pieniniemi@uta.fi)

Even though Theodor W. Adorno's theory of the culture industry is widely discussed among the scholars, one of its aspects is not usually recognized – its roots in Adorno's dialectical thinking. Consequently, Adorno's theory is usually defined as a critique of commercialized media culture. The aim of the presentation is to attest that, if contextualized in Adorno's conception of dialectic, it can also be seen as dialectical cultural theory. Since dialectic is too vast a subject to be treated in detail – its history extends back to ancient Greek – in the presentation it will be defined as a thought mode paying particular attention to different kind of dualisms, oppositions, and contradictions. In order to highlight the dialectical undertone of Adorno's theory, I will distinguish three dialectical thought operations

that Adorno applies in his writings on the culture industry. In the first operation the usual problem comprises of an asymmetrical dualism between a central and a marginal phenomenon. It is resolved by introducing a third term that encompasses both of the opposites, thus effacing the opposition. The second operation focuses on a single entity, and it results in an equally dialectical insight. It maintains that the entity is deeply contradictory and therefore we need two opposing definitions to grasp its nature. In the third operation we face a contradiction between two equally strong propositions or entities. This time the typical conclusion is that both of the alternatives are actually false and no third option is available.

## 11\_07JS28 - Sports and Culture: Participation Alike?

Chair(s): Koen Breedveld (WHJ Mulier Instituut, the Netherlands)

### Practicing, Visiting and Following; Differences in Participation in Sports and Culture.

Annet Tiessen-Raaphorst, Netherlands Institute for Social Research | [a.tiessen-raaphorst@scp.nl](mailto:a.tiessen-raaphorst@scp.nl)

Andries van den Broek, Netherlands Institute for Social Research | [a.van.den.broek@scp.nl](mailto:a.van.den.broek@scp.nl)

Cultural participation and sports participation have much in common. Both culture and sports can be enjoyed as visitor or spectator, both either by going to venues where arts and sports can be seen or through the use of media. Both can also be actively practiced for leisure, in which case one is either an amateur artist or an amateur sportsperson, if not both. Not all within the population engage in all leisure activities, and not all segments within the population do so in equal measure. This paper sketches and compares cultural participation and sports participation in The

Netherlands, based on brand new data that were collected in autumn/winter 2012/2013. It compares levels in participation (do as many people take part in sports practices as in cultural practices, or vice versa?) as well as patterns in participation (to what extent are these practices related to such characteristics as age, gender, educational attainment). The paper also addresses to what extent and by whom cultural participation and sports participation are combined at the individual level.

### Athletics and Aesthetics: on Differences and Similarities between Sport and Culture

Koen Breedveld, Mulier Instituut | [k.breedveld@mulierinstituut.nl](mailto:k.breedveld@mulierinstituut.nl)

Judging by some of the media-stereotypes, those with an interest in sports (the athletic ones) generally are rather different, and in fact quite the opposite, from those that are primarily interested in culture (the aesthetic ones). But how correct is that image? To draw attention and to send a clear message, mass-media have no choice but to blow up stereotypes. Real life though, is never in black and white, but rather in (fifty?) shades of grey. In this paper, we will analyze both the worlds of culture and of sports, to explore to what extent and in what ways both worlds are in fact, quite similar. Relying on a combination of empirical data, literature-study and media-analyses, we will argue that sports and culture have much in common, on quite a number of levels

(historically, politically, economically, culturally and socially). Both rely heavily on government support and face similar difficulties in attracting new audiences, esp. amidst the lower social classes. From thereon, we will turn to two influential changes in society, the rise of an 'experience economy' and the advent of a 'multi-cultural society'. We will show how these developments offer new opportunities for both worlds, and at the same time, pose formidable challenges. At no point in time were there so many other possibilities, temptations for people to invest their precious time in. In addition, the experience economy draws the two closer to each other as they have ever been. In order to maintain levels of participation and interest from the crowds, a

common strategy, a sharing of expertise is called for, and an acknowledgment that in fact

sports and culture are more alike than the media suggests us.

## **Cultural Capital, Family and Sports: Intergenerational Reproduction of Leisure Sports in Context of High-Brow Culture Activities**

Ondřej Špaček, Charles University, Prague | [ondrej.spacek@fhs.cuni.cz](mailto:ondrej.spacek@fhs.cuni.cz)

Empirical studies of social differentiation of leisure sports participation show its profound similarities with culture activities (e. g. Stempel 2005, Warde 2006). Intergenerational transmission of leisure patterns between parents and children (see e. g. Engström 2008) could be understood as a key mechanism capable of uncovering the nature of this relationship. In this context, a question arises whether the connection between sports and high-brow cultural participation stems from an actual position in a social space (i. e. Bourdieu's class homology), from class-based habitus acquired during the childhood

(Bourdieu 1984) or whether it is the result of a reproduction of autonomous family leisure cultures (see Birchwood 2008). A structural equation model will be applied on a recent representative survey data of the adult Czech population (dataset TSSM 2009). Different models of intergenerational transmission of sports participation will be assessed in the context of respondent's past and present social position and the participation in high-brow cultural activities. The study will discuss the role of the family milieu in the relation of sports and culture activities.

## **RN07 - Poster Session**

### **The Relation of Culture and Events: the Role of Meanings and Cultural Autonomy**

Gábor Oláh, Masaryk University, Brno | [olah@fss.muni.cz](mailto:olah@fss.muni.cz)

There is an interdisciplinary interest focusing to the study of event. Number of fields try to find the definition of event and its boundaries, there are efforts to find out the event's role in history, it's role in the life of individuals and collectivities, to interpret the effect of events on states, nations and societies. In this presentation I would like to focus on the relation of event and culture, and discuss the questions of how does the public know events, what is the role of meanings of events and how the meanings are made. I argue that through meanings and meaning making is possible to

understand events but the acceptance of an event is determined by cultural structures and relative autonomy of culture. I would like to approach the relation of event and culture from a cultural sociological perspective by putting effort to the role of relative autonomy of culture in and out of events. I focus to the process of meaning making during and after event by asking when is an event extraordinary and how this label is determined by culture. On the meaning depends the acceptance and interpretation of an event.

## RN08 - Disaster, Conflict and Social Crisis

### 01JS06JS08 - The Eurozone Crisis as an Opportunity: Structural Changes within the Member States of the Eurozone and the European Union

Chair(s): Laura Horn (Roskilde University), Nicholas Petropoulos (formerly of the Pedagogical Institute of Greece)

#### Disciplining Southern Europe from Outside and from Within: Italy and Spain in Comparative Perspective.

Monica Clua-Losada, Universitat Pompeu Fabra, Barcelona | [monica.clua@upf.edu](mailto:monica.clua@upf.edu)

Davide Bradanini, IMT Advanced Studies Institute, Lucca | [davidebrad@hotmail.com](mailto:davidebrad@hotmail.com)

The paper analyses the historical roots of crisis management and resistance in Italy and Spain. The two processes are compared through the lens of uneven and combined development of European capitalism. The contemporary historical development of the two largest Southern European economies - despite important differences - can be understood by a similar logic of transformismo, which has expressed itself in a form of management of class struggle characterised by a regressive fiscal system, an uneven internal development, and an underdeveloped and clientelistic welfare state. Politically, this has been reinforced by reactionary tendencies of the

ruling class combined with a logic of exclusion of working class parties and social movements. The present crisis manifests itself as an attempt both from outside and from within to intensify the neoliberal transformation of the state/society nexus while further delegitimising the redistributive function of the state. Furthermore, the crisis has enhanced the role of technocratic discourses and practices on the one hand, as well as an anti-political discourse at the level of the popular common sense, whilst deeply transforming the two political economies and further weakening the role of organised labour.

#### Erosion or Transformation of the Austrian Model in the Crisis

Roland Atzmüller, JKU, Johannes Kepler University, Linz | [roland.atzmueller@jku.at](mailto:roland.atzmueller@jku.at)

Austria fared quite well in the current crisis as it belongs to those countries in Europe with a considerable trade surplus. Nevertheless, the recent crisis and its effects on the labour market put the Austrian regime of Active Labour Market Policies (ALMP) to the test and sparked off a range of activities by the government, the social partners and the Public Employment Service (PES). Measures to secure employment (short-time work, etc) and

enhance human resources stood in the foreground policies to tackle the crisis. Furthermore, the connection of job-protecting measures with training programmes and the expansion of re- and upskilling measures were implemented to even use the crisis to support structural change. Nevertheless, the interplay between developments on the labour market in general and these strategies revealed that the Austrian ALMP-regime increasingly serves to

regulate a segmented labour market based on precarious forms of employment, which were extensively used by companies as a buffer in the crisis, through a polarised ensemble of programmes and measures. Thus, through an expanded set of activation measures and disciplinary devices provided by the PES a docile workforce is secured when the economy

takes off again. The paper will conclude with some considerations whether these developments can be interpreted as a slow erosion of the so-called Austrian model of coordinated capitalism linked to a conservative welfare model or rather a transformation towards some kind of workfarist investment state.

## Crisis as an Opportunity to Knock the State Out

**Branko Bembič**, University of Ljubljana | [Branko.Bembic@ff.uni-lj.si](mailto:Branko.Bembic@ff.uni-lj.si)

**Sašo Furlan**, Workers and Punk's University, Ljubljana | [sasofurlan@hotmail.com](mailto:sasofurlan@hotmail.com)

In the process of transition to capitalism, two elites emerged in Slovenia: the neoliberal (comprador) and the national bourgeoisie. In contrast to other transitional countries in Eastern Europe, the national bourgeoisie prevailed, but its success hinged upon political exchange between the state and the organised labour, which was in turn, due to its strong mobilisation at the outset of transition, able to influence considerably the process of building the institutional framework of the economy. The emerging neoliberal comprador elite on the other hand laid its hopes in 'exogenous shock' related to Slovenia's accession to the EU and EMU, which was expected to disrupt the established balance of power, but to no avail. The situation drastically changed with the eruption of the Eurozone crisis, which the comprador bourgeoisie immediately interpreted as an opportunity to annul the

achievements of organised labour. While austerity measures with significant cuts in welfare state and public sector were imposed to reduce the budget deficit, the liberal and right-wing coalition government relaxed the tax burden on corporations and individuals. Furthermore, although the banks in Slovenia are solvent (though in need of additional capital), a plan for bank rehabilitation involving a costly 'bad bank' was prepared; if enacted, this plan significantly add to the public debt and in turn increase the strain on the public sector and welfare state. It seems that the neoliberal comprador bourgeoisie, unable to defeat the organised labour in an open struggle, is trying to exacerbate the fiscal crisis in order to exhaust the state and make it unfit to function as a counterpart in the political exchange with the organised labour.

## 01JS08JS12 - Energy Futures: Emerging Conflicts, Impacts, Opportunities

Chair(s): Debra J. Davidson (University of Alberta, Canada), Matthias Gross (Helmholtz Centre for Environmental Research, Leipzig)

### It's Not All About Consumption! The Nature of the Resource Matters More Than We Think

Debra Davidson, University of Alberta | [debra.davidson@ualberta.ca](mailto:debra.davidson@ualberta.ca)

Society's impact on earth's ecosystems due to energy use can increase even if consumption levels are held constant. This is so, because the effort required to turn natural resources into commodities depends on the condition of the resource, and that effort is directly correlated to ecological impact. As the richest, most accessible reserves become depleted,

effort increases, requiring continually escalating investments in environmental management. While historically this trend was primarily exhibited regionally, today the declining condition of many resources can be observed at the global level. I offer a brief discussion of this trend focusing on one of our most significant energy sectors: oil.

### Stabilizing Public and Political Boundaries: A Case Study of Udney's Community-Owned Wind Turbine.

Laurie Lee Robertson, University of Aberdeen | [r01llr0@abdn.ac.uk](mailto:r01llr0@abdn.ac.uk)

The Scottish Government widely promotes renewable energy technologies; indeed, a great deal of political capital has been expended on the promotion of wind energy technologies in their bid for political independence. Renewable energy, however, does not go undisputed and is routinely presented as a contentious issue by rival conservative politicians and journalists. These political controversies will no doubt influence the extent to which renewable energy technologies are deployed in Scotland. This paper considers the co-existence of political, technical, natural, and social factors of renewable energy arrangements. Based on participant observations of the Udney Community Turbine Trust (the first community

in Scotland to secure complete ownership of a wind turbine), I consider the strategies adopted by the Trust members in their bid to secure public support and overcome the effects of political controversies. These strategies, which attempt to stabilize the boundaries between the public and the political, are visible in Trust's assistance with community benefit projects, which are otherwise funded by local authorities. I will show the extent to which renewable energy technologies afford greater opportunities for public participation and highlight the instability of technical, social and political arrangements. The Trust's attempts to stabilize public and political boundaries are never fully achieved, but rather, requires continual effort.

## Public Engagement with Energy Futures: Risk, Uncertainty and Ambivalence

Catherine Butler, Cardiff University | [butlercc1@cardiff.ac.uk](mailto:butlercc1@cardiff.ac.uk)

Karen A Parkhill, Cardiff University | [parkhillk@cardiff.ac.uk](mailto:parkhillk@cardiff.ac.uk)

Nick F Pidgeon, Cardiff University | [pidgeonn@cardiff.ac.uk](mailto:pidgeonn@cardiff.ac.uk)

With issues of climate change, environmental degradation, resource scarcity and access to energy, come imperatives to transform energy systems and, in doing so, create alternative energy futures to those already in the making. In this context, new forms of energy supply, such as renewable sources or shale gas, are being developed along with differently configured systems of energy provisioning (e.g. toward more decentralised forms of supply). As these changes unfold an important set of questions arise around how publics are engaging, characterising, and responding to the risks and uncertainties associated with new forms of energy supply. In this paper, we draw on public deliberative workshops about UK whole energy system transformations to examine the ways that the riskiness of

emerging supply side options (e.g. biofuels, carbon capture and storage, wind, micro-generation) is currently being formulated. We show how public concerns are connected not only to technological and ecological risks but to those that can be characterised as being more social, for example, threats to finances or personal identity. Moreover, we offer important insights into how perspectives on the risks and benefits associated with different forms of new energy supply are formulated when located as part of a whole system. The analysis draws centrally on concepts of risk, uncertainty and ambivalence (e.g. see Kearnes and Wynne, 2007) for interpreting our findings and for exploring how new energy systems configurations might be contested, challenged or recreated.

## 01RN08 - Social Crisis, Poverty and Social Inequality in Times of Austerity

Chair(s): Dionyssis Balourdos (National Centre for Social Research, Athens), Joanna Tsiganou (National Centre for Social Research, Athens)

### Economic Crises and Crime

Joanna Tsiganou, National Centre for Social Research | [jtsiganou@ekke.gr](mailto:jtsiganou@ekke.gr)

Many crime and economy specialists, political analysts and media commentators have much too often insisted on the strong relationship between economic crises and the volume of crime. In the proposed paper I intend to show that the relationship between economic crises and levels of criminality needs further empirical verification. The data available suggest that although the volume of "street crime" (that is mainly, thefts, burglaries and

robberies) seems to increase in the middle of financial crises at an international level, strong empirical evidence to prove the linear or the causal character of the above mentioned relationship is missing. On the contrary the Greek experience suggests that economic crises alone cannot "improve" the volume of crime, because criminal behavior has mainly moral that is cultural connotations as well. Although Greece is undergoing one of the

major economic crises in its history for the past 3-4 years, criminal activity or law offending behavior does not unquestionably resort from economic parameters alone.

Neither the increased poverty has “produced” more crime, nor does the country live in a state of violence and anomic chaos.

## Individualization and Poverty over Time: the Italian Case (1985-2011)

Ferruccio Biolcati-Rinaldi, University of Milan | [ferruccio.biolcati@unimi.it](mailto:ferruccio.biolcati@unimi.it)

Simone Sarti, University of Milan | [simone.sarti@unimi.it](mailto:simone.sarti@unimi.it)

In the last few years much of the sociological debate has focused on individualization theory, especially on Beck’s risk society version. According to this theory, contemporary social change is interpreted as a rebalancing of the relationship between agency and structure, where the first is gaining ground on the second. Individualization theory has found hospitality in many fields of study (voting behavior, consumption behavior, etc.). Although much of such a debate has a theoretical character, there have been some attempts to assess empirically individualization theory. As far as poverty is concerned, some authors supporting the individualization theory have developed empirical analyses highlighting the role played by agency variables, especially by life course variables. Other authors supporting the stratification theory have

developed empirical analyses contrasting agency and structural variables. Both these approaches focus on short observation windows while it is necessary to consider a long period to assess the core of the individualization theory. Our approach assesses the change (rather than the stability) of the individual-level relationship between structures (occupational classes, education, etc.) and poverty over a long time period. This changing-parameter model is implemented through multilevel modeling with families at level one and years at level two. The analysis focuses on the Italian case and it is based on data from the Family Expenditure Survey collected by the Italian Statistical Institute (Istat). It covers the period from 1985 to 2011. The results support the stability of the relationship between structures and poverty.

## The Identity of Excluded in Times of Fiscal Austerity in Greece: Perception and Experience of Discrimination in Employment

Katerina N. Iliou, National Centre for Social Research | [kiliou@ekke.gr](mailto:kiliou@ekke.gr)

Economic crisis in Eurozone set Greece in the center of international interest as far as economic breakdown and social unrest is concerned. Unemployment trends outline a pessimist ground for present and future workforce. 23.1% of Greek people are officially recorded as unemployed, while millions express inability to cover basic needs in everyday life. Implementation of fiscal austerity policies and enforcement of overwhelming taxation measures contribute to a greater risk of poverty (21.4%). Old and new social groups

appear to cope with exaggerated inequalities in the field of employment. This paper presents results of a survey conducted by the National Centre for Social Research in collaboration with the “Manpower Employment Organization” during 2012. We focus on two distinct groups: members of vulnerable groups and general population. We examine how these groups perceive discrimination in general and experience discrimination in personal level. Analysis examines the following research question: Is discrimination at work a matter of:

a) problematic groups (being member of a devalued social group), b) problematic conditions (such as personal socio-economic conditions, qualifications), c) problematic processes (such as field of employment, social security fund etc.)? Findings focus on inequalities in times of socio-economic uncertainty and withdrawal of welfare state

from major fields of social policy. Perceived social threat and personal experience on discrimination at work facilitates understanding the construction of devalued identities by members of (old and new) groups at risk of social exclusion and poverty. Therefore, lead to basic ideas for innovative social policy in contemporary society.

## 02JS08JS12 - Energy Futures: Emerging Conflicts, Impacts, Opportunities

Chair(s): Debra J. Davidson (University of Alberta, Canada), Matthias Gross (Helmholtz Centre for Environmental Research, Leipzig)

### Negotiating the Future of International Peace (or War) under Conditions of Natural Resource Scarcity and Global Climate Change

Tracey G. Skillington, University College, Cork | [t.skillington@ucc.ie](mailto:t.skillington@ucc.ie)

This paper offers a critical assessment of how inclinations towards democratic peace can be maintained within the international community as competition between states for diminishing stocks of natural resource reserves grows evermore intense. Implicit in recent policy discourse on the security implications of climate change is the notion that war, in certain circumstances, is a legitimate response to threats to a community's resource reserves and given the inevitability of shortages amongst many climate vulnerable states in the future, highly likely. This paper examines the 'uncomfortable paradox' (Beck 2008:131) that emerges alongside the institutionalization of a liberal democratic

regime that in principle supports global peace and solidarity under conditions of resource scarcity and growing climate adversity but in practice, offers legitimation occasionally to its opposite – war. From a critical normative perspective, the notion that resource-led conflict can be considered 'just' or even 'inevitable' is objectionable. Ultimately, it is a regressive form of liberalism that allows a war mentality to condition how universal principles of freedom, justice and self-determination are applied to issues of resource distribution in this age of climate adversity when global cooperation is a prerequisite for humanity's long-term survival.

### Localized Global Energy Dilemmas

Karin Edberg, Södertörn University, Huddinge | [karin.edberg@sh.se](mailto:karin.edberg@sh.se)

The paper's overall intention is to discuss how the global energy dilemma can be understood from a local perspective. More specifically, the interest is how energy challenges facing the

Swedish welfare state and the Baltic Sea Region are translated into local opportunities and risks, and how energy projects are normalized and legitimized locally. An

increased global energy demand, ambitions to decrease the use of traditional fossil fuels and anxiety of climate change all augment the creation of new energy infrastructures. The variety of facilities is vast just as the narratives surrounding them on global, regional and national scales, just as on the local scale where they are placed. Interviews and observations have been conducted in a Swedish community with a dual identity as concurrently industrial energy intense and a popular tourist area. A number of energy related projects will, or have recently, established in the area: a transnational project shipped and stored pipes there during the construction phase of the Nord Stream natural

gas pipeline and a wind energy park is planned in the vicinity. Since energy infrastructures are part of other structures and surrounded by social arrangements cultural norms, common knowledge and local identity have implications for the outcome of the technology at hand, just as on the understanding of the benefits and risks it will imply. New energy infrastructure is often controversial as projects can be understood as simultaneously a risk and an opportunity in terms of energy security, environment, cultural values and economy. How the different notions connected to the energy types on national and regional scale are mirrored locally, and the role of local identity are thus in focus.

## **When the Wind Does Not Make Noise: the Peaceful Experience of a Renewable Community.**

**Ivano Scotti**, University 'Federico II' of Naples | [ivano.scotti@gmail.com](mailto:ivano.scotti@gmail.com)

**Dario Minervini**, University 'Federico II' of Naples | [dario.minervini@unina.it](mailto:dario.minervini@unina.it)

In the last few years an increasing amount of resources have been invested in Southern Italy in the renewable energy, particularly wind farms and solar power plants. This represents one of the main pillars of Italian ecological modernization. Frequently these plants are plagued by political and technical controversies. Previous researches have shown that these conflicts are frequently the result of the absence of engagement of the local community in the decision-making process. Furthermore, the argument of the opponents is based mainly on issues of energy and environmental injustice, such as the degradation on the natural integrity and the depreciation of the real estate as well as potential health risks. Nevertheless, there are also some non-conflictual cases in the green

energy process. The social disputes, in fact, do not seem to occur in the case of small plants owned by local citizens or in the Municipally-owned green energy facilities. In these socio-technical configurations the energy issue seems connected to more equitable solutions in terms of common local advantage. However, these socio-technical assemblages are still poorly investigated. The purpose of this paper is to explore in depth one of these experiences, in which a local community was involved in the settlement of small renewable facilities. In particular the case of Sasso di Castalda, a small mountain municipality in Southern Italy, is analyzed. In this paper, we adopt a narrative approach to illustrate how ecological modernization was peacefully translated into practice in this experience.

## 02RN08 - Crisis Informatics

Chair(s): Antti Silvast (University of Helsinki), Nina Blom Andersen (Roskilde University)

### Late Modernity Disasters in on-line Extraordinary Contexts. An Overview on L'Aquila Earthquake and the Use of Social Platforms

Manuela Farinosi, University of Udine | [manuela.farinosi@uniud.it](mailto:manuela.farinosi@uniud.it)

Alessandra Micalizzi, Libera Università di Lingue e Comunicazione IULM, Milan | [Alessandra.Micalizzi@iulm.it](mailto:Alessandra.Micalizzi@iulm.it)

Nowadays digital media play a crucial role in any event, both locally and internationally, but there is little systematic research about what role they play in extraordinary contexts, such as earthquakes, hurricanes, floods, etc.. Natural disasters are never a private matter. They represent an individual and collective extra-ordinary experience that threatens the community's cohesion and the whole social system. How people use digital media and, in particular, social platforms during disasters? How the Net can support communities affected by a disaster and contribute to build resilience?

Starting from an overview of the main empirical researches already realized, in this contribution we 1) map the main online grassroots initiatives emerged after the 2009 L'Aquila earthquake (Italy); 2) investigate the role of the Net in managing the participation and the processing of trauma and memory linked with the disaster; 3) present an interpretative model that helps to synthesize the main functions of the web and their implications in constructing a new approach to study the natural disaster from a communicative and sociological perspective.

### Risk Communication and Social Media: Are we Ready?

Beneito-Montagut Roser, Universitat Oberta de Catalunya | [r.beneito-montagut@aston.ac.uk](mailto:r.beneito-montagut@aston.ac.uk)

Shaw Duncan, Warwick University | [duncan.shaw@wbs.ac.uk](mailto:duncan.shaw@wbs.ac.uk)

Anson Susan, Aston University | [s.c.anson@aston.ac.uk](mailto:s.c.anson@aston.ac.uk)

Brewster Christopher, Aston University | [c.a.brewster@aston.ac.uk](mailto:c.a.brewster@aston.ac.uk)

The possibility of crowdsourced information, multi-geographical and multi-organisational information flows during emergencies and crisis provided by social media is facing emergency managers with new communication challenges and opportunities. Building on the literature about risk communication and social media and based on interviews with experts from six European countries this article explores how governmental agencies are using social media in emergency situations. The research gives answer to which risk communication functions do SM support. Risk

communication has used traditional media (TV, news papers, radio) to communicate with the public. The public is massively using social media, and social media allows a two-way communication between agencies and public, and across agencies. Today it is difficult for authorities to be the first informer as there is always somebody with a mobile phone ready to take a picture and tweet it. When communities are at risk disorganised behaviour can take place, and rumours spread through the internet quick and easily. Besides, people, or other stakeholders, can feel excluded from

decisions that affect them if agencies do not provide them a mechanism and framework within which they can articulate their concerns. By scrutinizing how these organisations are using, or not, social media the paper contributes to the research on risk communication, specifically to the approach

that promotes risk communication as a two-way process in which both 'expert' and 'lay' perspectives should inform each other. Social media appears to have engendered new paradigms of public engagement and communication across agencies.

## **Social Media and Natural Disasters: Mapping Information Spread and Influence Dynamics during the Emilia 2012 Earthquake**

**Francesca Comunello**, Sapienza Università di Roma | [francesca.comunello@uniroma1.it](mailto:francesca.comunello@uniroma1.it)

**Emanuele Casarotti**, Istituto Nazionale di Geofisica e Vulcanologia (INGV) | [emanuele.casarotti@gmail.com](mailto:emanuele.casarotti@gmail.com)

**Valentino Lauciani**, Istituto Nazionale di Geofisica e Vulcanologia (INGV) | [valentino.lauciani@ingv.it](mailto:valentino.lauciani@ingv.it)

**Lorenza Parisi**, Sapienza Università di Roma | [lorenza.parisi@gmail.com](mailto:lorenza.parisi@gmail.com)

Social media have served as a powerful tool for emergency management and disaster relief in many recent emergency situations, in particular natural disasters. The huge number of messages and interactions generated on social media during emergencies, moreover, constitute an unprecedented source for understanding the specific communication patterns taking place on social media, with regard to information spread and influence dynamics. The goal of this paper is to analyze the role of social media during natural disasters: we present the results of an analysis of the dataset of the whole geolocalized tweets with hashtag #terremoto (=earthquake) that can be related to the 20/5/12 earthquake in Emilia, Italy (the tweets have been extracted in real-time by INGV). We will adopt a multidisciplinary framework, integrating a sociology and communication perspective with

insights from geophysics (with regard to seismological parameters and to citizen-generated information about the earthquake effects collected by INGV). Our research goals include: - providing a quantitative account of Twitter activity, including tweet volume over time, distribution of activity across users, etc. and exploring: - information spread and patterns of influence - the interactions between citizen-generated information and institutional information - uses and gratifications related to Twitter usage both by directly affected populations and by the general Italian public. Our research integrates quantitative and qualitative methods. The quantitative side includes automated data analysis and activity metrics; social network analysis; content analysis. Such quantitative methods are integrated with a qualitative tweet analysis (drawing a sample from the dataset).

## **Models of Governmental Crisis Communications and Information Management**

**Elena Gryzunova**, MGIMO-University | [mail2.elena@mail.ru](mailto:mail2.elena@mail.ru)

The research represents comparative analysis of different governmental models of crisis communications and information management

ranged from the least effective to the most effective one. 1) Information blockage, external communication withdrawal, hierarchical

internal communication. 2) Information manipulation, one-way external communication, hierarchical internal communication. 3) Information management, external communication with feedback, combination of hierarchical and network internal communication. 4) Knowledge management; network participatory communications; overlap of external and internal communications. The empirical part is represented by case studies that match the above models. The author's theoretical approach to crisis management is based on sociological theories enriched by other related social sciences and multidisciplinary concepts

of complementarity, synergy and complexity. Crisis is described as an ambivalent social phenomenon which is at the same time subjective and objective, constructive and destructive, a point of bifurcation and a process. That is why both functionalist and interpretive sociological paradigms are applied to crisis management. The theories used in the research are: structure functionalism, symbolic interactionism, phenomenology, sociology of knowledge, sociolinguistics, theory of social change (Sztompka), cultural sociology (Alexander), communication theory of power, and theory of informational society (Castells).

### **03RN08 - Voluntary Service and Natural Disaster: toward a Relational Approach**

Chair(s): Barbara Lucini (Università Cattolica del Sacro Cuore, Milano), Marco Lombardi (Università Cattolica del Sacro Cuore, Milano)

#### **Voluntary Engagement in a Civil Security System. The Czech and Polish Cases in the European Perspective**

Piotr Matczak, Adam Mickiewicz University, Poznań | [matczak@amu.edu.pl](mailto:matczak@amu.edu.pl)

Vera-Karin Brazova, Charles University, Prague | [y.k.brazova@gmail.com](mailto:y.k.brazova@gmail.com)

Voluntary engagement in disaster management and relief has traditionally had fundamental role at the communities' level. The engagement of voluntary fire service, religious organisations etc. has substantially decreased in last 100 years due to professionalization of disaster management and the growing role of the state. Today, the variety of the voluntary engagement among the countries is large. In the paper, the Czech and Polish cases are presented in the European perspective. Not only do these two countries share a similar history, but also the threats they face tend to be of a similar nature (i.e. mostly natural disasters like floods and storms). Building on these similarities, the differences in the involvement of the civic sector are contrasted. In doing so, the paper

seeks to answer the following research question: What is the current niche of the voluntary service in the civil protection systems and what is its possible future evolution? Based on the analysis of reports, legislations and interviews with experts, the specificity of the voluntary engagement in a civil security system in these two (post-communist) countries is shown, vis-à-vis other European countries. Based on recent examples (e.g. the floods of 2002 which severely impacted both countries), the role of the non-governmental sector is shown, as well as the engagement of the general public. Following, the current trends of civic-state cooperation are discussed and the new initiatives are presented and the (enhancing and constraining) role of the government – in the times of the economic

crisis.

## Social Inclusion through Volunteering in the Time of the Crisis

**Yeva Perpek**, Hungarian Academy of Sciences - Corvinus University of Budapest | [perpek.eva@tk.mta.hu](mailto:perpek.eva@tk.mta.hu)

**Zsolia Bauer**, Hungarian Academy of Sciences - Corvinus University of Budapest | [bauer.zsolia@tk.mta.hu](mailto:bauer.zsolia@tk.mta.hu)

During times of social and economic crisis actors may experience elevated levels of alienation and social exclusion. While a large corpus of literature argues that volunteering may play an important role in community participation and empowerment (Henderson 2007, Putnam 1995), thus being an important factor in social inclusion especially in times of crisis, present paper argues that the situation may not be so self-evident and contextual effects play an important role. Within this study formal (helping via organization) and informal (helping directly) voluntary activity is examined from a comparative aspect, investigating which form enhances inclusive tendencies greater. According to our hypothesis formal volunteerism is the frame which fosters local development more effectively. The empirical evidences of the study are derived from both quantitative and qualitative data sources:

secondary analysis of two Hungarian representative surveys' data conducted in 1993 and 2004 and case studies conducted in 2011, researching civil guard organizations and neighborhood watch groups in diverse communities. The analysis of the representative data has confirmed that formal and informal volunteers are significantly different in three main dimensions: frequency of the activity, social status and motivations of the participants, and formal volunteering proved the more effective tool for inclusion through community participation. These findings appeared somewhat modified when looking at the results presented in the two case studies, highlighting that in the time of the present economic crisis this primacy of formal volunteering is less salient and informal volunteering can also serve as relevant and effective form towards inclusion.

## Boundary Practices at Incident Sites: Making Distinctions between Emergency Personnel and Volunteers

**Linda Kvarnlöf**, Mid Sweden University | [linda.kvarnlof@miun.se](mailto:linda.kvarnlof@miun.se)

**Roine Johansson**, Mid Sweden University | [roine.johansson@miun.se](mailto:roine.johansson@miun.se)

As pointed out in disaster sociology, the public converge at incident sites in times of disaster in order to offer their assistance to those in need. Many times, the public are the actual first responder as they arrive at incident sites before the emergency personnel. As we will show, this is just as much the case in times of emergencies such as road traffic accidents. Here, we have studied members of the public in terms of unaffiliated volunteers, i.e., people who just happen to arrive first on scene at road

traffic accidents. We argue that in order to understand the actions of volunteers we need to recognize the organizational context and the interaction between emergency personnel and volunteers. The aim of this article is to study how this interaction is structured by the emergency personnel's jurisdictional claims in terms of boundary practices. Based on interviews with emergency personnel as well as unaffiliated volunteers, our findings show that the interaction can be described in terms

of three different boundary practices: cordoning off, division of labour and conversation. The result shows that the emergency personnel's relationship to volunteers is ambivalent, as they are both seen as an uncertain element at the incident site in need of control and as a valuable source of

information. We believe that these results could be applied to other situations than road traffic accidents, and that the relationship between professionals and lay people is of great importance whether talking about emergencies, crisis or natural disasters.

## **The Added Value of Voluntary Service during Earthquakes Emergencies. Prevention, Action, Communication**

**Gaia Peruzzi**, Sapienza University, Rome | [gaia.peruzzi@uniroma1.it](mailto:gaia.peruzzi@uniroma1.it)

**Andrea Volterrani**, University Tor Vergata, Rome | [andrea.volterrani@uniroma2.it](mailto:andrea.volterrani@uniroma2.it)

What is the added value of voluntary work in the case of natural disasters? What are the functions of voluntary workers in collaboration with the Italian Civil Protection? What competences are made available by non-profit organizations? What are the specific contributions that are actually realized by free will and grounded on ethical values, that voluntary work organizations claim being their distinguishing trait? We will seek to answer these questions by means of a research path that will re-define the role of one of the oldest and most important Italian voluntary organizations, Anpas, in three critical situations: the earthquakes in L'Aquila and in the region of Emilia Romagna, and the seismic swarm of Pollino. Its prestige, dimension and the ever growing devotion to emergency work made this organization a protagonist of Italian civil protection. On the other hand, the

unpredictable and dangerous nature of earthquakes, and the seismic nature of the National territory, made these events a constant and emblematic reference in the communication of risk. The research strategy will integrate different qualitative actions, in the analysis of the processes of communication: 1) by reconstructing the social history of Anpas, examining archives and interviewing volunteers; 2) by laying out and analyzing the activities of the volunteers during the emergencies in L'Aquila and Emilia Romagna, as well as studying the evidences and interviewing privileged witnesses; 3) by analyzing the current prevention campaign of Pollino "Terremoto. Io non Rischio" [Earthquake. I do not risk]; 4) by analyzing the communication material issued by Anpas during and after the crisis.

## 04RN08 - Political Effects of Debt Crisis

Chair(s): Alberto Cotillo Pereira, Ariadna Rodriguez Teijeiro, Elvira Santiago Gomez

### Crisis, Convulsion and the Welfare State

Frances Fox Piven, City University of New York | [fpiven@hotmail.com](mailto:fpiven@hotmail.com)

Lorraine C. Minnite, Rutgers, The State University of New Jersey-Camden | [lcm130@camden.rutgers.edu](mailto:lcm130@camden.rutgers.edu)

Dramatic changes are occurring in poverty policy worldwide. In a number of the rich countries that were earlier the pioneers in creating the welfare state, social spending is under attack, and the buzzword is austerity. This is not only happening in beleaguered Greece and Spain, but to a lesser extent in other advanced post-industrial nations; it is on-going in the U.K. and the U.S., where cut-backs began years ago. On the other hand, a rash of new and expansive programs have been inaugurated in many countries in the southern hemisphere, the part of the world where we usually expect to find economic laggards, and if for no other reasons, policy laggards. Neither of these trends can be explained by dominant theories of welfare state development, including logic of industrialism, Marxist variants of that perspective, power

resources theory, or theories that emphasize the workings of “normal” politics and state-centric bureaucratic actors which largely focus on non-poor actors when they focus on actors at all. We think this is a mistake. We argue that policy reversals in the rich countries are owed to a neoliberal offensive, but also to the acquiescence or confusion of the less-well-off groups who are affected. At the same time, current trends suggest that the arguments advanced by Piven and Cloward and others that privilege the ‘politics of the poor’ and the role of disorder and dissensus in the development of poverty policy, are also incomplete. This paper will inventory the big shifts in poverty policy in the advanced and emerging economy nations of the West and global South, and assess the ‘weight of the poor’ in explaining these developments.

### Fighting Austerity Measures: Protecting Interests or Promoting Principles?

Marie Louise Damen, VU University, Amsterdam | [m.l.c.damen@vu.nl](mailto:m.l.c.damen@vu.nl)

Jacqueline van Stekelenburg, VU University, Amsterdam | [j.van.stekelenburg@vu.nl](mailto:j.van.stekelenburg@vu.nl)

Bert Klandermans, VU University, Amsterdam | [p.g.klandermans@vu.nl](mailto:p.g.klandermans@vu.nl)

The lengthening of the crisis and the seemingly inability of governments to reverse it, has raised citizens’ discontent with the performance of democratic representative institutions in general and politics in particular. In response, citizens of all walks of life

mobilize in opposition. This is vividly exemplified by dozens of anti-austerity demonstrations throughout Europe and movements as the Indignados and Occupy. Yet, social movement literature has shown over and over again that protesters –generally–feel political

efficacious, have faith in democracy and trust their political institutions. Is this also the case for participants in the recent anti-austerity protests? Are protesters only fighting the proximal austerity measures or also voicing their discontent with the performance of democratic institutions as a more distant goal? This is the question that interests us in this paper. In order to answer this question we compare participants in 19 anti-austerity demonstrations dispersed over seven European countries (Belgium, Italy, The Netherlands, Spain, Sweden, Switzerland, Sweden, and the U.K.) over the years 2009-

2012. We asked about their grievances, participation goals and their evaluation of politics (trust in institutions, political cynicism, satisfaction with the functioning of democracy). Demonstrations will be mapped in a two-dimensional space defined by the functioning of the economy (poor-well) and generalized trust in government (low-high). Depending on a demonstration's location in this two-dimensional space at the moment of the demonstration, we expect demonstrators to be more or less in opposition to the government and protecting their interests rather than promoting democratic principles.

## Eroded Ideologies? Institutional Confidence Crisis and Ideological Identification in Spain

**Cotillo Pereira Alberto**, Universidad de La Coruña | [acp@udc.es](mailto:acp@udc.es)

**Ariadna Rodríguez Teijeiro**, University of La Coruña | [ariadna@udc.es](mailto:ariadna@udc.es)

**Elvira Santiago Gómez**, Institute of Public Goods and Policies - Csic | [elvira.santiago@ccchs.csic.es](mailto:elvira.santiago@ccchs.csic.es)

Over recent years there has been an increase in political disaffection in terms of an authentic institutional confidence crisis in Spain. This confidence crisis has been particularly strong among those identified in the ideological left. This brings to suggest that the increase in political disaffection has produced, first of all, an increase in the mistrust in representative democratic institutions from those identified in the ideological left. This paper tries to deal with the analysis of the link between institutional confidence crisis and the

ideological self-positioning. It maintains that the ideological self-positioning is to some extent related to institutional confidence. This paper analyse to what extent institutional confidence crisis is related to ideological erosion in past years in Spain. The link between both parameters stems a specific feature of the usual scales of ideological self-positioning. They work more as expressions on the assessment of the political situation than as genuine scale measurement of ideological self-positioning.

## 05RN08 - The Social Impact of the Debt Crisis: Recent Trends on Poverty and Inequality across Europe. Causes, Consequences and Future Prospects

Chair(s): Ullberg Susann (CRISMART Nicholas Petropoulos)

### The Chronic Institutional Crisis of Greek Labour

George Tsobanoglou, University of the Aegean | [g.tsobanoglou@soc.aegean.gr](mailto:g.tsobanoglou@soc.aegean.gr)

Eirini Ioanna Vlachopoulou, University of the Aegean | [socd12054@soc.aegean.gr](mailto:socd12054@soc.aegean.gr)

The current crisis in Greece has brought to the surface the employment security aspect of the Greek “labour system”. The employment relationship seems to be embedded upon a bifurcated system whereby labour is separated institutionally in a) a secured salaried public sector and b) a private sector defined by precarious labour conditions that are characterised by the technical separation of work from its social security (pensions) relationship. The two systems have been coupled with separate health systems developing separately (current attempts to unify in process). The paper explores this situation that defines the organisation of the labour system in Greece whose politico-

administrative controls formulate a binary legal system (public/private) which does not allow for the emergence of the not-for-profit-law institutions. The “social” reproduction of private labour is based upon the formally established private and “commercialised” interests that practice “trade” in basic needs (health, education). As a result, communities rely on the family, the Church, self-help and ... out-migration. By focusing on this anachronistic and discriminatory system of political order for labour we may be able to unlock the reasons for the weakness of labour social economy organisations in Greece and the acute unemployment rates (the highest in the Eurozone).

### Minimum Income Schemes in Europe: Paying the Price?

Sarah Marchal, University of Antwerp | [sarah.marchal@ua.ac.be](mailto:sarah.marchal@ua.ac.be)

Ive Marx, University of Antwerp | [ive.marx@ua.ac.be](mailto:ive.marx@ua.ac.be)

Natascha Van Mechelen, University of Antwerp | [natascha.vanmechelen@ua.ac.be](mailto:natascha.vanmechelen@ua.ac.be)

This paper compares how European minimum income schemes for able-bodied working aged have fared during the crisis. In a first part of the paper, we analyze how the net disposable incomes of families relying on minimum income benefits have evolved in the period 2009-2012 in Portugal, Spain and Italy, as compared to trends in the other Eurozone countries. The standard simulations take account of changes in minimum income benefits and additional benefits such as housing allowances and supplements for

children. The focus is on the changed capacity of minimum income packages to protect against the risk of poverty. In the second part of the paper, we dig deeper into the crisis measures and reforms introduced in this period in the Southern European states. These countries were hit comparatively hard by the crisis, both in terms of the effect on their public finances as on their labour markets. Moreover, the social insurance systems that have provided a relatively well-functioning automatic stabilizer in other countries, such as

the unemployment insurance scheme, are often less generous, and focus on the insiders of the labour market. Finally, and most pertinent given our focus on minimum income schemes, these countries were relatively late and/or incomplete in the establishment of a final safety net for their working age population. The institutional changes and

reforms to the minimum income schemes are then compared to the changes that took place in the remainder of the EU countries. We focus on those countries that have undertaken structural reforms of their minimum income schemes since the onset of the crisis, and assess differences and commonalities of these reforms.

## Greece in Crisis: Testing Institutions and Social Trust 2002 -2010

**Antti Kouvo**, University of Eastern Finland | [anttikou@uef.fi](mailto:anttikou@uef.fi)

**Heikki Ervasti**, University of Turku | [heikki.ervasti@utu.fi](mailto:heikki.ervasti@utu.fi)

**Takis Venetoklis**, University of Turku | [ta\\_vene@yahoo.com](mailto:ta_vene@yahoo.com)

We investigate how the malfunctioning and trust deficit of public institutions associate with changes in interpersonal trust and ask whether these changes are similar in different groups of the population. Our hypothesis stems from the institution-centred theory. Conclusions in the accumulation of social trust are often based on cross-sectional data. Over time however, there is little empirical evidence of how a potential sharp deterioration of trustworthiness of public institutions effects social trust. In our analysis we use data from the European Social Survey for Greece and other 13 European countries during 2002-2010. During that period and compared to others, Greece gradually entered a much deeper economic and social crisis. And this, unfortunately, has lately deteriorated even

further. In the analysis of institutional change and attitudes, causal explanations are usually rather problematic. The comparison of the Greek case with other European countries nonetheless, provides us with a quasi experimental setting through which we can take positive steps towards more causal explanations. Matched against other European countries, for Greece our results indicate a sharp decline of trust in public institutions, but not yet a general decline of social trust as of 2010. We find however, differences in the variation among different subgroups of society over time. Thus, it seems that the collapse of institutional trustworthiness does not have an equal effect on the social trust of all citizens. In our paper, the theoretical and policy implications of the findings are also discussed.

## The Demographics of Poverty in Mediterranean countries

**Dionyssis Balourdos**, National Centre for Social Research | [dbalourdos@ekke.gr](mailto:dbalourdos@ekke.gr)

This presentation focuses on the interrelationships between family structure and poverty in selected Mediterranean countries (Greece, Spain, Portugal, Italy, Malta and Cyprus) and on how social policy can best address poverty in the family institution. For this purpose we use a typological approach, based on selected characteristics of family structure, involving the following dimensions:

sex of head, age, family size and composition, nationality, employment of family members, education and housing tenure. These dimensions are then used in a basically descriptive and comparative analysis based heavily on poverty and material deprivation indices, using data from the European Union Statistics on Income and Living Conditions (EU-SILC) for the period 2008-2011. In 2011, the

population at risk of poverty in the Mediterranean countries was well above the EU average. Women are one of the groups most vulnerable to poverty. This, among others, has to do with the fact that women still retain primary responsibility for home and family. The risk of poverty rate of households with dependent children and without members in employment has also risen significantly. Furthermore, immigrants, sole-parent, single parent and households with 2 dependent

children are of particular concern due to the high incidence of poverty. The risk of working poverty is very low among couples with either two full-time earners or one full- and one part-time, but rises substantially when there is just one earner. In response to increasing family poverty, it is recommended that governments should take active measures in order to ensure that employment is guaranteed for both parents.

## 06RN08 - Disaster Risk Techniques: Practices of Use, Critiques and Reinventions

Chair(s): Antti Silvast (University of Helsinki), Turo-Kimmo Lehtonen (University of Helsinki)

### Protecting the ‘Reasonably Maximally Exposed Individual’ at Yucca Mountain, Nevada: The First One Million Years

Vincent F Ialenti, Cornell University | [vfi2@cornell.edu](mailto:vfi2@cornell.edu)

This presentation examines the United States’ failed radioactive waste disposal efforts at Yucca Mountain, Nevada through the lens of some of the novel technical strategies it developed to simulate, to protect, or to otherwise influence societies imagined to inhabit the distant future. After a brief look at how human inclinations to know, to destroy, and to protect have become increasingly entangled with futures of radically extended duration, this talk zooms in on three specific instruments developed in the United States to effectuate nuclear waste risk governance and to ward off far future disasters: (a) oft-deployed technical modeling processes, (b) the imaginaries of science fiction, and (c) the ‘reasonably maximally exposed individual’ – premised on familiar individuations of liberal

personhood – that was defined as the legal standard according to which the high-level radioactive waste disposal regime as a whole was required to prove safety. The aim of this presentation is to unpack the ways in which these instruments have been selectively repurposed, reengineered, or reinvented to serve new ends adaptive to the Yucca Mountain Project’s uniquely long sighted ‘compliance horizons’ that stretched one million years into the future. The talk concludes with an analysis of what this failed radioactive waste management endeavor can reveal about novel epistemological, pragmatic, and ethical challenges to risk governance that may arise in zones of engagement with distant future societies, bodies, and environments.

## Risk Science and Governance as Pattern Recognition: Two Regulatory Struggles

Arho Toikka, University of Helsinki | [arho.toikka@helsinki.fi](mailto:arho.toikka@helsinki.fi)

Nina Honkela, University of Helsinki | [nina.honkela@helsinki.fi](mailto:nina.honkela@helsinki.fi)

Modern societies utilize complex risk governance frameworks to deal with risks of novel technologies. These frameworks are built on idealized views of science and scientific knowledge, where risk knowledge proceeds through formal, objective disciplinary procedures. These frameworks handle uncertainty as simple lack of knowledge and assume a strict split between facts and values, working on the assumption of a disinterested science. Many theorists have challenged these ideals and tried to draw a more realistic picture of the everyday actions of the scientist, including the distinctions between normal and post-normal science (Funtowicz & Ravetz 1994), Mode 1 and Mode 2 knowledge production (Gibbons et al. 1994), regulatory and research science (Jasanoff 1990) and science of certainty and science of wonder (Byers 2011). We use these distinctions to analyze the

operational frameworks scientists use in their argument. We use these theories to look at risk science and risk regulation in two case studies: carbon nanotubes and endocrine disruptors. Carbon nanotubes are known for their extraordinary strength and other useful properties, but also potential for asbestos-like toxicity. Endocrine disruptors are chemicals that can interfere with the hormone system in ways that cannot be calculated based on high-dose, short-time tests. In both cases, scientists are struggling to provide regulators with information. We argue that, first, the scientists are already operating within the new, post-normal, Mode 2, wonderful frameworks and, second, that embracing these frameworks openly does not undermine science but rather provides a more solid foundation for scientific knowledge that produces applicable material for risk regulation.

## Public Acceptability of Surveillance Oriented Security Technologies in the Era of Pre-Emptive Security: Towards a Democratization of Risk Management Strategies

Elvira Santiago Gómez, Institute of Public Goods and Policies - Csic | [elvira.santiago@cchs.csic.es](mailto:elvira.santiago@cchs.csic.es)

Sara Degli Esposti, Center for People and Organisations | [Sara.Degliesposti@open.ac.uk](mailto:Sara.Degliesposti@open.ac.uk)

Vincenzo Pavone, Consejo Superior de Investigaciones Científicas | [vincenzo.pavone@cchs.csic.es](mailto:vincenzo.pavone@cchs.csic.es)

Pre-emptive security nowadays constitutes the main framework behind new strategies to respond to security threats and human and natural disasters. This perspective based on deterrence or peace-building, emphasizes the necessity of envisioning and designing solutions enabling the anticipation and management of security risks. These technologies bring along with their implementation other risks, such as risks of

privacy infringement, discrimination, misuse, abuse of errors, which have often triggered public outcries and caused widespread anxieties among citizens. Thus, the same measures meant to foster human security, can make people feel insecure, vulnerable, and exposed. Despite being in contrast with what is envisioned in the Charter of Fundamental Rights of the European Union, wherein privacy and security are equally protected, this

outcome is perfectly in line with the master security narrative, where it is considered inevitable to trade privacy and liberty in exchange for security. Widely adopted as a policy benchmark in security policies, this trade-off between security and liberty has over-simplified citizen's assessment of Surveillance Oriented Security Technologies (SOSTs), producing a misleading interpretation of how citizens assess risks associated with the implementation of SOSTs. Drawing from

both the socio-cultural and psychometric approaches to risk analysis and the literature on public engagement in science and technology, this article proposes a new model to identify the factors influencing public acceptability of SOSTs. In the context of the FP7 funded SurPRISE project, this model will be empirically tested in 9 European countries through the "Citizen Summit" method, a participatory data gathering event that relies on a new mix-methods research design.

## Managing Insecurity: Risk Technologies and the Looping Effects of Welfare Production

**Turo-Kimmo Lehtonen**, University of Helsinki | [turo-kimmo.lehtonen@helsinki.fi](mailto:turo-kimmo.lehtonen@helsinki.fi)

**Mikko Jauho**, National Consumer Research Centre, Helsinki | [mikko.jauho@ncrc.fi](mailto:mikko.jauho@ncrc.fi)

**Jyri Liukko**, University of Helsinki | [jyri.liukko@helsinki.fi](mailto:jyri.liukko@helsinki.fi)

**Antti Silvast**, University of Helsinki | [antti.silvast@helsinki.fi](mailto:antti.silvast@helsinki.fi)

A key objective of the welfare state is the management and redistribution of risks related to various kinds of disasters. These include not only large scale natural catastrophes or infrastructure disruptions but also – and from the citizens' point of view, crucially – the personal disasters caused by poverty or ill health. This paper looks empirically at how the present scope of possibilities, offered by the welfare systems, is conditioned by the risk technologies which have been applied in creating these systems. We juxtapose three different domains of practice: first, the risk factor approach which dominates the current mode of governing public health; second, the role of private insurance in the management of household economy through insurance; and third, the relationship between electricity supply

breakdowns and the emerging security initiatives. The empirical case studies are based on historical research on particular sites of expertise in Finland. The paper makes two main points. First, we emphasize the looping effect of welfare production: the techniques with which welfare is operationalised and advanced – among them technologies of health care, insurance and electricity supply – strongly reshape the conceptions of welfare, ie the scope of possibilities regarding what could be done and what should be done for advancing welfare and well-being. Second, although the focus of our empirical work is on the techniques of controlling risk, we argue that the specific development of these techniques has constantly been related to the will to create positive conditions for well-being by utilizing and embracing risk.

## The Dark Side of Interaction in Sociotechnical Systems

**Chiara Bassetti**, Italian National Council of Researches - CNR, Rome | [chiara.bassetti@loa.istc.cnr.it](mailto:chiara.bassetti@loa.istc.cnr.it)

**Roberta Ferrario**, Institute of Cognitive Science and Technology, Italian National Council of Researches - CNR, Rome | [roberta.ferrario@loa.istc.cnr.it](mailto:roberta.ferrario@loa.istc.cnr.it)

**Emanuele Bottazzi**, Institute of Cognitive Science and Technology, Italian National Council of Researches - CNR, Rome | [bottazzi@loa.istc.cnr.it](mailto:bottazzi@loa.istc.cnr.it)

Interaction has a force of attraction that might be fatal. Person to person interaction may help in mitigating crises, but it can also pave the way to catastrophes. People prefer to maintain and sustain interpersonal interaction per se. This is crucial in Socio-technical systems where inter- and intra-organizational ends, goals, technological artefacts and other elements are in place. This contribution – a result of an interdisciplinary effort (sociology, philosophy and AI)– is mainly theoretical, and introduces the notion of Recognized Epistemic Field (REF), that is the field where interpersonally valid definitions of the situation are marked in interaction. A REF, basically, is a regarded-as-shared map of the ongoing interaction that allows coordination. The problem is that, in STSs, coordination has to be maintained also with the relevant elements of the system. Therefore, even at the detriment of interpersonal interaction per se, REF needs to be periodically double checked by participants, who should "resist", so to speak, the attraction of interaction. Moreover, given that we are dealing with the whole STS, we need each of its relevant elements to be able to contribute to the construction of a mutually recognized, valid definition of the situation. We think that this approach is a good way to consider communication and information management in crisis situations at its basic layer. Therefore, we shall propose a socio-ontological analysis of interaction and its potential impasses, and then we shall consider the implications dealing with crises in complex organizational contexts, also leveraging on the analysis of an actual case, that of Air France Flight 447 crash.

## 07RN08 - Material matters in Crisis, Conflict and Disaster

Chair(s): Ullberg Susann (CRISMART)

### Can Material Matters and Critique Be Dealt with at the Same Time? Discussion of Analytical Approaches

**Nina Blom Andersen**, Roskilde University | [ninablom@ruc.dk](mailto:ninablom@ruc.dk)

Material matters has to be dealt with in analysis of disasters, social crisis and conflicts since an important part of the unpredictability in these courses not only stems from human agency but as well from objects that are as well involved in complex webs of relations that shape the processes. Several theoretical traditions offer perspectives that take objects

into account even though they approach the understanding of how material relations shape social life differently. This presentation discusses how the research area on disaster, social crisis and conflict can benefit and be widened up from each of four traditions that cover a continuum of more or less radical involvement of materiality: Actor Network

Theory/ANT (e.g. Callon 1986) deals with materiality in the most radical way offering a framework where it is argued that symmetric analysis of human as well as non-human actants enriches an analysis. Post ANT (e.g. Mol 2002) distances itself from the ANT-tradition by focusing on the practices where humans and materiality are gathered instead of focusing on the relations between these actants. Working with Clarke's (2005) notion of

situational analysis as well as Practice Theory (e.g. Reckwitz 2002) materiality is as well offered a central place in the analysis though dimension of structural character are involved in contrary to both the ANT- and the Post ANT tradition. The four approaches will be outlined in relation to different cases, and each tradition's ability to deal with the question of critique will be discussed as well.

## Material Evidence as "Third Party" in Environmental Conflicts

**Aymeric Luneau**, Ecole des Hautes Etudes en Sciences Sociales, Paris | [Aymeric.luneau@gmail.com](mailto:Aymeric.luneau@gmail.com)

The main question which my paper deals with concerns the conditions in which conflicts are possible. In fact, it seems difficult to understand conflict or crisis, if we don't ask how they appear. I would like to demonstrate that "material evidence" plays a key part on the configurations of conflict. I will illustrate my proposal with the comparison between three environmental health problems that I'm analysing for PhD work: the controversy over the reality of the "Multiple Chemical syndrome", the use of perchloroethylene in laundries and the health impact of the pollution around the "Etang de berre", an industrial area near Marseilles. When individuals can't get material evidence to prove that the risks on their health are real, it becomes more difficult for actors to share a common definition of the environmental health problem, and disputes could shift to unproductive exchanges. My

observations are in accordance with the distinctions which Ernan McMullin draws between "controversy of fact" and "controversy of principle" (McMullin, 1987), or with the typology of Marcelo Dascal who opposes "dispute" to "discussion" (Dascal, 2010). Otherwise, in order for social conflict to exist, actors should pay attention to the arguments of opponents and respond to them. The conflictual process implies a challenge of power relations. Without proof of their pain, laypeople may not succeed in drawing the attention of public authorities. "Material evidence" embedded in conflict seems to introduce a mediation between actors, thus opening access to spaces of discussion. Therefore, I aim to suggest that "material matters", such as the money in economic relations (Simmel, 2009), could be a kind of third party (Simmel, 1999) in conflicts.

## Zooming In and Out: Social Impacts of Drone Action in Conflicts

**Valentin Rauer**, Goethe University, Frankfurt | [vrauer@soz.uni-frankfurt.de](mailto:vrauer@soz.uni-frankfurt.de)

**Julian Junk**, Goethe University, Frankfurt | [julian.l.junk@gmail.com](mailto:julian.l.junk@gmail.com)

This paper focuses on the question how material objects like 'drones' shape public awareness during conflicts and discusses its consequences. A recently published study "Living under Drones" (2012) argues that the

increasing use of drones needs to go hand in hand with a better understanding of the social impacts of such acting objects. To address this research gap, the paper combines the public sphere with the practices of warfare and of

victimhood and discusses how these are influenced and transformed by objects in action. Drone practices are micro situations that are translated in a global macro-context. The paper introduces the concepts of “connections” and of “zooms” to analyze these impacts sociologically. We argue that the impact of drone action goes beyond lethal action, surveillance of large geographical spaces, and the permanence of existential threats in conflict regions. Drones have salient impact for the public in sending countries as

well. We argue that the newsworthiness in these sending countries is rather small, because there are “only” objects flying: soldiers, the pilots, are not “at war”, they are at war for eight hours, then “at home”. The cultural memory developed with a long history of making war and peace has no impact anymore. Instead we are confronted with hybrid objects of zooming between war and peace, militants and civilians and macroscopes and microscopes.

## Meanings of Materiality in Flash Flood Risk Management in Mexico

**Peter Simmons**, University of East Anglia | [p.simmons@uea.ac.uk](mailto:p.simmons@uea.ac.uk)

**Frida Guiza Valverde**, National Autonomous University of Mexico | [fnadiezda@gmail.com](mailto:fnadiezda@gmail.com)

Engineered barriers and other technologies are routinely used to reduce the risk of flash flood events. The role of these material artefacts has been examined from the perspective of functional performance but their social and cultural meanings and the effects that they produce have received less attention. This paper examines the significance of materiality in the context of a small community in Mexico that has experienced flash flooding of increasing intensity. It examines in particular the construction of a flood defence

barrier by local citizens and the use of management technologies such as flood risk maps by the local civil protection authorities and considers the role, meanings and functions of these artefacts within the socio-cultural contexts in which they are deployed. The paper highlights the ways in which these material objects are inscribed with meaning by political, economic, social and cultural processes that render them simultaneously functional and dysfunctional.

## 08RN08 - Change from the Margins? Gender and Social Inequality in the Wake of Disaster

Chair(s): Shelley Pacholok (University of British Columbia), Nina Blom Andersen (Roskilde University)

## Seeing the Change: Tools for Reading Shifts in Gender Relations in Disaster Contexts

**Christopher Lyon**, Independent Researcher | [chris.lyon77@gmail.com](mailto:chris.lyon77@gmail.com)

The idea that disasters may generate progressive shifts in gender relations raises many new questions about how these shifts

may occur. In particular, which theoretical or conceptual tools sensitive to the power, justice, complexity, and identity issues inherent in

gendered relationships are suitable for revealing these shifts? This paper proposes several emerging concepts from resilience and adaptation scholarship that hold promise as investigative tools. Empirical work in socialpsychology and social learning at individual and collective scales describes the processes by which people come to understand disasters and renegotiate their roles and identities in response. Social attractors are the different values or ideas around which social practices coalesce and help explain group

formation and resource allocation in response to change. Contrapuntal analysis accounts for the voices of both the marginalized and the privileged, understanding them as component parts of a whole, thereby allowing the social inequalities to be accounted for. Examples of these ideas are drawn from existing literature and explained in reference to their potential applicability for addressing the processes, complexity, and power relationships integral to progressive changes in gender relations in disaster contexts.

## Fighting (in) the Crisis: New Gender and Race Strategies in Greece

Alexandra Halkias, Panteion University, Athens | [halkiasa@otenet.gr](mailto:halkiasa@otenet.gr)

This talk presents part of a larger critical ethnographic project that examines some of the ways in which alterities are negotiated in the shifting terrain of Greece in the context of “the crisis” and the neo-colonial effort to “solve” the crisis. Taking “the crisis” as an opportunity to study how gendered subjectivities attempt to rearticulate the self, the assumption underlying the project is the belief that the trauma associated with rapid large scale economic change creates conditions that could yield new, and radical, forms of subjectification. I focus here on three sites of tension produced by the wide scale adoption of a rhetoric of crisis in Greece and the implementation of legal and state action that increasingly jeopardizes the wellbeing of all those residing in Greece, citizens and migrants alike. Discourse analysis of certain

fragments of public talk supports the argument that much of the intensity marking crisis-related government discourse and practice is connected to an implicit latent reading of the crisis as a sign of a related crisis in hegemonic masculinity. At the same time, however, I go on to argue that these sites of tension, revealing of a faltering of hegemonic masculinity, seem also to fuel alternative, competitive masculinities. The paper discusses evidence of disparate forms of these masculinities; from the explosion in male suicide rates, growing “anti-fascist” collectivities and glimmers of anarcho-feminist masculine formations, to the stark surge in support for the far right party Golden Dawn, characterized by blatantly racist, nationalist and sexist discourse in various forms.

## Earthquake for Women: Effects of Earthquakes on Lives of Women in Van, Turkey

Zeynep Beşpınar Karaoğlu, Marmara University, Istanbul | [zeynep.bespınarkaraoglu@gmail.com](mailto:zeynep.bespınarkaraoglu@gmail.com)

It is well argued in literature that effects of natural disasters on psychological and social lives of those who experience disasters heavily depend on socio-economic and class status, age, gender of those persons. Problems encountered by women during an upheaval

such as an earthquake, are very complex and multi-dimensional in societies where differentiation in gender roles have negative impact on social status of women. Level of development, together with specific features of the social fabric, affect the quality and depth of

problems, besides mechanisms of coping. Thus, earthquakes occurring in different regions of Turkey, shall have important differences in terms of their social consequences. Earthquakes occurred in Van in 2011 should be considered in the context of specific conditions of Van. Being one of the most problematic provinces of Turkey in terms of development indicators, Van also differs in terms of the Kurdish population and activity of Kurdish political movement. This “difference” affected the discourse and activities of the central authority, following the earthquakes. Moreover, tribe oriented traditional patterns,

which deepen social inequalities and bring multiple problems especially for women, maintain their validity. Regarding all these, this presentation focuses on the question “How have women in Van been affected by the earthquake?” and aims to reflect problems faced by women in region. The presentation is based on the qualitative field research carried out in Van between July-August 2012. A total of 32 in-depth interviews have been made with women of different socio-economic status, representatives of political parties and women associations in the region, civil servants and local journalists.

## **Gender Mainstreaming in Disaster Management - Opportunities and Challenges in Badakhshan, Afghanistan**

**Malashree Bhargava**, GIZ- DETA Project | [malashree\\_b@yahoo.com](mailto:malashree_b@yahoo.com)

**Sebastian Wigele**, GIZ- DETA Project | [sebastian.wigele@giz.de](mailto:sebastian.wigele@giz.de)

Gender mainstreaming into natural disaster management by public authorities has seen a challenging journey in Badakhshan, the Afghan province with by far the highest frequency of natural hazards in the country. However, post-2001 has brought a ray of hope due to international efforts and growing political interest for integration of gender aspects in disaster management policies and practices. Although women in rural areas have always been an invisible force of resilience and responders during disasters, their active participation in disaster management projects has been largely unheard of, often due to marginalisation in a predominantly patriarchal society. The global trends of climate change, environmental degradation, poverty combined with weak governance structures, lack of technical know-how and response capacity, political instability and a high dependency on

external aid are contributing to disaster vulnerability and the precarious gender situation. This paper will explore the interaction between the nascent Disaster Risk Management gender-mainstreaming policy guidelines being developed by Department of Women Affairs in Badakhshan, and its implementation within the socio-political context and structures in the province. The paper will identify challenges and opportunities for mainstreaming gender in policy and practice in rural and provincial Afghanistan. Combining a brief review of recent, theoretical literature on the topic with lessons learned by the authors in the field, its’ primary goal is to help streamlining respective development practices, and to become more cognisant of local realities. In turn, this might provide a valuable case study for gender streamlining in other countries, as well.

## Sexuality, Gender and Inequality: Shifting Social Relations in Post-Disaster Settings

Marcilyn A. Cianfarani, Royal Roads University | [marcilync@gmail.com](mailto:marcilync@gmail.com)

Shelley Pacholok, University of British Columbia | [shelley.pacholok@ubc.ca](mailto:shelley.pacholok@ubc.ca)

It is well-established that disasters reinforce social inequalities based on race, class, ethnicity and gender, but little is known about the experiences of lesbian, gay, bisexual, trans, queer and intersex (LGBTQI) people. A small body of recent research indicates that sexual minorities and gender variant individuals face discrimination during and after disasters but theoretical explanations for such discrimination are underdeveloped. Further, the tendency in the field of gender and sexuality studies to focus on the ways in which inequality is reproduced has foreclosed examinations of positive change. This paper discusses the findings from two exploratory studies that examine the disaster experiences of LGBTQI people, with a focus on their needs

and capacities and the extent to which disasters shift social relations within and beyond these communities. The results draw on survey data from 49 LGBTQI people in Toronto, Canada who experienced one or more disasters and from 6 interviews in New York City, USA with LGBTQI people who were affected by Hurricane Sandy. The findings suggest that disasters can both create possibilities for connections across social divides and exacerbate existing social tensions and inequalities. We conclude by discussing the broader theoretical implications for social change stemming from this work as well as the practical implications for those involved in disaster and emergency planning.

## 09RN08 - Open Session I: Disasters and Social Crises

Chair(s): Nina Blom Andersen (Roskilde University)

### From Perrow to Parsons: Social Theory, Organisations and Disaster Studies

Christopher Schlembach, Austrian Road Safety Board | [christopher.schlembach@univie.ac.at](mailto:christopher.schlembach@univie.ac.at)

In the 1980s Charles Perrow presented his highly influential idea that accidents are normal in organisations that are complex and tightly coupled. As a rejoinder to Perrow's pessimism, however, the theory of high reliability organisations (Karl Weick, Todd LaPorte etc.) argued that some organisations like nuclear power aircraft carriers, air traffic control systems avoid crisis and disaster, even under conditions of high technical and ecological risks. In this paper I want to go behind the positions of normal accident and high reliability theory, claiming that they can be integrated with the action frame of reference in

the tradition of Max Weber and Talcott Parsons. In *The Structure of Social Action* Parsons argued that since the 1930s societies in Europe evolved along a two-pronged structure of integrated or anomic social action. In modern type societies social action is integrated if the subjective meaning of social action is based on rationality and reciprocity of perspectives. But this structure can break down and regress into anomie, characterised by force and fraud, ritualism and charisma. I want to argue that this type of analysis could be used in order to understand social action in organisations in terms of a similar two

pronged structure of normal accident and high reliability organisations. The question is how and under which conditions does a highly reliable organisation drift into a state of

normal accident. Some examples shall be given of how this type of analysis can be used in order to understand the relationship between accident and organisation.

## Concentration Camp Rituals: Narrative of Former Bosnian Detainees

Goran Basic, Lund University | [goran.basic@soc.lu.se](mailto:goran.basic@soc.lu.se)

This article analyses the experiences retold by former concentration camp detainees who were placed in concentration camps at the beginning of the Bosnian war in the 1990s. The article aims to describe the recounted social interaction rituals after having spent time in a concentration camp as well as identifying how these interactions are symbolically dramatized. In their stories of crime and abuse in the concentration camps the detainees reject the guards actions and the category:

"concentration camp detainee". The retold stories of violation- and power rituals in the camps show that there was little space for individuality. Never the less, resistance- and status rituals along with adapting to the conditions in the camps seem to have generated some room for increased individualization. To have possessed somewhat control and been able to resist seems to have granted a sense of honor and self-esteem for the detainees, not least after the war.

## Risk Management and Decision Making: A Sociological Approach to Managers' Psychological Coaching in organisations.

Adhémar Saunier, Ecole des Hautes Etudes en Sciences Sociales (EHESS) | [adhemar.saunier@ehess.fr](mailto:adhemar.saunier@ehess.fr)

Companies have had to face a growing cultural intolerance towards natural and social risks - likely to destroy their reputation instantly - and have had to deal with a more volatile economy, which demands more flexibility in their organisation. How can companies be both more flexible, in order to catch economic opportunities on rocky markets, and also more secure, to manage global risks? This issue has led organisations to focus their attention on individual vigilance, especially for managers who make the decisions. Thus, professional training have become increasingly concerned with how individuals behave towards their environment. We want here to present our analysis about "individual coaching", to update and complete other studies about leadership and crisis management (e.g. Janis, Irving, 1989). The device of individual coaching in

particular has been given increased emphasis in big French organisations, while it was already widespread in Anglo-Saxon countries. With a pragmatic approach, I have questioned the development of recourse to coaching by these companies, and its practice itself. Our data show that coaching is used both to increase an organisation's influence on managers' mobility (to earn loyalty or ease a departure), and to empower managers who are exposed to particular risks. Thanks to economics of Conventions, I will first show that coaching supports the drive towards labour market flexibility. Then I will investigate its consequences on work: I will insist on both the limits of the individual theory of risk, showing the second order dangers of such a focus on individuals, and its novelty regarding risk management (work on individual vigilance).

## **Material Causes and Consequences of Imperialist Wars of Recolonization Complex Disaster – the Case of the 1999 NATO Depleted Uranium Bombing of FR Yugoslavia Revisited**

Vera A Vratosa, Faculty of Philosophy - Belgrade University | [vvratosa@f.bg.ac.rs](mailto:vvratosa@f.bg.ac.rs)

This paper revisits (Vratosa, ESA 1999:351, 2001:248, 2003:141) material causes and consequences of implementation of imperialist wars of recolonization complex disaster scenario of mass media propaganda preparation and live broadcasting of allegedly „protective“, „humanitarian“ and unauthorized by UN Security Council NATO aerial bombardment of civilians and life-sustaining infrastructure with depleted uranium coated projectiles, on the basis of empirical evidence gathered after several reprises of this scenario and after the passing of the latency period that preceded the dramatic increase in lymphoma and solid cancer as well as in birth defects incidence in Serbia and other bombarded countries. The main finding of this reconsideration is that in the conditions of the exacerbation of the global systemic hyper accumulation of capital crisis, the financial

capital centralized and concentrated in the hands of tiny but powerful global corporate and banking oligarchy intensifies implementation of described scenario, in the attempt to scare the laid off, impoverished and indebted exploited and oppressed direct producers all over the world not to resist robbery privatization of public infrastructure and services, in order to avoid cheap disposal of toxic, radioactive and mutagenic nuclear waste over their heads with genocidal and ecocidal long term consequences. The boomerang effect of this private profit maximizing war strategy includes ailment of imperialist countries' soldiers when engaged on the ground after aerial bombardment, as well as widening of the ozone hole in the atmosphere of entire planet, causing disastrous climate changes also in imperialist countries.

## **From the Conflict to Security and Modernization: in Case Chechen Republic**

Musa Movlievich Yusupov, Chechen State University - The Center of Social-Strategic Researches | [musa\\_y17@hotmail.com](mailto:musa_y17@hotmail.com)

The modern world endures an economic crisis, conflicts in various regions, transformation of the system of social and political relations. Methods: In research the functional and socio-cultural approaches were applied, the methods of the quantitative analysis providing measurement of modernization potential of region. Subject: features of modernization of post conflict region. Results. Crises and conflicts signal a necessity of perfection of forms and structure of social communications, carrying out transformations in economic, political and civil spheres. In the territory that has endured a confrontation, not only the common features inherent in all social system of the country exist, but also specific

circumstances. It is social instability, low level of security, weak security of the rights and freedom of citizens, mass unemployment, insignificant experience of functioning of many recreated civil institutes. In a conflict region in the beginning transition from violence to order, security is carried out, the social and economic infrastructure is in parallel restored. It serves as a condition of concentration of resources on transformation of the social environment. Regions of Russia are at different stages of development, in the Chechen Republic primary and secondary modernization are mismatched, as a result of war deindustrialization has occurred. Socio-cultural indicators of region are twice lower than average Russian. The

conclusion. Low level of social and economic parameters forms preconditions of instability of political system. Presently indicators of

monitoring the situation in regions and countries are necessary, allowing to take the adequate measures of influence.

## **a09RN08 - Open Session II: Disasters and Social Crises**

Chair(s): Nina Blom Andersen (Roskilde University)

### **Multi-Organizational Co-Operation in the Management of Emergencies at Local Authority Level**

Erna Danielsson, Mid Sweden University | [erna.danielsson@miun.se](mailto:erna.danielsson@miun.se)

Jörgen Sparf, Mid Sweden University | [jorgen.sparf@miun.se](mailto:jorgen.sparf@miun.se)

Joseph Trainor, University of Delaware | [jtrainor@udel.edu](mailto:jtrainor@udel.edu)

This study focuses on multi-organizational co-operation in the management of emergencies at local authority level, especially our understanding of co-operation in a broader perspective, wherever organizations other than rescue organizations are involved and there is no well defined incident scene. The purpose is to develop practical and, in this paper, theoretical knowledge of how co-operation and decision-making in multi-organizational emergency management is affected by (i) the different cultures and working methods (logics) of the organizations involved, (ii) the characteristics of the given organizational

emergency management field, (iii) the organizations' familiarity with emergency management, and (iv) the organizations' members sense making of emergencies. To understand how multi-agency cooperation is affected by this, we use theory of enacted sense making and on improvisation, and Quarantelli & Dynes model on organizations in disaster. Our assumptions are that members of different organizations construe emergency management in different ways, and this affects their priorities and decision-making, which in turn affect their co-operation.

### **Rebuilding the Wreckage. Three Case of Study about the Post-Earthquake Reconstruction in Chile**

Davide Olori, Alma Mater Studiorum Università di Bologna | [davide.olori@unibo.it](mailto:davide.olori@unibo.it)

The Chilean earthquake (February 27, 2010) was one of the strongest that have shaken humanity, estimated number of people affected is about two million. 83% of them belonged to the two quintiles with lowest income. Two years after the reconstruction, the applied model is sharpening dynamics of social urban problems, such as spatial segregation, gentrification, expulsion of the poorest classes

in the suburbs etc. At the same time the processes of conflict generated by housing market dynamics are sharpening, showing a range of different reactions. Analysing three key cases, the paper aims to provide a contribution to the notion that social vulnerability is not given by a single exposure to risk, but lies in the sensitivity and resilience of a system to prepare, handle and recover

from multiplicity of risks (Turner, 2003). This theoretical framework is grounded in the recent trend of sociological studies of social vulnerability concerning disasters (Cutter, 2000). The first of the specific cases is that of the city of Talca, where the socially heterogeneous historic centre (Letelier, 2011) has undergone a rapid gentrification resulting by the expulsion of the lowest middle class in the suburbs. The second one is Villa Olimpica,

a Santiago's neighbourhood of Allende government' social housing, which is resisting to the draft densification of the real estate market; finally, the network of self-managed and recovered buildings (IRA) in the neighbourhood of Franklin [Santiago]: a squatting and self-repair project of public edifices created by the earthquake victims in the neighbourhood who refuse the transfers in the suburbs.

## Rebuilding Live Post-Disaster: Innovative Community Practices for Sustainable Development

Julie Drolet, Thompson Rivers University | [jdrolet@tru.ca](mailto:jdrolet@tru.ca)

Floods, wildfires, tropical cyclones, and hurricanes have the potential to devastate our way of life, and the cumulative effect of these disasters produces a significant personal, material and economic strain on individuals, communities and the fiscal capacity of all levels of governments. The goal of the study, funded by SSHRC's partnership development grant program (2012-15), is to advance knowledge in long-term community-based disaster recovery by exploring sustainability, equity, and livelihoods post-disaster in small cities and rural communities in Canada, USA, Australia, India, Pakistan, and Taiwan affected by disasters. The research partnership brings together academic researchers, practitioners, educators, community partners, and local government from Canada, the USA, Australia, UK, India, Pakistan, and Taiwan. Community-

based partners bring expertise in disaster recovery and reconstruction. Social workers have an important and unique contribution to make to disaster relief work. Specifically, working with marginalized people in supportive and compassionate ways, as well as considering structural issues and a social analysis of the causes of social inequality, enhance the potential of social work to make a unique contribution to disaster work. The project is significant because it provides a range of community perspectives of interest to stakeholders such as emergency service volunteers, emergency managers, social workers, community practitioners, and the social sciences particularly in the relationship between the social construction of disasters, climate change adaptation and mitigation, the environment, and sustainable development.

## Environmental Crisis and Sustainability: Tensions and Social Movements about the Question of Time-Frame

Anahita Grisoni, Ecole Normale Supérieure de Lyon | [anahitagrisoni@gmail.com](mailto:anahitagrisoni@gmail.com)

First hippies and "neo-country" people (Hervieu et Léger, 1979, 1983), then political ecology actors, and finally everybody: since the 70s, the environmental crisis is an *acquis* (Morin, 1971, Serres, 1987), the risk society would constitute an evidence (Beck, 1985), and

would appear as an experience for individuals. On one hand, this interpretation originates in religious time and space representations, marked by the imminence of a disruptive moment. On the other hand, a parallel is tangible between the discourses on

environmental, social and economic crisis in some sectors of the society. In both cases, those alternative discourses and representations are carried and developed by “active minorities” (Moscovici, 1979), acting as subjects and actors in the frame of social movements. This communication would describe how different groups of actors claim their interpretations of the multiple aspects of the crisis. Those productions of meanings are formulated against the institutional discourse that affirms the necessity of a green capitalism

and a sustainable development, based on the division of social, economic and environmental dimensions. For those actors, what is presented as a “financial markets crisis” or as a “debt crisis” (Liberti, 2010) could be, in truth, a civilization crisis. To this end, I will compare two social movements I have observed, first the natural medicine, topic of my PhD work at the EHESS between 2006 and 2011, and then the Italian NoTav movement, opposed since 1993 to the construction of a railroad network relying Lyon and Torino.

## Dimensions of Vulnerability in Children from the Southeast of México

Judith Perez-Castro, Juarez Autonomous University of Tabasco | [pkjudith33@yahoo.com.mx](mailto:pkjudith33@yahoo.com.mx)

This paper presents the results of a research carried out with governmental support and implemented with children from elementary school from the southeast of Mexico. The theoretical framework is based on the contributions made by Beck (2002, 2006), Douglas (1987), Douglas and Wildavsky (1982), Duclos (1987), Luhmann (1991, 1996), Peretti-Watel (2001) as well as the work developed by the United Nations Environment Program, the Economic Commission for Latin America and the Caribbean and Save the Children. We surveyed 2,800 children and the results showed that most of them suffered from economic and social vulnerability, since they did not have access to public services and their families are in the lowest income quintile. These kids also showed high levels of cultural and technical vulnerability, given that most of

them did not have access to good education in general and to education on prevention and disaster management in particular. The majority did not know the security measures (89%) and had never participated in any security exercise (more than 63%). Besides, 57% said they have rarely or almost never studied the topic of disaster in their schools. Finally, these children suffered from physical and institutional vulnerability. First, because their towns are considered among the 46 villages with high risk of floods in the southeast of Mexico (SEDESOL – H. Ayuntamiento del Centro, 2009). And, second, because the conditions of their social contexts usually place them out of institutions, it means, they do not received appropriate attention from public policies and programs.

## c09RN08 - Open session/The Eurozone Debt Crisis as an Opportunity for Social and Structural Changes

Chair(s): Nicholas Petropoulos (formerly of the Pedagogical Institute of Greece)

### Opportunity and Opportunism in Spain and Italy: How the Eurozone Crisis Has Tested the Resilience of Inherited Socio-Political Structures in Two 'Southern' EU Member-States.

Dennis Smith, Loughborough University | [d.smith@lboro.ac.uk](mailto:d.smith@lboro.ac.uk)

During the current Eurozone Crisis, the world has seen Italians accepting the imposition of a technocratic cabinet led by Mario Monti to 'sort things out' in a 'business-like' manner congenial to Brussels and Berlin while in Spain separatism has reigned, and the 'indignados' have marched resolutely towards the sound of gunfire. Differences between the two societies are rooted deep in history. Spain was knocked off its imperial perch in 1898, suffered a terrible civil war then endured outsider, almost pariah, status in the Franco years. Entry into the EU restored Spain's fortunes and gave all Spaniards new dignity at a time when the end of Spanish fascism was opening up legitimate political careers to socialist and progressive liberals who had been marginalized since 1939. The sharp reversals of fortune after 2008 have been greeted with horror and indignation. By

contrast, Mussolini's two decades in power, glorious at the beginning, culminated in military defeat and civil war in Italy (1943-5). After 1945 the main contenders were left standing, able to enter into post-war Italian politics in various guises. Modern Italians have learnt to be cynical about politicians' grand claims. Many have – for survival's sake – also learnt to adapt to life in an imperfect socio-political order that enables people to complain loudly while also getting their 'little bit of the action'? Unlike the Spanish, Italians were part of the 'original marriage' contracted in the Treaty of (significantly) Rome. Does this make them more able to accept whatever the EU brings to them 'for better or for worse'? This paper reports on research by the author in Spain and Italy as part of a larger project that also encompasses Greece and Ireland.

### Reforms, Contestation, and Change: The Case of the Education System Reform in Latvia

Inta Mierina, University of Warsaw | [inta.mierina@uw.edu.pl](mailto:inta.mierina@uw.edu.pl)

Latvia was one of the countries hit the hardest by the recent global economic crisis. Besides obvious negative consequences such as an increase in unemployment and poverty, the magnitude of the budget deficit strengthened support for, and facilitated introduction of long-needed reforms both in the structure of economy, and most importantly, in the efficiency of the use of public funds. This paper briefly summarizes the important structural

changes that were introduced in Latvia during the years of crisis such as administrative reforms, tax system, etc. In addition, it employs case analysis approach to explore in more detail one of the most hotly contested issues in Latvia, i.e., the attempts of the new minister of education to introduce a large-scale education reform. Analysis reveals that whereas there is a wide consensus that reforms are needed, proposed solutions are met with strong

resistance from education professionals, teachers, parents, and students organisations. It seems to show that, whereas some of the reforms in Latvia were not implemented to the necessary extent, some might have been excessive, rushed, without sufficient

consultations with the social partners. One can conclude that even though the support for change is there, opportunities should be used wisely, in order to avoid negative long-term consequences for the future of the country.

## **I Can Change – Greece’s Neoliberal Restructuring in Historical Context**

Jesse Hembruff, Queen’s University | [jesse.hembruff@queensu.ca](mailto:jesse.hembruff@queensu.ca)

The ongoing sovereign debt crises in the European Monetary Union (EMU) have revealed both the shaky foundations of the currency union, as well as the dysfunctional political economies of the peripheral states themselves. In the wake of these crises, austerity measures imposed by the so-called ‘troika’ of the European Commission (EC), European Central Bank (ECB), and International Monetary Fund (IMF) have produced the ostensibly counterproductive effect of throwing crisis-hit countries into deep depressions and rendering it more difficult to repay their debts. I address this apparent paradox by examining both the integration of Greece into the EMU and post-crisis austerity measures with respect to the historical development of Greece’s ‘dysfunctional’ post-

junta political economy. I do this by employing a historical materialist framework which synthesizes: David Harvey’s conceptualization of debt as fictitious capital, capital not backed by a commodity transaction, but by a claim on future value; the ‘golden noose’ of sovereign debt, which must be loose enough to prevent a debtor delinking from the global lending game, while tight enough to ensure debtor governments follow through on privatizations and austerity measures; Bob Jessop’s Strategic-Relational Approach; and finally, neo-Gramscian work on neoliberal integration in the EMU. I argue that Greece’s sovereign debt crises is being used as a level to radically restructure the Greek political economy in line with the dominant paradigm of neoliberal capitalism.

## **10RN08 - Political effects of debt crisis**

Chair(s): Alberto Cotillo Pereira, Ariadna Rodriguez Teijeiro, Elvira Santiago Gomez

### **The Eurozone Debt Crisis and Greek Neo-fascist Movements: the Case of the "Golden Dawn"**

Nicholas P. Petropoulos, Pedagogical Institute (former Sociology Counselor) | [erc@otenet.gr](mailto:erc@otenet.gr)

The Eurozone debt crisis, whose impacts have been especially extensive in Greece during the last three years, has been a major factor in the radical restructuring of the traditional party system and the re-alignment of the political parties. The two-parties (the conservative

"New Democracy" and the "Panhellenic Socialist Movement"), that have governed Greece since the fall of the dictatorship (1967-1974), have essentially been displaced, while new parties, both on the left and the right of the political spectrum, have emerged. This

paper will focus on one of the new far-right parties - the "Golden Dawn", which for the first time (during the June 2012 national elections) entered the Greek parliament. Using the relevant historical, social-psychological and political-sociology literature, as well as Greek political surveys and press analyses, the paper will present statistical data regarding the "Golden Dawn's" relative strength, before and after the debt crisis. In turn, it will discuss both

domestic and geopolitical factors that have influenced its public appeal. An important question will be to assess the relative impact of the debt crisis and other factors, such as non-documented migration, Greek public administration and globalization. The paper concludes with a discussion regarding the course and the prospects of the "Golden Dawn" party.

## **The French Socialists and the Eurozone Crisis**

Sotiria Liakaki, Independent Researcher | [sliakaki2001@gmail.com](mailto:sliakaki2001@gmail.com)

Christos Kanellopoulos, National University of Athens | [cskanel@gmail.com](mailto:cskanel@gmail.com)

This paper describes and analyzes the political and policy discourse of the French Socialist Party during the recent financial and economic crisis, covering the period prior to the election of François Hollande as President, making a thorough treatment of the ideas that dominate the public stance of both the party and its leading figures and propose an interpretation of the reaction of the French Socialists to the crisis by taking into account four dimensions. The historical dimension, related to the leading role of French Socialists in the European integration and their ambivalent position on the Economic and Monetary Union. Parameters like the distance between party rank and file and party leadership at critical moments for European integration, the gradual electoral decline of social democracy across Europe and the French prominence in European politics should equally be considered. The political

dimension, centered on the designing of a strategy aiming at enlarging the electoral appeal of the PS candidate for the Presidential Election. The 'Social Europe' discourse emerges as a key element in a high-natality France plagued by youth unemployment and industrial delocalization. The economic dimension of a European crisis unfolding: the "other Europe" that French socialists propose does not only pass through alternative guidelines for crisis management; it also requires a new political power configuration across Europe leading to an overhaul of Eurozone's institutional architecture. The ideational dimension of the crisis, since German ordoliberalism shapes the actions and decisions of the German leadership, the Franco-German axis and all the EMU institutions.

## **"The Institutional Framework on Combating Discrimination in the Greek Labour Market under the Impact of the Economic Crisis"**

Nikos G. Sarris, National Center for Social Research | [nsarris@ath.forthnet.gr](mailto:nsarris@ath.forthnet.gr)

The aim of the paper is to present the institutional framework on combating discrimination in Greece since the adoption of the EU directives on racial and ethnic equality (2000/43/EC) and employment equality

(2000/78/EC) and to comparatively evaluate the institutional reforms in Greece and other European countries in the area of discrimination. This paper examines the evolution of non-discrimination law in Greece

and how it is interpreted through judicial decisions and applied in practice. It focuses on the implementation of Law 3304/2005 which incorporated the above mentioned directives into the national law. Annual reports of the Greek Ombudsman, whose duty is to investigate cases following citizens' complaints regarding discrimination, are used to highlight the issues concerning discrimination, especially in the Greek labour market. Data of the European Social Survey's fifth round are also used concerning discrimination on the basis of ten different grounds in different

countries for the purpose of a comparative analysis. The perceived effectiveness of national efforts to fight discrimination is also examined through Eurobarometer's surveys. Overall, the present paper will attempt to answer the main critical questions related to the application of the anti-discrimination legislation in the Greek labour market, to the impact of the economic crisis on equality policies and to the way the economic and financial crisis contribute to more discrimination in the labour market.

## RN09 - Economic Sociology

### 01RN09 - Theoretical Perspectives in Economic Sociology

Chair(s): Maria Nawojczyk (AGH University of Science and Technology)

#### Max Weber's Work as Foundation of Economic Sociology?

Andrea Maurer, University of Trier | [andrea.maurer@uni-trier.de](mailto:andrea.maurer@uni-trier.de)

It is argued that new economic sociology started successfully by criticizing both classical sociological theories, esp. structuralist theories, and neoclassical economics and therefore missed to take a closer look at the classics. Based on this it is discussed that within the work of Max Weber new economic sociologists can find strong methodological and theoretical arguments that help strengthen sociological explanations of the economy. First, to start with an empirical thesis of what action orientation or what kind of intentions work. Secondly, to describe

precisely what kind of social action pattern or problem the individuals are faced with, eg. orientation, uncertainty, coordination or conflict. Thirdly, to analyse the interplay of social institutions and social networks in order to provide orientation, reduction of uncertainty or conflict solutions. Examples therefore are provided with regard to Webers analyses of markets and business firms. The main theoretical conclusion will be that the last argument can help to close the gap between new institutionalism and new economic sociology.

#### Capitalism and the Functional Differentiation of Society

Joao P Bachur, Free University of Berlin | [joapbachur@hotmail.com](mailto:joapbachur@hotmail.com)

The dyad "Critique and Crises" traces back to Koselleck's masterpiece on the pathogenesis of modern world and the aporetic conditions of legitimacy. What may have been altered with the consolidation of a hegemonic neoliberal discourse after 1989, is that critique seems not only theoretically difficult but, furthermore, it is often opposed by resignation discourses. Luhmann's sociology is such an example. Nevertheless, one may extract a critical diagnosis of capitalism out of Systems Theory, once it is submitted to a dialectical reinterpretation. The hereby-proposed paper shall explore the constitutive relation between functional differentiation and capitalism, forged throughout the period of primitive accumulation and triggered by the

differentiation of the monetary economy, for it dissolved the remaining feudal relations and unleashed the differentiation of non-economic social spheres. Yet this process is everything but harmonic: each social system develops an own accumulation logic, since all of them must "choose" who is included in or excluded of their operations in order to reduce complexity. Reversing Luhmann's view, I contend that these exclusions are not independent from one another, but reciprocally imbricated and prior to the functioning of social systems, undermining the basis on which Systems Theory ultimately rests – the alleged primacy of functional differentiation. A dialectical reinterpretation of Systems Theory can provide a suitable theoretical framework for analyzing

modern capitalism, since it accounts for the complex relations between the economic and non-economic realms of society, without

loosing sight of the new forms of domination and social control at work in contemporary capitalist society.

## Consciousness is at the Root of Economic Behavior

Dhan A. Rousse, M.S., Bhaktivedanta Institute for Consciousness Studies | [integr8ted@gmail.com](mailto:integr8ted@gmail.com)

Economic activity is not something that occurs in a vacuum, in a bank vault or on a computer screen. It is a human endeavor, and when we speak of economics we are speaking about people and their behavior. They cannot be separated. Economic behavior = human behavior. If we want to understand economics we must understand people. In this paper I combine psychology, economics and Sankhya philosophy to explain how individual consciousness determines desire, motivation and monetary reward. The origin of different values and influences that change them are explained by what may be called "consciousness determinants." The various kinds of economic behavior are determined solely by the consciousness of the actors, and provide a means of perceiving the influences of the consciousness determinants. They can be

expressed broadly in three forms: care and cooperation, pride and competition, or contempt and exploitation. Other factors may include desire for status, reward, lust, envy and exploitation of others, laziness, the cheating propensity, contempt of others, on one hand, and honesty, responsibility, a sense of duty, sense of purpose, the common good, etc. on the other. All of these qualities are a function of consciousness. Sankhya philosophy, from the Vedic period, explains how this world functions. It is thousands of years old and offers a great deal from which we can learn. Its concepts are "out of the box" thinking, compared to modern thought, which offer unique insights that can be applied to modern problems. This theoretical explanation is an entirely new and unique approach to social and economic behavior.

## Formal Organisations Employees' Attitudes towards Organisational Change: Theoretical Reflections

Witold Nowak, Adam Mickiewicz University, Poznan | [witoldnowak@wp.pl](mailto:witoldnowak@wp.pl)

Numerous contemporary organizations have to respond to changes in their environment. Events requiring response may be of diverse origin - market, technological, legislative or social, some of them take place in the local environment, others are global, but seem to happen more and more often. Such a necessity often causes organisational changes that in general can be defined as all significant modifications of some parts of organisation. Generally, these processes can be described as an accelerating transition from the Weberian model of bureaucracy to Toffler's/Mintzberg's adhocracy model. At the

same time, social processes occurring in contemporary organisations seem to be particularly interesting object of sociological analysis, while organisational change may be treated as their specific 'catalyst'. However, the review of available literature on organisational change and employees attitudes towards organisational change demonstrates a domination of publications from management and organization theory perspective, often presenting very pragmatic view and oriented on delivering guidelines on managing employees during organisational change. In that case, the aim of this paper is to present

the results of the review of literature on organisational change and employees attitudes towards this process. Particular attention will be put to the analysis of expressed and not expressed assumptions constituting the theoretical background of research in the above-mentioned field. An attempt of

identifying the scale of influence of particular sociological theoretical paradigms will be made. As a result, some theoretical reflections and proposals concerning research on attitudes towards organisational change will be presented.

## Social Classes in the Nordic Countries and in Russia

Harri Melin, University of Tampere | [harri.melin@uta.fi](mailto:harri.melin@uta.fi)

Raimo Blom, University of Tampere | [raimo.blom@uta.fi](mailto:raimo.blom@uta.fi)

Our aim is to analyse the changing class relations in Europe from a comparative perspective. This is done by ISSP 2009 data on inequality and ESS 2010. With these data sets we can analyse not only class structures and class situations, but also the reproduction models of the class groups. We shall compare Russia and the Nordic countries. In this way these two different cases can be localized on the international scale, thereby distinguishing general socio-structural regularities from merely national particularities. In our case comparative research provides an especially useful method for generating, testing and further developing sociological theory. In our

approach the transformation of the class structures, based on the ownership of the economic, cultural and social capital is the basis for the other topics of the study. Processes to be addressed include changes 1) in the size and in the social composition (gender, age, education, incomes, place of living, etc.) of classes and class groups, and 2) in the relation between class and other social divisions. Our approach also enables us to give its empirically anchored contribution to the discussion about the death of class that has been actively going on during past twenty years.

## Socio-economic Structuralism

Jacek Tittenbrun, University of Poznan | [jacek@amu.edu.pl](mailto:jacek@amu.edu.pl)

The aim of the presentation is to sketch out an innovative framework that can be regarded as a social theory grounded in economic sociology. Whilst it draws to some extent from Marx, Weber and Parsons, it is, by and large, original. In this theoretical perspective society at large is viewed as composed of four structures, including an economic one. A novel understanding of the concept of structure is proposed, which sheds a new light on the perennial dilemma of the structure vs. agency. The economic structure stands out among other societal structures on the basis of the extent and strength of ties between it and the remaining societal structures. Innovative is

also the set of concepts proposed to characterise the internal composition of the economic structure, which, inter alia, makes it possible to offer a new approach to the informal as well household economy. Finally, an integral part of the framework in question [as being inherently socio-economic in nature] is constituted by, again, a novel conception of economic ownership, and related class theory, which, amongst others, offers an innovative approach to the class position of women. A range of misunderstandings around ownership is cleared up, which is worthwhile, given the empirical and theoretical relevance of that –marginalised by our discipline–

problematics. In addition, a terminological distinction is proposed-between two sides of economic sociology- one focused on a sociological treatment of the economy, and

another-on an investigation of a diversity of ways in which the economy influences the extra-economic structures.

## 02RN09 - Capitalist Globalization and its Alternatives

Chair(s): Sokratis Koniordos (University of Crete)

### Three Real-Utopistic Alternatives to Globalizing Capitalism

Manuel Ahedo, University of the Basque Country | [manuel.ahedo@ehu.es](mailto:manuel.ahedo@ehu.es)

Capitalist economic system has reached almost all corners of the world, led by the Multi National Corporations and globalizing financial flows and networks. The socialist alternative to capitalism, due to its democratic deficit, appears more as surviving than as exemplifying. However, from an utopistics and real-utopias perspective it is possible to identify three possible alternatives to the conventional capitalist logic of capitalism. The first alternative is the democratic welfare capitalism, located Northern Europe (mainly in the Nordic countries); upon a strong organizational democratic culture this model allows the state to counterbalance some of the most negatives aspects of capitalist work and labour organizing, and enables resourceful labour unions to support working class against financial speculations. The second alternative is the cooperative enterprise model; based on

the original idea of cooperativism, this alternative has acquired various directions and dynamics depending on country and continental institutional trajectories; there are still highly alternative examples of worker-owner enterprise, such as the Mondragon Cooperative Group in Spain, safeguarded by its own financial bank. The third one is the collaborative networks of Small and Medium-Sized Enterprises, also called districts or clusters, which upon a collaborative labour and training system are able to realize possibilities of local prosperity. Each of these alternatives has its own nature and evolution, and its particular scope of globalization. Despite societal institutional inter-dependencies, it is possible to find co-existing combinations of them in some societies, which can be inspiring sources of real-utopistics alternatives.

### Transferability of Successful Cooperativist Actions: the Case of Albacete's Cooperatives.

Gisela Redondo, University of Barcelona | [gredondo@ub.edu](mailto:gredondo@ub.edu)

Alfonso Rodríguez, University of Barcelona | [alfonso\\_rod@hotmail.com](mailto:alfonso_rod@hotmail.com)

The Integrated Project INCLUD-ED (FP6 of the European Commission) identified Successful Actions (SAs) in diverse social domains. In the field of employment, the successful case of the cooperatives of Mondragon in the Basque

Country was analyzed. The Mondragon Corporation (MC) has proven to be a non-capitalist alternative to the traditional organizational and governance models of capitalist firms, combining democratic

principles, values of solidarity and strong competitiveness that allow it to achieve both efficiency and equity. In this organization, five successful cooperativist actions (SCAs) were identified and considered crucial in explaining these accomplishments. In order to analyze the transferability of the SCAs, some of them have been recreated in the poorest and most marginalized neighborhoods of Spain: La Estrella and La Milagrosa in Albacete. In 2011, a cooperative was created on the basis of developing the SCAs to provide decent, stable

and sustainable employment to people from these neighborhoods. This paper aims to explain the success of the transferability of the latter to the cooperative in La Estrella and La Milagrosa and the ways in which this successful actions approach is contributing to overcome inequalities while contributing to generate alternatives to the capitalism. This work is developed in the framework of the international network of research on cooperativism coordinated by Erik Olin Wright and Ramon Flecha.

## **The Craft Ethic against the Spirit of Capitalism**

Anne Jourdain, Université de Picardie Jules Verne, Amiens | [anne.jourdain@gmail.com](mailto:anne.jourdain@gmail.com)

As many professionals, artist-craftsmen – that is to say cabinetmakers, ceramists, glassblowers, weavers... who are business owners with or without employees – adhere to a craft ethic: their behaviour is guided by a “commitment to task” (H. Becker and J. Carper, 1956) due to their socialization to the craft. Based on 92 interviews with artist-craftsmen and quantitative data on arts and crafts businesses (N=947), our purpose is to show that this craft ethic prevents the capitalist orientation of businesses. We also lay the emphasis on the conditions for such alternative businesses to survive in a capitalist environment. Beyond artist-craftsmen’s discourses which tend to deny the economic aspects of activity, as in every “economy of symbolic goods” (P. Bourdieu, 1994), the frequent difficulties to reach the threshold of

profitability in arts and crafts businesses can be partly attributed to the predilection for well-done work which causes high production costs. Moreover, the analysis of concrete slow-down business strategies, aiming at respecting the craft conception, reveals the power of the craft ethic in front of the overwhelming spirit of capitalism in modern societies (M. Weber, 1905). However, to survive in a capitalist environment, artist-craftsmen often have to accept some adjustments (minimize personal needs, work more, find external revenue) but also compromises with the capitalist logic. Indeed, most of them feel forced to set up profit-making entrepreneurial strategies such as the diversification of their products and prices. In these cases, tensions arise between the pursuit of subsistence profits and the craft ethic.

## **Democratic Organizational forms in the Economic Realm and the "Liability of Unfamiliarity" – Lessons from a German Case**

Olaf Kranz, University of Regensburg | [olaf.kranz@wiwi.uni-regensburg.de](mailto:olaf.kranz@wiwi.uni-regensburg.de)

In organization science one can find at the one hand a strong theoretical reasoning of democratic organizational forms that explains the notorious failure of those forms in the economic realm in terms of degeneration, transformation or a general limited viability. On

the other hand there is a scarcity of empirical studies that analyze the failure of Employee Owned Companies. Thus, the literature is inconclusive with respect to the different causal mechanisms that could explain the short lifespan of democratic organizations. In

my presentation I try to develop an alternative explanation for the limited viability of democratic organizations by means of a case study. I present a case study of an EOC in Germany that was later transformed in a 'normal' capitalist firm. I stress that democratic organizational structures themselves constitute a social innovation that depend on the institutionalized social environments in which they occur. The analysis focuses on the question why democratic organizational forms are held illegitimate by society in terms of irrationality. I argue that the democratic organizational structure of the

case company has suffered from a "liability of unfamiliarity". Instances of EOC are compared, measured and evaluated against the backdrop of the classic script of the bureaucratic organization. Consequently, democratic organizations are considered to be the direct antithesis of the very term 'organization' and as a real oxymoron. The contradictions and paradoxes of organizing in a democratic framework are particularly highlighted and, therefore, democratic organizations appear to be "negligent, irrational, or unnecessary" (Meyer & Rowan 1977: 350).

## **Redefine the Crisis of the Tax State or the Unified Theory of the State and the Market after World Crises with Reference to the Turkish Case.**

**Fuat Ercan**, Marmara University, Istanbul | [ercanfu@yahoo.com](mailto:ercanfu@yahoo.com)

**Hale Balseven**, Akdeniz University, Antalya | [halebalseven@akdeniz.edu.tr](mailto:halebalseven@akdeniz.edu.tr)

The current crisis has manifested itself not via the reproduction of the state itself. The contradictory functions of the state, namely, the establishment of favourable conditions for capital accumulation, while also ensuring the legitimacy of the capitalist system has become very costly since the onset of the global crisis. This process, which has been called the 'fiscal crises of the state', has not only been the cause of fiscal interventions by the states but has also, through the transformations of the fiscal structure of the state, revealed the spectacular transformation in the internal architecture of states as a whole. This paper places these discussions of public finance in the context of an analysis that argues that the transformation of the state is directly connected to the constraints by the re-valorization and realization of capital accumulation. It is then

argued that an approach which aims to construct the internal connections of the state and the conditions of capital accumulation may be found in the process which is defined as a fetishistic analysis of Trinity Formula. In particular, the object of this paper is to raise some fundamental questions about the conceptions of fiscal sociology and the fiscal crisis of the state with a view to ensuring the robustness of a critique that at present is clearly inadequate in terms of explaining state intervention. Because the theoretical framework related to this phenomenon has gained concrete forms since the 2008 global crisis, the approach taken is primarily an examination of the theoretical dimension of deep internal connections in the case of Turkey.

## **Religion and Socio-Economic Well-Being: Religious Social Capital in Poland**

**Wojciech Sadlon**, Cardinal Stefan Wyszyński University, Warsaw | [w.sadlon@iskk.pl](mailto:w.sadlon@iskk.pl)

This study explores the linkage between religion and economy. This two - from a

common point of view – independent domains constitute one social reality. Already classical

sociologists have discovered this connection between religion and economic systems. Nowadays new sociological concepts – based on developed interdisciplinary social theories – allow to investigate in the deeper and wider way the dependencies between economy and religion. One of these theoretical and interdisciplinary concept is 'social capital'. Basing on principle social capital theories it is possible to create the category of Religious Social Capital (RSC) and using existing empirical data to operationalise it. RSC is understood as a social phenomenon, the result of religious impact on society, which has much

wider consequences than just only to support relations between individuals. Created Evaluation RSC Model enables to verify if the religion-based social capital has also wider outcomes understood as social and economical well-being. Data used in creating RSC model comes from many national and regional surveys (Social Survey Center Opinia, Social Diagnosis, Polish General Social Survey, European Social Survey) at individual level and census data from Institute of Catholic Church Statistics and National Statistical Office at local level.

## 04RN09 - Organizations and Institutions in Emerging Markets

Chair(s): Jarosław Królewski (AGH University of Science and Technology)

### The Level of Financial Literacy of Russians

**Olga Kuzina**, National Research University, Higher School of Economics | [kuzina@hse.ru](mailto:kuzina@hse.ru)

Across the decade of the 1990s to the present, the issues of financial education have risen on the agendas of different actors in many countries in the world. Many people still lack the basic understanding of what matters for their finances. For example, it has become a common case in many countries that individuals are saving too little for their pensions. Another example is overcrediting on credit cards which also indicates that financially illiterate consumers are not making good decisions for their families undermining their economic security and well-being. Growing concern about the low level of financial literacy resulted in implementing the national strategies for the promotion of financial literacy in many countries. In Russia

such strategy is about to be announced. To make the national strategy more efficient one needs to know the existing level of financial literacy of individuals, the areas of their strengths and weaknesses as well as their preferences and needs regarding the learning process. The main goal of this paper is to addresses the issues of defining the concept of 'financial literacy' and measuring indicators of financial literacy in the all-Russian baseline financial literacy survey (N=6000). The first part of the paper deals with the methodological issues of measuring financial literacy and capability. In the second part the empirical findings are summarized and compared with the results in other countries where the same methodology was implemented.

## Changes of Institutions after the State Interference in the Markets (A Case of Contemporary Russian Retailing)

Maxim Markin, National Research University Higher School of Economics | [mmarkin@hse.ru](mailto:mmarkin@hse.ru)

The research concerns the changes of institutions that appear after the state interference in the markets. Deciding to pass a new law the Government usually plans to solve the problems which take place in an industry. But sometimes the state regulation of markets leads to the conflicting results. In fact, there are no changes which have been expected to appear after the state interference. Moreover, the results of the state regulation are rather opposite to the declared aims. Passing the trade law is one of the most widely discussed issues in Russian business community. Until 2006 the relationships of retailers and their suppliers had been taking place without any state interference. Market actors signed their contracts bargaining with each other. But at

the end of 2006 public discussions about the necessity of the state regulation of retailing began and in 2009 the trade law was passed. One of the main aims of the state interference was supporting the opportunity of coming to an agreement. On the contrary, the flexibility of the relationships decreased and retailers and their suppliers continue to conflict with each other. The research bases on two quantitative surveys which were carried out in 2007 and 2010 by the research group of the National Research University Higher School of Economics (Moscow, Russia). About 500 managers of retailers and suppliers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen.

## Institutions of Market and Property as Constitutive Elements of Serbian Institutional Frameworks

Vladimir Cvetkovic, Novi Sad University | [vcvet@myopera.com](mailto:vcvet@myopera.com)

One of somewhat undermined avenues of sociological research, including economic culture, is grounded in what is often referred to as sociology of knowledge, or reality as a social phenomenon. This approach is based on few notions: people perceive environment as collections of facts and orientate behaviour accordingly; some facts (brute, according to Searle) are independent of society and some are socially constructed or interpreted; as a result of construction and interpretation they are established as institutions; further, with legitimizing mechanisms institutions are horizontally and vertically integrated into systems providing individuals with referential frameworks and symbolic meanings. This approach is particularly suited to analysis of institutional change such as post-socialist transition. Collapse of socialism in Serbia has not brought fast economic improvement to the

country. Common explanation that the old system facilitating economic practice seized to exist while the new one has not been established can be misleading – if focused only on socialist heritage and neglecting historical institutional heritage and resources available to society. In case of Serbia this heritage and resources can be traced as far back as early XIX century, the origins of modern Serbia. There are arguably two main issues at the center of economic transition, namely the institutions and concepts of property and market. Post-socialist transition requires transformation on two levels: institutional, and symbolic. This work analyses evolution of market and property institutions in Serbia over the last two centuries and the consequences for present-day economic transformation through the lens of socially constructed reality.

## On the Interwar (1918-1940) Monetary Roots of the Baltic Model of Post-Communist Capitalism

Zenonas Norkus, Vilnius University | [zenonas.norkus@fsf.vu.lt](mailto:zenonas.norkus@fsf.vu.lt)

During recent economic crisis the economic policy of „internal devaluation“ of Baltic States earned the applause of exponents of the neoliberal orthodoxy. How to explain the determination of Baltic States to maintain the exchange parity no matter what cost? Economists look for conventional cost-benefit calculation. This presentation advances a culturalist Neo-Weberian cum Neo-Simmelian argument. The destruction of national states by Soviet occupation in 1940 made the narrative of the interwar time (1918-1940) as „golden age“ to prevail in the social imaginary of the by indigenous populations at the time of the exit from communism in the early 1990s, imprinting post-communist transformation here with restitutive orientation. Importantly, this „golden age“ was also the time of attempted gold standard restoration in the world economy. So hard national currency

(modelled after „that old good litas, lats, or kroon“ from interwar time) became an anchor of national identity along with national flag, anthem and coat of arms. This „monetarization“ of Baltic identities helps to explain not only the willingness of indigenous populations to embrace the neoliberal model of capitalism with monetary institutions at its core and to climb to them during the crisis of 2008-2009. It also provides the key for understanding the recent rise of the euroscepticism, which symptomatically is particularly strong in Estonia – the Baltic State which was the first to suffer an identity trauma of the loss of the kroon as national symbol by joining European Monetary Union. This research is/was funded by European Social Fund under the Global Grant measure (VP-1 3.1-ŠMM-07-K-01-010).

## Investigation of the living standards of Tuva Republic's population

Shonchalai Soyan, Tuvan State University | [saryghaa@tuvsu.ru](mailto:saryghaa@tuvsu.ru)

Orlanmai Kuular, Tuvan State University | [orlanmai72@mail.ru](mailto:orlanmai72@mail.ru)

The central point of the ongoing reforms in the country is to improve the well-being of the population. To do this, it is necessary objectively measure the standard of living, to identify the factors that ensure its positive trend. With growing regional disparities in socio-economic development and the standard of living, it is necessary to assess the standard of living, and the factors affecting it, in the level of individual regions of Russia. In contrast to other regions of Russia, the Republic of Tuva has a low standard of living. This is due to the peculiarities of the economic development of the region, their socio-demographic, national, geographic location, which impose certain changes on the formation of living standards. If one does not take highly effective measures for

improving of the material well-being of the population of Tuva, the beginning of the depopulation in the country may become irreversible. It is obvious that there is an optimum limit at which solves the problem of social and demographic pressures. And in many ways, this limit is determined by the standard of living of the population. The project revealed the reasons for the low standard of living of the population. Expected results: (Expected results were specified with their description: a monograph series of articles, drawn up in accordance with the original application) The results of study: 1. Classification assesses methods of living standards from the position of an integral and private assessment; 2. The main factors of low

living standards of the Tuva Republic: climatic, ethnic, cultural and socio-economic.

## **'Path Dependency' to Social States of Ukraine and Belarus: Sociology and Political Economy of Post-Soviet Social Contract**

Olga V. Ivashchenko, European Humanities University | [olgivash@socinform.kiev.ua](mailto:olgivash@socinform.kiev.ua)

Used to think that low living standards and quality of life caused the collapse and sequenced transitional processes in USSR, hopefully starting market development in order to improve the life of ordinary soviet people: for some of them – expected new opportunities, for the rest – good social guarantees. However, first post-soviet 20-years revealed the crash of such hopes, moreover political-economic changes only reinforced social-economic inequality and public worry of sharp income differences, indicated the post-soviet space as working poor, poverty and new wave of declared struggle with such problems. Those problems occurred on the background of constitutionally

declared social states and Ukraine and Belarus: borderlands with much in common history but different post-soviet political-economic experience. Authorized comparative sociological research based on Path dependency methodology, quantitative and qualitative data revealed some general and peculiar features of post-soviet Ukrainian and Belarussian societies; 'social contract' impact consequences on the changing values system especially concerning the work motivation and self-realization, -- in general shaping the different patterns of 'sociality' of post-soviet states due to different political-economic path chosen.

## **08RN09 - Moral Economies of Debt**

Chair(s): Nina Boy (Lancaster University)

### **Moral Economies between Generations: Mobilizing Finance as a Moral Resource**

Andreas Langenohl, Justus Liebig Universität, Giessen | [andreas.langenohl@sowi.uni-giessen.de](mailto:andreas.langenohl@sowi.uni-giessen.de)

In many contemporary societies, finance and financial instruments have entered, and altered, moral arrangements between generations. This concerns, for instance, the accumulation of funds to finance one's children's higher education, and, probably most crucially, financial arrangements around the moment of death. This regards caring for older, and possibly sick, family members; caring for one's children in the face of one's death, for instance, through inheritance arrangements; and engaging in precaution for

one's own 'fourth age' so as to not become the burden of relatives. While the social sciences have extensively discussed "financialization" as a process in which financial rationalities intrude social spheres that operate according to different logics, this paper argues that the financialization of the relationship between generations articulates morality as interconnected with finance. Only seemingly paradoxically, thus, finance can become the seat of intergenerational morality as well as a resource for more flexibility within that

morality – at least, as a promise. The paper is based on semi-structured interviews with private investors as well as on a content

analysis of financial advertisements and guidebooks on finance.

## Europe's Bonds of Debt: Perspectives from the Economic Sociology of Law

Sabine Frerichs, University of Helsinki | [sabine.frerichs@helsinki.fi](mailto:sabine.frerichs@helsinki.fi)

Europe is in a crisis. With the Euro at stake, the project of European integration is facing one of its biggest challenges so far. Is not Europe, an integrated European economy, polity and society, but an illusion? Indeed, the European society is built on debt, which is a powerful social fiction. The foundations of today's Europe are law and money, notwithstanding more charming visions of Europe's infinite 'becoming'. The recent move towards 'Eurobonds' as a means to solve the European sovereign debt crisis cannot be understood without considering the background of legal and economic relations which already oblige individuals and collectives with regard to one another across the continent. This transnational network of bonds will be the focus of this study. Combining the expertise of social science and legal scholarship, we aim to shed light on the normative quality of factual

interdependencies, or what we call the 'moral economy of debt'. Drawing on historical scholarship (from Savigny's jurisprudence to Durkheim's sociology), law will be used as an indicator of morality, i.e., of the state of solidarity in Europe. Drawing on economic sociology (such as Simmel's, Weber's, and Polanyi's views of monetary capitalism), we will expose the function of law in a modern transnational society, in which everybody is in everybody's debt. In doing so, we will substantiate the 'economic sociology of law', which links law, economy, and society, with regard to transnational debt relations. The result will be a more sophisticated understanding of the European 'society of debt', and of how policy choices are shaped by this 'shared destiny', which has become evident in the crisis.

## Resilient Indebtedness: Debt Crisis and the European Body Politic

Ute A Tellmann, University of Hamburg | [ute.tellmann@wiso.uni-hamburg.de](mailto:ute.tellmann@wiso.uni-hamburg.de)

This paper analyses the current dispositif of European debt management. It argues that the discourses on "critical infrastructure" and resilience that have informed the politics of security during the last decade have started to inflect the rationalities of governing the European debt crisis. The stability of the "financial infrastructure" is now the main object of debt management. This stability is sought through what is called "macroprudential" management. Macroprudential management is distinguished from the classical macroeconomic types of management of the "national economy" that became dominant throughout the twentieth

century. Eschewing the unity of the "national" economy, macroprudential management is geared towards the stability of financial ties that cross territorial borders and that mix private and public actors. A new type of statistical visibility is currently developed, which aims at "mapping" the networks of finance. The paper will outline these developments and discuss in which ways Europe is imagined and produced in these dispositifs of debt as an "operative" community consisting of (financial) infrastructures. It discusses this implicit understanding of an "operative" community against the new developments in sociology and political theory

to re-introduce the notion of collectivity in order to render visible common “matters of

concern” (Bruno Latour).

## Why not Cash the Housing Equity?

Hannu Ruonavaara, University of Turku | [hanruona@utu.fi](mailto:hanruona@utu.fi)

Päivi M H Naumanen, University of Turku | [naumanen@utu.fi](mailto:naumanen@utu.fi)

Recently many governments have been seeking ways to secure provision of adequate level of income for their aging population in the future. The idea that citizens should provide a part of their future livelihood by themselves is gaining ground in many European societies. One way of doing that is by using the wealth that people have accumulated during their lives. An owner-occupied dwelling is the largest piece of wealth that ordinary households possess. It constitutes an asset that households can transform into money. Banks have developed different financial instruments for households to transform their housing equity into money. However, housing is not an asset comparable to financial investments, like stocks or shares. Homes have a special meaning for people, and this

makes a dwelling a special good that cannot be traded at will. The amount of the monetary, physical and emotional investment in the home makes it an emotionally and morally loaded possession. This paper is based on a qualitative interview study done in Finland. We will take a closer look at how studied Finnish homeowners justify their mostly negative attitude towards using housing equity for their old-age needs. One of the issues that households are concerned is that by using the financial instruments like reverse mortgages they would be remortgaging a debt-free house and enter in debt again, and this they would not want to do. Is there a specific moral aversion against debt? Is the owner-occupied house a “sacred” possession that cannot be cashed?

## A Change of Understanding from Public Utility Towards “Commodity”: Vulnerability and Stigmatization of Poor Households Through Privatization Process

Kezban Celik, Ondokuz Mayıs University, Samsun | [kezban.celik@omu.edu.tr](mailto:kezban.celik@omu.edu.tr)

Sibel Kalaycıoğlu, Middle East Technical University | [ksibel@metu.edu.tr](mailto:ksibel@metu.edu.tr)

This paper is based on a research analysing the privatisation process going on in the electricity sector services and its impact on the living standards and coping strategies of poor households. For this aim a qualitative study is conducted in the two cities in Turkey, namely Batman and Tokat. The selection of two cities is purposive for comparing the effects in one non-privatised (Batman) and one privatised (Tokat) region. The research is based on semi structured interviews with the people from different decision-maker status in Batman and

Tokat; and focus group meetings with the people of poor households in both cities during 2012. Electricity directly improves the living conditions of people in modern society and its key importance is probably not challenged by many. During the state monopoly era before 2000 in Turkey, electricity prices were set with an understanding of public utility and generally kept lower. This had enabled higher accessibility and affordability of poor households to the services. With the privatization, however, the philosophy of

operating the system has changed. Privatization of electricity has gradually transformed electricity users into “energy consumers”. Hence electricity services are no longer perceived as a public utility but as a “commodity”. Privatisation, on the one hand, created relatively regular/careful “consumers” who can take precautions for saving of

electricity. On the other hand, it has created a discrimination process from the perspective of the company between those “who cannot pay” and “those who avoid to pay”. In fact, although majority of those households who had payment difficulties with rising prices were poor, the stigmatization of them as “non-proper citizens” or as

## Common Sense Republicanism: Representations of Financial Markets in Finnish Bank Advertising

Juri Mykkänen, University of Helsinki | [juri.mykkanen@helsinki.fi](mailto:juri.mykkanen@helsinki.fi)

This paper takes its departure from historical debates on the potentially corruptive nature of market freedom. Originally these debates can be traced back to political theory but the conceptual boundary between politics and economy is particularly fluid in this area. The political critique of market freedom was concerned about the destabilizing forces of the market, e.g., weakening of independence through wage labor and destruction of voluntarism as the basis of civic virtue through creation of a proletariat. This line of argument has been revived occasionally in the modern era, for example, by Karl Polanyi who attempted to demonstrate that state

intervention is a necessary companion of market freedom pushed to its limits. Basing the argument on these earlier discussions on markets and freedom, this paper shows that traces of same discussions can be found also in the field of popular culture. These traces are remarkably recent and they tell us about the resilience of republican ideas concerning individual freedom, its proper uses and, more generally, how individual citizens are supposed to create culturally sanctioned social bonds through economic transactions. The data for the paper are drawn from a sample of bank advertisements published in Finland between 1954 and 2008.

## 09RN09 - Economic Temporalities and Narrativities

Chair(s): Ute Tellmann (University of Hamburg)

### The Afterlives of Crisis: Varieties of Historical Representation and Modes of History-Production in the Global Political Economy

Amin T Samman, City University, London | [Amin.Samman.1@city.ac.uk](mailto:Amin.Samman.1@city.ac.uk)

Within the study of global capitalism, it has become increasingly common to treat crises as events that are interpreted or constructed as necessitating decisive historical change. The present paper contributes to the further development of this ‘new crisis theory’ by

focusing on the afterlives of crisis narratives. It begins by drawing an analytical distinction between the function that a recollected past crisis might perform within a later present, and the specific practices of historical representation through which that past crisis

finds a determinate form. It then goes on to develop a typology of three basic varieties of historical representation. These correspond to historical representations that are produced through practices of emplotment, analogical reasoning, and lesson drawing. Finally, the paper introduces a concept of history-production, which captures how these different varieties of representational practice can be combined to yield a wider range of functions for the imagined past than is currently

envisioned by crisis theory. Here each basic variety of historical representation is used to identify a distinct mode of history-production, wherein the imagined past serves to either constitute or help negotiate the historicity of a crisis in the present. Taken together these points highlight a complex interaction not only between historical analogies, lessons and narratives, but also between these diverse practices and the discursive negotiation of crisis.

## Governing (through) Expectations: Inflation Targeting and the Formation of Rational Expectation Formers

Benjamin Braun, University of Warwick | [benjamin.bb.braun@gmail.com](mailto:benjamin.bb.braun@gmail.com)

Building on the work of Callon, Beckert and Esposito, this paper develops a sociological account of governance of and through expectations in the context of inflation targeting. While monetary theorists have been attentive to the intricacies of central bank communication, they overlook that expectation management is conditional on the presence of a specific form of rationality in economic actors – inflation targeting involves what Callon calls the “performance of calculative agencies”. This paper distinguishes two ways in which central banks aim at formatting ‘rational’ expectation formers. First, they condition the formation of expectations by framing the economic present and future in terms of only two variables – the inflation rate (target variable) and the short-term interest rate (operational target variable). Second, by being

vocal about the reasoning behind their decisions and about their own interpretation of the economic environment, central banks aim to actively rationalise the ways in which economic actors respond to these variables. The paper goes on to argue that the pretence-of-knowledge syndrome recently diagnosed by macroeconomists should not be viewed merely as a pathology. Instead, it constitutes a precondition for expectation management, in the sense that the central bank’s epistemic authority requires that pretence of knowledge is widely perceived as actual knowledge. The second part of the paper applies this theoretical framework to the experience of the ECB in the run-up to the recent crisis, conceptualising destabilising behavioural patterns as counter-performative effects of monetary governance through expectations.

## (Epi)crisis of Economy

Tuija Lattunen, University of Helsinki | [tuija.lattunen@helsinki.fi](mailto:tuija.lattunen@helsinki.fi)

In the mercantilist times the body and its functions were influential referents for the economic thought. Although organic vision of economy has long lost its role as the guiding principle of economic theories, the ideas of “fit” and “sick” economy have remained powerful metaphors in the everyday

understandings of economic life: our economies become sick, heal and make recovery, although sometimes not without being revived and resuscitated. Metaphors are not only vivid rhetorical devices but also important means for structuring perceptions as they combine not only different words but

also certain logics related to the concepts used. Thus, illness as an attribute for economy does not merely pathologize its object or create sense of urgency – it also ratifies what is considered as “normal” or “natural” in the economy as opposed to the “abnormal” and “degenerate” features the narratives point to. Furthermore, the pathologies and the ways they are described create certain rationalities about the disturbances they portray, offering thus discursive foundations for defining economic crises: the narratives of symptoms, pathogens and possible cures indicate whole

chains of events from causes to consequences, from victims to the blameworthy, up to the remedies and responsibilities. This paper focuses on the kind of economic rationalities “economic pathologies” create and the roles they promote for economic subjects by analyzing economic reporting in Helsingin Sanomat, largest newspaper in Finland, during various economic crises from 1950’s national deregulation until the global recession of 2008. The study is part of a larger research project “Imagining Economy in Finnish Advertising and Media (1954-2008)”.

## **Sovereign Credit: from ‘Transcendence by Failure’ to Paradigmatic Failure?**

Nina Boy, Lancaster University | [nina@prio.no](mailto:nina@prio.no)

This paper looks at the relationship of credit, crisis and critique with regard to the evolution of and present challenge to sovereign creditworthiness. A striking observation when looking at one of the first consolidations of a public debt in Florence in the 14th century, the creation of the Bank of England in 1694, or the first paper money era following the Bank Restriction Act in 1797, is that defining features of public credit seem to have been born out of insolvency and crisis. In a similar vein, the fiction of public credit has displayed remarkable resistance to critical projects of ‘unmasking’: instead of subverting the evolving

system of public credit in 18th century Britain, the fierce attacks by the Augustan Satirists promoted and naturalised a new paradigm of social relations based on state finance. Against this history of a ‘transcendence by failure’ (R. Mitchell) the second part of the paper turns to the present unprecedented crisis of the sovereign creditworthiness of advanced economies in the wake of the financial crisis. At stake here is not the solvency of individual states but a questioning of the concept of the risk-free asset as such. The paper concludes with reflections on the failure and fallibility of the fiction of sovereign credit.

## **The Nexus between Scientization Processes within Central Banks and Monetary Crises**

Leon Wansleben, University of Lucerne | [leon@wansleben.com](mailto:leon@wansleben.com)

Within the last 50 years or so, numerous central banks have arguably been ‘scientized’: They have intensified their research activities, decision making authority has been passed to experts and central banks have become networked in transnational, epistemic or discursive communities. While the dominant research on central banks in economics and political science has largely ignored this aspect of institutional change, scientization seems to

be crucial in order to better understand contemporary monetary policy and its legitimation. This paper aims to present first results of an empirical historical-sociological study of scientization processes within the Bank of England and the Swiss National Bank from the 1960s until today. Moreover, it is asked: What are possible explanations of these processes? One promising approach is to focus on monetary crises. Such crises have mostly

been studied in the context of macro-histories, written by sociologists or historians of money. In this paper, I will try to identify crises on the level of strategic responses by central banking authorities. Such strategic responses can aim at presenting new 'solutions' to commonly perceived/accepted monetary problems,

taming or inhibiting conflicts between different aims or interests, and/or reframing legitimacy. The paper will look at strategic decisions to intensify knowledge production within central banks as one such crisis response, which becomes increasingly relevant since the 1960s.

## Freedom and Temporality in Finnish Bank Advertisements

Juri Mykkänen, University of Helsinki | [juri.mykkanen@helsinki.fi](mailto:juri.mykkanen@helsinki.fi)

In this paper, a historical selection of Finnish bank ads from 1950s to 1980s provide a rich source for studying portrayals of individual freedom as an encounter between citizen-consumers and financial institutions. These portrayals are idealized representations of historically real problems and concerns of great importance for ordinary people. Because of their idealized yet contextually relevant nature the portrayals can be treated as condensed manifestations of culture without much risk of over interpretation. As such, the ads are analyzed as faithful reproductions of common sense theories of freedom which can be linked to more explicit theories ranging from classical republicanism to freedom made

visible through unconstrained market. A key observation suggests that the ads introduce easily available ways to manipulate time to promote individual freedom through economic transactions. Occasionally, time manipulation is made possible by "magical realism" that bends the limits of reality, for example, by accelerating or slowing down time. However, it is important not to dismiss these "nonsensical" representations as essentially relevant for our understanding of economy as a cultural entity. This paper will also emphasize the durability of and multiple ways of achieving economic relationships that verge on republican values such as independence, responsibility and communal harmony.

## 11RN09 - Money, Finance and Society (A)

Chair(s): Olga Kuzina (The National Research University - Higher School of Economics)

### Global Financial Markets and Global Financial Class

Lukas Hofstaetter, Goethe-University, Frankfurt | [hofstaetter@soz.uni-frankfurt.de](mailto:hofstaetter@soz.uni-frankfurt.de)

In my contribution I ask whether the global financial markets constitute the economic base for the formation of a "global financial class". As the global financial crisis has demonstrated, the present-day economy is indeed a global one. Financial markets have always been at the forefront of the globalization process. Professionals on the financial markets have profited enormously

this development. Following the arguments developed within the "new economic sociology", markets rely on their structural embedding in personal networks, shared cultural and cognitive foundations, and are shaped by political struggles. From a perspective of field theory, I argue that these forms of embeddedness translate into specific forms of economic, social and cultural capital

for the market actors. As the social studies of finance point out, financial markets rely on shared cultural and cognitive understandings, anchored deeply in calculative and communicative practices. Thereby cultural and cognitive embeddedness produce a common worldview (doxa) and habitus of market actors. Financial professionals are therefore likely to form a (global) social class. This perspective on global class formation contrasts with previous research, which conceives the processes of

globalization and global class formation to be driven by multinational corporations. The existing literature on global class therefore focuses on the top tier of corporate officials as the potential members of a global capitalist or managerial class, whereas a global financial class would "cut across" the logic of the firm and the state, thereby opening new perspectives on processes of financialization and globalization.

## The Morning after: Conversations with Economists

Berta Alvarez-Miranda, Complutense University, Madrid | [berta@cps.ucm.es](mailto:berta@cps.ucm.es)

How do economists describe their role in predicting and announcing to the public the advent of the current economic crisis? Did they not predict the crisis, did they not publicize their predictions, or did these not deserve public attention? This paper analyzes their reflections on this topic on the basis of in depth interviews with top economic trend analysts and focus groups of economists with medium-high positions in firms and banks in Spain. The Spanish case is of particular interest because of the large volume of the housing bubble and the predictability of its explosion, and because of the deep effects it has had (together with the international financial crisis) on employment

levels and people's everyday lives. But the contents of the conversations with economists on which the paper is based are easily generalizable: among them, the epistemological limitations of economic forecasting, their imbrication with economic and political interests, the gregarian dynamics of the profession, the problems of communication among economic analysts and practitioners. A common theme in economists' narratives of the crisis is also the role of analysts as the spoilsport to whose warnings about the morning after nobody listens while the party is on,

## The Moral Battle over Derivatives: how Non-Financial Actors Shape Financial Reform

Agnes Orban, University of Cologne | [aorban@uni-koeln.de](mailto:aorban@uni-koeln.de)

Following the idea that markets are not natural but inherently moral projects (Fourcade & Healy 2007), this paper will analyze the link between moral perceptions and the regulation of markets. I draw on a case study of the regulation of derivatives trading in the US in the current financial crisis to uncover the mechanism through which moral boundaries affect actors' reform capacities. Derivatives markets are at the heart of a process called financialization as a strategy for growth, i.e.

increasing the role of financial markets, actors, and motives in the operation of the domestic economy. Mainly analyzed from the perspective of international political economy, scholars argue that these markets are beyond state's regulatory capacities. Global economic pressures, the power of the financial industry, and competitive advantages due to the size of US-financial markets have prevented regulatory oversight for 30 years. Current financial reforms challenge these

perspectives. The rapid development of OTC derivatives for energy, food, and government debt outside of regulatory oversight has raised moral debates about the nature of derivatives trading, too. Diverse groups such as business, agricultural interests, and advocacy groups formed a counter-movement to financialization and were able to shape regulatory reform. Conceptualizing moral perceptions as cognitive

categories, the working hypothesis is that actors manipulate the classification of derivatives trading as gambling vs. speculation vs. hedging to advance their reform projects. This paper will show the strategies actors use to change the categorization of derivatives trading. Using Process Tracing methodology, I analyze policy-documents and expert interviews.

## **Dangerous Loans and Social Responsibility in the Age of Financialisation**

**Christian Poppe**, The National Institute for Consumer Research (SIFO), Oslo | [poppe.christian@gmail.com](mailto:poppe.christian@gmail.com)

**Elling Borgeraas**, The National Institute for Consumer Research | [elling.borgeraas@sifo.no](mailto:elling.borgeraas@sifo.no)

**Randi Lavik**, The National Institute for Consumer Research | [randi.lavik@sifo.no](mailto:randi.lavik@sifo.no)

The deregulation of the Western economies from the late 1970s onwards has fundamentally changed the economic environments in which households operate. One obvious consequence is that loans, credit and a range of other financial products have become easily available to almost everybody. From now on, in the name of individual freedom all households – even the poor – are expected to take responsibility for their own welfare using borrowed money. But just as important, this has led to a financialisation of every-day life, i.e. an increasing dependence on finance and speculative financial products. This has created higher levels of welfare, but also a more unstable global economy that introduces new risks for households. This paper looks at how welfare based on borrowing may lead to

quite the opposite: socio-economic exclusion and poverty. Norway is a good case for studying such mechanisms because this is a country with elaborated safety nets and traditionally very little poverty. Based on data about debt settlements in 1999, 2004 and 2012 the amount and composition of debt portfolios are investigated as instances of how risk mechanisms operate and change over time in financialised environments. We demonstrate how the most dangerous and expensive forms of loans and credit increasingly create as well as finance poverty. This raises important questions about the role of the market. Should those cannot afford it have access to credit? Should the market have a social policy function or should the welfare state take on extended social responsibility?

## **The Crisis of the Industrial System in Italy: the Case of Ilva in Taranto.**

**Mara Maretti**, Università di Chieti-Pescara | [m.maretti@unich.it](mailto:m.maretti@unich.it)

**Riccardo Di Gregorio**, Università degli Studi di Teramo | [ridigre@gmail.com](mailto:ridigre@gmail.com)

This paper shows the main results from a case study which can be considered as representative of the Italian industrial system. The clear conflict between the magistrates, the government and the labour unions, which is

also evident within the civil society is synthesized by the media as a conflict between the right to work and the right to health. The case of Ilva in Taranto, the largest steelworks in Europe, represents the failure of the

neoliberal policies in a country with poor civic consciousness, widespread corruption of institutions and hidden economy. The analysis of both some qualitative interviews and documentation concerning the environmental conflict engendered by this huge industrial. This paper intends to present a case study as a considerable limitation of the crisis of the

Italian industrial system. The conflict between public institutions (the judiciary, the government and unions) and within civil society. of and documentation relating to around the largest steelworks in Europe since the 90s allows the emergence of a series of reflections not only of cases studied but the country's system.

## 12RN09 - Money, Finance and Society (B)

Chair(s): Maria Nawojczyk (AGH University of Science and Technology)

### Financial Crisis, Intra-State Politics and Regulatory Reforms

**Daniel Maman**, Ben-Gurion University of the Negev | [dmaman@bgu.ac.il](mailto:dmaman@bgu.ac.il)

Deep crisis, such as the recent global financial turmoil which countries experienced it very differently, could lead to substantial changes in the existing institutional arrangements. Studies focus on conditions that facilitated the institutional change, as well as on the actors and mechanisms that were involved in the process. Yet, studies tend to overlook the dynamics of the perceptions and interpretations of the crisis and their effects on the proposed policy solutions. Based on a detailed process-tracing analysis of the Israeli case, this paper asserts that throughout the course of the global financial crisis, the perceptions and interpretations, as well as the interests of the pivotal actors in the political-economic field, changed dramatically, because actors alter their understanding of the changing world and recalculated their priorities. Specifically, from its eruption in the

summer of 2007 and until the second quarter of 2009, wide consensus formed among state agencies, which are the dominant players, that it is a very severe crisis, which uncovers the weaknesses in the supervision of the financial system. Moreover, state agencies, similar to other developed countries, concluded that a new systemic supervision should be established, which will be carried out by the central bank. Furthermore, they consent that there is urgency in strengthening the appropriate tools and authority necessary for the regulation of financial bodies, and agree to consider reforming the supervisory structure. Following the global and local recovery, deep disagreements took place among state agencies regarding the interpretation of the crisis, its effects on the local economy, and especially on the necessity for changing the supervisory

### Central Bank Independence: A Social Economic and Democratic Critique

**Jocelyn Pixley**, The University of New South Wales | [jocelynpixley@gmail.com](mailto:jocelynpixley@gmail.com)

**Sam Whimster**, Max Weber Studies | [swhimster@gmail.com](mailto:swhimster@gmail.com)

**Shaun A Wilson**, The University of New South Wales | [Shaun.Wilson@unsw.edu.au](mailto:Shaun.Wilson@unsw.edu.au)

Central banks are public institutions whose system integrating function is to operate as the

interface between public currency and private credit. Their centrality is defined by their role in intervening between the competing demands of creditors and debtors where those demands are denominated in a national currency whose stable value a central bank must try to maintain. As public institutions they are given statutory powers by legislatures to perform these tasks. This paper looks at how democratic legislatures have, since the 1990s, re-defined the remits of central banks, and in particular how they came to give up direct controls over central banks in favour of awarding them 'independent' powers. Our argument is that central banks cannot be freed from the contradictory demands and

expectations that are placed upon them, and that 'operational' independence has turned out to be a form of re-privatisation of central banks where accountability to the public sphere has been replaced or modified by implicit subordination to commercial financial institutions. The situation is now dire (November 2012) as central banks improvise policies that have moved far beyond this previous 'independent' remit. We argue that both the democratic accountability of central banks (historically, a relatively brief interlude) and their statutory functions are in urgent need of reconsideration and that present crisis-driven events may prompt new pressure for governmental control of central banks

## Financial Crises and Real Estate Markets: Wealth, Speculation and Modernity

**Luigi Droste**, University Muenster (Westfaelische Wilhelms-Universitaet) | [luigi.droste@uni-muenster.de](mailto:luigi.droste@uni-muenster.de)

There are significant hints of a strong relationship between the dynamics of real estate markets and financial crises from the second half of the 19th century until today. In spite of research accumulation, it is seemingly ignored that since the late 19th century several financial crises were caused by real estate bubbles, depending on the distinct characteristics of real estate markets. The paper supports the idea that real estate and financial crises show indeed similar and congruent characteristics since the 19th century. This concerns (1) the inherent tendency towards speculative bubbles, (2) high

and insufficiently secured credits, (3) the close relationship between real estate markets and the banking system, and (4) the growing significance of globalized finance. However, the investigation of real estate markets is not only interesting for understanding and explaining the genesis of modern economic crises, but contributes also to the understanding of the emergence of practices of speculation and the indebtedness of private households. A further examination of real estate markets promises the contribution towards a better understanding of actors, practices and institutions in modern market societies.

## «New» Means of Payments: Use of Cashless Payments in Russia.

**Natalia Khalina**, National research university Higher School of Economics | [nhalina@hse.ru](mailto:nhalina@hse.ru)

New means of payment, concerned with the development of information and communication technologies are increasingly at the center of various debates. There is an assumption that we are on the way towards cashless society where modern electronic forms of money replace paper notes due to

their benefits in the form of flexibility and ease of calculations. In fact there is a doubt for such possibilities especially in the markets where the history of credit and debit cards (as a first example of cashless payment tool) is shorter. On the one hand there is now need to reinvent the wheel and all solutions in this market exist,

on the other hand, there is possibility to meet different obstacles from the consumers and main actors in the field of cashless transactions. For example, the development of bank cards market in Russia is characterized by strategy of new consumers' engaging through salary bank cards. As a result there are a growing number of people who are only the holders but not the users because of widespread practice to convert all their salary in cash in ATM. This paper focuses on the question why some people prefer to use cashless payments in everyday life and others

are not even in case when they are holders of such payment instruments and what factors determine such practices. Using the data of the all-Russian financial survey (2010-2012, N=1600 each year) in the first part of paper the main practices of cashless payments usage and their dynamics are described, in the second part drawing on a concept of 'multiple monies' it would be discussed the role of social factor and role of trust for new forms of money and financial institutions in use of cashless payments.

## Degrowth, Local Currencies and Commons

**Maurizio Ruzzene**, Associazione per la Decrescita | [ruzzene@gmail.com](mailto:ruzzene@gmail.com)

Financial crises and increasing debt intensify the exploitation of resources, especially labour, but can favour new forms of economic valorisation, more attentive towards the environment and people. Also in the degrowth movement, it has long been known that local currencies can play an important role in economic and political reconstruction: they can favour more responsible, shared and participated valorisation of the commons, develop alternative forms of finance for public economies and social services, and reconcile economics, political communities and territory. To seize such opportunities, however it is necessary to identify the limits and constraints that have prevented movements proposing new monetary forms from developing projects with a firm and widespread foundation in common experience. In the proposed report I highlight some of more important economic, legal and

cultural problems that have prevented solid widespread construction of sustainable local currencies for new "commons economies". I consider the need to expand the main functions usually attributed to local/complementary currencies. I question the reduction of local currencies to mere means of exchange and economic growth (for small and "close", self-referent communities), and review their role in developing alternative social security systems and adequate socio-economic programming (on a local and regional/macro-regional scale), both necessary for a sustainable development of post-industrial societies. I endeavour to recover an adequate stable value basis for the care activities of environmental heritage, to link economic with natural and cultural constraints, collectively established on a more equitable and cooperative basis.

## 13RN09 - Money, Finance and Society (C)

Chair(s): Daniel Maman (Ben-Gurion University of the Negev)

### Imitation and Divergence A Sociological Explanation of Expectations on Financial Markets

Klaus Kraemer, University of Graz | [klaus.kraemer@uni-graz.at](mailto:klaus.kraemer@uni-graz.at)

Financial markets are marked by considerable uncertainty. Actors in financial markets are nevertheless constantly forced to make decisions. In my presentation I want to discuss how they cope with this problem of decision-making. Based on a critical discussion of the concept of “expectations of expectations,” I want to distinguish between two different types of expectations on financial markets: isomorphic and divergent expectations. Isomorphic expectations are the predominant mode of expectation in self-referential financial markets. These expectations shared by a majority of market participants. In contrast to shared expectations, divergent expectations based on their observations of isomorphic expectations. They refrain from imitating majority decisions in the

marketplace. How can deviation from the path of imitation be explained? It would surely be mistaken to describe such divergence in terms of a “spontaneous” instance of unconventional action detached from social context. Deviators must believe in the reliability of divergent expectations. When do they hold such a belief? And, above all, when do they believe in expectations that radically depart from the mainstream? How can we get a sociological grasp on the social impact of such a belief? I suggest turning to Max Weber’s concept of ideas and interests, which can be fruitfully applied to better understand the influence of normative ideas on divergent expectations and explain such influence as a social process of belief in profitability.

### Financialization and the Self-Referentiality of the Monetary Medium

Timo Walter, Institut de Hautes Etudes Internationales et du Développement | [timo.walter@graduateinstitute.ch](mailto:timo.walter@graduateinstitute.ch)

Both economic sociology and political economy have been concerned with the financialization of the economic system in modern capitalist societies. An increasingly speculative and ecologically dominant financial system is seen to have become dis-embedded from the “real” economy, with this structural disjuncture generating both increasing fragility within the financial system, and, through various channels, causing strains and pressures on the productive sector of the economy. There is a growing sense that the dis-embedding of the financial system is intimately connected to the “hyperreal” or “virtual” character of much of

contemporary financial practices, expressed most clearly in the predominance of speculative activities; however, there is little by way of systematic conceptualization of what precisely is “virtual” about modern finance. This paper draws on insights from sociological systems-theory (Luhmann) as well as the sociology of money and proposes to understand financialization as an amplification of the self-referentiality of monetary calculability. It suggests that the growing self-referentiality of finance is better understood not as resulting from a rise in speculative activity but as a shift between two of the

traditional functions of money – from its role as a means of payment (enabling generalized economic transactions) to money as a token of abstract wealth or value. Self-referentiality, then, does not result from a lack of

referentiality to “real” economic values so much as from the ways in which value is constituted in practices of making monetary assets “calculable”.

## Decrypting Financial Markets through Mass-Collaboration: on-line Networks of Investors in Periods of Uncertainty

Niccolò Casnici, University of Brescia | [niccolo.casnici@eco.unibs.it](mailto:niccolo.casnici@eco.unibs.it)

Pierpaolo Dondio, Dublin Institute of Technology | [pierpaolo.dondio@dit.ie](mailto:pierpaolo.dondio@dit.ie)

Flaminio Squazzoni, University of Brescia | [squazzon@eco.unibs.it](mailto:squazzon@eco.unibs.it)

This paper investigates 24 million messages (14 million with stock tag) exchanged by 32,300 investors in an on-line financial forum (“Finanzaonline”) from 2003 to 2012. Our aim is to provide a quantitative measure of the information sharing mechanisms in periods of market uncertainty and investigate the link between such mechanisms and the stock market price dynamics. Using the sequence of user messages in the forum and the content of such messages, we computed the following daily indicators: i) number of messages, ii) number of active users, iii) volatility of messages, iv) users contributions dispersion, v) users turnover, and vi) uncertainty of users contribution. We built a text-based information index to measure the level of stock market-related information shared by the community

over their total activity. Finally, we traced the users’ network configuration at periodical intervals by collecting descriptive metrics, such as centrality and density, and tracing the position of the most influential users. Then, we focused on the correlation between stock prices and such indicators to understand if particular market conditions are related to the emergence of certain networks configurations of the forum. Given the growing popularity of financial on-line communities and social media, our findings allow us to discuss the importance of mass collaboration in knowledge sharing to develop appropriate market knowledge, giving a contribution to a quantitative sociological approach to financial markets.

## Group Buying as a Way to Cope with the Crisis

Ariela Mortara, IULM University, Milan | [ariela.mortara@iulm.it](mailto:ariela.mortara@iulm.it)

Antonella Ardizzone, IULM University, Milan | [antonella.ardizzone@iulm.it](mailto:antonella.ardizzone@iulm.it)

The economic crisis of the last years has deeply affected the consumption patterns of people around the world. Indeed, in Italy the level of consumption has downshifted reaching the same expenditure as in 1997. Decrease in purchases has affected both products and services; however, despite this situation e-commerce shows a revers trend. In 2012 e-commerce has growth by 18% mainly due to

the widespread of group buying sites. Such sites, the most known of which is Groupon, allow people to purchase services and goods at a very discounted price through an online coupon. The paper will present the results of an online quantitative research conducted in order to understand if and in which way the group buying sites have affected the consumption behavior of consumers. The

research hypothesis is that even if convenience is not the only motivation fostering the huge success of this kind of sites, surely the

worldwide economic situation has contributed to it.

## 14RN09 - Emergence and Innovation in Markets and Organizations

Chair(s): Sokratis Koniordos (University of Crete)

### Hero Stories as Society's Paradox Resolution: Comparing the Stories of Startup Entrepreneurs and Hired CEOs

Antti H. Hyrkäs, University of Helsinki | [antti.hyrkas@helsinki.fi](mailto:antti.hyrkas@helsinki.fi)

During the past decade, the “scalable startup” has become the center of attention amongst venture capitalists and in the pages of business magazines. A scalable startup is a company with a disruptive business idea and a big growth potential, but without the need for heavy investments during the growth phase. The success stories of these firms – usually software or social media companies – have given birth to the new hero of the business world: the startup entrepreneur. Often depicted as the rockstar or happy-go-lucky teenager of business world, the startup entrepreneur challenges almost everything that the hired professional CEO has come to stand for. In my presentation/paper I will compare the success stories of startup

entrepreneurs and professional CEOs. Emphasis is on what makes a legitimate leader: what is sacrificed and what is gained during the story? The paper is based on my ongoing doctoral thesis. In the final analysis I will talk about the wider implications that have risen with the preliminary analysis of magazine articles and biographies. Here I will take the hero stories and their differing structures as examples of how, why and where the reduction of complexity happens in modern society. In this last part of my paper I will bring together Niklas Luhmann's theory of society (“culture is the stock market where options for paradox resolution are traded”) and the myth analysis of Claude Lévi-Strauss (myth as a logical model for overcoming a contradiction).

### Success by Hazard? Gurus and the Emergence of Light Business Books' Market on Brazil.

Monise F. Picanço, University of Sao Paulo | [monise.picanco@usp.br](mailto:monise.picanco@usp.br)

Since the 1990's, Brazilian's editorial market watched amazed the bustling rise of self help books to the best sellers book charts. Interestingly enough, this increase was mainly achieved by success and career self-help books– also known as light business manuals – in a moment of intense economic crisis in Brazil. Harshly criticized by the main press, these books not only pullulated in the charts on

the 1990's, but have gathered the status of an editorial niche in Brazil, successful to this day. The development of this niche acquires answers to some questions: How the emergence of these market has been made possible? With translations of books, now assimilated to these genres, dating since the 1960's, what made possible on the 1990's the construction of these books as a new genre?

The main hypothesis is that the triumph of these books on Brazilian's editorial market and its segmentation as a niche has been made possible mainly through the appearance of an actor: the guru. Gurus are the social skilled agents (Fligstein, 2001; Fligstein & McAdam, 2011) that made possible the emergence of this new market. They are the authors of this successful books and speakers, commonly hired by companies to address motivation

skills. Through the meticulous study of two well-known Brazilian gurus' trajectories, my aim is to show how the conjunction of their strategies, activities and self-presentation has acquired them a sort of "motivational healer" appeal, which, combined with their continuous transit throughout editorial and corporative worlds and their performances on media, play key roles to the emergence of a new editorial niche in the 1990's on Brazil.

## Academics as Entrepreneurs

**Maria Nawojczyk**, AGH University of Science and Technology, Cracow | [maria@list.pl](mailto:maria@list.pl)

The question arises who could be the agents of changes toward innovative economy. Within the present concept of knowledge based economy, knowledge became acknowledged as perhaps the most decisive economic resource for the 21st century's economic activity. This has given rise to a whole new set of practices aimed at the improvement of the ways that knowledge is created, applied and transferred within and between organizations. The primary organizations where knowledge is created are universities. Teaching and research were two traditional activities of universities to which now the third equally important one is added – the knowledge transfer. It is understood as the link between research and commercial outcomes (i.e. spin out and 'spin-in' companies, entrepreneurial incubators, start-

up businesses, commercial patenting and licensing, marketization of research innovations). Moreover, it also includes other activities aimed at the strengthening of the academia business ties such as consultancy and contract research, student projects in industry, capacity building and continuing professional education. In the most developed countries, we can find many successful examples of cooperation between universities and their business environment in creating innovative hubs. Interesting research question is how it works in Poland, in her imitating economy. Based on in-depth interviews with university scholars who are involved in creating innovative enterprises I will analyze the phenomenon of university entrepreneurship.

## How to Become a Prominent Food Critic? Innovation among Market Intermediaries

**Sidonie Naulin**, Université Paris-Sorbonne | [sidonie.naulin@gmail.com](mailto:sidonie.naulin@gmail.com)

The production of value has recently been the topic of numerous studies in economic sociology (Aspers & Beckert, 2011; Lamont, 2012; Stark, 2009; Vatin, 2009) and the role of market intermediaries in the production of value has particularly been questioned. The market for restaurant meals is a good example of a market that requires the existence of intermediaries in order to assess the

(symbolic) value of the products sold. A way to understand the role of food critics in the restaurant value making is to investigate the trajectories of critics who managed to become prominent – and consequently the ways of innovating in the field of food journalism. My work is based on the study of the trajectories of four French food critics who managed to become famous at different periods (Henri

Gault & Christian Millau in the 1970s, François Simon in the 1990s, Alexandre Cammas with the Fooding and Luc Dubanchet with Omnivore in the 2000s) [1]. I first show that there are two main ways of innovating – and thus becoming prominent – for food critics: inventing a new gastronomical aesthetic and creating a new way of working as a journalist. Then, I show that to account for the trajectories of innovations, we need to devote special

attention not only to the personality of innovators and to the social context of innovations but also to the “work” performed by intermediaries in order to institutionalize and display their innovation. [1] Methodology: I have mainly based my work on first hand interviews with the actors involved and with their colleagues, on their written productions (critiques, biography, interviews...) and on observations of events they organized.

## 15RN09 - Work Transformations

Chair(s): Jarosław Królewski (AGH University of Science and Technology)

### Dealing with Mass-Employment. The Systemic but Stateless Creation of the Employment Relationship

Felix Behling, National University of Ireland Maynooth | [felixbehling@gmail.com](mailto:felixbehling@gmail.com)

The paper deals with the historical constitution of the employment relationship and industrial capitalism in Germany and the UK. Studies of paternalism, labour law and industrial relations have outlined the importance of employment for the consolidation of capitalism, the fiscal system of states and industrialisation during the long 19th century. While these studies explain the power relation between employer and employee, and the role of the state in the political economies of modern societies, they fail to answer why employers chose a particular approach to the employment relationship over another, even if they were operating in similar business

environments. By using systems theory and business histories, two instances are identified that frame the employment relationship; these are the personal experiences of employers and the conditions prevailing in companies. Employers simply did what they knew best from their everyday when faced with mass employment. The paper will contribute to theory informed discussions on historical employee welfare in Germany and the UK, and will provide arguments to see current movements such as corporate social responsibility as a continuation of that frame for employment.

### Recruitment Behaviour and Wages in Open and Closed Labour Markets

Andreas Haupt, Karlsruhe Institute of Technology | [andreas.haupt@kit.edu](mailto:andreas.haupt@kit.edu)

According to neoclassical theories labour markets are homogenous regarding recruitment behaviour. Firms just want the most productive worker for a given workplace. They might differ in their strategies how to

achieve certainty about the productivity of employees. In contrast, sociological theories of segmented labour markets and social closure have challenged the claim of only one recruitment strategy. There are a lot of

analyses showing that the relation between employers and employees differ with respect to firm or occupation specific labour markets, which both can be described as more or less closed relationships. But so far, research on open and closed labour markets lacks a systematic description of different recruitment strategies and their economic consequences. In this talk I will compare the recruitment in open and closed occupational labour markets. I will describe the recruitment in open labour markets with signalling and screening theories and show how these mechanisms are

significantly modified in closed markets. A discussion of these differences leads to the expectation that gender and experience are less relevant for wages in closed occupational labour markets, leading to a much lower gender wage gap and a much smaller amount of seniority wages. These hypotheses are tested and supported with wage estimations based on a large dataset of German employees from 2006. The results strengthen the view that wage inequality can be better understood if we account for different market structures in which wages are set.

## Immigration, Gender and Labour Market in the North East of England

**Hengameh Ashraf Emami**, Social Sciences, Northumbria University | [hengameh25@yahoo.co.uk](mailto:hengameh25@yahoo.co.uk)

Due to globalisation and push and pull factors, immigration has always been a dynamic phenomenon in the history of British, one which constructs a new form of diversity in the host society. Thus, it may influence creating further challenges for both immigrants and the host community. The social structure and various dimensions of employment, education, culture, cultural aspirations, language, history and the identity of ethnic minorities are significant factors representing the possible transformations in former and latter communities. The process of adoption of work culture by new arrivals is not an effortless process, considering the variety of obstacles immigrants may have to confront. This paper aims to investigate and explore the level of accessibility of work for female with ethnic minority background in the North East of England, while addressing specific issues

relating to migrated women. The distinctive focus will be on ethnic minority women with a professional background and the challenges they might have to face finding employment in England. Furthermore, the research endeavours is to assess and highlight the barriers that exist for those women seeking to obtain employment. To achieve the aims of the study, various women's organisations have been approached and accessed so as to capture the stories and views of marginalized women through focus groups, questionnaires, case studies and in-depth interviews, investigating the challenges and barriers those women encounter in the labour market. Therefore, dynamic discussions have been taken place around districts aspects of culture and identity, Islamophobia, racism, racial segregation, their aspirations, the 'glass-ceiling'.

## Fantasies of Good Life and Toxic Masculinities: The Case of Unemployed Men in Lithuania

**Arturas Tereskinas**, Vytautas Magnus University, Kaunas | [a.tereskinas@smf.vdu.lt](mailto:a.tereskinas@smf.vdu.lt)

The presentation focuses on the results of an ongoing project "Social Exclusion and Social Participation in Transitional Lithuania." Based

on semi-structured interviews with unemployed men (out of work for more than a year), it analyzes different aspects of their

social exclusion and their subjective perceptions of good life. What does these men's normative fantasy of good life consist of and how it can be achieved? The presentation also discusses the ways in which the respondents' masculinity influences their rather conventional good life fantasies confronted by both their life experiences and the economic, social and political environment in Lithuania. Unemployment makes men doubt their success at being men: they feel disarmed of their independence, status, power, and pride that are considered the defining characteristics of masculinity. Moreover, when traditional resources of masculinity like employment or work are not available, alternative resources, including violence, readiness to control others,

and insensitivity associated with toxic masculinity (Kupers 2001) are often used to accomplish masculine identity. A "moral-intimate-economic thing" (Berlant 2011) that the interviewed men call the good life and that serves as a self-therapeutic narrative of self-fulfillment is indeed an obstacle to good life. Using the insights of both gender studies and sociology of emotions (Butler 2004; Berlant 2011; Ahmed 2004), the presentation argues that the normative ideal of the good life must be rethought and re-evaluated with regard to not only dynamic experiences of social exclusion but also forms of masculinity and emotional structures used by the respondents as a means of survival.

## **Trans-alienation of Our Times: Economics, Labor and the Powerless of Working Man (Russian Studies)**

**Vyacheslav Yur'Evich Kombarov**, Institute of Economics and Industrial Engineering of the Siberian Branch of the Russian Academy of Science | [vkombarov@gmail.com](mailto:vkombarov@gmail.com)

"Liquid" modernity (Bauman, 2006) has accelerated social dynamics of modern communities and the Russian society (also post-communist countries) in particular and determined the necessity to study new forms and types of alienation and the mechanisms of its origin. Today, we are expected to consider such urgent social phenomena as formation of hyperreality and consumer society (Baudrillard, 1972, 2006), necessity to follow innovations as well as permanent condition of modernization (Vallas, 2001; Hackman, 1980). There is no doubt that all this refers to industrial enterprises and their workers. Therefore, whereas 20 years ago (when the term "alienation under socialism" first appeared in the Russian sociological discourse) the researchers used mainly classical Marxist approach in the studies of alienation, my work is based on both classical

interpretations and poststructural (postmodern) concepts. Here labor and industrial relations are viewed in the context of social, economic, cultural and political aspects. On the basis of the sociological survey of engineers of large Russian industrial companies had identified five types (clusters) of workers experiencing a different combination of such types of alienation as powerlessness, meaninglessness (Seeman, 1959), political alienation, etc. Hybridization of these and other "classical" types of alienation with the "new" kinds of alienation, typical of Western consumer societies (alienation from reality, from spirituality, atomization) (Kombarov, 2011, 2013) allows me to talk about trans-alienation, which is a rhizome (an infinite set of interlocking projections of alienation) which in turn reflects the close interconnectedness of the processes in a globalizing world.

## An Insight into the Nature of the Relationship between Entrepreneurship and International Migration

Alin I Croitoru, University of Bucharest | [alin.croitoru@sas.unibuc.ro](mailto:alin.croitoru@sas.unibuc.ro)

My paper is primarily concerned with two of the most significant changes which are visible in ex-communist countries. Since 1990, an entrepreneurial phenomenon has arisen in Romania as a result of the reintroduction of specific free market practices. At the same time, Romanians have gradually acquired the right to travel and work in many Western European countries. While certainly not claiming to be an exhaustive exposition of some of the most important perspectives in the field of entrepreneurship studies, this paper points out some key distinctions between Austrian Economics and Schumpeterian perspectives on the process of entrepreneurship. This work employs a comparative approach and addresses point by point the nature of entrepreneurial opportunities, the sources of uncertainty in the initialization of entrepreneurial action, the

process of competition and its role in the market as well as the relationship between entrepreneurship and knowledge. The qualitative methodology allows the focus on the nature of the relationship between entrepreneurial practice and the experience of migration. In order to have a deeper understanding of this issue I conducted a set of in-depth interviews with Romanian migrants living and working in Graz (Austria). This type of research can supply deep insights into the process of building an entrepreneurial activity. From this point of view the Schumpeterian metaphor which emphasized the role of 'new combinations' for entrepreneurial behavior can be a useful way to summarize the preliminary results. The author would like to express his gratitude for the financial support supplied by the project number POSDRU/107/1.5/S/80765.

## The Structure of Organizations and Wage Inequality within Occupational Classes: Findings from Germany

Clemens Ohlert, University of Hamburg | [clemens.ohlert@wiso.uni-hamburg.de](mailto:clemens.ohlert@wiso.uni-hamburg.de)

Holger Lengfeld, University of Hamburg | [holger.lengfeld@wiso.uni-hamburg.de](mailto:holger.lengfeld@wiso.uni-hamburg.de)

This paper analyses how the formal structure of work organizations affects wage inequality among employees holding different occupational class positions. The initial point for our analysis is the well-known fact that employers are heterogeneous concerning organizational structure. Accordingly, employees of equal class positions receive unequal remunerations due to their attachment to a certain firm. Particularly, we derive and test the hypothesis that relative wage premiums connected to firms with internal labour markets are larger within lower class positions than within higher class positions. Using linked employer-employee

data provided by German Institute of Employment research, we regress wages on individual characteristics as well as firm level variables. The results show that overall wage inequality as well as inequality across employers is larger within higher class positions. However, organization membership is a strong predictor for wages only within lower class positions. Furthermore, the wage inequality effect of an internal labour market is higher within working classes than within higher qualified service or managerial classes. This suggests that employees of lower class positions exceedingly rely on the characteristics of their employer. In contrast,

employees of higher status generally earn higher wages but intra-class inequalities stem to a higher degree from remuneration of

diverse individual characteristics. Thus, wage inequality caused by internal labour markets is smaller in these classes.

## 16RN09 - Work Transformations

Chair(s): Maria Nawojczyk (AGH University of Science and Technology)

### Social Capital and Firms' Innovation: a Comparison of Italy and Uk

Maria K. Orteca, University of Essex | [mkorte@essex.ac.uk](mailto:mkorte@essex.ac.uk)

It is widely argued that social capital is one of the main elements fostering business firms' development and innovation. However little is known about how networks and interpersonal relationships can help or prevent these processes in firms' environment. This paper studies the effect of social capital, along with physical and human capital, on innovation in its three main forms (product, process and services). Also it investigates how this effect varies between two different industrial systems: Italy which relies on small and medium enterprises and incremental innovations, and the UK characterized in contrast by big enterprises and more radical innovations. The empirical analysis uses the Community Innovation Survey 4, which provides data on firms and their innovative and R&D activities for all European countries in years 2002-2004. In addition to the comparative

nature and the use of micro data, the contribution of this study lies in its application of the Knowledge Production Function as analytical framework. The analysis deploys several variables to operationalize social capital in probit models: informal collaborations and official partnerships with different agents (firms, clients, universities and public institutions), the latter at both national and international level. Empirical findings confirm the importance of social capital for innovation. In particular, I find social capital to be strongly associated with more radical innovations (e.g. product innovations), together with physical capital (investment in R&D). Further, I show that this result is robust to the use of different measures of social capital, although it is particularly pronounced in the case of official collaborations and partnerships.

### Shifting Production Bases and Semi-dependent Development: Comparing CEE and Western European Auto Agglomerations

Andrew J Jacobs, East Carolina University | [drajjacobs@yahoo.com](mailto:drajjacobs@yahoo.com)

Since the fall of State Socialism, the World's largest automakers have established several auto production complexes in Central and Eastern Europe (CEE). This process began in the early 1990s, with major foreign direct investments (FDI) by Fiat in Poland, Suzuki in Hungary, and Volkswagen in the Czech

Republic and later in Slovakia. These developments attracted numerous foreign auto suppliers to these areas, and later other major carmakers, all locating in the CEE in order to take advantage of its skilled but relatively inexpensive, labor force. The central locations of these nations also made them prime export

bases to ship vehicles to both emerging and developed European markets. Meanwhile, the world's largest automakers have dramatically scaled-back production in Western European countries, particularly, Belgium, Italy, Spain, and the UK. Guided by the theories of Pavlinek (2012), A. Smith (1998), Wallerstein (1974), Frank (1967), and others, this paper compares

the impact of the shift of auto production on motor vehicle production regions in the CEE and Western Europe. In the process, shows how the economies of CEE nations/regions, particularly, Slovakia, have become what might be called "semi-dependent" on motor vehicle related FDI.

## **Toward a Map of Knowledge Work In Italy: Trend, Composition and Organizational Forms**

Francesco Miele, University of Trento | [francesco.miele@unitn.it](mailto:francesco.miele@unitn.it)

Lara Maestripieri, Polytechnic of Milan | [lara.maestripieri@polimi.it](mailto:lara.maestripieri@polimi.it)

In last decades, advanced capitalistic economies have shifted from a model based on good production to a focus on services, in which knowledge as productive factor has gained a rising importance. In this context, expertise has become strategic for organizations and labour markets have progressively been characterized by the spread of high skilled workers specialized in offering advanced business services, usually called by scholars as knowledge workers (k.w.). However, the dimension of such phenomenon still remains uncertain. This paper will try to fulfil some theoretical gaps by mapping k.w. in Italy thanks to the ISTAT Italian Labour Force Survey (2004/2009). In the paper proposed for the conference, three main points will be developed. Firstly, even if quite often scholars

take for granted their undifferentiated growth, our data show a more complex scenario in which there is a dualist increase that occurs at the top and at the bottom of services sector. Secondly, the profile of k.w. in Italy appears to be quite differentiated from cadres and liberal professionals: if it's still too difficult to speak about the creative class, it is true however that there is a social group called k.w. that show characteristics irreconcilable with the other two groups. Last but not least, the strong percentage of self-employed workers in Italian k.w. can be interpreted as a signal of a progressive consolidation of new organizational forms characterized by flexibility and fragmentation, which seems to fit the intrinsic need for autonomy of this type of workers.

## **Entrepreneurship in Startups. The Social Implications of the Internet Revolution in Small and Medium-Sized Enterprises.**

Jarosław Michał Królewski, AGH University of Science and Technology, Cracow | [jaroslaw.krolewski@agh.edu.pl](mailto:jaroslaw.krolewski@agh.edu.pl)

In the last decade we can observe the rapid development of innovative companies which operate exclusively online. This type of business is particularly popular among young people, but nevertheless increasingly attracts the attention of large investors. Innovations in Internet-related fields improve the development

of so-called digital economy, which increasingly determines the level and quality of life in society. Nowadays, the development of Internet Startups is very interesting and popular phenomenon for many researchers. There are a lot of publications and papers which try to characterise the emergence,

development and also often fall of this kind of young and immature projects. Poland is an example of a country which thanks to European Union funding has invested enormous financial resources in the Internet business in the last decade. From the perspective of many years, we can evaluate and describe (on the basis of socioeconomic analysis) how Polish society uses technologies and solutions offered by companies which based their business model on the Internet. The main purpose of paper/presentation is to characterize Polish startups which were created during last couple

years and which were supported by the European Union. The study is based on an analysis of the content of the EU cofinanced projects and interviews with entrepreneurs operating on the Internet. Among the main research questions, there are hypotheses which refers to the organizational culture, financing, founding of young companies and their impact on the labor market and social attitudes to work. Theoretical models used in the analysis are based on classical theories (eg. Max Weber) and contemporary concepts (such as Jeremy Rifkin).

## **A Cultural “Glass Ceiling”? The Moral Economy of Gender (In-)Equality in Corporate Board Membership across Europe**

**Sebastian Koos**, Universität Mannheim | [skoos@sowi.uni-mannheim.de](mailto:skoos@sowi.uni-mannheim.de)

Women are highly underrepresented in positions of economic responsibility in European companies. This gender imbalance has sparked much research devoted to the mechanisms that keep women from reaching top management positions. Studies have focused on individual traits, firm and board characteristics as well as industry and regulatory environments. While some research has started to address cultural explanations shared beliefs and norms of economic gender (in-)equality have not yet been studied systematically. However, cultural aspects seem critical as Europeans' beliefs and attitudes potentially constitute a cultural “glass-ceiling” for women's career mobility. Shared beliefs reflect a moral economy of economic gender (in-)equality that might help to reproduce structures of economic power. Therefore I first analyse how attitudes towards economic gender equality differ across Europe

and second how these different moral economies can be explained. Using data from a recent Eurobarometer survey (2009) I reconstruct national moral economies of gender (in-)equality by focusing on the reasons European citizens provide for women's lower likelihood to reach positions of economic responsibility. Here I distinguish between ascription to individual reasons (lack of interest or qualification) and external reasons (discrimination, family responsibilities) for gender inequality. European societies differ strongly in the extent to which reasons are ascribed to individual traits and external conditions. Drawing on modernization theory, cultural and institutional approaches this study seeks to explain the variation in these reasons provided by citizens. In a final step I analyse how the different moral economies impact citizens' preference

## **How the Firm Became Consultable – Constructing Governability in the Field of Management**

**Christian Schmidt-Wellenburg**, University of Potsdam | [cschmidt@uni-potsdam.de](mailto:cschmidt@uni-potsdam.de)

The firm has not always been consultable, and

it has not always been consultable in the same

way. Research from institutional perspectives has undertaken thorough investigations into the development of consulting and has produced valuable insights, but remained rather vague on actual change processes that increase the need for consulting and open up the realm of senior management and strategic decision making for external advice. A discursive perspective can offer complementary insights here. The urge of consultants to engage in new areas of expertise and advice is channelled not only by external institutional changes but also by the beliefs, ideas and concepts about the firm and its good governance that prevail at a certain time and structure the imagination of agencies in the field. At the same time, it becomes obvious that the urge of management consultants to expand their areas of expertise drives them into discursive struggles over

meaning and leads to their active engagement in the creation of management knowledge. An analysis of the discursive changes management underwent should take into account both the changes affecting the ability of agents to participate in the discursive praxis and changes in content. The paper draws on theoretical and methodological insights offered by Bourdieus field analysis and Foucault take on discourse and governmentality. I will start by outlining the field of management and its discursive practices and precede by mapping the discursive changes that management underwent in the second half of the 20th century. In the end, I will consider management consulting as dispositif that creates and maintains the conditions in which firms can be managed along the lines of a neoliberal idea.

## **Modelling of the Firms' Behavior at the Labour Market, Educational Services and R&D Market under the Social and Economic Risks**

**Efim S. Fidrya**, Immanuel Kant Baltic Federal University | [efim.fidrya@gmail.com](mailto:efim.fidrya@gmail.com)

This paper is devoted to the problem of modelling of the firms' behavior under various social and economic risks. The growth of the professional level of the employees at the firms, development and introduction of organizational, technological and market innovations is crucial for the development of the private sector and regional development in general. However, in the real social and economic environment there are a lot of factors influencing the perception, dispositions and practices of the firms, and thereby constituting very complex configuration of opportunities and risks. It is necessary to understand the mechanisms determining the firms' behavior in order to forecast some tendencies of social and economic processes in the region and to develop an adequate economic policies. There were 650 firms (as SME and large companies) in various economic

sectors examined during the survey. Three main groups of variables were measured: - economic characteristics (firm's age, economic sector, market share, number of permanent employees); - practices (consumption of the educational services, labor market activity, research requests); - risk perception (estimated probability of the undesired events, most dangerous threats and important problems). There were multiple regression and multiple correspondence analysis used as the methods of the data analysis. The main results of this study are: - model of perception of risks, threats and opportunities were developed; - models of firms' behavior at the labour market, educational services and R&D market under various risks were developed; - main classes of the firms classified by their practices and dispositions were marked out and described.

## **To Last in Time in Spite of the Crisis. A Case Study about a Long-Lived Firm of the Automotive Industry and Engine Manufacturers**

Lia Tirabeni, University of Torino | [lia.tirabeni@unito.it](mailto:lia.tirabeni@unito.it)

Economical crisis involves every parts of the society, but specially entrepreneurship contest of a Country is involved in this current process of change. If the possibility to survive over the years for most of the firms is still more difficult than in the past for the economical crisis, the question is: which are the firms that still resist over the years in spite of the crisis? A success model can be supposed? Why some firms die and others become century-old companies? With the presentation of this case study, my aim is to show how a long-lived firm could be successful from year to year in a sector which is really in crisis: the automotive industry. By

showing these good practices regarding both organizational change and process and product's innovation, I intend to look at some possible good practices for the others firms which are now in a state of crisis. My case study is about a large firm of the automotive industry operating in the Turin's area. The topics are the organizational change, the process and product's innovation and, then, the transition of the entrepreneurial power between generations. My approach refers to the symbolical and cultural studies in organizations

## RN10 - Sociology of Education

### 01RN10 - Crisis and Education

Chair(s): Vasiliki Kantzara (Panteion University of Social and Political Sciences)

#### Successful Socioeducational Actions in Contexts of Poverty

Carmen Elboj, University of Zaragoza | [celboj@unizar.es](mailto:celboj@unizar.es)

Juan Sebastián Fernández-Prados, University of Almería | [jsprados@ual.es](mailto:jsprados@ual.es)

Gisela Redondo, University of Barcelona | [gisela.redondo.sama@gmail.com](mailto:gisela.redondo.sama@gmail.com)

The Eurobarometer survey on poverty and social exclusion in 2010 shows that 17% of the European Union population live below the poverty threshold. The Member States are concerned about the growing inequalities in their territories, especially after the recent economic recession, and the crisis has also challenged the effectiveness of previous traditional anti-poverty measures. Taking into account that promoting proper access to education and ensuring successful academic results is a way to combat social exclusion, this paper presents successful socioeducational actions that demonstrates how to overcome resistances in education. The implementation of successful socioeducational actions is being

done in the School La Paz in La Milagrosa (Albacete), which is the poorest neighborhood of Spain. The measures that have been taken demonstrate how to reverse the growing trend of failure, absenteeism and conflict. Research on successful socioeducational actions for the overcoming of poverty is framed within the National Plan of Scientific Research, Development and Technological Research 2008-2011 of the Ministry of Economy and Competitiveness of Spain and has as main objective to study the successful socioeducational actions that can be transferable to other contexts contributing to overcome poverty in communities and school failure.

#### Long-Term and Short-Term Cultural Factors Affecting Education and the Present European Crises

Sølve Sandaker, County Governor of Oslo and Akershus | [ssossa@runbox.no](mailto:ssossa@runbox.no)

Long-term and short-term cultural factors affecting education and the present European crises Background In the present economic crisis situation in large parts of Europe, the education system in many countries is only to a limited extent contributing to the welfare of the country in which it is a part, since many of those who have benefited from education are not in the domestic labor market any more. The unemployed can never the less use

general skills from school for personal good and sometimes also for common benefits outside wage labor. Ideas, explanations and sources In what way can this situation be traced back to other than specific economically related circumstances? We are thinking of such factors as the cultural situation and the content of education (in addition to work related skills): the degree of unity fostered and felt within local communities and the sense of

solidarity and of morality in the specific nation, and in larger regional units and the world society. So we are interested in the social embeddedness of what happens in relation to an economic crisis. The norms and values encircling the situation are probably crucial to understand both how the present problems have occurred and in what way they best can be approached. For this purpose we will examine and compare some writers and the

interpretation of their writings concerning long-term and short-term cultural and educational challenges related to the present European crises. Those are Rousseau, Kant, von Kleist, Durkheim, Weil and Foucault. What can the diversity and coincidence of the thinking of these writers learn us about solutions to the present crises? Literature selection might be added if space is available

## **Remain in Employment in Economic Hard Times: A Question of Individual's Capabilities or Supportive National Contexts?**

**Ylva Wallinder**, University of Gothenburg | [ylva.wallinder@socav.gu.se](mailto:ylva.wallinder@socav.gu.se)

**Tomas Berglund**, University of Gothenburg | [tomas.berglund@socav.gu.se](mailto:tomas.berglund@socav.gu.se)

During the last decades, the concept of 'employability' has frequently been discussed in policy contexts. Employability refers to the individuals' ability to remain attractive in the labour market and stresses the individuals' human capital. However, the concept is said to overly emphasize the supply side of the labour market, focusing on the individual's responsibility to be employable. Further, it has been stated that the concept neglects more general political responsibilities of both increasing the demand for labour and facilitating the development of human capital through training and education opportunities. Individuals' perceived employability can be affected by different institutional and structural factors on a national level, such as the educational system, active labour market policies and the unemployment level. By focusing on these general factors 'employment

security' becomes a relevant concept. The discussion on flexicurity holds that decreased job security can be compensated by general factors improving the possibility to remain in employment but not necessarily at the same employer. To enhance individuals' chances of finding a job educational and life-long learning policies and active labour market measures are believed to be important factors, beside general demand in the labour market. In this paper, the distinction between employability and employment security will guide our research approach. Through multi-level modelling, we will analyse the significance of individual and contextual factors on employees' perception of their chances in the labour market. The data used is European Social Survey (ESS 2010), including data from 24 countries.

## **The Impact of the Crisis in Education: Financial Constraints or Ideological Options?**

**João Sebatião**, ISCTE - University Institute of Lisbon | [joaoseb@sapo.pt](mailto:joaoseb@sapo.pt)

**Luís Capucha**, ISCTE - University Institute of Lisbon | [luís.capucha@iscte.pt](mailto:luís.capucha@iscte.pt)

The crisis declared in 2008 has heavily affected countries like Portugal which, in recent

decades, have made a very significant effort to overcome serious problems in education. In

the Portuguese case, the educational reforms implemented in the last decade have produced clear results in all areas: levels of youth and adult education, literacy and math/science levels measured by PISA and other international studies, decline in rates of early school-leavers and improving students' school performance, school modernization and universalization of access to ICT, increasing educational opportunities to disadvantaged social groups. The increasing effects of the financial crisis and the electoral turnaround in 2011, with the arrival of a neoliberal government, changed public policy's options which became the control of the public debt and the balance of the banking system. The education sector was heavily affected, with its

weight on the State budget falling from 5.7% to 3.9% of GDP. Under the cover of the argument of inefficient and of poor quality outputs in education, the Government began a program of dismantling the national qualifications system, imposing the reorientation of the role of the State to minimal public intervention scenarios and a structural change of the educational policies towards the dualization and privatization. We will analyze in this communication the way budgetary arguments are used to impose ideologically-driven policies defended a long time before any budgetary crisis emerged, comparing for that educational decisions with trends in educational indicators

## The University as 'Axis Mundi' – and More so in [a] Crisis

Jeannie C. A. Holstein, University of Nottingham | [lixjh@nottingham.ac.uk](mailto:lixjh@nottingham.ac.uk)

In the UK, there is an argument that some universities are 'having a relatively good crisis', in comparison with other civic institutions and each other. There is a cash neutral research budget and a research policy, which has a long-established and understood trajectory. It is also possible to reflect that this crisis is as profound as earlier ones, from which universities emerged blinking into the light, resilient and intact (Tight, 2009). However, the university has changed and faces change, and is subject to policy that narrates this change. A monolithic consensus to policy in university strategy is imagined, rather than empirically expressed. This paper addresses this gap, through a case study of two civic universities in the UK and consideration of research policy

over a 20-year period. It asks how the narrative of the university is used to legitimate 'strategy' and 'change'. It is located within wider debates on policy and strategy as a socially constructed reality, as negotiated meanings and as an inter-textual phenomenon, and addresses a wider gap in the understanding of policy as narrative (Brown et al. 2009). The study surfaces a powerful and shared narrative device of the university as 'axis mundi', within a wider 'mappa mundi', which is concerned with creating order. This narrative does stabilize legitimacy recursively (Vaara and Mohin, 2010). However, the organization has a different, but hidden 'mappa mundi', whereby policy is loosely coupled from the order creation, and more especially 'in crisis'.

## 02RN10 - Crisis, Resistances and Solidarity in Education

Chair(s): João Sebastião (University Institute of Lisbon)

### Crisis and Solidarity in Education in Greece

Vasiliki Kantzara, Panteion University of Social and Political Sciences, Athens | [v.kantzara@gmail.com](mailto:v.kantzara@gmail.com)

Currently, Greece faces a crisis that affects the majority of the people. It is well known, that this crisis is met by the Government by adopting an 'austerity' policy at all levels, which includes extensive cuts in state expenses. Education is been affected in many ways, direct and indirect, visible and invisible, as well as in short and long terms. For example, only in Athens, media reports reveal that 2000 pupils go unfed to school, somewhere else they faint in class; and as the winter approached some schools had to close their door for lack of heating petrol oil. In 2011, students lacked school books and in 2012 teachers as well. Parallel to this, highly educated individuals flee the country, a phenomenon described as a form of 'brain drain'. In the meantime, a solidarity movement

has grown as a response to the malaise caused by the crisis. Organisations and groups are set up by local authorities, the church, political parties, NGO's and individuals (not included in the previous categories). Formal and informal networks attempt to provide immediate help and relief in the fields of subsistence (food, clothes), health, and education (providing lessons at no cost), in the context of formal and non-formal education. In this paper, I would like to deal with the questions: How is education affected by the crisis? What forms of solidarity have been developed? What are the long term consequences for education and society as a whole? Based on a reading of Durkheim's approach to solidarity, the analysis goes further taking into consideration more modern conceptions of this notion.

### Resistance, Identity and Micro-Politics in Vocational Higher Education

Goran M Puaca, University of Borås / University of Gothenburg | [goran.puaca@hb.se](mailto:goran.puaca@hb.se)

The purpose of the present article is to examine how expectations of education are shaped in an educational institution. When doing this it investigates students' identity work in relation to micro-political negotiations in a vocationally oriented higher education program. Two questions are addressed specifically. These are respectively how personal projects are bounded to the specific group and institutional conditions and what role surrounding social circumstances are given when choices and decisions are rationalised. When answering these questions

the article identifies distinctive reflexive and strategic processes amongst students as their means of creating an educational identity. These are shown to often be characterized by a form of resistance based on a self-awareness of social position and a capability of forming relatively autonomous personal projects in relation to social powers. The possible success and sustainability of the students' education identity processes seem to significantly rest on collective and institutional support within the education program.

## Building Resistance, Constructing Change: Teachers as Intellectual Actors in Policy Arenas

Rhiannon M Maton, University of Pennsylvania | [rmaton@gse.upenn.edu](mailto:rmaton@gse.upenn.edu)

Internationally, teachers' work is increasingly facing restriction and standardization. In a growing global trend, education policies seek to govern local practice through implementing standardized national curriculum, standardized national and international testing, and prescribed curricular materials. Policy borrowing is increasingly popular – education systems pick and choose from a host of possible policies, aligning regional education policy with national and international contexts. But even in this era of increasing standardization, there are pockets of resistance. Teachers advocate for the freedom to respond to students' needs, and assert their voices in multiple arenas in varied creative ways. Few studies look at teachers as intellectual actors capable of designing and implementing school change initiatives. In this

study, I examine the roles and experiences of six Canadian teachers from a single urban district active in local curriculum and program design. Data reveals that these teachers innovate in order to better meet the needs of their students, and to drive local policy and program design initiatives. The teachers draw on social justice resources, construct new critical models of pedagogy and programming, and consider themselves intellectual actors capable of designing and constructing quality educational programs for their students. Through informal and formal organizing, the teachers work both autonomously and collaboratively to effect broader educational change in the school district and province. The paper will refer to data derived from interviews with participants.

## Are We Running Out of Avant-garde Intellectuals Capable of Counteracting the Crisis?

Ernest J.-P. Albert, University of Zurich | [albert@soziologie.uzh.ch](mailto:albert@soziologie.uzh.ch)

Efforts to expand tertiary education, to ensure equal access to it and to enhance the quality of education as well as its international compatibility have been with us for decades now. Obviously, these efforts have not been a sufficient remedy against social and economic crisis. The proposed contribution argues that the group of the higher educated should not only be sufficiently large, socially diverse and in possession of technical skills in order to effectively counteract the present crisis. It should also possess the mental propensities enabling such a role. In classical sociology, the ability to relate to some form of utopia, to criticize present conditions and to support progressive political action has been attributed to the "free-floating" type of intellectual by Karl Mannheim. Based on representative time

series data for Switzerland, it can be shown that the subjective orientation patterns of the higher educated have developed away from Mannheim's ideal type in recent decades. The education's "free-floating" character has grown weaker as its link to the economic necessity of work has tightened. The positive correlation between educational achievement and idealistic, pro-innovation attitudes has weakened. Even as we disregard questions of idealism, we can observe that the most educated Swiss have not taken an avant-garde role in the context of recent value trends. An avant-garde mentality which is probably necessary to counteract crisis on structural levels does not seem to be a universal attribute of the higher educated. Instead, this group may need to rediscover the mentality in question,

after it has faced high demands for flexibility and thus for acceptance of the present

structures over the last decades.

## 03RN10 - Discourses on Education

Chair(s): Bernadette Brereton (Dundalk Institute of Technology)

### Themes Structuring Education Discourses: Analysis of Classroom Interaction in Latvia

Mikelis Grivins, University of Latvia | [mikelis.grivins@gmail.com](mailto:mikelis.grivins@gmail.com)

Education is an institution that can be easily described using Foucauldian term 'technologization': it is usually highly regulated with wide range of supporting institutions that both provide and maintain knowledge. Therefore, all the characteristics of education discourse are locked deeply within the official knowledge. In order to promote changes in education discourse one needs to address this technologized form of knowledge. This presentation shows how various groups of pupils and teachers tend to reinterpret themes structuring education discourse. Furthermore, I analyze how such reinterpretation is a part of struggle for changes in classroom power relations. For that reason I distinguish three themes that are characteristic and important in

education discourses: pedagogy, development and control. These themes serve as central points for representation of various education functions and involved agents. Each of the mentioned education discourse themes characterizes a direction of interpretation that is important for describing education system's efficiency, significance and structure. All of the themes are characterized by internal power relations and mutual connections. My analysis is based on 34 in-depth interviews conducted in Latvia's primary schools. Interviews have been conducted in 8 schools. In every school one math or language teacher and several of his students have been interviewed. For data analysis Critical Discourse analysis was used.

### On Mobilizing and Optimizing. Equality and Excellence as Hegemonic Discourses of the German Educational System

Tobias Peter, University of Freiburg | [tobias.peter@soziologie.uni-freiburg.de](mailto:tobias.peter@soziologie.uni-freiburg.de)

Looking at the conflictual constitution of educational systems by equality and excellence, this paper examines the discursive formation of two political rationalities in the contemporary German educational system that are directly opposed. While early childhood and primary education discourses are dominated by a terminology of equity (inclusive and aimed at a minimum of competences breadthwise), tertiary education institutions such as

universities are described with a terminology of excellence that has become a reference point for political interventions and institutional reform processes (exclusive and aimed at top performance). Taking up the theoretical position of hegemony-theory, governmentality studies and system theory, the paper analyzes the rules of justification these hegemonic discourses refer to by employing a discourse analysis of strategic, conceptional, and

institutional texts of the German education policy discourse between 2003 and 2010. Based on empirical material of the Hamburger Primarschulreform (primary school reform in Hamburg) and the Elitenetzwerk Bayern (network of elite study programs in Bavaria) the paper puts forth the thesis that mobilizing and optimizing represent the common

principles of equality and excellence as rationalities of the maximal mobilization of educational resources. They enforce strategies of fitness, functionalize technologies of individual and intensive learning as specific practices of the educational system, and organize processes of inclusion and exclusion by subjectifying talent.

## Prospects of Russian Education – Contradictions of Discourses at Aifferent Levels

**Galina Iosifovna Saganenko**, The Russian Academy of Sciences | [saganenko.selina@yandex.ru](mailto:saganenko.selina@yandex.ru)

This paper is about changes of basic attitudes of Russian education during the last 10 years in some comparative coordinates. (1) Discourse change in Russian education since 2003, when Russia signed the Bologna declaration and began to change key concepts, new qualification of urgent problems, etc. (2) Next change 2008 - the Russian government developed Concept of social and economic development of the Russian Federation - 2020. The Russian economy suddenly was transformed into «economy of knowledge», new status is given to education among leading factors of development. (3) 5-6-year formats of Russian training is cut on 2 independent parts – a bachelor degree and a magistracy. Advantages of Russian education are taken off. (4) In 2010-2012 - formal quality management system (producing from ISO-9000) erased in universities. Their rules and requirements are

regardless to definite universities, specialties, modern content of educational disciplines. (5) In surveys IT-students have rather different notions from quality managers. Their notions have a good portion of criticism, they do not satisfy by the absence of proper courses and good practice, criticism of teaching. superfluous number of humanitarian courses. (7) In 2010 problems of technological backlog of Russia prefer to decide by grand initiatives - Skolkovo, Megaprojects. Education also would receive some additional preferences. (8) Final accent from World Economic Forum 2013 in Davos. Three negative scenarios for Russian economy were calculated. George Soros added specification of Russian prospects – «To investors better to refrain from investments into the Russian economy. It is collapsing economy which Putin conducts in the erroneous direction»

## Teaching Democratic Citizenship in Times of New Tensions and Possibilities of Democratization in Turkey's Formal Education

**Kenan Cayir**, Istanbul Bilgi University | [kenan.cayir@bilgi.edu.tr](mailto:kenan.cayir@bilgi.edu.tr)

This paper explores the way 'democratic citizenship' is framed and presented in Turkey's new schoolbooks, with a special focus on the new Citizenship and Democracy Education course. Turkey has been undergoing major transformations for the last decade.

Non-Turkish and non-Muslim groups have increasingly been raising their voices against discrimination and claiming their rights for full citizenship. These claims create new tensions at political and social level since they require a revision of historically difference-blind Turkish

citizenship regime. This process, on the other hand, includes new possibilities for democratization because Turkey is trying to develop a new constitution, negotiating with Kurdish groups to solve armed-conflict and introducing a new elective course on Kurdish. However a close discursive analysis of the new Citizenship and Democracy Education demonstrates that it can hardly contribute to developing a notion of democratic and inclusive citizenship. The paper argues that there is a huge discrepancy between socio-political developments and new educational materials

since citizenship is still framed with a difference-blind and ethno-nationalist lines. This combines with the presentation of Turkey as a new growing force due to its economic success while Europe is tackling with economic crisis. Turkey's increasing self-confidence is reflected in the new Citizenship textbook with poems pointing out that 'we are now doing it well'. The paper deconstructs the problems of the notion of 'democratic citizenship' in textbooks and offers some ways for de-essentializing and de-nationalizing Turkish citizenship.

## Educating to Foster Tolerance and Community Cohesion

Wendy A Booth, University of Wales, Newport | [wendy.booth@newport.ac.uk](mailto:wendy.booth@newport.ac.uk)

Issues of multiculturalism, racism, tolerance, nationalism and community cohesion are of particular relevance in today's social and political climate. An inter-disciplinary approach is suggested as the way forward, including taking evidence from social psychology and sociological principles, and incorporating them into the Citizenship curriculum in schools. Teaching secondary school pupils about the notions of conformism and in-groups and out-groups, including the impact on the human psyche, as well as the real social issues which face many marginalised communities, may help to foster a generation which is naturally more tolerant. Fostering tolerance has become yet more essential due to the economic crisis creating an often volatile situation, with an increased likelihood of scapegoating. In addition,

fostering tolerance is a two way process, for just as the 'indigenous' European population has to learn how to live alongside various ethnic minorities, so too must these ethnic minorities integrate and work alongside the wider population in Europe. The education system should be the starting point for this. This paper will examine the aforementioned issues and suggest ways in which the curriculum can be adapted to meet current needs, whilst drawing on the pluralist approach of, for example, Raz, along with the multi-relational approach advocated more recently by Laegaard and Cantle. It will examine how and argue why particular elements should be incorporated into the secondary school curriculum on a compulsory basis.

## a04RN10 - Higher Education I: Autonomy

Chair(s): Mieke Van Houtte (Ghent University)

### A Ruptured Inheritance? Higher Education Attainment, and Social Reproduction through Two Generations in China

Ye Liu, University College, Cork | [yliu@ucc.ie](mailto:yliu@ucc.ie)

China's rapid rise over past two decades has significance beyond the economy and geopolitics. China's debut in the 2009 PISA (the Program for International Student Assessment) showed Shanghai topping the world league in the three skills domains of Reading, Math and Science (OECD 2010). How did China progress from the chaotic Cultural Revolution period, when education experienced its darkest hour, to the current situation, when China's output of skills presents a growing challenge to the West? What has been the role of education in China's economic ascent and in the re-shaping of the social structure? This paper examines intergenerational transmission of cultural advantages amongst children growing up in the contrasting environments of the Cultural Revolution and Post-Reform China. I used Bourdieu's primary

effect of social reproduction and Boudon's secondary effect to investigate the patterns of social reproduction through two generations, namely, the first whose educational careers were in parallel with the Cultural Revolution, and the second generation born after the market reform. This research involved a survey of around 1,000 undergraduates who were enrolled in universities in two Eastern provinces in China in 2007. The survey will be designed to collect first-hand data on the cultural capital and educational careers of undergraduates and their parents, thus encompassing intergenerational transmission. This research concludes with comparing the life courses of two generations and linking the patterns of cultural reproduction from one generation to another to wider shifting macro-political circumstances.

### Political Barriers to Capabilities Approach: Higher Education and the "Bologna Process"

Davide Borrelli, University of Salento | [davide.borrelli@unisalento.it](mailto:davide.borrelli@unisalento.it)

Emiliano Bevilacqua, University of Salento | [emiliano.bevilacqua@unisalento.it](mailto:emiliano.bevilacqua@unisalento.it)

The human development approach emphasizes a course of action that promotes "capabilities" (ie, that promotes spheres of freedom) rather than the imposition of certain "functionings" (Martha Nussbaum, *Creating Capabilities. The Human Development Approach*; Amartya Sen, *Inequality Reexamined*). Our contribution starts from the observation that the global economic crisis is represented and used at various levels to disqualify the traditional view of politics as a place of dialogue and dialectical synthesis between interests and points of view in order to

accredit an idea of politics as social technology required to achieve the optimum performance, that is "the right recipe". The consequence is that the complex social problems of the contemporary world, that is "the wicked problems", are addressed and managed as "the tame problems, that is one-dimensional and without alternatives" (Horst W. G. Rittel and Melvin M. Webber, *Dilemmas in a General Theory of Planning*). This pattern of governance that promotes a particular "functioning" might seem a neutral political strategy, but in fact it

hinders people's "capabilities" and limits their freedom and choices. Our paper aims to discuss the obstacles to human development in the academic policies from the so-called Bologna Process (1999). In particular, we argue that the issues of quality and competitiveness in educational and research systems lead to focus on functioning rather

than capabilities: to assume that the educational system should aim at a particular performance (whatever this might be), leads to the undesirable consequence of conceiving quality as a matter of functioning rather than widening the range of choices and enhancing cultural diversity.

## **Nordic Fields of Higher Education. Structures and Transformations of Organization and Recruitment, 1985-2015**

**Mikael Börjesson**, Uppsala University | [mikael.borjesson@edu.uu.se](mailto:mikael.borjesson@edu.uu.se)

**Emil Bertilsson**, Uppsala University | [emil.bertilsson@edu.uu.se](mailto:emil.bertilsson@edu.uu.se)

**Tobias Dalberg**, Uppsala University | [tobias.dalberg@edu.uu.se](mailto:tobias.dalberg@edu.uu.se)

There is much evidence suggesting that a special model for higher education has developed in the Nordic countries during the second half of the twentieth century. This model is characterized by largely publicly-owned systems, which are relatively closely regulated by the state, include high levels of public funding and no or low student fees, and have strong influences from egalitarian traditions. During the last three decades higher education systems in the Nordic countries have undergone important changes. The Bologna process has been implemented, although time tables and the degrees of adjustments have varied. The number of students has increased drastically, partially by the establishment of new institutions. Internationalization has become a more integrated part of the national systems and an increased emphasis on efficiency, competition

and market orientation has been apparent. In short, the systems appear to have been transformed from cohesive and standardized systems, administered largely within the state, into more diverse and complex national and international higher education landscapes. Our project investigates what these changes mean for the traditional Nordic model of higher education by focusing on the recruitment of students. We believe that recruitment patterns offer a key to understanding the effects of restructuring in national systems of higher education, as changes in recruitment patterns over time provide us with indicators of changing valorisations of higher education programs, fields and types of study, and institutions. In our presentation we will lay out the general features of the recruitment patterns in the Swedish, Danish, Norwegian and Finnish fields of higher education.

## The impact of Higher Education on Regional and Local Socioeconomic Cohesion and Development. The case study of a Portuguese Higher Education Institution

Sandra I. G. Saúde, Polytechnic Institute of Beja | [ssaude@ipbeja.pt](mailto:ssaude@ipbeja.pt)

Sandra C.R. Lopes, Polytechnic Institute of Beja | [slopes@ipbeja.pt](mailto:slopes@ipbeja.pt)

Carlos M. Borralho, Polytechnic Institute of Beja | [cborralho@ipbeja.pt](mailto:cborralho@ipbeja.pt)

Isidro G. Féria, Polytechnic Institute of Beja | [iferia@ipbeja.pt](mailto:iferia@ipbeja.pt)

HEI as major centers of knowledge and learning were confirmed in the 90's, on the scope of the so called Knowledge- Based Society, as a kind of engine of innovation, crucial to sustain the socioeconomic competitiveness of countries and regions in the global economy. They act as partners of local governments and actors in the process of regional development, and even play a key role in what is presently conceived as 'the learning region'. The debate about the role of HEI in society is often characterised by misunderstanding, over simplifications and/or an absence of evidence. It has often been limited to arguments about the market or 'close to market' activities of higher education institutions; with a particular emphasis on research and teaching that has a direct relevance to business and industry and is

relatively easy to measure. This skews the argument, undermining the huge value of the total social benefits that the sector brings. Following these evidences, and the ones that reveal the relatively modest number of empirical studies that identify the impact of HEI in the social cohesion of the regions, we have developed an regional study which main objective was: • To measure the socioeconomic impact of a HEI, namely for the regional socioeconomic cohesion and development. The main objective of the paper that we propose to present is to explore the empirical evidences collected in the study that show the direct and indirect strategic links between higher education presence and socioeconomic dynamics of a region, based on a specific case study.

## Institutional Autonomy in European Higher Education

Ildiko Hrubos, Corvinus University, Budapest | [ildiko.hrubos@uni-corvinus.hu](mailto:ildiko.hrubos@uni-corvinus.hu)

The question of the sustainability of higher education has received emphasized attention in European higher education organizations since 2008, as a consequence of the economic crisis. Sustainability is interpreted in the following way: a guarantee, that higher education will acquire sufficient financial resources to fulfil its academic mission for the benefit of the current and subsequent generations. On the institutional level, this is primarily expressed in relation to financing. Institutional autonomy is a key factor in achieving this, since institutional missions, can be attained in a regulatory environment, which incentivises the diversification of financial

resources and the cooperation with outside stakeholders. The issue of autonomy was placed in the forefront first in the 1990s, in connection the massification of higher education. It was at this time, that the triangle model was formulated, with the assistance of which specific higher-education models can be interpreted: according to the balance of power among the three main actors – the academic oligarchy, market forces and government bureaucracy. The 2000s brought a turning point in this respect: the social role of higher education changed, its missions expended. The number of actors which command significant power, increased – the famous triangle has

become heptagon or octagon. Two large projects of the European University Association have examined the questions: the Financially Sustainable Universities and the University Autonomy in Europe projects. In the process of

these tasks an attempt was made to clarify the fundamental concepts of sustainability and autonomy, and to make them operational for an empirical study.

## **b04RN10 - Higher Education II: Successful Learning**

Chair(s): Lore van Praag (Ghent University)

### **Social Networks - an Essential Support Structure for Learners in Higher Education?**

**Bernadette C. Brereton**, Dundalk Institute of Technology | [bernadette.brereton@dkit.ie](mailto:bernadette.brereton@dkit.ie)

**Neil J. Hurley**, University College, Dublin | [neil.hurley@ucd.ie](mailto:neil.hurley@ucd.ie)

Humans are social beings who create networks of interaction that control our engagement with the world. This social support is fundamental for social integration and emotional well-being. There is a diversity of qualitatively different support networks within the student body and understanding these networks is key to understanding the student learning experience. In the context of the modern world in which social networking is more and more supported by on-line tools, we expect that support networks have further diversified due to the extent to which individuals have access to and are comfortable with the use of these tools. One category along which we might expect to observe a clear distinction in support networks is between mature learners and those who enter third-level directly from second-level. There is also a generational shift

in the way that people balance, for example, needs for privacy against the support that can be obtained from dissemination and discussion of personal matters with a wide community of on-line 'friends'. This project examines the support networks of the student body with a particular comparison between mature learners and others. A central methodology includes a role analysis that categorises the student body into groups according to the structure of their support networks. We will attempt to discover social isolation and furthermore to discover social integrators, that is, individuals, or networks of individuals, who are key to functioning support networks. We believe that these analyses will help to target early intervention mechanisms that can predict badly developed support structures and put in place remediation actions.

### **Interdisciplinarity in Higher Education. The case of Sustainable Development**

**Tobias Dalberg**, Uppsala University | [tobias.dalberg@edu.uu.se](mailto:tobias.dalberg@edu.uu.se)

**Ida Lidegran**, Uppsala University | [Ida.Lidegran@edu.uu.se](mailto:Ida.Lidegran@edu.uu.se)

Swedish higher education has expanded during the last three decades becoming increasingly complex with a greater repertoire of courses

and programs. New professional programs have been launched, and specialization has proceeded apace. One further important

component is the proliferation of multi- and transdisciplinary fields of study such as gender studies, educational sciences, and sustainable development. The latter will be in focus for this paper. Sustainable development (SD) is often presented and understood as a truly multidisciplinary field, which straddles the natural sciences, technology, humanities and the social sciences. The rise of this field of study in higher education thus provides an opportunity to study the boundaries of disciplines and the crossing of these boundaries. However, our starting point is that we need to break with the taken-for-granted notion of SD as a trans- or interdisciplinary field of study and make the linkages between subjects within SD-education our object of

study. Preliminary results points in two directions. On a general level, SD shows plenty of signs of interdisciplinarity in that it is visible in a broad range of disciplines and in different types of higher education institutions. On a more detailed level, by looking at interdisciplinary collaboration within each individual educational programme we find that SD is neither more nor less interdisciplinary than educational programmes in general, and that the level of interdisciplinary collaboration varies from discipline to discipline. Thus, interdisciplinary collaboration in the SD educational domain seems more related to disciplinary traditions rather than the domain itself.

## Learning Equals Earning? Student Understandings of Success in Britain and Singapore

Esther K. Muddiman, Cardiff University | [muddimanek@cardiff.ac.uk](mailto:muddimanek@cardiff.ac.uk)

Despite the shockwaves created by the global financial crisis and the uncertainty currently faced by university graduates, it is still widely asserted that in the context of a globalised, post-industrial knowledge economy, a university level education is an invaluable asset for securing a well-paid job. Since policies driven by human capital theory retain much of their orthodoxy, large numbers of young people across the developed world are encouraged to invest their time, money and effort into obtaining a degree qualification in return for enhanced employment prospects upon graduation. However, little is known about how economic imperatives are reflected in young peoples' approaches to learning in the context of their own 'employability'. Drawing on the findings of a comparative case-study entailing interviews with final year undergraduate students studying either

Business or Sociology, I explore these issues in relation to cultural context, socio-economic policy, and graduate employment rates in both Britain and Singapore. I outline the ways in which students' constructions of learning at university mediate conceptualisations of success, employment strategies, and broader aspirations for the future, together with assessing the claim that the commodification of university education and the increased pressure to gain competitive advantage is leading to a rise in instrumental or 'acquisitive', rather than 'inquisitive', learning. To conclude, I reflect upon how young people construct successful identities in relation to education, work and affluence, and evaluate the discursive spaces available to students for critical engagement with broader societal issues beyond their immediate employment.

## A Nordic Model of Higher Education?

Agnete Vabø, NIFU | [agnete@nifu.no](mailto:agnete@nifu.no)

A Nordic model of higher education? Increasing diversification between mass and elite higher education, in addition to the rising unemployment among young people, challenges the belief that the welfare-state education systems in the Nordic countries actually helps to achieve social cohesion and economic stability. This issue raises the question as to whether there is a Nordic model of higher education. Despite many commonalities between the countries, the history and tradition of the national education systems of the Nordic countries vary considerably and these differences shape the structures and policies of each country in

different ways. The aim of this paper is to obtain a systematic and empirical understanding of the Nordic model of education by mapping the types of institutions and exploring the degrees of access to education. It is argued that the sources of influence on the education systems are key in shaping the systems. In this paper, emphasis will be placed on enhancing our understanding of the interplay between higher education and social structures such as gender, class, labor market and welfare system characteristics, etc. The analysis presented is based on a synthesis of existing research, literature, reports, interviews, and other documents.

## 05RN10 - Education in Italy

Chair(s): Maddalena Colombo (Università Cattolica del Sacro Cuore)

### The Effects of Italian Students' Engagement to OCSE-PISA 2009 on their Performances

Michela Freddano, University of Genova | [michela.freddano@unige.it](mailto:michela.freddano@unige.it)

The research examines the grade of participation to the International Program for Student Assessment (PISA) by the Organisation for Economic Co-operation and Development (OECD) among Italian students. PISA is an international study that was launched by the OECD in 1997 with the aim to evaluate education systems worldwide every three years by assessing 15-year-olds' competencies in the key subjects: reading, mathematics and science. Particularly, reading literacy is the main domain of PISA 2009. In Italy, results from PISA 2009 underline a great variance among students' performances between geographical areas and between different types of school; results are also affected by the

social, economic and cultural background of students. The present paper focuses on the effects of students' motivation and participation to PISA testing on their achievement. Starting from the idea that motivation can improve students' success and limit the effects of their social, cultural and economic status, the hypothesis is the existence of a positive significant relationship among students' performances in reading literacy and their grade of engagement in doing the test. From the methodological point of view the analysis of PISA 2009 data was developed focusing on Italy and comparing results between geographical sub-areas, regions and type of schools. An index of students'

engagement to PISA test was realized. The analysis were done by using the software SPSS (Statistical Package for Social Science) and HLM (Hierarchical Linear Model). Results

shows the estimations of the effect of students' engagement to PISA test on their performances.

## What is the Influence of Social Origins on Educational Opportunities in Italy? Primary and Secondary Effects on Upper Secondary Education Transitions

**Anna Ressa**, University of Trento | [anna.ressa@unitn.it](mailto:anna.ressa@unitn.it)

**Davide Azzolini**, University of Trento | [davide.azzolini@unitn.it](mailto:davide.azzolini@unitn.it)

Social origins strongly affect individuals' chances of attending general and academic oriented schools in upper secondary education in Italy. What is still unclear, though, is the extent to which these social differences are due to the differences in previous educational outcomes ("primary effects") rather than being attributable to the variability between social classes in perceptions of risks, costs and benefits related to the different educational options ("secondary effects"). Whereas the contributions of these two effects have been thoroughly investigated in several Center-North European countries, this topic has been largely neglected in Italy thus far, with the only exception of the work of Contini and colleagues (2011; 2013). We update and extend these results by exploiting a unique administrative and longitudinal dataset based on an entire

student cohort who enrolled in upper secondary education in the province of Trento in 2010/11. Our results confirm that secondary effects play an overwhelmingly stronger role as compared with primary effects, although female students show weaker secondary effects than their male counterparts. But we also add some novel results to the literature. First, we focus not only on transitions to the general track but also to training courses and find that secondary effects are even stronger than when considering the general track. Second, we proxy social origins using not only parental education but also social class, finding that the use of the former leads to a slight underestimation of secondary effects. Third, we examine interactions between the grade obtained in the lower secondary education exit exam and social origins.

## Immigrant Families Interactions with the Schools. Some Evidence from an Italian Research

**Maria Perino**, Università del Piemonte Orientale "Amedeo Avogadro" | [maria.perino@sp.unipmn.it](mailto:maria.perino@sp.unipmn.it)

**Enrico Allasino**, Istituto di ricerche economico sociali (Ires) | [allasino@ires.piemonte.it](mailto:allasino@ires.piemonte.it)

The paper examines the ability of immigrant families to interact with Italian schools, seeing this as a fundamental process of class formation. The idea is that there are specificities due to being migrants, even apart from the "cultural" specificities usually assumed. The paper will draw on material from the ongoing research project Second

Generations: Migration Processes and Mechanisms of Integration among Foreigners and Italians (1950-2010) which shows that parents and pupils have very incomplete and inadequate information of the Italian school system and of local schools. This makes information and educational advice and orientation crucial questions in the educational

trajectories of children of immigrants and in the creation of class inequalities. Linguistic competences are fundamental in the ability to negotiate the school system. So it is important that the language specificity of children of migrants are currently under-estimated in Italy, and school teachers and counselors insufficiently equipped to distinguish between

the various forms of competence required for academic functioning. Interviews gathered during the research also illustrate the micro mechanisms shaping school choices. We believe these micro-mechanisms influencing choices and strategies are as important as structural constraints in reproducing inequalities.

## Family Background and Educational Paths of Italians Graduates

Loris Vergolini, Bruno Kessler Foundation, Trento | [vergolini@fbk.eu](mailto:vergolini@fbk.eu)

Eleonora Vlach, University of Trento | [eleonora.vlach@unitn.it](mailto:eleonora.vlach@unitn.it)

This paper analyses social inequalities in the horizontal dimension of education in Italy. More precisely we are interested in the influence of family background in choosing a field of study both at secondary and tertiary level of education. Trying to overcome the limitation of the traditional sequential model, we provide a typology of educational paths based on two axis: the prestige of the choice of the high-school track (academic or vocational), and the remuneration on labour market of the university fields of study (high or low). The ranking of the latter is build up using their labour marked returns in terms of monthly net income, as derived by the Italian Labour Force Survey. We identify four paths: academic-high; academic-low; vocational-high; vocational-low. We investigate the presence of social inequalities on educational path using data

from the Istat "Survey on the transition to work of University graduates" regarding waves of university graduates respectively in 1998, 2001 and 2004. Results obtained exploiting multinomial logistic regressions, confirm rational action theory prediction. It emerges that family background, in terms of both parental social class and education, exerts a positive and significant effect on the choice of the most advantageous educational path. Moreover, we find that students from lower socio-economic background show a higher probability to choose the vocational-high path. This unexpected result suggest that the choice of a vocational course at high-school seems to protects less wealthy students from their potential failure is they chose one of the most lucrative and risky fields at university.

## Interactions and Identities in Italian-as-a-Second-Language University Classes.

Marina Artese, Università degli Studi di Macerata | [marina.artese@unibo.it](mailto:marina.artese@unibo.it)

The central hypothesis of this contribution is that interactions and the co-construction of identities are fundamental in the field of language education for their social outcomes and benefits. First of all, a shared symbolic universe is negotiated by language interaction, and flows through identities' representations in the communication exchanges of our study context. Identities are negotiated in the verbal

and non-verbal interactions. During the socio-cultural identity negotiation, the social relationship can be, therefore, interculturally redefined. Such redefinition implies a social relationship which have symbolic, hence cultural, significance and also represent the interculturality which will be put into practice in the social interactions outside the classroom. Such redefinitions, negotiations

and bonds start a process where the university student – the learner – starts to open towards the Other in and outside the classroom, in an intercultural asset which will become part of the student's experiential life. Ultimately, the cultural features of action and interaction within the classroom situation are structurally determined, but variations and re-positionings are conceived and actualized during the classroom intercultural interactions. Such

changes might spin off changes in society. I will illustrate how language and culture cannot be considered separately when approaching to understanding the contents of the second language presential education. To this end, in the framework of the discourse analysis, data from a corpus collected in two university second language classroom in Italy for a PhD project will be presented and analyzed.

## 06RN10 - Curriculum and Educational Innovation

Chair(s): Mieke van Houtte (Ghent University)

### **Improving Science Education in Europe. An Empirical Comparative Study on Factors that Influence the Implementation of Inquiry-Based Science Education in the Czech Republic, Turkey, Sweden and Israel.**

**Jana Heinz**, TUM School of Education, Technische Universität München | [jana.heinz@tum.de](mailto:jana.heinz@tum.de)

The improvement of science education in Europe has become a strategy to strengthen Europe's economic viability, with more adolescents choosing a career in science, mathematics and technical occupations. The majority of the initiated programmes aim at disseminating inquiry-based science teaching and learning approaches (IBSE). The data of this study originates from the EU-Project S-TEAM (2009-2012) that focused on the dissemination of IBSE on a large scale in Europe. To find out, if and how IBSE can be implemented in differing national education systems, questionnaires (N 20) from participants of national workshops that S-TEAM organized 2011 in Turkey, Israel, Sweden and the Czech Republic were collected. The following research questions are addressed: 1) Which differences and similarities between the different educational systems can be found? 2)

How do they influence the implementation of IBSE into science education? Quantitative analyses with SPSS (Anova tests) were conducted to reveal significant differences between the mean values of each country versus the entire group. Results show that the country-specific education infrastructure and the cultural teaching practices create differing prerequisites, with a number of factors influencing the implementation of IBSE into science education: (1) the need to improve existing ways of science education, (2) the support of these initiatives by educational policy, (3) the degree of autonomy/centralization of organizations in the area of teacher education, schools and teachers, (4) the status of the teacher profession and (5) the structure of the countries' teacher professional development programmes.

## From Venezuela to Portugal: The impacts of El Sistema in Portuguese Schools

**João Teixeira Lopes**, Arts and Humanities Faculty of Oporto University | [jmteixeiralopes@gmail.com](mailto:jmteixeiralopes@gmail.com)

This communication is part of the preliminary results of an interdisciplinary project (associating sociology of education and culture with musical and artistic education studies) funded by the Portuguese Foundation for science and technology that aims to analyse the impacts of the implementation of the socio-educational teaching method of music El Sistema, Venezuela, in Portuguese schools located in educational priority intervention areas, marked by cumulative and multidimensional processes of social exclusion. It will discuss, from ethnographic field work, a survey on teachers of music and also from the development of students

sociological portraits (Bernard Lahire) whether there is a genuine effort to translate the model to Portuguese reality and if that effort focuses on increasing academic and social integration (Vincent Tinto) of students, the transfer between aesthetic, ethical and political dispositions and the creation of new patterns of social relations between the school and the surrounding communities. Search will still work out whether such a project is confined to a mere social assistance and public education on culture or if it has deeper consequences in the modification of pedagogical atmospheres and of institutional ethos of the schools involved.

## Multilingual School Population: a Lever for Linguistically Innovative Classrooms?

**Anouk K M Van Der Wildt**, Ghent University | [anouk.vanderwildt@ugent.be](mailto:anouk.vanderwildt@ugent.be)

**Mieke Van Houtte**, Ghent University | [Mieke.VanHoutte@ugent.be](mailto:Mieke.VanHoutte@ugent.be)

**Piet Van Avermaet**, Ghent University | [piet.vanavermaet@ugent.be](mailto:piet.vanavermaet@ugent.be)

In Flanders a perfect knowledge of the Dutch standard language is seen as necessary to be successful in schools. While children bring a variety of home languages to school, teachers often do not know how to manage the multilingual repertoires of their pupils in mainstream classrooms. This often leads to a Dutch-only policy in schools. The empiric model presented intertwines sociolinguistics and school effects research, using insights from both fields. Sociolinguistic research shows that school culture regarding multilingualism can have an impact on pupils' well-being. As language is part of pupils' identity, they may feel uncomfortable or demotivated when the use of their mother tongue is pointed out as the cause of lower school success. A school culture, however, that embraces and exploits the multilingual reality may cause pupils to perform and feel better, as

they are given the possibility to use their foreknowledge for learning (Cummins, 2001). School effects research has focused on teachability expectations teachers hold of pupils (Becker, 1952), suggesting multilingualism as an important factor in shaping those expectations (Agirdag, Van Avermaet, & Van Houtte, 2013). This paper focuses on how the linguistic diversity in a school motivates teachers for creative approaches to manage children's multilingual repertoires and on how it inspires teachability expectations. Further on it reports on the impact that managing linguistic diversity has on pupils' cognitive and non-cognitive (e.g. school belonging and feelings of futility) outcomes. The data analyzed in this multilevel model originate from a survey in 67 primary schools in Flanders, in which both teachers and 4th grade pupils participated.

## The Transition to Estonian as the Language of Instruction in Upper Secondary Schools: The Readiness of Pupils and Teachers in Estonia

Anu Masso, University of Tartu | [anu.masso@ut.ee](mailto:anu.masso@ut.ee)

Maie Soll, University of Tartu | [Maie.Soll@hm.ee](mailto:Maie.Soll@hm.ee)

The present paper concentrates on analysing the change of instruction language in formerly Russian-medium upper secondary schools in Estonia. As a theoretical basis, the social and communication geographical approach to education change is used. The empirical basis is representative surveys conducted in 2009 among pupils (n=1026) and teachers (n=548) at Russian-medium schools in Estonia. The paper uses multilevel modelling method and aims to explain readiness for education change using two dependent variables – knowledge of the Estonian language and perception of the transition to Estonian-language instruction; social-geographical contextual variables are then applied at the individual, school and regional level. Analysis shows the dominance of individual-level characteristics over contextual features. Between the two main

groups primarily involved with the transition to instruction in the state language – teachers and pupils – different levels of readiness can be expressed. When the linguistic readiness for the education change can be estimated as satisfactory, then attitudinal readiness for transition to Estonian-language instruction is rather modest. Analysis showed that the shortcoming of the single regression model in comparison to the multilevel model would lead to underestimation of the impact of some school-level contextual effects, foremost the effect of teachers' supplementary education on pupils' attitudes and language proficiency. Such results show that apart from the instrumental focus of supplementary education, like concentrating on language proficiency, cultural and communicative aspects should be taken into consideration.

## Curricular Programs: Analysis of Perceptions of High School Teachers and Students.

Ana Paula Brito, CESPU-Instituto Superior de Ciências da Saúde-Norte | [anapaulabrito08@gmail.com](mailto:anapaulabrito08@gmail.com)

Nelson Vieira, ISMAI | [nelsonmiguelvieira@gmail.com](mailto:nelsonmiguelvieira@gmail.com)

Ana Filipa Costa, ISMAI | [afmc17@gmail.com](mailto:afmc17@gmail.com)

Pedro Magalhães, ISMAI | [pedromaga\\_10@hotmail.com](mailto:pedromaga_10@hotmail.com)

Francisco Silva, ISMAI | [fs37122@gmail.com](mailto:fs37122@gmail.com)

**Introduction:** The curriculum is viewed as an articulated whole which has a prerequisite, the personal education of the student, making up, in all disciplines and cycles, goals that are contemplating the domains of attitudes and values, skills and abilities and of disciplinary knowledge (CEDEFOP, 2011). **Objectives:** Characterize and contextualise a global cross-Secondary Education in Portugal in 2012 according to the perceptions of Teachers /

**Students.** **Methodology:** This quantitative, exploratory and cross was structured from a survey questionnaire randomly 2178 12th grade students and 842 high school teachers, taking into account the disciplines of admission to college. The questionnaires were posted online and therefore accessible to all teachers and students nationwide. After the data collection, statistical procedures consisted of using IBM SPSS Statistics software version 19,

and  $p \leq 0.05$ . Data processing was performed using descriptive analysis, t test for comparisons and Factor Analysis. Results: There were significant differences ( $p \leq 0.05$ ) between the perceptions of different groups of respondents from different geographical areas relating to: the implementation of the specific programs of the discipline, skills and intellectual materials both formal skills that students are expected to reach, components

sense of responsibility and motivation to learn, the role of the teacher and the textbook ideal. Conclusions: Significant differences were found regarding: the implementation of specific programs of disciplines; skills material, intellectual and formal expected to reach the student; sense of responsibility and motivation to learn, the teacher's role and the ideal textbook.

## 07RN10 - Inequalities in Education I

Chair(s): João Sebastião (University Institute of Lisbon)

### Gender Gaps in PIRLS Reading Performance: How Does Parental Involvement at Home and at School Matter?

Marga Mari-Klose, University of Barcelona | [mmariklose@ub.edu](mailto:mmariklose@ub.edu)

Albert Julià Cano, University of Barcelona | [ajuliaca7@socio.ub.edu](mailto:ajuliaca7@socio.ub.edu)

Pau Mari-Klose, University of Zaragoza | [pmklose@unizar.es](mailto:pmklose@unizar.es)

Studies of educational achievement have found that female students outperform boys in writing and reading tests scores, but underperform in math tests. Much attention has been given to biological and neuro-developmental causes of such differences. It is also argued that the behaviour and non-cognitive skills of boys and girls in early childhood account for differences in language acquisition, benefiting the latter. Yet less attention has been given to parental practices at home and the school setting. Drawing on data of PIRLS 2011 we assess to what extent gender gaps in reading scores vary across family and schooling contexts. We are particularly interested in disentangling how certain intergenerational experiences at home and parental involvement at school affect gender differences in reading achievement. Are parents who engaged in high intensity

communication activities during early childhood (reading, telling stories) more or less likely to benefit girls over boys in reading scores? Does parental educational involvement at home (discussion of child's school work, ask what learned at school, etc.) show a different association with reading scores of boys and girls? Do families who are actively in close contact with school achieve a differential effect on girls and boys reading scores? Do schools that boost parents' participation (volunteer for school projects) more or less likely to benefit girls over boys in reading scores? Do schools that support parents (workshops on pedagogical issues, learning materials to use at home) benefit differentially boys and girls reading performance? Answering these questions can provide us with a better understanding of the nature-nurture foundations of educational gender gap

## The Portuguese High School at Proof of the Imagined Project of Inclusive School

José Manuel Resende, Universidade Nova de Lisboa | [josemenator@gmail.com](mailto:josemenator@gmail.com)

Luís Gouveia, Universidade Nova de Lisboa | [lcgouveia@yahoo.com](mailto:lcgouveia@yahoo.com)

In Portugal, schooling in the last decades is marked by massification. This significant change in the school institution is followed along by other problematic issues: education inequality reflected in the performance of students, the phenomena of indiscipline and incivility and, more presently, other problems associated with respect towards student's dignity and situations of humiliation. This takes place in an historical period marked by a greater integration of Portugal in the European Union and implementation of the major policy directives emanating from its political bodies. Within this framework, the political orientations assumed by Portugal in the definition and implementation of its public policies and correlative public actions in the educational field are justified under the principle of building an inclusive school, providing education for all. This

communication is based on a research project carried out between 2009 and 2012. A central question guided the research conducted in five Portuguese public schools with contrasting school population: understand the students' experience of humiliation and non-recognition and the feelings of injustice within school environment and in its relation with the construction of gender identity. Students' sociability is studied, along with their sociability with teachers. The analytical focus is shaped by the Pragmatic Sociology as the theoretical approach adopted. The judgments expressed by these actors contain conceptions of 'fair' in the construction of life in common within the school space – and in a context of great social diversity among the school population and in the students' trajectories, which poses challenges to the functioning of school institution today.

## Tough Boys and Fragile Girls? An Empirical Assessment of Self-Reported Truancy among Girls and Boys in Flanders.

Lilith Roggemans, Vrije University, Bruxelles | [lilith\\_roggemans@hotmail.com](mailto:lilith_roggemans@hotmail.com)

The negative consequences of truancy for individuals, schools, communities, and society in the short and long term are well-documented. Not surprisingly, then, combatting truancy rates have been high on the political agenda. But despite the numerous measures that have been taken, truancy rates in most European countries are still on the rise (Reid, 2002). A contributing factor in that tendency is an increase of truancy among girls. Against that background, this paper assesses gender differences in truant behaviour. We rely on self-reported data from a survey conducted in 2011 in 33 secondary schools in the two among the largest cities of Flanders (the Dutch-speaking part of Belgium), Antwerp

[n:2156] and Ghent [n:1711]. Multilevel logistic regression analyses are used to differentiate individual and between school variations. The results show equal overall truancy rates among boys and girls. Gender specific pathways, however, are found with respect to the relation between truancy and delinquent and anti-social behaviour. More in particular, we find that in comparison with boys truancy among girls is less strongly embedded in delinquent behaviour and more common in more girls populated schools. Truancy among boys corresponds more closely to the traditional view of truancy as part of rebellion behaviour mainly present in vocational education.

## **The Impact of Racial and Nonracial Peer and Teacher Discrimination on the Sense of School Belonging of Turkish and Moroccan Minority Students in Flanders.**

Fanny D'hondt, Ghent University | [fannyl.dhondt@ugent.be](mailto:fannyl.dhondt@ugent.be)

Mieke Van Houtte, Ghent University | [Mieke.VanHoutte@ugent.be](mailto:Mieke.VanHoutte@ugent.be)

Peter A.J. Stevens, Ghent University | [Peter.Stevens@UGent.be](mailto:Peter.Stevens@UGent.be)

Although many scholars focused on the relationship between racial discrimination and different behavioral and psychological outcomes, there is a lack of large-scale studies giving detailed information on the different dimensions of racial discrimination and its impact on various outcomes. This study addresses this problem by analyzing data from a large-scale study (767 students, 47 schools) collected during the school year 2011-2012 and designed to study racism in Flemish secondary schools. A first part of the analysis is descriptive and focuses on the frequency of adolescents' experiences with discrimination, their attributions of such experiences (racial or not) and the perceived source of discrimination (teacher or peers). A second part of the analysis links the different dimensions of discrimination to students' sense of school belonging. Belongingness is an important

concept within a school context as it has a positive impact on a whole range of outcomes, such as study motivation and school misconduct. While there are many studies that focus on the impact of school belonging on different outcomes, little is known about the impact that discrimination has on the students' sense of school belonging. Hence, the second part investigates to what extent experiences of (particular kinds) of discrimination in school impact on students' sense of school belonging? Based on preliminary multilevel analyses, the results show that the experience of discrimination has a negative impact on students' school belonging, but only in relationship to experiences of discrimination from teachers and not from peers. In addition, the underlying attribution of experienced discrimination does not impact on students' sense of school belonging.

## **Intersecting Gender and Ethnicity: Exploring Gender Literacy within Multicultural Frameworks in the context of Taiwan**

Shu-Ching Lee, National Chengchi University, Taiwan | [shuching928@gmail.com](mailto:shuching928@gmail.com)

The interaction between concepts of gender and ethnicity possibly further complicates the story of gender politics in schooling in Taiwan. This paper focuses on the ways that schoolteachers of a Han background reconceptualise the notions of sexuality and gender of Taiwanese aborigines. In the meantime, it explores the ways that aboriginal teachers look at their own sex/gender relations within their cultures. The research finds that

This Han-centred perspective of what a good 'gender relationship' would be influenced, in turn, the content of the 'gender education' they imposed on aboriginal students. Departing from gender studies, this paper attempts to investigate the relationships between gender and ethnicity, through which exploring the possibility of gender literacy within multicultural frameworks in the context of Taiwan.

## Gender Difference in Mathematics at High Achievements Levels: Evidence from Poland.

Alicja Zawistowska-Sadowska , University of Bialystok | [zawistowska.alicja@gmail.com](mailto:zawistowska.alicja@gmail.com)

Changes in the educational strategies of youth are shaped – among the others – by two main phenomena. Explosion and differentiation of the schooling possibilities on the one hand and increasing competitiveness on the labour market on the other give young people strong incentives to make greater investments in education. In turn quality of education became more important than sheer quantity of diplomas. Students at high level of educational achievement, especially in the field of mathematics, are going to become a future elite in science and some strategic sectors of economy. It's one of the reasons why it seems important to analyze the “upper tail” of mathematical achievers with regard to basic characteristics like gender and social background. I'm going to show how the structure of these factors depends on the certain branch of mathematics and the type of

the test carried out among high school students. Contrary to the most common approach which compares merely average achievements I'm going to explore differences across the whole distribution of results. Using quantile regression models to analyze different sets of data (PISA, Mathematical Olympics, Gymnasium and Matriculation exams) I'm going to show that: (1) in all subscales boys were overrepresented, (2) the largest differences occurred in the tasks referring the spatial reasoning, (3) gender gap is wider on extreme results and higher level of schooling. Moreover social background varies together with gender gap. These findings may serve as important input to the discussion on the many problems of contemporary schools, e.g. inequalities, methods of schooling, and to some more general considerations like underrepresentation of women in science.

## 08RN10 - Inequalities in Education II

Chair(s): Bernadette Brereton (Dundalk Institute of Technology)

### Marginal Educational Transitions in the Competition State

Mette Pless, Aarhus University | [mep@dpu.dk](mailto:mep@dpu.dk)

Noemi Katznelson, Aarhus University | [nka@dpu.dk](mailto:nka@dpu.dk)

Susanne Murning, University of Aarhus | [sumu@dpu.dk](mailto:sumu@dpu.dk)

European countries and Denmark and the Nordic counties in particular are facing the rise of what the Danish Professor Kaj Ove Petersen has named the Competition state (Pedersen, 2012) representing a profound societal change over the course of the last twenty years. Whereas the Nordic welfare state can be said to represent a society aimed at creating the ‘good’, democratic citizen, the competition

state increasingly perceive its members as (potential) labour and they are measured in terms of productiveness, efficiency and availability in regards to the labour market. Consequently the aim of the educational system in Denmark is subject to major transformation processes expressed by an overall focus on international rankings, which allegedly express economic competitiveness.

These changes have been further emphasised in the light of the current economic crisis. The transformation includes a changed understanding of educational performances and completion rates and leads to an overall focus on utilizing the current youth generation fully in terms of their educational and labour market abilities. How do these changes in focus and educational objectives and the changing conditions and the current economic

crisis frame the transitions of young adults within the educational system and from education and onto the labour market? To what extent and in what ways are these broader perspectives and trends penetrating perceptions and understandings of education amongst young adults and especially young adults at the margins of the educational system?

## **The Effects of Socio-Economic and Geographic Inequalities on Pupils' Educational Outcomes**

Patricio Troncoso, University of Manchester | [patricio.troncoso@postgrad.manchester.ac.uk](mailto:patricio.troncoso@postgrad.manchester.ac.uk)

The "Chilean Winter" burst in 2011 with massive student-led protests supported by the general population as a response to the long-standing problem of the inequalities in the educational system. Students and citizens' unrest mainly came from the awareness of the high level of socio-economic segregation of Chilean schools, where children attend schools whose quality depends on what their parents can afford, which has had a major impact on the equality of opportunities for decades. This research seeks to analyse the effects of socio-economic inequality on the academic performance of Chilean students moving from primary to secondary school, at the level of pupils, classrooms, schools and local authorities. The analysis uses the Ministry of Education's standardised tests datasets (with N=202,605) from 2004-2006 to implement a 4-level model of change in Mathematics

performance. Results from this multilevel model indicate that attainment is mostly associated with external factors (i.e. classroom, school, local authority) rather than pupils' characteristics. After controlling for intake scores and socio-economic characteristics, the between-school variation reduces noticeably, but there still remain a handful of schools performing above and below average. From a value-added theoretical perspective, it is found that only a few schools actually add value to their pupils' educational trajectories. This research intends to contribute to the understanding of educational inequalities in the context of a developing country, where socio-economic disparities do not only produce differences in achievement between schools but also between localities, which are remarkably greater than those found in more egalitarian developed countries.

## Outstanding Performances, Responsibility and Intellectual Giftedness. Meritocracy and the Creation of Differences in German Secondary Schools

**Mareke Niemann**, Martin Luther University Halle-Wittenberg | [mareke.niemann@zsb.uni-halle.de](mailto:mareke.niemann@zsb.uni-halle.de)

**Lena Dreier**, Martin Luther University Halle-Wittenberg | [lena.dreier@zsb.uni-halle.de](mailto:lena.dreier@zsb.uni-halle.de)

**Anja Gibson**, Martin Luther University Halle-Wittenberg | [anja.gibson@paedagogik.uni-halle.de](mailto:anja.gibson@paedagogik.uni-halle.de)

In the German field of education some important changes took place. Firstly, almost half of the students attend schools that allow higher certificates. Secondly, there are new developments in view of the governance of the school system, the strengthening of school autonomy in relation to the formation of „educational quasi-markets“, and market-formed structures. The developments have led secondary schools in urban regions into a tension field between cooperation and competition. Our research project focuses on exclusive schools in relation to the public discourses on elite, excellency and top performance. The development in the educational sector led to a renewed discussion on social exclusion and inequality in Germany. Thus, a dilemma was raised – the dilemma of socio-economic barriers and the pursuit of genuine academic meritocracy. The discussion

on elite education is a revisited one in Germany, in contrast to the ongoing debates in the USA, Great Britain and France. Our analysis refers to the institutional side, to mechanisms of selection, coherence and distinction. The research is based on qualitative data from exclusive and non-exclusive schools. In our presentation, we will illustrate what relevance elite discourses gain in contemporary education regions of secondary schools referring to narrative Interviews with school actors. Furthermore, we will show what evidence is consequently uncovered with regards to quasi-education-markets for secondary schools. The term 'elite' needed school specific justification strategies, to prevent the accusation of social privilege and therefore affirm the status of the own school.

## The Paradox of the Cascade System: when Homogeneous Grouping Leads to More Heterogeneity in the Classroom

**Lore Van Praag**, Ghent University | [Lore.VanPraag@UGent.be](mailto:Lore.VanPraag@UGent.be)

**Mieke Van Houtte**, Ghent University | [Mieke.VanHoutte@ugent.be](mailto:Mieke.VanHoutte@ugent.be)

**Simon Boone**, Ghent University | [Simon.Boone@UGent.be](mailto:Simon.Boone@UGent.be)

**Peter A.J. Stevens**, Ghent University | [Peter.Stevens@UGent.be](mailto:Peter.Stevens@UGent.be)

Tracking and other forms of ability grouping such as streaming or setting, are general features of many educational systems in Europe. Although tracking practices are widespread, countries vary considerably in the ways tracking is organised. Policy makers have introduced tracking to facilitate teaching and learning. However, this was often accompanied

with some unintended consequences. Previous research has shown that the introduction of tracking appeared to have led to the development of specific tracking cultures, an unequal social and ethnic distribution of students across tracks and 'teaching to the test' when track allocation is based on standardized tests. Therefore, policy makers

should incorporate these unintended consequences when evaluating tracking systems. In this study, we will examine the unintended consequences associated with the structure of the tracking system in Flanders (northern part of Belgium). Results are based on data from participant observations (approximately 25 weeks) and interviews with 127 students from fifth grade of secondary education in three multi-ethnic schools in Flanders. Our findings suggest that due to the

cascade-like structure of the Flemish educational system, there appears to be a higher heterogeneity in terms of previously followed educational trajectories in less appreciated tracks at the end of secondary education, compared to higher appreciated tracks. This higher heterogeneity appears to contrast with initial tracking objectives and complicate teaching and learning, influence classroom behavior and study motivation.

## **Reducing or Re-Producing Uncertainty? Dealing with the Topics of Inequalities and Diversity in Civic Education**

Tatjana Zimenkova, Bielefeld University | [tzimenkova@uni-bielefeld.de](mailto:tzimenkova@uni-bielefeld.de)

European societies are increasingly seeking to implement diversity education as part of a civic education curriculum in order to provide young people with competences in dealing with different forms of diversity. The presentation analyzes policies and praxis approaches pertaining to education for diversity at both the supranational level of European Union and Council of Europe as well as at the level of member states (Germany, Estonia, Russia, and Sweden). The presentation shows that in Europe school education for diversity simultaneously pursues two separate goals: while generating a grand narrative of celebrating European diversity those same materials and policies stipulate that issues of inequality are to be dealt with separately. Based on the conceptualization of diversity with reference to heterogeneities and inequalities,

the presentation shows how migration-related inequalities tend to be covered over in positively connoted conceptions of diversity. Comparing educational policies, school curricula, and teaching materials, the presentation reveals the ways in which diversity and inequalities are decoupled, and poses following questions: What happens if diversity is only treated as a matter of celebration? Can an educational practice, called for facilitating a simultaneous addressing of Europeanization as positively connoted process and (migration-based) inequalities as reality of European societies' and of learners' everyday life contribute to more uncertainty, social closure and (self-)exclusion of those learners, who do not find themselves within diversity celebration narratives?

## a09RN10 - School Choice and Pupils' Trajectories

Chair(s): Jan Germen Janmaat (University of London)

### Families, School Choice and Democratic Iterations on Right to Education and Freedom of Education in Finnish Municipalities

Janne Varjo, University of Helsinki | [janne.varjo@helsinki.fi](mailto:janne.varjo@helsinki.fi)

Mira M. M. Kalalahti, University of Helsinki | [mira.kalalahti@helsinki.fi](mailto:mira.kalalahti@helsinki.fi)

The Universal Declaration of Human Rights sets two determining principles of law directing the admission and selection to basic education. On the one hand, basic education is outlined as basic human right assured by the nation states: "Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory." On the other hand, the declaration requires nation states to respect the educational freedom of parents by allowing them to choose and establish private or alternative educational institutions for their children: "Parents have a prior right to choose the kind of education that shall be given to their children" Different emphases and interpretations of the aforementioned rules of law are determining guiding principles of the admission policies and practices in basic education. The aim of this

presentation is to analyze the ways in which the Right to Education and the Freedom of Education are manifested in local policies and practices concerning the selection and admission to basic education, and in parental attitudes towards school choice and diversification of schools. First, we outline local institutional spaces for parental school choice by using documentary material from two Finnish municipalities, then we analyze parental attitudes by using survey data (n=2624), collected for Parents and School Choice -research project. By elaborating local institutional spaces for parental school choice and parental attitudes, which are shaping aforementioned principles and their local interpretations, we aim to illustrate the democratic iterations on Right to Education and Freedom of Education in various local sociocultural contexts.

### Social Networks of Parents and School Choice: Comparing French and Finnish Upper Classes

Sonja Kosunen, University of Helsinki | [sonja.kosunen@helsinki.fi](mailto:sonja.kosunen@helsinki.fi)

Agnès van Zanten, Sciences Po Paris, CNRS | [agnes.vanzanten@sciences-po.fr](mailto:agnes.vanzanten@sciences-po.fr)

Parents across countries can impact the school allocation process of their children in a way or another. According to previous research, parents often struggle in obtaining sufficient information about schools from different official sources and social networks. They aim to evaluate the reputations, quality of teaching and the pupil composition of each school and then seek the best possible match

of school for their child. (see van Zanten, in press; 2009; Orìà et al. 2007.) In the process of matching and succeeding in making the best possible choice the parents use their social networks in multiple ways. We compare the discourse of upper-class and upper middle-class parents in Rueil-Malmaison (Paris metropolitan region, n=70) and Espoo (Helsinki capital region, n=44) on what do they consider

being good education and relevant information regarding the choice of school, from which sources do they try to grasp the information and in which social networks do they share it. The comparisons between France and Finland are made based on qualitative content analyses conducted over semi-structured thematic interviews. It seems that in both countries some of the information parents considered relevant in regard to choosing

schools 'well' was distributed only in the social networks of parents. Simultaneously the networks of parents seemed to be socially fairly homogeneous, consisting of parents from the same social status group. In both countries some of the information could only be attained in discussions with other parents, which in its way shaped the school choice processes and the conceptions of good education.

## **Over Education Processes and Professional Trajectories: Young Adults' Biographies among Bonds, Opportunities and Freedom of Choice**

Valeria Pandolfini, University of Genoa | [Valeria.Pandolfini@unige.it](mailto:Valeria.Pandolfini@unige.it)

The paper explores the relationship between the widespread over education processes and labor market outcomes, analyzing the consequences of employment flexibility on young adults' life trajectories and its influence on social identity and freedom of choice. It is highlighted the weakening of the educational qualifications' occupational expendability and the downsizing of expectations related to the desired job's quality within the actual socio-economic crisis. The theoretical frame refers to the debate on positive freedoms (Paci, 2005; Clark, 2005) and to the capability approach (Sen, 1996, 1999; Nussbaum, 2003) to investigate how young adults create meaning of their lives in relation to education and work. This leads to explore the effective opportunities of biographical and working fulfillment, considering self-determination capabilities and individual freedom of choice, whose exercise is

compromised by lacking of resources to realize personal ambitions. Thus, over education processes and expansion of secondary and tertiary levels of education risk to connote subjects being in a never-ending uncertain condition. These themes are analyzed through a quanti-qualitative research on a sample of Genoese young adults exploring their experiences with school and training, their perceptions and conditions with career transitions. The paper presents an heterogeneity of individuals' experiences related to the nexus between education, labor market outcomes and implications of over education for life trajectories, with reference to the specificities of the Italian scenario, identifying discriminating key factors in terms of capabilities and functioning which differentiate the freedom of choice in private and working dimensions.

## **The School Choice as Middle Class Enterprise – Exploring the Fragments within the Finnish Middle Class**

Mira M. M. Kalalahti, University of Helsinki | [mira.kalalahti@helsinki.fi](mailto:mira.kalalahti@helsinki.fi)

Janne Varjo, University of Helsinki | [janne.varjo@helsinki.fi](mailto:janne.varjo@helsinki.fi)

Education is an important definer of social standing, a basis for income disparity and an enabler of privileges; nevertheless it has always been distributed unevenly among the

population. As a general rule, families in upper social classes are more able to utilize the changes in education policies – like increased parental school choice, competition and

diversification of schools – than families in lower social classes. The stratification concern not only upper and lower classes. Apparently, new class cleavages have been identified within the middle class, arguing that middle class can be divided into an “old” class of industrialists, managers and business owners, and a “new” class of knowledge workers. The aim of our study is to contribute to the classifications within sociology of education by analyzing the class distinctions and school choice. We explore parental school choice and parental educational attitudes in their connection to class cleavages within the Finnish middle class, by using survey data (n=2624) collected for Parents and School

Choice -research project. For our analysis, we subdivide the two highest categories (I Higher-grade professionals; II Lower grade-professionals) of the EGP class schema (Erikson, Goldthorpe & Portocarero 1979) into two “old” classes of technocrats and two “new” classes of social and cultural specialists (Güveli 2006). Our analysis indicates that technocrats (both higher and lower professionals) are more in favor of individual school choices and diversification of schools than the ones employed as social and cultural specialists. Moreover, higher professionals (especially technocrats) highlight education as an indicator of person’s status and value.

## **b09RN10 - Vocational-Professional Education**

Chair(s): Marta Zahorska (Warsaw University)

### **Technical College as a Low-Risk Strategy Under Economic Uncertainty**

**Ksenia Tenisheva**, National Research University - Higher School of Economics, St. Petersburg | [tenishewa.soc@gmail.com](mailto:tenishewa.soc@gmail.com)

**Daniel Alexandrov**, Higher School of Economics, St. Petersburg | [alexandrov.daniel@gmail.com](mailto:alexandrov.daniel@gmail.com)

**Svetlana Savelieva**, National Research University - Higher School of Economics, St. Petersburg | [sv.savelieva@gmail.com](mailto:sv.savelieva@gmail.com)

The proposed paper views educational choice between academic and vocational tracks from the vantage point of risk aversion under uncertainty. J.Goldthorpe and R.Breen suggested that when making educational choice individuals try to avoid risk of status loss, which prevents them from upward mobility. In current Russia the most direct pathway to tertiary education is via academic high school. It implies higher costs, delayed entering of the labor market, and risks of drop-out or future unemployment. There is second important pathway to tertiary education via technical college after which many students can have a lateral transfer to the university with a possibility of transferring credits for

advanced courses they took in a third year of technical college. We suppose that vocational schools are chosen by students with working class background, technical colleges are the choice of low middle class, and staying in academic track with going to university after the 11th grade – of middle and upper strata. We use data from long-term mixed-method research: interviews with 9thgraders and their parents as well as a local survey of 500 9thgraders from 18 schools in a district of Leningrad Region and a large scale survey of 100 schools and 7500 students in St. Petersburg. In both urban and rural areas about 13% of students after the 9thgrade are choosing technical colleges to further proceed

to tertiary institution. This is a strategy of low middle-class families, who value higher education but are pragmatic enough to take care of warranted future employment. It allows

them to have diversified options and a fall back strategy of having technical qualifications at hand to enter labor market in case of a failure in the university.

## **Labor Market Oriented Educational Policies: Implementing the Entrepreneurial Education. Closing or Widening the Gap?**

Ines Elezovic, National Centre for External Evaluation of Education | [ines.elezovic@ncvvo.hr](mailto:ines.elezovic@ncvvo.hr)

Education for entrepreneurship is a fairly new concept that became widely known in modern educational arena throughout publishing The key competences for lifelong learning – A European Reference Framework (2007). Croatia's accession to EU membership requires introduction and harmonization with new concepts in educational system, as well as for their successive evaluation and monitoring with standardized procedures. The overall idea of more organized institutional bridges building between education and labor market thrives to develop, manage and assess the production of targeted knowledge, its practical application and related skills. According to the Croatian National Curriculum Framework (2011) Entrepreneurship is one of the six new cross-curricular subjects. The most developed countries have recognized the importance of stimulating entrepreneurial climate and policy

framing that supports entrepreneurial learning in the national context. Solution for different types of social crises, and present economy crisis, is traditionally sought in education as a dynamo of long-term positive change in societies. Hence, one can wonder where in Habermas' critical theory of capitalism does marriage of education and economy belongs to. Are these national and international educational policies an example of political intention to emancipate disempowered individuals and groups within an egalitarian society – or just the opposite, perpetuation of a system which keeps individuals and groups (dis)empowered and suppresses change within capitalistic elites? All this imposes additional social pressure on a system that has a role to educate and raise, nurture and direct youth, and at the end – foster the national economies at the same time.

## **Why Are so Many Immigrant and Minority Students in Professional Education in Portugal?**

Maria José Casa-Nova, University of Minho | [mjcasanova@ie.uminho.pt](mailto:mjcasanova@ie.uminho.pt)

Teresa Seabra, ISCTE-IUL, Lisbon | [teresa.seabra@iscte.pt](mailto:teresa.seabra@iscte.pt)

Statistical data collected at a national level relating to reality Portuguese school students indicate that descendants of immigrants and minorities (namely Portuguese gypsies) are overrepresented coming in vocationally oriented education system and the phenomenon has been increasing. This can set up a reinforcement of school exclusion operated within the educational system (the so called "excluded from inside" in the words of

Bourdieu and Champagne, 1992) and, for this reason, it is important to know the reasons and processes that originate this "choice." Some preliminary qualitative data collected in schools through observation and semi-structured interviews, shows that in what Portuguese ROMA (gypsies) students is concern, attending VET in grammar schools is a "choice" often guided by their teachers. The communication shall consist of the

presentation of statistical national and global data and, based on semi-structured interviews conducted with some teachers and students,

presents explanatory hypotheses of this socio-educational phenomenon.

## Competence-Based Vocational Education and Training and its Cultural Context Sensitivity

**Carmen Baumeler**, Swiss Federal Institute of Vocational Education and Training | [carmen.baumeler@ehb-schweiz.ch](mailto:carmen.baumeler@ehb-schweiz.ch)

Currently, we are witnessing international interest in vocational education and training (VET). This is due to the fact that in the present global economic downturn, countries with well-developed VET systems face much lower youth unemployment rates (ILO 2012; Unesco 2012). Worldwide, around one in eight young people between the ages of 15 and 24 is unemployed. While the importance of prioritising job creation is acknowledged, the opinion is also that many young people lack the right skills for the labour market. Therefore, adequate skilling for the labour market is demanded, and policymakers are currently seeking to borrow concepts from countries that successfully integrate young people in their labour markets. These countries include Switzerland (average youth unemployment rate in 1999-2008: 6.9%), Austria (7.5%), Denmark (8.2%) and Germany (10.9%) (ILO 2012: 5). They

are characterized by dual VET systems (i.e. which combine classroom instruction with work-based training) and the pursuit of competence-based education. Within this context, the paper considers whether competence-based education, as defined from a western European perspective, is transferable from one cultural context to another. First of all, the concept of competence-based education is defined as a new educational paradigm (Wesselink, Biemans, Mulder, van den Elsen 2007). Then, the concept is situated within its cultural context. Next, the paper presents a case study of the VET system in India – a country actively engaged in reforming its VET system. The conclusion will identify pitfalls that may arise when transferring the concept of competence-based education from a western context to other cultural contexts such as India.

## Trends and Contradictions of Functioning of the Regional Market of Services of Supplementary Professional Education

**Irina I. Kharchenko**, Institute of Economics & Industrial Engineering Siberian Branch of the Russian Academy of Sciences | [kharchen@ieie.nsc.ru](mailto:kharchen@ieie.nsc.ru)

The goal of the research conducted in 2011-2012 is to study the regional market of services of supplementary professional education (SPE) as well as the system of SPE (which includes professional courses, courses for raising the level of skills, job-related training, etc.), its functioning and development as a social institution and as the area of activity and interaction of individuals and groups through the prism of the formulated goals of

modernization and successful development of economy (on the case of Novosibirsk region, Russia). Other purposes also include identification of the requirements of different groups of able to work citizens, such as senior students, employed and unemployed people in the additional education (continuing education in any existing forms). Methods of research: analyses of Internet sites of the organizations of SPE; questionnaire survey of the course

participants; interviews with representatives of SPE and employers; secondary analysis of the empirical data. The data demonstrated that in whole during the last decade mass demand for additional education among adults has been observed. There is a special need in higher and second higher education, as well as in the courses and other programs of SPE. However, contradictions have been noted, thus the discovered educational needs essentially

surpass real involvement of the population in the continuing education. Secondly, the largest part of the courses and programs is oriented towards the needs of the population, but the acquired qualifications and competencies are often not in demand on the labor market. Thirdly, a lot of employers do not stimulate their workers to study in SPE, although they prefer staff with modern competencies.

## **a10RN10 - Equity and Inequity in Education**

Chair(s): Alicja Sadownik (University of Gdansk - University of Bergen)

### **Are there Inequalities within the Ivory Tower? Perception and Empirical Findings on the US-American Research Universities**

Stephanie Beyer, University of Bamberg | [stephanie.beyer@uni-bamberg.de](mailto:stephanie.beyer@uni-bamberg.de)

The US-American university system is often seen as a role model when implementing European higher education reforms. But these reforms often follow a rather incomplete picture of the US higher education system focusing on visibility among international rankings. Therefore it is crucial to take a closer look at the US-American higher education system in order to understand it in more detail. From a US-American perspective it has clearly been shown that the US system can as well be described as a caste system. To contrast the European perspective with empirical findings, this study (1) outlines the allocation of financial resources and ranking positions of US-American research universities using data

from the Delta Cost Project and the National Science Foundation spanning a period from 1987-2010. Applying Pierre Bourdieu's concepts of field and capital, universities can be analysed as actors struggling for research resources and prestige. In a second step, (2) these institutional characteristics are combined with individual data on the micro level, using CVs of sociology professors from US-American research universities. The main purpose of this paper is to explore patterns of inequality in an institutional as well as an individual context within the US higher education system so that these findings can be contrasted with an "American ideal" perceived by European policy making.

### **Can Teachers Reduce Social Inequalities in Education? Do they Can, Want and Know how to Do it?**

Marta Zahorska, Warsaw University | [martazahorska@wp.pl](mailto:martazahorska@wp.pl)

Social inequalities in education are a common and a well-known, persistent phenomenon despite the numerous social changes and

educational reforms. The case of Poland is very interesting, since the political and economic changes that have led to dynamic growth of

social inequality have been accompanied by reforms of the education system, which are aimed at ensuring that social origin ceases to be a barrier that hinders reaching higher education levels. The consequence of this situation is a visible polarization of the education system. The inequalities that are now observed are of horizontal nature. On a single education level, we are dealing with good and poor schools – the former facilitate the professional career, while the latter are a blind alley. The existing inequalities provoke the authorities to introduce more changes, which are to provide better chances for children from various environments. Paper presents the initial conclusions from research

conducted at elementary and grammar schools in several cities and towns in Poland aiming at presentation the teachers' and students' opinions in regard to possibilities of reducing inequalities by the school. I will compare the statements made by teachers of various classes and schools, as well as students of the last grade of grammar school (aged 15 – 16) in schools located in smaller and bigger towns (with gender perspective included). The research methodology is based on observation of selected classes, interviews (IDI) with teachers, school principals, school counselors, surveys filled out by students and an essay „Who I am going to be in 10 years from now”.

## **Class Position as a Determinant of Learning Skill Acquisition in Russia's Secondary Schools**

**Julia Epikhina**, Institute of Sociology of the Russian Academy of Sciences | [epikhina@gmail.com](mailto:epikhina@gmail.com)

Russian educational system has been undergoing reform for the last 20 years. The reforms have been contributing to inequality in Russian society. Traditionally, the Russian sociology understood inequality in education as differences in access to educational resources. It has been consistently revealed by sociological studies that different social classes have different chances to access higher education. Differential access to economic and cultural resources associated with a class position provide for a variance in outcomes of educational trajectories. We propose to add another type of inequality that differentiates education – the inequality of

learning quality. We assume that members from the different classes delve into curriculum differently and receive the different educational skills. This can be substantiated by the data of the international survey PISA. Russia participated in the PISA surveys 4 times (2000, 2003, 2006, 2009). The PISA data include the results of school math and reading tests as well as information on the pupils' social background, their families' economic and cultural resources. There is evidence showing that the inequality of the learning process has been increasing and the difference of tests results is related to families' economic and cultural resources.

## **The Dynamics of Education Systems: Convergence and Divergence across the OECD countries.**

**Andy D Green**, Institute of Education: University of London | [andy.green@ioe.ac.uk](mailto:andy.green@ioe.ac.uk)

**Tarek Mostafa**, Institute of Education, University of London | [t.mostafa@ioe.ac.uk](mailto:t.mostafa@ioe.ac.uk)

This presentation focuses on the major changes occurring in the structure and

regulation of education systems during the past twenty years across OECD countries.

Although according to the influential World Culture (or convergence) perspective national education systems are becoming increasingly similar, scholars have also highlighted continuing cross-national differences regarding particular aspects of education systems. For instance, different models of compulsory education have been identified and these have typically been associated with particular regions or clusters of countries. These have included a 'Anglo-Saxon model', a 'Nordic model', an 'East Asian model', and models associated with German-speaking and southern European countries. The presentation will test the convergence perspective and discuss the validity of the different models identified for the 1990-2000 period. OECD 'Education at a Glance' and PISA data will be

used to assess the trends in relation to institutional structures, school regulation and governance, curriculum and assessment and learning outcomes. We find more instances of convergence (17) than divergence (6) across countries in our assessment of 24 indicators of system properties and outcomes over a period of two decades. Yet, the convergence found was often small as it was statistically insignificant in 14 of the 24 indicators). Variations between country clusters remained marked. What is more, the convergence that was found on a structural property in some cases did not go in the expected direction. For instance, although countries appeared to become more similar on decision-making structure, the trend was towards more central control instead of more school autonomy.

## Educational Differentiation and Inequalities of Civic Engagement

Jan Germen Janmaat, Institute of Education | [g.janmaat@ioe.ac.uk](mailto:g.janmaat@ioe.ac.uk)

This presentation explores the influence of two institutional properties of education systems – the degree of grouping by ability and degree of school autonomy – on disparities of civic engagement. It hypothesizes that systems that select early on the basis of ability and systems with high levels of school autonomy are likely to produce greater disparities of civic engagement both across classrooms and across social and ethnic groups. Data of the 2009 International Citizenship and Civic Education Study (ICCS) and of the 2009 OECD PISA report were used to measure civic engagement, early selection and school autonomy. We found that countries with early selection systems in compulsory education

indeed show larger disparities of civic engagement across classrooms, but inequalities of civic engagement across social and ethnic groups are not larger in those countries by comparison to countries with strict comprehensive systems. Centralization (as tapped with the inverse indicator of school autonomy) turned out to go hand-in-hand with smaller disparities of civic engagement across social groups, but this relationship was only visible amongst upper secondary students and was not based on significant correlations. Centralization is not related to any other inequalities of civic engagement, neither across classrooms nor across social and ethnic groups.

## b10RN10 - Learning and Achieving

Chair(s): Maddalena Colombo (Università Cattolica del Sacro Cuore)

### How Institutional Integration Contributes to HE Achievement of Non-traditional Students?

Klára Kovács, University of Debrecen | [kovacs.klarika87@gmail.com](mailto:kovacs.klarika87@gmail.com)

Gabriella Pusztai, University of Debrecen | [gabriela.pusztai@gmail.com](mailto:gabriela.pusztai@gmail.com)

Zoltán Györgyi, University of Debrecen | [gyorgyi.zoltan@arts.unideb.hu](mailto:gyorgyi.zoltan@arts.unideb.hu)

Ágnes Engler, University of Debrecen | [engler.agnes@arts.unideb.hu](mailto:engler.agnes@arts.unideb.hu)

Despite the increasing HE participation the low student outcomes cause the dysfunction in HE. Regarding the diversity of the student community, some of the literature discusses the heterogeneity of students in terms of sex, social origin, ethnicity and religion. Studies in educational sociology are consistent in calling certain groups non-traditional if they show new features in the above respects, or are underrepresented compared to their social significance. We seek a more precise explanation for the achievement of various student groups in HE by using a more sensitive, multidimensional approach, taking into consideration the influence of personal relationship networks. We identified four student types with special external relationships: married/cohabiting students, students with extra-campus job, members of sport-clubs, and religious students. We plan to

test Tinto's integration-hypothesis by comparing their study career and achievement. The main elements of the new indicator system are indirect predictors of further achievement: the commitment of students to do curricular and extra-curricular work, their devotion to improve their knowledge. We have used the database of HERD survey (N=2728), which was carried out in the higher education institutions of the cross border area of Hungary, Romania and Ukraine. We found significant deviations according to way of life and learning strategies of different non-traditional students groups. On the one hand we can identify the potential resources that can support the better student outcomes, and on the other hand our findings can serve as the basis of a new institutional strategies connected to them in the future to facilitate these students to be successful.

### Escape from Math - Consequences of Social Perception of Mathematics for Young People's Career Paths.

Anna Baczko-Dombi, Polish Academy of Sciences | [anna.baczko@gmail.com](mailto:anna.baczko@gmail.com)

Mathematics as no other school subject evokes conflicting emotions and contradictory attitudes. Process of studying mathematics is of specific nature – it requires systematic practice and patience, as mathematical knowledge is of cumulative nature. In case of mathematical education we can observe a process of “abandoning/dropping out” of

mathematics by a significant number of students who start to consider themselves “humanists” – i.e. people unable to learn math. This has numerous consequences, which may narrow down possible paths of future education, and options on the labour market. This problem is especially important in time of crisis, while modern economies tend to put

more and more emphasis on math-related abilities. In Poland we are dealing with 'overproduction' of graduates of humanistic faculties and deficiency in the area of technical education. Recently there were some social campaigns aimed at encouraging secondary-school graduates to choose technical specializations at universities, however this revealed another problem: insufficient level of mathematical knowledge in candidates. This shows that the problem has to be handled at earlier stages of education. Yet, without

understanding why children abandon mathematics, we won't be able to solve the problem. I will present results of two studies – qualitative (2010) and quantitative (2011, N=3169 –student sample, N=428-parents sample) showing the mechanisms behind the negative attitudes towards math. I will describe what students and their parents think about mathematics, what are they afraid of, and whether they believe that math can be useful in life.

## **Learning with the Senses: Investigating the Role of the Body in Musical Learning**

**Jaco van den Dool**, Erasmus University, Rotterdam | [vandendool@eshcc.eur.nl](mailto:vandendool@eshcc.eur.nl)

Popular music plays a major role in youth culture, increasingly so in developing countries (Greene, 2001). In rapidly changing societies, the music soundscape becomes a fluid blend between local music and western popular music. In this blended soundscape, young musicians negotiate between different modes of learning to acquire knowledge on western popular music. This learning process is a unique form of blended musicality. Youngsters import specific practices and learning strategies from their dominant music culture into novel musics. Intermusical (Monson, 1996; O'Flynn, 2005) traffic of learning strategies is part of the daily musical reality of many youngsters worldwide. In this paper, I study the complex intermusical transfer between various music systems and learning strategies to provide insight into the way intermusicality is

shaped and considered an essential tool in the process of music learning through a case study in Kathmandu, Nepal. During a musical and interactive paper presentation, I will present how the body plays an essential role in the music transmission process. This research seeks to develop a sensory model by analyzing all the senses deployed during the transmission process. In this study the transmission of music and music learning is not only focused on visible and audible senses, but the tactile sense, like touch, is also under investigation. Studying the unique situation in Nepal, where young musicians actively shape their intermusical world with a various set of senses, can contribute to the understanding of the multiplicity of music transmission, intermusicality, and the learning process of multiple music systems.

## **Dialogic Sociology of Education: schools as Learning Communities.**

**Adriana Aubert**, University of Barcelona | [adriana.aubert@ub.edu](mailto:adriana.aubert@ub.edu)

**Tinka T Schubert**, University of Barcelona | [tschubert@ub.edu](mailto:tschubert@ub.edu)

**María Jiménez-Delgado**, University of Alicante | [maria.jimenez@ua.es](mailto:maria.jimenez@ua.es)

In this paper, we present the dialogic turn in Sociology of Education that makes educational success possible for all and promotes social transformation. While reproduction theories

emphasised the idea that schools reproduce relations of oppression, postmodernism has increased the language of impossibility by analysing all educational actions in terms of

power relations. Educational actions in line with any of these sociological approaches cannot act as tools that schools and communities need to tackle inequalities from education or foster educational success for all students. Social sciences and sociology of education have shifted their focus of attention to studying those actions that actually transform social structures. Dialogic sociology of education analyses educational and social actions that challenge inequalities from education to provide solutions on overcoming these. The theoretical foundation of dialogic sociology of education draws on contributions from Freire, Flecha or Habermas, among others, who emphasise the dialogic nature of

the humans. Research in dialogic sociology of education is based on two basic principles: 1) identify successful educational actions that help to overcome inequalities, and disseminate them; 2) involve researchers and social actors in a democratic and dialogic way into the research. Schools as Learning Communities are implementing actions in education that are inducing profound changes in the socio-cultural environment as well as in the students themselves leading to significant improvements in the students' academic results investing the same or even less resources. These schools have the purpose to contribute to a society where every person can have equal chances and results.

## 11RN10 - Education: Adaptation and Change

Chair(s): Vasiliki Kantzara (Panteion University of Social and Political Sciences)

### Six Metaphors and One Model of Educational Change: A Kazakhstani case of rapid 'internationalisation at home'

Olena Fimyar, University of Cambridge | [olena.fimyar@gmail.com](mailto:olena.fimyar@gmail.com)

This paper considers the most recent educational policy initiatives in Kazakhstan, which are centred around the establishment of world-class educational entities – Nazarbayev University (NU) and the network of Nazarbayev Intellectual Schools (NIS). The paper argues that these developments mark a new era of education policy-making, which is very distinct from the structural adjustment policies initiated in the country in the first post-independence decade [See Asanova 2007, Silova 2005, Silova & Steiner-Khamsi, 2008]. In the literature and within the field, the attempts to conceptually grasp a new model of reform include such diverse and at times conflicting terms as 'globalisation on the margins' (Silova 2011), 'aggressive reform package'

(governmental official), a 'beta-testing strategy' of policy adjustment and wide-scale implementation (Ruby 2012), 'parallel systems of education' (interview with the NIS representative), 'cherry picking policy from around the world' (cf. Winstanley 2012) and others. Drawing on the analysis of twenty-six interviews with the national policy-makers and international partners involved in the establishment and operation of NU and NIS, the paper contributes to the critical analysis of 'new policy networks' (Ball 2012, Ball & Junemann 2012) in time of triumphant globalisation, which in Kazakhstani context take the form of rapid 'internationalisation at home' or 'internationalisation from within'.

## Education as a Mean of Adaptation to the Social Structure – Polish Migrants in England

Piotr Mikiewicz, University of Lower Silesia | [piotr.mikiewicz@yahoo.pl](mailto:piotr.mikiewicz@yahoo.pl)

Alicja Renata Sadownik, University of Gdansk / University of Bergen | [wontherland@gmail.com](mailto:wontherland@gmail.com)

Education, as an universal institution of socialization, selection and allocation is the tool of adaptation of the new community members to the social structures. That mechanism is especially important for immigrant adaptability to new realities of life in the new society. As non-natives, they are in a difficult situation, as they lack the acknowledged cultural capital (language, values, habits) enabling them an adaptation to school and society. It results in the placement of migrants' children in worse school paths and allocation in social positions of lower status. Our study 'Poles in the UK: The Portraits of Polish children's School Life in the Context of Broader Adaptation Processes' has shown a surprising and unexpected changes to the mechanism described above, by the use of cultural and social capital of belonging to a

particular religious group. Using the baptism certificate, children of Polish migrants have chances to access the prestigious school paths and open channels to the allocation in higher social positions. Access to prestigious education warms up aspirations, and challenged by the crisis, social structure seems to give them more room for social mobility. Their educational carriers seem to go across selective and classed structure of school system and society. Using data from the qualitative research project we emphasize the importance of the cultural and social capital in the process of adaptation to the new social structure. How far the 'classical' way of reproduction throughout the schooling can be challenged in new circumstances affected by increased degree of migration flow and world-wide crisis?

## Modernization of Education in the Context of Modern Challenges

Nina Sorokina, Russian State Technological University of K. Tsiolkovsky | [nd-sorokina@mail.ru](mailto:nd-sorokina@mail.ru)

This paper examines the problems of modernization of Russian education in the context of current challenges. The present transformation of Russian society is aimed at the establishment of market relations, with innovative development of the country being a priority. Education plays a key role in these processes. The modernization of Russian education takes place in complex and conflicting conditions of the societal transformation, being a complex and conflicting process itself, as this process is accompanied by the conflict of opinions on the goals, the objects, and the core of the transformation of Russian education. There is a tendency of escalation of the conflicts

regarding the educational reforms. There are two dominant opposing opinions, one considering education as a service and knowledge as a commodity, and the other seeing them as a benefit and a value respectively. The recently observed protests are mostly directed at disagreement on the part of the reform concerning the increasing commercialization of education. While the amount of protestors is relatively small, they cover the significant territory of the country. As for the prognosis, it could be positively assumed that the "higher" authorities would not be able to implement the educational reforms in their present form fully, which will result in escalation of the conflict between the

society and the government, and eventually in increase of the social tension.

## A Revolution by Degrees? The Emergence of Free Alternative Schools in the German Education System

Stina Preuss, University of Heidelberg | [stina.preuss@soziologie.uni-heidelberg.de](mailto:stina.preuss@soziologie.uni-heidelberg.de)

The German education sector is dominated by public institutions. Nevertheless, over the last three decades, the emergence of a new form of private schooling institutions has been observed: the free alternative schools (FAS). In contrast to private confessional schools, FAS are funded by parental associations as innovative education solutions for their children. They are ideologically rooted in the protest movement of 68, criticizing public schooling as "machines sorting and channeling biographies". Although article 7 of the constitution ensures the right to found private schools, applications are closely inspected and monitored by the state. The following paper proposes to look into the negotiation process

that takes place between parental associations who want to establish a free alternative school and the state regulatory bodies in charge of inspecting the application. By reconstructing the negotiation process between 20 FAS and the regulative body in charge, light can be shed on the way public schooling authorities impact on the attempt, on behalf of organized citizens, to introduce alternative (and innovative) forms of schooling into the public system. The study draws on neoinstitutionalist insights into understanding the normative, regulative and cognitive dimensions of the negotiation process, thereby uncovering institutional resistance of the public schooling system in Germany.

## RN10 - Poster Session

### Social Subject of Post-Crisis Society, Formed by the Modern Russian School Education

Irina N. Chudnovskaya, Lomonosov Moscow State University | [inchud@bk.ru](mailto:inchud@bk.ru)

The state system of education is functionally directed simultaneously on the preservation and reproduction of the cultural and historical country code, and the formation of a new social subject for further development of the state in the new socio-economic conditions. In terms of economic instability, globalization and the consequent sharp competition the state determines what identity type of the social subject it needs, and based on that, what social actor will be created at the output of a long-term educational process: active vs. passive personality (R.Funk); creative personality vs.

person consuming what was created by others; individual of the world vs. patriot, value-oriented with national social code; communicative personality belonging to the adequately interpreting socio-mental group vs. belonging to the inadequately interpreting group and, therefore, easily manipulated (T.Dridze); normative personality vs. inclined to marginality. The education system operationalizes these requirements for the social actor in specific lawmaking and executive practices with a wide public response. Based on the above, and considering

that the school is the basic institution of education, in this paper we analyze the legislative discourse of school program reform in modern Russia. Special attention is paid to the humanities. The purpose of the research,

on the methodological basis of the comparative analysis and the analysis of documents, is to identify potential features of the social subject of the new Russia, which form with currently being developed school educational programs.

## **Associations of Social Capital and Inclusive Education Policies: the Usefulness of the Biopsychosocial Model**

**Eleni Koutsogeorgou**, National School of Public Health, Athens | [e\\_koutsogeorgou@hotmail.com](mailto:e_koutsogeorgou@hotmail.com)

**Gregor Maxwell**, Harstad University College | [gregor.maxwell@hih.no](mailto:gregor.maxwell@hih.no)

**Marta Moretti**, University of Zurich | [marta.moretti@access.uzh.ch](mailto:marta.moretti@access.uzh.ch)

**Maria Aluas**, Babes-Bolyai University, Cluj-Napoca | [maria.aluas@gmail.com](mailto:maria.aluas@gmail.com)

**Rui Quintas**, Neurological Institute Carlo Besta IRCCS Foundation, Milan | [rui.quintas@istituto-besta.it](mailto:rui.quintas@istituto-besta.it)

There is a current worldwide trend in policy-making which aims in community building through the strengthening of social networks and social capital, in general, which together with upgrading of employment and business development can contribute to tackling the challenges of the current challenging economic situation face in many parts of the world. Based on this argument, the present paper explores the association of social capital and inclusive education policies with health, disability and functioning. The model proposed for this purpose is the biopsychosocial model of the World Health Organization's International Classification of Functioning, Disability and Health Children and Youth Version (ICF-CY). A methodology of linking recommended social capital indicators and selected documents of national inclusive

education policies of European countries to the ICF-CY classification of has been followed. The social capital indicators used in the linking process referred to formal and informal networks, general and institutional trust, and civic norms. The outcome of this process showed that social capital and inclusive policies associate theoretically, while in practice they could potentially associate through the use of a common language such as the ICF-CY. Results indicate that the ICF-CY has been shown to be a useful tool for assessing social capital indicators and inclusive education policies in terms of health and its related topics. The association and use of social capital and inclusive education policies with regard to health, disability and functioning will be discussed.

## **Social Origin and Learning Performance: a Multilevel Analysis Using PISA.**

**Rosario Scandurra**, University of Barcelona | [rosario.scandurra@gmail.com](mailto:rosario.scandurra@gmail.com)

In most advanced countries the education system fulfills economic functions, cultural functions and social functions. The sociology of education has found how education system fails to completely neutralize starting

inequalities, despite the efforts of public investment and provision of resources. The persistence of social origin as a determinant of learning and academic performance has been monitored from the 60s and 70s (Coleman,

Jencks, Bourdieu & Passeron) until the present day (PISA). Data from PISA research program, that assesses the educational capabilities of fifteen students in OCDE countries, have confirmed again the determinant of socioeconomic context background to explain the inequality of learning achievement (Duru-Bellat, 2004; Gorard, 2004). PISA data allow more specific analysis and give chance to interrelate socioeconomic background factor with organizational and educational variables of schools. Dupriez & Dumay (2004) conclude that inequality of outcome is determined more by the social composition of schools than by their

organizational and educational mechanisms. In this paper I examine how variance between schools and within schools diverges between OCDE countries and I focus on some factors that are crucial to explaining these differences. This paper is structured as follows. First, I make a brief introduction and justification of the chosen topic to be completed by a brief references to the literature. Afterwards, I will analyze variance of PISA 2009 students competencies through a general multilevel regression for all OCDE countries, being my dependent variable plausible values in mathematics. I will conclude with brief prescriptive conclusions.

## **Students' Trajectories in Upper Secondary Education: Factors and Processes that Affect or Benefit School Failure and Success**

Patrícia N. Amaral, ISCTE - University Institute of Lisbon | [patricia.amaral@iscte.pt](mailto:patricia.amaral@iscte.pt)

As part of on-going doctoral research puts in evidence the relevance of the sociological problems of success and failure in upper secondary education, focusing on an analysis of the factors and processes that affect or benefit the school careers of young people in a multidimensional perspective and based on three levels of analysis: structural, institutional and individual. In a context of finalization of this education cycle, and transition to higher education and/or the labour market, the relevance of studying the Students' trajectories assumes particular interest if we consider the increasing openness to new possibilities of training in upper secondary education in order to tackle school failure and reduce social inequalities in education. The research focuses on a methodological strategy of intensive and

qualitative nature, which requires auscultation of various school actors. The analysis' component of the biographical Students' trajectories take the central core of this research, seeking access to the intra-individual and inter-individual of attitudes and values and taking into account the different contexts of young people's socialization. The present Communication aims to present the first results of the empirical work, more specifically, biographical interviews for final year students of public upper secondary education, in order to capture the dimensions that influence students' educational trajectories, and identify the component of experiential and subjective young people according to the space and time in which they occur, and people with whom they interact.

## **School Capital in the Building Educational Resilience of Economically Deprived Students in Baltic States**

Ieva Karklina, University of Latvia | [ieva@petijums.lv](mailto:ieva@petijums.lv)

Aleksandrs Aleksandrovs, University of Latvia | [aleksandrsa@gmail.com](mailto:aleksandrsa@gmail.com)

The purpose of this paper is to identify aspects of school economical, human, cultural and

social capital that positively influence educational competitiveness of economically deprived students in Baltics and to realise opportunities to increase achievements through building social resilience of economically deprived low achievers. The data from OECD PISA 2006 on students' educational achievements in science and aspects of school capital affecting them are analysed. According to research results, economically deprived families in Baltic are not a homogeneous group. There are families whose members communicate mostly within very narrow interaction network, distance themselves from the local activities and society in general and have lost any future perspective struggling for survival. At the same time there are some families in similar material situation, but who are making efforts to promote children's

intellectual development, looking for ways to achieve short term initiatives, as well as planning their children's further education. In relation to that there are a certain number of socially resilient students – children from economically deprived families who despite of all difficulties and problems caused by the material deprivation are capable to meet the high educational achievements. Focusing on the daily life in science teaching and school activities to promote science learning are very important, but teacher professionalism and ability to contribute to poor student motivation, build self-esteem are critical factors of school capital that can help to reach higher educational competitiveness for socially non-resilient students and therefore – to reduce inequality in general education of Baltics.

## Webometrics Ranking: the Dynamics of Network Activity of World Universities

**Olga Karpenko**, Modern University for the Humanities | [dn@muh.ru](mailto:dn@muh.ru)

**Margarita Bershadskaya**, Research University - Higher School of Economics | [beriandr@mail.ru](mailto:beriandr@mail.ru)

The openness of information on achievements in educational and research activities of world universities in modern conditions is of paramount importance not only for the modernization of education, but also in the context of financial constraints related to the economic crisis. The main ideas which have been initially put in Webometrics Ranking is the growth of online of publications; communication expansion between scientists and teachers; the formation of new connections ; the speed, simplicity and efficiency of information exchange. All these important indices have led to notable results which we recorded in the analysis of the dynamics of network activity of universities, particularly universities of Russia. We also consider a new aspect of leadership of higher education systems of countries - not only for

individual universities- leaders, but for the full range of universities in the system. Taking into account the magnitude of the higher education system, Russia for the first time comes to leading positions. The main conclusions of the review of the results of the dynamics of Russian universities in the period 2007-2013: 1) By number of national higher education institutions among 5000 best universities of the world Russia enters in the top ten since 2007. 2) Development of the network activity of Russian universities promotes intellectual development of the regions. In 2012, of the Russian higher education institutions included in the 2000 best universities in the world, universities of all federal districts of Russia are presented; 3) The important feature of network activity of regional universities - high ranking indicator "OPENNESS"

## Does Workplace Training Mitigate Inequalities in Earnings?

Rossella Icardi, University of Southampton | [r.icardi@soton.ac.uk](mailto:r.icardi@soton.ac.uk)

During periods of crisis the level of inequalities and individuals wage disparities may enlarge, this leading to a change in lifetime earnings trajectories. Within the literature a common agreement exists about the role of education as a strong predictor of employee's future wages. Far less is known about whether another element of human capital formation, namely workplace training, has an effect on earnings and, if so, to what extent this might redress the gap in wages individuals experience due to their different educational histories. My paper deals with a comparative analysis of the effects of workplace training on wages of employees presenting diverse schooling backgrounds. In particular, I focus on the distinction between vocational and general education. Vocationally educated individuals might be expected to experience lower starting wages if compared with their

generally educated peers, however they may profit more from training events due to a higher specialization and consequent increased productivity they may achieve through a further training event on the job. This is explored through a cross-country comparison between Germany and the United Kingdom, due to their opposite educational and skills provisions systems. The latter focuses mainly on the provision of general education whereas Germany presents a schooling scheme with a neat segmentation between the academic and vocational stream. Using the two national panel datasets respectively, I investigate whether training has a diverse effect on vocationally or generally educated individuals' earnings comparing pre and post crisis periods, so to account for any change possibly caused by the economic instability.

## The Introduction of Vocational Courses in Public Schools: Pupil's Social-Educational Profile

Alexandra Duarte, ISCTE-IUL, Lisbon | [alexandra.duarte@iscte.pt](mailto:alexandra.duarte@iscte.pt)

This text is a PhD thesis reflection and is about the decision-making to introduce professional courses in Portugal public schools. In a context of a secondary education with many problems, it is important to understand the contribution of this policy for the reconfiguration of the educational system, to improve school performance and to diversify educational provision, responding to the expectations of different public schools and promoting equal opportunities. Despite the positive trend observed in the last decade, the lack of qualification of population is still recognized as the key obstacle to development of the country. That is why Portuguese policy makers decided to establish some education policies for young people, based on logic of promotion of secondary education as minimum education

level, introducing compulsory education of 12 years for young people under 18. This policy combined by a crisis in access to the labor market for young people bring new challenges to secondary education. The process of enlargement and diversification of secondary education was seen as the politics alternative to respond to this challenge. This paper reflects about the implementation of vocational courses in public schools in an adverse context, i.e., a secondary education strongly oriented for higher education, and where the social perception of these courses was very negative. We reflect on the impact of the generalization of the vocational courses in promoting a greater diversity of public school. For that, we mobilize data collected through a questionnaire applied in some schools,

analyzing the pupil's social origin and school trajectory, comparing them with the reality of national official statistics.

## Roma Minority in Polish Educational System - Social Context

**Joanna Grzymała-Moszczyńska**, Jagiellonian University, Cracow | [j.grzymala.moszczyńska@gmail.com](mailto:j.grzymala.moszczyńska@gmail.com)

**Krystian Barzykowski**, Jagiellonian University, Cracow | [krystian.barzykowski@onet.pl](mailto:krystian.barzykowski@onet.pl)

**Halina Grzymała-Moszczyńska**, Jagiellonian University, Cracow | [uzgrzyma@gmail.com](mailto:uzgrzyma@gmail.com)

**Magdalena Kosno**, Jagiellonian University, Cracow | [kosno.magdalena@gmail.com](mailto:kosno.magdalena@gmail.com)

**Daniel Dzida**, Jagiellonian University, Cracow | [daniel.dzida@gmail.com](mailto:daniel.dzida@gmail.com)

Due to the recent media reports and Roma minority NGOs, Roma children are neglected equal rights to education in Polish system of education, as they are disproportionately streamed into special schools (in some parts of the country as much as 37 percent of Roma children who are attending primary schools are located in such schools). According to them it is due to racist practices and erroneous psychological diagnosis based on Polish language verbal intelligence tests (WISC-R). Presented research addresses issue of educational functioning of Romani children attending mainstream and special primary schools. The objective of the present research was to identify systemic barriers to fulfilling the equal rights to education of Roma children in Poland. There were 25 interviews with Roma parents and 57 interviews with school staff conducted. Among the most important factors

affecting the situation of Roma children in the Polish system of education, the following were identified: (1) low socio-economic status of Roma families and cultural values' differences between Roma minority and mainstream society concerning the importance attributed to education; (2) attractiveness of financial benefits resulting from the diagnosis of a child's disability for families, and therefore a preference for placing children in special schools among many Roma parents; (3) lack of preparation of school staff and psychologists to work in a multicultural school environment, and lack of knowledge about creating a psychologically- sound diagnosis of culturally-diverse children; In the end, there will be recommendations formulated, the implementation of which would lead to the better inclusion of Roma children within the mainstream educational system.

## RN11 - Sociology of emotions

### 01RN11 - Theorizing Emotions

Chair(s): Katharina Scherke (University of Graz)

#### Developing a Theory of Collective Emotions

Christian von Scheve, Freie Universitaet, Berlin | [scheve@zedat.fu-berlin.de](mailto:scheve@zedat.fu-berlin.de)

Collective emotions arise in many groups and societies and become evident in gatherings, crowds, or responses to certain events. Still, they are little understood and conceptualized in scientific terms. I provide some initial steps towards a theory of collective emotions. I will review accounts of the social and cultural constitution of emotion that contribute to understanding collective emotions from three

perspectives: face-to-face interaction, culture and shared knowledge, and social identity. In discussing their strengths and shortcomings and highlighting areas of conceptual overlap, I translate these views into a number of mechanisms that explain collective emotion elicitation on the levels of social cognition, behavior, and social practices.

#### The Effects of Euphemisms on Thought, Emotions, Action, and Interaction

Juha Klemelä, University of Turku | [jklemela@utu.fi](mailto:jklemela@utu.fi)

In my presentation I will treat linguistic euphemisms, and the consequences or non-consequences of their use in speech and written word for peoples' cognition, emotions, action, and interaction. The term "euphemism" refers to an alternate or roundabout expression used to substitute another expression, that has come to be regarded as somehow negatively charged or "politically incorrect." Euphemisms are used in all kinds of social contexts, but their use is especially salient in economic, political, and administrative – "official" – speech. There is both latent and manifest intentionality in the

use of euphemisms. Their (possible) effect to action and interaction may be seen as mediated through emotions. The likely emotional consequences of euphemism-usage are but ambivalent. They can both inhibit fears, anxiety, and envy, but also produce irritation, or even shame and guilt. In my presentation I will study the functions of euphemisms conceptually and treat more closely a few cases of euphemistic expressions. I will also ponder about the possibilities for the further study of euphemisms and their functions, and language use in general, to be conducted in the realm of the sociology of emotions.

#### Nostalgia: Emotional Strengthening of Social Bonds by Usage of Objects

Katharina Scherke, University of Graz | [katharina.scherke@uni-graz.at](mailto:katharina.scherke@uni-graz.at)

Nostalgia: Emotional strengthening of social bonds by usage of objects There is an amplified

retro trend in design and fashion in the last years. People are enthusiastic of buying products which look old or similar to old things but have all the advantages of new products. Why are people interested in consuming retro-products or celebrating retro-parties? It is worthwhile to have a closer look at the emotions which form the background for this trend. Nostalgia is one of them. In social psychology the capacity of nostalgia to strengthen social connectedness was stressed already. Besides this, nostalgia is often connected with a preference for specific

objects. There is a growing interest in objects in sociology. Objects seem to have special social functions for individuals beyond their visible usage. People use objects to perform their self-concept, objects help them to distinguish them from others and there is also an emotional attachment to objects. The paper is going to concentrate on the ability of objects to cause nostalgia and to stabilize social bonds thereby. Ideas of Bruno Latour, Randall Collins and of current research in social psychology will be combined in explaining some features of the current retro-trend.

## Emotions of Finance from Social Surveys and Economic Theories

Jocelyn Pixley, The University of New South Wales | [jocelynpixley@gmail.com](mailto:jocelynpixley@gmail.com)

Peter McCarthy, Macquarie University | [peter.mccarthy@mq.edu.au](mailto:peter.mccarthy@mq.edu.au)

Shaun A Wilson, The University of New South Wales | [Shaun.Wilson@unsw.edu.au](mailto:Shaun.Wilson@unsw.edu.au)

“Depression is a malady of the affections of the business men. That is the seat of the [emotional] difficulty,” said Thorstein Veblen after the 1870-90 Great Depression. This paper looks at two social/theoretical problems. First, we compare Veblen’s account that presages Keynesian policies, which, as Robert Lekachman argued, ‘appear to demand much combined research by social scientists’. It draws on work by economist André Orléan on money’s intrinsic social emotions (authoritative representations, à la Durkheim, Simmel and Simiand), not only the emotions from money’s

uncertainties, and sociological ‘emotions and economy’ literature. Second, the paper introduces recent empirical survey research on well-being and financialisation, e.g. on the despair followed quite rapidly, in a counter-intuitive sense, by bleak acceptance of poverty to the post-2008 financial crisis in the US. Also we discuss indications of ‘anxiety and mistrust’ in other significant work. To round up the argument, we return to Veblen’s and Keynes’s views on business ‘men’, bankers and traders. The paper thus combines studying up with the converse, population surveys.

## Of Political Emotions

Nicolas Demertzis, University of Athens | [ndemert@media.uoa.gr](mailto:ndemert@media.uoa.gr)

Ever since late 1990s, the ‘emotional’ or ‘affective’ turn has gradually altered fundamentally the way academic community conveys political analysis. It has contributed to the postulation that in all its modalities, that is, action, thought, discourse, rhetoric, institutional setting – be it contentious or consensual- politics is ultimately affective in nature. Not infrequently, this has been

designated by word ‘political emotions’. Yet, unlike political philosophers, political sociologists of emotions political sociologists of emotions have left the notion of ‘political emotion’ highly under-theorized. In order to minimize vagueness and ambiguity, this paper puts forward a genus and difference intentional (or connotative) theoretical definition on the basis of which a distinction is made between

salient political emotions/sentiments (or political emotions proper), on the one hand, and politically relevant emotions, on the other. It is argued that political emotions are

relational and social since they are elicited from asymmetrical figurations of power and are triggered by appraisals that make a reference to other people.

## 02RN11 - Emotions, Power Relations and Moral Orders

Chair(s): Sylvia Terpe (University of Halle)

### The Dark Sides of Hope

Sylvia Terpe, University of Halle | [sylvia.terpe@googlemail.com](mailto:sylvia.terpe@googlemail.com)

Hope seems to be a very positive emotion. Besides faith and love, it is one of the central virtues in Jewish and Christian theology which gives solace beyond death (Moltmann 1964). In the literature on social movements hope is depicted as a necessary prerequisite for action, as it is “the anticipation that struggle will produce positive results” (Summers-Effler 2002: 53). While hope seems to have an empowering and motivating effect, the loss of hope is associated with senselessness of action and despair (Gould 2009: chap. 7). While these notions describe a dominant cultural pattern of hope, the aim of my paper is to explore divergent interpretations of hope with a special emphasis on two interrelated facets. The first one is contained in the epitaph of the writer Nikos Kazantzakis who says: “I hope for nothing. I fear nothing. I am free.” From this

perspective hope is perceived as a constraining and inhibiting emotion: as long as it refers to an unsure future, it allows for the possibility of failure and loss; but as long as one clings to the idea of a better future one is susceptible to fear of losing the desired objects or states. Hence hope is corruptible via emotions of fear. A similar idea is spelled out in the autobiographical novel “Revenge is Mine” by Friedrich Torberg (1943), who points to a second interrelated feature. Torberg describes the perfidious strategy of a Nazi commander who takes advantage of each prisoner’s individual hope for survival and hence successively destroys group solidarity in the so called “Jews’ barrack”. I will discuss how these notions of hope can contribute to our understanding of this emotion and sharpen its theoretical conception.

### The Politics of Humiliation. Shame as an Instrument of Political Control in Neo-Social Poverty Economies

Stefan Selke, Furtwangen University | [ses@hs-furtwangen.de](mailto:ses@hs-furtwangen.de)

Based on the results of a 2-year research project on donations of food (food banks/food pantries) and similar donations to poor economies, a theoretical model of humiliation as a means of normalisation of precarious circumstances of life is produced. Although objective aspects of poverty do appear as a

subject of public debate, the subjective dimension of those affected has been relatively little researched (Becker/Gulyas 2012). On the empirical basis of the samples in this case (120 qualitative interviews), shame can initially be classified as an endogenous indicator of personal crisis situations (Selke 2013). On the

other hand, humiliation can be understood as the complementary endogenous process (Boley 1998). Legitimation and recognition of the structures of power and dominance that form the basis of one's own shame are connected to this (Neckel 2009). This represents the thesis that humiliation can be used as a targeted tool to apply discipline to hardship. Systematic humiliating circumstances can be set up and used in routine and reliable forms. Humiliation can therefore be understood as an ordering mechanism for reducing contingency. Simultaneous upgrading of strategies of

subjectivation and moralising fits into neo-social (de)activation logic. The paper explains how these humiliation forms work on the basis of the author's own empirical data in the context of a sociology of practices (praxeology). The aim is to show that a society that has a crisis and institutionalizes humiliation no longer recognises citizens as self-determining subjects but uses them as objects that can be manipulated, thereby intensifying social processes of exclusion. The presentation concludes with the question of emancipating counter-strat

## Shame, Perpetrators and the Question of Morality

Stephanie Bird, University College, London | [stephanie.bird@ucl.ac.uk](mailto:stephanie.bird@ucl.ac.uk)

In this paper I explore how, by understanding shame as an emotion of the self, we can fundamentally question the frequently suggested relationship of shame and morality. Taking as a starting point both Elias's analysis of shame as regulatory and Leys's disquiet concerning the shift from guilt to shame in theories of the subject, I argue that shame is an emotion that shatters the self (Copjec). By drawing parallels with trauma theory I argue that rather than privileging shame as a sign of our ethical being or humanity (Levinas), or as an emotion that upholds moral values, the destructive role of shame can be pivotal in leading to abusive and immoral behaviour. Against the background of recent historical work on Nazi perpetrators pointing to the role of shame in facilitating an individual's willingness to participate in genocidal acts, I

return to Musil's *Die Verwirrungen des Zöglings Törleß* as offering a complex analysis of shame and immorality. The novel depicts the torture and abuse of one boy by three of his peers, and reveals that shame, far from being effective in its regulatory effect, is implicated in the perpetration of abuse. Crucially, the refusal of the narrator to offer explicit moral judgment of the abuse is a rejection of a moral discourse that depends upon shame and shaming. This literary text thus suggests that shamelessness, understood as an unflinching rejection both of shaming practices and of the valorization of shame as moral, itself assumes an ethical dimension. In conclusion I argue that shame negatively sustains group values by masking them as moral, whereas shamelessness unmasks the relationship of hierarchy and morality.

## Shame and Politics. Case Study: Rejection of the Civil Partnership Bill as a Cause of Declared Shame among Liberals.

Katarzyna Chajbos, Adam Mickiewicz University, Poznan | [katarzyna.chajbos@yahoo.com](mailto:katarzyna.chajbos@yahoo.com)

In January of the current year, Polish parliament rejected three bills on civil partnerships. Parties who voted in favor of passing are firm liberals and socialists. The

voting result has caused deep splits within parties but more importantly, a vivid burst of emotions among politicians and society in general. A great number of people expressed

strong shame and embarrassment due to the decision of parliament. Causes of the declared shame were connected to the rejection itself (as a proof of democratic immaturity) but also to homophobic acts and attitudes that followed the voting. In my presentation I would like to indicate different theoretical approaches that could provide a helpful lens to look at the problem. If allowed, I will propose to focus on several issues that seem to be of key importance to shame analysis in the mentioned context. Firstly, I would propose to focus on personal and national identity of Polish liberals

to indicate how the shame of failure, assessment, and unfavorable comparison with other nations emerges and how the shame itself could constitute a litmus paper to define the both mentioned (referring to G. Simmel, J. Tangney, I. Goffman). Secondly, I would like to discuss instrumental usage of shame in the battlefield of political and emotional domination (referring to R. Collins, A.R. Hochschild). Thirdly and lastly, I would like to point out emotional circles that emerged among the group protesting against the voting results (referring to Ch. Cooley, H. Lewis).

## 03RN11 - Morality, Values and Emotions

Chair(s): Sylvia Terpe (University of Halle)

### Emotional Skills Management in Business Organizations as a Moral Issue

Agata Dembek, University of Warsaw | [agata.dembek@gmail.com](mailto:agata.dembek@gmail.com)

Both the theories of contemporary corporate organizations and the management theories accentuate and elaborate the importance of the so-called soft skills, particularly emotional and interpersonal competences. They are presented as personal resources, as well as human resources of a company, and – as professional skills – are required both from employees and managers. Additionally, for the sake of measurement and evaluation they are described with the use of behavioural indicators. This phenomenon may be accepted as one of the most characteristic examples of the ontologization of emotions, i.e. their abstraction from the individual so that they could be measured and managed (Illouz 2007). The paper presents findings of the qualitative research conducted in 2011-2012 aiming at reconstruction of understanding and practices

of emotional skills management of Polish business trainers, HR managers and HR consultants from different companies and organizations. The deepened interviews proved that professional emotional competences are far more often perceived and evaluated on the moral than on the economical level, and conceptualized with the use of moral categories instead of economical ones (such as effectiveness, use value etc.). The argument is that in spite of the adequacy of Illouz's concept of ontologization on the discursive level, the practices and everyday experience of work in contemporary corporate organizations prove the important moral entanglement of soft and emotional skills management. Illouz, E. (2007). *Cold Intimacies: The Making of Emotional Capitalism*; Cambridge, Malden: Polity Press

## The Emotional Character of Normative Change: Fear, Anxiety and Non-Sectarian Mothering in Belfast's Inner City.

Lisa M. Smyth, Queen's University, Belfast | [L.Smyth@qub.ac.uk](mailto:L.Smyth@qub.ac.uk)

How do mothers in Belfast cope with the tensions generated by normative change, as they go about raising their children? This paper focuses on the shifting dynamics of fear and anxiety shaping the attitudes and actions of working class and poor mothers in Belfast's segregated and historically violent inner city. As Elster argues, social norms are important in motivating how we act, coordinating our expectations through their 'emotional tonality' (1989:97, 128). Our efforts to avoid or minimize feelings of anxiety, as well as those of guilt, shame, and embarrassment, reveal the authority of specific social norms, as we struggle to avoid censure for non-compliance. These negative emotions constitute the crucial feedback mechanisms shaping action and interaction in social life. This paper explores

the various ways in which mothers cope with the tensions between a relatively new social norm of non-sectarianism, and a long established moral norm that parents should protect children from harm, including from sectarianism. This generates a conflict between the effort to avoid reproducing the sectarian bitterness shaping attitudes and relationships between Catholics and Protestants, and the observation of a moral duty to instil reasonable fears in their children, as they educate them to recognise, and so avoid, potential sectarianism. The struggle to restrain long-established sectarian fears and anxieties, in the face of uncertainty and mixed expectations about what non-sectarianism might involve, provides the focus of attention.

## Emotional Facets of Conscience and Corresponding Personality Scales

Sylvia Terpe, University of Halle | [sylvia.terpe@googlemail.com](mailto:sylvia.terpe@googlemail.com)

Helmut Thome, University of Halle | [helmut.thome@soziologie.uni-halle.de](mailto:helmut.thome@soziologie.uni-halle.de)

Various conceptions of conscience in philosophy and psychology emphasize its relation to feelings like guilt, shame or anxiety. These feelings are seen as the emotional manifestations of a moral judgement, in which people sense their real or imagined behaviour as wrong or bad. However, in our survey with more than 1000 persons around 40 percent of them described their conscience as mainly "confirming" or "encouraging" in response to a standardized question. In contrast to existing theories this result indicates that positive feelings go along with experiences of conscience as well. Furthermore, only 20 percent of our respondents chose the options "burdensome" or "discouraging" and 30 percent reported mixed, i.e. positive and negative experiential qualities attributed to their conscience. Although we cannot assess

the 'specificity' or 'representativeness' of our sample, we want to illuminate the following two questions in our presentation. First, what are the specific emotions associated with the preset options mentioned above? A first analysis of about 500 open answers presenting reports on experiences of conscience in everyday life reveals (besides guilt and shame) a vast array of feelings ranging from e.g. helplessness, disappointment, pity and uncertainty up to relief, satisfaction and happiness. Second, are there specific individual characteristics that correspond to the perception of these positive and negative feelings emanating from conscience? In particular we want to address the question whether value orientations, mode of internal reflexivity and perceived loneliness can predict these various emotional qualities in

experiences of conscience.

## 05RN11 - Emotions in Institutional Settings

Chair(s): Jochen Kleres (University of Gothenburg)

### The “Quality Agenda” and the Transformation of Social Relationships in Danish Kindergartens.

Poul Poder, University of Copenhagen | [pp@soc.ku.dk](mailto:pp@soc.ku.dk)

With the rise of New Public Management Danish kindergartens are increasingly required to formulate institutional goals and then systematically pursue them through ‘learning plans’, documentation, and evaluations pursuing the “quality agenda” in modern society (Dahler-Larsen 2008). Pedagogues have been concerned that quality measures divert them from time with the children, and existing research has documented this reservation and other negative effects such as subjugation and frustration among employees (Willig 2009, Andersen et. al 2008). The present paper analyses empirical material generated by semi-structured interviews of employees and managers of 6 kindergartens, who were asked how learning plans, goals, evaluation and documentation influenced their social relationships. This paper, then, shows that group solidarity, pride, professional self-

confidence, collective identity and skills are engendered by engaging in various quality measures. Drawing on Collins interaction ritual theory and Hardy, Lawrence & Phillips' (1998) further elaboration of the interacting links between discourse and action it is shown how emotion, identity and skills in the studied kindergartens is transformed qua focused interaction rituals and discourse that translate municipal demands into locally meaningful initiatives. Thus, constructive effects can be detected when focusing on social relationships from emotion sociological perspective that grasp how social relationships are transformed (not necessarily frustrated) through working on ‘quality measures’. This result puts the quality agenda in a new light by recognizing that which effects emerge, depend on how the quality agenda is locally managed and which interaction rituals accompany it

### Emotions and Professional Orientation of the Criminal Police Officers

Tetyana V. Ivanova, Sumy State University | [sociol\\_tanya@mail.ru](mailto:sociol_tanya@mail.ru)

Socio-demographic indicators, professional and emotional state of the criminal policemen of Ukraine are analyzed. High level of emotional disorders is not typical for those asked, but about half of the respondents have unexpressed emotional dysfunction. Sthenic (anger) and asthenia (anxiety) emotions occur with equal frequency. With increasing of the length of time worked, respondents’ anxiety

increases, too. Emotional characteristics of the respondents have an important role in professional activities. This is true not only for the process of communication, interaction with colleagues, subordinates or detainees. There is certain connection between the assessment of emotional features and professional capabilities and needs, and with a focus on professional development. Three groups were

identified: 1) respondents who acknowledge the communication problems, but are not interested in getting knowledge in order to resolve them (emotionally unstable), 2) respondents with communication problems who focused on obtaining the necessary

information to resolve them (emotionally stable ), 3) respondents who deny any communication problems and needs in getting professional knowledge, but formally agree with the necessity to obtain such knowledge (emotionally super-stable).

## Deeds, Emotions and Motivation: Understanding Violent Agency

Suvi K. M Ronkainen, University of Lapland | [suvi.ronkainen@ulapland.fi](mailto:suvi.ronkainen@ulapland.fi)

The cultural perspective on violent events leads to an assumption that a violent offence – the violent deeds and the amount of violence used in the situation – is dependent on the emotional state of the offender and the situation in which the offence occurs. In the presentation I will explore the conceptual linkage between emotions and motivation of violence. The paper is based on the large qualitative material that consists of police accounts on violent events during the years 1995-2011 (N=1154). The material has been categorized and coded for quantitative

analysis, which has been used for to typify different violent profiles. After groupings by the cluster analysis I have analyzed qualitatively the incidences for to identify motivational and emotional statements that explained why the act of violence was committed. In the paper I will present three different trajectories of violent life histories looking at what happens to the deeds (who are the victims, type of violence etc), motives and emotions. The theoretical aim is to look at the construction of agency in the context of justice system.

## The Emotional Profiles of the Professional Actors in Swedish Courts

Stina Bergman Blix, Stockholm University | [stina.bergmanblix@sociology.su.se](mailto:stina.bergmanblix@sociology.su.se)

Åsa Wettergren, University of Gothenburg | [asa.wettergren@gu.se](mailto:asa.wettergren@gu.se)

The court room is a space for the taming of emotion with the aim to peacefully resolve conflict, achieved through the careful staging of a ritual in which the legal professions play key roles. Based on theory and research showing that emotions are embedded in most everyday interactions of bureaucratic organizations, we analyse the emotional profiles of prosecutor and judge. 12 judges and 10 prosecutors at two Swedish district courts were shadowed for 2-5 days: observed before, during, and after court trials; interviewed before and after. We show that both professions adhere to the value and principle of impartiality, but not necessarily in terms of non-emotionality. Impartiality is primarily understood as a duty to pay equal attention to

both plaintiff and defendant, and to focus upon the validity of evidence. In the Swedish adversarial judicial system, prosecutors balance between being impartial leaders of the investigation, and being the morally righteous prosecuting party in court; between finding the truth as investigators, and representing a truth in court. The judge disregards truth and focuses on evidence, remaining emotionally distant. Yet some claim to establish 'a bond' of mutual understanding with the defendant that eases acceptance of the sentence. The strictly regulated court ritual sets the parameters for the freedom of the judge to exercise power with a personal style, with an immediate effect on the court atmosphere. The 'institutionalized unexpectedness' of court hearings, on the

other hand, requires advanced emotion management skills of both judge and

prosecutor.

## 06RN11 - Methods

Chair(s): Helena Flam (University of Leipzig)

### On the Geography and Temporality of Emotions

Helena Flam, University of Leipzig | [flam@sozio.uni-leipzig.de](mailto:flam@sozio.uni-leipzig.de)

While the 'regular' qualitative sociology has much advanced our understanding of why it is important to work with autobiographic, narrative material - namely, inter alia, to escape the narrow confines of socio-demographics and prejudice with their pre-set social categories; to gain insight into internalized discourses, norms and values; to reconstruct historical processes the way they were experienced and responded to - the exploration of how one can trace and unearth emotions in this material has only just began. In my presentation I will propose a few 'indicators' of emotions assisted by the

memoirs of an American writer, John Cheever. I will show that it is in principle possible to reconstruct in a systematic way the individual emotional geographies conveyed by what historians call self-narratives, whether these are autobiographies, memoirs, letters or diaries. I will also show how one can study self-narrated emotions over time. Based on my and others' findings, I will raise some theoretical issues, such as, for example, whether language/discourses and feeling rules alone, or even in combination with sanctions, suffice to constitute a feeling rule / emotional regime.

### Feeling the past. Mediated Memories and Emotions

Vivien Sommer, Chemnitz University of Technology | [vivien.sommer@phil.tu-chemnitz.de](mailto:vivien.sommer@phil.tu-chemnitz.de)

The whole world could witness the collapse of the World Trade Center through the media. But when the terror attack actually happened, patterns for adequate emotional reactions were not yet established and internalized. In the aftermath of this event a memory culture was constituted through trans-medial discourses which also determined 'scripted' emotions (Sturken 2007) such as sympathy, mourning and empathy. That's why Thomas Hoepker's photo of a group of young people sitting close to the burning twin towers, appearing to be happy and relaxed, caused such intensive debates on its publication in 2006 about the allegedly 'wrong' emotional reaction of these young Americans. In the light

of this controversy, the question arises, what role emotions play for memory and especially for mediated memories? In my paper I will discuss theoretical approaches by extending concepts of mediated memories (Garde-Hansen 2011; Hoskin 2009; Landsberg 2004; van Dijck 2007) with the theoretical frame of the sociology of emotions (Hochschild 1983; Katz 1999; Thoits 1989). Guiding questions for my discussion and theoretical conceptualization would be: - Is there a difference between media technologies and media forms in their (re-)constructions of emotive mediated memories? This question encompasses both the difference of old and new media, and the different levels of

multimodality in communication– for example mediated memories which are ‘felt through’ a written article compared to a video of the same event. – Media have an emotional potential in terms of illustration of emotions and evoking

emotional reactions on the individual level. How can the interrelation between personal memory and cultural forms of memory be conceptualized?

## Travails, Travels, Leaves: Emotional Dynamics in Fieldwork with Queer Refugees

Eda Hatice Farsakoglu, Lund University | [eda.farsakoglu@soc.lu.se](mailto:eda.farsakoglu@soc.lu.se)

Building upon a steadily enlarging methodological literature on emotions in fieldwork, this paper explores the complexity of emotional exchange between the researched and the researcher in various stages of fieldwork. To do this, I draw on my own ethnographic study with Iranian queer refugees who are seeking asylum based on sexual orientation persecution in the transit migratory space of Turkey as well as create a sense of self and belonging amid the conditions of cross-border mobility. Specifically, in this paper, I aim at reflecting upon two main issues. First, I argue that change and transformation

in emotions of researchers as well as of participants during the course of fieldwork may alter the research process or even affect the research findings as both researchers and participants shift across identities and multiple boundaries in entering and leaving the field, as well as in sharing and collection of data. Second, I suggest that such a more complex investigation of emotions in fieldwork can also be used as data to deepen our understanding about queer refugee migration as it also illustrates the emotional content of this kind of cross-border mobility.

## Video Ethnography in a Glocal Context. A Way to Foster Proximity to the "Others"

Luciana L.T. Taddei, University of Genoa | [taddei.luciana@gmail.com](mailto:taddei.luciana@gmail.com)

The paper discusses the possibility to include video ethnography as a useful method to study emotions empirically. The researcher, in fact, has the possibility to show natural setting and to transmit emotions, that are the basis of social reality. To improve this method we have worked with an antiracist group that is fighting for the regularization of peddlers in Genoa, Italy. This group is self-organized by immigrants, and the majority of them is sans-papier and come from Senegal. The video is recorded both in Italy and in Senegal and try to explain to Italian citizens that they are persons like us. Understand this concept is really important because sans-papiers are strongly criminalized by Italian government, laws and media, and it is fundamental to change the public opinion. Senegalese in Genoa work to send money at home for their bigs and poor

families and, thanks to a lot of strikes, have become a fruitful dialog with the local administration. The central government is strongly repressive with peddlers, and the youngest of them began to choose the drug market, to earn more money and suffer less control. Everyday life is really difficult for them and, overall, it is really different to the life that they have dreamed in Europe and that everybody imagine in Senegal. The paper describes the empirical study and, overall, how a method like video is able to capture the complexity of urban spaces and can transmit, better than others methods, emotions and feelings, to bring people closer to "Others". Potentially, video is a tool that has this capacity and it could be able to make debate and to modify public opinion, at least at local level.

## 07RN11 - Post-Atrocities Emotions

Chair(s): Helena Flam (University of Leipzig)

### It's a Casual(ty) Crisis! – Post-Heroic Handling of Soldier Losses in the German Bundeswehr in Afghanistan

Dinah Schardt, Ruprecht-Karls-University, Heidelberg | [Dinah.Schardt@soziologie.uni-heidelberg.de](mailto:Dinah.Schardt@soziologie.uni-heidelberg.de)

Casualties among own soldiers seem to be a bigger threat than ever in multilateral military operations since the 1990s. Debates declare public casualty shyness as a significant western side-effect of new wars in a post cold war area (Moskos). The modern way of avoiding the term war in political and sociological discussions (Joas / Knöbl) is considered to be responsible for the incapability of so-called postheroic societies to accept casualties (Luttwak). With emerging (mission-related) casualties among German soldiers, a direct link to a decrease of public support has been challenged. Public opinion towards the German troops in Afghanistan is marked by a slowly growing acceptance on the one hand and a broad indifference in the public on the other (Kümmel/Leonhard). However, my empirical results of a qualitative discourse-analysis show that ways of dealing with emerging

military casualties don't appear in spite of but because of calling them a military postheroic crisis. In order to deal with death and injury in preparation for the mission abroad and to draw more attention for military missions in public mass media discourses, the postheroic soldier and the postheroic public are critical rhetoric starting points to dramatize civil-military differences. Fact and risk of soldier's deaths evoke a postheroic crisis management during supervisions and post processing of each mission as well as by the use of mass media. Beyond the context, the latter practical form of civil postheroic communication is far from being exceptional, but a very striking example for new kinds of general problem-solving strategies in modern mediatized societies (Nassehi). In the end, so to say, calling a crisis is already the first step out of it!

### Trauma, Memory and Comedy

Stephanie Bird, University College, London | [stephanie.bird@ucl.ac.uk](mailto:stephanie.bird@ucl.ac.uk)

This paper analyses German-language texts and films that are concerned with suffering as a direct or indirect legacy of the Second World War, and which incorporate a comic dimension in their representation of suffering and trauma, while not being comic texts. The analysis seeks to understand how the comic aspects of the chosen texts and films contribute to the vexed ethical debates around the cultural portrayals of suffering and trauma. Comedy is particularly interesting in this respect precisely because it forces the potentially disturbing bond between

the depiction of extreme events and emotions on the one hand, and the often unacknowledged pleasure they elicit on the other, into stark relief. It is precisely the unashamed association of comedy with pleasure that causes anxiety when representations of trauma and suffering include a comic dimension in their aesthetic. Such anxiety is identifiable not only in the texts themselves, but also in their critical reception, becoming evident in a reluctance even to acknowledge the presence of humour.

Crucially too, comedy offers a sometimes unusual perspective from which to explore how representations of trauma and the memory of traumatic events construct modes of identification that sustain particular group or national identities, including communities of victimhood. Here comedy can function as an aesthetic strategy sustaining emotional norms

of how to respond to trauma and what may be forgotten or remembered. The paper will focus on author W. G. Sebald and documentary film maker Volker Koepp to show how comedy problematizes different emotional regimes and the vested identification behind them: those of melancholy and reconciliation respectively.

## Emotional Infrastructure of Reconciliatory Practices

Joanna Kurczewska, Polish Academy of Sciences | [jkurczew@ifispan.waw.pl](mailto:jkurczew@ifispan.waw.pl)

Jacek Kurczewski, University of Warsaw | [j.kurczewski@uw.edu.pl](mailto:j.kurczewski@uw.edu.pl)

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian - is made aiming at excavating the basic emotional components underlying the successful reconciliation. This involves the discussion of emotions like guilt, hatred, forgiveness, penitence and love. The tolerance is usually assumed as minimal precondition for reconciliation but the ideal reconciliation is linked with the proactive

approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the role and dynamics of the tolerance/love/hatred complex. This is then linked with the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized.

## 08RN11 - Migration and Ethnic Diversity

Chair(s): Mary Holmes (Flinders University)

### Compassion, Loyalty and Affection: Moralizing Emotions, Doing Turkish Family.

Öncel Naldemirci, University of Gothenburg | [oncel.naldemirci@gu.se](mailto:oncel.naldemirci@gu.se)

Migration brings about changes about how people understand and express creatively their emotions. Not only do immigrants ponder their ways of feeling that they consider to be deeply entrenched in their cultural identity, but they also come to interpret emotional scripts they encounter in the country of settlement. Transnational relations and flows of information, stories and experiences lead to changing meanings of taken-for-granted

emotions. These emotions come to shape subjectivities and help us to better understand ethnic identifications in specific contexts. An increasing number of studies attempt to understand how families are 'done' in migration context. Like other early-in-life labor migrants who came to Sweden in 1960s, Turkish immigrants have started to reach older ages and ponder care responsibilities, family relations and filial duties in frail old age. Based

on my ethnographic research with Turkish early-in-life immigrants who settled in Gothenburg (Sweden), this paper will delineate how Turkish family is done through moral emotions, such as compassion (merhamet), loyalty (vefa), and affection (şefkat). These moral emotions recall subject positions for the elderly and their descendents, as required by their perceived ideal of traditional Turkish family consisting of tight relations, while

eliminating some traits which could appear at odds with their identity construction as well-integrated, modern Turkish migrants living in Sweden. In other words, this is a dynamic reconstruction of moral subjectivities in response to care and interdependence, rather than taken-for-granted family roles, in constant dialogue with the norms in the country of settlement.

## **Ambivalence at (Domestic) Work: on the Relevance of “Opposing Affective Orientations” in Immigrant Care Workers’ Life Experience**

Paolo Boccagni, University of Trento | [paolo.boccagni@unitn.it](mailto:paolo.boccagni@unitn.it)

The notion of ambivalence has gained salience in several sociological fields, although its specific relevance and implications as an emotion have been relatively under-researched. My paper explores the significance of this emotional experience within migrants’ life trajectories, through a case study of immigrant women working in personal care in Italy – a highly ethnicized, gendered and “emotionally laden” niche. Building on the narratives of 30 East European women, employed as co-residential paid carers in Northern Italy, I discuss how ambivalence is perceived, constructed and coped with in two crucial realms: first, the work relationships between migrant women and the dependent elderly they care about, which are typically characterized by an expectation of asymmetric familiarity, or of migrants to demonstrate an emotional involvement irreducible to their

formal tasks (and even to the ordinary notion of “emotional labour”); second, and more critically, concerning migrants’ evolving attitudes toward their homeland. The latter simultaneously elicits nostalgia and patriotic affiliation, as well as resentment, mistrust and disenchantment. This ambivalent feeling, together with the ordinary difficulties of everyday immigrant lives, contributes to make their future life projects, in turn, uncertain and reversible. Their limited control on the homeland day-to-day life, while living away from it, is also constitutive of this ambivalent feeling. Given their strong biographic investment in a better future, which is primarily addressed to left-behind kin, resolving this tacit ambivalence – ultimately, opting for the hostland or the homeland as their ‘home’ – is a crucial challenge ahead for migrant care workers.

## **" The Embodied Experience of a Local Minority-Targeted Affirmative Action Project in France: a Reading from the Social Language of Emotions"**

Kàtia Lurbe i Puerto, ENS Lyon & AHPH | [katia.lurbe.puerto@gmail.com](mailto:katia.lurbe.puerto@gmail.com)

Between 2000–2007, 34 Romanian families living in shantytowns in a Parisian suburban area participated in a group-specific local Project of social integration. A four-year socio-anthropological study was undertaken two

years after it ended, including documentary analysis of its archives, interviews with its beneficiaries and the professionals involved, and ethnography among three families with distinct integration histories. Based on the

comprehensive evaluation of the interventions led within the framework of this group-specific local Project, this paper analyses the social stakes inherent to the process of categorization of "Roma" / Gypsies in Europe. It will bring to light, through the analytical deconstruction of concrete scenarios, how moral evaluations rule the distribution of the resources and opportunities provided by the Project. Drawing from this case study, it will intend to answer the following questions: what is the role that emotions plays in the social labeling and production of stereotypes and in the moral economy, which underlies this

Project implementation? In particular, what sociological reading can be given to the numerous scenarios during its implementation that have been described by both the intervention team and the beneficiaries, as moments lived as "sensitive" and of "strong emotional load"? Finally, what do these scenarios inform us about, on the one hand, the experience of applying social control while carrying out a socio-educational initiative targeting a strongly stigmatized minority, and on the other hand, on the experience of shaping identities and emotions in a device that aims at social alternation?

## **Happiness and 'Economic Migration': A Comparison of Eastern European Migrants and Stayers**

David Bartram, University of Leicester | [d.bartram@le.ac.uk](mailto:d.bartram@le.ac.uk)

In a conventional/common-sense perspective, one would expect economic migrants to experience an increase in happiness after migration: life in wealthier countries might be better, particularly for migrants who succeed in improving their financial situation. From the perspective of 'happiness studies', however, migration motivated by the prospect of economic gain is perhaps a misguided endeavor. In general, people do not gain happiness from an increase in their incomes, and migration as a means of gaining an increased income might not amount to an exception to that general pattern. This paper explores happiness among migrants and stayers in a number of European countries, investigating individuals from eastern European countries who went to western

Europe (using data from the European Social Survey). Migrants generally appear to be happier than those who have remained in the countries of origin – but there is evidence that this difference is the result of a greater tendency towards migration among people with higher levels of happiness (thus not a matter of happiness increasing as a consequence of migration). In addition, there is significant variation by country: migrants from Russia, Turkey and Romania are happier than stayers, but migrants from Poland are significantly less happy than stayers. Models that determine whether a correction for endogeneity is necessary suggest that those country-level differences represent increases and decreases (respectively) in happiness.

## **"Gypsy" as a Moral Figure: Ethnic Differences and Moral Hierarchies in East-Central Europe**

Michal Ruzicka, University of West Bohemia | [michal.ruzicka@univie.ac.at](mailto:michal.ruzicka@univie.ac.at)

Current academic and policy-oriented research claims that the Roma (sometimes referred to as "Gypsies" in public discourse) living in

Central and Eastern Europe have been subjected to increasing levels of poverty and marginalization since the demise of the state-

socialist regimes. Predicament of the European Roma has been scrutinized from various perspectives, while attention has been given to the role of factors such as the economic transformation, reorganization of housing markets, neo-liberalization of the state apparatuses, and general discrimination. During my ethnographic research among poor sedentary Roma families in Czech Republic and Slovakia, I have noted the crucial role which emotions and notions of morality play in supporting the existing system of inter-ethnic inequality and inter-group exclusion. I will use

data from my multi-sited ethnographic research to study how the figure of "Gypsy" is being used as a "moral figure" to mobilize strong emotions and sentiments as well as to mark, refresh, and make visible the inter-ethnic boundaries in everyday interactions between the Roma and the non-Roma. Particular attention will be paid to concrete ways how the over-moralized and emotionally laden notion of "Gypsy" / "Gypsies" is being used to (re)produce ethnic differences, inequalities and moral hierarchies by both parties of the social conflict.

## 09RN11 - Civic Action

Chair(s): Åsa Wettergren (University of Gothenburg)

### Between Pride and Resentment. Enacting the Communitarian Citizen through Policy Practice.

Mandy de Wilde, University of Amsterdam | [m.dewilde1@uva.nl](mailto:m.dewilde1@uva.nl)

Research has shown that in the last two decades a shift of responsibilities from governments to citizens and an activation of citizens on many levels such as health care, social assistance, employment and the neighborhood have occurred. One outcome of this process has been the rise of voluntarism and more particular a re-framing and re-enactment of the ideal-type citizen as moral subject of responsible communities. In this paper I ask how citizens are enacted by policy professionals through different policy practices. Drawing on two year of ethnographic fieldwork in disadvantaged neighborhoods, I analyze the policy practice of neighborhood meetings in an Amsterdam neighborhood that is part of the Dutch Neighborhood Renewal Deal. Through these meetings professionals try to stimulate and encourage residents to perform voluntary tasks in the neighborhood.

Moreover, I will argue that in these meetings professionals arouse a sphere animated by fellow feeling and imagine residents to be activated by the capacity to feel and act upon these feelings, rather than the capacity to think and deliberate rationally. Through these practices different 'citizens' emerge. On the one hand the 'hopeful citizen' embodied by migrant women who feel proud to finally be able to participate and recognized by policy professionals. On the other hand the 'resentful citizen' embodied by autochthonous residents who feel unrecognized by professionals and feel publicly displaced by migrant women. I show that the ideal-type citizen that is enacted by professionals singles out other expressions of citizenship, leaving some volunteers in the neighborhood to feel displaced unable to act and a sense of fellow feeling and community far away.

## Feelings of Absurdity and Civic Action

Jochen Kleres, Universität Leipzig | [jkleres@gmx.de](mailto:jkleres@gmx.de)

In this presentation I will conceptualize absurdity as an emotion and investigate its significance for different forms of civic action. It can be understood as the emotional apprehension of the collapse of taken for granted meanings. Garfinkel's breaching experiments can be interpreted as creating feelings of absurdity, even though they focus mainly on secondary emotional reactions to it, such as anger. This is particularly the case in situations where different taken for granted meanings become irreconcilable. Feeling lost and confused in this way, however, can lead to quite different reactions. I will explore some of

these reactions to situations of absurdity with regards to civic action. Drawing on research on AIDS-activism and volunteerism I will show that absurdity has the potential to ignite activism. This is akin to the angered reactions in Garfinkel's breaching experiments. But there are other possibilities, too. Absurdity also has the potential to slowly grind down or discourage civic action. For others, absurdity failed to activate civic action at all. These differences refer to the specific contexts and contingencies of feelings of absurdity and ultimately relate to the difference between activism and volunteerism.

## Role of Emotions in Collective Social Entrepreneurship

Gladius D. Kulothungan, University of East London | [g.kulothungan@uel.ac.uk](mailto:g.kulothungan@uel.ac.uk)

Emotions in social theory have been both underrated and neglected as a subject of study with "the assumption that emotions are obstacles to the progress of reason towards truth and that they cloud the vision of intellect and ultimately limit freedom" (Fiumara, 2001). When it comes to social entrepreneurship – the solving of intractable social problems in community settings – the social causes and consequences of human emotions become extremely important as researchers have started constructing theories of entrepreneurial action where social interaction and emotions are the key variables (Goss, 2005). The social groups and collectives that embark on these collective social problem solving can be considered genuine cognisors and knowers as well (Lehroodi, 2007). What then distinguishes these social groups from other collectivities like mere populations (sets

of people with common features) is that they are capable of action in the manner of a corporation or association. This research paper looks at two case studies of such collective social enterprises – one in the UK and the other in Denmark – and argues: 1. Social interactions amongst the social actors lead to a 'collectivity' that engenders specific collective affects(emotions) – of solidarity, belonging, security, hope, sense of possibilities – which determine certain types of 'collective cognition'. 2. There is a collective 'sense making' – within a collectively built 'cognitive frame' – which leads to a collective 'problem solving' innovation based on that sense making – confirming that 'it is through the subject's active exchange with others that emotional experience is both stimulated in the actor, and orientating of their conduct' (Barbalet, 2004)

## 10RN11 - Emotions in Intimate Life

Chair(s): Stina Bergmann Blix (University of Stockholm)

### Emotions, Imagination, and the Time between Us - The Meaning of Emotions in the Intreplay between I and You of Electronic Communication

Francesc Núñez-Mosteo, Open University of Catalonia | [fnunez@uoc.edu](mailto:fnunez@uoc.edu)

Swen Seebach, Open University of Catalonia | [swen.seebach@gmail.com](mailto:swen.seebach@gmail.com)

Natàlia Cantó-Milà, Open University of Catalonia | [ncantom@uoc.edu](mailto:ncantom@uoc.edu)

In this presentation we will discuss the meaning of imagination in the moments of waiting for one's partner's answer in electronic communication. We will try to show in how far these moments of waiting, this time between us, these moments where we start to daydream or to long, how Campbell (1987) says, take place in certain emotional settings, made of experienced moments, feeling rules, and idealised possible and impossible scenarios of what is going to come. These emotional settings, regulating our emotions, allow certain imaginations whilst they make other imaginations impossible. This individually regulated interplay between

emotions, imagination and the other as a realisation (or not realisation) of the imagined is in fact a good part of what an electronic relationship is made of (Ben Ze'ev, 2000 and 2004, Illouz, 2009). However, the isolation and the rather individually experienced emotions in moments of longing for an answer makes it difficult to satisfy the longing individual when the answer finally arrives, and is a problem in the creation of a shared bond of love. The Presentation will discuss the issue on the basis of 106 interviews: 48 from Barcelona, 7 from Madrid, 6 from Valencia, 4 from Bilbao, 34 from Berlin (34) and 7 from Freiburg.

### Emotionally Reflexive Intimacy in a Global Context

Mary E J Holmes, University of Edinburgh | [mary.holmes@flinders.edu.au](mailto:mary.holmes@flinders.edu.au)

Emotional reflexivity is a capacity to interpret and act upon emotions that becomes increasingly essential within globalised modes of life. Globalisation entails more and faster links between parts of the globe, and a general organising and perception of life in more global terms. It is characterised by high levels of geographical mobility. There have been those who argue that such uprooting of people from settled connections to place and community make it difficult to form and maintain intimate relationships. Others have suggested that as traditional practices lose their exemplary force, individuals must design their own ways of living. However, despite some degree of

detraditionalisation, tradition, place, people and feelings all limit the free reign of individual intimate choices. Deliberating about what to do within these free but forced global social conditions makes emotional reflexivity necessary in forming and maintaining relationships. It is argued that Symbolic Interactionist approaches can provide a basis for a more emotional, embodied and relational model of reflexivity as exercised in intimate lives within a global context. Some insight into these reflexive processes will be given by drawing on interviews with couples in distance relationships.

## Prosumer of Emotions. Love and the Emotional Production Regime of Online Dating Platforms.

Kai Dröge, Institute for Social Research, Frankfurt | [k.droege@em.uni-frankfurt.de](mailto:k.droege@em.uni-frankfurt.de)

Olivier Voirol, Goethe Universität / University of Lausanne | [Olivier.Voirol@unil.ch](mailto:Olivier.Voirol@unil.ch)

In recent years, “online dating” has become one of the few profitable sectors of the digital economy. The business model here is quite distinct: In fact, intimate emotional relationships are the main “product” of dating platforms. In practice however, these relationships are produced by the actual users. Their activity can be regarded as a form of “emotional labor” (Arlie Hochschild), because it produces a surplus value that is a vital part of this particular business model. As a result, the roles of producers and consumers merge; members of dating platforms become “prosumers of emotions”. Based on our own

empirical research in the field of online dating, the presentation will analyze the tensions between love and emotion work in general as well as the specific emotional production regime of dating platforms, which not only tends to spur emotions but also to transform them into productive emotional labor. Regarded this way, online dating appears as a current and outstanding example for a general trend in today’s capitalism to intensify the use of emotions as a source for economic value creation. (would also fit in “13RN11 Mediated Emotions”, but may be better here)

## 11JS25 - Joint Session Social Movements and Emotion

Chair(s): Marianne van der Steeg, Jochen Kleres

## Paradoxes of Emotional Evaluation of the Soviet History in Protesting Political Discourse of Modern Russia

Nataliya Grigorievna Repina, Russian State Social University | [repina-nat@mail.ru](mailto:repina-nat@mail.ru)

The political life of modern Russia in recent years has increased markedly. Openly declared themselves the opposition political groups. In the cities there are mass demonstrations and media present stormy political debate, sure to cover topics of the Soviet history, which continue on internet forums. In this paper we intend to explore the theme of paradoxical relation to the Soviet history of politically active social groups and their supporters. First, we will try to analyze arguments, as of those who feel sorry for the lost Soviet past, which they perceive as the cause of the current situation, and of those who hate the Soviet Union and call Russians to repentance to create positive

changes. Second, we will focus on the evaluation of these arguments forming the basis of political discourse. In the paper we put forward the arguments for the following statements: - all the evaluations of the Soviet history, both of those who regret it, and of its violent accusers are paradoxical, contradictory and provoking the fury of political protest; -these paradoxes cause high emotional intensity of discourse and assume the character of acute emotional controversies tending to escalate into a confrontation; - the overwhelming majority of the debating, in spite of their education and professionalism, show polarity of thinking: insisting only on their point

of view, and furthermore, the positions and arguments of the opponent are often perceived as a personal insult. On the basis of the key

provisions of sociological theory we try to answer the question; what are the reasons of the paradoxes in evaluating the Soviet past?

## Emotions and Movement Identity: Emotional Boundaries in Collective Memories of the Global Justice Movements in Italy, Germany, and Poland

Priska Daphi, Humboldt University of Berlin | [p.daphi@hu-berlin.de](mailto:p.daphi@hu-berlin.de)

Collective memories play a crucial role in social movements' identity. Next to providing a sense of continuity, these narratives draw emotionally loaded boundaries that distinguish the movement from the outside as well as provide internal differentiations. This paper examines the emotions activists of the Global Justice Movements in Italy, Germany, and Poland attach to boundaries drawn in collective memories. Which emotions are attached to internal boundaries, which to external ones? How does this differ across different constellations of the Global Justice Movement in Europe? The analysis draws on 48 narrative interviews conducted with Italian, German, and Polish activists in 2011 and 2012. Italy, Germany, and Poland constitute different

constellations of the movement with respect to actors, repertoires, and size. The analysis shows that a broad range of emotions are linked to boundaries across countries. In particular, it reveals that the relation between emotions attached to internal and external boundaries varies with the degree of movement cohesion. In constellations with a high degree of movement cohesion emotions attached to external boundaries clearly differ from those attached to internal boundaries: feelings such as mistrust and anger are linked to the first, while trust and sympathy predominate in the second. When cohesion is lacking, emotions linked to external and internal boundaries either converge or are reversed.

## Insurgent Youth, Emotions, and Cognitive Development

Hank Johnston, San Diego State University | [Hank.Johnston@sdsu.edu](mailto:Hank.Johnston@sdsu.edu)

Recent uprising in the Arab world were often portrayed as youth revolts. While participation extended far beyond youthful protests as the revolutions spread, it is important for the study of contentious politics to recognize the vanguard role of youth. This paper argues that youthful participation is the "elephant in the room" of collective action studies. It is incorrect to analyze protest participation based on generic models of the social actors that do not take into consideration cognitive development of young men (especially) and women ages 16-22. These are the primary soldiers in the most significant protest

mobilizations and revolutions of the last century, a fact just recently confirmed in Egypt and Tunisia, and last year, in Iran. This paper analyzes the roots of youthful revolt, emphasizing cognitive development in terms of four key elements of cognition regarding protest participation: cognitive triggering, tactical innovation, high-risk behaviors, and cognitive emotionalism. The analysis concludes with a treatment of crucial intergenerational relations in protest mobilization, and how these shape the trajectories of protest.

## 11JS34 - Affects and Emotions in the Field of Religion

Chair(s): Stef Aupers (Department of Sociology - Erasmus University, Rotterdam), Cécile Vermot (Université Paris 5-Descartes)

### Contemporary Spirituality, Ritual Creativity and the Importance of “Negative” Emotions

Anna Fedele, CRIA - Lisbon University Institute | [annafedele@yahoo.com](mailto:annafedele@yahoo.com)

This paper is based on fieldwork in Spain and Portugal among followers of the Goddess movement. It explores the role emotions play in contemporary spirituality and particularly in the context of crafted rituals. Taking as an example rituals that are created ad hoc to celebrate particular moments of women's reproductive cycle, I will analyze the specific function of ritual as a vehicle for the expression of emotions: those of participants as well as those that the creators of ritual wish to solicit. Using as a departure point the approaches of Tanya Luhrmann (2001) and of Linda Woodhead and Eeva Sointu (2008) to

contemporary forms of spirituality, I will argue that emotions, and especially “negative” emotions, play a central role in contemporary crafted rituals. These rituals allow women to express and come to terms with emotions they have learned to consider inappropriate and to hide. In this context anger and other emotions such as fear become a powerful catalyst for transformation and healing. I will therefore also analyze to what extent these crafted rituals allow their participants to challenge the “emotional regimes” (Riis and Woodhead 2010) and “feeling rules” (Hochschild 1983) of their social background.

### Emotions between Inclusions and Exclusions from the Orthodox Jewish Community: The Case of Sabbateans Living in Prague

Silvana Greco, University Milan-Bicocca | [silvana.greco@unimib.it](mailto:silvana.greco@unimib.it)

Giulio Busi, Free University of Berlin | [busi@zedat.fu-berlin.de](mailto:busi@zedat.fu-berlin.de)

The paper and presentation will focus on the emotional impact of the relationship between orthodox majority and sectarian/heretical minority. This widespread and recurring pattern will be approached from the perspective of a specific case study concerning the members of a Jewish heretic movement (the Sabbateans living in Prague during the 18th -19th centuries) and their relation to the orthodox local community. The goal of the paper is to highlight both the contradictory

set of emotions which drive to belong to the heretic movement, such as joy and happiness, and the feelings which arise from the exclusion of the orthodox Jewish community such as shame, fear and guilty. The paper is based on a large literature concerning Sabbatianism and on the analysis of different forms of biographical narratives such as diaries, letters and autobiographies of the followers of the pseudo-messiah Sabbatai Zevi.

## The De-Emotionalization of Religion and the Decline of Religiosity in Europe

Franz Höllinger, University of Graz | [franz.hoellinger@uni-graz.at](mailto:franz.hoellinger@uni-graz.at)

The strong decline of religiosity in Europe in comparison with other parts of the world is usually explained by a combination of various factors, such as the high level of material wellbeing and social security, the historical heritage of state-church systems, and the disenchantment of world-views as a result of the Enlightenment. In this paper I want to give an additional explanation that highlights the importance of religious emotions in this process: Religious feelings and experiences are aroused, to a large extent, by rituals. The more the ritual involves the whole person, body and mind, the stronger the religious feelings. Since the times of the Protestant Reformation,

the focus of religion in Europe has shifted from the holistic-ritualistic to the verbal-discursive dimension. The restriction to the cognitive level made the occurrence of religious feelings and experiences less likely; subsequently, also Christian religious practice and beliefs declined. This argument is supported by data from the Religionmonitor 2008 which show that respondents from Protestant and Central-European Catholic countries report much less frequently that they have religious feelings (i.e. positive or negative feelings towards the divine) than respondents from the USA and from Latin-American countries.

## The Affective Turn of Apocalyptic Sensibilities: Fear and Hope as Modalities of Religiosity in the Space of Exception.

Joost van Loon, Catholic University of Eichstätt-Ingolstadt | [joost.vanloon@ku.de](mailto:joost.vanloon@ku.de)

Fear and Hope are two affective modalities of Dasein that entail future projections and could be associated with risk. In this paper, I would like to explore the possibility of conceptualizing both in terms of Simmel's reflections on religiosity. However, rather than focusing on the field of religion, I intend to bring these theoretical reflections into an empirical engagement with what Agamben referred to as "the space of exception". The space of exception constitutes "bare life" in terms of sheer corporeality and provides the inaugural ground, the ground zero so to speak, of the

(neuro-) political moment of decision-making (which is the original meaning of crisis in ancient Greek) as an exercise of sovereignty. The space of exception is the space of crisis, both in terms of decision but also in terms of "between life and death" (the body in crisis). By invoking examples from discourses of specific crises that allow us to associate fear and hope in relation to the space of exception, I aim to generate a theoretical conception of "the religiosity of crisis" as an attunement to being in the world as anticipation (or risk).

## 11RN11 - Emergence and Reproduction of Groups and Collectivities

Chair(s): Christian von Scheve (Free University of Berlin)

### On Linking Emotions: Emotions as Individual and Unique, Emotions as Social Constructions... Or Maybe Both

Natàlia Cantó-Milà, Open University of Catalonia | [ncantom@uoc.edu](mailto:ncantom@uoc.edu)

When Georg Simmel at the beginning of the twentieth century asserted that gratitude was the memory of society, he argued furthermore that gratitude was a form of the second order in the sense that it was a social form that conferred durability upon other social forms of sociation existing in society, and which were being reciprocally weaved by its members. Gratitude was felt on the side of each individual as an emotion, an unique emotional

experience, and, at the same time, viewed from a social perspective, it was a form of forms that stabilised society, it allowed society to have a memory, to have a history. In this paper I seek to develop further this Simmelian perspective, exploring in how far the concept of forms of the second order can be successfully applied to the study of emotions from a sociological perspective.

### Emotion and Constructing Identity

Maria Świątkiewicz-Mośny, Jagiellonian University, Cracow | [maria.swiatkiewicz-mosny@uj.edu.pl](mailto:maria.swiatkiewicz-mosny@uj.edu.pl)

On the basis of scientific theories of identity and emotions, I will present the role of emotions in constructing identity. The presented analysis focuses on 3 types of crisis on different social levels: macro – national identity, mezzo – regional identity, and micro – identity crisis. The presented text depicts several situations of constructing identity. The first of them relates to creating national identity. In Poland we have a problem with this kind of identity; we are trying to re-construct it. Historical heritage, battles for independence and national identity shaped in this way do not find their place in contemporary world. What we are also facing is the fact that politicians appropriate national identity and create

divisions into real Poles and non-Poles. As a result, there is a question present in public space about who a real Pole is. The first theme of the presentation concerns the motions which accompany the media discourse about national identity. The second example relates to regional identity. I am going to show emotional context of constructing regional identity on the example of Silesian identity. The third considered example is related to individual identity and will be reconstructed on the basis of twenty statements tests and association tests carried out among secondary school students (Erikson's identity crisis). What emotions are connected to constructing our own identity?

## Can Radical Microsociology Play a Role of a Prolific Cognitive Tool in the Sociology of Emotions?

Lukasz Dominiak, Nicolaus Copernic University, Tòrun | [lukasz@umk.pl](mailto:lukasz@umk.pl)

The highly interesting concept of “ritual interaction chains” is now promoted as a research method which can change not only the sociology of emotions but also the social theory in general. In the paper, I would like to examine the newest arguments concerning the theory of emotions by the well-known authority in the subject, Randall Collins (2004). The main question is whether his idea of chains of ritual interactions can be used as a full-scale

research tool that provides not only new cognitive perspectives, but is also able to autonomously form empirical phenomena which, in turn, can be an object of research. I am going to examine it on the basis of some recent research and also by conducting my own microsociological observations in one empirical domain – the emotions emerging during sports events.

## Sentiments of National Identification in Charities of Ethnic Kin Support

Ildikó Zakariás, Corvinus University of Budapest | [zakariasildi@gmail.com](mailto:zakariasildi@gmail.com)

Charity organisations providing support for ethnic minorities, based on common ethno-national belonging of the helpers and the helped (ethnic kin support) are terrains for reproducing the nation. Besides cognitive elements (discussing solidarities, goals, and activities using national categorization), emotions also play a central role in this process. Initial involvement of activists is often based on the abstract idea of a homogenous Hungarian cultural nation, and the idea of marginalized nation fragments demanding support in maintaining their national identities. As opposed to these essentialist ideas, national identification in target communities are multi-layered, consisting of multiple ties towards the kin-state, as well as the majoritarian state, embedded into a complex system of locally relevant categories, e.g. religion, or everyday strategies of “getting on”. Among these

circumstances, two major types of sentiments related to national belonging emerge during charity activism. The divergence between initial ideas and local realities may cause a state of ambiguity and disorientation among the activists. At the same time initial motivations of the quest for national authenticity, as well as a struggle for reducing ambiguities all induce a state of elevated sensibilities, resulting in a sense of gratification and even in catharses when perceiving signs of common national belonging. In my presentation the dynamics of these emotional upheavals, their reflection in national narratives, as well as their impact on charity activities will be described, drawing on participant observations and interviews carried out in organisations in Hungary, providing cultural support of Hungarian minorities in neighbouring countries.

## 13RN11 - Mediated Emotions

Chair(s): Stina Bergmann Blix (University of Stockholm)

### Rituals of Authenticity, Rituals of Intimacy – the Cinema Visit as an Individual Experience and an Experience in a Love Relationship

Swen Seebach, Open University of Catalonia | [swen.seebach@gmail.com](mailto:swen.seebach@gmail.com)

Natàlia Cantó-Milà, Open University of Catalonia | [ncantom@uoc.edu](mailto:ncantom@uoc.edu)

The presentation will discuss the experience of movies in the cinema, from two different sides, at the one hand from the side of the individual, as rituals of authenticity, in which and through which we consumptively learn something about ourselves, about our emotional and sensational universes (Campbell in Ekström/Brembeck 2004), on the other hand from the side of the couple in love. In fact, so will be argued in the presentation, the shared experience of the movie lifts the movie out of its desire-satisfying, and desire-engaging dimension and relates it to the shared social and moral universe of the couple in love. Different emotions must be seen as key

elements in this mediating process between individual authentic rituals and shared intimate ritual on the one hand, between film story and life/love-story on the other hand. The presentation can therefore be understood, as a contribution shedding further light on how media contribute to shape our individual and social life, and what difference it makes whether we experience a consumptive moment alone or socially, and to show how we web our social myths today. Interviews, auto-ethnographic observations, and focus group discussions will help to shed light also from an empirical perspective.

### Degradation Ceremony of the Scandalized Politician: Strategies of Defamation and Humiliation Used by the Media and Political Opponents

Monika Verbalyte, Freie Universität, Berlin | [monika.verbalyte@fu-berlin.de](mailto:monika.verbalyte@fu-berlin.de)

In investigating political scandals, I seek to disclose the process of political emotion management mainly carried out by the media and politicians with the purpose to influence on emotions of the people. For it I discursively analyze media reports of six scandals that occurred in Germany from 2009 to 2012. In my presentation I would like to address one aspect of this management. It seems that after the interpretation of a scandalous event as a norm violation is established and public outrage is evoked, but the scandalized politician is still in his post, the next stage of the scandal is to transform this public anger into contempt and hate in order to demonstrate that the politician not only transgressed, but tends to transgress

and therefore should not be allowed to remain in her/his political position. It is carried out by accumulating accusations, demonizing the scandalized person (showing her/his moral foulness, viciousness, ascribing her/him mean intentions, inappropriate emotions and negative personal dispositions), but also by humiliating, offending, ridiculing the scandalized politician, and therewith reassuring the strong emotionality of citizens' and other politicians' reactions. Since there always are people who stand by the scandalized politician, strategies of denunciation rarely strive for complete unanimity, but aim at demonstrating that those defending the scandalized person and the

scandalized politician her/himself are a gradually shrinking minority. The other effect of degradation ceremony is a strong polarization of society transforming the

scandal into the drama which attracts public attention till the culmination – confession and/or resignation of the scandalized politician.

## Identity Crisis and Digital Shaming: a Case Study on Twitter

Alessandra Micalizzi, IULM University | [alessandra.micalizzi@gmail.com](mailto:alessandra.micalizzi@gmail.com)

The shame belongs to the family of self-awareness emotions, the activation of which is closely linked to the context and the situation that the individual is experiencing. Moreover, it is the consequence of a crisis of the images of the self: the ideal self and the real self. Shame, then, is a complex emotion that intercepts the individual and social identity, highlights the close relationship between public and private spheres and the increasing difficulty in separating them. According to the growing interest in the dynamics of reputation on the web, it becomes interesting to look at the counterpart phenomenon asking how this feeling is declined, takes shape and has a space in participatory environments of the Network. I identified three possible forms of experiencing shame on the Net: - The first deals with a digital action (experienced-

shame); - The second is when users share, by personal narratives, memories of experiences that generated a feeling of shame (told-shame); - the third intercepts the practice of naming and shaming: the production of narratives through which users accuse someone else for ashamed behaviors (naming&shaming actions). The paper presents the results of an exploratory research aimed at investigating the three dimensions of shame just mentioned. More specifically, the study will be presented concerning the qualitative analysis of tweets posted on the Internet between July and December 2012 with hashtag expressions as semantically related to the topic of shame in order to reconstruct the narrative practices, emerging themes and forms of narrative of shame on the Net.

## Flowers as Institutionalised Objects: The Management and Expression of a sentiment Identity

Emma Saunders, University of Essex | [emmasaundersresearch@yahoo.co.uk](mailto:emmasaundersresearch@yahoo.co.uk)

A sentiment identity consists of aspects of our emotional self that we either seek to express or suppress when interacting with others. Flowers are objects that act as conduits in which to express sentiment, inscribed with the character of the institution embedded within a "structured and well-established system", such as rites of passage rituals during which flowers become institutionalised props that assist in the management of a sentiment identity. Space can be viewed as an area provided for a particular purpose - for example the region where the rituals take place, whether public or private. As socialised actors

we act out the scripts of society dictated by the region. This paper derives from a sociological perspective looking at the role of flowers within ritual spaces, interaction and management of identity, predominantly drawing on the work of Erving Goffman and Arlie Hochschild. Flowers have evolved from their natural state to becoming cultivated emotional stimuli, when applied to these frameworks they can be identified as multifaceted institutionalised props with interchangeable meaning, assisting in the management of a positive sentiment identity. Flowers uphold a ritualistic culture,

maintaining the ritual space and framework of the rituals that bind us together and remind us

that we are part of a wider network.

## Internet Use and Social Capital

Nicolas Demertzis, University of Athens | [ndemert@media.uoa.gr](mailto:ndemert@media.uoa.gr)

Dimitra Milioni, Cyprus University of Technology | [dimitra.milioni@cut.ac.cy](mailto:dimitra.milioni@cut.ac.cy)

In tandem with the broad sociological interest in trust, since early 2000s web researchers have been thoroughly interested in whether the internet increases or decreases social capital, or just supplements the rhythms of peoples' everyday life. Research findings have supported both assumptions premised, however, on divergent methodologies, political cultural settings, and conceptualizations of 'social capital' itself. Nevertheless, most of the

time 'social capital' is deemed as the combination of generalized trust and social networking. Based on this theorizing, the proposed paper takes on data from the 3rd wave of the World Internet Project in Cyprus, conducted in 2012, and has a double comparative perspective: it seeks to analyse the distribution of social capital among the internet users and non-users within the Greek-Cypriot and the Turkish-Cypriot community.

## 15RN11 - Emotions and Power

Chair(s): Christian von Scheve (Free University Berlin)

### Charisma & Venerabilis – Embodying Emotional Regimes

Veronika Zink, FU Berlin | [veronika.zink@fu-berlin.de](mailto:veronika.zink@fu-berlin.de)

Charismatic others are tangible symbols of the socially sacred. Durkheim defines the sacred object as an emblematic transfiguration of collective beliefs. Sacred figures are symbolic objectifications of the cognitive, the normative, and especially the emotional self-conception of a social entity. They symbolize the emotional regime of a community. Therewith, I am proposing that in dealing with the prevalent image of a charismatic persona, one is able to draw closer to the group specific knowledge about feeling(s). According to Weber, charisma lays in the eye of the beholder. Within the contribution I will reconstruct the emotional nomos represented by an adored person from the perspective of the adorer. Analyzing narrations about embodied venerabilis allows to understand dominant emotional tones and

their group specific valuation. Within my presentation I will (1) focus on descriptions of the emotional style of the adored and (2) illustrate in how far these interpretations could be understood as expressions of prevalent feeling rules of a post-modern emotion culture. By contrasting religious movements with communities venerating a popular icon, I will concentrate on convergent features positing that shared collective representations point to an overarching symbolic discourse about emotional values. With this in mind, I will show that both personas are interpreted as highly emotional and therefore authentic subjects. They are loving, embracing, and subtle. In contrast to charismatic examples such as the frenzied berserk, the triumphant knight, or the stirring leader charisma appears

in an empathetic, narcotic, sensitive and vulnerable shape. They represent

contemporary societal values: positive emotionality, authenticity,

## Adoring the Great Seducer. Obsessive Addiction and Spellbinding Manipulation?

Francis Le Maitre, University of Konstanz | [francis.le-maitre@uni-konstanz.de](mailto:francis.le-maitre@uni-konstanz.de)

Veronika Zink, FU Berlin | [veronika.zink@fu-berlin.de](mailto:veronika.zink@fu-berlin.de)

Using the term 'charisma' we usually refer to a mysterious quality of an exceptional persona. Extraordinary figures attract the attention of vast audiences and unleash powerful emotional reactions, such as adoration. Considering adoration as a reaction to an outstanding individual asks for a deeper understanding of the relationship between the adored figure and the adoring subject. This relation has variously been described as a seemingly antagonistic dyad: on the one side the powerless devotee as a person entering this relation with the promise to give praise and on the other side his powerful opponent, the seducer. By positing a link between adoration and seduction, we question if we can understand this linkage properly by reducing it to antagonistic positions. In using a Baudrillardian approach to seduction, we will illustrate that adoration is not based upon a mono-dimensional way of hypnotizing an

adoring subject, but rather on an unquestionable game-logic binding both protagonists. Adoration is subject to the logic of seduction – to this balancing game of creating felt closeness as well as insurmountable disparities between the adored figure and the adoring subject. From an outside perspective all passionate forms of veneration are suspicious. Those who are not affected by this strange form of love ask for an explanation in order to disclose a hidden secret. Charisma by definition is an unquestionable mystery that absconds from the requirements of a society seeking for transparency. The desperate search for transparent, ratio-reductionist explanations are at the core of contemporary culture. Herein seduction becomes a manipulative crime and adoration becomes addiction: an obsessive emotion out of order.

## Bullying as a Triadic Social Process

Charlotte Bloch, University of Copenhagen | [cb@soc.ku.dk](mailto:cb@soc.ku.dk)

The present paper is based on an investigation of bullying on the workplace. The aim was to explore bullying as an interactional and emotional process between the bully, the bystander and the victim. In the investigation self-reported bullies, victims and bystanders were interviewed in order to explore interpretative processes, self- and other feelings, actions etc. These analyses have all been published in English. Pivot in the analysis of the interviews of bullies, victims and bystanders have been to develop an

understanding of the dynamic of the triadic relationship between the three parts. Very often, in social interactional theories the third part is forgotten or is invisible. In my presentation I outline a model or a preliminary theory about how to understand the emotional, the cognitive and the action dimension in triadic relationship. This model is partly based on the results of my analysis of bullies, victims and bystanders and partly on theoretical approaches to the triadic relationship (Simmel, Collins, Cohen, Bauman, Barbalet etc.)

## In and Out of Control

Pia Heike phj Johansen, University of Southern Denmark | [piaj@sam.sdu.dk](mailto:piaj@sam.sdu.dk)

This paper contributes to the development of a theoretical framework for analysing the relationship between emotions and power. It focuses on the emotional states controlling social interactions in various settings. In addition, the paper contributes with examples on how to study emotions empirically in communities and organisations. The paper is inspired by the thinking of Gabriel Tarde's Law's of imitation and his integration of Gottfried Leibniz' Monad. Leibniz considers Monads to be the micro basis of society and according to Tarde monads are what is imitated. They are explained as a simple substance that cannot be divided and that is constituted by a fixed combination of a desire and a belief. A recent study of rural imitation applying Tarde's sociology revealed an underlying structure of his thinking that the

sociology of emotions may integrate in an overall theoretical framework. Following this structure showed how the belief in an inner self is combined with the desire for control of social interaction. Another monad combines the belief in getting closer to an inner self with the desire for controlling own emotions. In various settings, the imitation of those two monads showed themselves differently, with a local preference for specific emotional state for getting closer to an inner self and a specific preference for the organisation of social interaction for supporting the beliefs in an inner self. Such result indicates that emotions play a strong if not the strongest role in exercising power. This paper explores how such understanding contributes to current literature on sociology of emotions.

## 17\_11JS20JS28 - Emotions, Objectification and Reflexivity in Qualitative Body and Sport Research (1)

Chair(s): Monica Aceti (University of Strasbourg), Katarina Jacobsson (Lund University), Haifa Tlili (Paris Descartes University)

### Coming to a Moving Body: Methodological Grapplings

Judy Davidson, University of Alberta | [judy.davidson@ualberta.ca](mailto:judy.davidson@ualberta.ca)

Angela Meyer, University of Alberta | [ammeyer1@ualberta.ca](mailto:ammeyer1@ualberta.ca)

Randi Nixon, University of Alberta | [rlnixon@ualberta.ca](mailto:rlnixon@ualberta.ca)

In this project, we seek to hear from and move with those people who would describe themselves as having been alienated from their moving bodies for most of their adult lives, and work with their kinesthetic and affective experiences (struggles, successes, failures, etc.) of coming to movement as adults. The project is inspired by Davidson's late partner, whose trauma history seriously

hampered her embodied movement horizons. This paper will grapple with how one not only addresses the discursive effects of biographical histories, including legacies of ethnocentric, sexist, homophobic, and fat phobic physical education/activity instructional spaces (Sykes, 2011), but also query how affect contribute to kinesthetic experiences of movement. We will stretch the frame of

participant observation to participant participation with the researcher – wherein research participants will be invited to move with a researcher, narrating their in-process, embodied experience. We will think through the dialectical relationship between a skilled mover and an unskilled mover, between someone who struggles with an alienated moving body relationship and a more conventionally skilled athletic body. How does a researcher's investment in being an already confidently embodied subjectivity impact the

relational, participative movement and moment – where an adult neophyte mover narrates and does movement. Questions we will address include: How does hegemonic doxa about presumed movement patterns, knowledges and abilities subjectify bodies that experience themselves as alienated from conventional, taken for granted movement capabilities? How might those alienated movers move dialectically with a different kind of approach to movement pedagogy?

## The Challenges of Conducting Qualitative Research into the Experience of Female Football Fans

Caroline Dunn, Regent's College, London | [dunnc@regents.ac.uk](mailto:dunnc@regents.ac.uk)

This paper outlines the methods I used to conduct my research into the experience of female football fans in England. It begins by setting the historical context of research into fan experience, which has long depended on participant observation; and it explores the reasoning behind the selection of a questionnaire as a 'development stage', proceeding to one-to-one interviews with each respondent. It goes on to examine the concepts of 'narrative' and 'memory' as they relate to the respondent's part of the interview, and the challenges they represent. It discusses whether or not completely 'accurate' accounts can ever be elicited – and if so, if that should

matter to the researcher. The paper then puts forward the argument in favour of the researcher positioning herself reflexively and critically, accepting and acknowledging her biases and preconceptions by invoking the concept of the 'aca-fan', as put forward by Jenkins and Hills. It assesses the difficulties of a researcher interrogating a fandom they share, and highlights some examples of how this was encountered in my own research. It concludes that there is no such thing as a 'perfect' piece of research: a social scientist can never be entirely objective and detached from either her respondents or the data elicited.

## Careers of Sociologist in Sport: Epistemological Essay of How Things Intertwine between Subjects and Objects.

Haifa Tlili, Paris Descartes University | [tlilihaifa1@gmail.com](mailto:tlilihaifa1@gmail.com)

Monica Aceti, University of Strasbourg; IUHMSP-CHUV Lausanne | [monica.aceti@unifr.ch](mailto:monica.aceti@unifr.ch)

The objective of this work in-progress is to light up research in the sociology of sport activities. Sport sociologists' career is analyzed as per Becker's method, considering at the same time the objective dimension (status, career plan), the subjective dimension (intimate meanings, emotions, strategies and

hurdles) and the diachronic dimension (linear evolution of the career or junction). In the feminist thinking, the normality of "axial neutrality" is questioned. In order to generate a typology of sociologist career, we cross different methods: directed and informal interviews, reflexive work of writing and an

autobiographical exchange platform. There are 2 steps for this field study: First, a methodology is tested with a small group of researchers by the way of exploratory exchanges about personal and professional background. Doing so, a forum for exchange is created allowing to roll out our own careers recollecting personal ethnography and coming to the realization of the many undertakings that might interfere in the structure of our sociological research and its implementation (whether political, institutional, professional, biographical, familial or intimate). In parallel of

this reflexive exercise of objectification, direct interviews with sociologists in sport are conducted to understand how they are doing their work as they are themselves involved in situ and belong to the social environment they are studying. For this paper, we will analyze verbatim of sport sociologist, most known in France, with different speciality (specialist of gender studies, queer studies, socio-politics studies, in philosophy, in critical studies, in quantitative studies, in ethno-phenomenology or in ethnomotricity).

## When Research Calls in Question the Body. Am I an “Able People”?

Rémi Richard, Paris Descartes | [richardremi@hotmail.fr](mailto:richardremi@hotmail.fr)

Does the “not-disabled” researcher have any legitimacy to speak about the body experience of people presenting a physical impairment? For the most radical activists of disability studies, the answer is obvious: to speak about disability, it is necessary to have lived it (Oliver, 1990). Nevertheless, my two years spent in the clubs of powerchair football (the only team sport proposed to people using daily an electric wheelchair) led me to rethink the apparently immense difference, between the “abled people” (“valides” in French) and the “disabled people” (“handi” in French). As my interviews and my investigations on the field progress, the players made me realize that I was not an “abled” (valide), without being a “disabled” (handi). During the data analysis, I realized that I am in a liminal situation (Van Gennep, 1981). I understood, a posteriori, that because of my professional background in a special

institution for disabled people, I am not considered as an “abled” by the powerchair football players without being a “disabled”. The aim of my communication will be, at first, to expose the reflexive processes, which bring me to rethink my “abled people” (valide) position. Then we will see that this position of “not really abled” (pas tout-à-fait “valide”), which was originally unconscious, allowed to lead my research in a privileged way, particularly in giving the possibility of sharing the sports experience of the body in a powered wheelchair. Oliver, M., 1990. The politics of disablement. London: MacMillan. Van Gennep, A., 1981. Les rites de passage: étude systématique des rites de la porte et du seuil, de l'hospitalité, de l'adoption, de la grossesse et de l'accouchement, de la naissance, de l'enfance, d

## 17RN11 - Emotions at Work

Chair(s): Åsa Wettergren (University of Gothenburg)

### Exploring Emotional Responses to Disaster

Elisabetta Puglisi, Independent Researcher | [elisabeth.puglisi@gmail.com](mailto:elisabeth.puglisi@gmail.com)

Disasters, such as floods, evoke strong emotions in those affected. My research highlighted the varying types and intensities of emotions which were felt by a group of hotel workers, who experienced their work premises being flooded in January 2011. A progression from negative to positive emotions emerged during the course of the flood and its aftermath. Initially, as the waters began flooding the hotel premises, very strong negative emotions, such as anger, shock and sadness, were experienced. However, once the initial shock and fear of job insecurity wore off, positive emotions such as happiness, enjoyment and appreciation emerged among many of the hotel workers. My research has shown that the sequence of events associated

with the flood appeared to parallel the sequence of emotions experienced by the hotel workers. The negative emotions experienced ranged from initial fear and related job insecurity, to shock, sadness, anger and a sense of devastation and frustration. These varying emotions to some degree had an effect on the people on an individual level as well as in their relations with others. Some of the negative emotions abated once information was provided to the hotel workers and they understood that the hotel would reopen in due course. The positive emotional responses varied from feelings of happiness, appreciation, and emotional support to a positive atmosphere and the courage and bravery that was observed and enacted.

## **Empathy in the Workplace – The Employee as a Relationship Manager**

Eva Köppen, Hasso Plattner Institute, Potsdam | [eva.koeppen@gmail.com](mailto:eva.koeppen@gmail.com)

Even if empathy is a basic requirement for mutual emotional understanding and even if empathy is part of arguable models like “emotional intelligence” (Goleman 1997), the issue of practice-oriented empathy is only broached marginally in the sociology of emotion. As the literature about empathy in organizations claims, employees “feel right” when they act empathetically and acting empathetically is something that is truly positive. These statements parallel recent publications about the “empathic civilisation” (Rifkins 2009) or “the age of empathy” (de Waal 2009), which are convinced that empathy is genuinely positive and leads to a better world. Their standpoint clearly advocates the informalisation theses (Wouters 1999) : empathy empowers the employee to view his emotional capacities as unique and to act in a self-controlled, autonomous way, taking into account - empathetically - the needs of others.

On the other hand one should keep in mind the mechanisms and rules of customer-oriented bureaucracy, in which the work of many employees takes place – a form of work organization in which there are potentially contradictory logics at play. Furthermore, empathy cannot only be taught by conveying techniques and methods: A change in mentality, the generation of new mindsets is necessary to achieve empathy. In my interview study I try to identify the manifold and ambivalent ways in which empathy in the workplace serves or fails to fulfill its purposes for the employee’s activity. The results of a study with 40 participants will be presented and discussed. Further more, a theoretical model will be derived from these results, shedding light on how we may understand empathy in the special context of organizations.

## **Happiness at Work, Organizational Commitment and Happiness with Life**

Stefan A Litz, St. Francis Xavier University, Antigonish | [slitz@stfx.ca](mailto:slitz@stfx.ca)

This paper will present the results of an empirical study focusing on the micro-macro interrelationship of emotions. Research focusing on happiness has nowadays even entered Economics and new indicators like "Gross Domestic Happiness" (GDH) and other macroeconomic indicators related to happiness have been suggested. But this macroeconomic approach neglects the experience of happiness on a regional level and in particular domains of life. Based on the theoretical and conceptual works of Layard (2005) and others, the results of a survey based on a random sample of the population of Nova Scotia, Canada will be discussed. The paper will particularly focus on the interrelationship between reported overall happiness with life and happiness at work. In addition, the

connection between overall happiness with life and happiness at work with organizational commitment will be investigated. Finally, the survey will also present results pertaining to the question whether there are significant differences in the perception of general happiness, happiness at work, and organizational commitment between various groups like such of gender and age as well as people who are long-term or short-term residents. The results will help to identify the strength and types of interrelationships and differences between the variables and may enable policy-makers as well as management to focus much more on the importance of happiness at the workplace. Layard, R. (2005): *Happiness: Lessons from a New Science*. London: Penguin.

## 18\_11JS20JS28 - Emotions, Objectification and Reflexivity in Qualitative Body and Sport Research (2)

Chair(s): Haifa Tlili (Paris Descartes University), Katarina Jacobsson (Lund University), Monica Aceti (University of Strasbourg)

### Speaking With(in): Embodied Reflexivity & Embodied Knowledge

Jessica M Francombe, University of Bath | [jmf22@bath.ac.uk](mailto:jmf22@bath.ac.uk)

Emma Rich, University of Bath | [E.Rich@bath.ac.uk](mailto:E.Rich@bath.ac.uk)

Laura De Pian, University of Bath | [L.De.Pian@bath.ac.uk](mailto:L.De.Pian@bath.ac.uk)

Predicated upon our desire to destabilize any notion of "axiological neutrality" within qualitative research on the (moving) body we examine how our own researcher bodies come to bear across the spectrum of the research process. We engage the cultural identities of ourselves and the individuals we encounter through author body-narratives derived from three separate research studies all of which focus on our biopolitical subjectivity in some way. These narratives point towards the corporeal contradictions of being located within a culture of reading and critiquing bodies while realising our own trajectories as a somewhat complex set of assemblages. They

advance a politics of reflexivity that shed light on how we experience, make claims and speak about others as bodies made known through our own bodies which are always in a process of becoming (Coleman, 2008). We consider speaking with bodies, highlighting the challenges of moving beyond taken-for-granted body knowledge when our physicality legitimises bionormality. We tussle with the vulnerability our subjectivities evoke, we question our responses when our corporeality is silenced and we problematize our ability to engage in border crossing within particular communities when the body and embodied knowing complicates the process. Whilst much

has been written about intersubjectivity of data collection and the politics of representation and voice, we advocate for the extension of this reflexivity in relation to the lived embodied experiences of researchers' presentation and

dissemination of their work across public and academic context. Doing so means understanding not what researchers' bodies might signify, but what they do relationally in the constitution of knowledge.

## Writing Graffiti - Risks and Chances of 'Ethnographic Life-World Analysis'

Paul Eisewicht, Karlsruhe Institute of Technology | [paul.eisewicht@kit.edu](mailto:paul.eisewicht@kit.edu)

The 'Ethnographic Life-World Analysis' developed by Anne Honer is an outstanding approach to field research. Rather than participant observation it favors observational participation (which means the existential involvement of the researcher in the field). In doing so, the aim is to reconstruct: a) the guiding subjective knowledge of the agents in the field and furthermore b) the typical experience of the specific small life-world (which in accordance to the Social Phenomenology of Alfred Schütz is bound to emotions). By this guideline, the subjective and emotional connection of the researcher to the field becomes constitutive for his scientific work as a basis for the analysis rather than a contamination that has to be avoided (in other words: it turns the unavoidable problem of the researcher in the field in a productive way for sociological insight). The talk focuses on the

practices of the Ethnographic Life-World Analysis and the risks and chances of this approach using the example of a research project about learning in youth cultures. The research question is: how do people gain skills in informal settings in the case of the graffiti scene. Writing Graffiti as an activity involves various meaningful actions (e.g. observing, climbing, writing, running, even self-defense) that has to be understood in relation to the subjective motives and the personal emotional experience in the situation. Using this project as an example this talk addresses: a) the use of the researcher's experience as a participant, b) the triangulation of observational data and c) the problems with ethnography in deviant fields, which challenge the balance between scientific insight, ethical principles and the trust of the research subject.

## Conducting Research in Egypt before and since the Revolution. How Does the Researcher Deal with Personal Emotions, Violence, and Gender Issues?

Chaymaa Hassabo, Collège de France, Paris | [chaymaahassabo@gmail.com](mailto:chaymaahassabo@gmail.com)

Since January 25th, 2011, a revolutionary process has begun in Egypt. Within this context, several new political and social actors have emerged, allowing entirely new interactions in society to take place. Some of these interactions have taken a violent turn, especially, those involving the confrontation of « revolutionaries » with security forces (either of the army or of the police). This new context has made apparent inevitable political divisions amongst the Egyptian people - sometimes even within families - between pro-revolutionary

and anti-revolutionary factions. Before this new political context, I have pondered over some of these relational dynamics when working on issues that implicate personal, ideological or generational conflicts of interest (the case of Egyptian young political activists for example). What initially appear as « problems » that could hinder the objectivity of the research, eventually became the fruitful resources that helped enrich my fieldwork. Today, the personal implications of the researcher are again questioned because of

the overwhelming, unprecedented political situation. However, several questions come to light that need to be addressed with regards to participatory observation: How does a researcher deal with such situations? How can personal emotions and ethical issues effect - either positively or negatively- ongoing or past research? What gender-specific problems

arise when doing research in the current male-dominated situation that poses restrictions on the physical presence of the female researcher in some circumstances (the events involving the Football Ultras are a case in point, but the question also pertains to violent mass demonstrations in general)?

## **Shadow Boxing among the 'Pro's': Autobiography, Embodiment and the Crafting of 'Insider' Understanding among Amateur and Professional Boxers in England.**

Alex Stewart, University of Bedfordshire | [alex.stewart@beds.ac.uk](mailto:alex.stewart@beds.ac.uk)

This paper focuses on the practice and production of what is often termed 'insider ethnography' or 'ethnography at home', or qualitative research carried out in cultural settings intimately familiar to the ethnographer prior to commencement of fieldwork (O'Reilly 2012). Following this methodological vein I conducted ethnographic fieldwork over a five-year period among amateur and professional boxer's based in Luton and London, England (Stewart 2008). More to the point, having accumulated many years experiences as a competitive boxer prior to my scholarly endeavour, I ventured into the field enamoured with a belief that being able to 'talk the talk' and 'walk the walk', be a 'real' boxer among the boxing-practitioners studied, I could bodily and intellectually capture other boxer's reality vantages from a somehow more

culturally nuanced and intuitive position of knowing. Whatever suppositions I may have harboured at that time, however, it is safe to say that as a neophyte researcher I had little, if any, appreciation of the intellectual, physical and emotional turmoil I was to experience as I reflexively grappled with issues of strangeness and over-identification in both the field as 'the boxer' and the library as 'the researcher' writing-up and amending the thesis. The discussion henceforth is thus mindful to convey something of the messy and emotionally draining ethnographic journey realised and the necessity of questioning and drawing upon one's evolving 'fieldworker self' in order to bring autobiographical and embodied sense-making assumptions and intuitions to consciousness.

## RN12 - Environment and Society

### 01JS08JS12 - Energy Futures: Emerging Conflicts, Impacts, Opportunities

Chair(s): Debra J. Davidson (University of Alberta, Canada), Matthias Gross (Helmholtz Centre for Environmental Research, Leipzig)

#### It's Not All About Consumption! The Nature of the Resource Matters More Than We Think

Debra Davidson, University of Alberta | [debra.davidson@ualberta.ca](mailto:debra.davidson@ualberta.ca)

Society's impact on earth's ecosystems due to energy use can increase even if consumption levels are held constant. This is so, because the effort required to turn natural resources into commodities depends on the condition of the resource, and that effort is directly correlated to ecological impact. As the richest, most accessible reserves become depleted,

effort increases, requiring continually escalating investments in environmental management. While historically this trend was primarily exhibited regionally, today the declining condition of many resources can be observed at the global level. I offer a brief discussion of this trend focusing on one of our most significant energy sectors: oil.

#### Public Engagement with Energy Futures: Risk, Uncertainty and Ambivalence

Catherine Butler, Cardiff University | [butlercc1@cardiff.ac.uk](mailto:butlercc1@cardiff.ac.uk)

Karen A Parkhill, Cardiff University | [parkhillk@cardiff.ac.uk](mailto:parkhillk@cardiff.ac.uk)

Nick F Pidgeon, Cardiff University | [pidgeonn@cardiff.ac.uk](mailto:pidgeonn@cardiff.ac.uk)

With issues of climate change, environmental degradation, resource scarcity and access to energy, come imperatives to transform energy systems and, in doing so, create alternative energy futures to those already in the making. In this context, new forms of energy supply, such as renewable sources or shale gas, are being developed along with differently configured systems of energy provisioning (e.g. toward more decentralised forms of supply). As these changes unfold an important set of questions arise around how publics are engaging, characterising, and responding to the risks and uncertainties associated with new forms of energy supply. In this paper, we

draw on public deliberative workshops about UK whole energy system transformations to examine the ways that the riskiness of emerging supply side options (e.g. biofuels, carbon capture and storage, wind, micro-generation) is currently being formulated. We show how public concerns are connected not only to technological and ecological risks but to those that can be characterised as being more social, for example, threats to finances or personal identity. Moreover, we offer important insights into how perspectives on the risks and benefits associated with different forms of new energy supply are formulated when located as part of a whole system. The

analysis draws centrally on concepts of risk, uncertainty and ambivalence (e.g. see Kearnes and Wynne, 2007) for interpreting our findings

and for exploring how new energy systems configurations might be contested, challenged or recreated.

## **Stabilizing Public and Political Boundaries: A Case Study of Udney's Community-Owned Wind Turbine.**

**Laurie Lee Robertson**, University of Aberdeen | [r01l1r0@abdn.ac.uk](mailto:r01l1r0@abdn.ac.uk)

The Scottish Government widely promotes renewable energy technologies; indeed, a great deal of political capital has been expended on the promotion of wind energy technologies in their bid for political independence. Renewable energy, however, does not go undisputed and is routinely presented as a contentious issue by rival conservative politicians and journalists. These political controversies will no doubt influence the extent to which renewable energy technologies are deployed in Scotland. This paper considers the co-existence of political, technical, natural, and social factors of renewable energy arrangements. Based on participant observations of the Udney Community Turbine Trust (the first community

in Scotland to secure complete ownership of a wind turbine), I consider the strategies adopted by the Trust members in their bid to secure public support and overcome the effects of political controversies. These strategies, which attempt to stabilize the boundaries between the public and the political, are visible in Trust's assistance with community benefit projects, which are otherwise funded by local authorities. I will show the extent to which renewable energy technologies afford greater opportunities for public participation and highlight the instability of technical, social and political arrangements. The Trust's attempts to stabilize public and political boundaries are never fully achieved, but rather, requires continual effort.

## **01RN12 - Social Theory and the Environment**

Chair(s): Filip Alexandrescu (Helmholtz Centre for Environmental Research, Leipzig)

### **The Importance of Environmental Issues in Contemporary Science: a Theoretical and Empirical Analysis**

**Marcela da S. Feital**, Universidade Estadual de Campinas | [mafeital@hotmail.com](mailto:mafeital@hotmail.com)

**Lúcia Costa Ferreira**, University of Campinas - UNICAMP | [luciacf@unicamp.br](mailto:luciacf@unicamp.br)

This article is the result of a theoretical and empirical work on the importance of epistemological and paradigmatic changes of modern science from the inclusion of environmental issues in the social sciences, emphasizing the concept of risk society as a source of contemporary questions about this scientific rationality. Here we build up the

attempt to understand this process of crisis and transformation of science, pointing to an emerging need of interdisciplinarity in which is called new science. The discussions raised permeate from the radical environmentalists, as I. Illich, A. Gorz and W. Olphus, for example, to the contemporary social theorists such as U. Beck, B. Latour, J. Hannigan, A. Giddens and L.

Ferreira, trying to establish relationships with empirical studies regarding the Project Mexilhão. This is a large enterprise from Petrobras responsible for the extracting, processing and transporting of gas, settled in the North Coast of São Paulo - Brazil. This is an area that presents some of the key social and environmental dilemmas of contemporary economic development, because it combines,

at the same time, high biodiversity, tourism, short urban planning, and installations of industrial projects, and vulnerability to the risks and effects of global environmental change such as climate change. With this case study, it was possible to identify this necessary transformation of science from the inclusion of environmental issues on the political and academic agenda.

## View on Nature – a Matter of Practical Association?

Marianne E.S. Høyen, Aarhus University | [mahoe@dpu.dk](mailto:mahoe@dpu.dk)

This paper addresses the relation between man and nature as an issue of human practice. Based on the work of Pierre Bourdieu, especially his concepts of field, capital and habitus, the paper poses the question of how this association is distributed in social space? To analyse human relation to nature encompass a discussion of the relation itself as well as the opportunities for the existence of this relation. Therefore the analysis embraces a positivistic as well as a phenomenological tradition together in what Bourdieu calls 'praxeology': A theoretical constructed perspective on social phenomena. Establishing this kind of knowledge requires that the researcher challenge people's spontaneous experiences, as well as hers/his own understanding. Equally important is it to challenge professional, as well as political

classifications. Through the ages various occupational groups have constructed their own specific association with nature and often so-called theoretical understandings conflict with practical knowledge. However each group act as if their ways of associating with nature are universal and if they have no group interests but act on behalf of everybody's interest. In order to support an empirical based research of this, I have worked with a field that illustrates different professional groups positions within a social space. However, an empirical analysis will require attention to the structure of the field as well as the genesis of the field. My study takes place in Denmark and deals with narratives, general laws related to nature and teaching materials from 1899 to 2005.

## Communicating Environmental Crises: Sovereignty, 'Risk Society', and the Far-Right

Bernhard Forchtner, Humboldt University of Berlin | [b.forchtner@hu-berlin.de](mailto:b.forchtner@hu-berlin.de)

Research on the far-right has largely focussed on anti-immigration rhetoric but has rarely investigated their narratives about 'old' and 'new' environmental crises, e.g. the destruction of the countryside and climate change. This separation between 'old' and 'new' seems particularly meaningful in the context of such actors as earlier crises related to regional nature and could thus be tackled

within a national frame while 'risk societies' (Beck) know no borders. By looking at the 'radical' British National Party and the 'moderate' Danish People's Party, the paper asks: how are their stances on 'the basic problem of nature' (Moscovici) conditioned by shared elements of nationalist ideology and different degrees of radicalism manifest in their self-representation as 'legitimate'

political actors? How do these actors deal with ideological challenges emerging from the fact that environmental issues increasingly slide from a national to a transnational frame? Drawing on party magazines, brochures and election manifestos published between July 2008 and June 2010 (which saw both parties gaining popular support and the taking place of the UN Climate Change Conference in Copenhagen), the paper argues that although differences exist between radical and more

mainstream far-right parties, both view nature as a core symbolic element of the nation. However, while they show a concern for the countryside as a paradigmatic sovereign space, they cannot do so when it comes to climate change which transcends national sovereignty and is thus denied. The paper thus provides a deeper and differentiated understanding of symbolic struggles for legitimacy via environmental communication by two paradigmatic far-right parties.

## **The Imaginary Institution of Social Space and its Resistance in a Period of Crisis: the Case of Greek Agricultural Landscape**

**Christoforos Bouzanis**, University of Edinburgh | [bouzanistos@hotmail.com](mailto:bouzanistos@hotmail.com)

**Aikaterini Mitka**, University of Edinburgh | [ktrnmtk@gmail.com](mailto:ktrnmtk@gmail.com)

The theoretical investigation about the transformation and reproduction of society is intrinsically related with the questions about the transformation and reproduction of the social space. On the one hand, Constructionist approaches have casted light on the arbitrary as well as the malleable character of the material settings and the institutional formulations which concretize the structure of those settings. On the other hand, more Realist approaches have intended to highlight 'the constraining of nature' and, the persisting and emergent character of social structures which take part in the co-production of social space, in the sense that the expansion or the narrowness – in terms of the relations with the natural stratum – does not follow an autonomous path of social creativity but one within pre-existed limitations. This paper aims

at a compromising theoretical approach underlining the crucial role of the social imaginary as well as the temporary semi-independence of social structure in the creation of social space while showing, partially theoretically, partially empirically, the ways in which, even in long periods of financial crisis, the imaginary institution resists structural transformation – and in a sense, hinders the expansion of social space towards 'imposed' modes of its relation with the natural stratum. In the light of more substantial empirical findings, with the use of interviews and focus groups, this paper theoretically connects the persistence of more traditional modes of thinking about the uses and the formation of rural landscape with the idea of the imaginary instituted social space and its temporary tension with social structure.

## a01RN12 - Social Theory and the Environment

Chair(s): Cigdem Adem (The Public Administration Institute for Turkey and the Middle East)

### Degrowth and “Buen Vivir” (Living Well): To what Extent these Two Concepts Are Complementary?

Ernest Garcia, University of Valencia | [ernest.garcia@uv.es](mailto:ernest.garcia@uv.es)

Degrowth's critique of development is mainly based on the ecological crisis. Other critiques of development have focused more on inequality. In my opinion, living well can be understood as a reformulation and updating of these latter perspectives. Anyway, a dialogue on the concepts of degrowth and living well [“buen vivir”, “vivir bien”] seems necessary and could be very informative. Such a dialogue should explore what both concepts have in common (particularly their critique of development: skepticism regarding its promises and its presumed universalism), as well as the specific and most important characteristics of each (references to the limits to growth and environmental sustainability in the case of degrowth and the connotations of

cultural identity and community orientation in the case of living well, etc.), paying attention to potential areas of disagreement, conflict and incompatibility. This is the aim of this text; it is not meant to provide a definitive analysis, but to participate in an exchange of views that is already happening. My own view in this exchange starts with the suspicion that the identification between “premodern” and “sustainable” that can be found today in many idealized descriptions of indigenous cultures is a mirror-image of Eurocentric prejudices. It would be much more realistic to recognize that the plurality of examples and experiences is almost endless and to accept that no culture provides a guarantee of sustainability.

### Models of (Future) Society: Bringing Social Theories Back In Backcasting

Gabor Kiraly, Budapest Business School / Corvinus University of Budapest | [kiraly.gabor@pszfb.bgf.hu](mailto:kiraly.gabor@pszfb.bgf.hu)

György Pataki, Corvinus University of Budapest | [gyorgy.pataki@uni-corvinus.hu](mailto:gyorgy.pataki@uni-corvinus.hu)

Bálint Balázs, Environmental Social Science Research Group, Budapest | [balazs.balint@essrg.hu](mailto:balazs.balint@essrg.hu)

Alexandra Köves, Corvinus University of Budapest | [koves.alexandra@gmail.com](mailto:koves.alexandra@gmail.com)

Thinking about the future always involves thinking about the future of society. There is always an underlying theory of how society operates now and will operate in the future in backcasting projects, however, little attention is paid so far to reveal different ideas on society at work and, in turn, how this can be an input for the practice of backcasting. The paper reports on a backcasting project on sustainable employment policy and

demonstrate the underlying theories on society and social change operating and influencing the project from the phase of preparation through the process to the output phase. Moreover, it is also argued that one has to take into account the different socio-political discourses surrounding the theme of backcasting which can vary in different national contexts. While these consideration can raise questions about the situated nature

of the results of a backcasting project, it also highlight the need to focus on social theories as a key component of designing such a

process. Therefore, lessons for a more reflective design and application of the backcasting approach are proposed.

## Beyond Biophilia: Exploring the Social Roots of Nature Protection

Kris Van Koppen, Wageningen University | [kris.vankoppen@wur.nl](mailto:kris.vankoppen@wur.nl)

For more than a century, protecting nature has been a strong and enduring motive for people to engage in voluntary environmental action. This paper offers a theoretical exploration of social factors that influence this persistent concern for nature of individuals and groups. It starts from a discussion of the biophilia hypothesis, coined by Wilson and Kellert, who posit that human affinity for nature has biological roots in evolution. I argue that this theory, even when it is plausible, leaves

individual and cultural diversity unexplained and offers only limited help in understanding nature-oriented social practices. Building on previous work on the 'arcadian tradition', I present an explanation that combines symbolic and sensual dimensions of human-nature interactions, identifies social practices as main sites of mediation between these dimensions, and extends Collins' theory of interaction ritual chains to the domain of nature.

## From 'Sociology as if Nature Did not Matter' to 'a Warm Planet...as if People Mattered'

John Karamichas, Queen's University, Belfast | [j.karamichas@qub.ac.uk](mailto:j.karamichas@qub.ac.uk)

The emergence and development of environmental sociology has been intimately connected to developments in environmental awareness and consciousness. From its initial skirmishes and challenging position toward established sociology, and its alleged subscription to human exemptionalism, to the advent of reflexivity and the ever growing sociological engagement with the most important global environmental issue of our times, climate change, the interplay between the human and the natural was always at the epicentre of the environmental sociology endeavour. With the debate on the anthropocene marking 'a finite period in human history' (Urry, 2011: 39) without a 'stable relationship between humans and nature which can be simply returned to' (ibid:

105), is there a need to produce another paradigm in environmental sociology? This paper seeks to answer this question by engaging in a diachronic examination of the placement of antropos in the environmental sociological imagination. It concludes by suggesting that the sociological engagement with the natural was always pondering on the possibility of the anthropocene outcome. However the irreversibility of the Anthropocene and the accepted fact that humankind has become so large and dynamic that it now competes with 'some of the great forces of Nature and its impact on the functioning of the Earth system' (Steffen et al. 2011:843) forces a need for a reformulation of the ways that we seek to examine the human - nature interchange.

## 02JS08JS12 - Energy Futures: Emerging Conflicts, Impacts, Opportunities

Chair(s): Debra J. Davidson (University of Alberta, Canada), Matthias Gross (Helmholtz Centre for Environmental Research, Leipzig)

### When the Wind Does Not Make Noise: the Peaceful Experience of a Renewable Community.

Ivano Scotti, University 'Federico II' of Naples | [ivano.scotti@gmail.com](mailto:ivano.scotti@gmail.com)

Dario Minervini, University 'Federico II' of Naples | [dario.minervini@unina.it](mailto:dario.minervini@unina.it)

In the last few years an increasing amount of resources have been invested in Southern Italy in the renewable energy, particularly wind farms and solar power plants. This represents one of the main pillars of Italian ecological modernization. Frequently these plants are plagued by political and technical controversies. Previous researches have shown that these conflicts are frequently the result of the absence of engagement of the local community in the decision-making process. Furthermore, the argument of the opponents is based mainly on issues of energy and environmental injustice, such as the degradation on the natural integrity and the depreciation of the real estate as well as potential health risks. Nevertheless, there are also some non-conflictual cases in the green

energy process. The social disputes, in fact, do not seem to occur in the case of small plants owned by local citizens or in the Municipally-owned green energy facilities. In these socio-technical configurations the energy issue seems connected to more equitable solutions in terms of common local advantage. However, these socio-technical assemblages are still poorly investigated. The purpose of this paper is to explore in depth one of these experiences, in which a local community was involved in the settlement of small renewable facilities. In particular the case of Sasso di Castalda, a small mountain municipality in Southern Italy, is analyzed. In this paper, we adopt a narrative approach to illustrate how ecological modernization was peacefully translated into practice in this experience.

### Localized Global Energy Dilemmas

Karin Edberg, Södertörn University, Huddinge | [karin.edberg@sh.se](mailto:karin.edberg@sh.se)

The paper's overall intention is to discuss how the global energy dilemma can be understood from a local perspective. More specifically, the interest is how energy challenges facing the Swedish welfare state and the Baltic Sea Region are translated into local opportunities and risks, and how energy projects are normalized and legitimized locally. An increased global energy demand, ambitions to decrease the use of traditional fossil fuels and anxiety of climate change all augment the creation of new energy infrastructures. The

variety of facilities is vast just as the narratives surrounding them on global, regional and national scales, just as on the local scale where they are placed. Interviews and observations have been conducted in a Swedish community with a dual identity as concurrently industrial energy intense and a popular tourist area. A number of energy related projects will, or have recently, established in the area: a transnational project shipped and stored pipes there during the construction phase of the Nord Stream natural

gas pipeline and a wind energy park is planned in the vicinity. Since energy infrastructures are part of other structures and surrounded by social arrangements cultural norms, common knowledge and local identity have implications for the outcome of the technology at hand, just as on the understanding of the benefits and risks it will imply. New energy infrastructure is

often controversial as projects can be understood as simultaneously a risk and an opportunity in terms of energy security, environment, cultural values and economy. How the different notions connected to the energy types on national and regional scale are mirrored locally, and the role of local identity are thus in focus.

## Negotiating the Future of International Peace (or War) under Conditions of Natural Resource Scarcity and Global Climate Change

Tracey G. Skillington, University College, Cork | [t.skillington@ucc.ie](mailto:t.skillington@ucc.ie)

This paper offers a critical assessment of how inclinations towards democratic peace can be maintained within the international community as competition between states for diminishing stocks of natural resource reserves grows evermore intense. Implicit in recent policy discourse on the security implications of climate change is the notion that war, in certain circumstances, is a legitimate response to threats to a community's resource reserves and given the inevitability of shortages amongst many climate vulnerable states in the future, highly likely. This paper examines the 'uncomfortable paradox' (Beck 2008:131) that emerges alongside the institutionalization of a liberal democratic

regime that in principle supports global peace and solidarity under conditions of resource scarcity and growing climate adversity but in practice, offers legitimation occasionally to its opposite – war. From a critical normative perspective, the notion that resource-led conflict can be considered 'just' or even 'inevitable' is objectionable. Ultimately, it is a regressive form of liberalism that allows a war mentality to condition how universal principles of freedom, justice and self-determination are applied to issues of resource distribution in this age of climate adversity when global cooperation is a prerequisite for humanity's long-term survival.

## 02RN12 - Climate Change and the Role of the Social

Chair(s): Cigdem Adem (The Public Administration Institute for Turkey and the Middle East)

### How “Social” is the Climate Change Research Agenda? Monitoring the Scientists/Stakeholders Interaction in a Climate Change Programme.

**Sofia Bento**, Tecnical University of Lisbon | [sbento@iseg.utl.pt](mailto:sbento@iseg.utl.pt)

**Marta Varanda**, University of Lisbon | [Marta.varanda@ics.ul.pt](mailto:Marta.varanda@ics.ul.pt)

**Audrey Richard-Ferroudji**, Institut National de Recherche en Sciences et Technologies pour l'Environnement et l'Agriculture | [audrey.richard@irstea.fr](mailto:audrey.richard@irstea.fr)

**Nicolas Faysse**, National Agricultural College of Meknès | [nicolas.faysse@cirad.fr](mailto:nicolas.faysse@cirad.fr)

Climate change impact and adaptation research are topics which receive the attention and the funding of politics and scientific. In the last decade, there has been an enormous amount of initiatives and results that try to go deeper into the knowledge of the social aspects linked to climate adaptation. Researchers are invited to integrate actors representing the society in the research projects. Calls underline the efforts scientific teams have to make for the inclusion of new actors in the research and essentially in the construction of new solutions. Of course, linking scientific knowledge to political decision making is far from being a straightforward task. This paper focuses a set of researches financed by Circle-Med programme which dealt with management of hydrological resources in the Mediterranean

region in a context of climate change. In this call, a strong appeal was made for research to be pursued in collaboration with local stakeholders and for the interdisciplinarity of teams, in particular with the involvement of social science researchers. This study is based on the analysis of research projects' documents and interviews with project coordinators and stakeholders. It shows that the liaison to stakeholders has a very secondary role in the scientific outputs. The current organization of science and public administration, as well as its funding and focus on short term goals, were considered to be strong deterrents of the collaboration of science and society. Nevertheless, the current analysis gives relevant insights on the conditions of the dialogue between researchers and stakeholders.

### Practical and Structural Solutions for Fuel Poverty Abatement in Europe

**Lidija Zivcic**, Focus, Association for Sustainable Development | [lidija@focus.si](mailto:lidija@focus.si)

**Marie Moisan**, CLER - Réseau pour la transition energetique | [marie.moisan@ccler.org](mailto:marie.moisan@ccler.org)

With rising energy prices, more and more households across Europe are facing fuel poverty. Although the problem is a complex one, some solutions are simple and cost-effective. The abstract presents an Intelligent Energy Europe supported project ACHIEVE, a pan-European action with practical and

structural solutions that help Europeans to reduce fuel poverty. ACHIEVE works towards uniting fuel poverty definition across Europe and sharing approaches to better identify fuel poor households. It is known that these households are often not well reached by energy saving awareness campaigns oriented

towards the general public, and thus do not seek the help they might need to improve their situation. Action's important social innovation is that it contributes to social reintegration, both by empowering households and by engaging long-term unemployed people to fight fuel poverty. Indeed, fuel poverty and long-term unemployment are often linked with social marginalization. In this action, long-term unemployed people are mobilized and trained to carry out home visits to fuel poor households. The households are stimulated to reduce their energy and water use through

free saving devices and behavior adjustments. Visits also provide an opportunity to identify complementary long term measures for improving the building energy performance. The action also looks for structural solutions, from building retrofit to financing mechanisms for abating fuel poverty at meso and macro levels. The action connects a variety of stakeholders (tenants, landlords, social services ...) to engage them in identifying structural solutions to the fuel poverty problem.

## Climate Change and Maltese ENGOs in an EU context

Michael Briguglio, University of Malta | [michael.briguglio@um.edu.mt](mailto:michael.briguglio@um.edu.mt)

This paper analyzes the activism of Maltese ENGOs involved in climate change through a case study approach and through a historical method which incorporates discourse analysis. The theoretical framework of hegemony proposed by Laclau and Mouffe (1985) is applied, thus investigating the construction or otherwise of hegemonic formations on climate change. Carter's conceptualisation of external impacts of the environmental movement (2001) provides indicators for analysis in this respect. At the same time, theoretical reference shall be made to conceptualizations of reflexivity (Beck, 1992; Giddens, 1991) and

overdetermination (Althusser, 1977). In this regard, the interplay of 'mutual overdeterminations' (Resnick and Wolff, 1993: 65) shall be given due importance, and agents shall be considered as both effects and causes of their social contexts (ibid. 2008: p.566). The paper concludes that ENGOs formed part of a hegemonic formation through which climate change became a key political issue, with significant policy and legislative changes. The question, however, remains whether the established targets for the EU in general and Malta in particular will be reached.

## Climate Change and the Role of the Social - Examples from the Bavarian and South Tyrolean Alps

Jana Türk, Munich University of Applied Sciences | [jana.tuerk@hm.edu](mailto:jana.tuerk@hm.edu)

Cordula Kropp, Munich University of Applied Sciences | [cordula.kropp@hm.edu](mailto:cordula.kropp@hm.edu)

How do societies deal with climate change on a local and regional level? Empirical evidence on that subject is generated in the research project "Klima Regional" funded by the German Federal Ministry of Education and Research. We conduct community studies in the Bavarian and South Tyrolean Alps, being regarded as a region that is especially

vulnerable to climate change. The focus lies on actor constellations and the respective societal resources in order to cope with climate change and to manage the transition towards sustainability. We address climate change as a challenge that impacts on the local and regional level and consequently has to be dealt with on that levels (since since top-down-

processes regarding climate change initiated at a global or national level have often failed in the past). Moreover, we challenge the rather narrow association of climate change with energy issues only. Through interviews and ethnographic fieldwork evidence could be found that climate change is also an issue which is to be discussed in relation to aspects like demographic and socio-economic change,

to name a few. This can be illustrated for example by civil initiatives for a village store or models of regional development in the fields of energy, agriculture, nature protection and tourism. By portraying the respective climate adaptation realities, we point out cooperative capacities and guiding visions as crucial means to mobilize social actors and to co-ordinate dispersed agency on a local and regional level.

## 03RN12 - Natural Disasters, Resilience, and Vulnerability

Chair(s): Michael Stauffacher ETH Zürich

### From Technological Disaster to Social Crisis: an Analysis of the Red Sludge Catastrophe

Gabor Sarlos, ELTE University Budapest / PeppeR 21 PR | [gabor.sarlos@pepperpr.hu](mailto:gabor.sarlos@pepperpr.hu)

In October 2010 in Western Hungary a break in the dam of a waste depot created a flooding of red sludge, a by-product of aluminum production, and resulted in the death of 10 persons, immense material loss and destruction of large agricultural landmass. In the framework of a detailed media analysis 2100 pieces of media coverage about the event and the follow up have been evaluated. The findings prove that the relevant company had no risk communication preparation or relevant activity at all. Interpretation from the company was to minimize perception of risks and damage. Very soon the government stepped in and centralized information output. Focus of communication followed three stages: causing damage, damage control and damage compensation. Following the initial stage, government handling of the catastrophe as

well its media coverage became politically motivated. Due to significant political differences various media constructed parallel realities of the handling of the crisis. Division lines appeared and exist among the affected population, individuals and communities evaluate the handling of the crisis based on their personal and communal situation and destiny. Changes in basic living conditions reshape the social structure of the communities. International and local NGOs have been playing a critical role in managing the crisis on a local level and in providing independent and competent information ever since. Further steps are needed to reduce social effects of the catastrophe as well as to make conclusions become part of regular risk management in critical industries.

### Do Disasters Lead to Social Learning? Planning Horizon, Regulatory Change and Disasters Management in Swedish Forestry

Rolf Lidskog, Örebro University | [rolf.lidskog@oru.se](mailto:rolf.lidskog@oru.se)

Due to their high potential damage (political, environmental, economical), environmental

disasters receive considerable attention both within scientific communities as well as by society at large. But not only the disasters, also the handling of them, are an integral part of human history. Individuals, organizations and whole societies have put effort to anticipate, prevent and mitigate hazards as well as minimize the consequences of them. This study focuses on to what extent social organizations learn from disasters in order to be less vulnerable for future disasters. The empirical object is a hurricane that hit southern and western Sweden in January 2005. It resulted in dramatic destruction; 14 persons were killed, 250 million trees (72 million cubic meters) were felled by the storm and it took about 5 years before all these trees were cut up. The

hurricane also resulted in the destruction of more than 30,000 kilometers power line, resulting in power outage for 730,000 customers. 260,000 households had telecommunication disruption, and public transport (railway, busses and ferries) was stopper in South and West Sweden. The cost of the catastrophe is estimated to almost 3 billion euro. This paper is based on two interview studies, of affected forest owners in the area and of the responsible forest adviser within the forest agency as well as forest companies. The guiding research question is to what extent there has been a change in planning and preparedness amongst those categories of actors caused by the experience of the hurricane.

## Coastal Adaptation in Portugal: Understanding Local Discourses and Strategies for the Future

**Luisa Schmidt**, University of Lisbon | [schmidt@ics.ul.pt](mailto:schmidt@ics.ul.pt)

**Mónica Truninger**, University of Lisbon | [monica.truninger@ics.ul.pt](mailto:monica.truninger@ics.ul.pt)

**Carla Gomes**, University of Lisbon | [carla.gomes@ics.ul.pt](mailto:carla.gomes@ics.ul.pt)

**Susana Guerreiro**, University of Lisbon | [susana.guerreiro@ics.ul.pt](mailto:susana.guerreiro@ics.ul.pt)

**Paulo Granjo**, University of Lisbon | [paulo.granjo@ics.ul.pt](mailto:paulo.granjo@ics.ul.pt)

**Pedro Prista**, University of Lisbon | [pedro.prista@iscte.pt](mailto:pedro.prista@iscte.pt)

Climate change and coastal erosion, coupled with economic recession, represent increased threats to the Portuguese coast in the near future. The situation is particularly challenging in a country where the State has traditionally assumed the role of “holding” the shoreline, through heavy and costly defence structures. This calls for new ways of governing the coast and deeper social engagement, the main objective of the project CHANGE – Changing Coasts, Changing Climate, Changing Communities (2010-2013), in which the findings of this paper are based. CHANGE aims to understand social perceptions about coastal risks and to explore the prospects for an adaptive governance of vulnerable coastal zones. This involved collecting a set of quantitative and qualitative data, through

surveys and semi-structured interviews, on three different locations – in the Northern, Lisbon, and Southern regions. The following step was a broad discussion on coastal futures, by confronting local stakeholders with flooding scenarios for the next decades (2025, 2050 and 2100). For this paper we produced a preliminary analysis of the focus group discussions undertaken in these three coastal areas. Three groups in each location – administration, business representatives and the local community (including fishermen, farmers, and surfers) – discussed their perspectives on different adaptation strategies and the possibility for alternative arrangements to finance these options. When stakeholders look towards the future of their coastal zones, three different types of

discourse emerge: disbelief (catastrophic view), faith (in technology and in the protective

role of the State) and engagement (willingness to be involved in the change process).

## Salmon Propagation and the Redefining of Local Fisheries Management: the Ethnography of Salmon Propagation in Northern Japan.

Mayumi Fukunaga, Osaka Prefecture University | [m-fukunaga@21c.osakafu-u.ac.jp](mailto:m-fukunaga@21c.osakafu-u.ac.jp)

This article draws on ethnographic research and a review of literature and documents to explore how chum salmon (*Oncorhynchus keta*) artificial propagation has reciprocally influenced and redefined local fisheries management, cultural identity and socio-economic structures of local community in Northern Japan. The artificial propagation of salmon was first introduced to Japan in 1873, and mainly private hatcheries operated during the early years of the Meiji period. Afterwards, in the midst of a scramble for fishing rights, the implementation of a prefectural salmon propagation policy provided local communities with the means to legitimize their salmon fishing rights and reinforced their political status as stakeholders. This was a sufficient reason for local communities to begin to promote artificial hatcheries along with the traditional Tane-gawa system, which centered

on habitat protection for natural reproduction. After WWII, the enforcement of the fisheries resources protection law of 1951 established artificial propagation of salmon as a national project, and imposed hatcheries setup as a condition for salmon fishing. This policy shift brought a dramatic increase in coastal catches of salmon, while it brought the local community's subsequent heavy dependence on it economically and socially. The analysis shows the state simplification that went along with the artificial propagation of salmon from a local perspective, and also suggests the simplification means fragmentation of local contexts on nature-society relationships. Finally we discuss this fragmentation is the very hurdle to rebuild people's lives after Tsunami disaster, and find the recent challenges to re-link the contexts for disaster restoration.

## The Political Fallout of the Multiple Disasters of 3/11 in Japan

Annamari Konttinen Konttinen, University of Turku | [ankont@utu.fi](mailto:ankont@utu.fi)

"3/11" is being established as a shorthand for the Magnitude 9 Great East Japan Earthquake of March 11, 2011 and its aftereffects: the tsunami that destroyed much of Japan's northeast coast, and the crippling of the Fukushima Daiichi nuclear power plant. The earthquake was the strongest ever recorded in Japan, but a tsunami of the scale that struck on 3/11, more than 10 meters, was not unprecedented. Yet coastal communities had been built below the high-water marker warnings placed by the ancestors. Damage to several reactors has made Fukushima a level 7 (serious) nuclear disaster, classified in that category with Chernobyl. The combined natural

and technological disaster was the epitome of a low probability and high consequence event. The death toll of the Triple Disaster is estimated to be 16 000, plus 2500 missing. Approximately 100 000 buildings are destroyed, and 25 million tons of rubble is still being cleared. More than 80,000 local residents living within a 20 km radius of the damaged nuclear plant were evacuated. The total number of people living in temporary shelters after the multiple disasters exceeded 130 000. Some sources quote figures as high as 200 000. All in all, the disaster was the costliest in history, US\$235 billion according to the World Bank estimate. In my presentation, I will: 1. Outline

the contours of the multiple disasters, focusing mostly on the one still continuing; the nuclear disaster 2. Describe the rationale behind Japan's nuclear policies and explain why the

nuclear disaster is politically different from the earthquake and tsunami 3. Assess the political fallout by studying the triple disaster from the perspective of social and political trust.

## 04RN12 - Renewable and Non-renewable Energies

Chair(s): Debra J. Davidson (University of Alberta, Canada)

### Windmills and Mirrors: Living in the Vicinity of Windfarms and Solar Power Stations

Ana Delicado, University of Lisbon | [ana.delicado@ics.ul.pt](mailto:ana.delicado@ics.ul.pt)

Mónica Truninger, University of Lisbon | [monica.truninger@ics.ul.pt](mailto:monica.truninger@ics.ul.pt)

Ana Horta, University of Lisbon | [ana.horta@ics.ul.pt](mailto:ana.horta@ics.ul.pt)

Elisabete Figueiredo, University of Aveiro | [elisa@ua.pt](mailto:elisa@ua.pt)

Luis Silva, CRIA, Lisbon | [luis.silva98@gmail.com](mailto:luis.silva98@gmail.com)

Luís Junqueira, University of Lisbon | [luis.junqueira@ics.ul.pt](mailto:luis.junqueira@ics.ul.pt)

Renewable energies generating facilities have become a familiar feature in European landscapes in recent years. Towering wind turbines on mountain crests and sprawling fields of photovoltaic solar panels have transformed mainly rural settings, bringing into them technological artefacts, financial revenue, new jobs, and a role to play in the global fight against climate change and fossil fuel dependency. But they have also brought environmental risks, visual and noise (and possibly health) impacts, conflicts around ownership rights or incompatible economic interests, controversies about land planning and social justice. Social attitudes towards renewable energies vary considerably according to the technology involved, the perceived impacts and risks, the location of the facilities, the social and economic interests at

play, the planning procedures, the expected benefits, local community dynamics. Though this is a fairly studied issue, systematic analyses are still lacking. This presentation aims to compare the results of two case studies concerning the social reactions to a windfarm and to a solar power station in two different locations in Portugal. It is based on ethnographic fieldwork and interviews, but it also draws on the bigger picture of renewable energies in Portugal and their social, environmental, political, economic and scientific framework. This paper is integrated in a research project on science and society studies, intituled 'Socio-technical consensus and controversies about renewable energies', funded by the Portuguese Foundation for Science and Technology (PTDC/CS-ECS/118877/2010).

## Actors, Networks and Strategies in the Transformation of the German Energy System. The Case of Direct Marketing of Electricity from Renewable Energies

Sandra Wassermann, University of Stuttgart | [sandra.wassermann@sowi.uni-stuttgart.de](mailto:sandra.wassermann@sowi.uni-stuttgart.de)

Due to effective policy support to date, electricity generated by renewable energies already accounts for a relevant share - 20.5% - of the German electricity supply (cf. BMU 2012). As a result, enforced market integration and a more demand-oriented feed-in of electricity from renewable energies are considered as crucial next steps in the process of transformation of the German energy system. In this process of market integration a variety of actors is involved. They develop innovative strategies, business models and services aiming at the realisation of a more demand-oriented feed-in of electricity from renewable energies. This process of market formation and integration and especially the interplay of innovative actors and institutions will be analysed in this paper. Firstly the paper investigates how different actors have

formulated competing ideas on how to organise such a process and then secondly how they actually developed and implemented different strategies and business models. The actor analysis is led by assumptions derived from the theory of strategic action fields (cf. Fligstein/McAdam 2011), as well as from neo-institutionalist concepts of organisational sociology. The empirical work is based on literature review, guideline-based interviews with representatives of the important actor groups and an expert workshop. The results of the analysis explain why different actors have developed and implemented what kind of different strategies and business models. Furthermore they demonstrate how the organisation of the new market was backed and supported by the development and implementation of new regulative frameworks.

## Perceptions on Changing the Energy Sector in Turkey: Renewable Sources or Imported Fossil Fuels

Yelda Erden-Topal, Middle East Technical University | [yeldaerden@gmail.com](mailto:yeldaerden@gmail.com)

There is a growing energy demand in Turkey. The average growth rate of total electricity consumption has been approximately 8% per annum for last ten years. The fossil fuels are the dominant energy sources and they are mostly imported. This energy scheme represents an increasing import dependency and threatens energy supply security. Provision of energy seems to create energy crisis in near term and the criticism of dependency on imported fossil fuels necessitates a change in energy regime in Turkey. Hence to meet the increasing energy demand in sustainable manner, to decrease the share of fossil fuels in energy supply and to provide energy security in long term through clean ways, the promising solution may be to increase the share of domestic renewable

sources in energy supply. This can be achieved by defining a balanced energy bundle through increasing the share of renewable sources. However, the tendency in energy supply is still toward supplying the energy mostly by imported natural gas, petroleum and coal and the energy projections for the share of renewable sources in total energy supply in near future is very moderate. This paper will offer an analysis of this lock in fossil fuels and the perceptions on the usage of renewable in society. For this purpose, 10 in-depth interviews have been conducted with experts from Turkish state authorities and firms, and academicians. Interviewees have been asked about the current situation of Turkish energy sector, the main problems, their suggestions for solution and their perception of change

towards renewable sources. The paper is an attempt to understand the social background

behind the existing situation in the energy sector in Turkey.

## The End of the Nuclear Renaissance in Europe? Post-Fukushima Media Debates in Finland, France and the UK

**Markku Lehtonen**, Université de Paris-Est Marne-la-Vallée & University of Sussex | [m.lehtonen@sussex.ac.uk](mailto:m.lehtonen@sussex.ac.uk)

This paper examines the repercussions of the Fukushima accident to nuclear policy, industry and public debate in three countries at the forefront of the presumed “nuclear renaissance” prior to Fukushima: Finland, France, and the UK. The post-Fukushima public debates and their interaction with nuclear policies are examined against the context of the historically developed institutions and cultural and political orientations in the three countries. Building on our earlier research (Teräsväinen et al. 2010) the paper critically examines the continued explanatory power of such country-specificities. The argumentation and reporting on post-Fukushima nuclear debates in the main national daily newspapers is analysed, with focus on 1) the varying framings and perceptions of the risks of nuclear power, and 2) the roles of the state, the market, the expert,

and the citizens in nuclear policy. Important factors for explaining the partly contrasting policy and media reactions to Fukushima in the three countries – the “business-as-usual” approach in Finland and the UK, as opposed to the very lively political debate on the future of nuclear in France – include the weight of nuclear industry in the national economy and politics, public trust in state institutions and experts, perceived transparency of decision-making, and the historically shaped “state orientations”. The fluidity and dynamism of the country-specificities is manifest in the trends towards greater emphasis on economics and transparency in the France, the gradual decline of “market fundamentalism” in the UK, and the first signs of erosion of trust among Finns in experts, state authorities and the nuclear industry.

## Geothermal between “Good” Renewable Energy and “Bad” Large Centralized Infrastructure

**Michael Stauffacher**, ETH Zurich | [michael.stauffacher@env.ethz.ch](mailto:michael.stauffacher@env.ethz.ch)

Emerging technologies gain momentum in an undecided or ambivalent environment of public reaction. Whilst the technical development is still on-going and associated risks are uncertain or unknown, public opinion has yet not been fixed, remains arguably volatile. Under such conditions, much can be learned how public opinion unfolds, what role interest groups play and how for instance the media can be used to attempt shaping public opinion by strategically framing the communication about the technology. A pertinent example is

deep geothermal energy. On the one hand, geothermal energy is a renewable energy source and as such supposedly strongly supported by society. Latest technological developments focus not only on hot water but as well on hot rock as heat source and thereby potentially providing a significant share of electricity and heat production. Yet, on the other hand, this type of energy has to be retrieved at an industrial scale and in centralized facilities. This recalls the political valence of “good” renewable energy and “bad”

large centralized infrastructure, both offering an attractive frame for communicating about this technology. We present and discuss preliminary results from a content analysis of newspapers in Switzerland investigating how

different interest groups are framing deep geothermal energy. We argue that public opinion about geothermal energy can in fact be impacted by a respective communication strategy.

## **a04RN12 - Renewable and Non-renewable Energies**

Chair(s): Luisa Schmidt (Universidade de Lisboa)

### **(De)Politicization of Energy and Nuclear Power Debate – The Case of Finland after the Fukushima**

Marja Ylönen, University of Jyväskylä | [Marja.k.ylonen@jyu.fi](mailto:Marja.k.ylonen@jyu.fi)

The Fukushima nuclear power plant accident was a shocking event, which has had and will have an impact on the future of energy policy. Reactions to the accident have varied from country to country. Some countries, such as Germany, announced their intention to abandon the nuclear energy, whilst others have been willing to continue with nuclear power, either more carefully or at more moderate level. Finland had taken big steps towards nuclear renaissance in 2010 with the Parliament's approval to construct two new nuclear reactors. Hence, it is interesting to analyse the Fukushima's effects on the Finnish public debate concerning energy and nuclear power, and how the relevant topics of energy

debate, such as sustainability, changes in energy demand and security of energy supplies have been dealt with in the debate. Have new imaginaries or new power relationships emerged? The paper focuses on the analysis of meanings that are produced and reproduced in the media through particular ideological systems, and politicization or depoliticization processes that have been going on in the debate. In addition, transformative potentialities of debates will be examined. Data consist of news and letters to editors in major national newspaper after Fukushima until the end of 2012, to which content analysis will be applied. Changes in media structures as well as audiences will also be discussed.

### **Ecological Modernisation and Energy Transition in the Electricity Sector of China**

Xavier Lemaire, University College, London | [x.lemaire@ucl.ac.uk](mailto:x.lemaire@ucl.ac.uk)

China may have rejected international climate change treaties perceived as potentially capable of impeding its growth. However, Chinese authorities seem to have also been recently following a deliberate state-driven "green growth" strategy to convert the Chinese electricity system into a low carbon energy system. This paper analyses the rationale behind China taking the leadership in the field

of massive scale deployment and manufacturing of renewable energy technologies in the electricity sector, and also acting on energy efficiency but with mixed success. It examines the discourses and the policies that go with this apparent accelerated energy transition. It relates to ecological modernisation theories to understand how China is trying to move from its current status

as one of the biggest emitters of CO<sub>2</sub> emissions in the world to one of a responsible modern state; can this push toward low carbon electricity be effective in modifying the current energy system, taking into account the features of the current socio-economic and political Chinese system which has till yet favoured growth with limited considerations for its environmental implications? Furthermore, is this move compatible with a more and more

fragmented authoritarian system? This paper focuses on institutional arrangements between the private sector and public administration which make the accelerated energy transition of China possible, but also the contradictions inherent to these arrangements which make them unstable. It concludes on the different versions of ecological modernisation theories available to describe the current energy transition in the particular context of China.

## Energy Microgeneration from Renewable Sources in Italy: Attitudes, Opinions and Practices of Sustainability

Mara Maretti, Università di Chieti-Pescara | [m.maretti@unich.it](mailto:m.maretti@unich.it)

Alfredo Agustoni , "G. d'Annunzio" di Chieti-Pescara | [consigliatodaglielfi@gmail.com](mailto:consigliatodaglielfi@gmail.com)

While renewable sources are shyly emerging in the Italian Energy market, we need to answer some questions concerning their cultural and sociological potential, also considering vicissitudes concerning public incentives, victims of the crisis and of economic policies. This contribution pays a particular attention to domestic microgeneration from sun. It investigates, by the means of a web survey, the attitudes and motivations explaining the choice to invest on this kind of household technology. From a wider point of view, we support the hypothesis that trust in a particular technology

is deeply related to the feeling to cognitively control it. Accordingly to the interdisciplinary literature in this field our investigation is in particular aimed: 1. to check motivations for investment (dimension of desirability of the technology); 2. to understand these motivations in the broader frame of attitudes towards sustainability; 3. to check the presence of a tie of a particular sustainability oriented behaviour (microgeneration) to other sustainability oriented behaviours (such as recycling, mobility choices ...). Results are discussed.

## Dealing with Change: Going to Work on a Context of Energy Crises

Nathalie MM Ortar, ENTPE | [nathalie.ortar@entpe.fr](mailto:nathalie.ortar@entpe.fr)

Félicie Drouilleau, ENTPE | [fdrouilleau@gmail.com](mailto:fdrouilleau@gmail.com)

In 2010-2013 an interdisciplinary research has been conducted in Lyon and Lille, France, to define future scenarios of energy consumption. While one part of the research was focused on companies located in suburban areas with poor public transportation, their attention to energy as well as to the commutes of their employees, another part of the research conducted by sociologists was focused on the employees. Those employees, living downtown and in

suburban areas, have been interviewed in their home about their commutes and general attitudes to energy. The aim was to find out what was their behavior change in a context of energy and economical crises. In this paper we will present results of the inquiry conducted in Lyon about how people deal with the increased prices of energy according to where they live, the alternatives solutions found to keep commuting and the meaning of those changes.

## 05RN12 - Social, Environmental, and Financial Pillars of Sustainability

Chair(s): Michael Stauffacher (ETH Zürich)

### Social Indicators to Evaluate Environmental Change

Cigdem Adem, The Public Administration Institute for Turkey and the Middle East | [c\\_adem@yahoo.com](mailto:c_adem@yahoo.com)

Indicator related work became predominant in measuring environmental change to develop a basis for environmental policy in the recent years. OECD initiated the development of environmental indicators as early as 1989. This process is further fostered by international agreements, processes and conferences such as UN Conference on Environment and Development held in Rio de Janeiro, Johannesburg World Summit on Sustainable Development, Rio+20 Conference on Sustainable Development. It was only after Rio that the work on environmental indicators gained momentum. There have been several attempts to make use of social indicators to analyse environmental change such as Environmental Sustainability Index (ESI) (2002) developed by Yale University, Columbia University, World Economic Forum and patterns and trends in human development, equity and environmental indicators in the 2011

UNDP Human Development Report. ESI has been particularly subject to criticisms. Analysing environmental indicators via social indicators is further related with the justice dimension of green economy. Hence, two reasons of involving social indicators can be cited. The first is to explore the link between economic, social equalities, demographic change and environmental change which will also serve to address environmental justice issues. The importance of equity and inclusion is already explicit in the objectives of green economy policies. The second is to understand lifestyle changes of especially expanding new middle classes to provide inspiration for policy makers to develop relevant policies accordingly. Hence, this paper is a further attempt to reconcile social indicators with environmental change. I argue that this would, constitute the

### Long-Term Futures in the Making: the Evaluation of Adequacy of Funds for a Geological Repository Project in the United States

Basak Saraç, Centre de Sociologie de l'Innovation | [bsaracle@ensmp.fr](mailto:bsaracle@ensmp.fr)

How do the government and its agencies evaluate the adequacy of funding of a 120 years project? What does it mean to calculate "the net present value" of a long-term project? In this paper, I investigate this question in the case of the evaluations of the adequacy of funding of the terminated Yucca Mountain geological repository project in Nevada. The projected total life cycle cost of the Yucca Mountain project was estimated to be 96 billion USD in 2008. The adequacy of its funding was

evaluated annually by the project office within the Department of Energy. For doing so, the analysis was based on several projections and scenarios and ratios, one of which was the controversial long-term discount rate fixed by the Office of Management and Budget (OMB) for government projects exceeding a lifetime of thirty years. Whereas the futures have often been problematized in terms of the long temporality of nuclear waste, often associated with the geological time, social sciences often

overlooked the temporality of the project, which is “only” of 120 years. It is not rare to hear that “300 years is unproblematic!” in the field of nuclear waste management. Nevertheless, the last safety measures designed to be put in place to close down the geological repository were the “engineered barriers”, requiring the availability of adequate

funding to buy and use 1/3 of world titanium production at the end of the project. The paper explores how the adequacy of funding for the Yucca Mountain project was calculated, and analyses the definition of the state these calculations enacted, while demonstrating the responsibility among generations distributed through these calculations.

## Research and Implementation of Social Dimensions of Pilot Projects: an Industrial Chair's Perspective

**Amélie Coulbaut-Lazzarini**, Université Versailles Saint Quentin en Yvelines | [a.coulbautlazzarini@gmail.com](mailto:a.coulbautlazzarini@gmail.com)

**Christelle HUE**, Université de Versailles Saint-Quentin-en-Yvelines | [christelle.hue@uvsq.fr](mailto:christelle.hue@uvsq.fr)

Changes and projects taking account of social aspects in energy consumption reduction and/or clean energies uses and environmental concerns are at the heart of the Econoving chair's works. Our sociological focus is both on the governance of pilot projects and inside of the projects, on representations, behaviours and uses of actors in a changing context. Our position is interesting because we have a practical perspective of societal action, being partners of projects testing new solutions. Depending of the projects, these solutions can be the implementation of smart grid, of electric vehicles or the renovation of a railway station, but each one implies social impacts. And in each project we study these social aspects. Taking the example of three French projects in which Econoving chair is currently involved,

this communication aims to show how a sociological perspective can take place in industrial projects. It will explain how the methodological aspects are negotiated, and which ones can take place in the projects. We will explain to what extent the international Econoving Chair acts as both observer and actor of these social evolutions and present the methodologies and methods used to achieve this double objective. We will show that changes also appear in industrial mentalities, beginning to understand that sociological work can be helpful for the real implementation of new elements in the society, even if it is far from their way of thinking. But also what are the barriers still present, which limit the sociological studies.

## The Social Relation State and its Sustainability Politics: The Example Germany.

**Norman Laws**, Leuphana University, Lueneburg | [laws@leuphana.de](mailto:laws@leuphana.de)

**Harald Heinrichs**, Leuphana University, Lueneburg | [harald.heinrichs@uni.leuphana.de](mailto:harald.heinrichs@uni.leuphana.de)

An important part of environmental politics is the concept of Sustainable Development (SD). SD politics offers a wide range of connections with traditional environmental politics, but it also points to the interconnection between environmental, social and economic aspects. These aspects highlight the importance of

societal formations when it comes to SD. Developments within the society are reflected in the political sphere. Taking into account the ecological boundaries for societal or economic actions, most policies the state conducts can be seen as SD related. Viewing the state as a social relation (Poulantzas 1978) where actors

inherent a strategic perspective, it is possible to analyze whether and in what ways different actors – including the state – actually adopt the multi-dimensional problem perspective that is required in dealing with pressures on the ecosystem effectively. Results of a study of the Leuphana University Lüneburg on behalf of the WWF Germany, conducted to review the status of SD politics in Germany and to assess how well-established SD politics is as a distinct political realm, can be reviewed in the light of

the deliberations made above. Drawing on the results of the study that were derived from interviews conducted in every federal ministry as well as in the political parties in the German Parliament, it is possible to gain a better understanding of the distinct configuration of interests within state structures and the respective implementation power with regard to a progressive environmental policy, and how it may be hampered by other societal interests.

## 06RN12 - (Un-)Sustainable Consumption

Chair(s): Kris van Koppen (Wageningen University)

### Social Innovations for Sustainable Consumption – Definition and Evaluation Criteria

**Jana Rückert-John**, Institute for Social Innovation (ISInova), Berlin | [jana.rueckert-john@isinova.org](mailto:jana.rueckert-john@isinova.org)

**Martina Schäfer**, Technische Universität, Berlin | [schaefer@ztg.tu-berlin.de](mailto:schaefer@ztg.tu-berlin.de)

**René John**, Institute for Social Innovation (ISInova), Berlin | [rene.john@isinova.org](mailto:rene.john@isinova.org)

**Melanie Jaeger-Erben**, Technische Universität Berlin | [jaeger-erben@ztg.tu-berlin.de](mailto:jaeger-erben@ztg.tu-berlin.de)

**Jens Aderhold**, Institute for Social Innovation (ISInova) | [jens.aderhold@isinova.org](mailto:jens.aderhold@isinova.org)

Current political debates ascribe importance to social innovations concerning the transformation towards a more sustainable society. Social innovation is referred to a variety of phenomena like new forms of user participation, transition towns, intercultural gardens, and consumer-driven innovations, but often used as a mere label to market well-known phenomena like car-sharing. However, it is indistinct how social innovation is defined seeing that most definitions are too simplistic by repeating standard economic definitions or an obsolete idea of technical innovation as different from social innovation. In this presentation social innovations are understood as a set of novel social practices which differ from established routines. They constitute solutions for social problems and entail far reaching structural changes in society. Beside

these structural effects the dynamics of change are considered by describing social innovation as a process with three stages: (1) problematisation and disruption of established practices, (2) emergence and experimental application of alternatives and (3) re-establishment of altered setting in terms of their continuous reproduction in everyday routines. In the project "Sustainable consumption through social innovation", funded by the German Federal Ministry of Environment (BMU), 46 cases within several fields of consumption were investigated. Essential results are the reconstruction of 8 generalised descriptions of alternative modes of sustainable consumption practices (e.g. do-it-together, cooperative consumption, prosuming) and the identification of different types of innovativity which are able to stimulate

sustainable consumption.

## Can Energy Efficiency Induce New and More Consuming Energy Practices?"

**Susana MD Fonseca**, ISCTE - Instituto Universitário de Lisboa | [susanafonseca@yahoo.com](mailto:susanafonseca@yahoo.com)

In the past four decades energy efficiency has become a central element of energy provision policies and motto present in all policy documents and speeches. Policies were drawn, incentives created, debates organized, technology developed and monitoring activities implemented. Meanwhile, the success of efforts to promote energy efficiency is very disparate along different sectors. Households are one of the sectors where results are, very often, more difficult to obtain and monitor. A conjunction of factors both related to agential powers and structural elements - lifestyles, information, education, social status, income, age, incentives, knowledge, technology, and infrastructure - seem to be shaping the way energy efficiency is being integrated in day-to-day decisions and practices. Building on the

theories of practice (Reckwitz, 2002; Shove-Pantzar, 2005; Warde, 2005) this communication aims to discuss the influence of factors like rules and knowledge, meanings, objects/technology and practical understanding in shaping heating practices among Portuguese families and how energy efficiency has influenced the way people understand heating as a practice. Taking heating practices as the case study and combining data from a survey and interviews to a sample of Portuguese families as well as in-depth interviews to experts on energy policy and technology, different perspectives on energy efficiency are discussed aiming at a deeper understanding of the pros and cons of policy measures and initiatives to promote it, if the goal is to build a more sustainable society.

## Energy Consumption, Families and Technology: Unsustainable Pathways

**Ana Horta**, University of Lisbon | [ana.horta@ics.ul.pt](mailto:ana.horta@ics.ul.pt)

**Susana MD Fonseca**, ISCTE - Instituto Universitário de Lisboa | [susanafonseca@yahoo.com](mailto:susanafonseca@yahoo.com)

**Luisa Schmidt**, University of Lisbon | [schmidt@ics.ul.pt](mailto:schmidt@ics.ul.pt)

**Augusta Correia**, Universidade de Lisboa | [augusta.correia@ics.ul.pt](mailto:augusta.correia@ics.ul.pt)

The enormous challenges that currently affect energy consumption and related social practices require the study of the interaction between people, technology and material structures, and its impact on energy consumption and practices. The Net Zero Energy School Project aims to contribute for a better understanding of the power of technological agency on energy perception and consumption (Jansen 2003, Wilhite 2008). In this case study of the households of students enrolled in a school in Lisbon, we consider two levels of analysis: material structures and electrical consumption on one side; and social

representations and practices on the other. The methods used combine technical measurements of dwellings' energy consumption (through meters and supplementary information), a survey and in-depth interviews with members of the households. Results from the survey on 301 households of students from different social classes showed that the relative weight of energy costs in household income is paradoxically higher among lower classes families. The meters installed in 50 of those households further showed that lower income families have higher energy consumption when

compared with middle class families, which have more financial resources and better living conditions and equipments. In a period of deep economic crisis, with steep energy price rises

and decreasing income, these findings suggest that lower class families can fall into a spiral of social injustice hard to leave.

## The Northern Exposure: Sustainable Eating in Four Nordic Countries

**Johanna Mäkelä**, University of Helsinki | [johanna.m.makela@helsinki.fi](mailto:johanna.m.makela@helsinki.fi)

**Nina Kahma**, National Consumer Research Centre, Helsinki | [nina.kahma@ncrc.fi](mailto:nina.kahma@ncrc.fi)

**Mari Niva**, National Consumer Research Centre, Helsinki | [mari.niva@ncrc.fi](mailto:mari.niva@ncrc.fi)

Promoting sustainable food consumption is at an intriguing crossroads of policy making and individual consumer choices. On one hand, the quest for solving problems related to sustainability of food production and consumption is high on food policy agendas. On the other hand, the current policy making often relies on informed choices by individuals. The presentation discusses political consumption and peoples' beliefs about sustainable food consumption from a Nordic comparative perspective. We examine sustainable eating from two angles. First, we explore how people as consumers in their daily practices follow habits that are considered as sustainable. Second, we investigate how people as citizens support sustainable policy making. We analyse data from a 2012 Nordic survey (N = 8 248) from the Food in Nordic Everyday Life project conducted in Denmark, Finland, Norway and Sweden. Sustainability of food consumption

was measured with questions concerning consumption of locally produced foods, food products imported by airplane, seasonal vegetables, organic foods, meat and products with excessive packaging (cf. Tobler 2011). Support for environmental policy measures was examined with questions about environmental education, market interventions, regulation and taxation. Multivariate methods are applied to analyse the differences between social groups in the total sample and in each country. The preliminary results suggest that age and household type are related to the differences in the sustainability of eating. Supporting environmental policy measures is positively correlated to sustainable food consumption. Our study shows that among the Nordic peoples the food habits of Swedes are the most sustainable.

## a06RN12 - (Un)Sustainable Consumption

Chair(s): Giorgio Osti (Università di Trieste)

### Changes in Shopping Practices with the Transition to Motherhood

**Kate Burningham**, University of Surrey | [K.Burningham@surrey.ac.uk](mailto:K.Burningham@surrey.ac.uk)

**Kate Burningham**, University of Surrey | [K.Burningham@surrey.ac.uk](mailto:K.Burningham@surrey.ac.uk)

**Susan Venn**, University of Surrey | [s.venn@surrey.ac.uk](mailto:s.venn@surrey.ac.uk)

The meanings, practices and implications of the transition to motherhood have long been a

topic for sociological inquiry. Recently interest has turned to the opportunities offered by this transition for the adoption of more sustainable lifestyles. Becoming a mother is likely to lead to changes in a variety of aspects of everyday life such as travel, leisure, cooking and purchase of consumer goods, all of which have environmental implications. The environmental impacts associated with such changes are complex, and positive moves toward more sustainable activities in one sphere may be offset by less environmentally positive changes elsewhere. In this paper we apply Shove et al's (2012) simplified model of how practices change to examine how mundane provisioning practices change – or remain stable – with the birth of a first child with a particular eye on any

implications for sustainability. In this it provides a novel addition to research on new mothers and consumption. Our analysis is based on data from a longitudinal qualitative research project which explores how aspects of everyday life change at points of transition. We focus here on interview data with women before and after they have become mothers to explore some of the ways in which shopping practices and the meaning attached to shopping may change, and on explicating potential sustainability implications. We draw attention to the ways in which practices are embedded and interrelated and argue that more consideration needs to be given to the influence of all household members.

## Exploring the (Un)sustainable Normal: Biography and Consumption in Everyday Life

Fiona J Shirani, Cardiff University | [fionashirani@cardiff.ac.uk](mailto:fionashirani@cardiff.ac.uk)

Catherine Butler, Cardiff University | [butlercc1@cardiff.ac.uk](mailto:butlercc1@cardiff.ac.uk)

Karen A Parkhill, Cardiff University | [parkhillk@cardiff.ac.uk](mailto:parkhillk@cardiff.ac.uk)

Nick F Pidgeon, Cardiff University | [pidgeonn@cardiff.ac.uk](mailto:pidgeonn@cardiff.ac.uk)

Karen Henwood, Cardiff University | [henwoodk@cardiff.ac.uk](mailto:henwoodk@cardiff.ac.uk)

For many in the Western world there is increasing recognition of the fundamentally unsustainable nature of the everyday actions and modes of consumption that form part of normal life. In this context, it is possible to see emergent forms of practice that attempt to challenge current ways of consuming and living in order to address these underlying socio-ecological problems. However, these efforts often continue to be positioned as unusual or unconventional meaning that acting in sustainable ways can involve particular challenges, such as financial insecurity and potential identity dilemmas arising from being “outside” of the normal. At the same time, some forms of action toward sustainable ways of living are becoming increasingly normalised as more people make moves toward sustainable consumption. This raises different issues, for example, the potential situating of

sustainable practices within fundamentally unsustainable wider systems as, for example, fashions or fads. In this paper, we aim to open up insights related to these concerns associated with (un)sustainability and “normality”. This represents one line of analysis arising from the Energy Biographies project, which uses longitudinal biographical interviews together with multi-modal methods to explore opportunities for change within energy consuming practices. This presentation will consider centrally how people are negotiating knowledge of the unsustainable nature of current consumption practices within and through their lived experiences. Building on this, we will explore possibilities to foresee ways that the sustainable can become normal and what this might mean within the context of everyday life.

## Different Framings of Animal-Farming Practices: Making Sense of Politicised Consumption.

**Pekka Jokinen**, University of Eastern Finland | [pekka.jokinen@uef.fi](mailto:pekka.jokinen@uef.fi)

**Saara Kupsala**, Finnish Environment Institute | [saara.kupsala@ymparisto.fi](mailto:saara.kupsala@ymparisto.fi)

**Markus Vinnari**, University of Eastern Finland | [markus.vinnari@uef.fi](mailto:markus.vinnari@uef.fi)

Animal welfare and meat consumption have increasingly politicised in Western countries and, therefore, the interest to understand how consumers perceive animal farming and farm animal welfare has also grown. As shown by studies, animal welfare is associated in everyday language with a diversity of cultural interpretations. Yet, it is given a growing importance in policy discussion about sustainable consumption as well as ethical and political consumption. This paper focuses on collective sense-making on political consumerism. By drawing on eight group discussions (N=57) with Finnish consumers, we explore how the consumer's relation to food chain and food practices affects the framing of farm animal welfare and of political consumption. In order to gain rich accounts of how different consumers attribute meanings to

the ethics of meat consumption, we conducted group discussions with rural women, hunters, gastronomes, organic consumers, vegans/vegetarian, and randomly selected "ordinary" shoppers as well as with two mixed groups of consumers involved in various food movements. The paper presents empirical results on the connection between the politics of consumption and animal-farming practices. It challenges the assumption that certain information-based measures, such as standards and labelling systems, could effectively inform the consumers on the ways in which farm animals are treated. Finally, it discusses the role of citizen-consumers as agents of change and considers the implications of the results for studying sustainable consumption and policy framing.

## What they Say and what they Do: the Development of a Tool to Support Policymaking by Exploring the Implications of Indigenous Everyday and Domestic Practices for Sustainable Consumption

**Ana Prades**, CISOT-CIEMAT, Barcelona | [ana.prades@ciemat.es](mailto:ana.prades@ciemat.es)

**Josep L. Espluga**, Universitat Autònoma de Barcelona | [josepluis.espluga@uab.cat](mailto:josepluis.espluga@uab.cat)

It is important to understand the limited success of existing public policies which have attempted to encourage sustainable consumption. Many existing policies have been focused on trying to promote 'more educated' consumer choices that promote the sustainability of the planet. Although citizens seem to recognise the seriousness of the problem, and the need to act in order to solve it, the available evidence suggests that the proposed environmental objectives are not being achieved. What can be done about this?

Is it simply a matter of education? The EU-funded project PACHELBEL (2010-12; [www.pachelbel.eu](http://www.pachelbel.eu)) set out to find ways of supporting policymaking for sustainability in ways that go beyond the notion of educating consumers. The research team recognised that at the heart of the problem is the need to understand the potential gap between what citizens say and what they do. In other words, the mismatch between the responses that people typically give to surveys about their environmental views, and what they actually do

in terms of consumer behaviour in their everyday lives. The resulting group-based tool (STAVE) offers a means to produce insightful and detailed understandings of how citizens' everyday practices are related to sustainability issues. Importantly, the tool can reveal the nature of practical barriers preventing the adoption of environmental-friendly consumer

behaviours. The tool offers a means to allow policymakers to design and communicate their sustainability policies much more effectively. The feedback received from the collaborating policy organisations has been overwhelmingly positive. NB Matthias Gross advised this session or the Open Session (20) would be most appropriate.

## 07RN12 - Rationality and Environmental Decision Making

Chair(s): Henning Best (GESIS - Leibniz Institute for the Social Sciences, Mannheim), Axel Franzen (University of Berne, Switzerland)

### Who is More Likely to Travel by Air? An Analysis of the Determinants of Air Travel for Private Purposes

Heidi Bruderer Enzler, ETH Zurich | [bruderer@soz.gess.ethz.ch](mailto:bruderer@soz.gess.ethz.ch)

Andreas Diekmann, ETH Zurich | [diekmann@soz.gess.ethz.ch](mailto:diekmann@soz.gess.ethz.ch)

Air travel for leisure purposes has increased sharply over past decades (SFSO, 2012) and causes a non-negligible amount of greenhouse gas emissions. Therefore, it is important to know its determinants. The present study examines socio-demographic, geographic as well as attitudinal predictors of air travel for leisure purposes. The analyses are based on data from the Swiss Environmental Survey 2007 (Diekmann & Meyer, 2008), a subsequent computation of the respondents' environmental impact by air travel (carried out by the Swiss Federal Laboratories for Materials Science and Technology, measured in carbon dioxide equivalents) and spatial data from various sources. The results of multivariate analyses show that among the socio-demographic variables, income and having children in one's household have the

strongest impact on air travel. Persons with a higher income are more likely to travel by air, whereas households with children are less likely to do so (see for example Böhler et al., 2006; Brand & Boardman, 2008; Dargay & Clark, 2012). In line with previous research, we did not find any consistent effect of environmental concern, environmental knowledge or voting green (e.g. Franzen, 1998; Prillwitz & Barr, 2011). In contrast, high levels of protectionism indicate lower emissions. Additional analyses suggest that persons classifying themselves as being in the middle of the political left-right spectrum cause less emissions from air travel than persons of left or right political orientation. The closer the respondents live to the airport, the more likely they are to travel by air (*ceteris paribus*).

## Moving beyond Europeanization – Towards an Understanding of Brownfield Regeneration in Eastern Europe as an Emerging Strategic Action Field

Filip M. Alexandrescu, Helmholtz Centre for Environmental Research | [filip.alexandrescu@ufz.de](mailto:filip.alexandrescu@ufz.de)

Alena Bleicher, Helmholtz Centre for Environmental Research - UFZ | [alena.bleicher@ufz.de](mailto:alena.bleicher@ufz.de)

Within the last decades, Central and Eastern European countries (CEEC) have seen fundamental changes in their political and administrative structures dealing with environmental protection. Major reasons for these changes are the processes of adaptation and harmonization of the domestic structures according to the values and norms of the European Union. Research on the Europeanization of the environment has emphasized the mechanisms of external influence or conditionality on domestic changes in CEEC. In the area of brownfield regeneration, however, we find that a different process of Europeanization is taking place, one in which domestic actors play a more active role through social learning and lesson-drawing. The article builds on this latter body of research but also moves beyond it by offering an alternative explanation of transformation processes, in which

Europeanization is only one part of a more encompassing set of influences. This wider field of influences is aptly described by the theory of strategic action fields. Rather than dealing only with European vs. domestic processes of environmental transformation, we explore how actors struggle to define and defend specific fields of policy and action at different levels. We rely on qualitative data from the EU-funded TIMBRE project (Tailored Improvement of Brownfield Regeneration in Europe) carried out in the Czech Republic, Poland and Romania. Our findings qualify the Europeanization perspective in the area of brownfield regeneration, by showing that social learning and lesson-drawing are shaped by conflict and change in action fields, which render environmental transformations contingent on different epistemic, political and economic interests.

## Environmental Decision Making: the Analysis of Indicators' Use and Influence in EU and UK

Lea Sebastien, University of Toulouse II - Le Mirail | [lea.sebastien@univ-tlse2.fr](mailto:lea.sebastien@univ-tlse2.fr)

Markku Lehtonen, Université de Paris-Est Marne-la-Vallée & University of Sussex | [m.lehtonen@sussex.ac.uk](mailto:m.lehtonen@sussex.ac.uk)

Tom Bauler, University of Brussels (ULB) | [tbauler@ulb.ac.be](mailto:tbauler@ulb.ac.be)

The present paper contributes to the literature on the interaction between science and policy, by proposing an analytical framework of the various roles that indicators, as boundary objects, can play as a specific form of scientifically grounded evidence for policy processes. It presents two case studies from the EU-funded POINT and BRAINPOOL projects, which examined the use and influence

of environmental indicators: the first case study analyses the role of composite indicators of sustainable development at the level of EU policy-making, while the second concentrates on energy indicators in the UK. In neither of the cases did indicators have a significant instrumental role, as direct input to policymaking, whereas the conceptual and political use and influence were far more

significant. The composite SD indicators at the EU-level can be considered developing their boundary work as 'framework indicators', advocating a specific vision of sustainable development, whereas the energy indicators produced various types of indirect influences, including through the process of indicator elaboration. In delineating the use and influence of indicators, our case studies show that in the explanation of the observed boundary work 'user factors' (characteristics of

policy actors) and 'policy factors' (institutional context) were crucial to be invoked, whereas the characteristics of the boundary object itself, i.e. 'indicator factors' (quality of the indicators), were of rather limited importance. Our research underlines the importance of a solid understanding of the political and institutional contexts as a prerequisite for indicators to engage in their most productive roles in policymaking processes.

## Environmental Behaviors: What Kind of Rational Choice is Relevant?

Jean-Paul Bozonnet, Université de Grenoble | [jeanpaul.bozonnet@sciencespo-grenoble.fr](mailto:jeanpaul.bozonnet@sciencespo-grenoble.fr)

In mobilizing citizens in order to implement environmental policies, European governments face two options. Either they encourage people to desire the common good and therefore promote education and communication campaigns to inculcate civic values; or this way is mere illusion and they should merely impose laws with rewards, prohibitions and punishments. This alternative is a traditional debate among sociologists trying to explain the mechanisms underlying environmentally friendly behavior. The discussion divides those who invoke ecological values or motivation to understand the involvement of citizens (Klintman 2012), while others call instead of the pure individual interest (Diekmann et Schmidt 1998); in short those who refer to a "value-oriented" action (wertrational), against those who call forth a "goal-oriented rational"

one (zweckrational)(Weber 2003). In this paper, we propose to highlight the logic of different types of environmental actions (Stern 2000), both those related to civic commitment in the public sphere (e.g. participation in associations, demonstrations, boycotts...), and those relating the domestic sphere (recycling, friendly transports, energy saving...). Our hypothesis is that environmental behaviors are inherently heterogeneous, but can be explained by rational choice, either "value-oriented" or "goal-oriented". The two logics apply differently depending on the intensity of the commitment required and the nature of the social field in which they operate. In order to develop our demonstration, we plan to exploit the 2010 ISSP data, special survey dedicated to the environment and available now.

## The Island and the Pipeline: Challenge, Conflict and Confusion

Karin Edberg, Södertörn University, Huddinge | [karin.edberg@sh.se](mailto:karin.edberg@sh.se)

Anna-Lisa Fransson, Örebro University | [anna-lisa.fransson@oru.se](mailto:anna-lisa.fransson@oru.se)

The Swedish island of Gotland inevitably became part of a regional geopolitical game when the developer of a controversial natural gas project, Nord Stream, offered to finance the renovation of a worn-down harbour at the east coast of the island. In exchange, access to

roads, storage space and permit to use the harbour as shipping port during the construction of an offshore pipeline was required. Meanwhile the project was debated at different political and societal levels in Sweden and in the region. The local

government's dilemma is whether to consider it a local, national or regional offer, but also to decide on an accurate framing; could the municipality choose to understand the project as purely local infrastructural or are the considerations and responsibility also ought to encompass political and environmental perspectives? The study aims to analyse the period of political confusion and conflict leading up to local governmental positioning and the process of municipal decision-making following the harbour offer. The analysis is done through a reconstruction of the policy process based on interviews, local media

coverage and official documents. Media storylines and involved actor's accounts will be examined with focus on narratives, legitimization and rationality as well as the relationship, positioning of power and possible tension between municipal political representatives and officials. Furthermore, the difficulty of dual or multiple loyalties – to a location, to personal conviction or to the profession – will be investigated. The study concludes, *inter alia*, that when large-scale regional interests and local politics meet, powerlessness and resignation appear resulting in difficulties to reach local decisions

## 08RN12 - Local Food and Global Food Chains

Chair(s): Kris van Koppen (Wageningen University)

### Backyard Chicken-Keeping as a Response to Perceived Crisis in Global Food Production?

Vicki Whittaker, Aston University | [whittavj@aston.ac.uk](mailto:whittavj@aston.ac.uk)

Studies of locavorism are often dominated by the figure of the ethical or organic consumer, but little attention has been devoted to citizen food production. Yet, in the first decade of the 21st century, the UK saw a rise in the number of people acquiring small backyard flocks of chickens, frequently in urban areas, with one estimate putting the total number of homes with chickens in 2009 at 750,000. Drawing on material gathered during my research with backyard chicken-keepers in the UK, which focused in particular on new converts to chicken-keeping, I discuss the relationship between individuals' motivation for local food production and concerns surrounding food safety and food production ethics. My dataset demonstrates that in response to these

concerns, acquiring chickens for personal food production can develop into a 'chicken-keeping career': a common trajectory in which, often in a quest for self-sufficiency, individuals start by growing their own vegetables, then getting a few hens for eggs, expanding their flocks (in part through rescuing ex-battery chickens, in part by hatching their own birds), rearing birds for meat, and finally aspiring to, or actually acquiring, a smallholding. As such I argue that the choice to keep backyard chickens is not only an individual one, but represents both a citizen and consumer response to a perceived crisis in global food production at the beginning of the 21st century, and a 'lifestyle movement' constitutive of social change.

## Trust at a Distance. Consumer Trust and the Sustainability of Global Food Supply.

Peter Oosterveer, Wageningen University | [peter.oosterveer@wur.nl](mailto:peter.oosterveer@wur.nl)

Consumers are often ignored when considering global food governance but they are nevertheless critical because consuming food requires trust in its quality, safety and sustainability. Consumer trust in food can be established through personal relationships but also through institutions such as science or government authority. At present, we observe a dwindling public trust in scientific expertise and government authorities and an increased call for forms of personalised trust, for instance through the demand for local food supply where producers and consumers are able to establish direct contacts. However, although local food supply can contribute to

more sustainability it cannot be the full answer because large sections of food supply are already globalised and here sustainability needs to be addressed as well. As simple trust-building tools are absent, food consumers are confused about whether to trust the sustainability and safety of globalised food. A key question is therefore how sustainability also in global food provision can be increased and consumer trust in this process promoted. This paper will reflect on this question and assess what consumer trust-building mechanisms are available at the global level.

## Sustainable Food Futures: Actors and Networks in Hungary

Bálint Balázs, Environmental Social Science Research Group, Budapest | [balazs.balint@essrg.hu](mailto:balazs.balint@essrg.hu)

This paper presentation examines local food system (LFS) development pathways in the context of recent regulatory reforms in Hungary implemented to promote local product sales and short food supply chains (SFSCs). Taking a SFSC approach three case studies will demonstrate how new type of local food systems initiated by non-farmers attempt to shorten the distance of consumers and producers. The findings are based on qualitative key informant interview and consumer attitude survey data that seek to identify how LFSs promote or enact

sustainable food supply and how consumers perceive the nature of relationship between consumers and producers. The results from the 'Szimpla farmers' market', the 'Gödöllő Local Food Council' and the 'Szekszárd local food system' show various specificities and challenges of new type of emerging urban civic food networks. The paper concludes by pointing to critical factors and tools for the future development of LFSs, as well as reflecting on the role of original research to facilitate change for more sustainable food futures.

## Vulnerability and Climate Change Adaptation in Finnish Food Chains

**Antti Puupponen**, University of Jyväskylä | [antti.puupponen@jyu.fi](mailto:antti.puupponen@jyu.fi)

**Marja O. I. Järvelä**, University of Jyväskylä | [marja.jarvela@jyu.fi](mailto:marja.jarvela@jyu.fi)

**Ari Paloviita**, University of Jyväskylä | [ari.paloviita@jyu.fi](mailto:ari.paloviita@jyu.fi)

Our paper discusses the concepts of vulnerability and adaptive capacity of Finnish food chains in the context of climate change. Further, we present some empirical perceptions via a case study that was conducted between in 2011-2012, within three Finnish regions. In our study, we examined especially milk and bakery chains. Both key concepts, vulnerability and adaptive capacity, are rather frequently tackled in climate change studies. Vulnerability is a multidimensional concept that covers both ecological and socioeconomic issues. Vulnerability refers to livelihood security and the capacity for resilience. Additionally, adaptive capacity describes a system's (e.g. community,

household, sector, etc.) capability to better cope with some changing condition, risk or hazard. Furthermore, similarly as the concept of vulnerability, adaptive capacity is also context-specific. Adaptive capacity varies over time depending on country, community and individual. The results of our study imply that there is a need for a more decentralized food system in Finland. In addition, well-functioning local food chains could contribute to the adaptive strategy with regard to climate change. Moreover, food enterprises are also facing other increased challenges, for instance, increased bureaucracy and market competition.

## 09RN12 - Environmental Communication, Values, and Attitudes

Chair(s): Balázs Bálint (St. István University in Gödöllő, Hungary)

### Environmental Narratives among Adolescents in Romania. Is there a Generational Shift?

**Laura Nistor**, Sapientia - Hungarian University of Transylvania | [la.nistor@gmail.com](mailto:la.nistor@gmail.com)

The presentation provides an insight into the environmental narratives among adolescents in Transylvania, Romania. The empirical study is the result of focus-group discussions with adolescents living in medium and large sized towns and investigated the ways in which adolescents construct the environment and its problems in their discourses. The discourse-analysis suggests that youngsters clearly separate between local and global environmental problems (i.e. they always exemplify environmental problems with local

or global environmental problems) but they also use intensive repertoires in order to illustrate the linkages between local and global environmental problems. In their viewpoint "everything is connected to everything". This finding contradicts previous Romanian results which suggested intense interruptions in the environmental belief system of the Romanian adult population. In terms of environmental behaviours youngsters appear as stakeholders within their families, in the sense that they try to convince their parents to put in practice

those environmental behaviours they "learnt in the schools" or "heard or discussed about on the internet". This is also a new finding in the context of those previous data which suggested that Romanians' environmental knowledge is rather sporadic. In the light of our results it

seems that there is occurring a generational shift regarding the attitudes and behaviours towards the environment in Romania. Besides this, the presentations will insist also on adolescents' informational sources and collective environmental behaviours.

## **Intermediaries of the Housing Sector as Change Agents for Sustainable Energy Consumption?**

**Sophia Alcántara**, University of Stuttgart | [sophia.alcantara@sowi.uni-stuttgart.de](mailto:sophia.alcantara@sowi.uni-stuttgart.de)

**Pia Laborgne**, KIT - Karlsruhe Institute of Technology | [laborgne@eifer.uni-karlsruhe.de](mailto:laborgne@eifer.uni-karlsruhe.de)

**Sandra Wassermann**, University of Stuttgart | [sandra.wassermann@sowi.uni-stuttgart.de](mailto:sandra.wassermann@sowi.uni-stuttgart.de)

The development and diffusion of new routines and ways of living can be analyzed with the help of the diffusion of innovations theory and their specific focus on communication networks (McMichael/Shipworth 2013) as well as on the role of change agents (Rogers 2003). Some interesting empirical work has been conducted in this context, in order to analyze communication networks and their influence on energy conservation behaviour of individuals (Weening/Midden 1991; Ball et al. 1999; Fell et al. 2009; Ek/Söderholm 2010). In this tradition our paper will focus on various instruments of communication and participation which have been developed and implemented by actors of the housing sector in order to influence energy related behaviour of tenants, thus demonstrating their role as change agents. Empirical basis are two studies on intermediary actors of the housing sector,

analyzing their perceptions, interests and roles for the transformation of energy consumption behavior. They can provide tenants with on-site information or even further reaching offers of involvement and participation. In this regard they resemble the idea of change agents described in innovation literature. Besides innovative methods developed and implemented by those actors, the paper will also refer to some specific problems and challenges related to their outstanding role. Challenges are for example lacking credibility and trustworthiness. In the case of the housing industry, tenants may for example suspect selfish company reasons towards energy-saving services offered by them. Hence the paper also presents how networks of communication and trust are set-up and strengthened and finally help to solve these problems.

## **Governmental Communication about Sustainability Politics and Public Health Promotion**

**Pernille Almlund**, Roskilde University | [almlund@ruc.dk](mailto:almlund@ruc.dk)

**Jesper Holm**, Roskilde University | [jh@ruc.dk](mailto:jh@ruc.dk)

The communicative turn in planning, multi-layered governance and governmentality are analytical concepts from various schools of thoughts to comprehend the emergence of new types of public-private governance politics

when it comes to enhancing positive transitions of complex, wicked systemic issues such as in sustainability politics and public health promotion. The paper explores a research approach to compare these two simultaneously

evolving political agendas during the last two decades in a Danish context. The paper will pose and seeks to answer following questions: How are measures for enhancing positive plus sum games enacted (e.g. public participation and deliberation)? When and by which line of argumentation is governance and governmentality politics by deliberation for individual or collective action installed? The exploration of the research approach build upon a pilot study of two cases namely the current governmental communication and politics about sustainability and the current governmental communication about health promotion. This pilot project helps us to apply our research approach in an abductive

methodological framework. Thereby the study contributes to clarify how different governance-government strategies are narrated and by various measures enact different possibilities for positive systemic transitions. The pilot study is based on political documents and on both the actual ministers' political statements and the specific authority's statements in five national newspapers. This will help us exploring if our theoretical approach with Actor network Theory (ANT) in the meaning of Reassembling the Social (Latour, 2005) is a theoretical opportunity when the empirical material is primarily communication.

## **The Inconvenient Truth of Environmental Campaigns.**

**Paul J. Haynes**, Royal Holloway University of London | [paul.haynes@rhul.ac.uk](mailto:paul.haynes@rhul.ac.uk)

Environmental policy implementation able to include effective climate change mitigation requires a wide range of social groups to agree on objectives, instruments and strategies in the face of objections from powerful interests willing to commit considerable resources to preserve these interests. Campaigns to enroll support for the comprehensive policy frameworks required have had backing from high profile individuals and many respected interest groups. These campaigns continue to meet with limited success. Many of the

strategies used in marketing products have been applied to such campaigns...expect for those that are most effective. Drawing on the work of Clifford Bob and research undertaken with Doug Holt, I will examine the limitations of conceiving campaigns as like selling commercial products and services and the need to rethink campaigning. The paper will also explain how such insights can be (re)applied to the commercial sector beyond the conventional understanding of iconic and cultural branding.

## **10RN12 - New Trends in Environmental Democracy**

Chair(s): **Filip Alexandrescu** (Helmholtz Centre for Environmental Research, Leipzig)

## **Another South Asia is Possible? Trans-Boundary Water Resources and the Limits of Alternative Regionalism**

**Douglas Hill**, University of Otago | [dph@geography.otago.ac.nz](mailto:dph@geography.otago.ac.nz)

As trans-boundary water sharing becomes more contentious in the Ganges Meghna

Brahmaputra basins, more scholars are beginning to examine a range of ways in which

a more just and equitable distribution of South Asia's water resources may occur in the future. While agreeing with those who have argued for the need for a more broad-ranging regional organisation (Crow and Singh, 2009), not least because water-sharing negotiations are conspicuously absent from discussions at the inter-governmental South Asian Association for Regional Cooperation (SAARC), this paper argues that it is vital- both as an analytical and a practical task- to escape the 'territorial trap' (Furlong 2006) of thinking about trans-boundary water resources only in terms of relations between nation-states. Instead, the

paper traces attempts to form networks of civil society groups drawn from across the region and examines their success in contributing to policy debates. In so doing, it analyses the ways in which the politically fragmented nature of the sub-continent means that it is very difficult for such pan-South Asian networks to regularly meet and take up issues associated with trans-boundary water resources. While most trans-boundary networks are fairly nascent, the paper nevertheless argues that they are vital to a more open and accountable future, which in turn can assist in ensuring water security within and between India and Pakistan.

## **Destroying the Mountain to Construct Europe: a Short Story of the NoTAV Movement**

**Anahita Grisoni**, Ecole Normale Supérieure de Lyon | [anahitagrisoni@gmail.com](mailto:anahitagrisoni@gmail.com)

If the economic crisis of October, 2008, was identified as a "financial markets crisis" or as a "debt crisis" (Liberti, 2010), the fact remains that this event, localized in time, identified as the beginning of a "new era" (Salzbrunn, 2007) crystallizes the social and economic dimensions of a political crisis by questioning the legitimacy of the Union European, as an experience for European citizens (Friedmann, on 2010). The purposes of the French-German research network "Saisir l'Europe " is to answer to the various sectors of the crisis in Europe, through an interdisciplinary approach. The results I will present are based on a work on the social interpretation of the environmental crisis and aims to underline the conflicts on the definition of the sustainable development and environment meanings (Kalaora and Charles, 2001). The NoTav

movement in Italy and recently in France shows how European actors, committed in this confrontation, use the legal and institutional frameworks in various territorial scales, conflicting with the local decision-makers of cross-border projects. In this communication, the story of the NoTAV movement would be detailed in order to show how the topics of the economic crisis were progressively or suddenly introduced in the arguments used by the social actors against the setting-up of the railroad. If the movement exists since 1993, mobilizing not-only ecologic but also social or economic arguments, the fact remains that after the 2008 financial market crisis, the actors discourse has been reorganized around the parallel between both environment and economic crisis.

## **Explaining Private and Public Sphere Personal Environmental Behaviour in Lithuania**

**Audrone Telesiene**, Kaunas University of Technology | [audrone.telesiene@ktu.lt](mailto:audrone.telesiene@ktu.lt)

**Aistė Balžekienė**, Kaunas University of Technology | [aiste.balzekiene@ktu.lt](mailto:aiste.balzekiene@ktu.lt)

This presentation is part of the discussions on personal environmental behaviour and the

factors shaping this behaviour. The main aim of the presentation is to characterise the prevalence of personal environmental behaviour in Lithuania and evaluate the influence of background variables, environmental concern and knowledge upon this behaviour. The paper draws upon ISSP representative survey "Environment" conducted in 2010. Paper employs data from Lithuanian sample. Research indicates that individuals tend to be more engaged in private sphere environmental behaviour (waste sorting, environmentally-friendly consumer habits, saving water and energy) than in public sphere environmental behaviour

(environmental group membership, financial support of such groups, signing petitions, participating in demonstrations). Lithuanian results indicate that active private sphere environmental behaviour is more common among women, older people, people with university degree and inhabitants of small towns. Public sphere environmental activities are influenced significantly by education level and place of residence. Environmental concern has significant influence upon environmental behaviour, and knowledge about causes and solutions of environmental problems has significant but weak influence.

## Shelter from the Storm? The Role of Expertise in Environmental Deliberation

Luigi Pellizzoni, University of Trieste | [pellizzoni@sp.units.it](mailto:pellizzoni@sp.units.it)

The relationship between expertise and public deliberation on environmental issues is strong and controversial at the same time. Models and practices entrust experts a major role, as providers of relevant knowledge and information to lay participants. Yet the objectivity and neutrality of technical advice is often contested. Previous research has shown that expertise is increasingly thrown onto the terrain of conflicts, with complex effects as regards the politicization of the latter. Public deliberation, on the other hand, aims at offering shelter from the dynamics of contentious politics, and care is usually taken to ensure balanced expert inputs. Yet for critics such inputs affect in any case the way participants reflect and debate, as regards the

terms of the issue and the public interests and concerns involved. Participants, moreover, are hardly able to rely on an own (counter-)expertise, as it is often the case outside deliberative settings, which arguably weakens their position. The paper will offer evidence from a case study on a deliberative process concerning the project of an incinerator. Results indicate that the deliberative framework adds further layers of complexity to the role of expertise in environmental governance, as regards the significance of experts' independence, the limits of their hold on the issue and the capacity of participants to make creative use of their contributions.

## Storylines of Northern Mining Discourse Analyses of the SIAs in Mining Processes in the Arctic

Leena Suopajarvi, University of Lapland | [leena.suopajarvi@ulapland.fi](mailto:leena.suopajarvi@ulapland.fi)

In the Arctic regions exploitation of natural resources has dominated economic development even in the 21st century. In Finnish Lapland, for example, mining sector is growing fast due to interest of international

mining companies, high mineral prizes and good infrastructure of the Scandinavian welfare state. In the last ten years, six new mining projects have proceeded to environmental impact assessment in this

sparsely populated Northern county. Two of these projects have begun their production phase. There are high expectations for the growth of the mining: according to a regional industrial program the mining industry's revenue is expected to more than tenfold and the number of jobs more than threefold in a decade. The paper discusses what the mines are about from the local peoples' point of view. The data consists of social impact assessments (SIAs) made in six mining projects situated around Finnish Lapland. The SIA-reports summarize local people's opinions about the mines; hopes and fears related to mining. Argumentative discourse analysis,

introduced by Maarten Hajer in 1995, is employed as a research method. Based on the empirical study three storylines were identified. The first one argues that mines are the only way to develop remote regions of Lapland. The second storyline stresses that mines are important for the development of the whole county. After the Second World War the intensive use of natural resources was justified by national interest; now it is grounded in the name of regional interest. The third storyline argues that there is no loss of valuable nature. The analysis of storylines explains why public opinion in Northern Finland is strongly supporting mining projects.

## **a10RN12 - New Trends in Environmental Democracy**

Chair(s): Audrone Telesiene

### **Governance for Sustainability in Both Sides of Atlantic**

Joao Guerra, University of Lisbon | [joao.guerra@ics.ul.pt](mailto:joao.guerra@ics.ul.pt)

Luisa Schmidt, University of Lisbon | [schmidt@ics.ul.pt](mailto:schmidt@ics.ul.pt)

Promoted by global governance institutions, since the Brundtland Report publication, sustainability and participatory governance are sharing basic purposes and overlapping main potentials. Hence, the first aim of this presentation is the analysis of global, national and local factors that can improve or impede those potentials, based on data of different surveys applied in Portugal and Brazil. Additionally, the second proposed aim is to compare both sides of Atlantic conditions of participatory governance for sustainability, checking for themes, initiatives, failures, and successes. The results show some vital elements for success, viability and continuity of

such initiatives (e.g., the commitment and involvement of local authorities; clear information availability; transparent procedures...), but also some common difficulties (e.g., distrust between governors and governed, bureaucratic atavism, lack of resources...) arising mainly from inherited centralist traditions of governance marked by former authoritarianism regimes in both countries. Furthermore, although less significant in magnitude, the results in Brazil seems more consistent and reliable than in Portugal, primarily due to the national program (absent in Portugal) to implement and monitor local sustainability initiatives.

## Shale Gas or Nuclear Power Plant: Who Deliberates on Energy Future in Poland and how? The Perspectives for the Social Dialogue on Energy Issues on the Example of Communication Activity in Business and Administrative Sector in Poland.

Aleksandra Wagner, Jagiellonian University, Cracow | [aleksandra.wagner@uj.edu.pl](mailto:aleksandra.wagner@uj.edu.pl)

During last 20 years the significance of academic reflection on deliberative process in social science is increasing. It is connected with the theory of democracy (Habermas, Rawls, Dryzek), methodology (Fiskin, Coleman, Bohman, Luskin), civil participation and public dialogue (De Munck, Didry, Ferreras) or the group process (Wojcieszak). The consequences of 'deliberative turn' could be observed in social practice: in administration field – law regulation, and in business sector – where the idea of dialogue with stakeholders is a part of Corporate Social Responsibility. The aims of my paper are twofold: first is discussing the concept of deliberation (understood as habermasian "bringing lifeworld perspective" into system orientation and as "rational, common and dialogical consideration of important issues for society" following Fishkin) as important step of making people engaged in

environmental issues. Second, basing on empirical analysis- case study of social dialogue on the new solutions in Polish energy sector: shale gas and nuclear power plant, focuses on comparison of communication practice used in the business and governmental sector. Analysing the communication campaigns executed by two big enterprises: PGE (nuclear energy) and PGNiG (Shale gas) as well as communication activity of Ministry of Economy and local governments during the last two years, I will identify: - the practical understanding of the idea of social dialogue, - main social actors engaged in it - main tools and channels of communication. The paper contributes to the discussion on Participation, Citizenship and Environmental Democracy by confronting the normative approach with the social practice, its chances, limitation and barriers.

## Limits of Acceptance. Problems of a Concept and the CCS-case in Germany

Dietmar Rost, Institute for Advanced Study in the Humanities (KWI), Essen | [dietmar.rost@kwi-nrw.de](mailto:dietmar.rost@kwi-nrw.de)

Gunnar Fitzner, Institute for Advanced Study in the Humanities (KWI), Essen | [gunnar.fitzner@kwi-nrw.de](mailto:gunnar.fitzner@kwi-nrw.de)

Dynamics of global warming and greenhouse gas emissions demand severe and immediate transformation in fields of production, consumption and infrastructure. In this context, the concept of acceptance has become widely used to address a range of problems linked with the implementation of transformative steps. Here, the concept of acceptance serves especially to address problems showing up within formally democratic processes, e.g. local resistance to new power lines. Public opposition to

infrastructure projects of several kinds motivated growing interest in understanding the role of acceptance as well as in policies trying to achieve acceptance. Thus, research on acceptance finds itself in the middle of needs for transformation resulting from Global Change, policies interested in scientific support and its scientific task of broad reflection on that issue. Looking at its usage within the field of energy production transition, our paper intends to critically highlight different aspects of acceptance and limitations

of this concept. Based on analysis of German Carbon capture and storage (CCS)-plans and their public debate we discuss scientific usages of the concept of acceptance, alternative concepts like acceptability, and productive aspects of non-acceptance of infrastructure projects. By this, we intend to

demonstrate that thorough reflection and distinction of various aspects usually merged into the concept of acceptance is a basic prerequisite for thinking about ways to strengthen civic participation, usage of local knowledge, and democratic procedures in transition of the energy sector or elsewhere.

## **Public at Risk or Public as Risk? Managing Environmental Concerns through Risk Governance**

Rolf Lidskog, Örebro University | [rolf.lidskog@oru.se](mailto:rolf.lidskog@oru.se)

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization. This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens' and stakeholders' claim for regulating nature. The analysis finds

that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of symbolic action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

## **11RN12 - Science, Technology, and Environmental Innovation**

Chair(s): Alena Bleicher (Helmholtz Centre for Environmental Research, Leipzig)

### **Evaluation and Monitoring of Social Impacts of Megaprojects: Lessons from the Literature, and Potential for the Evaluation of Radioactive Waste Disposal**

Markku Lehtonen, Université de Paris-Est Marne-la-Vallée & University of Sussex | [m.lehtonen@sussex.ac.uk](mailto:m.lehtonen@sussex.ac.uk)

A growing body of literature has drawn attention to the "megaproject pathologies", i.e.

the chronic failure of large, complex infrastructure projects to keep to their budgets

and timetables, and deliver their promised benefits to society. The literature often mentions the social and environmental impacts of these projects, but has overwhelmingly concentrated on the issues of time and cost, paying little attention to the evaluation of social impacts. When addressed, 'the social' is often subsumed under the 'socio-economic', emphasising 'the economic' and the 'objective' side of the social, measured through quantitative indicators. This paper explores approaches and methods capable of combining, in megaproject evaluation, the 'objective' and the 'subjective' dimensions of the social, and taking seriously the exercise of power. The management high-level radioactive waste in France is used as an illustrative example of a megaproject. The paper briefly

reviews the place of social impact evaluation, assessment and monitoring in current megaproject literature, identifies the specificities of geological disposal of high-level radioactive waste as a megaproject, and draws on literature on impact assessment (especially SIA), policy and programme evaluation, and institutionally oriented ecological economics for inspiration on ways to evaluate 'the social' within megaprojects. Building on lessons from current work on territorial social indicators, social capital, and the 'capabilities approach', the paper explores the potential of monitoring and evaluation of the social impacts that would be flexible, reflexive and sensitive to power, and would fully recognise the essentially political nature of evaluation as a social practice.

## Risk Regulation Regimes in Action: Analyzing Finnish and Swedish Spent Nuclear Fuel Repository Licensing Processes

Tapio Litmanen, University of Jyväskylä | [tapio.litmanen@jyu.fi](mailto:tapio.litmanen@jyu.fi)

Barry Solomon, Michigan Technology University | [bdsolomo@mtu.edu](mailto:bdsolomo@mtu.edu)

Mika Kari, University of Jyväskylä | [mika.kari@jyu.fi](mailto:mika.kari@jyu.fi)

This study focuses on the safety critical risk regulation processes of nuclear waste management. The cases to be studied are Finnish and Swedish plans to dispose of spent nuclear fuel in geological repositories for thousands of years. These two countries are the most advanced in their plans. The companies in both countries have assured the public that their plans can hold up to critical assessment. However, critics doubt that safety can be guaranteed. Our aim is to analyze: 1) institutional waste management frameworks in both countries, paying special attention to the role of civil society actors and transnational risk regulation; 2) how lay-people and civil society organizations (CSOs) have been able to participate and contribute to recent nuclear waste decision-making; and 3) the nature of

nuclear waste risk debates in both countries. In particular, we are interested in determining how one safety critical issue, namely corrosion of copper canisters, is discussed. Research data consists of official documents of the nuclear waste companies and nuclear safety authorities, but also reviews from CSOs and statements of laypeople. Theoretically we will apply a risk regulation regime approach, which is oriented towards institutional issues. However, we will argue that civil society regulation has to be better integrated into these regimes. We assume that CSOs can press corporations to deliver improvements in their research, development, and technical design and similarly they can follow the work of regulators and give potentially superior ideas for improving waste management.

## **The SIMAGE (Integrated System for Environmental Monitoring and Emergency Management): an Innovative Public-Private Technological Partnership in the Chemical Site of Porto-Marghera (Italy)**

Paolo Crivellari, University of Toulouse3-Paul Sabatier | [paolo.crivellari@iut-tlse3.fr](mailto:paolo.crivellari@iut-tlse3.fr)

The scientific literature on environmental issues stresses that the interest for environmental pollution of air, soil and water has been historically overshadowed in a vast number of industrial sites by occupational issues, due to the “jobs vs. the environment” dispute. Environmental agencies and industrial companies have traditionally followed different (and sometimes colliding) paths because of their specific missions. The SIMAGE (Integrated System for Environmental Monitoring and Emergency Management) represents a remarkable exception in Italy, being based on a public-private partnership between the ARPAV (Environmental Regional Agency for the Environment of the Veneto Region, Italy) and the EZI (Association that gathers the industrial companies of the Porto Marghera chemical site). Thanks to this economic and technological partnership, the

SIMAGE is an innovative technological device that performs at the same time: 1) the monitoring of polluting substances in the air; 2) the analysis of the gathered data; 3) the communication to the population in case of an industrial accident (when the pollutants trespass the thresholds of emissions). The present paper is based on an empirical sociological study that has been conducted at the local level in the chemical site of Porto Marghera (Italy), using qualitative techniques (semi-structured interviews). It aims at accounting for the genesis of the partnership between ARPAV and EZI and focuses especially on the evolution from a controller-controlled relationship towards mutual trust and confidence. Conclusion will focus on the conditions that are required for linking trust building and innovation in a public-private partnership about environmental issues.

## **Digital Communications: A New Set of Tools or Conscious Awareness for Sustainability?**

Robert Rattle, Sault College/Independent scholar | [robert14robert@yahoo.ca](mailto:robert14robert@yahoo.ca)

Throughout human history, beliefs, cultural norms and structures prevented the ‘Joneses’ from getting ahead. With constraints to greed, competition, hoarding, control and leadership, human history reflects understandings of the natural world and its limits, and, equally, the importance of close social bonding, trust, equality, egalitarianism, sharing and cooperation. In such environments, cultural norms, practices and technologies evolved to ensure an equitable distribution of social wealth and a sustainable scale of the society. Today, however, the dominant social messages encourage getting ahead of the Joneses. These messages reflect beliefs in the mechanistic

predictable functioning and control of the natural world, social encounters and economic structures. Structures that support competition, greed, individual self-interest, materialism, inequality and hierarchies are rewarded. Digital Communications (ICTs) merely reflect these structures. Despite the potential for ICTs to generate ecological and social benefits, their development continues to focus on economic growth and material expansionism, social exclusion, class divisions and wealth inequalities to more or less perpetuate the status quo. Yet ICTs have demonstrated the potential to enable functional participatory governance, greater

equalities and more equal wealth and power distributions, sustainability, and cooperation and sharing in ways and at scales unimaginable even a decade ago. Nevertheless, very little attention is directed at

the societal normalising ideals emerging from these practices. This presentation will discuss how ICTs might contribute to sustainability through the values they project rather than as a new set of tools.

## **From the Naples Emergency to the Waste-to-Energy Miracle. How and why Italian Press Influenced Public Opinion on Waste Incineration**

**Giuseppe Tipaldo**, University of Torino | [giuseppe.tipaldo@unito.it](mailto:giuseppe.tipaldo@unito.it)

The claim for public participation and consensus building among local communities are two of the most shared leit motiv in energy plants settlements, nowadays. Far from assuming deterministic perspectives, a key role is played by the media system, whose mediatised narrations can drive the negotiation strategies between citizens and promoters to different outcomes. As a part of a still on-going 5-years research conducted on the social impact of the under-construction co-incineration plant in the city of Turin, the paper is first of all concerned on how the Italian newspapers covered the 2008 waste emergency in the city of Naples. Secondly, data from the mass media analysis are cross tabulated with those coming from a panel survey and some focus groups in order to give

empirical evidences of the effects of the coverage on public opinion attitude towards waste-to-energy technology. The work demonstrates a highly emphasized and dramatized communication has been set up by the Italian newspapers, which described the Naples' waste emergency as a "new Chernobyl", whose solely solution was the incineration with energy recovery, without giving enough space to alternatives. By making the local emergency in Naples a sort of Hirschman's «catalytic event» nation-wide, mass media have strongly influenced public opinion in a short term perspective, increasing the number of people agreed with waste-to-energy, particularly those with a low cultural profile.

## **12RN12 - Sustainable Consumption and Life Styles**

Chair(s): Giorgio Osti (Università di Trieste)

### **Target Groups for Promoting Low Carbon Lifestyles among Urban Populations**

**Georg Sunderer**, Institute for Social-Ecological Research (ISOE), Frankfurt am Main | [sunderer@isoe.de](mailto:sunderer@isoe.de)

**Immanuel Stieß**, Institute for Social-Ecological Research (ISOE), Frankfurt am Main | [stiess@isoe.de](mailto:stiess@isoe.de)

**Christian Dehmel**, Institute for Social-Ecological Research (ISOE), Frankfurt am Main | [dehmel@isoe.de](mailto:dehmel@isoe.de)

Mitigating climate change cannot solely be achieved by new technologies. There is also a

need for a change towards low carbon routines and consumption practices. Private households in industrial countries contribute significantly to the emission of greenhouse gases. In this context, the fields of nutrition, mobility and household energy consumption are particularly relevant. In order to understand how low carbon lifestyles can be promoted among different groups of the population, segmentations have been proved as a promising tool. That means the population is segmented into homogenous groups with special patterns of motives and barriers. Therefore, segmentations allow adjusting policy measures better to the needs of different societal groups. In our presentation we focus on the question, which target groups for promoting low carbon practices can be

identified? The analysis addresses the special case of urban population and is based on a broad empirical survey ( $n = 2.000$ ) in the two German cities, Frankfurt/Main and Munich. In particular, consumption routines and practices in the fields of nutrition, mobility and energy consumption are taken into account. The target groups are identified by examining motivational factors, e.g. climate awareness, which could support the diffusion of low carbon lifestyle, as well as broad and field specific barriers, which restrain low carbon routines. Additionally, the actual consumption activities and their environmental impact are taken into account. This aspect of practices is often neglected in segmentations, although it is important for creating suitable policy measures and programmes.

## **The Voluntary Simplicity Movement: As Socially Motivated as the Rest of Us**

Mikael Klintman, Lund University | [mikael.klintman@soc.lu.se](mailto:mikael.klintman@soc.lu.se)

Based on evolutionary-based environmental sociology, this paper scrutinizes its own thesis that social motivation, rather than ecological or economic motivation, is the fundamental driving force behind all human activities above struggles for meeting basic needs of oneself and the near ones. Empirically, qualitative interviews have been conducted with 'the voluntary simplicity movement' in urban areas in Sweden. Data are analysed in the context of this movement internationally. The study elucidates how people identifying themselves as belonging to the 'voluntary simplicity movement' to be sure have ecological issues close to heart. Yet, their bottom line rather seems to be to distance themselves against 'the culture of mainstream mass consumerism' than against, for instance, contributing to pollution of artificial chemicals and of fossil fuels. It seems more important to

indicate an aesthetic distinction from other cultural expressions than from the environmental impact of those cultures. From an ecological perspective there might lie a hope in that neither the voluntary simplicity movement nor the rest of us in our practices with ecological ambitions need to fight against an inherent, basic Homo Economicus motivation towards ever-increasing comfort and materialist satisfaction. Nor do we need an essential ecological motivation in order to modify our lifestyles or to support more ecologically progressive politics in the name of reduced ecological harm. Instead, the crucial issue is how to shape social organization and politics in ways that people can meet their fundamental motivations of social bonding and distinction, and at the same time reduce ecological and social harm.

## Translating Sustainability Standards into Practice: How Transnational Nonstate Governance Improves Forest Management in Russia

Olga Malets, Technical University, Munchen | [olga.malets@tum.de](mailto:olga.malets@tum.de)

I focus on the translation and implementation of nonstate market-driven governance in the area of the environment and natural resources during the world economic recession. I explore how local actors translate transnational voluntary standards of responsible natural resource management into on-the-ground practices in domestic settings. Building on the sociological literature on social learning, international law, pragmatist and experimentalists accounts of institutional diffusion and environmental governance, I argue that implementation is not a straightforward execution of transnational rules imposed by powerful transnational actors – e.g., international NGOs, multinationals, governments or consumers. Rather, local actors negotiate the ways in which transnational standards are implemented locally in formal and informal settings, and thereby settle political conflicts over natural

resource management and construct new knowledge related to standard implementation and good natural resource management. They use both global ideas reflected in transnational norms standards and locally available concepts and practices as building blocks, and combine them in various ways in order to construct new knowledge. I therefore emphasize stakeholder interest negotiation and collective learning as core social processes which enable the translation of transnational voluntary standards into on-the-ground practices. Empirically I build on my in-depth study of transnational forest governance in Russia. I show how transnational and national actors, including firms and NGOs, were able to introduce some of the broad international norms of sustainable forest management in the everyday practice of Russian timber producers.

## Sharing Economy: a New Option for Sustainable Consumption?

Harald Heinrichs, Leuphana University, Lueneburg | [harald.heinrichs@uni.leuphana.de](mailto:harald.heinrichs@uni.leuphana.de)

Individual ownership and consumption are central characteristics of an economic and societal model based on material wealth. The promise of a happy life based on individual consumerism has been critically analyzed in recent times: the spectrum ranges from results of happiness research, debates on resource scarcity up to concepts for post-growth societies. Parallel to this critical observations new, alternative forms of ownership and consumption – oftentimes supported by ICT, social media – arise in different areas in economy and society. Before this background we will discuss in our presentation theoretical-conceptual approaches concerning the so called “sharing economy” and “collaborative consumption” and

present empirical results of a quantitative study conducted in Germany on this topic. The results show, that collaborative consumption and sharing economy is not (any more) a niche topic. Taking into account expected positive effects of this “third way” for sustainable consumption – next to reduced consumption and consumption of sustainable products – politics, business and society at large are challenged to adapt boundary conditions, such as regulatory frameworks or business models, in such a way, that sharing economy and collaborative consumption may become a complementary consumer practice next to ownership economy and individual consumerism.

## 13RN12 - Biodiversity and Nature Conservation

Chair(s): Audrone Telesiene

### Public Participation in Environmental Conservation in Zoos and Marine Parks: a Case-Study Analysis

Eugenia Rodrigues, University of Edinburgh | [eugenia.rodrigues@ed.ac.uk](mailto:eugenia.rodrigues@ed.ac.uk)

Steven Yearley, University of Edinburgh | [steve.yearley@ed.ac.uk](mailto:steve.yearley@ed.ac.uk)

The philosophy and practices of zoological gardens and marine parks have changed dramatically in the last few decades. Formerly, zoos kept impressive and intriguing animals to excite the wonder and enthusiasm of the public and to serve as living species catalogues. Lately, zoos have begun to stress their role as conservation centres – for example by breeding in captivity species that are threatened with extinction in the wild. On this view, animals are confined for the species' good and not primarily out of scientific curiosity or for our entertainment. Zoos have always presupposed a public that would come to view the exhibits but they have seldom opened their own practices to public engagement; this is the case despite the fact that public participation and engagement exercises are now a well-established practice across scientific and environmental fields. This

paper analyses a recent attempt to involve the public in a deeper sense in biodiversity conservation issues in European zoos and marine parks. EUZoosXXI was an EU-funded project set up with the clearly defined objective of involving the public in the conservation work of zoos, not least by getting the public to participate actively in improving or radically changing one exhibit (and its impact on visitors) in each zoo/marine park. Our presentation analyses the development of this initiative, explores what happened in each of the four facilities involved, and identifies some of the limitations on the development of participatory ventures in zoos. As participants in the EUZoosXXI project, we adopt a reflective perspective to consider the difficulties in doing public engagement within interdisciplinary teams.

### The Impact of Biodiversity Discourse on the Environmental Conflicts in the European Union – Evidence from Poland

Krzysztof Niedziatkowski, Mammal Research Institute of the Polish Academy of Sciences | [kniedz@ibs.bialowieza.pl](mailto:kniedz@ibs.bialowieza.pl)

Jouni Paavola, University of Leeds | [J.Paavola@leeds.ac.uk](mailto:J.Paavola@leeds.ac.uk)

Bogumila Jędrzejewska, Mammal Research Institute of the Polish Academy of Sciences | [bjedrzej@ibs.bialowieza.pl](mailto:bjedrzej@ibs.bialowieza.pl)

Biodiversity conservation has become an important area of the European Union policymaking with its own legal and organisational framework. The accession of Poland to the EU in 2004 involved adopting appropriate rules and underlying discourses.

This paper looks at the consequences of this process for nature conservation governance in Poland. Tracing developments in three conservation conflicts it is argued that biodiversity discourse and institutions considerably affected the way conflicts over

nature are understood, played by actors involved, and resolved. The paper suggests that biodiversity conservation redefined what is naturally valuable and become much more space hungry increasing conflicts with infrastructure development. The passive nature conservation, focused on remnants of undisturbed habitats, became more offensive to include patches to be re-naturalized and ecological corridors. The new discourse and EU rules that followed, rescaled the governance of biodiversity, shifting power to the EU and non-state actors who became directly involved in decision-making. While in conflicts between conservation and

development, biodiversity discourse strengthened conservation interests, in a conflict, in which opposing groups advocated different concepts of biodiversity conservation, the impact of the new discourse was less pronounced. The paper also investigates the role of scientists in translating the dominant nature conservation paradigms into concrete policy goals. Based on these insights, the paper makes an original contribution to the debates concerning political aspects of biodiversity conservation, the importance of scale in interpreting biodiversity, and the role of science in biodiversity policy-making.

## **Is it Possible to See, Feel and Experience Biodiversity? The Framing of Biodiversity in EU Strategies and Actions.**

Ylva Ugglå, Örebro University | [ylva.uggla@oru.se](mailto:ylva.uggla@oru.se)

Biological diversity is a complex and abstract scientific concept, and both evaluating its condition and justifying its conservation require expert knowledge. Accordingly, regulating and managing biodiversity presupposes simplifying and standardizing a complex mass of knowledge, which, for example, is done through the red list. Furthermore, to be acted on, the concept of biodiversity must be spread, promoted and gain public support. In this process, the concept of biodiversity is (re)defined and “translated” in order to be comprehensible outside the scientific community. The aim of this paper is to analyze how the EU has framed, visualized and illustrated the concept of biodiversity in the endeavour to halt biodiversity loss. The paper also critically discusses the implications of various representations of the concept. The

study is based on the EU Biodiversity Action Plan, the EU Biodiversity Strategy and actions performed by the EU during the International Year of Biodiversity (2010), and includes analysis of both texts, images and the presentation (i.e. layout and the relationship between text, headings, catch phrases and images). The paper concludes that in the texts biodiversity to large extent is framed as a matter of human well-being and economic growth. The visual representations, on the other hand, mainly focus on natural sceneries and unique and/or threatened species. Taken together the message seems to embrace the variety of values attached to biodiversity. At the same time it results in a sketchy and inconsistent message of both biodiversity and the relationship between humans and their environment.

## **Very Little Impact of Voluntary Standards, such as the Roundtable on Sustainable Palm-Oil, to Protect Biodiversity, Especially Orangutan hHabitat.**

Denis Ruysschaert, Université de Toulouse Le Mirail | [denis.ruysschaert@gmail.com](mailto:denis.ruysschaert@gmail.com)

Denis Salles, UR ADBX | [denis.salles@irstea.fr](mailto:denis.salles@irstea.fr)

Orangutan habitat, the lowland rainforest in Malaysia and Indonesia, is declining at a rapid rate. Most of this loss is linked to the expansion of oil palm plantations. It happens despite the development of Multilateral Environmental Agreements (MEAs) to protect biodiversity or forest (such as the Convention on Biodiversity, the Convention on Climate Change). Voluntary codes of conducts have recently emerged as a practical alternative to preserve rainforest through the implementation of agreed sustainable principles by private stakeholders along the supply chain. This paper assesses the impact of one such a code of conduct, the Roundtable on Sustainable Palm Oil (RSPO), to protect orangutan habitat on the ground. The study found that the RSPO has very little impact preserving the orangutan habitat. The reasons can be summarized into two main findings.

Firstly, only western economies demands sustainable palm oil and therefore only the biggest palm-oil planters who seek to secure access to this market have an incentive to comply with the code of conduct. Secondly, the framework is not linked to the society (e.g. institutions, laws and regulations) in palm oil producing countries. This study is based on field data collected in Indonesia between 2006-2012. It includes data from participating at the RSPO annual meetings, reviewing RSPO reports and conducting interviews with all stakeholders in the palm-oil supply chain from farmers to government officials. The study provides a new insight on the role of the voluntary code of conducts. Beyond finding poor success in persevering the biodiversity rich habitat, the study also questions the impact of environmental NGOs in the RSPO to reach their conservation goals.

## **Biodiversity under Development. A Study of the Co-production of Biodiversity.**

Karin M. Gustafsson, School of Humanities, Education and Social Sciences, Orebro University | [karin.m.gustafsson@oru.se](mailto:karin.m.gustafsson@oru.se)

The concept biodiversity was used for the first time in 1986. The Convention on Biological Diversity was established in 1992. The year 2010 was proclaimed by the UN as the International Year of Biodiversity. In 2012 the Intergovernmental Platform on Biodiversity & Ecosystem Services was founded and the platform held its first plenary meeting in 2013. These years are some of the milestones throughout the history of the knowledge production which has enabled biodiversity to be acknowledged as an issue with severe problems. However, if to understand and manage these problems we need to ask what type of issue biodiversity has become, who has been involved in the knowledge production, and

what consequences the knowledge imply for managing the problems? This study studies how biodiversity came to be what it is today and how biodiversity has come to be constructed as one of the greatest environmental problems on the international political agenda. The study is based on a combination of previous studies covering different aspects of the history of biodiversity and new material on current activities related to biodiversity. The study is inspired by Jassanoff's perspective of co-production. The study analyses the complexity of biodiversity, its dependence on science, its political dimensions, its abstract character though locally rooted, its transdisciplinarity, and the many actors involved. The study shows

how biodiversity is co-produced by facts/values, science/policy, experts/everyday experiences, leisure/business, and nature/culture. The study offer important

knowledge of the hybrid character of biodiversity and contributes thereby with knowledge needed if the problems of biodiversity loss will be possible to managed.

## 14RN12 - Governance and Management of Water

Chair(s): Mikael Klintman (Lund University)

### Water Governance and Finnish Peat Mining

Eerika Albrecht, University of Eastern Finland | [eerika.albrecht@uef.fi](mailto:eerika.albrecht@uef.fi)

Mires and peat lands cover 1/4 of total area of Finland and peat remains an important national source of energy. In recent public debate peat mining is widely criticized due to impacts on water quality in underneath water bodies. On the other hand environmental permit is issued only for best available technology (BAT) and expert knowledge proves peat mining to be a minor water pollutant. Knowledge being central to water governance is in this case lacking the legitimacy and the processes in which the knowledge is being formed are questioned by the public. Water governance settings of peat mining have similarly faced a rapid change in past two years. National and local civil society actors have been active through several local conflicts

aiming at conservation of mires and water bodies. As a state policy response, a national strategy of mires and peat lands was published in 2011. As a response from company's side VAPO Oy, the biggest peat producing company in the world, has been forced to develop corporate environmental responsibility (CER) with main objective of reducing strain on water system. This paper analyzes the governance settings on national and local scale focusing on CER and national peat land policy and the impact of knowledge and citizen activity in the process of forming new water governance settings. Data consists of policy documents, company's CER documents and a set of interviews conducted on national and local level.

### AdaptEau : an Interdisciplinary Research Experience on the Water Governance in the Garonne-Gironde Environment

Denis Salles, UR ADBX | [denis.salles@irstea.fr](mailto:denis.salles@irstea.fr)

Guillaume Simonet, CERTOP - Université de Toulouse 2 | [simonet.guillaume@gmail.com](mailto:simonet.guillaume@gmail.com)

Territories, populations and socioeconomic activities are experiencing increasingly impacts from climate change. Exacerbated by impacts from the demographic evolution, the energy transition and the development of urbanization, the ecosociosystems need to implement adaptation strategies at local scale to reduce their vulnerabilities to this Global Change.

Nevertheless, whereas ways of organizing economic, social and political are questioned by the emerging normative frameworks, the implementation of efficient measures are facing cognitive, institutional and technical barriers. Taking the fluvio-estuary environment of Garonne-Gironde as application area, the French project AdaptEau

aims to study the conditions of emerging options of adaptation in the water field to face low flows and floods events through an innovative way using interdisciplinary approach. Through it, AdaptEau uses a co-construction method to reach scenarios on adaptation trajectories involving both researchers and stakeholders by imagining appropriate conditions of water governance at territorial scale. First results show that water management and governance is taking climate

change as a central director principle through different policy tools and plans, including the participative ways to accommodate the new society requirements. Moreover, the governance of these strategies of adaptation to global change is taking place at watershed or territorial scale, taking up the challenge to the essential involvement of the main local socioeconomic actors into the decisional process.

## **Governance Changes and the Transition toward Ecosystem-Based Management: The Case of Isla Mayor**

**Sherman Farhad**, Universidad Pablo de Olavide, Sevilla | [shermanfarhad@gmail.com](mailto:shermanfarhad@gmail.com)

**Miguel Angel Gual Font**, Universidad Pablo de Olavide, Sevilla | [mgual@upo.es](mailto:mgual@upo.es)

Addressing the current environmental crisis requires significant focus on social-ecological systems, and the analysis of their inherent uncertainties and complex, non-linear, multi-scale dynamics. To study the social mechanisms behind ecosystem function, we focus on governance configurations, including institutions, rules, norms and cultural practices that govern socio-economic activities, define their biophysical flows, and so their impacts on ecosystems. Our case study refers to Isla Mayor's social-ecological system, a southern Spanish municipality with an intensive rice cultivation tradition, located in the Guadalquivir River marshes, close to Doñana National Park. The study highlights that specific geographical location of the case close to the national park, has triggered an

environmental awareness in society concerning the negative effects of the rice activity of the region on the ecosystems. Accordingly, the perceived threat among rice-farmers of being rejected by society, the special role of the Seville rice farmer's federation as a bridging institution, and institutional support for the social-innovative approaches, have been catalyst elements, fostering a significant transformation in ecosystems management. As a result, we find: (1) integrated production as the main farming system of the region, (2) improved water quality as well as bird feeding conditions due to the stricter control in the use of phytosanitary products, and (3) the reinforcement of cultural and recreational ecosystem services, principally bird watching.

## **The Experience of Participation in Portuguese Water Administration: looking at the River Basin Committees (RBC).**

**Sofia Bento**, Technical University of Lisbon | [sbento@iseg.utl.pt](mailto:sbento@iseg.utl.pt)

**Marta Varanda**, University of Lisbon | [marta.varanda@ics.ul.pt](mailto:marta.varanda@ics.ul.pt)

**Oriana R. Brás**, Technical University of Lisbon | [oriana.rainho@gmail.com](mailto:oriana.rainho@gmail.com)

**Miguel Rodrigues**, Lisbon University Institute | [miguelrodrigues73@gmail.com](mailto:miguelrodrigues73@gmail.com)

Water sector in Portugal has witnessed innovations in management systems and sustainability practices in the last decades. The reform was initiated with the Water Law and was extended to institutional changes such as the creation of the administrations of Hydrographic Regions, new licensing regimes of economic uses of water, the implementation of River Basin Committees (RBC) and new forms of citizen involvement such as disseminating information through institutions webpages, participatory workshops, etc. Although the new forms of citizen involvement are new, they have not yet been monitored by any public or private institution nor by any independent organization. This paper aims to improve knowledge of the functioning of a particular initiative- the RBC's- as to gain greater knowledge of the recent process of participation in the water sector in Portugal.

These Committees integrate ministries, government departments, municipalities and entities representing users with the purpose of discussing a variety of water related issues, such as its management and policies. The Committees' format has the potential of being dialogic, allowing the co-construction of technical and management problems and to implement new democratic practices in the water management. However, old formulas of organizing discussion, going back to classical logic of power, can be observed where some voices are simply silenced. Based on the content analysis of the boards' minutes and also on interviews with actors involved, this paper wants to critically analyze the participatory dynamics in these committees, and assess how much is gained in such participatory processes.

## **15RN12 - Environmental Justice**

Chair(s): Balázs Bálint (St. István University in Gödöllő, Hungary)

### **Environmental Justice and the Roma Settlements of Eastern Slovakia: Entitlements, Land, and the Environmental Risks.**

**Richard Filcak**, Slovak Academy of Sciences | [richard.filcak@savba.sk](mailto:richard.filcak@savba.sk)

Exposure of the Roma ethnic minority to social exclusion, segregation and racial discrimination is well documented in the literature. How are these tendencies reflected in the access to environmental benefits and exposure to environmental risks (the majority

and minority population) is subject of this article. Through comparative evaluation and utilising the concept of environmental justice, it analyses the social processes and factors contributing to the differentiated distribution. The inequalities are mapped based on a survey

of 30 randomly selected settlements and comparative case studies analyses. Location of the Roma settlements is identified as a strong factor leading to environmental (in)justice in its various forms. The settlements location is then subjected to entitlement analysis (as developed by Amartya Sen). Particular attention is paid to defining and understanding entitlements and how they govern access to land and thus influence living conditions of different individuals and groups, and their well-being.

Entitlements and entitlement-based control of resources, are discussed here as a dynamic process, where different economic and social factors are identified and analysed to deconstruct processes leading to environmental (in)justice. The article concludes with a description of trends and discussion on the need to re-define our definitions and understanding of the role of entitlements vis-à-vis distribution of the environmental benefits and risks.

## Some Highlightings on Environmental Justice

**Ilaria Beretta**, Università Cattolica del Sacro Cuore | [ilaria.beretta@unicatt.it](mailto:ilaria.beretta@unicatt.it)

Today, very often we read and we hear talk on environmental justice not only in institutional and academic contexts, but also, more and more, through civil society. But it seems to the author that environmental justice terms do not mean the same everywhere, and there are several differences in the way these terms are used. With present paper, author tries to shed light on the 'status' of environmental justice answering the following theoretical questions: what are the origins of environmental justice concept? What does environmental justice mean through continents and countries? What

is its connection with sustainable development concept? Do they mean something different, or does sustainable development concept encompass environmental justice? What is the connection with globalization? Does globalization harm or help environmental justice? And, last, focusing on distributional problems, what are the distributional effects of environmental politics? Paper shows that very often it's not possible to answer these questions in a unique way, but different situations require different conclusions.

## Fuel Poverty and Environmental Justice

**Karl-Michael Brunner**, Vienna University of Economics and Business | [Karl-Michael.Brunner@wu.ac.at](mailto:Karl-Michael.Brunner@wu.ac.at)

**Anja Christanell**, Austrian Institute for Sustainable Development | [anja.christanell@oin.at](mailto:anja.christanell@oin.at)

**Sylvia Mandl**, Austrian Institute for Sustainable Development | [Sylvia.Mandl@oin.at](mailto:Sylvia.Mandl@oin.at)

While (unlimited) availability of energy is the norm for some social groups in industrialised countries, other parts of society are faced with the problem of not being able to afford energy in sufficient quantities or having to limit their use of energy services. In recent years, the analytical focus has shifted from global inequalities towards inequalities and vulnerabilities in the Northern countries, bringing forward evidence that financially

weaker households are more vulnerable to climate change than better-off households, although – compared to the more affluent – their contribution to climate change is usually lower (e.g. due to lower mobility rates). What is more, socially less privileged groups are notably more frequently hit by fuel poverty. But so far, fuel poverty has rarely been discussed within an environmental justice frame. The proposed paper will do so in focussing on

results from 2 research projects on fuel poverty in Austria. In recent years the first study has begun to investigate the matter from the perspective of the people concerned and their energy practices, conditions of action, and coping strategies. Based on the results of this study the authors have started a new project in

late 2011 (funded by the Austrian Climate and Energy Fund) which aims to develop, implement and evaluate tailor-made advice services for the improvement of energy efficiency and the mitigation of fuel poverty in 400 to 500 Austrian households.

## **Exit, Loyalty and Voice about Environmental Inequalities in Polluted Territories: Comparative Analysis of Incentives and Impediments for the Undertaking of Claims for Justice**

Christelle R.M. Gramaglia, G-EAU IRSTEA, Montpellier | [christelle.gramaglia@irstea.fr](mailto:christelle.gramaglia@irstea.fr)

Using the results of a survey conducted in 2 locations in Southern France, our presentation will address social and political issues raised by the definition of the environmental and health risks generated by the scattering of industrial pollution across inhabited territories. We shall tackle more specifically the question of environmental injustices and try to explain why the approaches relating to this frame of analysis were hardly developed in Europe. We shall evoke the factors which pushed some inhabitants of 1 polluted site to express views on the subject, and on the contrary, those which discouraged further criticism. We shall investigate how a protest collective formed in 1 case, how it appropriated and discussed scientific data, disputed official risk assessments and produced new knowledge on the extent of contamination, based on the experience of its members. We

shall present the main obstacles such a collective faced, in particular the fear of job losses and the downgrading of affected territories, and the ones which impeded any form of protest in the other case. We shall then discuss comparatively the consequences of the anxiety generated by uncertainties surrounding the levels of risk, which can vary according to the manner upon which the local authorities grasp the problems posed - limiting or amplifying what sociologists name the corrosive effects of pollution on communities. Finally, we shall show that while questions surrounding environmental and health risks are often approached with difficulty in public, they engender tacit heterogeneous practices of precaution defined at the individual level, which act as so many attempts at limiting the situation of ontological insecurity generated by pollution.

## **The Role of Responsibility and Justice in Outlining Climate Policy**

Carmit Lubanov, Tel Aviv University | [don1298@netvision.net.il](mailto:don1298@netvision.net.il)

The current debate on climate policy, and on ways towards global agreement, points to climate injustice as a major obstacle for progress. A recent research initiated by AEJI has focused on the centrality of the inequalities in consumption patterns concerning climate change responsibility. Methodologically, developing of indicators for comparisons of

GHG emissions levels across different groups of population, has been designated with aim to define the relevancy of 'justice' and its logic for the design and implementation of an effective and acceptable corrective climate policy. The article presents the analysis of disparities in the case of Israel, covering four areas of consumption (transportation, electricity, food,

waste). The results suggest that when it comes to the four fields of consumption, individuals belonging to the top income decile emit approximately 8- 25 times more GHG than those belonging to the bottom income decile, respectively the consumption field. This gap, which is approximately 2- 4 times bigger than the monetized consumption gap between the two said groups, illustrates the extent to which GHG functions as a multiplier of inequality. Consequently, in formulating policy for

emission cuts regulations, for example, considering the gaps between groups in their respective patterns of energy, fossil fuel and food consumption should be applied. This frame of work enables discussing the paradigms of environmental justice according to not only the 'original concept', in which unjust distribution of environmental hazards in space, but raising the questions relating the 'differentiated responsibility' for causing them, in relation to the nation stratified society

## 16RN12 - New Trends in Environmental Movements Research

Chair(s): Kris van Koppen (Wageningen University)

### Environmental Movements in the Age of Climate Change

Christopher Rootes, University of Kent | [c.a.rootes@kent.ac.uk](mailto:c.a.rootes@kent.ac.uk)

Environmental movements developed at a time when political awareness of the environment was itself emerging and when governments, if they recognised the environment as an issue at all, usually treated it as a peripheral concern left to junior ministers and marginal departments of state. Against that background, environmental movements and protest appeared to be natural bed-fellows as environmental activists struggled to mobilise an environmentally uneducated populace and to challenge the priorities of governments and parties more concerned about economic development than environmental protection. That changed as governments began to acknowledge environmental problems as well as the knowledge and expertise of environmental NGOs, and as governments began, in some cases, to see environmental

NGOs as partners rather than adversaries. That relationship was consolidated as climate change rose toward the top of political agendas, and as governments began to see environmental movements as potential mobilisers of citizens in concerted action against greenhouse gas emissions and toward sustainable alternatives to the carbon-intensive economy. But whilst this has created opportunities for NGOs, it has asked more of them than they can deliver, and so it has created dilemmas about their identity and future action. If, as George Monbiot observes, 'nobody riots for austerity', should we call time on the association of environmental movements with protest and focus instead on their capacity to promote positive, practical action? But if we do, what then is the status of environmentalism as a social movement?

## From Opposition to Empowerment. A Proposal of Analysis from Below of Grassroots Environmental Conflicts.

Alice Poma, University Pablo de Olavide, Seville | [alicepoma@hotmail.com](mailto:alicepoma@hotmail.com)

The aim of the paper will be to present a proposal of analysis about environmental conflicts from the perspective of the affected people. Based on three different cases of conflict experiences (related to hydraulic infrastructures) in Spain and Mexico, we will analyse how the experience of the resistance influences the processes of reconstruction and redefinition of values, beliefs and identity of the affected. The analysis of these experiences starts criticizing the NIMBY label approach, and emphasizing the importance of grassroots environmentalism. Our thesis is that whatever the outcome of the struggle (whether the communities won or lost the fight against the dam), there are always important consequences, like empowerment, at the individual and community level. Focusing on

the analysis of the conflict from below, we have paid special attention to the emotions felt by the protestors and their consequences in the dynamics of the protest. We will study the role of emotions in motivation with particular attention to the place attachment. We will analyse then the role of the emotions in some cognitive processes that help us to explain the dynamic of the protest, like moral shock, framing, cognitive liberation and empowerment. The research is based on depth interviews of multiple actors who participated in the conflicts in order to grasp the innermost dimension of the conflict, which resides in the lived experience of the affected individuals and in their concepts, ideas, valuations, feelings and emotions.

## Environmental Non-Governmental Organizations and Transnational Collaboration in Two Regional Contexts: The Baltic Sea and Adriatic Sea Region

Magnus Boström, Södertörn University, Huddinge | [magnus.bostrom@sh.se](mailto:magnus.bostrom@sh.se)

Linn Rabe, Södertörn University, Huddinge | [linn.rabe@sh.se](mailto:linn.rabe@sh.se)

Romina Rodela, Södertörn University, Huddinge | [rominarodela@hotmail.com](mailto:rominarodela@hotmail.com)

If civil society is to play a meaningful role in transnational environmental governance it consequently needs to develop transnational features. This paper analyzes the opportunity structures and abilities among environmental non-governmental organizations (ENGOS), in two regional contexts (the Adriatic Sea and the Baltic Sea) in six countries (Sweden, Germany, Poland, Italy, Slovenia, and Croatia), to develop cross-border collaboration and capacity building. It is based on document analyses and semi-structured interviews with representatives from key ENGOS in each country, and theoretically informed by social

movement theory. While earlier literature has indicated that ENGOS on a transnational level are comparably talented in mobilizing members, expertise, and other resources; our results show that the organizing for regional, transnational campaigning is still very challenging as ENGOS have traditionally been developed within national institutional contexts/cultures. Our study also reveals intriguing similarities and differences between the countries and regions as regards to ENGOS' abilities to develop cross-border collaboration and capacities. We pay attention to differences in opportunity structures for

both resource mobilization and for orienting towards politics and policy, which significantly shapes both the strategies and the capacity building among NGOs. The EU provides an opportunity structure that facilitates cross-border collaboration and capacity building, but

which also shapes the conditions for NGOs to set independent long-term agendas. A relatively institutionalized context in the Baltic Sea region is contrasted to the Adriatic context in which intergovernmental organizations are weaker.

## Transformations of Environmental Movement, Civic Activism and NGOs in Lithuania

**Neringa Kriauciunaite**, Kaunas University of Technology | [Neringa.Kriauciunaite@stud.ktu.lt](mailto:Neringa.Kriauciunaite@stud.ktu.lt)

**Leonardas Rinkevicius**, Kaunas University of Technology | [leonardas.rinkevicius@ktu.lt](mailto:leonardas.rinkevicius@ktu.lt)

Paper aims at examining transformations of Lithuanian environmentalism and civic activism by looking at the course of different NGOs since the first half of the 20th century till present. From historical perspective, the mode of Lithuanian environmental NGOs and civic activism has been closely associated with the political processes and consolidation of the statehood and civic society. Alongside with the environmental objectives, Lithuanian NGOs and civic activism have often been inter-twined with other objectives, hence the multitude of agency and social structure. This paper aims at reviewing and contrasting the Lithuanian NGOs and civic activism that have deep historical roots and traditions vis-à-vis those that emerged during the years of Singing Revolution and statehood restoration in the late 1980s. Those types of NGOs and activism

are contrasted with the third category of environmental activism, based on, or mobilized around, one emerged eco-issue. Three NGOs are explored, each representing different historical roots, socio-political context and objectives, ways and phases of mobilization. These NGOs are the green community Atgaja, the cultural and natural heritage protection NGO, and the Lazdynai district community in the city of Vilnius. These NGOs, reflecting different structural and agency features of Lithuanian environmental movement, serve as different case-studies illuminating various sociological shades of this multi-faceted social movement and civic activism. Different theoretical perspectives are deployed for interpretation, ranging from the American to the more nuanced approaches in the European sociological tradition.

## The Outcomes of Environmental Movements

**Eugene Nulman**, University of Kent | [e.nulman@kent.ac.uk](mailto:e.nulman@kent.ac.uk)

**Christopher Rootes**, University of Kent | [c.a.rootes@kent.ac.uk](mailto:c.a.rootes@kent.ac.uk)

The outcomes and impacts of social movements in general, and the impacts of specific movement activities upon social, political, and economic institutions as well as public policy and private practice, are under-researched. This no less true of the particular case of environmental movements than it is of social movements in general. The outcomes literature has largely focused on the impacts of

movements and associated actors on the policies of governments, and sometimes corporations. However, environmental activism has, especially but not only at local level, addressed the implementation of policy as well as its formation. Examination of environmental movement activity may illuminate the mechanisms by which policy impacts are made, indirect pathways to policy change, the

role of access to government officials and a variety of strategies and tactics, as well as pointing to the importance of the particularities of each case and the actors involved. In exploring the outcomes of environmental movements, particularly around the planning and implementation of environmental policy,

we will assess the modern environmental movement's influence on policy and the movement's peculiarities with respect to policy outcomes. Particular attention will be paid to policies and mitigation and adaptation strategies focused upon climate change.

## 17RN12 - Adapting Urban Structures to Global Environmental Change

Chair(s): Giorgio Osti (Università di Trieste)

### The Framing of Sustainable Urban Mobility: Policy Stories and Discourse Coalitions in the Making of Quebec City's Sustainable Mobility Plan.

Emiliano Scanu, Laval University, Québec | [emiliano.scanu.1@ulaval.ca](mailto:emiliano.scanu.1@ulaval.ca)

In recent years, sustainable urban mobility has become a key-tool in the planning of more efficient, inclusive and low-carbon transport systems. However, like other urban projects, mobility policies usually prove controversial, because local actors have conflicting views about what sustainable mobility involves, how it ought to be implemented in their municipality, and the place climate change should have in the planning of transport systems. Oddly, although studies about the technical side of sustainable mobility are numerous, studies about the framing of sustainable mobility issue are almost nonexistent. This paper aims to fill that gap. Using insights from cultural theory and discourse analysis, we present a qualitative, empirical study on the framing of the Sustainable Mobility Plan of Quebec City, Canada. This case has been methodologically

broached through interviews and detailed document analysis. Our study shows how three policy stories, afferent to three discourse coalitions, have emerged in the public debate that has formed within public consultations and hearings during the formulation of the plan: the "attractiveness" story of municipal authorities, the "business as usual" story of some private actors, and the "fair and eco-friendly mobility" story of civil society groups. These policy stories articulate around some "pivot themes", which, notably, are the most controversial aspects of the plan. Not only do these policy stories convey actors' opinions about sustainable mobility, they also shed light on more general values relating to different conceptions of transport, urban development and climate change. Finally, this study contributes to a better understanding of how environmental issues are communicated.

## Knowledge Production and Polluted Soil, Lessons from Urban Planning Process in Helsinki

**Paula Saikkonen**, National Institute for Health and Welfare / University of Helsinki | [paula.saikkonen@thl.fi](mailto:paula.saikkonen@thl.fi)

From time to time, in recognition of the gap between knowledge and policy, evidence-based policy has been suggested as a solution for modern environmental problems and risk management. A task of the paper is to illuminate the interface between knowledge production and policy at local level decision making in the context of polluted soil. Polluted soil represents an ecological risk and a modern environmental problem. The task of the study is to illuminate what forms of knowledge production are related to polluted soil as an environmental problem and risk, and how these forms have changed in three decades in Helsinki. The research material includes documents covering three decades, the publications of the city's bureaus (city planning department, environment centre, public works department), and interviews with

city authorities. The method of analysis has broadly adhered to grounded theory. As a result, it is argued that practices formulate the agenda of the city so that new problems are excluded from decision making unless the problem is converted as financial risk by risk management. Knowledge practices are focal factors in problem classification as well as policy outcomes. New technical solutions have been developed for polluted soil areas but citizens are mostly excluded from the knowledge production process. Under uncertain circumstances it is legitimate to ask who controls knowledge production: in theory, the forms of risk management are what is termed direct regulation; however, they appear to be indirect regulation without the involvement of informing parties.

## Fostering Post-Carbon Cities. Urban Metabolism as Matter of Social Practices

**Dario Padovan**, University of Torino | [dario.padovan@unito.it](mailto:dario.padovan@unito.it)

This contribution aims to identify a theoretical model to develop tools for reducing cities GHG emissions. Cities' urban metabolism is responsible for at least 70% of total GHG emissions. To reach future reductions of GHG emissions we need a tool to account urban metabolism. I suggest to use a consumption-based model instead of conventional production-based models of accounting. Special attention has to be paid to food, mobility and housing (water and waste included) as urban sectors that account for most of urban energy consumption. To assess the potential for changes of urban metabolism I will focus on the analysis of the functioning and regulation of urban metabolism and explore ways to improve its management. I will

revisit the concept of urban metabolism moving beyond a mechanical input-output model to include a focus on social controversies and conflicting practices. Urban metabolism is essentially an accumulation regime ruled by a mode of regulation which implies a complex range of socio-spatial practices carried on by different agents: households, civil society actors, institutions and corporations. These practices and their interrelationships need to be investigated in order to understand their potential for fostering strategies for post-carbon cities. Households's contribution to carbon reduction strategies is the main target of public policy and regulation. But consumption practices are reluctant to change merely on the basis of

externally imposed imperatives through media campaigns, prescriptive regulations and economic incentives. Consequently, material

conditions that enable more sustainable behaviour at the household level have to be explored.

## City Air: Settling Controversies about 'Socio-natures'

Gert Verschraegen, University of Antwerp | [gert.verschraegen@ua.ac.be](mailto:gert.verschraegen@ua.ac.be)

The objective of this paper is to explore, both theoretically and empirically, some of the contradictions and tensions associated with so-called 'socio-natures', implying a continuous transgression of boundaries of society and nature, politics and science. Drawing on political-ecological work of Latour, Morton, a.o., and using empirical material pertaining to ongoing controversies about fine particulate air pollution in the metropolitan region of Antwerp, the paper focuses on two issues in particular. Firstly, it aims to show how fine particulate air pollution (FPAP) is a thoroughly hybrid phenomenon, which can only be understood by taking into account dynamically unfolding and material relations

between human and nonhuman entities. The paper, secondly, examines the position of science in the controversies around FPAP and analyses how scientists have become deeply embroiled in the public and political debate about FPAP and its implications for public health, environment and urban design. It analyses why FPAP is not a undisputed "matter of fact" which can simply be uncovered by mono-naturalist science. Producing FPAP data or setting emission standards rather turns out to be an eminently political process that undermines the claims of universalistic science to determine 'matters of fact' and close the social and political controversies around them.

## Towards User-centered Urban Green Design - Green Roof Visions of Finnish Urban Residents

Marja H. Mesimäki, University of Helsinki | [marja.mesimaki@helsinki.fi](mailto:marja.mesimaki@helsinki.fi)

With expanding urbanization there is a growing awareness for providing well-being for urbanites using green spaces. Within the wider context of enhancing ecosystem services in urban areas, green roofs are a promising component: studies show that green roofs can e.g. significantly reduce flooding risks during extreme downpours, attenuate the heat island effect of metropolitan areas and support and connect habitats, which promotes biodiversity. Green roofs combine well with energy saving architecture. Vegetated roofs expand the amount of green in urban areas and hence also improve amenity values. However, social studies concerning green roofs are scarce. For example, it is not known whether urban dwellers accept such green roof solutions that promote biodiversity nor what kinds of uses of

green roofs would be relevant for urbanites. From a wider perspective: how can we obtain user-centered knowledge for sustainable design of urban environments? I will give insight to green roof visions of Finnish urban residents and discuss sociological research concerning green roofs, especially the methods. I present a study based on 150 stories collected with a method using the imagination of the respondents. The results reflect green roof visions of the respondents for different types of buildings and city districts and also according to restorativeness and enhancing biodiversity. I also discuss the results with relation to cultural ecosystem services. My study is part of a Finnish inter- and transdisciplinary research program that aims to produce high-profile and applicable

scientific results on urban green spaces, using green roofs as model systems.

## 18RN12 - Transitions to Green Economy and Society

Chair(s): Mikael Klintman (Lund University)

### Back to the Past? Changing Approaches to Radioactive Waste Management in Hungary

**Anna Vari**, Centre for Social Sciences at Hungarian Academy of Sciences | [anna.vari.dr@t-online.hu](mailto:anna.vari.dr@t-online.hu)

**Zoltan Ferencz**, Centre for Social Sciences at Hungarian Academy of Sciences | [ferencz.zoltan@invitel.hu](mailto:ferencz.zoltan@invitel.hu)

In the controversial area of radioactive waste management (RWM) most industrialised countries have moved away from top-down, technically oriented approaches towards ones for which both technical content and quality of policy-making processes are of comparable importance. Several elements of the latter approach have also been adopted in Hungary since the political transition of 1990. Negotiated agreements with the host communities of RWM facilities, public information and the provision of financial benefits have been at the heart of the Hungarian model. However, a number of important policy elements (e.g. transparency of national RWM strategy, public involvement, expert-stakeholder deliberations) have been adopted only half-heartedly, which made the model highly vulnerable. As economic recession has strongly hit the country, RWM

policy has started to change again. The government responded to the economic crisis with a number of centralisation measures and with weakening the status of environmental protection. Due to the elimination of most checks and balances and the weakening of civil society, policy makers may return to traditional practices. The paper presents the recent history of RWM in Hungary, with special attention to changing policy approaches. Institutional background for nuclear waste management, efforts to build RWM facilities, and emerging socio-technical challenges are analysed. The paper is based on empirical data collected from public documents, a series of semi-structured interviews conducted with various stakeholders, and public opinion surveys. The study has been financed by the InSOTEC EU FP7 project.

### Glocal Green Transitions – Introducing Finnish Green Innovation to Social Development Project in India

**Karoliina Snell**, University of Helsinki | [karoliina.snell@helsinki.fi](mailto:karoliina.snell@helsinki.fi)

This paper is based on an on-going research project that examines attempts to achieve transition to green economy by analyzing the interplay of local practices and policies in a

global environment. Multi-level dimensions of global economy, national innovation governance and local socio-cultural and politico-economic factors, are studied through

three case studies - glocal cases of green transitions where Finnish companies are working in emerging economies. The aim of the research is to scrutinize the interactions between and the perceptions of different stakeholders (e.g. companies, local authorities, technology developers, experts, and policymakers), particularly in terms of how they understand possibilities and boundaries for green transitions. In this paper I present one of the case studies of the project, a Finnish based venture that aims to build ecologically sustainable schools in poor areas in India.

These schools use high-tech mobile solutions in teaching, are operated as a closed loop system and include environmentally oriented pedagogy. The idea is that while providing the children with education the schools also promote local base of the pyramid green business. Through this case I examine how Finnish innovation, environment, and development policies and governance meet 1) the reality of Finnish businesses that operate in emerging economies, and 2) the needs and experiences of local Indian communities.

## Environment, Economy, Transition and the Crisis of Crisis

Larry Reynolds, Free University of Berlin | [larry.reynolds01@gmail.com](mailto:larry.reynolds01@gmail.com)

Bronislaw Szerszynski, Lancaster University | [bron@lancaster.ac.uk](mailto:bron@lancaster.ac.uk)

If crises are understood to be indications of endings, markers of epochal change and transition, then today 'crisis' is also in crisis. For despite the seemingly multiple layers of economic and ecological 'polycrisis' there appears to be no apparent successor regime, no new phase of capitalism, no counter-hegemonic movement or alternative society waiting in the wings. When the current phase of the crisis opened in 2008, hopes were raised that the outlines of a new regime of accumulation could already be discerned in signs of a society-wide attempt to address environmental crisis. These included the Stern Report, Obama's 'Green New Deal', the promise of a new 'green industrial revolution' that would unite trades unions, social movements and sections of industry, and the talk of a coming 'sixth Kondratiev wave' grounded in a new green 'techno-economic paradigm' that would restart growth and

restore rates of profit. However, the persistence of neoliberalism after its 2008 crisis is accompanied by a renewed hydrocarbon surge around 'extreme energy' sources, sustaining what might be called the 'strange non-death of fossil-fuel society'. The great green transition seems to have evaporated, and we remain locked into the productive forces associated with the second industrial revolution and the age of oil. Drawing on a range of analyses - of stagnation and the 'innovation crisis'; of the dynamic between energy and labour in metabolic transitions and technological revolutions; of the relationship between technological innovation and the rate of profit - we diagnose these 'limits to transition' as symptoms of 'peak capitalism', where the inner limits of the capitalist mode of production meet its outer, environmental limits.

## Sharing Economy as a Way to Sustainability

Vesa-Matti Lahti, The Finnish Innovation Fund Sitra | [vml@sitra.fi](mailto:vml@sitra.fi)

Sharing economy (also called collaborative consumption) is a combination of collaborative

ways to act and modern ways to communicate that are made possible by ICT (information and

communication technology). New network technology makes it much easier than before to share goods and services. In the sharing economy access is more important than ownership. Sharing economy is possible also between companies but usually it is seen as a consumer to consumer (peer to peer) activity, which is organized by some coordinating actor. As an international example: Airbnb company coordinates the sharing of spaces (rooms, flats, houses) between consumers and RelayRides company coordinates sharing of cars (which are owned by private individuals, not by the company). Studies on the environmental effects and energy savings of sharing economy (mainly car sharing) show

that the effects are positive and energy is saved. Some studies hint that the sharing economy is a growing phenomenon at least among young adults. Energy can be saved and positive environmental effects can be achieved by shifting economic activity more towards sharing economy. This shift is already occurring but because the need to save energy and cut the greenhouse gas emissions is so great and acute, all the governments in different countries should actively plan policies to make this shift or transition as smooth as possible. Ideas for government run projects that would foster sharing economy will be included in this paper.

## Financing Energy Futures: Risk, Responsibility and Social Contracts

Catherine Butler, Cardiff University | [butlercc1@cardiff.ac.uk](mailto:butlercc1@cardiff.ac.uk)

Karen A Parkhill, Cardiff University | [parkhillk@cardiff.ac.uk](mailto:parkhillk@cardiff.ac.uk)

Nick F Pidgeon, Cardiff University | [pidgeonn@cardiff.ac.uk](mailto:pidgeonn@cardiff.ac.uk)

There is increasing recognition of the significance of energy system transitions for the creation of green economies and societies. A major issue in the realisation of transformations in energy systems relates to the financing required to pay for their development. In this regard, there is potential for a reconfiguration of the financial risks, benefits and responsibilities associated with energy provisioning. For example, moves to finance renewable energy development through Feed-in Tariffs have seen new possibilities emerge for a high number of private citizens to own energy infrastructure. Additionally, in the context of liberalised energy markets, a set of question emerges around who will, can or should pay for different aspects of transitions. This is related to concerns about the possibilities for increases

in customer bills, about state subsidies, and about issues regarding the profit-making nature of energy industries. In this presentation, we draw on UK based research into public perspectives on whole energy system change to examine how publics engaged with such issues and their implications for conceptions of risk and responsibility. The analysis uses a lens informed by the concept of social contracts (referring to notions of reciprocal rights and responsibilities in the governance of social systems) to unravel the relations between publics, state, and the energy supply industry. It examines the ways that public(s) engage with these relationships as they are currently formulated, as well as with how they may be reconfigured in the development of new systems.

## 19RN12 - International Environmental Policy and the Impact on the Social

Chair(s): Cigdem Adem (The Public Administration Institute for Turkey and the Middle East)

### European Public Support for Climate Change Policies

Iva Zverinova, Charles University, Prague | [iva.zverinova@czp.cuni.cz](mailto:iva.zverinova@czp.cuni.cz)

Climate politics cannot be successful unless a majority of various groups of people support climate policies not only by talking about them but also by action and voting for them (Beck, 2010). Moreover, public resistance, and reluctance among politicians to implement policies lacking public support, are factors that can inhibit the successful implementation of climate policies (Steg, 2006). This paper aims at investigating which segments of population support climate policies more than others. In addressing this issue, the first objective of this paper is to identify socio-demographic factors that affect support of climate policies in the EU. The second objective is to analyse values, general environmental awareness, the awareness of and responsibility for climate change, social norms, and characteristics of the policy instruments in relation to public support for climate change policies. This paper

focuses on a gap between attitudes (e.g., environmental attitudes, attitudes toward climate change), and action (climate change policy support versus private-sphere environmentalism). This paper begins with literature review on factors influencing public support for climate policies. Further, it analyses data on attitudes and actions of EU inhabitants with respect to climate change from the Eurobarometer surveys, particularly EBS 364 and EBS 372. The understanding of the issue is deepened based on results of a qualitative survey conducted in the Czech Republic. Finally, results of the qualitative and the quantitative data analyses are jointly interpreted. The research results suggest ways of anticipating public resistance and overcoming barriers of EU climate policies through adequate design of policy instruments.

### An Exercise in Excess? Why Households Waste Food Needlessly

Tommy Ose, University of Oslo | [tommy.ose@sifo.no](mailto:tommy.ose@sifo.no)

Eivind Stø, National institute for Consumer Research, Oslo | [eivind.sto@sifo.no](mailto:eivind.sto@sifo.no)

Ole J Hanssen, Østfoldforskning | [ojh@ostfoldforskning.no](mailto:ojh@ostfoldforskning.no)

When households waste significant amounts of food needlessly it contributes to a whole range of environmental problems. It also wastes valuable resources, while being morally questionable with widespread famine in the world. In the last decades, an increasingly number of studies on food waste has been carried out. So far, most research has focused on quantifying the amount and composition of the food waste generated in the respective

societies. This research project on Food Waste goes beyond this perspective, using a combination of methodologies to uncover the underlying reasons driving food waste generation on a household level. The data material is collected through three different methods: waste analysis, surveys and participant observation from Norwegian households in the period of 2010-2012. Food waste in households is a result of a complex

mix of consumer preferences and choices; technologies for producing, distributing, storing and preparing food; trends and knowledge. In this paper we will show how two influential and underlying factors in this mix, the time and money available, can contribute to

food being wasted needlessly in different kinds of households. We also make suggestions as to how such wasteful practices can be reduced through actions on both an institutional level and a consumer level.

## Governing Green Growth in a Global Context: Finnish Experiences on the Politics of Water in Latin America

Tuula Teräväinen, University of Helsinki | [tuula.teravainen@helsinki.fi](mailto:tuula.teravainen@helsinki.fi)

As a response to the global ecological crisis and recent economic turbulences, national governments and international organisations such as the UN and the OECD have sought to adopt more holistic views that would integrate environmental, technology, and economic policies. Yet, efforts to shift towards more sustainable development paths also have raised new tensions and politico-cultural challenges relating to multi-level governance, sustainability, democracy, and power. This paper addresses these questions in relation to the recent technology-driven initiatives, particularly the OECD's Green Growth strategy, in a global context. Drawing from a case study on Finnish experiences of the management and

politics of water and water technology in Peru, it explores stakeholder experiences and expectations concerning the possibilities and hindrances of green growth within a particular technological field, water sector, and in an emerging techno-economic cooperation area, Latin America. At a more general level, the analysis contributes to understanding the governance of sustainability in the global context. The analysis is based on written material (policy documents, strategies, statements, reports) and stakeholder interviews conducted among companies, local authorities, technology developers, NGOs, and interest organisations in Finland and Lima in spring 2013.

## The Green Economy and Sustainable Development: an Uneasy Balance at Rio+20?

Olivia Bina, Universidade de Lisboa | [o.c.bina.92@cantab.net](mailto:o.c.bina.92@cantab.net)

The United Nations Conference on Sustainable Development (UNCSD, or Rio+20) was conceived at a time of great concern for the health of the world economy. In this atmosphere 'green economy' was chosen as one of two central themes for the Conference. I explore the potential meaning and implications of this choice for sustainable development. I analyse the content of a range of sources, international policy documents on the green economy, as well as other sources seeking to engage with the crisis and sustainability issues. After an initial categorisation of the sources, I explore the meaning of 'green economy' and its relationship to the traditional

three-pillar model of sustainable development. Through the analysis of three interrelated patterns: scarcity and limits, means and ends, separation (reductionism) and unity - I seek to identify what is included and excluded in the official discourse. The analysis highlights the progressive erosion of the focus on human beings and nature, in favour of an increasingly central role of the economy as the key source of solutions to problems in all three pillars. Yet development in the 21st century may require a bolder stance, beyond adjectives like 'sustainable' or 'green, and may need more fundamental questioning of the dominant paradigm of growth (albeit green). I discuss the

implications of these patterns, of economisation and polarisation of discourse, and of choosing to fix the economy rather than

re-orient our focus on human beings and society, appealing to the recovery of the notion of human dignity.

## From Foundations to Practice: towards Ecosocial Policy

Tuuli Hirvilammi, University of Helsinki | [tuuli.hirvilammi@helsinki.fi](mailto:tuuli.hirvilammi@helsinki.fi)

Tuula Helne, Kela, Research Department | [tuula.helne@kela.fi](mailto:tuula.helne@kela.fi)

Human understanding of the world and our role in it is anthropocentric to the core. The results can be seen in the current ecological crisis: in climate change, in loss of biodiversity, in the acidification of the oceans – and also in our obstinate commitment to growth economy. Social policy is a product of this worldview. Its effort to provide welfare for all is in itself commendable, but has its downside: the thus far ignored understanding of the fact that all human well-being depends on the vitality of the ecosystem. Building and maintaining the western welfare states are intertwined with the same economic growth that is threatening the foundation of our survival. Further, social policy has the in-built objective to increase consumption and raise our standard of living – again to the detriment of the environment.

Even the concept of human well-being in social policy is narrow and materialistic. In our presentation we argue that in order to make social policy ecologically and socially sustainable, incremental and haphazard measures are not sufficient. Instead, we need to rethink our worldview and the concept of well-being. First, we lay out the principles of a holistic, eco-centered paradigm. Second, we propose an ecosocial, relational and multidimensional concept of well-being based on a modification of sociologist Erik Allardt's theory of Having, Loving and Being. In doing so, we also draw upon the insights of deep ecology and the capability approach. In addition, we illustrate how this model of eco-social well-being provides the basis for the practices of sustainable ecosocial policy.

## 20RN12 - Environment & Society 1

Chair(s): Luisa Schmidt (Universidade de Lisboa)

### Regional Innovation Systems as an Approach to Study Energy Transitions: the Case of the City of Emden

Jens Koehrsen, University Oldenburg | [jens-ole.koehrsen@uni-oldenburg.de](mailto:jens-ole.koehrsen@uni-oldenburg.de)

Jannika Mattes, University Oldenburg | [jannika.mattes@uni-oldenburg.de](mailto:jannika.mattes@uni-oldenburg.de)

Although regions are frequently described as the hotspots of energy transition, the study of regional energy transition processes is still in its beginnings. The paper wants to contribute to the debate about regional energy transition processes by taking the empirical example of

the city of Emden in north-western Germany. The aim of the presentation is to describe the case of Emden's energy transition by using a regional innovation system approach (RIS). We thereby focus on the interaction of different subsystems – politics, industry, science, civil

society, intermediaries – and the role of institutional change for regional energy transition processes. In order to explore the case of Emden, we conducted 32 in-depth interviews with actors involved in the energy transition. The results of the empirical study show that the close cooperation of some key actors was crucial for the initiation of Emden's energy transition and spurring further transition projects. Over the years, the rising number of projects and collaborations led to the development of a local energy transition system. This development also implied institutional change: the emergence of

normative standards, new ways for generating knowledge, and new coordination mechanisms with regard to the energy transition. Moreover, the energy transition became a strategic asset for generating political power, economic revenue, and status. In sum, it turns out that the development of an institutional context, which facilitates the continuous realization of collaborative transition projects, may be an important feature of regional transition processes. At the end of the paper, we draw some theoretical conclusions for the debate on regional energy transitions.

## Social Science and the Study of Farm Animal Welfare: A Critical Literature Review

Michiel P.M.M. de Krom, Ghent University | [michiel.dekrom@ugent.be](mailto:michiel.dekrom@ugent.be)

In the last three decades, livestock production practices have risen to importance in scientific, political, and public debates on sustainable development. Topics of debate related to livestock farming's environmental impact, food safety and security, and human health have received considerable sociological attention. Animal welfare issues, and particularly the farm animal-human relations implicated in these, have only recently become a topic of sociological scrutiny. This paper presents a critical review of the emerging body of social scientific literature on farm animal welfare. Based on a systematic search for relevant literature in the Social Sciences Citation Index (SSCI) and Sociological Abstracts databases, the paper discerns the theoretical and epistemological perspectives that social

scientists have used to study practices and institutions in which farm animal welfare levels are defined and enacted. The paper argues that the majority of studies conceptualise animals either from a simple realist perspective as materials or objects, or from a constructivist perspective as a symbolically constituted category. These conceptualisations entail fundamental difficulties to analytically account for animal-human relations involving recognitions of animals as sentient beings, while it is exactly such recognition of animals as in some sense social others that lie at the root of animal welfare concerns. The paper concludes by exploring how animals may be conceptualised as sentient co-constitutors of social life with the help of practice theories.

## Post-Carbon Society: Transitions

Mercedes Martinez-Iglesias, University of Valencia | [mercedes.martinez@uv.es](mailto:mercedes.martinez@uv.es)

Here is presented a research project (Spanish N. Plan, R+D+I CSO2011-24275), the basic concept of is that the transition to a 'post-carbon' society cannot be achieved by an increase in energy efficiency alone or by

changing government policies, but also requires far-reaching transformation in lifestyles, consumption patterns, and forms of urbanization, along with other features of social organization. Consequently the project

focuses on the so-called demand-side of the pathways to European 'post-carbon' societies by emphasizing their socio-cultural dimensions. Three scientific approaches are then combined under the overall perspective of a "culture of sufficiency": social-anthropological history of technical developments; social-ecological approaches to everyday life and sustainable consumption patterns; social change and social movement research concerning creative (innovative) initiatives and communities. The fundamental objective of the project is to facilitate behavioural change and support public policies about climate change and de-carbonization by providing a new analytical framework

concerning phenomena which could aid or support the aforementioned transition within civil society: social movements, changes in lifestyles, perceptions and attitudes of the general public. To meet these objectives, several social research techniques will be used: both quantitative (surveys, secondary sources, and other existing statistical data analysis) and qualitative (in-depth interviews, documentary analysis, case studies). In addition to social empirical research, methods of historical retrospect and hermeneutic-philosophical interpretation will be used in order to highlight the cultural dimensions of the transition processes.

## Environment and Children's Health - Perceptions, Practices and Consumption

**Susana MD Fonseca**, ISCTE - Instituto Universitário de Lisboa | [susanafonseca@yahoo.com](mailto:susanafonseca@yahoo.com)

**Joaquim Gil Nave**, ISCTE - University Institute of Lisbon | [joaquim.nave@iscte.pt](mailto:joaquim.nave@iscte.pt)

**Maria J Pereira**, Instituto Superior Técnico, Lisboa | [maria.pereira@ist.utl.pt](mailto:maria.pereira@ist.utl.pt)

**Manuel Ribeiro**, Instituto Superior Técnico, Lisboa | [manuel.ribeiro@ist.utl.pt](mailto:manuel.ribeiro@ist.utl.pt)

**Fernanda Santos**, Regional Health Administration - Alentejo | [fernanda.santos@alentejолitoral.min-saude.pt](mailto:fernanda.santos@alentejолitoral.min-saude.pt)

Research reports by the WHO proclaim that environmental causes are a major factor influencing mortality / morbidity of children under 5 years. Indoor and outdoor air pollution, water contamination, toxic products and ecosystem degradation are among the main risk factors for children from environmental origin. With the purpose of assessing the impact of industrial pollution on children's health in the region of Sines (Alentejo Litoral - Portugal), where a major industrial cluster is installed since the early 1970's, this paper discusses the mother's perceptions of predictable impacts of several indicators on children's health, particularly those associated with everyday life. Data was gathered from surveys and in-depth interviews applied to a wide sample of mothers with newborn children

by the project GISA - Integrated Management of Health and Environment, run by a pluridisciplinary consortium of research organizations. Discussion includes the monitoring of socio-economic indicators (job, living conditions, residence, neighborhoods, family background) and cultural indicators (lifestyles, eating habits, personal care, consumption, health-related practices) that may play a role in children's health and mothers' perceptions of expected relationships between environmental factors, everyday practices and children's health. The results point to very low levels of perception and awareness by mothers of the possible impacts of the different indicators on children's health, particularly those associated with everyday practices.

## Issues of Traceability and Corporate Responsibility

Natasja Börjeson, Södertörn University | [natasja.borjeson@sh.se](mailto:natasja.borjeson@sh.se)

The objective of this paper is to discuss how and if corporations' strategies for traceability along their commodity chains may further corporate responsibility and, in the end, a more environmentally friendly production. The paper focuses on the case of chemicals in textiles; the textile production and commodity trading is one of the most global industries in the world with production and distribution lines spread over numerous regions with a multitude of production steps, suppliers and sub-suppliers. Moreover it has a great environmental impact coming from the use of toxic chemicals in both fiber production as well as in many manufacturing stages. During the last decade, there has been an increased pressure on companies to take accountability for the entire

commodity chain down to the last sub-supplier. Accordingly, the textile companies today find themselves facing the difficult task of trying to manage very complex product chains. The concept of traceability is being seen by the industry to be a key issue when trying to take on a more responsible approach and in improving their environmental practices. The paper looks into the concept of traceability and discusses such strategies using a literature review and semi-structured interviews. The analysis also includes lessons learned from other sectors. A particular topic that is addressed is the role of stakeholders, such as the media, NGOs and political consumers, in formulating and working for the new business strategies.

## a20RN12 - Environment & Society 2

Chair(s): Balázs Bálint (St. István University in Gödöllő, Hungary)

### Trajectories of Practice: Negotiating an Environmental Standard in the Design of Low and Zero Carbon Social Housing

Ritsuko Ozaki, Imperial College, London | [r.ozaki@imperial.ac.uk](mailto:r.ozaki@imperial.ac.uk)

Shaw Isabel, Imperial College, London | [isabel.shaw@imperial.ac.uk](mailto:isabel.shaw@imperial.ac.uk)

Recent climate change statistics attribute over a quarter of carbon emissions to residential energy use in the UK. To address this, a building standard ('Code for Sustainable Homes'), was introduced to aim to reduce levels of carbon dioxide emissions and energy consumption. This paper analyses how such an environmental standard reconfigures the socio-technological practices and relations of housing professionals that design, construct and manage social housing. We focus on how actors engage with the standard's recommendation for incorporating low and

zero carbon technologies into new buildings. We identify trajectories of practice that emerge from these engagements, which, we contend, have significant consequences for the working relationships of professional actors, and renewable energy provision and environmental sustainability. By being entwined in, and generative of actors' practices, we argue that the Code becomes part of the socio-technological relationships and infrastructures that shape energy provision and potential consumption.

## Land Requirement for Meat Consumption: the Case of Finland

Francesca Allievi, University of Turku | [francesca.allievi@utu.fi](mailto:francesca.allievi@utu.fi)

The production of meat is a particularly inefficient conversion, as on average about 6 kg of plant protein are required to obtain 1 kg of meat protein. Large amounts of feed grains are required and these in turn require vast areas of land. The future population growth and increase in meat products demand will also increase the amount of land required for meat production. Therefore, it is important to analyze the current land requirement for the production of meat and the factors affecting it. In this analysis the focus is on Finland, which is used as a case study to test a land requirement model developed by the Center for Energy and

Environmental Studies of the University of Groningen, which so far has been tested only on the Netherlands. Meat production by broilers, pigs and beef cattle on their current feeds are compared. The model is tested on a time series from 2000 to 2009, in order to detect the changes which have taken place in feed composition and related land requirement for each of the meat types examined. By knowing how much land is currently used for meat production, it is possible to estimate how much of it would become available for other uses if the meat consumption would be reduced in the future.

## Sustainable Development Policies: Sustainable Development Approaches of Certain International Organisation

Nazlı Beril Özer, Ankara University | [ozerber@hotmail.com](mailto:ozerber@hotmail.com)

As the Notions of “sustainable development” gained popularity after 1990s, many people from different sectors, from academicians to politicians, from social sciences to environmental sciences, it is being widely used. As a result, to define and to clarify the term within the literature became essential. This research is about approaches of certain international organisations such as World Wildlife Foundation, United Nations, World Bank, OECD and Delegation of the European Union that carries out work based on “Sustainable Development”. For this purpose, issues such as institution’s missions, realised future and past projects related to the term, definitions of development and methods used in order to measure it, are investigated within the scope of the research. For a broader comprehension “In-depth interview” is carried out among Qualitative Research Techniques

since it provides detailed information from key sources in a wide perspective freely. The results are analyzed and presented comparably for each organization supporting with the literature discussion. Basically according to the data, it can be said even though these international organizations are meeting under a similar approach and definition of sustainable development, they show difference related to emphasized components of sustainability. While some institutions are emphasizing economical indicators such as gross national product, per capita income in terms of wealth substitutes, some others are prioritising to provide basic needs of people in terms of education, health services as well as employment opportunities and some other to provide a healthy environment those new generations.

## Making Sense of Environmental Volunteering.

Hannah O'Mahoney, Cardiff University | [omahoneyh@cf.ac.uk](mailto:omahoneyh@cf.ac.uk)

Dimitrios Dimopoulos, ARCHELON | [d-dimop@otenet.gr](mailto:d-dimop@otenet.gr)

This PhD research contributes to a growing field of qualitative inquiry into volunteer tourism, which is itself a rapidly burgeoning branch of contemporary travel. Drawing on data collected in Greece with a group of international volunteers working for ARCHELON, the Sea Turtle Protection Society of Greece; this paper will discuss data gathered through participant observation and ethnographic interviews. The title of this presentation comes from a response which several of the German volunteers used in interviews - either in the original German sinnvoll or translated by them as sense-full. This was used by volunteers both to refer to their engagement with environmental issues generally, and in their discussions of their

motivations for volunteering and reflections upon the time spent on the project. Other volunteers also explained that volunteering and maintaining an environmental consciousness 'made sense' to them. The paper will focus on selected participants' views on employment, work and the environment, as well as the relationships between these topics. Literature concerning 'sense-making' by theorists including Fevre (2000), Cohen and Taylor (1976) and Szerszynski (1996) is mobilised to explore this data and offer an understanding of how these volunteers attempt to understand and make sense of their own worlds, in light of both the environmental crisis and perceived employability.

## Are Energy Curtailers Really Different than Efficiency Investors? A 10-country Study.

Jan Urban, Charles University, Prague | [jan.urban@czp.cuni.cz](mailto:jan.urban@czp.cuni.cz)

Milan Ščasný, Charles University in Prague | [milan.scasny@czp.cuni.cz](mailto:milan.scasny@czp.cuni.cz)

The purpose of this paper is to examine the alleged energy gap (Barr et al. 2005) between energy savers that save through everyday actions and those who save energy through energy saving investments. We exploit in this paper data from a multi-country survey (N=10,000) conducted in 10 OECD countries (Australia, Canada, Czech Republic, France, Italy, South Korea, Mexico, Netherlands, Norway and Sweden) in 2008. We test the hypotheses that curtailers and efficiency investors are different in terms of their level of education, income, age, their concern with environmental issues, their level of environmental activism, and their ownership of their residence. We use multi-group structural

equation modeling to test empirically these hypotheses. Our results suggest several things. First, the socio-demographic and attitudinal differences between curtailers and efficiency investors exist but they are relatively small and usually not consistent across the 10 countries. Second, the most important differences between curtailers and efficiency investors exist for income (high-income people invest more in energy efficiency), environmental concern (energy curtailers have on average higher environmental concern than efficiency investors), and also for residence ownership (owners are more likely to invest in energy efficiency). These differences seem to be relatively stable across the 10 countries.

## b20RN12 - Environment & Society 3

### External Benefit of Renewable Energy Project: Sociopolitical Changes and Problems after Fukushima in Japan

Yasushi Maruyama, Nagoya University | [ym@nagoya-u.jp](mailto:ym@nagoya-u.jp)

Makoto Nishikido, Hosei University | [nishikido@hosei.ac.jp](mailto:nishikido@hosei.ac.jp)

The aim of this research is to describe the changes in social acceptance of renewable energy after Fukushima event in Japan, and to show the possible scenario to make them more sustainable, both socially and environmentally in local society. We focus on increasing number of social conflict between stakeholders. At the same time, however, social acceptance in general is increasing and many citizen and business sectors are interested in renewable energy. We call this phenomenon as acceptance divide and analyze socio-economic background. Based on interview survey for stakeholders and media analyses, this research will point out structural problem regarding social justice such as distribution and procedure. Case studies show that the number and the type of social conflict do not change very much even after Fukushima event.

This means green economy should also pay attention to adequate distribution of benefit and risk, for there is no technology without any risk. Although community ownership should be one answer to improve social acceptance, it is also required to develop external benefit triggered by green economy. A few practices show up by networking rural and urban society. One case is a project of consumer cooperative in Tokyo, who develop own nuclear-free energy in rural area. They are trying to build up fair partnership with the region and handle their agricultural products. Another case is organizing investors of wind energy project into supporter of local agricultural products. In conclusion, we will show a theoretical model of social appropriate green economy and possible scenarios.

### Youth's Environmental Citizenship in Focus: Environmental Consciousness of Finnish 6th and 9th Graders

Leena Helinä Haanpää, University of Turku | [lehaan@utu.fi](mailto:lehaan@utu.fi)

Hanna Launokorpi, University of Turku | [hanna.launokorpi@utu.fi](mailto:hanna.launokorpi@utu.fi)

The concept of environmental citizen has spread in wide use in the contemporary public debate concerning youth. In Finland, this has led to a strong political and societal interest towards participation of children and youth in environmental action. That is, there is a desire to educate Finnish school children to make wise and environmentally sound choices. In other words, school is given an active role as to educate pupils to become global environmental actors. The enthusiasm and knowledge of children and youth create possibilities for the

future. Although different aspects of environmental education (e.g. consumption and recycling) already are part of the school curricula, teaching these matters still isn't systematic, it may be occasional and the resources to teach vary a lot between the schools. The aim of the paper is thus, to explore the level of environmental consciousness of children and youth. A data collected within the project "Youngsters in focus" makes it possible to scrutinize the level of knowledge, attitudes, concern and behavior

in relation to environmental questions. The research was carried out at schools in Southwest Finland in the autumn 2012. Altogether (N=7674) 6th and 9th grade pupils filled out the questionnaire, which measured the environmental consciousness via eight

different. Preliminary analysis show, that e.g. environmentally responsible behavior interests more girls and six graders. Almost half of the ninth grade boys have no interest to act in environmentally responsible way. The results and their consequences will be discussed.

## **"Seeing The Wood For The Trees" A Case For The Recognition Of Intergenerational Environmental Rights**

Selina R O'Doherty, University of Wales, Newport | [selina.odoherty@newport.ac.uk](mailto:selina.odoherty@newport.ac.uk)

Climate change is predicted to have devastating consequences for the human security of future generations, due, primarily, to the actions of current generations. As many of the predominant ideas of justice are based on the idea of reciprocity, recognition of rights or entitlements, and thus the provision and protection of them, to future generations is a contentious issue, particularly regarding universal recognition as opposed to local. Given that environmental threats and harms, including climate change, are a global injustice, universal recognition is essential if protection of future generation's environmental well-being is to be secured. However given that environmental harm is accumulative and indirect in addition to being a prediction as opposed to a current injustice, it proves a complex threat which raises

questions of applied and meta-ethics relating to the comparative value of ways-of-life, rights of the yet-unborn, the reciprocal nature of justice, liability and intent, and the distribution and assignation of accountability. This paper summarises the central argument of my research, which presents a case for recognising future generations as an existent 'other', entitled to environmental justice from current generations. Drawing on the work of intergenerational justice and environmental rights theorists such as Hiskes, Feinberg, Howarth, Barry and Nickel, and engaging with the challenges posed the non-identity paradox, my argument presents a case for recognition of future generations and an obligation to protect their environmental rights on humanitarian grounds.

## **New Trends for Consumptions of Functional Food: Buckwheat Case Study**

Mariella Nocenzi, Sapienza University of Rome | [mariella.nocenzi@uniroma1.it](mailto:mariella.nocenzi@uniroma1.it)

Ombretta Presenti, ENEA | [ombretta.presenti@enea.it](mailto:ombretta.presenti@enea.it)

Federica Colucci, ENEA | [federica.colucci@enea.it](mailto:federica.colucci@enea.it)

Since the Fifties of the last century, the agricultural and food consumptions are more and more changed as you can see through the evolution of the economical, political and technological factors. In the last times in Europe it's growing the consumer attention for the link between ethics and food, that is the evaluation of the healthy properties of food. About this, it's just clear that it's possible to

reduce the risk for health and to better the wellness with a good lifestyle as with a correct diet. Since 1980 and the first definition of functional for food that favors the health, today it's relevant the study about Foods for Specified Health Use (FOSHU). The interaction between food component and improving of the health and wellness has a growing importance also for the experimental research, especially

in those cases with healthy effects that go beyond the nutritional properties. Among them there's, the buckwheat with its antioxidant, anti-inflammatory and no glycemic properties. ENEA (Italian Agency for the new Technologies, Energy and Sustainable Economical Development) is engaged in the Buckfood Project (MiSE-Industry 2015, Announcement

for the New Technologies for the Made in Italy) which goal is to produce a selection of new nutritional products with as buckwheat as it's enough for the consumption of just doses of bio-active substances. Specific attention will be paid to the sociological and informational aspects about the healthy properties of functional food to the potential consumers.

## c20RN12 - Environment & Society 4

### **“Green Single Searching for Same”: an Analysis of Profiles on Online Dating Agencies for Environmentalists**

Lukáš Kala, Masaryk university | [lukas.kala@gmail.com](mailto:lukas.kala@gmail.com)

Today society faces many environmental challenges as natural scientists constantly remind us. One possible way to confront these challenges and overcome the problems they present is to change lifestyles. Many studies deal with how lifestyle changes can lower ecological footprints, but few studies have examined people who have actually elected more environmentally friendly lifestyles. No study has yet to deal with the problems that environmentally minded individuals face when looking for partners. Dating sites for environmentalists identify their users as “green singles”. In my paper I present my findings on this specific group of environmentally-focused singles searching for partners with similar values. My findings stem

from both quantitative and qualitative analyses of one thousand randomly selected profiles from the following dating sites: Planet Earth Singles, Green-Passions, Ethical Singles, EcoDater, and Green Singles. I discuss characteristics that attest to a shared identity of the users of these sites and attempt to identify the motives behind their lifestyle choices. I present a critical view of the environmental dimension of their lifestyles and also call into question the stereotypical concept of “singles” that views them as free individuals who have voluntarily chosen a hedonistic lifestyle without regard for the environment. This paper further looks at the connections between lifestyle, individualization, and environmental problems.

### **Consideration of Future Consequences as a Predictor of Environmentally Responsible Behavior. Evidence from a General Population Study**

Heidi Bruderer Enzler, ETH Zurich | [bruderer@soz.gess.ethz.ch](mailto:bruderer@soz.gess.ethz.ch)

Many behaviors relevant to the environment involve a conflict between short-term and long-term benefits. For example, in the long run switching off the lights when leaving a room or lowering thermostat settings in winter

results in lower energy costs and helps protect the environment, although in the short term it leads to a loss of comfort. Although this temporal dimension of pro-environmental behavior is often acknowledged, it has not been

investigated very frequently. One possible approach is to introduce future orientation as a predictor of behavior, for example by means of the Consideration of Future Consequences scale (CFC; Strathman, Gleicher, Boninger, & Edwards, 1994). CFC captures the extent to which a person is driven by short-term rewards or orients him or herself towards long-term goals. The present contribution analyzes the relationship between CFC and environmentally friendly behavior in a large general population survey (n = 1945). As there is considerable debate about whether the scale captures concern with future consequences only, or with both future and immediate

consequences (see for example Hevey et al., 2010; Joireman et al., 2008; Petrocelli, 2003), preliminary factor analyses are conducted. These support differentiation into two subscales: one reflecting concern for immediate benefits (CFC-Immediate) and one conveying a concern for future outcomes (CFC-Future). The results with regard to behavior, however, do not differ systematically between CFC-Immediate and CFC-Future. Overall, the results reveal that CFC is a significant predictor of pro-environmental behavior and that this relationship is (partially) mediated by environmental concern.

## **The Migrants and the Environmental Protection - Case of Germany: Taking a Closer Look at Migrant's Attitudes, Behavior & Greenhouse Gas Emission**

**German Mendzheritskiy**, University of Applied Social Sciences and Arts, Dortmund | [german.mendzheritskiy@fh-dortmund.de](mailto:german.mendzheritskiy@fh-dortmund.de)

**Anne Ziesenitz**, University of Applied Sciences and Arts, Dortmund | [anne.ziesenitz@fh-dortmund.de](mailto:anne.ziesenitz@fh-dortmund.de)

**Marcel Hunecke**, University of Applied Social Sciences and Arts, Dortmund | [marcel.hunecke@fh-dortmund.de](mailto:marcel.hunecke@fh-dortmund.de)

The whole population of Germany faces the new challenges of the changing world such as the problems of sustainability, environmental protection and environmental oriented thinking. This concerns all the groups of modern German society including the migrants. The migrant background possess now almost each 5-th citizen of the Federal Republic of Germany (18.7% of the population). But their intention and dedication to environmental and climate protection is not well investigated yet, as well as the influence of the participation of migrants in climate protection on their integration in the German society. The project 'EMIGMA: Empowerment of migrants for climate protection' is focused on Russian and Turkish speaking migrants' specific attitudes, norms, perceived behavior control, intentions with relation to three

environmentally relevant fields: mobility, nutrition and energy consumption and their ecological impact (co2-emission) During the study in 2011-2012, a representative sample of Russian (N = 800) and Turkish (N = 800) speaking migrants in four different federal regions (Berlin, Bayern, Baden Württemberg, NRW), and a sample of the local (German native speakers, N = 400) population were interviewed about the before mentioned research fields. The first results reveal significant differences between migrants and native population in several spheres of behavior relating to environmental protection, such as using of public transportation, car usage, consumption of bio products etc. and in general in climate protection orientation and activity.

## The Tidal Wave of Media. The Environmental Risk Between Reality and Representation

Mihaela Gavrilă, Sapienza University, Rome | [mihaela.gavrila@uniroma1.it](mailto:mihaela.gavrila@uniroma1.it)

Davide Borrelli, Università del Salento | [dborrell@libero.it](mailto:dborrell@libero.it)

Sarah Siciliano, University of Salento | [sarah.siciliano@unisalento.it](mailto:sarah.siciliano@unisalento.it)

The traditional fears arising from disasters of a natural order (such as earthquakes or eruptions), or of a mixed order (a natural one, but resulting from degenerative changes in the environment caused by humans, such as floods and fires), seem more frequently to invade a sensitivity that is fuelling itself through the ubiquitous connectivity of the media, generating complex reactions on the imaginative level, on mythologies, and symbolic constructions, as well as, of course, on the level of social behaviours, political practices, and theorizations themselves. Our enquiry aims to examine some basic dimensions: 1. The representation of environmental disaster in the traditional media, with particular attention to television as a reservoir of memory and identity; 2. Those communication strategies which are more coherent with the contemporary imagination,

to promote a widespread awareness of our being all players in the sustainable development process. To a first stage based on the expressive force of numbers, it will follow an analysis of personal experiences and glimpses of everyday life collected through various interviews, life's stories and focus groups, in order to access the personal experiences and the points of view of the players, encouraging them to describe reality with their language and their terms, within a more complex subjective vision of the world. An enquiry path, then, which is preliminary to the elaboration of appropriate communication strategies suited to create an environment culture and to give life to an information typology which spares no efforts in handling the environment with the best tools, daily renewing the interest in these themes and, above all, concretely affecting our lifestyle

## 21RN12 - Innovation in Energy Technologies

Chair(s): Alena Bleicher (Helmholtz Centre for Environmental Research, Leipzig)

### Ecopreneurs, Community-based Renewable Energy and Alternative Socio-technical Approaches to Sustainable Development: a Comparison of Two Community Solar Projects

Natalia Magnani, University of Trento | [natalia.magnani@unitn.it](mailto:natalia.magnani@unitn.it)

This paper focuses on community-based renewable energy (CRE) and its contribution to sustainable development (within and beyond the local community) in Italy. Italy has relatively little existing community energy initiatives, but in the last few years innovative

local projects have started to emerge in rural areas in response to a very generous feed-in tariff policy. In this paper two CRE case studies from the north-east of Italy are analysed with regard to their origins, characteristics and social/environmental effects. Both of them are

community solar projects, i.e. photovoltaic plants collectively-owned through cooperative-based share ownership. However, they differ under many respects making a comparison between them particularly interesting. First of all their initiators represent different types of ecopreneurs, holding alternative visions of the relationship between business and the environment and the role of the individual vs. the community and having access to different kinds of local resources (financial, social, technological). Moreover, differences also concern the ecological and social characteristics of the local community in which

they are embedded. These elements eventually generated divergent socio-technical arrangements for community energy production/consumption underlying a distinctive approach to sustainable development. On the basis of this empirical material the aim of the paper is twofold: to explore what variables shape the specific forms taken by CRE; to explore to what extent and under what conditions CRE can stimulate change towards sustainable development within and beyond the borders of the community.

## Energy Storage: First Socio-Technical Experiments in Italy

Giorgio Osti, University of Trieste | [ostig@sp.units.it](mailto:ostig@sp.units.it)

The presentation aims to open a new field of social research on the energy domain: the forms of storage. The reasons for such a fieldwork are probably known. Heat and electric storage help the development of renewables, which suffer of intermittent supply, and increase the energy saving chances as households and firms can better modulate their consumption. The energy storage process can happen at different socio-spatial scales, from households/firms level to regional energy systems. Smart grids are the frequently mentioned example. A sociological approach to storage can highlight some dimensions of the energy storage process. One dimension is the technological path. There are different ways to develop storage, each one, according to a socio-technical approach, entails expertise, cultural values, social

networks, even emotional communities. The prevalence of one technology package over the other ones depends on functional and social aspects, that are strictly intertwined. A second dimension is organizational. It concerns the actors which are experimenting energy storage. Usually, they are the utilities, but an important role is played by the high tech multinational companies able to invest wide resources on devices like batteries, compressors, cables. In this case, storage applications need a company's philosophy, a willingness to invest, a capacity to find the right partner, in other words, the qualities of a mature organization. Households, local communities and administrative bodies are conceived as well as organizations. Two Italian cases of people involvement in electric energy storage will be analysed.

## Governance and the Green State – A Comparative Analyses of Energy Technology Development Policies

Gerhard Fuchs, University of Stuttgart | [gerhard.fuchs@sowi.uni-stuttgart.de](mailto:gerhard.fuchs@sowi.uni-stuttgart.de)

The paper addresses two questions: (1) How do environmental states differ in the configuration of their governance arrangements and how can these differences be explained? (2) What are

the structural features that enable and constrain the activities of ecological states. Four cases will be analyzed dealing with the state sponsored development of climate

friendly energy technologies. The cases deal with three national experiences (Germany, Japan, Norway) and two technologies (Photovoltaics/PV, Carbon Capture and Storage/CCS). Each case will be treated as being embedded in a strategic action field (Fligstein/McAdam 2011/12). Thus the different

governance configurations and power constellations dominating the policy development in each case can be highlighted and explained. Given the varying success of technology development in the four cases constraints as well as opportunity structures for green policies can be identified.

## Social Experience with Ecosystem-Management Plan of the Barents Sea

Allan Sande, University of Nordland | [allan.sande@uin.no](mailto:allan.sande@uin.no)

In the High North, The Barents Sea has large resources of petroleum and sustainable populations of fish. The international challenge lies in implementing the conservation of biodiversity, at the same time managing sustainable exploitation of natural resources in the Arctic region. The Norwegian government has tried to solve conflicts of interest by making a large scale ecosystem-based national management plan for The Barents Sea. The national goals are sustainable use of petroleum, fishery resources and conservation of the maritime ecosystem. The key areas at sea are the most promising areas for the exploitation of petroleum in the Arctic region. In this paper, I present an empirical case study of Norwegian national decision-making in ecosystem-based management of The Barents

Sea. This new system of planning is implemented as the second sea area in the world. Australia has implemented a large ecosystem management plan at the east-coast with the Great Barrier Reef. In the paper, I discuss in a critical perspective of sociology of knowledge the social effects of the new environmental policy and environmental institutions of problem-solving of sea area management. In the paper I want to investigate the social effects of the development of national planning of the sea ecosystems in the Arctic area. The question is: Does the government eco-system management planning of the Barents Sea provide a suitable institutional framework for solving the social conflicting interests in the Norwegian societies?

## 22RN12 - Science in Environmental Transformations

Chair(s): Steve Yearley (University of Edinburgh)

### Learning and Coping Strategies in the Use of Geothermal Heat

Alena Bleicher, Helmholtz Centre for Environmental Research - UFZ | [alena.bleicher@ufz.de](mailto:alena.bleicher@ufz.de)

Matthias Gross, Helmholtz Centre for Environmental Research - UFZ | [matthias.gross@ufz.de](mailto:matthias.gross@ufz.de)

Geothermal energy is seen as an important factor for renewable energy systems. Geothermal heating for private houses and public buildings is perceived as an almost limitless energy potential with stable

availability, and the promise to gain some independence from established energy markets. Compared with other renewable energy sources at first sight geothermal energy seems to be an almost "perfect" energy

source. However, the installations of downhole heat exchangers and heat pumps – often fostered by political goals and economic incentives – have triggered questions on environmental effects and potential risks. These questions often emerge in situ while new facilities are installed and in use. Answers need to be found in the course of the development as no laboratory experiments are possible. Thus understood the geological underground and the attached single households over ground become the laboratory. In the course of experimentation, actors have to deal with ever-changing situations as regards the use of the renewable

energy source and environmental safety. In this presentation we will discuss some preliminary results of an investigation of learning and coping experiences that environmental administrators and house owners had during the processes of utilizing geothermal energy sources. We will analyze strategies that actors rely on when dealing with open questions as regards novel technologies and quality control. We will show on how actors become experts in geothermal energy tapping and usage through learning by doing and continuously moving into the unknown underground.

## **Social Attitudes and System of Values of Professional Ecologists in Post-Soviet Area.**

Irina A. Sosunova, VNIITE | [sossunova@mtu-net.ru](mailto:sossunova@mtu-net.ru)

Olga N. Mamonova, Russian Society of Sociologists | [olga\\_nr@hotmail.com](mailto:olga_nr@hotmail.com)

The study is devoted to the phenomenon of institutionalization of new social-professional group in Post-Soviet area. The findings of expert survey present the social attitudes and system of values of professionals and the views of the lay public about their role in the society. Data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present under the sponsorship of Russian Foundation for Basic Research. The main hypothesis of research is that features of this institutionalization are: adequate axiological and emotional relation to society and nature, the availability of specific knowledge, capacities to creative action and thinking, which help them to analyze the real socio-ecological crisis and to make changes to balanced optimal decisions in the sphere of nature protection. The institutionalization of the ecologists is influenced

by its special characteristics: the special role of ecological ethics and morality in activity of the professional and the importance of professional activity of ecologists in conditions of local ecological crisis which leads to development of professional self-identity and appearing of professional pathos. New profession of ecologists differs a lot from the traditional specialists of ecology as a part of biology and “improvising” specialists of other specialties. Nowadays the “ecologist” is characterized by unique specific – its sphere of activity for mass consciousness is quite uncertain and vague, even inside of scientific community there is free interpretation of definition. The disadvantage of professional ecologists leads to social, economic, political expenses which are predominant to the costs for their training.

## Environmental Innovation in Water-service Systems: which Eco-efficiency Improvements?

Les Levidow, Open University | [L.Lavidow@open.ac.uk](mailto:L.Lavidow@open.ac.uk)

Water management has been a major focus of environmental innovation, which generally combines economic and environmental aims. Together these have been widely analysed through the concept 'eco-efficiency', denoting a ratio between socio-economic benefits and environmental burdens of the same activity. The concept can help to compare alternative options for improvement. As a site for applying those concepts, a 'water-service system' makes water suitable for specific purposes (e.g. drinking, cooling, industrial processing, etc) by treating water inputs and effluents. In many cases eco-efficiency has been improved through technological changes, e.g. minimising water requirements, generating less pollutants, re-using water, recycling effluent, finding extra uses, etc. Such changes have been driven by environmental regulations and by companies' strategies for greening their

public image. An EU-funded FP7 research project, Ecowater, has been elaborating those concepts with several aims: namely, to develop meso-level eco-efficiency indicators, to use the indicators for comparing improvement options, to identify their drivers/barriers, and thus to inform policy frameworks for resource efficiency. Eight case studies encompass water-service systems in agricultural, industrial and urban sectors. Towards closed-loop recycling, systemic improvements can mean re-using water (or its components) across different processes. The latter systemic changes offer greater eco-efficiency improvements but apparently face greater barriers. From preliminary results of the Ecowater project, this paper will analyse drivers/barriers of potential improvements which offer relatively greater or less eco-efficiency.

## The Role of Science in Environmental and Social Transformations Generated by Installation of Mega-enterprises in the North Coast of Sao Paulo/Brazil – The Case of Expansion of the Port of São Sebastião

Marcela da S. Feital, Universidade Estadual de Campinas | [mafeital@hotmail.com](mailto:mafeital@hotmail.com)

Lúcia Costa Ferreira, University of Campinas - UNICAMP | [luciacf@unicamp.br](mailto:luciacf@unicamp.br)

The north coast of São Paulo has been studied in several research areas due to the environmental and economical importance of the region. Moreover, this is an area that presents some of the key social and environmental dilemmas of contemporary economical development, because it combines, at the same time, high biodiversity, tourism, little urban planning, mega-project facilities related to the oil industry, and vulnerability to risks and effects of global environmental changes such as climate change. The aim of this paper is to identify and understand the social transformations resulting from

urbanization and development in the northern coast of São Paulo, which includes installations of these mega-enterprises having as empirical case the expansion work of the Port of São Sebastião. On a specific way, from the sociological theories of conflict, arena and resource mobilization, we will analyze the use of scientific knowledge about environmental changes that the different social actors involved in conflicts over such projects make to justify and legitimize their interests in discussions during the environmental licensing process. Licensing is where the risks and their possible mitigations are discussed and defined

in arenas such as public hearings, which are an important stage of debate, since all stakeholders can present their questions and suggestions. This way we can explore the

relevance of these spaces that allow public participation within this arena of intense disputes over environmental risks and impacts.

## Social adaptation of the green technologies in Russia: myth or reality?

Polina Ermolaeva, Kazan (Volga region) Federal University | [Polina.Ermolaeva@gmail.com](mailto:Polina.Ermolaeva@gmail.com)

Lilya G Egorova, Department of Sociology | [lge1964@yandex.ru](mailto:lge1964@yandex.ru)

Elena P Noskova, Sociological Department | [Elena.Noskova@tatar.ru](mailto:Elena.Noskova@tatar.ru)

This study provides insights on the Russian people awareness of green technologies and the level of their adaptation in their daily social practices. It discusses definitions of green technologies in connection to the theories of green society and green culture. Furthermore, the research offers an authors' empirical data (n=400) in the form of the case study (Kazan, Republic of Tatarstan) on the people' green technologies awareness, different types of

green behavior and environmental lifestyle; evaluates correlates of people' green behavior with sociodemographics and social context variables. Factor analysis shows the two highly interpretable types of people' levels of green technologies adaptation are present: "Innovative Type" and "Conservative Type". Key practical implications for the policy and decision makers are discussed.

## 23RN12 - Sociology and the Limits of Resilience

Chair(s): Debra J. Davidson (University of Alberta, Canada)

### The Introduction of the Concept of Resilience in Public Policies : the French Case

Léo Bourcart, Sciences Po Grenoble - University Pierre Mendès France (UPMF) | [leo.bourcart@etu-iepg.fr](mailto:leo.bourcart@etu-iepg.fr)

Following the American and British examples, French institutions (national and local governments, public organizations, universities) have increasingly used the concept of resilience over the last few years. However, if from a broad perspective, this emergent dynamic could be interpreted as one of the French attempts to better apprehend the reality of modern crises (both natural and technical disasters such as the Japanese earthquake in March 2011, multi-scale and transboundary crises leading to situations of great uncertainty such as the H1N1 flu pandemic in 2009), a more precise focus

reveals that the definition and the use of resilience can broadly differ from an actor to another. Indeed, depending on the scientific field or the degree of responsibility of the users, resilience can be understood as a risks prevention principle, as a crisis management specific methodology, or as the capacities of a community or a society to rebuild its organization and its infrastructures after a disaster. Following Claude Gilbert and Emmanuel Henry's recent work on public problems definition, the main argument of my contribution to explain this actual confusion is that the concept of resilience, by moving

disaster issues from the security and technical field to the prevention and adaptation field, challenges on one side the legitimacy and the competences of the actual risks and crises management responsible, and raises on the other side the influence of actors coming from

other disciplines or fields (NGOs, civil societies, social sciences, environmental experts). Bibliography : Claude Gilbert and Emmanuel Henry. "La définition des problèmes publics: entre publicité et discrétion". French Review of Sociology 531, 2012

## **Common Property Systems and Resilience Following Disasters: Case Study of Tsunami-Hit Villages in Kitakami Area of Miyagi, Japan**

Taisuke Miyauchi, Hokkaido University | [miyauchi@let.hokudai.ac.jp](mailto:miyauchi@let.hokudai.ac.jp)

This presentation investigates the relationship between common property systems and local resilience following disasters by studying tsunami-hit villages in Kitakami area, Miyagi, Japan. This area was heavily hit by the 3.11 earthquake and tsunami in 2011. Besides many casualties, the villages are now facing a rapid depopulation crisis, but are striving to rebuild their communities. The presentation is organized as follows: First, I discuss the structure of common property systems in the region. Such systems have been constructed in various ways using various natural resources. A remarkable characteristic is the link between organizations and various rules, making the multilayered common system the key to this society's sustainability. Second, I analyze the role of traditional community organizations in the recovery process. For example, the fishermen's cooperative is

central to the fishery's recovery. Autonomous community organizations, called "Keiyakuko," figure prominently in collective relocation projects. Community organizations and the cohesion that the communities have fostered through resource management demonstrate its effective resilience following disasters. However, there are some areas where these organizations do not work in the rebuilding process. Third, I analyze new trends after the disaster and their relationship to the traditional common system. The government, professionals, and nonprofit organizations play a significant role in collaboration with community organizations. I investigate how this collaboration functions or does not. Moreover, I examine how the new types of local groups, such as young women and small fishermen, play an important role in the recovery process.

## **Mega Mining: Three Decades Later: Evaluating Resilience and Long-term Consequences**

Xaquín S. Perez Sindin Lopez, Gdansk University of Technology | [xaquin.perezsindin@udc.es](mailto:xaquin.perezsindin@udc.es)

The dimension of one of the largest power stations in Spain does not pass unnoticed for any visitor passing through the town of As Pontes. Located just one kilometer from the downtown, its construction and operation as of 1979 would definitely change a place that by that time was not far from many others villages that form the most genuine rural in the Autonomous Community of Galicia. The closure

of the adjacent opencast coalmine, its conversion into an lake, as well as the massive early retirement plan implemented, finally defined its particular idiosyncrasies up to date. But, what lies beneath these facts? Issues as equality and social cohesion, social capital, migration and early retired health status have been tested by mean a multi-method research design. On the one hand a self-administered

questionnaires and focus group among early retirees, on the other hand, secondary data from official statistic sources referred to As Pontes and in comparison with control municipalities not affected by mining production as well as regional and national average. The results allow us to see that the apparently boomtown experienced it actually consisted of a rapid urban growth in the vicinity of the power station, but in contrast, the As Pontes region as a whole, i.e., including

municipalities around, has always been suffering, not only now but from the beginning of the activity, from shrinking. Despite the obvious economic benefits in one part of the population, they have a clearly unequal distribution determined by the employment status with regard to the mining activity. Additionally, social capital, unemployment and poverty rates speak unfavorably about the area's resilience to the crisis and challenges of global change.

## **The Two-Face Janus of Disaster Management: Still Vulnerable yet Already Resilient**

**Mara Benadusi**, University of Catania | [mara.benadusi@unict.it](mailto:mara.benadusi@unict.it)

The paper ethnographically traces the various shapes resilience and vulnerability took in a post-tsunami Sri Lankan village, as well as the interpretations they were given by both humanitarian operators and the survivors themselves. I show that the practices of community-based disaster management involved approaches, visions and modus operandi that were highly ambiguous and divergent. Indeed, these practices revealed intense contestation around the concepts of resilience and vulnerability and wide variation in the ways these concepts were embodied by reconstruction actors. Still vulnerable yet already resilient, the survivors were encouraged to strategically employ one or the other facade of disaster management's two-faced Janus, calibrating the features that

rendered them desirable for gifting: a moving need for help and an untiring ability to cope with uncertainty. To attract additional aid packages, they had to carefully weigh the level of resilience achieved through training; they had to appear "just resilient enough" to be eligible for gifting but not so resilient as to tarnish the image of vulnerability still required to intercept aid. In their attempt to promote resilience at the community level, the humanitarian actors thus ended up creating a "social drama" with ambiguous and controversial implications. Paradoxically, the most important lesson the villagers received during the reconstruction phase was how to retain their position as a "good product of the tsunami."

## 24RN12 - Participation and Ecological Citizenship

Chair(s): Mikael Klintman (Lund University)

### Social Ecological Citizenship Challenges Environmental Participatio : SHP (dam) Opposition Cases in Turkey

Cagri Eryilmaz, Artvin Coruh University | [cagrideniz@gmail.com](mailto:cagrideniz@gmail.com)

Since 2008, hundreds of grassroots movements from Turkey have risen against construction of two-thousands of Small Hydroelectric Plants (SHP) at almost each river of country destroying valleys, farm lands and houses. Research question of this (PhD) study is "How can any environmental action (like SHP opposition in Turkey) be analyzed in terms of social ecology?" About ecological crisis, Murray Bookchin's social ecology develops strong criticism against liberal environmentalism, deep ecology and Marxism and provides an alternative radical social change as Libertarian Municipalism (LM). Social ecology criticizes environmentalism as legitimizing current status quo destroying nature and offers ecological approach for real solution. LM citizenship movement is a political program of social ecology to reach rational, ecological and democratic ecomunity that

is domination free and so does not dominate nature. I developed a LM movement model to reach a Classification Table (CT) as a tool to analyze all sorts of environmental activities according to social ecology. Implementation of CT with qualitative field study at three unique areas shows SHP opposition has the desire of strict state controls and planning as significant aspects of welfare-liberal environmentalism. On the other hand, the common critique of central, urban, professional and fund dependent environmentalism of national ENGOs fits market-liberal environmentalism critique of LM model. The increasing demand to join decision-making mechanism, the bottom-to-top regional organization of local units and developed "living space" discourse show LM tendency. In fact, SHP threat ignites participation demands of local people in decision-making mechanisms in Turkey.

### The Perspective of the Participants. Evaluation of Referendum: a Case Study on Decision Making of Waste

Gabriella Kiss, Budapest Business School | [kiss.gabriella@pszfb.bgf.hu](mailto:kiss.gabriella@pszfb.bgf.hu)

In the time of crisis the legitimacy of decisions is of utmost importance. It is in case of environmental decision making as well. Evaluating public participation processes can be useful tools for investigating legitimacy or acceptance of decision making processes and its outcomes. The main principles which are widely agreed upon in evaluating environmental decision making processes are fairness and competence. In case of referendum as a traditional tool of direct democracy fairness and competence raise

many questions and doubts. One of them is whether the participants were satisfied with the decision and the whole process after all. A good or successful participatory process in environmental decision making can be defined as the participants were content with the process itself. In this paper -based on the above approaches - a referendum is analysed from the perspective of the participants in a Hungarian waste management facility siting case. The characteristics of the referendum were identified using qualitative method of

grounded theory based on the participants' evaluation. The question of the analysis is the appropriateness and the acceptability of

referendum as a participatory decision making tool in the light of the evaluation of the decision (outcome) and the process itself.

## Challenges of Representative Democracy Faced with the Participatory Demands of the People within the Setting of Protected Natural Areas.

Juan Francisco J.F. Bejarano Bella, University of Seville | [jbejarano@us.es](mailto:jbejarano@us.es)

Adolfo J. Torres Rodríguez, University of Granada | [atorresr@ugr.es](mailto:atorresr@ugr.es)

Carmen Sanz López, University of Granada | [csanzl@ugr.es](mailto:csanzl@ugr.es)

Mercedes Lucena González, University of Granada | [lucename@hotmail.com](mailto:lucename@hotmail.com)

**Abstract:** The need for good governance practices stems from accepting that governments are not the only players facing big social questions. This work intends to show that new responsibilities in the management of ecological heritage must be accompanied by political participation in order to promote civic education and governability. To this end, some questions have been raised: What role do these new participatory structures play in the management of protected natural areas? Is

deliberative democracy possible in the conservation of nature? And perhaps more importantly, what role does civil society wish to play in the management of these areas? Especially if it is proven that this involves collaborative projects, which seek a broad social consensus and collective effort. In this case, Doñana National Park (Spain) will provide the necessary data to be able to answer all of these questions.

## Civil Society, Sustainability and Social Justice

Joao Guerra, University of Lisbon | [joao.guerra@ics.ul.pt](mailto:joao.guerra@ics.ul.pt)

If a holistic view of sustainability – while promoting human welfare and preservation of the natural environment – is becoming a programmatic and cross dominant ideology that has shaped (and still is) the generality of environmental policies, it is also evident that its effective implementation has basically been done in an evasive (Adger and Jordan, 2009), superficial (Redclift, 2005), and inconsequential (Lélé, 1991 [2005]; Carter, 2001) manner. Characteristics that tend to worsening, in those rough economic times that we are experiencing in Europe, and despite the inevitable end of the "age of irresponsibility" that assumed infinite resources (Jackson, 2009). Anyway, the interest for sustainability issues and the inevitable redefinition of social priorities in an ecological scarcity's context

(Schnaiberg, 1980) have covered, for better or for worse, their own way in today's societies and the urgency of change is gaining more and more advocates. Nevertheless, this does not release an engaged, empowered and collective movement able to request and support just, equitable and pro-sustaining measures. Hence, based on the testimony of representatives of civil society organizations (interviews and document analysis) this presentation seeks to define i) motivations, ii) interests, and ii) profiles of civil society organizations, taking into account that, despite the rhetoric of holistic sustainability, environmental groups tend to ignore social problems and overestimate ecological ones, while the remaining groups tend to take a reverse position.

## How Local Communities Experience New Mining Sites in Finland – Cases Talvivaara and Pampalo.

Tuija Mononen, University of Eastern Finland | [tuija.mononen@uef.fi](mailto:tuija.mononen@uef.fi)

Societies today are highly dependent on the use of most metals and minerals for various purposes. The growth in world population together with improvements in the standard of living in many countries has fuelled the pace of mineral exploitation. Finland has a long history of mining that has, and continues, to heavily influence the development of its economy. During the 1990's, the trend for the Finnish mining industry was to downgrade, but this has undergone a distinct reversal in recent years. The new developments in Finnish mining sector have meant also the rise of some local conflicts. Recent publicity about environmental problems of mining has increased the criticism and sensitivity of local people in all mining sites. In my presentation I will focus on the question: how local communities experience

new mining sites in Finland? I will explore especially the eco-social impacts of mining and various forms of local responses. With eco-social impacts I refer to changes in experienced landscape and natural values, perceptions of environmental risks, and possibilities of influencing the use of the natural resources and local environment. Presentation is based on interviews of local people in two new mining sites in Finland. Talvivaara is a nickel and zinc mine, but planning to recover uranium. Mining district is about 6 100 hectares and production is based on bioheap leaching method. Pampalo gold mine is small in scale, mining district being 300 hectares. Production is based on cyanide free concentration methods.

## RN12 - Poster Session

### Fight Fire with Fire: Forcing the Ivory Tower of Risk Management

Paolo Giardullo, Università di Urbino Carlo Bo" | [p.giardullo@campus.uniurb.it](mailto:p.giardullo@campus.uniurb.it)

The paper aims to investigate the strategies adopted by actors engaged in controversies about interventions to reduce air pollution risk in metropolitan context. The usage of the concept of risk, inscribes this work in the environmental sociology debate. Since the considerations fostered by Beck and Giddens books, risk has become a relevant research field for sociologists. Risk is deeply intertwined with techno-scientific knowledge as part of policy implementation process. Experts assess risks, decide for risk management and evaluate the outcomes. Even if citizens' participation experiences, or participant democracy experiments are expanding,

processes in environmental risk management still remain an expertise affair. Lay public typically enters the arena when policies have been already implemented; independently of the explanations when lay-actors decide to enter the public arena a certain degree of conflict is raising. According to these facts is important to dedicate empiric reflections to new strategies adopted by the actors that are on both sides: contesting or defending the policies. The case presented here is the controversy about the "Area-C", the congestion charge active in Milan. After a brief description of the measure, the map of the actors involved will be depicted following the Actor-network

Theory perspective. By sketching cartography of the controversy of the controversy, the strategies adopted by the actors will be analysed. According to a mixed-method approach, the research has been conducted

using different techniques; the analysis will show the actors challenging their counterparts using systematically using scientific produced made by the parts in conflict.

## From Objective Problems to Subjective Concern

José M. Echavarren, University of Pablo de Olavide, Seville | [jmechavarren@upo.es](mailto:jmechavarren@upo.es)

Ildefonso Marqués-Perales, University of Seville | [imarques@us.es](mailto:imarques@us.es)

Alejandra Amaya, University Pablo Olavide, Seville | [saydalo@hotmail.com](mailto:saydalo@hotmail.com)

Paz Bononato, University Pablo Olavide, Seville | [paz.bonfer@hotmail.com](mailto:paz.bonfer@hotmail.com)

José M. Peinado, University Pablo Olavide, Seville | [jmpeisaa@gmail.com](mailto:jmpeisaa@gmail.com)

Martínez-Alier makes a distinction between “environmentalism of the rich” and “environmentalism of the poor”. The former states that pro-environmental values are decoupled from pollution and more salient in richer countries. The second shows that environmentalism also has a hold on developing countries where is linked to environmental problems as people try to protect the environment that nurture them. We try to harmonize the findings of both perspectives by focusing on the nature of environmental harms. We believe that the nature of the environmental problem triggers environmental concern of different people. Our study posit the difference of both environmentalisms lay on the special characteristics of the objective environmental problem that trigger them: one is abstract and educational mediated; the other one is specific and directly perceived. We distinguish between

Invisible Environmental Problems (greenhouse emissions, sulfur dioxide emissions...), and Visible Environmental Problems (river pollution, deforestation...). IEP are expected to hold more influence on educated classes given that invisible problems are only accessible by reading information or through scientific knowledge; thus we explain the “environmentalism of the rich” in richer countries where most of the environmental problems are of invisible character and average citizens are more educated than in developing countries. We use the 2005 World Values Survey to measure individual environmental values in 57 countries. We will build the aggregate variables of environmental problems using the Environmental Performance Index database analyzing 25 indicators of environmental quality for 163 countries. We use multilevel analysis to verify our hypothesis

## Re-thinking Legitimacy of Grassroots Climate Change Movements

Marta Lis, Laboratory of Change Project | [marta.irena.lis@gmail.com](mailto:marta.irena.lis@gmail.com)

With increasing threat of climate change, grassroots climate change movements and initiatives mushroom globally. As they grow in strength, the most important question still remains unanswered. They all demand a say in global policy making, hence distinguishing

legitimate partners of the debate from the ones whose voices should be neglected is vital. The criterion to decide upon is legitimacy. This superficially simple term, however, creates much difficulty in its application. The puzzle that needs to be faced is how to apply the

concept of legitimacy, deeply rooted in political science realm, to the study of grassroots climate change movements. It is an important problem to address as frequently the greatest criticism and a prerequisite not to take social movements' claims seriously is their alleged lack of legitimacy. In order to tackle this problem, based on a thorough literature review, a Legitimacy Assessment Framework tool is developed that, with necessary adjustments, can be applied to an analysis of other social movements not only climate

change. Legitimacy Assessment Framework is a complex tool that takes into account all legitimacy dimensions, both on input and output side, and sources and develops clear indicators for legitimacy measurement. Its application is shown on a case study of 350.org, a grassroots climate change movement that gained its momentum in 2009 during the COP15 conference in Copenhagen, and was later characterized as 'the biggest climate demonstration in the world history' with 100 000 participants on December 12th 2009.

## The Decline of Honey Bees and its Social Dynamics

Stephan Lorenz, University of Jena | [stephan.lorenz@uni-jena.de](mailto:stephan.lorenz@uni-jena.de)

The disappearance of honey bees which has been observed in the past few years was first described in the USA as Colony Collapse Disorder (CCD). The adult bees leave their hives and thereby their brood which dies as a consequence. CCD has reinforced the trend of the decline of managed honey bees that has lasted for some decades. This is a worldwide development with its core areas in the highly industrialised countries. Hence, the ecosystem and agriculture services of the bees are endangered. It is assumed "that multiple factors are at work linked with the way humans are rapidly changing the conditions and the ground rules that support life on Earth" (UNEP 2011). However, while the "multiple factors" are intensely analysed, the corresponding "rapidly changing" has hardly been an object of social research yet. The paper presents an ongoing research (started in May 2012) which

adopts a sociological perspective on the honey bee decline. Obviously, the social dynamics induce changing pressure to the human-bee-coexistence, jeopardise the honey bees and thereby risk their own social operations. Keywords of relevant social dynamics that need to be clarified are industrialisation, commercialisation, urbanisation, globalisation and de-traditionalisation. The project analyses and compares a variety of modes of coexistence of humans and bees represented in diverse kinds of beekeeping practices, especially industrial, urban, organic and traditional beekeeping. The research relies on explorative methods, i.e. a combination of proved case reconstruction approaches with an ANT-style of network analysis. Following this way promises the reconstruction of social structures of the human-bee-coexistence and the decline of bees.

## Limitation and Extension of Natural Park Activities to Promote Sustainable Tourism: the Case of Adamello-Brenta Park in Italy

Eleonora Vlach, University of Trento | [eleonora.vlach@unitn.it](mailto:eleonora.vlach@unitn.it)

Silvia Campana, Università degli Studi di Trento | [silvy-2@hotmail.it](mailto:silvy-2@hotmail.it)

This paper reports a qualitative case study which investigates the role played by natural parks in pursuing sustainable tourism. The

need to go beyond the traditional form of tourism development became crucial in the last decades, due to the increasing attention

paid to environmental resources. However, the objectives of a sustainable advancement in many tourism contexts are far from being accomplished. A general agreement can be found in the literature on the fact that the co-existence of multiple stakeholders defines the features of a tourist destination and its development possibilities. In this reference, a natural park could be seen as one of the leading player in incentivize a sustainable way to make the most of tourism assets. In this analysis we consider the larger natural park in Trentino, in North-East Italy, one of the richest regions in Europe. The area is important not only because of its valuable natural

environment but also for the fact that it houses two of the most important mass-tourist destination of the region. By means of semi-structured interviews with key destination stakeholders, we illustrate how the level of participation in tourism decisions leads to different perceptions of the influence of the wildlife park on the economy of the area (constricting or sustaining). As a result, the efficacy of the action taken by the park to enforce sustainable tourism seems to depend on the grade it gains the participation of the other players with which it shares interests on the same territory.

## RN13 - Sociology of Families and Intimate Lives

### a01RN13 - Family, Poverty and Distress

Chair(s): Ulla M. Bjoernberg (Department of Sociology - Gothenburg University)

#### Parents' Perceptions of their Parental Role in Preventing Drugs and Alcohol Use of their Children

Hagit Levy, Ashkelon Academic College, Israel | [hagitlev@gmail.com](mailto:hagitlev@gmail.com)

The research background: the phenomenon of adolescent's drug and alcohol use is increasing and the age start is decreasing. As the "parenting style" model show that parental monitoring and authority can prevent it, the question is raised why parents use them less and less and how parents themselves perceive their parental role and what are their needs in order to establish it. The thesis is related to the field of social psychology of parenthood and is studying through qualitative paradigm the phenomenon of parents' perceptions of their role in preventing drugs and alcohol use by their children. The theoretical background of the parenting role and parenting style elevates its challenges in the contexts of the 21st century and in light of the phenomenon of the adolescents' tendency to experiment with drugs and alcohol. The current phenomenology research follows qualitative approach, and

both the grounded theory and the narrative approach are used for data collection and analysis. Based on the interpretation of data collected from 24 parents, the findings argue that parents' perceptions of their prevention role reflect a fluctuation between present and absent parenting. Parenting is perceived within four different aspects, three different parenting style and three leading story lines which demonstrate that parents wish to establish effective parenting but at the same time they feel unable to do so. The discussion suggests that the construction of the parental role perceptions into parental identity is influenced not only by traditional socio-cultural and intergenerational internalized perceptions but rather also by internal and external factors such as the bi-directional relationship with the child

#### Mental Healthcare Use among Single Mothers and Fathers: The Role of Work-Family Interface and Social Support

Elieen Colman, Ghent University | [Elieen.Colman@UGent.be](mailto:Elieen.Colman@UGent.be)

Sara A. A. Symoens, Ghent University | [sara.symoens@ugent.be](mailto:sara.symoens@ugent.be)

Piet F. Bracke, Ghent University | [piet.bracke@ugent.be](mailto:piet.bracke@ugent.be)

Single parents can be considered a vulnerable group, experiencing more financial problems, lack of social support and more difficulties to combine work and family demands, resulting in

higher rates of mental health problems among single parents. In this contribution, we examine how the mental health care use of single divorced, repartnered divorced and

continuously married fathers and mothers is affected by work-family interface and various dimensions of social support (emotional support, practical support and conflict) of family members and coworkers. We employ a subsample of working fathers (N=850) and mothers (N=1417) of the data of the Divorce in Flanders survey ([www.divorceinlanders.be](http://www.divorceinlanders.be)). Gender specific logistic regression analyses are performed to identify the correlates of seeking help from a GP or psychiatrist because of social or emotional problems. Results show that single fathers and mothers are indeed the

most likely to have consulted a professional health care provider, whereas the married have the least often contacted a GP or psychiatrist. No association between family-to-work conflict and mental health care use is found, but we do find that parents are more likely to consult a GP or psychiatrist when they experience more work-to-family conflict. The divergent dimensions of social support are all differently related to mental health care use. Hence it is concluded that relation between social and informal support is highly complex.

## Narratives on the Father-Son Relationship in the Context of Alcohol Problems

Henna Pirskanen, University of Jyväskylä | [henna.pirskanen@jyu.fi](mailto:henna.pirskanen@jyu.fi)

Family relations appear differently to individual family members. While family relations can at best offer attachment, love and nurture, at worst they can be draining, neglectful and suppressive. In my presentation, narratives of father-son relationship in the context of the fathers' alcohol problems will be discussed. Adult sons who have lived with problem-drinking fathers are given a voice through interviews and their life stories are explored. What kind of a relationship do sons and their problem-drinking fathers have in the sons' perceptions. What kinds of power relations exist between sons and their problem-drinking fathers? The data of the study consist of 21 life story interviews with men aged 21-42 years. In the study, four story types of the father-son relationship during the sons' life course were

constructed. These types were named after the emotions central to the story. These were the narratives of loyalty, irritation, melancholia and hatred. From the perspective of power, the father-son relationships contained both benign and malign power and varying combinations of the two. Normatively, the sons' power has increased as they have grown up; the shifts in the power balance here are connected to the different life phases of both fathers and sons and the emotions these have entailed. The study shows the centrality of temporality and different emotions in narratives on family relations experienced by family members as challenging. Simultaneously, it yields new knowledge on family relations that are perceived as challenging and problematic in nature.

## The TARA Project: A Longitudinal Study of the Service Use and Need of Homeless Women.

Emma Williamson, University of Bristol | [e.williamson@bristol.ac.uk](mailto:e.williamson@bristol.ac.uk)

Hilary Abrahams, School for Policy Studies, University of Bristol | [Hilary.Abrahams@bristol.ac.uk](mailto:Hilary.Abrahams@bristol.ac.uk)

Karen Morgan, School for Policy Studies, University of Bristol | [Karen.Morgan@bristol.ac.uk](mailto:Karen.Morgan@bristol.ac.uk)

Ailsa Cameron, University of Bristol | [A.Cameron@Bris.ac.uk](mailto:A.Cameron@Bris.ac.uk)

Lorna Henry, University of Bristol | [L.Henry@bristol.ac.uk](mailto:L.Henry@bristol.ac.uk)

The TARA project was a longitudinal study following homeless women over a period of two years, examining the barriers they face in obtaining housing and their needs with regard to housing and care support. The project was based in a city in the West of England and took place against a backdrop of service retrenchment and reorganisation. 38 women were recruited via night shelters, hostels, supported housing services and specialist services with a view to them participating in 3 rounds of interviews. At the initial interview women reported experience of a wide range of issues including child abuse and neglect, domestic violence, sex work, mental health

difficulties and drug and alcohol dependence. This paper will explore women's experiences of homelessness services, their efforts to navigate support services and the destabilising impact of service reorganisations; in so doing it will consider these experiences in relation to discourses of risk and resilience. Finally the paper will identify how support services can best be provided to meet the complex needs of homeless women. In particular, the importance of women having the space and opportunity to understand the gendered experiences of their lives in order to move forward.

## The Extent of Poverty among Parents, and the Relationship with Parenting Practices in the UK

Esther Dermott, University of Bristol | [esther.dermott@bristol.ac.uk](mailto:esther.dermott@bristol.ac.uk)

Discussion in the UK about children's future prospects are currently dominated by an emergent dichotomy focusing on either 'poverty' or 'parenting'. Poverty remains a key policy challenges for current and future governments in the UK and across Europe. In 2000, the eradication of poverty and social exclusion became a central goal of the Lisbon Agenda. At this time, the UK had among the highest levels of inequality and poverty in the EU. However, Prime Minister David Cameron has declared that 'what matters most to a child's life chances is not the wealth of their upbringing but the warmth of their parenting' (2010). This discourse is also evident in two

major government reports -The Foundation Years: Preventing Poor Children Becoming Poor Adults (Field 2010) and Early Intervention: The Next Steps (Allen 2011). In arguing against the importance of income, Field concentrates on 'good parenting' and 'opportunities for learning and development': it is parents' actions not their 'capital' that are seen as determining outcomes for children. Drawing on data from the PSE2012 – a new nationally representative survey of poverty and social exclusion in the UK using the 'consensual method' of measuring minimum necessary living standards and direct measures of material and social deprivation – the paper will

present findings on the extent of poverty among partnered and sole parents. It will also provide evidence about the relationship

between poverty and parenting activities that have as yet, have been the subject of limited empirical research.

## **b01RN13 - Balancing Family, Working Lives and Job Mobility 1**

Chair(s): Vanessa Cunha (Institute of Social Sciences - University of Lisbon)

### **Balancing Contrasting Mobilities in Rural Lifestyle Businesses**

Erika A Cederholm, Lund University | [erika.andersson\\_cederholm@ism.lu.se](mailto:erika.andersson_cederholm@ism.lu.se)

Malin Åkerström, Lund University | [malin.akerstrom@soc.lu.se](mailto:malin.akerstrom@soc.lu.se)

The paper discusses experiences and values of geographical mobility among business owners in the tourism and recreational industry in rural Sweden. The study is based on ethnographic interviews with so called lifestyle entrepreneurs, who explicitly seek to combine business, lifestyle and family life. The study comprises owners of horse-farms, farm-stays and Bed & breakfast enterprises, and includes lifestyle migrants as well as those who run an inherited farm. The analysis focuses on the dynamics between mobility and immobility, particularly how the families balance their own sense of being potentially mobile or immobile towards other people's or groups presumed immobility or mobility. Some of the themes identified are: 1) Lifestyle migrants seem to confirm an identity as potentially mobile by

identifying with or against other lifestyle migrants and/or more "permanent" locals, 2) although everyday working conditions with a farm and a service business make the families relatively immobile, the value of being potentially mobile are sustained through close relationships with highly mobile guests or temporary workers in a form of vicarious mobility, 3) relative immobility is balanced towards an emphasis and appreciation of intense social contacts in everyday service encounters, which is associated with a travelling lifestyle. Finally, the paper discusses the relationship between values of autonomy embedded in running a lifestyle oriented business, and values of geographical mobility and the spatial and temporal constraints of everyday farm-based service work.

### **Exploring the Dangers for Partnership Stability through Job Related Mobility**

Stefanie A. Kley, University of Hamburg | [stefanie.kley@uni-hamburg.de](mailto:stefanie.kley@uni-hamburg.de)

Novel findings about the impact of job related mobility on partnership stability show that long distance commuting of women increases the risk of separation for couples in Germany. Prominent theories of partnership stability suggest different mechanisms behind this finding. Is it the perceived lack of partnership-utility, arising from the fact that she has to take a great burden in order to contribute to the

household income, or is it rather the woman's individual autonomy that strengthens her bargaining position within the couple? In the proposed contribution such "couples at risk" are analyzed in more detail with 2008/09 data from the German family panel study (pairfam). For about 260 female commuters with partner typical configurations of work and household characteristics are revealed making use of

Fuzzy-set QCA, a relatively new method based on Boolean algebra. The women belonging to the rendered configurations are distinct with regard to combinations of working hours, personal income, and partner's income, presence of small children, home ownership, and satisfaction with their partnership. For each of the configurations the commuting

women's satisfaction with other spheres of life, their perceived burden with household duties, their state of health, their conflicts with the partner, and their thoughts about separation are explored. The findings suggest that bargaining theory is most suitable to explain the mechanisms behind the increased risk of separation due to female commuting.

## **Couples on the Move: Consequences of Couples' Living Arrangements for Academic Careers**

**Alessandra Rusconi**, Wissenschaftszentrum Berlin für Sozialforschung (WZB) Social Science Research Center Berlin | [alessandra.rusconi@wzb.eu](mailto:alessandra.rusconi@wzb.eu)

For university graduates, geographical mobility is an essential element of career development. In addition, job insecurity triggers migration and individuals with fixed-term contracts move above average. Mobility, however, represents a central dilemma for dual-earner and especially dual-career couples, as only one job might require relocation or both partners might need to relocate but at a different time and/or location. This conflicts with the need for stability and co-presence that ensues from family responsibilities. The paper investigates how couples balance conflicting job mobility and family demands and analyzes the consequences of different living arrangements for the achievement of academic careers. The literature shows that one strategy is to prioritize co-residence and either follow the demands of only one career (often the man's with a 'tied' migration of women) or limit job

search to locations that appear to offer good occupational prospects for both partners. Yet, tied migration is shown to have a negative impact on career development; particularly for women. Thus, another strategy is to prioritize the occupational development of both partners and accommodate conflicting mobility requirements by means of multi-local living arrangements. Using life history data I analyze the living arrangements of scholars and their partners at different career/family stages. The German case is of particular interest given the predominance of fixed-term contracts for scholars below the professor rank and a growing precariousness for academic careers since the late 1990s. Thus, multi-local living is widespread among German scholars; especially among women who are more often part of dual-earner (often dual-scholar) couples.

## **Work-Related Residential Multilocality in Relationships and Families: What Kind of Relationship Concepts are Involved?**

**Heiko Rüger**, Federal Institute for Population Research | [heiko.rueger@bib.bund.de](mailto:heiko.rueger@bib.bund.de)

**Michaela Schier**, German Youth Institute | [schier@dji.de](mailto:schier@dji.de)

**Tammy Ries**, Federal Institute for Population Research | [tammy.ries@bib.bund.de](mailto:tammy.ries@bib.bund.de)

In terms of balancing family, working lives and job mobility, multilocal living arrangements become increasingly important. Work-related

multilocal relationships and families are characterised by arrangements where at least one partner is not present at the communal

family home for a substantial part of the year for occupational reasons. However, little is known about the prerequisites and consequences of those arrangements on the relationship level. This paper examines the relationship concepts of individuals living in multilocal arrangements in comparison to individuals in non-mobile arrangements and individuals who decided in favour of other forms of job mobility, such as relationship/family relocation. Our sample is derived from the European comparative “Job Mobilities and Family Lives in Europe” panel study, in which 5026 individuals aged 25 to 54 years in Germany, France, Spain and Switzerland have been interviewed with regard

to their mobility behaviour, work and private life. The results show that living in a multilocal arrangement is associated with a relationship concept that emphasises distance more than closeness/spatial proximity. We could not find significant differences between multilocal childless relationships and families (children  $\leq 18$  years). Using longitudinal information, the paper will discuss the question whether the positive attitude to absence or a ‘absence/distance thinking’ is a precondition for choosing a multilocal living arrangement or can rather be seen as a consequence of an adaptation process accompanying such a decision.

## c01RN13 - The Value of the Family and Family Values in Europe 1

Chair(s): Isabella Crespi (Dept. Education, Cultural Heritage and Tourism - University of Macerata)

### Infant Cries Lead to Marriage - A Qualitative Study of Children's Importance for Marriages

Karin Jarnkvist, Mid Sweden University | [karin.jarnkvist@miun.se](mailto:karin.jarnkvist@miun.se)

During the 21st Century the number of people choosing to get married in Sweden has increased; a break with the trend during the later part of the 20th Century when the number of weddings declined steadily. Research on this change remains limited, particularly as regards studies using qualitative methods. This article studies the relationship between co-habiting, children and marriage. Sixteen young heterosexual couples who are also parents have been interviewed regarding their reasons for marriage. The couples give two kinds of motives for marriage; formal and symbolic

motives. Formal motives for marriage mean that the interviewee sees legal advantages to being married. The legal incentives are particularly strong amongst couples who also have children from previous relationships. The symbolic motives are partly about fulfilling the image of what a “real” family is, and partly confirming that the relationship is serious. The results give a more nuanced picture of young Swedes’ motives for marriage than earlier theories portraying marriage as a temporarily fashionable activity.

## The “Leitbild” Approach. How to Explain Differences in Family Lives in Europe?

Sabine Gründler, Bundesinstitut für Bevölkerungsforschung | [sabine.gruendler@bib.bund.de](mailto:sabine.gruendler@bib.bund.de)

Detlev Lueck, Federal Institute for Population Research, Germany | [detlev.lueck@bib.bund.de](mailto:detlev.lueck@bib.bund.de)

Katrin V Schiefer, Federal Institute for Population Research, Germany | [katrin.schiefer@bib.bund.de](mailto:katrin.schiefer@bib.bund.de)

In trying to explain changes and differences in family lives, the most popular approach has recently been rational choice. Despite success in explaining some patterns (e.g. low fertility among highly educated women, high fertility in countries with good public childcare) other findings remain unclear (e.g. gender difference in the education effect, high fertility in the UK with little public childcare). There are institutional approaches, e.g. by B. Pfau-Effinger and A.H. Gauthier, offering explanations for cross-national differences that complement structural by cultural arguments. Our aim is to develop these approaches further by describing the cultural characteristics more precisely and by applying them not only to countries, but also to regions and social groups. Inspired by K.D. Giesel, we refer in our theoretical and methodological approach to leitbilder as sets of collectively

shared and pictured conceptions of guiding role models, that are widely spread, socially expected and/or personally desired. Leitbilder may refer to family issues, such as the “normal” or “ideal” composition of a family (structural aspects) or the “perfect” timing when to have children (process-related aspects). Leitbilder may be related to a country, a region, or a social group. They influence family decisions for a number of reasons, e.g. having children may seem less attractive to a woman whose leitbild of a mother includes highly demanding duties towards her child. In our presentation, we will introduce our theoretical and our methodological approach, as it is implemented in a representative survey, conducted 2012 in Germany (n=5,000). And it will present first descriptive findings of family-related leitbilder in Germany.

## Constructing the Meaning of Home in a Cross-Cultural Family

Kristel Siilak, Tallinn University | [siilak@tlu.ee](mailto:siilak@tlu.ee)

The present research unfolds on globalised and transnational societal phase with the expansion of multiple cross-cultural opportunities for individual self-realisation, and the setting up international homes (see for first results in Paadam, Siilak, Ojamäe 2013 forthcoming). The research is inspired by the Estonian team’s experience in a recent EU framework project ‘Euroidentities’ (2008-2011). The findings suggest that the in-depth experience of cross-cultural intimate relationships is a complicated endeavour and the successful intimate relationship functions for adaptation to new cultural circumstances. During this process ‘the home may be considered as a symbolic marker of a space

where intimates are psychologically, socially, economically, culturally and physically settled’ (Paadam, Ojamäe, Siilak 2012). The primary aim of this paper is to contribute to an understanding on the interconnections building between the ways individual partners in cross-cultural intimate relationship perceive the role of family relations and intimacy during the construction of the meaning of home. More specifically how individuals construct the meaning of home within this cross-cultural experiences. How partners perceive and understand the role of family and intimate experience during the construction of the sense of home. The biographical study draws the narratives of cross-cultural partners with

one partner of Estonian origin and the other from either the Northern or Southern Europe

residing one of the partners country of origin.

## A Sketch of the Family as a Field

Will Atkinson, University of Bristol | [w.atkinson@bristol.ac.uk](mailto:w.atkinson@bristol.ac.uk)

This paper makes the case that 'family' relations constitute a field of struggle in Pierre Bourdieu's sense. It does so primarily to put on firmer conceptual ground a valuable means of making sense of how broader structures of social and cultural domination are lived and either reproduced, deviated from or transformed in everyday life, though in so doing it also intends to rebuff those who believe Bourdieu has little to offer researchers of familial life and propose an advance over existing theories of kinship in terms of

practices, displays or figurations. Grounded in qualitative research on class and everyday life in the UK and using Bourdieu's own brief reflections and logic as its point of departure, it outlines the core facets of the family as a field: its realisation through internalisation of the *nomos* hailing from the state, church, law, etc; its specific and unique *doxa*; struggles over symbolic and emotional capital; the existence and contestation of boundaries; and any one family field's embeddedness within a wider universe of overlapping familial fields.

## Whence are You? The Social Role and Symbolic Status of the Family

Firouz Gaini, Norwegian University of Science and Technology, Trondheim | [firouz.gaini@svt.ntnu.no](mailto:firouz.gaini@svt.ntnu.no)

The Faroe Islands, a Nordic island community (49,000 inhabitants), are characterized by a family-based individualism that strongly influences the social organization and communication patterns of the islands. This paper aims to investigate the social role and cultural (symbolic) status of family as cultural value and network in a small-scale society in shift. According to own research, as well the work of e.g. Dennis Gaffin (1996) and Jonathan Wylie (1987), the cognatic ego-centric family 'system' of the Faroe Islands is to be considered as a very flexible and open institution shielding traditional individualism, yet, apparently, Faroese society has a remarkably strong family-orientation. How to explain this? This leads to my main query: Is the traditional family institution not in conflict

with (late) modern lifestyles? The case of the Faroe Islands, I argue with reference to own fieldwork and Faroese media, illustrates the resistance and viability of the cognatic (individualistic) family. Using Pierre Bourdieu's concept of capital – social and symbolic capital – and adding a 'family capital' to his social theory, this paper intends to analyze the family as a latent network or capital that is activated when needed by the individual. The Faroese family is also a child-centered family network. The focus on the child, instead of alliances and descent, suggests a look into the future rather than a view back in time. These premises are based on rich data material from interviews, observations and local media in the Faroe Islands.

## **d01RN13 - Conflict and Violence in the Family**

Chair(s): Stefania G. Meda (Family Studies and Research University Centre - Università Cattolica, Milano)

### **HERMES Pilot Study: Training Doctors to Identify and Refer Male Victims/Perpetrators of Domestic Violence and Abuse.**

Emma Williamson, University of Bristol | [e.williamson@bristol.ac.uk](mailto:e.williamson@bristol.ac.uk)

Marianne Hester, University of Bristol | [Marianne.Hester@bristol.ac.uk](mailto:Marianne.Hester@bristol.ac.uk)

Sue J Jones, University of Bristol | [Sue.Jones@bristol.ac.uk](mailto:Sue.Jones@bristol.ac.uk)

Gene Feder, University of Bristol | [Gene.Feder@bristol.ac.uk](mailto:Gene.Feder@bristol.ac.uk)

The HERMES pilot project, which builds on previous work intended to improve the response of health clinicians to female victims of domestic abuse who present within general practice, focuses on male patients with experience of domestic violence and abuse. The pilot involved an intervention intended to improve the identification and referral of male patients who were victims and/or perpetrators of domestic abuse. The findings from this pilot study include an analysis of pre-post intervention surveys of the participating health practitioners; interviews with these practitioners about the intervention; pre and post intervention data about the number of male patients identified within the medical record as potentially experiencing and/or perpetrating domestic abuse; and finally, third party referral information from a national

helpline in England. This paper will present the findings from this pilot study and discuss the lessons which can be learnt in relation to better identification, documentation, and referral of male patients who present to general practice with issues related to their experience and/or perpetration of domestic abuse. This discussion will take place in a wider context of considering gender within the gendered violence paradigm. [This paper is based on independent research commissioned by the National Institute for Health Research (NIHR) under its Programme Grants for Applied Research scheme (RP-PG-0108-10084). The views expressed in this publication are those of the authors and not necessarily those of the NHS, the NIHR or the Department of Health].

### **Redefining Forced Marriages: Between Individual Resistance, Changing Gender Norms and Poverty among Immigrants and Descendant of Immigrants in France.**

Nisrin Abu Amara, INED, Paris | [nisrin.abu-amara@ined.fr](mailto:nisrin.abu-amara@ined.fr)

How to define forced to marry in a migration context where cultural transmission of values and tensions between individual and collective standards regarding marriage? This presentation examines the different situations where consent to marriage was altered by various forms of family pressures. This paper is based on 29 interviews with immigrant

women and daughters of immigrant, who initially responded to the quantitative survey Trajectories and Origins (INED and INSEE) which focused on discriminations in France (Ined, 2009). Those who reported not being at the initiative of their marriage were again interviewed as part of a qualitative survey on consent and coercion to marriage. The

diversity of situations encountered during these interviews can account for the existence of various situations of social and family constraints. This research reveals, in particular, the coercion is experienced differently according to gender, origin, and socio-economic resources. It also helps to uncover the vulnerability of some women in the migration process: lack of economic or symbolic resources (education, language proficiency) and the lack of relational networks

(friendships or family), that sometimes leaves them against a violent and abusive husband. But mostly, this research illustrates the tension between these women's aspirations and the family control they are subject to, added to the social and economic obstacles they have to face. Despite its violent consequences to these women, this conflict indicates the existence of a process of social change, both in the minority as in the country of origin.

## Professional Programs on Familial Violence

Lars Alberth, University of Wuppertal | [alberth@uni-wuppertal.de](mailto:alberth@uni-wuppertal.de)

Doris Bühler-Niederberger, University of Wuppertal | [buehler@uni-wuppertal.de](mailto:buehler@uni-wuppertal.de)

Steffen Eisentraut, University of Wuppertal | [eisentraut@uni-wuppertal.de](mailto:eisentraut@uni-wuppertal.de)

The paper presents data of a recently finished research project on professional interventions in cases of (suspected) child maltreatment and neglect (funded by the German Research Foundation/DFG). Case centred interviews with responsible professionals (social workers, physicians, psychologists, midwives) as well as participant observations at case conferences in child protection services were conducted and we assembled a data set, consisting of 93 cases of suspected child maltreatment which were delineated at length. The overall aim was to reconstruct the professional triage

processes in cases of children younger than six years old. Our results show (1) that professional programs (of social workers, medical doctors, psychologists, midwives) exclude children and their concrete voices; (2) a particular perspective on family as a generational and gender order is a decisive factor; (3) the client-professional relation particular for a given professional group. Therefore, familial violence is addressed only in a small part and with considerable biases. This paper might fit in the session on "Social Policy and family interventions"

## The Intergenerational Cycle of Violence: Do Italian and Swiss Families Transmit Intimate Partner Violence?

Federica Santangelo, Alma Mater Studiorum - Università di Bologna | [federica.santangelo@unibo.it](mailto:federica.santangelo@unibo.it)

Scholars agree all over the world on the intergenerational cycle of violence: who witnesses or suffers violence during childhood shows higher risk to become an adult batterer (if male) and a battered woman (if female). However, little is known about the factors that influence the decision to leave a violent partner. No studies have examined the decision to leave using national sample and

moreover, no studies have looked at the role played by the presence of children in this crucial decision. Indeed, the presence of children may on the one hand strengthen the relationship, on the other hand women could be more disposed to leave a violent partner thinking of the well-being of their child. The objective of this paper is to test whether the presence of children witnessing violence

affects women's decision to interrupt violent relationships. Data from the violence against women survey of the Italian national institute of Statistics (2006) and the International Violence Against Women Survey conducted in Switzerland in 2003 will be used. Event History techniques are used to test the relation

between the presence of children and the duration of violent relationships.. We will also compare results across countries, because, aside from the presence of children, we also expect country differences in the conception of gender roles to affect the decision to leave a violent partner.

## a02RN13 - Fertility and Reproduction 1

Chair(s): Elisabetta Carrà (Family Studies and Research University Centre - Università Cattolica di Milano)

### Parental Background, Intergenerational Educational Mobility and Timing of First Birth

Adriana Duta, University of Southampton | [ad3e11@soton.ac.uk](mailto:ad3e11@soton.ac.uk)

This study aims to contribute to a long-standing debate in the literature regarding social mobility and fertility. Previous research focused mostly on the quantum dimension of fertility in relation to intergenerational class mobility. In this study, the influence of intergenerational educational mobility on timing of first birth is explored. The data used in this research come from different BHPS (British Household Panel Study) waves which provide information about respondents' fertility histories and educational achievement of both respondents and their parents. The modelling strategy combines, for the first time, discrete-time hazard models with diagonal mobility models which are widely preferred in recent studies analysing consequences of social mobility, comparing them to more conventional approaches used to model mobility outcomes. The research questions to be answered are the

following: (1) Does parents' education influence timing of first birth over and above respondent's education? (2) Does intergenerational educational mobility influence timing of first birth over and above parents' education and respondent's education? (3) Is the timing of first birth of mobile individuals more similar to non-mobile individuals in the group of destination or to the non-mobile individuals in the group of origin? (4) How do these vary by gender and cohort groups? Answering these questions will improve our knowledge of how individuals' lives are connected to the lives of their parents, what is the interplay between ascription-related and achievement-related educational characteristics when it comes to the timing of first birth, and whether intergenerational educational mobility matters for the timing of first birth.

## Is Childbearing Contagious? Fertility and Social Interaction at the Workplace

**Sebastian Pink**, University of Mannheim | [sebastian.pink@uni-mannheim.de](mailto:sebastian.pink@uni-mannheim.de)

**Thomas Leopold**, European University Institute | [thomas.leopold@eui.eu](mailto:thomas.leopold@eui.eu)

**Henriette Engelhardt**, University of Bamberg | [henriette.engelhardt@uni-bamberg.de](mailto:henriette.engelhardt@uni-bamberg.de)

We ask whether fertility at the workplace is “contagious”, investigating the influence of colleagues’ fertility on women’s transitions to first pregnancy. Based on the principles of analytical sociology, we propose different mechanisms that are likely to mediate social interaction effects on fertility. The empirical analysis draws on linked employer-employee panel data from the German Federal Employment Agency comprising 42,394 female co-workers in 7,560 firms. Discrete-time hazard models reveal a sizable contagion effect: In the year after a colleague gave birth, transition rates to pregnancy almost double.

The results are consistent with desire- and belief-based mechanisms of social contagion, suggesting that interaction with pregnant colleagues and/or their newborns may generate or exacerbate the wish to have a child but also increase confidence in childbearing decisions by learning from a social model. Furthermore, the results add a new perspective to the discussion concerning low fertility. Due to such social multiplier effects, family policies aimed at improving the compatibility of work and family could develop a strong potential to stimulate fertility.

## I Cannot Give Birth Yet, the Tests Are Not Over!

**Esra Gedik**, Middle East Technical University, Ankara | [esragedik.34@gmail.com](mailto:esragedik.34@gmail.com)

**Ezgi P. Kadayifci**, Middle East Technical University, Ankara | [ezgip@metu.edu.tr](mailto:ezgip@metu.edu.tr)

technologies and discourses of reproduction have been surrounding women and particularly men in every culture; because reproduction is thought to be a power mechanism that strengthens masculinity, institution of family, marriage and social order. At the same time, this very order depends on commonsense norms about “appropriate” newborns. The definitions of being appropriate or being normal is determined by the social and produced by reproductive technologies. It would be a simplification to argue that women are objectified by these technological discourses; rather they are only the vessels of the real object; fetuses which are to be normalized by reproduction technologies. In

Turkey the application of prenatal technologies is common and they are encouraged as if they are the only way to have a healthy baby. However access to these technologies is not possible for every woman. Upper middle class women in Turkey willingly access the application of prenatal reproduction technologies excessively; two times ultrasound every month until the second half of third trimester, then every week until birth, and screening tests for every trimester. In this study we try to understand the prenatal experiences of middle class women who are surrounded by related discourses and practices. In order to achieve this we conduct in-depth interviews of 30 women.

## Now? Later? Never? A Qualitative Study on Reasons for Postponing Fertility-Intentions

Sonja U. Unteregger, University of Salzburg | [sonja.unteregger@sbg.ac.at](mailto:sonja.unteregger@sbg.ac.at)

The on-going demographic transition and one of its main driving forces, the changes in family forms and fertility, accompanied by a shift in value structures towards individualization and self-realization, have already been forecasted 25 years ago. Moreover changes in structural circumstances (e.g. educational expansion, labour market liberalization) cause tensions and insecurities and therefore the institutionalized "norm biography", including early motherhood, cannot be realized smoothly anymore by all women. These tensions (probably aggravated by effects of the crisis) can be avoided by postponing fertility intentions. Women's average age at first birth was rising steadily in the last decades in most European countries. This paper investigates motives for postponing decisions on family planning by using Grounded Theory. Although such situations of decision making can be

analyzed quite well with quantitative event data analysis, factors beyond rationality like emotional aspects and values should not be underestimated. Therefore the analysis is going to focus especially at the emotional component of the family planning decision by using in-depth interviews. As a key element, fears of the future could be detected competing with the positive feelings connected to motherhood and the wish to have a child. Women are trying to minimize the risks for a suboptimal future scenario (subsuming e.g. being single parent, financial dependence on the partner, disadvantages in career) before deciding to form a family. This contribution provides new and in-depth insights into the ambivalence of emotions connected to the decision to have a child and connected to this the phenomena of postponement of procreative behaviour.

## **b02RN13 - Families, Migration, Care and the Effects on Family Relationships 1**

Chair(s): Stefania G. Meda (Family Studies and Research University Centre - Università Cattolica di Milano)

### **Slovak Elder Care Workers in Austria: Do their Families Suffer?**

Miloslav Bahna, Slovak Academy of Sciences | [miloslav.bahna@savba.sk](mailto:miloslav.bahna@savba.sk)

In recent years researchers have analyzed the growing importance of migrant care-workers in elder care provision in Europe. The case of Slovak middle-aged women who play a dominant role among the roughly 40 thousand around the clock migrant care providers in Austrian households became an analyzed topic in the discussions that accompanied the home care legalization process in Austria between 2006 - 2009. Within international migration research the - mostly female - migrant care-workers are subsumed in the category of female migration where the focus is on family relationships, families thorn apart and children left behind. As part of the „Global Care Chains“ (Hochschild) female elder care providers are expected to be confronted with problems relating to lack of their care in the home country. We present and analysis of the

impacts of such migration on the families of the carers based on a recent semi-representative survey of Slovak female elderly care providers done in November 2011 (N = 151). Our results suggest that the most often employed two weeks commuting regime between Slovakia and Austria does not create much strain in the families of the care workers. Besides the possibility to commute, this is probably caused by the fact that most of the care workers are women in their mid-forties with little care obligations, both towards their adult children and their still independent parents. In fact, our multivariate analysis shows that the overall satisfaction of the carers with their employment is not shaped by their family situation in Slovakia, but rather by their income and by the care needs of their clients in Austria.

### **Cultural Contagion? Changing Attitudes towards Working Mothers among Immigrants in Norway.**

Hanne C. Kavli, Fafo, Institute for Labour and Social Research, Oslo | [hanne.kavli@fafo.no](mailto:hanne.kavli@fafo.no)

The question of attitudinal change is repeatedly at the center of public debate concerning immigration – will immigrants change, or will they change the receiving society? The answer, many will argue, lies somewhere in between. Immigrants to the Scandinavian welfare states are met with great expectations concerning their adaptation to the dual earner family model. This paper addresses attitudes towards

mothers' employment among Norwegians, non-western immigrants and immigrant descendants – and explores how these attitudes vary according to time of residence and type of participation in Norwegian society. Can the cultural exposure that follows migration change attitudes? Or are attitudes and values more or less fixed after the formative first years? The multivariate analysis

indicates that the time of entry to Norway is related to attitudes to mothers' employment. Those who enter before school age are more positive than those who have immigrated later. But this is not only a matter of when, but also of how. Migrants with good language skills tend to be more positive than migrants with a poor command of the Norwegian language. The article is based on a survey, conducted in the respondents' mother tongue, among 1800

respondents from Norway, Pakistan, Iran, Iraq and Vietnam. The individual interviews are linked to register data on employment status, education, public benefits and time of residence in Norway. Also, the analysis has been inspired by four focus-group interviews among parents, with and without immigrant backgrounds, who discussed the main findings from the survey with the researchers.

## **Family Life in the Age of Mobility and Migration. Filipino au Pair Migration to Norway and Transnational Organization of Care**

**Mariya Bikova**, University of Bergen | [Mariya.Bikova@sos.uib.no](mailto:Mariya.Bikova@sos.uib.no)

Fleeing from years-long economic crisis, systematic underemployment and stalled gender roles in the Philippines, thousands of young Filipinas came to Norway during the last few years to work as au pairs in affluent Norwegian homes leaving behind husbands, children and old parents. Based on mobile multi-sited ethnographic fieldwork in Norway and the Philippines, and approaching the au pair-migration with the notion of global care chains, the paper aims to shed light on the consequences of the participation in the scheme for the au pairs, their left-behind family members and local communities in the country of origin. Based on interviews with Filipino au pairs in Norway and persons who

have been au pairs, the article examines what impact the migration to Norway has had on the family lives of the migrants, who is taking care of the au pair's children and parents, and how, if at all, gender roles have been reconstructed and reorganized as a result of migration. 'Following' the au pairs to the villages and local communities they come from allows for exploring how the left-behind family members perceive of and experience being part of the au pair-migration and the global care chains. The perspective of the mobile migrants as expressed in the interviews with the au pairs is combined with the perspective of their immobile family members to reveal the meanings, mechanisms and costs of migration.

### **Crisis and Critique of Family Definition on the Light of Family Institute Changes: Case of Lithuania**

**Vida Cesnuiyte**, Mykolas Romeris University, Vilnius | [v.cesnuiyte@mruni.eu](mailto:v.cesnuiyte@mruni.eu)

The research aim was to explore family concept that is characteristic for the population of Lithuania. The research objectives were to

identify the subjective concept of family and to compare it with the measures on family configuration. The research problem relates

with the crisis of family definition that is under discussions and critique last several decades not only in Lithuania but in all countries that experience changes of family institute. The research hypotheses are as such: (1) for the population of Lithuania, family concept is associated not only with the modern nuclear family members, but with extended family members and people beyond the nuclear and extended families also; (2) subjective concept of family characteristic to population differs from the measures on persons living together or networks of important persons. If these hypotheses are true, it can be assumed that postmodern concept of family is emerging in the minds of Lithuanians, while practice is related with the modern nuclear family.

Hypotheses testing based on data received within the research project „Trajectories of family models and social networks: intergenerational perspective“ carried out in Lithuania (<http://famo-socnet.mruni.eu/>). Empirical data were received from the quantitative survey (2000 respondents; fieldwork: November, 2011 - May, 2012) and qualitative deep interviews (60 respondents, who were participants of previous quantitative survey; fieldwork: June-July, 2012). The research results let to state: majority of population associate their family with the modern nuclear family, but the postmodern concept of family is emerging in the minds of population in Lithuania. So, new criteria for family definition is needed.

## **The Importance of Authenticity and Faithfulness - Betrayal and Lies as Cardinal Sins in Love Relationships**

**Francesc Núñez-Mosteo**, Open University of Catalonia | [fnunez@uoc.edu](mailto:fnunez@uoc.edu)

**Swen Seebach**, Open University of Catalonia | [swen.seebach@gmail.com](mailto:swen.seebach@gmail.com)

**Natàlia Cantó-Milà**, Open University of Catalonia | [ncantom@uoc.edu](mailto:ncantom@uoc.edu)

In this paper we will present the results of the analysis of 106 semi-structured interviews collected during the years 2011 and 2012 in Germany and Spain regarding one's love biography and love story. According to our interviewees, trust is essential in love relationships, and their love relationship would not be able to survive any severe fissures or cracks in this trust. Worse than any other deed, betrayal and lies are presented by the greatest majority of our interviewees as that which they would neither be able to forgive nor to forget.

Thus we will, listening to the voices of our informants, analyze the role that trust has overtaken in our contemporary understanding of what it makes a successful relationship, and will elaborate upon their accounts of lies and betrayal, presented either as that which they have experienced in the past (or viewed somebody experiencing) or as the shadow of their worst fears regarding their partnership, or both. The fact that lies and betrayal are viewed even as worse than infidelity will also be interpreted and discussed.
